67^{TH} MEETING OF THE SENATE

TO BE HELD ON
TUESDAY, SEPTEMBER 20, 2022
FROM 03:00 P.M. ONWARD
AT THE SENATE ROOM, S.N. RAY MEMORIAL BUILDING
NIT DURGAPUR

AGENDA NOTES

Item No. 67.1 Confirmation of the Minutes of the 66th. Senate Meetings.

The 66th Meeting of the Senate was held on April 13, 2022 at 10:30 AM in the Senate Room, S. N. Ray Memorial Building. The minutes of the said meeting were mailed to all Senate members for their comments **(Annexure 67.1.1)**. Several comments were received from the members on item no. 66.15.

Submitted to the Senate for discussion and the confirmation of the Minutes.

Item No. 67.2 Actions Taken Report

Reference Item No.	**Agenda Item**	**Action Taken on the Resolution**
66.2	To consider the equivalence of patent filing with one publication in an SCI/SSCI/AHCI/Non-paid Scopus/Web of Science Journal.	The alternatives proposed by the Committee constituted by the Senate may be discussed in the 67th Meeting of the Senate as Agenda Item # 67.6.
66.3	To consider the resolutions of UGAC meetings.	Resolutions duly implemented.
66.4	To consider the resolutions of PGAC meetings.	Resolutions duly implemented.
66.5	To consider the resolutions of RAC meetings.	Resolutions duly implemented.
66.6	To consider revision in Clause 13.7 of the PhD regulations in respect of uploading the full text of PhD thesis in INFLIBNET.	Action in progress.
66.7	To consider a change in the specialization name of the existing M. Tech. program offered by the department of ECE from "Telecommunication Engineering" to "Next Generation Communication and Networks".	Resolutions duly implemented.
66.8	To consider the modalities for starting self-financed M. Tech. programs from AY 2022-23.	Action in progress.
66.9	To consider the modalities for starting self-financed MBA program from AY 2022-23.	Action in progress.
66.10	To consider offering the M. Tech. program in Operations Research jointly by three departments.	Resolutions duly implemented.
66.11	To consider the Fee Structure for the AY 2022-23.	Revision in the fee structure for AY 2022-23 duly implemented. Work initiated on further revision in the fee structure.

66.12	To consider revision in the mode and weightage of the end-term examination (even semester, 2021-22) for the UG and PG students.	Resolutions duly implemented.
66.13	To consider issues related to possible placement of students from Bangladesh through the Career Development Centre of the Institute.	Action in progress.
66.14	To consider the framework proposed by the Chairman, Continuing Education Centre in regard to internship at NIT Durgapur.	Resolution duly implemented.
66.15	To consider issues related to the removal of gender bias through suitable change in the Institute motto as displayed in the Institute logo.	Action in progress.
66.16	To consider constituting an Advisory Committee for monitoring the smooth running of activities of the SRCC.	Resolutions duly implemented.
66.17.1	To consider the recommendations of the MoU Committee meeting held on 14.04.2022.	Action in progress. The resolutions on Research Methodology duly implemented.

PART A: MATTERS RELATED TO UG STUDIES

Item No. 67.3 To consider the resolutions of UGAC meetings

The Senate may consider the resolutions of UGAC meetings held on 31.05.2022, 29.07.2022 and 31.08.2022. **(Annexures 67.3.1, 67.3.2, 67.3.3)**.

PART B: MATTERS RELATED TO PG STUDIES

Item No. 67.4 To consider the resolutions of PGAC meetings

The Senate may consider the resolutions of PGAC meetings held on 31.05.2022, 29.07.2022 and 31.08.2022. **(Annexures 67.3.1, 67.3.2, 67.3.3)**.

PART C: MATTERS RELATED TO PhD STUDIES

Item No. 67.5 To consider the resolutions of RAC meetings

The Senate may consider the resolutions of RAC meetings held on 08.06.2022 and 07.09.2022 **(Annexures 67.5.1 and 67.5.2)**.

Item No. 67.6 To consider the alternatives proposed by the committee constituted by the Senate to consider the equivalence of patent filing with one publication in an SCI/SSCI/AHCI/Non-paid Scopus/Web of Science Journal.

The Senate may consider the alternatives proposed by the committee constituted by the Senate to consider the equivalence of patent filing with one publication in an SCI/SSCI/AHCI/Non-paid Scopus/Web of Science Journal resolutions of UGAC meetings. **(Annexure 67.6)**.

PART D: ACADEMIC MATTERS REQUIRING THE APPROVAL OF THE BOG

Item No. 67.7 To discuss issues pertaining to the 18th Convocation

The Senate approved via circulation the proposed conduction of the 18th Convocation of the National Institute of Technology Durgapur on Saturday, October 22, 2022 and noted with great honour and pride the confirmation regarding the presence of Shri Dharmendra Pradhan, Hon'ble Minister of Education and Minister of Skill Development & Entrepreneurship, Government of India, as the Chief Guest of the 18th Convocation of the Institute.

The Senate may approve the list of degree recipients and the gold medal awardees in the 18th Convocation (**Annexures 67.7**).

The Senate may discuss various other issues pertaining to the 18th Convocation.

PART E: OTHER MATTERS

Item No. 67.8 To consider signing MoUs with universities in India and abroad.

The Senate may consider signing MoU with Sister Nivedita University Kolkata and Vilnius Gediminas Technical University, Lithuania. (**Annexures 67.8.1 and 67.8.2**).

Item No. 67.9 To consider revision in the SRCC rules & regulations

The Senate may consider revision in the existing SRCC rules and regulations to facilitate the SRCC activities. (**Annexure 67.9**).

Item No. 67.10 Any other matter with the permission of the Chair.

Date: **Registrar & Secretary, Senate, NIT Durgapur**

ANNEXURE 67.1.1

NATIONAL INSTITUTE OF TECHNOLOGY DURGAPUR

66th MEETING OF THE SENATE

HELD ON
TUESDAY, APRIL 19, 2022
FROM 10.30 A.M. ONWARD
AT THE SENATE ROOM, S.N. RAY MEMORIAL BUILDING
NIT DURGAPUR

MINUTES

The meeting was attended by the following members:

The meeting was attended by the following members:

1.	**Prof. Anupam Basu** Director & Chairman-Senate NIT Durgapur	:	Chairman
2.	**Prof. S. Chattopadhyay** Department of Biotechnology, NIT Durgapur	:	Member
3.	**Prof. K. Aikat** Department of Biotechnology, NIT Durgapur	:	Member
4.	**Prof. (Ms.) Surabhi Chaudhuri** Department of Biotechnology, NIT Durgapur	:	Member
5.	**Dr. Debjani Dutta** **HoD**, Department of Biotechnology, NIT Durgapur	:	Member
6.	**Prof. S. S. Mukhopadhyay** Department of Biotechnology, NIT Durgapur	:	Member
7.	**Prof. D. Sukul** Department of Chemistry, NIT Durgapur	:	Member
8.	**Prof. A.K. Patra** Department of Chemistry, NIT Durgapur	:	Member
9.	**Prof. M. Maji** Department of Chemistry, NIT Durgapur	:	Member
10.	**Prof. Rajnarayan Saha** Department of Chemistry, NIT Durgapur	:	Member
11.	**Prof. Sankar Ch. Moi** Department of Chemistry, NIT Durgapur	:	Member

12.	**Prof. P. Gupta** Department of Chemical Engineering, NIT Durgapur	:	Member
13.	**Prof. K. C. Ghanta** **Dean (R&C)** Department of Chemical Engineering, NIT Durgapur	:	Member
14.	**Prof. P. Pal** Department of Chemical Engineering, NIT Durgapur	:	Member
15.	**Prof. A. K. Sadhukhan** Department of Chemical Engineering, NIT Durgapur	:	Member
16.	**Prof. S. Dutta** Department of Chemical Engineering, NIT Durgapur	:	Member
17.	**Prof. Gopinath Halder** Department of Chemical Engineering, NIT Durgapur	:	Member
18.	**Prof. Tamal Mandal** Department of Chemical Engineering, NIT Durgapur	:	Member
19.	**Dr. Jaya Sikder** **HoD**, Department of Chemical Engineering, NIT Durgapur	:	Member
20.	**Prof. D.K. Singha Roy** Department of Civil Engineering, NIT Durgapur	:	Member
21.	**Prof. K. Bhattacharya** Department of Civil Engineering, NIT Durgapur	:	Member
22.	**Prof. S. Bhattacharyya** Department of Civil Engineering, NIT Durgapur	:	Member

23.	**Prof. A.K. Banik** Department of Civil Engineering, NIT Durgapur	:	Member
24.	**Prof. Amiya Kr Samanta** HoD, Department of Civil Engineering, NIT Durgapur	:	Member
25.	**Prof. A. Das** Department of Civil Engineering, NIT Durgapur	:	Member
26.	**Prof. (Mrs.) T. Pal** Dept. of Computer Science & Engg. NIT Durgapur	:	Member
27.	**Prof. D. Nandi** Dept. of Computer Science & Engg. NIT Durgapur	:	Member
28.	**Prof. Subrata Nandi** HoD, Dept. of Computer Science & Engg. NIT Durgapur	:	Member
29.	**Prof. (Mrs.) Suchismita Roy** **Dean (FW)** Dept. of Computer Science & Engg. NIT Durgapur	:	Member
30.	**Prof. Avijan Dutta** Dept. of Management Studies NIT Durgapur	:	Member
31.	**Prof. Mousumi Roy** Dept. of Management Studies NIT Durgapur	:	Member
32.	**Dr. Kaushik Mandal** **HoD,** Dept. of Management Studies NIT Durgapur	:	Member
33.	**Prof. A.K. Bhattacharjee** Dept. of Electronics & Communication Engineering NIT Durgapur	:	Member
34.	**Dr. Durbadal Mondal** **HoD,** Dept. of Electronics & Communication Engineering NIT Durgapur	:	Member

35. Prof. Rowdra Ghatak : Member
Dept. of Electronics & Communication Engineering
NIT Durgapur

36. Prof. R. Mahapatra : Member
Dean (SW)
Dept. of Electronics & Communication Engineering
NIT Durgapur

37. Prof. G.K. Mahanti : Member
Dept. of Electronics & Communication Engineering
NIT Durgapur

38. Prof. Ashis Kr. Mal : Member
Dept. of Electronics & Communication Engineering
NIT Durgapur

39. Prof. B. Maji : Member
Dept. of Electronics & Communication Engineering
NIT Durgapur

40. Prof. S.S. Thakur : Member
Dept. of Electrical Engineering
NIT Durgapur

41. Prof. N.K. Roy : Member
Dept. of Electrical Engineering
NIT Durgapur

42. Prof. S. N. Mahato : Member
HoD, Dept. of Electrical Engineering
NIT Durgapur

43. Prof. T. K. Saha : Member
Dept. of Electrical Engineering
NIT Durgapur

44. Prof. C. Koley : Member
Dept. of Electrical Engineering
NIT Durgapur

45. Prof. Parimal Acharjee : Member
Dept. of Electrical Engineering
NIT Durgapur

46. Prof. K. Adhikari : Member
HoD, Dept. of Earth &Environmental Studies
NIT Durgapur

47. Prof. P.P. Sengupta : Member
Dept. of Humanities and Social Sciences
NIT Durgapur

48.	**Dr. J. Banerjee** **HoD**, Dept. of Humanities and Social Sciences NIT Durgapur	:	Member
49.	**Dr. Lakshmi Kanta Dey,** **HOD**, Dept. of Mathematics NIT Durgapur	:	Member
50.	**Prof. S. Kar** Dept. of Mathematics NIT Durgapur	:	Member
51.	**Prof. (Mrs.) Seema Sarkar (Mondal)** Dept. of Mathematics NIT Durgapur	:	Member
52.	**Prof. B. Halder** Dept. of Mechanical Engineering NIT Durgapur	:	Member
53.	**Prof. N. B. Hui** **Dean (Academic Courses)** Dept. of Mechanical Engineering NIT Durgapur	:	Member
54.	**Prof. A. B. Puri** Dept. of Mechanical Engineering NIT Durgapur	:	Member
55.	**Prof. S. S. Roy** Dept. of Mechanical Engineering NIT Durgapur	:	Member
56.	**Prof. N. Banerjee** Dept. of Mechanical Engineering NIT Durgapur	:	Member
57.	**Prof. A. Layek** Dept. of Mechanical Engineering NIT Durgapur	:	Member
58.	**Prof. I. Basak** Dept. of Mechanical Engineering NIT Durgapur	:	Member
59.	**Dr. Sumit Mukhopadhyay** **HoD,** Dept. of Mechanical Engineering NIT Durgapur	:	Member
60.	**Dr. Supriya Bera** **HoD**, Dept. of MME NIT Durgapur	:	Member

61.	**Prof. P. Kumbhakar** **Dean (Academic Research)** Dept. of Physics NIT Durgapur	:	Member
62.	**Prof. A. K. Meikap** Dept. of Physics NIT Durgapur	:	Member
63.	**Dr. Sukadev Sahoo** **HoD,** Dept. of Physics NIT Durgapur	:	Member
64.	**Prof. Amit Kr. Chakraborty** Dept. of Physics NIT Durgapur	:	Member
65.	**Mr. Soumya Sen Sharma** Registrar NIT Durgapur	:	Secretary

Prof. Ajitava Raychaudhuri, Prof. Siddhartha Sen, Prof. (Mrs.) Swagata Dasgupta, Sri S. Chatterjee, Mr. B. Bhattacharya, Ms. Dipa Das, Mr. Manish Awasthi, Prof. Dalia Dasgupta Mandal, Prof. A. Dey, Prof. S. Saha, Prof. P. Ray, Prof. Subhrabrata Choudhury, Prof. S. Banerjee, Prof. Sumit Kundu, Prof. (Mrs.) Kajla Basu, Prof. A. N. Mullick, Prof. K. S. Ghosh and Prof. Joydeep Maity could not attend the meeting and were granted leave of absence.

The Chairman welcomed the Senate members to the meeting and requested Secretary, Senate to present the agenda of the 66th Senate meeting.

Item No. 66.1 **Confirmation of the Minutes of the 62nd., 63rd., 64th. and 65th. Senate Meetings.**

The minutes of the 62nd., 63rd., 64th. and 65th. meetings were confirmed by the Senate.

Item No. 66.2 **Action Taken Reports**

The Senate of the Institute noted the Action Taken Reports with satisfaction.
In regard to Item No. 62.9 (To consider equivalence of filing of a patent with one publication in a SCI/SSCI/AHCI/Non-paid Scopus/Web of Science journal), the following Committee was constituted for deliberating on the matter:

1. Professor Pathik Kumbhakar, Chairperson
2. Prof. Sudip Chattopadhyay, Member
3. Professor Parimal Pal, Member
4. Professor Tandra Pal, member
5. Professor Chiranjib Koley, Coordinator, IPR Committee, Convenor

The Committee shall submit its report to the Chairman of the Senate.

PART A: MATTERS RELATED TO UG STUDIES

Item No. 66.3 **To consider the resolutions of UGAC meetings.**

The Senate ratified the resolutions of UGAC meetings held on 11.01.2022, 31.01.2022, 01.03.2022 and 11.04.2022 with the following rider:

- 31.01.2022: Item #6 - The Senate resolved that joint projects will also be considered for selection of Best Project in the UG level. The following Assessment committee was constituted:

  Dean (Academic Research) – Chairman
  Dean (Students Welfare) – Member
  Dean (Academic Courses) - Member
  Members of Innovation and Incubation Cell (IIC) – Members
  Coordinator of IIC – Coordinator

- 01.03.2022: Item #3 - The Senate recommended the proposed Seat Matrix with a provision of 15% supernumerary seats for the foreign nationals in all Dual Degree and Integrated M. Sc. Programmes. The same for the B. Tech. programs are approved already.

  The Senate also resolved that in the selection process of ICCR, applicants shall be shortlisted based on their marks obtained in the 10th, 12th examinations / CGPA and the essay submitted by them. The essay shall be assessed by the faculty members of the departments of HSS and MS. Similarly, applicants through SII shall be selected based on their 10th and 12th marks / CGPA.

- 11/04/2022: Item No. # 2 – The Senate recommended awarding of B. Tech. degrees to three students, namely, Biswanath Bar (Roll No. 11/ME/118), Sibanto Dutta (Roll No. 11/ME/112), Plabon Roy (Roll No. 11/ME/82), who have satisfied their graduation requirements already in the 18th Convocation. Their certificates shall indicate the date of completion as June 2017, June 2018 and June 2018, respectively.

PART B: MATTERS RELATED TO PG STUDIES

Item No. 66.4 To consider the resolutions of PGAC meetings.

The Senate approved the resolutions of PGAC meetings held on 11.01.2022, 31.01.2022, 01.03.2022 and 11.04.2022 with the following riders:

- 11.01.2022: Item #6 - The Senate resolved to terminate the studentship of Soumya Ghosh, who was drawing salary from the State Bank of India and scholarship from the Institute concurrently. Dean (SW) shall issue a notice to the student to immediately refund to the Institute the scholarship amount he has received till date.

- 31.01.22: Item #5 - The Senate resolved that the total credit mentioned in the approved PG curriculum shall be treated as the minimum total credit for the graduation requirement (Clause 13.2 of the PG Regulations). A PG student may, however, take additional credit courses, subject to prior endorsement by the department, which will be included in her/his grade card.

  As a special case, Mr. Avinaba Topadar (Roll No: 21EC4110), has been permitted to undertake an additional course in the even semester 2021-22 as recommended by the DPAC and PGAC.

- 31.01.2022: Item #6 - The Senate resolved that joint projects may also be considered for selection of the Best PG Project. The Assessment committee that was constituted for the UG projects shall act as the Assessment Committee for PG Projects too.

- 01.03.2022: Item #3 - The Senate recommended the proposed Seat Matrix with a provision of 15% supernumerary seats for the foreign nationals in all M.Sc., MBA and MSW programmes. The same for the M. Tech. programs are approved already.

PART C: MATTERS RELATED TO PhD STUDIES

Item No. 66.5 To consider the resolutions of RAC meetings.

The Senate approved the resolutions of RAC meetings held on 14.12.2021, 27.01.2022 and 12.04.2022, including the recommendation of award of PhD degrees to 20 candidates **(Annexure I)** and the approval of the registration of 37 candidates for the PhD program **(Annexure II)** with the following riders:

- 14.12.2021: Item #6 – Release sought by a regular Institute PhD research scholar before the completion of the PhD program, and the refund of scholarship amount received till date, shall be guided by the PhD regulations, while that sought by other regular PhD research scholars, funded by an external funding agency, shall be guided by the regulations of the respective funding agency.

- 14.12.2021: Item #8 - The Senate resolved the following addendum in the clause 2.3.3 of the PhD regulations.
  "The Chairman of the Senate is empowered to decide on the appeal by a Professional PhD student for a partial relaxation in residential requirement in a very special case, only on the recommendations of the DSC and RAC."

- 14.12.2021: Item #8 - The Senate approved the discontinuation of Som Subhra Dutta, subject to the refund of scholarship he has received till date, if stipulated by the funding agency.

- 27.01.2022: Item #4 - The Senate permitted the respective DSC to conduct the pre-registration seminars of Rohan Jadhav (18BT1103), Parboti Golui (18CH1502) and Anuj Kumar Pandey (19EE1501) within 3 months. However, the DSC of Rohan Jadhav (18BT1103) and Parboti Golui (18CH1502) will apprise the Chairman, Senate of the impediments in the progress of their doctoral studies.

- 27.01.2022: Item # 11 - The Senate approved the proposed format of the PhD Provisional certificate **(Annexure - III)**.

- 27.01.2022: Item # 12 – The Senate advised the DSC, DRPC and RAC to submit a clear recommendation on further extension of the PhD tenure of Chinmayee Behera (Reg. No. NITD/PhD/ME/2017/00926) of ME department.

- 27.01.2022: Item # 15 – The Senate resolved that a PhD specialization certificate **(Annexure IV)** shall be issued by the Dean (Academic Research) to the candidates of the Department of Humanities and Social Sciences (HS), who were awarded PhD degree in the 17th Convocation on specific and clear recommendation by the respective DSC and endorsement by the RAC on the specialization of the candidate in PhD studies. However, there shall be no amendment in the PhD degree certificate.

- 12.04.2022: Item #4 – The Senate granted one-year extension in the registration period beyond what is permitted in the PhD regulations in the Academic Year 2022-2023 on specific recommendation of the respective DSC. It will be applicable for the registered candidates whose research was hampered by COVID-19.

- 12.04.2022: Item # 6 – The Senate permitted the conduction of Pre-registration seminar of Bikramjit Mukherjee (19ME1502) and Rajrup Saha (18EC1106) within July 2022.

- 12.04.2022: Item # 11 – The Senate resolved that all the PhD-related seminars (other than the ones already scheduled) shall henceforth be conducted in offline mode except the PhD defence seminar which may be conducted either in online or offline mode, depending on the availability and convenience of the external examiner.

- 12.04.2022 Item # 12 – The Senate approved the proposed amendments in the PhD regulations with respect to clauses 1.1, 2.4.3.3 and 6.2.2.

- The discontinuation of the following 7 students from the PhD programme was approved by the Senate.

  (i) Suvashree Mukherjee (19CR1101) (ii) Somsubhra Dutta (19 BT1111, UGC Fellow), (iii) Putul Gorai (21EC1102), (iv) Ranashree Das (16ME1105), (v) Anita Barman (21MA1105), (vi) Amrita Gorai (14/ECE/1507) and (vii) Santanu Mondal (21BT1107)

Item No. 66.6 To consider revision in cl. 13.7 of the PhD regulations in respect of uploading the full text of PhD thesis in INFLIBNET

The Senate resolved to follow the instructions of the Ministry of Education as outlined in its communication F.No.31-10/2021-TS II for uploading of full text of the PhD theses in the Sodhganga repository immediately after the approval of the award of PhD degree. The clause 13.7 in the PhD regulations shall be amended as:

"13.7. The Institute shall submit the soft copy of the thesis to the INFLIBNET after the approval of the award of the PhD degree".

PART D: ACADEMIC MATTERS REQUIRING THE APPROVAL OF THE BOG

Item No. 66.7 To consider a change in the specialization name of the existing M. Tech. program offered by the department of ECE from "Telecommunication Engineering" to "Next Generation Communication and Networks".

The Senate recommended the proposed change in the specialization name of the existing M. Tech. program offered by the department of ECE from "Telecommunication Engineering" to "Next Generation Communication and Networks" with effect from AY 2022-23. Minor changes in the proposed curriculum, prepared in association with external experts, shall be incorporated by the DPAC of the Department of Electronics & Communication Engineering. The Chairman, Senate was authorized by the Senate to approve the revised curriculum, which, along with the eligibility criteria and the seat matrix shall be placed for consideration by the Board of Governors in its next meeting.

The Senate also recommended that the proposal submitted for NBA accreditation of the existing M. Tech. programme in Telecommunication Engineering be withdrawn.

Item No. 66.8 To consider the modalities for starting self-financed M. Tech. programs from AY 2022-23.

The Senate opined that comprehensive and structured proposals should be prepared by the willing departments in a common format, indicating the curriculum, syllabus, eligibility criteria for admission, seat matrix, content delivery and evaluation methods, tuition fee, etc. The Senate advised the proposing departments to interact with each other and ensure that the proposals are placed in the next meeting of the Senate through proper channel.

Item No. 66.9 To consider the modalities for starting self-financed MBA program from AY 2022-23.

The Senate advised the department of MS to interact with the departments willing to offer self-sponsored M. Tech. programs, revise their proposal and ensure that it is placed in the next meeting of the Senate through proper channel.
The Senate also resolved that separate degree nomenclature of the self-sponsored programs should be chosen to differentiate these from the regular academic programs offered by the Institute.

Item No. 66.10 To consider offering the M. Tech. program in Operations Research jointly by three departments.

The Senate recommended the proposal of offering M. Tech Programme in Operations Research jointly by three departments – Mathematics, Management Studies and Computer Science & Engineering with effect from AY 2022-23. The exiting M. Tech. program in Operations Research offered by the Dept. of Mathematics alone shall no longer be offered from AY 2022-23. The Senate also approved the eligibility criteria, revised curriculum and syllabus of the programme prepared in association with external experts and recommended by the PGAC.

The recommendations of the Senate shall be placed in the next meeting of the Board of Governors for due approval.

Item No. 66.11 To consider the Fee Structure for the AY 2022-23.

The Senate recommended the revised Fee structure (**Annexure V**) for the admission year 2022-23 for the UG, PG and PhD students, and recommended the withdrawal of the concessions given to the existing students due to COVID 19. The recommendations of the Senate shall be placed in the next meeting of the Finance Committee for due approval.
The Senate further constituted the following Committee for conducting a comparative study including all NITs and IIEST Shibpur and proposing revised user charges in the Fee Structure for the students.

- Prof. P.P. Sengupta, Professor, Department of Humanities & Social Sciences, Chairman
- Dr. Gautam Banerjee, CMA, Associate Professor, Department of Management, Member
- Dr. Anupam De, CA, Associate Professor, Department of Management, Member
- Dr. Siddhakam Bhattacharya, CMA, External Member.

PART E: OTHER MATTERS

Item No. 66.12 To consider revision in the mode and weightage of the end-term examination (even semester, 2021-22) for the UG and PG students.

The Senate ratified the resolutions taken in the meeting of the HODs and Deans with the Chairman, Senate on 31/03/2022 for revision in the mode and weightage of the end-term examination (even semester, 2021-22) based on the resolution of a meeting held between the Deans and the student's representatives on 30/03/2022. Students having back-log examination shall also be allowed to follow the revised mode and weightage as approved for the end-term examination, even semester 2021-22.
During the regular examinations, faculty members shall combine the CA3 and end-term marks components and submit under the end-term (out of 60 marks) through Chanakya software.
The Senate also resolved that the supplementary examinations (2021-22) shall be held offline and would carry 60 marks.

Item No. 66.13 To consider issues related to possible placement of students from Bangladesh through the Career Development Centre of the Institute.

The Senate recommended to consider the offer of internship and campus placement of the students from Bangladesh by the recruiters from Bangladesh through the Career Development Centre of NIT Durgapur. However, a-priori signing of MoU between the company and NIT Durgapur will be needed for the same.

The Senate also agreed in principle to the proposal of possible placement opportunities of foreign students from Bangladesh through the Career Development Centre of the Institute through a revisit of the extant norms.
In addition, the Senate resolved to revisit the existing norms for identifying any lacunae that might be in conflict with the extant norms.

Item No. 66.14 To consider the framework proposed by the Chairman, Continuing Education Centre in regard to internship at NIT Durgapur.

The Senate approved the proposal of the Chairman, Continuing Education Centre for reframing the resolution adopted in the 54th Meeting of the Senate in regard to internship at NIT Durgapur, and suggested a change in the fee for internship in NIT Durgapur as follows: Rs. 3000/- per month.

Item No. 66.15 To consider issues related to the removal of gender bias through suitable change in the Institute motto as displayed in the Institute logo.

The Senate resolved to organise a competition amongst the faculty, staff, student and alumni for selection of an appropriate motto.

Item No. 66.16 To consider constituting an Advisory Committee for monitoring the smooth running of activities of the SRCC.

The Senate approved the constitution of the following Advisory Committee for monitoring the smooth running of activities of the SRCC as proposed by the Dean (R&C).

1. Dean (Academic Research)
2. Dean (FW)
3. Prof. Ajit Kumar Meikap, Previous Dean (R&C)
4. Prof. Dipankar Sukul (CY) – Senate Nominee
5. Prof. Susmita Dutta (CH) – Senate Nominee
6. Dr. Aniruddha Chandra (EC) – Director's Nominee
7. Dr. Sayantari Ghosh (PH) - Director's Nominee

Item No. 66.17 Any other matter with the permission of the Chair.

66.17.1 To consider the recommendation of the MoU Committee meeting held on 14.04.2022

- The Senate recommended the signing of MoU between NIT Durgapur and Udyam Ventures Private Limited, New Delhi.
- The Senate also recommended the signing of MoU between NIT Durgapur and the Department of Metallurgical Engineering, Kazi Nazrul Univertsitty, Asansol after its recirculation amongst the possible stakeholders for increasing the scope of activities.
- The Senate also resolved that all MoU proposals should henceforth be routed through the HoD(s), Director and then the MoU Committee for placing it to the Senate for consideration.
- The Senate resolved that the Research Methodology course for the PhD students shall be conducted online though the end term examination would be conducted off-line.

The meeting ended with a vote of thanks to the Chair.

Soumyadeb Sharma

DEAN (ACADEMIC RESEARCH)
15.04.2022

NATIONAL INSTITUTE OF TECHNOLOGY DURGAPUR

Academic Section

Date: 31.05.2022

Minutes of the meeting of UGAC and PGAC held jointly at the meeting room of the academic section on 31.05.2022 (Tuesday) at 03.00 pm.

The Chairman welcomed the members to the meeting.
The agenda items were placed for discussion.

Item # 1 Confirmation of the minutes of UGAC and PGAC held on 11.04.2022.

The minutes of the UGAC and PGAC meeting held on 11.04.2022 were confirmed.

Item # 2 To consider ratification of provisionally published results of 1st Semester UG, 2021-22.

The provisionally published results of 1st Semester UG, 2021-22 is ratified. Also, corrigendum results is recommended for approval by the Senate.

The marks obtained under different sessional subjects of the students bearing Roll Nos. 21D80083, 21D80087 and 21F80086 are to be rechecked by concerned subject teachers.

Item # 3 To consider the publication of even semester regular / backlog results 2021-22 (other than first year UG).

The even semester 2021-22 regular, backlog results (other than first year UG) are recommended for approval and subsequent publication on public domain.

- No distinction will be awarded for the B. Tech and M. Tech Dual Degree program and Integrated M.Sc program.
- Due to a mistake in the assignment of credits to the subject CSC404 – Object Oriented Programming (results has been published with 2 credits, however, the subject is of 3 credits), modification of results in Semesters 4, 5, 6 and 7 were necessary for BTECH 8th semester students of AY 2021-22 and it is recommended by UGAC. All such students shall be issued revised grade cards.
- Results of 648 students of 4th semester under graduate program are kept withheld and will be subsequently published on 25.07.2022 upon receipt of clearance from the office of Chief Warden and / or Dean (Students Welfare) (Annexure I).

Item # 4 To consider the minutes of the meeting of Examination Disciplinary Committee held on 10.05.2022.

The minutes of the meeting of Examination Disciplinary Committee held on 10.05.2022 is recommended for approval.

Item # 5 To consider the matter regarding not appearing for end semester examination 2021-22 due to medical reasons.

- **Rajib Sarkar - Roll No. 19ME8045 - HSC631, MEE613, MEE625**
- **Shreya Lama - Roll No. 20CS8019 - CSC405, EEO440**

The students will be allowed to appear for supplementary examination 2021-22 under medical reasons (without deduction of grades).

hmi
Dean (Academic Courses)
National Institute of Technology
Durgapur-713209 India

Item # 6 **To consider the appeal on cancellation of admission –**

Sl No.	Reg. No.	Roll No.	Name	Programme / Department
1	20U10696	20F80070	RISHABH TA	B. TECH
2	20U10127	20CS8043	SUMAN DAS	B. TECH
3	21U10092	21B80010	ANKIT HOWLADAR	B. TECH
4	21U10339	21I80034	SOUGATA BOSE	B. TECH
5	19U10726	19MM8054	B. SAI VISHNU VARDHAN	B. TECH
6	20U10844	20CS8190	PRAMITA SAMANTA	B. TECH

The matter of withdrawal by the respective students are accepted. The Institute fee and Hostel fee paid by the candidates/students will not be refunded. Institute caution money, if any, may be refunded to the bank account of the individual students at the end of the current financial year.

However, no refund will be admissible to the candidates, who do not take admission to the Institute after final allotment of seats through centralized counselling such as CCMT, CCMN, CSAB, JoSAA, etc. Entire amount paid by such candidates during the counselling process and admission process will not be refunded.

Item # 7 **To consider the matter regarding correction of records on Chanakya portal.**

- Sudipto Swar (Roll No. 20ME8181) – Date of Birth to be corrected as 05/10/2000
- Niloy Deb (Roll No. 20CS8122) – Mothers surname to be corrected as Mojumder

The matter of correction may be incorporated in the Institute academic software.

Item # 8 **To consider the request regarding incorporation of NPTEL and UDEMY courses on the grade card of Pranjal Mittal (Roll No. 18EC8073).**

The matter is discussed in detail and decided that the entry of marks will be done from the end of the Department concerned.
Henceforth, all such cases (credit course as well as audit course) will be done in accordance with the provisions of the regulation related to credit transfer.

Item # 9 **To consider the matter regarding the minutes of DAC meeting of CH Department held on 29.04.2022 on**

- **Offering a new open elective for 5th semester UG students (Solid and Hazardous waste management with a holistic approach – CHO541).**
- **On assigning coordinator for Dual Degree program.**
- **Conduct of end semester examinations.**

The matter is discussed and it is decided that the syllabus will be endorsed by the Department and will be sent to the Dean (Academic Courses) by 30.06.2022.

hmi
Dean (Academic Courses)
National Institute of Technology
Durgapur-713209 India

Item # 10 **To consider the matter of conversion from M. Tech Regular mode to M. Tech Off campus mode after successful completion of the first year of the programme by Kotha Venkatesh (Roll No. 20CE4212 / Reg. No. 20P10242.**

The matter is recommended for approval and the scholarship are to be discontinued. However, there will be a modification in the application form where the date of joining to the organization is to be mentioned which has to be recommended and forwarded by the respective Head of the Department as applicable for termination of scholarship

Item # 11 **To consider the matter related to Best Project Awards (UG and PG).**

Sri Akash Manna (Roll No. 18CS8129) and Sri Sayantan Chatterjee (Roll No. 20EE4115) were selected respectively for best under graduate project award 2021-2022 and best post graduate project award 2021-2022 (refer to Annexure – II)

Item # 12 **To consider the Academic Calendar 2022-23.**

The matter is recommended for approval. (Annexure III)

Item # 13 **To consider the schedule of**

- **Supplementary / backlog examination for final year 2021-2022 and first year 2021-2022**
- **Alternative midterm examination for first year 2021-22**
- **Midterm examination of XXC01**

The matter is discussed and resolved that

- Supplementary / backlog examination for final year 2021-2022 and first year 2021-2022 will be held during June 13 – 17, 2022
- Alternative midterm examination for first year 2021-22 will be held during June 20 – 24, 2022
- Midterm examination of XXC01 will be held in offline mode as per the schedule (Annexure – IV)

The meeting ended with vote of thanks to the Chairman.

Date: 30.05.2022

Minutes of the meeting held on 28.04.2022 and 25.05.2022 for evaluation of best Undergraduate Project Award and best Postgraduate Project Award 2021-2022.

The meeting is chaired by Prof. P. Kumbhakar Dean (Academic Research) and attended by Prof. N. B. Hui, Dean (Academic Courses), Prof. K. C. Ghanta, Dean (R & C), Prof. R. Mahapatra, Dean (Students' Welfare), Dr. S. K. Lahiri, Department of Chemical Engineering, Dr. Sayantari Ghosh, Department of Physics, Dr. A. Goswami, Department of Mechanical Engineering and Dr. A. Bhattacharya, Department of Electrical Engineering.

1. The project of Sri. Akash Manna (Roll No.: 18CS8129) was selected for best Undergraduate project award 2021-2022 among ten entries from the department of Biotechnology (2), Civil Engineering (2), Chemical Engineering (1), Electronics and Communication Engineering (2), Mechanical Engineering (2) and Computer Science and Engineering (1).
2. The project of Sri. Sayantan Chatterjee (Roll No.: 20EE4115) was selected for best Postgraduate project award 2021-2022 among eight entries from the department of Civil Engineering (1), Chemical Engineering (1), Electronics and Communication Engineering (1), Mathematics (1), Electrical Engineering (2), Metallurgical and Materials Engineering (1) and Computer Science and Engineering (1).

The meeting ended with vote of thanks to the Chairman.

Prof. N B Hui
Dean Academic Courses
NIT Durgapur

Respected Prof Hui

Today in a DAC meeting DAC DMS has unanimously agreed with the communication of Dr. M Islam, invited faculty member of this course and has decided
i) mid term of the Course "Constitution and Civic Norms" will be of 10 multiple question answer types and each question will be of 2.5 marks each.
ii) duration of the examination would be of 30 minutes.

This above resolution is for your kind consideration and requisite approval from appropriate authorities

Thanking you
HOD DMS

NATIONAL INSTITUTE OF TECHNOLOGY DURGAPUR

Academic Section

Date: 29.07.2022

Minutes of the meeting of UGAC and PGAC held jointly at the meeting room of the academic section on 29.07.2022 (Friday) at 03.00 pm.

The Chairman welcomed the members to the meeting.
The agenda items were placed for discussion.

Item # 1 **Confirmation of the minutes of UGAC and PGAC held on 31.05.2022.**

The minutes of the UGAC and PGAC meeting held on 31.05.2022 were confirmed.

Item # 2 **To consider the publication of**

a. **Final Year UG supplementary / special back-log examination 2021-22**
b. **1st semester UG supplementary examination 2021-22**
c. **2nd semester regular examination 2021 - 2022**

The results are recommended for approval and subsequent publication on public domain.

Md. Aman Alam (Roll No. 21E80025) was Reported Against for adopting unfair means in "Constitution of India and Civic Norms" (XXC01) and the matter will be dealt in accordance with the existing norms / provisions of the regulations of UG program.

Supplementary examination 2021-2022 will be held from 08th August 2022.

Item # 3 **To consider the list of Degree recipients and Gold medal recipients of B.Tech programme (706 + 04 of previous years), B.Tech and M.Tech Dual Degree programme (08), Integrated M.Sc programme (08), M.Tech programme (281). M.Sc programme (88), MBA programme (29) and MSW programme (02) to be awarded in 18th Convocation.**

The list is prepared and presented to the Senate for recommendation. (Annexure I)

Item # 4 **To consider the appeal on cancellation of admission –**

Sl No.	Reg. No.	Roll No.	Name	Programme
1	21P10374	21EE4218	MD SHARFUDDIN	M. TECH
2	20U10750	20BT1006	ADITYA CHOWDHURY	DUAL DEGREE

The matter of withdrawal by the respective students are accepted. The Institute fee and Hostel fee paid by the candidates/students will not be refunded. Institute caution money, if any, may be refunded to the bank account of the individual students after the current financial year.

Dean (Academic Courses)
National Institute of Technology
Durgapur-713209 India

However, no refund will be admissible to the candidates, who do not take admission to the Institute after final allotment of seats through centralized counselling such as CCMT, CCMN, CSAB, JoSAA, etc. Entire amount paid by such candidates during the counselling process and admission process will not be refunded.

Item # 5 **To consider the matter regarding correction of name (to be corrected as Kinnera Harshitha Sanjivini) of Kinnera Harshitha Sanjivini (Reg. No. 21U10551) in Chanakya portal.**

The matter of correction may be incorporated in the Institute academic software.

Item # 6 **To consider modified curricula of B. Tech minor Marketing Management.**

The matter is discussed in detail and the modified curricula of B. Tech minor Marketing Management is recommended for approval (Annexure II)

Minor in Marketing Management						
Semester	**Name of the subject**		**L**	**T**	**P**	**Credits**
Sem V	Marketing Management		3	0	0	3
	Marketing Lab-I		0	0	2	1
Sem VI	Research Methodology		3	0	0	3
	Marketing Lab-I		0	0	2	1
Sem VII	Digital Marketing	Any Two	3	0	0	3
	Marketing Research		3	0	0	3
	Marketing Communication		3	0	0	3
	Consumer Behaviour		3	0	0	3
Sem VIII	Marketing Analytics	Any Two	3	0	0	3
	Sales and Distribution Management		3	0	0	3
	Service Marketing and Retail management		3	0	0	3
					Total	20

Item # 7 **To consider the matter of establishing "Non-formal Sanskrit Education Center of Central Sanskrit University".**

The matter is discussed in detail and resolved that a centre may be started in the Institute. Department of HSS will be coordinating department. Space for the centre will be allocated by the Institute.

Item # 8 **To consider the matter regarding Project Evaluation of M. Tech 2nd year students of EE Department undergoing one year internship in the industry.**

The matter is discussed and decided that detail deliberations are to be taken up at the departmental level after which the views of the departments will be placed in the next meeting of PGAC.

Item # 9 **To consider the matter on advising the students to visit Atal Tunnel, Rohtang and understand the best practices in engineering, design, planning, construction and project management.**

The Department of Civil Engineering and the office of Dean (Students Welfare) will take necessary initiative for the visit of students in batches to the Atal Tunnel, Rohtang and understand the best practices in engineering, design, planning, construction and project management.

Dean (Academic Courses)
National Institute of Technology
Durgapur-713209 India

For the first time, HOD, Dept. of Civil Engineering shall submit 10 students (UG, PG combined) to the office of Dean (Academic Courses) for recommendation and onward processing.

Item # 10 **To consider the matter on appearing the 2nd semester supplementary examination 2021-2022 under medical condition of Siddharth Singh (Roll No. 21E80087 – All subjects) and the matter regarding medical leave for one year of Sandeep Chaurasia (Roll No. 20ME8056).**

The matter will be dealt in accordance with the existing norms / provisions of the regulations of UG program.

Item # 11 **To consider the matter on modification of curriculum of M.Sc in Life Sciences and introduction of elective subjects in M.Sc basket as (Annexure III) –**

- **BT9031 – Human Molecular Genetics**
- **BT9033 – Signal Transduction**
- **BT9034 – Molecular Cell Signalling**
- **BT9035 – Food Biotechnology**
- **BT9041 – Advanced rDNA Technology and Cellular Biotechnology**

The matter is recommended for approval.

Item # 12 **To consider the matter on shifting of Open Elective (HSO542: Culture and Communication and MMO541 – Basic Manufacturing Processes) from 5th semester to 7th semester with revised codes HSO742 and MMO741 and introduction of two open elective subjects (CSO744: Computational Biology and its Applications, ECO742: Mobile Communication).**

The matter is recommended for approval (Annexure IV) from the AY 2022-23.

Item # 13 **To consider the matter of DPAC meeting dated 29.04.2022, DAC meeting dated 10.06.2022 and DAC / DPAC meeting dated 28.06.2022 of the Department of Chemical Engineering (Annexure V)–**

- **The change of credit points & syllabus revision for a subject under the PG (Specialization: Chemical Engineering) program.**
- **Offering of Depth Elective (Self-Mastery – CHE 720) for 7th semester UG students.**
- **Proposal for separate Dual Degree program regulations.**

Resolved that

- The change of credit points & syllabus revision for a subject under the PG (Specialization: Chemical Engineering) program. – will be taken up in the next PGAC
- Offering of Depth Elective (Self-Mastery – CHE 720) for 7th semester UG students. – Not recommended as a Depth Elective and referred to the department.
- Proposal for discontinuation of Dual Degree program – will be taken up later.

Item # 14 **To consider the matter of correction of Course code EE 4052 (misprinted as EE 40521 on grade cards) of Course name – "Seminar and Viva Voce" in the grade cards of 4th semester 2009 – 2010 of Electrical Engineering (Electrical Systems) and correction of misprints on the grade cards of all four semesters of M.Sc in**

Dean (Academic Courses)
National Institute of Technology
Durgapur-713209 India

Life Sciences and M.Sc in Applied Geology and Geoinformatics for admission year 2020-2021.

The matter is recommended for approval.

Item # 15 **To consider the matter regarding disposal of checked answer scripts of examinations lying with the Departments (UG regulations and PG regulations – clause 12.14).**

Respective departments will take up the matter regarding disposal of checked answer scripts of examinations lying with the Departments with the office of Assistant Registrar (Estate and Security) / Estate Section of the Institute.

Item # 16 **To consider the matter of including electives in the PG curriculum of Microelectronics and VLSI, ECE Department and few open elective subjects for UG curriculum (Annexure IV).**

- **Digital Signal Processing using MATLAB (EC9001) (3-0-2)**
- **Applications of image processing using Python (EC9003) (3-0-2)**
- **FPGA based design (EC9031) (3-0-2)**
- **ASIC design using Verilog / VHDL (EC9036) (3-0-2)**
- **Introduction of following open Elective subjects and some corrections in Minor program (Annexure VI)**

Paper Code	Paper Name
ECO442	Electronic Design
ECO742	Mobile Communication
ECO743	Internet of Things
ECO843	EMI/EMC
ECO853	Electronic System Design

The matter is recommended for approval (ECO742 is already discussed in Item # 12).

Item # 17 **To consider the matter regarding commencement of daily classes from 8.00 am as per routine with class duration of 55 minutes per class.**

The matter is recommended for approval.

The meeting ended with vote of thanks to the Chairman.

18TH CONVOCATION

TENTATIVE DATE OF CONVOCATION: 2ND WEEK OF SEPTEMBER 2022

LIST OF INSTITUTE GOLD MEDAL RECIPIENTS OF POST GRADUATE PROGRAMME

Sl. No.	Regn. No.	Roll No.	Institute Gold Medal	to Name	In recognition of being	in	(Department of……….)	in the academic session ending in June 2022
1	20P10112	20BT4103	Institute Gold Medal	Shalini Das	In recognition of being First in Master of Technology	in Biotechnology	(Department of Biotechnology)	in the academic session ending in June 2022
2	20P10107	20CE4106	Institute Gold Medal	Bajrabahu Dhananjay Narayan Deo	In recognition of being First in Master of Technology	in Structural Engineering	(Department of Civil Engineering)	in the academic session ending in June 2022
3	20P10083	20CE4204	Institute Gold Medal	Abdul Waris	In recognition of being First in Master of Technology	in Geotechnical Engineering	(Department of Civil Engineering)	in the academic session ending in June 2022
4	20P10452	20CH4112	Institute Gold Medal	Nikitha Lohia	In recognition of being First in Master of Technology	in Chemical Engineering	(Department of Chemical Engineering)	in the academic session ending in June 2022
5	20P10089	20CS4111	Institute Gold Medal	Debasish Kalita	In recognition of being First in Master of Technology	in Computer Science and Engineering	(Department of Computer Science and Engineering)	in the academic session ending in June 2022
6	20P10061	20EC4102	Institute Gold Medal	Samyat Sahu	In recognition of being First in Master of Technology	in Telecommunication Engineering	(Department of Electronics and Communication	in the academic session ending in June 2022
7	20P10125	20EC4205	Institute Gold Medal	Jeevan Tulashiram Thakare	In recognition of being First in Master of Technology	in Microelectronics and VLSI	(Department of Electronics and Communication	in the academic session ending in June 2022
8	20P10340	20EE4115	Institute Gold Medal	Sayantan Chatterjee	In recognition of being First in Master of Technology	in Power Systems	(Department of Electrical Engineering)	in the academic session ending in June 2022
9	20P10071	20EE4204	Institute Gold Medal	Suman Karmakar	In recognition of being First in Master of Technology	in Power Electronics and Machine Drives	(Department of Electrical Engineering)	in the academic session ending in June 2022
10	20P10282	20ES4112	Institute Gold Medal	Shardul Srivastava	In recognition of being First in Master of Technology	in Environmental Science and Technology		in the academic session ending in June 2022
11	20P10086	20MA4105	Institute Gold Medal	Sanju Kushwaha	In recognition of being First in Master of Technology	in Operations Research	(Department of Mathematics)	in the academic session ending in June 2022
12	20P10069	20ME4104	Institute Gold Medal	Gangineni Sandeep	In recognition of being First in Master of Technology	in Machine Design	(Department of Mechanical Engineering)	in the academic session ending in June 2022
13	20P10092	20ME4206	Institute Gold Medal	Ashutosh Kumar	In recognition of being First in Master of Technology	in Thermal Engineering	(Department of Mechanical Engineering)	in the academic session ending in June 2022
14	20P10046	20ME4302	Institute Gold Medal	Nawes Qamar	In recognition of being First in Master of Technology	in Fluid Mechanics and Heat Transfer	(Department of Mechanical Engineering)	in the academic session ending in June 2022
15	20P10441	20MM4106	Institute Gold Medal	Akankshya Rout	In recognition of being First in Master of Technology	in Metallurgy and Materials Technology	(Department of Metallurgical and Materials	in the academic session ending in June 2022
16	20P10307	20PH4102	Institute Gold Medal	Noorbasha Bhavani Sai	In recognition of being First in Master of Technology	in Advanced Materials Science and Technology	(Department of Physics)	in the academic session ending in June 2022
17	20P20263	20BT4509	Institute Gold Medal	Neha Maurya	In recognition of being First in Master of Science	in Life Sciences	(Department of Biotechnology)	in the academic session ending in June 2022
18	20P20233	20CY4510	Institute Gold Medal	Sanju Karmakar	In recognition of being First in Master of Science	in Chemistry		in the academic session ending in June 2022
19	20P20276	20ES4511	Institute Gold Medal	Abir Banerjee	In recognition of being First in Master of Science	in Applied Geology and Geoinformatics	(Department of Earth and Environmental Studies)	in the academic session ending in June 2022
20	20P20212	20MA4507	Institute Gold Medal	Neelanjan Mondal	In recognition of being First in Master of Science	in Mathematics		in the academic session ending in June 2022
21	20P20133	20PH4508	Institute Gold Medal	Md Sohel Mondal	In recognition of being First in Master of Science	in Physics		in the academic session ending in June 2022

NATIONAL INSTITUTE OF TECHNOLOGY DURGAPUR
DEPARTMENT OF BIOTECHNOLOGY

June 22, 2022

Minutes of the Departmental Academic Committee (DAC)/ Departmental Postgraduate Academic Committee (DPAC)/Departmental Research Program Committee (DRPC) meeting held on June 22, 2022 at 3 p.m. in the Seminar Room of the Department of Biotechnology

The following members were present in the meeting:

1.	Dr. Debjani Dutta	Chairperson
2.	Prof. Apurba Dey	Member
3.	Prof. Sudit Sekhar Mukhopadhyay	Member
4.	Prof. Kaustav Aikat	Member
5.	Prof. Dalia Dasgupta Mandal	Member
6.	Dr. Monidipa Ghosh	Member
7.	Dr. Subhankar Roy Barman	Member
8.	Dr. Debojyoti De	Member
9.	Dr. Sudipta Mondal	Member
10.	Dr. Amita Barik	Member
11.	Dr. Oindrilla Mukherjee	U.G Coordinator
12.	Dr. Ashish Bhattacharjee	P.G (M.Sc) Coordinator
13.	Dr. Nibedita Mahata	P.G (M.Tech)Coordinator
14.	Dr. Sougata Saha	PhD Coordinator

The resolutions of the meeting are as follows:

1. The Load distribution for the ODD semester for the academic session 2022-2023 was discussed and is given as Annexure I.

2.In accordance with PG regulation 2017 (amended June 2021) clause no 11.3 (ii); the members have no objection in Mr. Sauma Suvra Majumdar (18BT1004) pursing his Master thesis work under the joint guidance of Dr. Debojyoti De, NIT Durgapur and Dr. Mohit Kumar Jolly, Assistant Professor, Centre for BioSystems Science and Engineering, Indian Institute of Science, Bangalore.

3. For academic year 2022-2023; BT3052 will be evaluated based on an original article presented by the students in presence of all the faculty members of the Department. Dr. Debjani Dutta will be in charge of the entire process.

4. A set of departmental norms has been consolidated based on DAC resolutions. The same would be circulated among the B.Tech/B.Tech-M.Tech (Dual Degree) M.Tech/M.Sc students and is given as Annexure II. All Departmental norms circulated are subjected to amendments as and when required.

5. The M.Sc. Life Science curriculum was modified to include the following electives from the existing M.Tech curriculum to the M.Sc elective basket. This was done to increase the choice of electives among the M.Sc students.

i) BT9031 Human Molecular Genetics

ii) BT9033 Signal Transduction

iii) BT9034 Molecular Cell Signalling

iv) BT9035 Food Biotechnology

v) BT9041 Advanced rDNA Technology and Cellular Biotechnology

6. The members appreciated the efforts of Mr. Pravesh Tamang, (Alumni-Batch 2015), currently working as a scientific assistant in the Science and Technology Wing at the Embassy of India in Berlin in reaching out to the Department to help in establishing collaboration with German institutions or universities. It was further resolved that he may be invited for the Research Day and requested to further brief the faculty members and students on the various modalities.

7. The Committee for outdoor unit reinstallation of Air Conditioner stands ratified and is composed of the following members: Dr. Subhankar Roy-Barman; Dr. Nibedita Mahata and Dr. Sudipta Mondal.

8. The members all resolved to inform their respective research scholars to be more cautious and return the Departmental keys to the Security Control Room upon completion of work.

The meeting ended with thanks to the Chair.

Debjani Dutta
22/6/22

Dr. Debjani Dutta

NATIONAL INSTITUTE OF TECHNOLOGY DURGAPUR

Department of Chemical Engineering

Date: 28.06.2022

Minutes of DAC/DPAC meeting held on 28th June 2022 (Tuesday) from 10.30 pm onwards at the Departmental Meeting Room.

The following members were present during the meeting:

1. Dr. Parimal Pal, Professor (HAG)
2. Dr. Kartik Chandra Ghanta, Professor
3. Dr. Tamal Mandal, Professor
4. Dr. Anup Kumar Sadhukhan, Professor
5. Dr. Gopinath Halder, Professor
6. Dr. Susmita Dutta, Professor — S. Dutta 30/6/22
7. Dr. Jaya Sikder, Associate Professor (Chairperson)
8. Dr. Sandip Kumar Lahiri, Associate Professor
9. Dr. Mrinal Kanti Mandal, Associate Professor
10. Dr. Swapan Paruya, Associate Professor
11. Dr. Bimal Das, Assistant Professor
12. Dr. Abhiram Hens, Assistant Professor
13. Dr. Bikash Kumar Mondal, Assistant Professor
14. Dr. Rajib Ghosh Chaudhuri, Assistant Professor
15. Dr. Ananta Sarkar, DST-Inspire Faculty — Ananta Sarkar 29.06/22

The resolutions taken in the meeting are as follows:

Item # 2: To consider the responsibility distribution of unattended subjects in UG and Dual Degree curriculum in compliance with MOM dated 10.06.2022.

The subject's responsibility, CHE 613: Combustion Engineering, was taken by Prof. A. K. Sadhukhan. Prof. Gopinath Halder will provide all his modules' inputs to Prof. Sadhukhan as required.

Following unattended subjects were removed from the Dual Degree Program:

CH9017	Process Intensification and Green Technology
CH9019	Bioprocess and Bioreactor Engineering
CH9022	Combustion Engineering
CH9024	Project Engineering and Management
CH9025	Hazard Analysis and Risk Management in Chemical Industry
CH9029	Catalysis in Chemical Industry

Item # 4: To consider the future of the Dual Degree program in Chemical Engineering and the proposal for separate Dual Degree regulations.

Based on the several communications of dual degree students (pass out batches: 2021-22, 2022-23, 2023-24, **Annexure-III**), the Department analyses the feasibility of continuing the Dual Degree Program in the long run.
It is cumbersome to apply for NBA for seven numbers of the sanctioned seat and 3-5 practically admitted students considering it a separate program that mandates accreditation. The success rate

will be difficult to justify in the context of the present placement scenario of 1st passed-out batches in the 2021-22 academic year.

Hence the Department strongly recommended closing down the dual degree program from 2023-24 academic year onwards.

The sanctioned seven-seat may be merged with the BTech program; hence, the total BTech sanctioned strength will be 75 (present) + 7 = 82 seats.

Item # 5: To consider the shortlisting of candidates under sponsored MTech program & finalization of advertisement for the self-sponsored MTech program

The applicant, Sri Subhajit Patra, was recommended for shortlisting upon fulfilling the eligibility criteria as per the advertisement (**Annexure-IV**).

The draft advertisement for the self-sponsored MTech program was accepted as received from the office of Dean (AC) and finalized.

The Chairperson ended the meeting by giving thanks to the members for their kind presence and valuable opinion.

for Bimal Das.

INTER OFFICE MEMO

NITD/ACAD/ 2022-23 Date: 27.06.2022

From:
Dean (Academic Courses)
NIT Durgapur

To:
The ~~HOD~~, CH
NIT Durgapur

Sub: Short listing of candidates - admission to M. Tech sponsored program 2022-2023 without scholarship.

1. Enclosed please find an application from Sri Subhajit Patra regarding admission to M. Tech sponsored program 2022-2023 without scholarship.

2. You are kindly requested to go through the application to look into the matter of suitability of the candidate with reference to the advertisement as enclosed.

3. You are kindly requested to reply on the matter of suitability for short listing of the candidate to the Dean (Academic Courses) by 28.06.2022 Tuesday.

Your kind cooperation in this respected is highly solicited.

27/6/2022
Dean (Academic Courses)

To The PG coordinator for N/A
27.06.22

28.6.22

To The Dean (Academic Courses)
Sir, The applicant, Sri Subhajit Patra is suitable for short listing for the said program as per criteria. ~~The~~ eligibility criteria are fulfilled.
28.06.22

Head of Department
Department of Chemical Engineering
National Institute of Technology Durgapur
Durgapur-713209, WB, India

28/6/22

Date: July 19, 2022

To,
The Dean of Academic Courses,
National Institute of Technology Durgapur

Dear Sir,
As per the ECE DAC meeting held on July 19, 2022, the following points are resolved:

1. To incorporate the following Open Electives (As given in Table I below) into the existing UG curriculum of the ECE department.

Table: I

Course	Specialization	Type of Elective	L-T-P	Paper Code	Paper Name
B.TECH	N/A	Open Elective	3-0-0	ECO442	Electronic Design
			3-0-0	ECO742	Mobile Communication
			3-0-0	ECO743	Internet of Things
			3-0-0	ECO843	EMI/EMC
			3-0-0	ECO853	Electronic System Design

<table>
<tr><th colspan="9">Department of Electronics and Communication Engineering</th></tr>
<tr><td rowspan="2">Course Code</td><td rowspan="2">Title of the course</td><td rowspan="2">Program Core (PCR) / Electives (PEL)</td><td colspan="4">Total Number of contact hours = 42</td><td rowspan="2">Credit</td></tr>
<tr><td>Lecture (L)</td><td>Tutorial (T)</td><td>Practical (P)</td><td>Total Hours</td></tr>
<tr><td>ECO742</td><td>Mobile Communication</td><td>PEL</td><td>3</td><td>0</td><td>0</td><td>3</td><td>3</td></tr>

<tr><td colspan="2">NIL</td><td colspan="6">Assignments, Quiz/class test, Mid-semester Examination and End Semester Examination</td></tr>
<tr><td>Course Outcomes</td><td colspan="7">On successful completion of this course, students should have the skills and knowledge to :

CO1: Apply Cellular concepts to evaluate the signal reception performance in a cellular network and traffic analysis to design cellular network with given quality of service constraints.
CO2: Determine the type and appropriate model of wireless fading channel based on the system parameters and the property of the wireless medium.
CO3: Analyze and design receiver and transmitter diversity techniques. Evaluate the data rate performance.
CO4: Application of Fundamental Digital Communication Concepts in Fading Channel. Understanding suitable Modulation Schemes for Wireless Channel
CO5: Describe and differentiate five generations of wireless standard for cellular networks. Understand wireless communication systems with key 3G (e.g., CDMA); 4G (OFDM) and 5G technologies</td></tr>
<tr><td>Topics Covered/ Syllabus</td><td colspan="7">Module I. (L - 5)
Introduction to Wireless Personal Communication, Mobile radio systems.

Module II. (L - 10)
Cellular systems concepts, principles, system design fundamentals, spectrum efficiency, frequency management, channel assignment, handoff, power control, Call blocking, Cell</td></tr>
</table>

	splitting and Directional antenna etc. **Module III. (L - 8)** Characterization of wireless radio channel, propagation path models. Fading and Shadowing. **Module IV. (L -12)** Receiver Techniques for fading Channel. Detection of Signal in Fading Channel, Receive Diversity, Transmit Diversity, Equalization, Fading mitigation. Modulation schemes for wireless Communication (MSK, GMSK), OFDM, Multiple access techniques: Spread spectrum techniques, Cellular CDMA, NOMA **Module V. (L - 7)** Wireless Networks and Standards: GSM, CDMA Cellular standard, 3G, 4G

<tr><td>Course Outcomes</td><td colspan="7">CO1: Explain the term IoT and understand the main components of IoT systems.
CO2: Recognize, interpret and apply a variety of enabling technologies, connectivity technologies and communication protocols that occur in IoT systems.
CO3: Design and analysis of a complete working IoT system involving prototyping, programming and data analytics</td></tr>
<tr><td>Topics Covered</td><td colspan="7">1. Introduction to IoT: Introduction and definition of IoT;
-Basics of networking: Network types; Network topologies; OSI model; Adressing TCP/IP;
-Predecessors of IoT: WSN; M2M; Cyber Physical Systems (5L)
2. IoT enabling technologies: Cloud computing; Big data analytics; Embedded systems;
-IoT levels: level 1 to level 6
-Introduction to sensors; actuators; microcontrollers, and their interfacing: Sensors-characteristics, types; Sensor interfacing-interfacing gas sensors with nodeMCU/ Arduino, interfacing pH sensor, interfacing pulse sensor.
-Actuators: types, functions
-Microcontrollers and overview (8L)
3. IoT communication technologies:
-Constrained nodes and networks: types; lossy and low power networks
-Protocols for messaging and transport: Messaging protocols- MQTT; CoAp; XMPP; DDS
-Protocols for addressing and identification: IPV4; IPV6; Uniform Resource Identifier (URI); 6LoWPAN; Discovery protocols like universal plug and play; multicast DNS. (6L)
4. IoT connectivity technologies: IEEE 802.15.4; Zigbee; RFID; NFC; Sigfox; LoRa; NB-IoT; WiFi; Bluetooth (2L)
5. Cloud for IoT: challenges; selection of cloud service provider; introduction to Fog computing- working principle; edge and Fog computing; security aspects. (2L)
6. Data analytics: Data analysis; Machine learning: supervised and unsupervised; Types of ML models: classification; regression; clustering; Model building process; modeling algorithm; model performance; Big data platform. (5L)
7. IoT case studies and future trends: Agricultural IoT; Vehicular IoT; Healthcare IoT; Evolution of new IoT paradigms- IoBT; IoV; IoNT; IoD; IoSpace; NFV; SDN; 5G as IoT enabler. (6L)
8. IoT hands on:-Home automation: smart lighting;Air pollution monitoring;Health care: elderly fall detection; Prevention of drowsiness of drivers by IoT based smart drivers assistance systems. (9L)</td></tr>

5. Microwave Engineering (ECC502)</td><td colspan="6">Assignments, Quiz/class test, Mid-semester Examination and End Semester Examination</td></tr>
<tr><td>Course Outcomes</td><td colspan="7">CO#1 Ability to understand the basic knowledge of the sources of electromagnetic interference and electronic equipment classes based on standards
CO#2 Ability to analyze, explain and resolve technical problems related to electromagnetic interference
CO#3 Develop an ability to devise methodologies to mitigate electromagnetic interference and make the electronic system compatible</td></tr>
<tr><td>Topics Covered/ Syllabus</td><td colspan="7">Introduction to EMI - Definitions, Different Sources of EMI (Electro-magnetic Interference), Electro-static discharge (ESD), Electro-magnetic pulse (EMP), Lightning, and Mechanism of transferring Electro-magnetic Energy: Radiated emission, radiated susceptibility, conducted emission, and conducted susceptibility, Differential & common mode currents. Concepts of EMC, EMC units. [L-8]

Transmission Line Theory: transmission by guided media, idea of propagation characteristics and computation of VSR, reflection coefficient, scattering parameters. Transients of transmission line, Time-domain Reflectrometry (TDR) basics for determining the properties of a transmission line. Planar Transmission lines Pattern of EM field distribution in a Micro-strip Line, Derivation of Effective Dielectric Constant, Characteristic impedance & Attenuation, Different Micro-strip line design examples, coupled transmission lines, concept of signal integrity [L-8]

Impedance Matching & Tuning : Purpose of Impedance matching, Factors important in the selection of a particular matching network, Different types of Impedance matching, Single stub matching, double stub matching, The quarter-wave transformer, Quarter-wave transformer bandwidth calculation, theory of small reflection, Single-section Transformer, Multi-section Transformer [L-8]

Electromagnetic Sensors and Measurement: Antenna types and their use as sensors, effective height, antenna factor, broadband and multiband electromagnetic sensors, sub wavelength electromagnetic sensors, Power losses in cable, calculation of signal source output for a mismatched load, Measuring & Test systems, Test facilities, measurements of radiated emission in open test range & in Anechoic chamber, Conducted emission testing by Line Impedance Stabilization network (LISN). [L-8]

EMC requirements for electronic systems: World regulatory bodies- FCC, CISPR etc.</td></tr>
</table>

	Class-A devices, class-B devices, Regulations of the bodies on EMC issues. **[L-6]** Mitigation Techniques Grounding: Fundamental grounding concepts, Floating ground, Single-point & Multi-point ground, advantages & disadvantages of different grounding processes. Shielding, Cross-talks & Coupling, Measurement set for measuring Cross-talk. Filtering & decoupling. **[L-6]** Electromagnetic pulse and application in warfare, electromagnetic discharge **[L-2]**

• CO 5: Investigate application specific measurement systems</td></tr>
<tr><td>Topics Covered</td><td colspan="8">Module I: Introduction to electronic systems [L-1]

Module II: Static and dynamic characteristics [L-6]
Static characteristics of elements, Dynamic characteristics of elements, Quasi-static characteristics of elements, Static characteristics of systems, Dynamic characteristics of systems, linearity, non-linearity, Sensitivity, Resolution, Repeatability, Reproducibility, Response time, Settling time, Gain, bandwidth.

Module III: Electro-Multiphysics Actuation Systems [L-7]
Electro-magnetic actuators, Electro-mechanical actuators, Electro-thermal actuators, Electro-chemical actuators, Electro-optic actuators, Additional Multiphysics Mechanisms, Electro-Multiphysics drivers.

Module IV: Microcontrollers, Microcomputers and signal processing unit [L-5]
8051, Arduino, Raspberry pi

Module V: Sensors [L-8]
Temperature sensors, Force sensors, Pressure sensors, Vibration sensors, Flow sensors, Motion Sensors, Magnetic flux sensors, Chemical sensors.

Module VI: Signal Conditioning circuits [L-6]
Bridge circuits, Amplifiers, Filters, Oscillators, ADC

Module VII: Data presentation unit [L-3]
Several data presentation devices

Module VIII: Electronic controllers [L-4]
Open loop systems, Closed loop systems, PID controllers

Module IX: Case studies [L-2]</td></tr>

NATIONAL INSTITUTE OF TECHNOLOGY DURGAPUR

Academic Section

Date: 31.08.2022

Minutes of the meeting of UGAC and PGAC held jointly at the meeting room of the Academic Section on 31.08.2022 (Wednesday) at 03.00 pm.

The Chairman welcomed the members to the meeting. The agenda items were placed for discussion.

Item # 1 **Confirmation of the minutes of UGAC and PGAC held on 29.07.2022.**

The minutes of the UGAC and PGAC meeting held on 29.07.2022 were confirmed.

The matter regarding project evaluation for the final year students of M. Tech program undergoing one year internship in the industry will be taken up after receiving the observations of the respective DPAC of all the departments.

Item # 2 **To consider the publication of**

a. **Corrigendum result – Even Semester 2021-2022.**
b. **Supplementary / Back-log results, Even Semester 2021-22.**

The corrigendum results, Even Semester 2021-22 and Supplementary / Back-log results, Even Semester 2021-22 are recommended for approval and subsequent publication.

A faculty representative from the DAC of Student Activity Centre (SAC) may be inducted in the UGAC as a member, on approval of the Senate.

Item # 3 **To consider the appeal on cancellation of admission –**

Sl No.	Reg. No.	Roll No.	Name	Programme
1	22P10359	22EE4110	ROOPSI VERMA	M.TECH
2	22P40010	22MB4010	MIDDE CHANDANA	MBA
3	21U10033	21C80004	MANIK SULTANIA	B.TECH
4	22P10350	22BT4112	ABHISHEK KUMAR	M.TECH
5	21U10733	21C80074	SOUNAK MUNSHI	B.TECH
6	22P20330	22BT4513	ROMI RISHIT GEORGE	MSC

The matter of withdrawal by the respective students is accepted. The Institute fee and Hostel fee paid by the candidates/students will not be refunded. Institute caution money, if any, may be refunded to the bank account of the individual students after the current financial year.

No refund will be admissible to the candidates, who do not take admission to the Institute after final allotment of seats through centralized counselling such as CCMT, CCMN, CSAB, JoSAA, etc. Amount paid by such candidates during the counselling process and admission process will not be refunded.

Item # 4 **To consider re-admission of Md. Faisal (Roll No. 19ME8158, Reg. No. 19U10731) to 5th Semester 2022-2023 and Souvik Kumar Saha (Roll No 21F80063, Regn. No.21U10626) to 2nd Semester 2022-2023.**

The matter is recommended for approval.

Dean (Academic Courses)
National Institute of Technology
Durgapur-713209 India

Item # 5 **To consider the academic matter related to Debadrita Banerjee (Reg. No. 21U10750) and Dande Harshini (Roll No. 20BT8005, Reg. No. 20U10176 – B. Tech in Biotechnology) Ragiri Shireesha (Roll No. 20BT1007, Reg. No. 20U10756 – Dual Degree in Biotechnology) and Sobhag Bairwa (Roll No. 21D80083, Reg. No. 21U10824 – B.Tech in Computer Science and Engineering) .**

The matter was discussed in detail and it was resolved that

- Since Debadrita Banerjee (Reg. No. 21U10750) could not appear in all the examinations of her study in second semester, 2021-22, (due to medical reasons) she is recommended to take re-admission in 2nd Semester 2022-2023 in accordance with the provisions of the regulations of UG program.
- As per the records of even semester 2020-21, Dande Harshini (Roll No. 20BT8005, Reg. No. 20U10176 – B. Tech in Biotechnology) Ragiri Shireesha (Roll No. 20BT1007, Reg. No. 20U10756 – Dual Degree in Biotechnology) were declared "Failed" in the second semester of their study. Therefore, they are recommended to take re-admission in 2nd Semester 2022-2023 in accordance with the provisions of the regulations of UG program.
- Sobhag Bairwa (Roll No. 21D80083, Reg. No. 21U10824 – B.Tech in Computer Science and Engineering) is recommended to take re-admission in 1st Semester 2022-2023 in accordance with the provisions of the regulations of UG program.

Item # 6 **To recommend the matter related to change of branch for admission year 2021-2022 of B. Tech / Dual Degree / Integrated M. Sc Program.**

The matter is recommended for post facto approval as the branch changes are already implemented upon receipt of approval on circulation from the UGAC members.

Item # 7 **To consider the matter on appearing the 2nd semester supplementary examination 2021-2022 under medical condition of - Vidhi Srivastava (Roll No. 21F80043 – MAC02, ESC01, CYC01, PHC01, XXC01) Samarth Kumar Wadhawan (Roll No. 21J80080 – MAC02, ESC01, CYC01, PHC01, XXC01), Rajiv Sarkar (Roll No. 19ME8025 – MEE 613, MEE 625, MEE 631), Agnivo Ghosh (Roll no. 21H80011 - CYC 01, PHC 01, ESC 01, MAC 02, XXC 01), Ch Sanghamitra (Roll no. 20CS 8094 – CHO 441, CSC 401, CSC 402, CSC 403, CSC 404, CSC 405)**

The matter will be dealt in accordance with the existing norms / provisions of the regulations of UG program.

Item # 8 **To consider the matter of minor modifications in UG syllabus.**

The matter is finalized after incorporating minor modifications in UG curriculum and syllabus (See Annexure I).
It has been observed that some overlaps exist among a few subjects (open elective subjects offered by different departments, core/departmental electives offered by one department to open elective subjects offered by the other departments or vice-versa). To resolve this matter, following initiatives are to be taken by the departments at the earliest

(a) Grouping of similar subjects within/across the programs and floating in the same semester
(b) A table (see the example below) showing mapping between a subject to their pre-requisite subjects and subjects having similar content as follows

Dean (Academic Courses)
National Institute of Technology
Durgapur-713209 India

Table 1: Mapping table between pre-requisite and similar subjects

Subject Code	Codes of pre-requisite subject (s)	Codes of similar subject (s)
ECO740: Biomedical Instrumentation	NIL	EEO741: Biomedical Instrumentation EEO841: Biomedical Instrumentation
ECO542: Artificial Intelligence and Soft Computing	NIL	CSO843: Soft Computing Techniques EEO850: Soft Computing Techniques

Item # 9 **To consider the changes in Academic Calendar for first year UG students.**

The revised Academic Calendar incorporating the academic activities of first year UG students is recommended for approval of the Senate. (See Annexure II)

Item # 10 **To consider the modalities to be followed for content delivery and evaluation of 8th Semester UG students.**

Resolved for approval of the Senate that

- Mode of content delivery (for the theory and sessional subjects) will be online for all students in the 8th semester. However, end-term examination will be conducted offline in the institute.
- Evaluation of the internship report as a project report for the students opting to go for full semester industry internship will also be done in the offline mode along with the students staying on campus of the institute.

Item # 11 **To consider the matter related to upgrade the seat matrix of M. Tech (Microelectronics and VLSI Program) of ECE Department (intake from 20 to 40).**

The matter was discussed in detail. It has been observed that some of the MTECH programs of NIT Durgapur such as MTECH in Mirco-electronics and VLSI, MTECH in Structural Engineering are more preferred by the students. On the other hand, there are less number of applicants in some of the MTECH programs such as MTECH programs in Chemical Engineering, Chemical Engineering (Specialization in Energy Resources and Sustainable Environmental Engineering), Advanced Material Science and Technology, Metallurgy and Materials Technology over the past few years.
In view of the above, following measures are recommended for approval of the Senate:
(a) Increase in sanctioned intake of the more preferred MTECH programs, such as MTECH in Mirco-electronics and VLSI and MTECH in Structural Engineering
(b) Decrease in sanctioned intake / merger of two or more non-preferred MTECH programs such as MTECH programs in Chemical Engineering, Chemical Engineering (Specialization in Energy Resources and Sustainable Environmental Engineering), Advanced Material Science and Technology, Metallurgy and Materials Technology.
DPAC of non-preferred MTECH programs are requested to deliberate on the same and submit their views before the next PGAC.

Item # 12 **To consider the matter of re- evaluation of marks in Internet of Things (CSE 814) of Soumik Samanta (Roll no. 18CS 8127).**

Since the student has already been issued a provisional certificate long time ago, the matter is not recommended by the UGAC. However, the Senate may give its wise opinion on the matter (See Annexure III).

Dean (Academic Courses)
National Institute of Technology
Durgapur-713209 India

Item # 13 **To consider the matter regarding an email application dated 30.08.2022 on not having original signature of the Controller of Examinations on the grade card of B.Tech third semester 2005 – 2006 supplementary examination issued on May 09, 2006 to Himanshu Kumar Sarkar (Roll no. 04 / 526, Regn no. 20040200 of the department of Information Technology.)**

A duplicate grade card in existing format may be issued on return of the original unsigned grade card of B.Tech third semester 2005 – 2006 supplementary examination issued on May 09, 2006 to Himanshu Kumar Sarkar (Roll no. 04 / 526, Regn no. 20040200 of the department of Information Technology).

Item # 14 **To consider the matter regarding audit course XE9030 of PG program.**

Resolved that

- Attending all sorts of research related seminars like PhD defence, pre-foreign visit of the faculty member etc. by the department shall be made mandatory for the MTECH students.
- Grades as satisfactory or not satisfactory will be recorded in the marksheet.

The meeting ended with vote of thanks to the Chairman.

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT.

6th Semester

	DEPARTMENT OF BIOTECHNOLOGY
BTE610	Animal Biotechnology
BTE611	Industrial Microbiology
BTE612	Nutraceutical and Nutrigenomics
BTE613	Human Genomics
BTE614	Molecular Virology
BTE615	Biometallurgy
BTE616	Nanobiotechnology
BTE617	Marine Biotechnology
BTE618	Folding, Misfolding and Diseases
BTE619	Engineering Resistance in Plants

7th Semester

	DEPARTMENT OF BIOTECHNOLOGY
BTE710	Molecular Plant Pathology
BTE711	Cancer Biology and Cell Signaling
BTE712	Food Biotechnology
BTE713	Biopharmaceutical Process Design
BTE714	Bioenergy
BTE715	Project Engineering for Biotechnology
BTE716	Structural Biology
BTE717	Environmental Biotechnology
BTE718	Proteomics and Protein Engineering
BTE719	Molecular Modelling and Drug Design
BTE720	Nanotherapeutics
BTE721	Biomaterials
BTE722	Vaccine Technology
BTE723	Stem Cell Biology
BTE724	Application of Molecular Cloning

8th Semester

	DEPARTMENT OF BIOTECHNOLOGY
BTE810	Plant Developmental Biology
BTE811	Bioprocess Plant and Equipment Design
BTE812	Medical and Pharmaceutical Biotechnology
BTE813	GM Crops
BTE814	Bioethics and IPR
BTE815	Environmental Microbiome

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 01	MATHEMATICS - I	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic concepts of function, limit, differentiation, and integration.		CT+MT+EA					
Course Outcomes	• CO1: To introduce the fundamentals of differential calculus of single and several variables • CO2: To develop the basic concepts of integral calculus including multiple integrals and its application in finding area, volume, centre of mass, centre of gravity etc. • CO3: To introduce the fundamental concepts of vector calculus • CO4: To develop the concept of convergence						
Topics Covered	**Functions of Single Variable:** Rolle's Theorem and Lagrange's Mean Value Theorem (MVT), Cauchy's MVT, Taylor's and Maclaurin's series, Asymptotes & Curvature (Cartesian, Polar form). (8) **Functions of several variables:** Function of two variables, Limit, Continuity and Differentiability, Partial derivatives, Partial derivatives of implicit function, Homogeneous function, Euler's theorem and its converse, Exact differential, Jacobian, Taylor's & Maclaurin's series, Maxima and Minima, Necessary and sufficient condition for maxima and minima (no proof), Stationary points,						

	Lagrange's method of multipliers. (10) **Sequences and Series:** Sequences, Limit of a Sequence and its properties, Series of positive terms, Necessary condition for convergence, Comparison test, D Alembert's ratio test, Cauchy's root test, Alternating series, Leibnitz's rule, Absolute and conditional convergence. (6) **Integral Calculus:** Mean value theorems of integral calculus, Improper integral and it classifications, Beta and Gamma functions, Area and length in Cartesian and polar co-ordinates, Volume and surface area of solids of revolution in Cartesian and polar forms. (12) **Multiple Integrals:** Double integrals, Evaluation of double integrals, Evaluation of triple integrals, change of order of integration, Change of variables, Area and volume by double integration, Volume as a triple integral. (10) **Vector Calculus:** Vector valued functions and its differentiability, Line integral, Surface integral, Volume integral, Gradient, Curl, Divergence, Green's theorem in the plane (including vector form), Stokes' theorem, Gauss's divergence theorem and their applications. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th ed., Wiley India Ed. (2010). 2. Daniel A. Murray, Differential, and Integral Calculus, Fb & c Limited, 2018. 3. Marsden, J. E; Tromba, A. J.; Weinstein: Basic Multivariable Calculus, Springer, 2014. **Reference Books:** 1. Tom Apostal, Calculus-Vol-I & II, Wiley Student Edition, 2011. 2. Thomas and Finny: Calculus and Analytic Geometry, 11th Ed., Addison Wesley.

NIL		CT+MT+EA					
Course	CO1: To realize and apply the fundamental concepts of physics such as superposition						

Outcomes	principle, simple harmonic motion to real world problems. CO2: Learn about the quantum phenomenon of subatomic particles and its applications to the practical field. CO3: Gain an integrative overview and applications of fundamental optical phenomena such as interference, diffraction and polarization. CO4: Acquire basic knowledge related to the working mechanism of lasers and signal propagation through optical fibers.
Topics Covered	**Harmonic Oscillations** - Linear superposition principle, Superposition of two perpendicular oscillations having same and different frequencies and phases, Free, Damped and forced vibrations, Equation of motion, Amplitude resonance, Velocity resonance, Quality factor, sharpness of resonance, etc. [8] **Wave Motion** - Wave equation, Longitudinal waves, Transverse waves, Electro-magnetic waves. [3] **Introductory Quantum Mechanics** - Inadequacy of classical mechanics, Blackbody radiation, Planck's quantum hypothesis, de Broglie's hypothesis, Heisenberg's uncertainty principle and applications, Schrodinger's wave equation and applications to simple problems: Particle in a one-dimensional box, Simple harmonic oscillator, Tunnelling effect. [8] **Interference & Diffraction** - Huygens' principle, Young's experiment, Superposition of waves, Conditions of sustained Interference, Concepts of coherent sources, Interference by division of wavefront, Interference by division of amplitude with examples, The Michelson interferometer and some problems; Fraunhofer diffraction, Single slit, Multiple slits, Resolving power of grating. [13] **Polarisation** - Polarisation, Qualitative discussion on Plane, Circularly and elliptically polarized light, Malus law, Brewster's law, Double refraction (birefringence) - Ordinary and extra-ordinary rays, Optic axis etc.; Polaroid, Nicol prism, Retardation plates and analysis of polarized lights. [5] **Laser and Optical Fiber** - Spontaneous and stimulated emission of radiation, Population inversion, Einstein's A & B co-efficient, Optical resonator and pumping methods, He-Ne laser. Optical Fibre– Core and cladding, Total internal reflection, Calculation of numerical aperture and acceptance angle, Applications. [5]
Text Books, and/or reference material	**TEXT BOOKS**: 1. The Physics of Vibrations and Waves, H. John Pain, Willy and Sons 2. A Text Book of Oscillations and Waves, M. Goswami and S. None		CT+MT+EA					
Course Outcomes	• CO1: Introduced to chemical thermodynamics, kinetics, electrochemistry, absorption, and catalytic processes for engineering applications • CO2: To learn fundamentals of polymer chemistry and petroleum engineering. • CO3: Introduced to basic spectroscopic techniques for structure determination and characterization. • CO4: To study few inorganic and bioinorganic compounds of industrial importance.						
Topics Covered	**ORGANIC CHEMISTRY** i. Fundamentals of organic reaction mechanisms; Few important reactions and their mechanism along with their applications; Robinson annulation, Hydroboration reaction, Organometallic reagents (Gilman reagents), Metathesis using Grubb's catalyst and Wittig reaction. (3) ii. Fundamental concept on stereochemistry and application: Conformation and configuration of organic compounds, Diastereo-selective, enantio-selective, regio-selective, stereo-specific, and stereo-selective reactions. (3) iii. Polymer chemistry and polymer engineering: Fundamental concept on polymer chemistry; synthesis and application of important polymers, Rubber, and plastic materials. Conducting polymer. (2) iv. Petroleum Engineering and oil refinery: origin of mineral oils, separation principle and techniques of distillation of crude oil, Uses of different fractions, octane number, cetane number, Knocking, anti-knock compounds, and Bio-Fuel. (2) v. Structure elucidation of organic compounds by modern spectroscopic methods; Application of UV-Visible and FT-IR spectroscopy. (3) **INORGANIC CHEMISTRY** i. **Coordination Chemistry:** Crystal Field Theory of octahedral and tetrahedral complexes, colour and magnetic properties, Jahn-Teller distortion, pseudo Jahn-Teller distortion, Isomerism, and stereochemistry. (5)						

<table>
<tr><td></td><td>
ii. Bioinorganic Chemistry: Heme and non-heme O_2 transport protein (Haemoglobin, Myoglobin), Chlorophyll and photosynthesis. (3)
iii. Inorganic Materials: Introduction towards industrially important inorganic materials like cementing material, refractory material, fertiliser, inorganic polymer. (2)
iv. Organometallic Chemistry: π-acid ligands, stabilization of metal low oxidation state and 18 electron rules, metal carbonyls and nitrosyls, metal-alkene complexes. (4)
PHYSICAL CHEMISTRY
i. Thermodynamics: 2nd law of thermodynamics, entropy, free energy, Gibbs Helmholtz equation, change of phase. Cryogenics: joule Thomson experiment. (4)
ii. Chemical Kinetics: 2nd and 3rd order rate expression, Reversible reaction, Chain reaction, Consecutive reaction, Temp effect on reaction rate. (4)
iii. Electrochemistry: Electrochemical cell, Effect of pH, precipitation, and complex formation on EMF of oxidation/reduction processes. (2)
iv. Absorption: Physical and Chemical absorption, Absorption isotherms. (1)
v. Catalysis: Types of catalysis, Rate expression for Catalysed reaction, Acid-base and Enzyme catalysis. (2)

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)#	Total Hours	
XEC01	**ENGINEERING MECHANICS**	PCR	2	1	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA
Course Outcomes	• CO1: Acquire knowledge of mechanics and ability to draw free body diagrams. • CO2: Apply knowledge of mechanics for solving special problems like truss and frame analysis. • CO3: Ability to calculate centroid, moments of inertia for various shapes. • CO4: Learn momentum and energy principles. • CO5: Knowledge on virtual Work Principle and its application
Topics Covered	Engineering Mechanics; measurement and SI units. [1] Vectors and force as a vector; Resultant of a system of forces on a particle; free body diagram and conditions of equilibrium of a particle; problems on particles; equilibrium of particles in space. [2] Resultant of a system of forces and couples on a rigid body; conditions of equilibrium of a rigid body; free body diagrams of rigid bodies subjected to different types of constraints; simple space problems of rigid bodies. [4] Coefficients of static and kinetic friction; problems involving friction; theories of friction on square threaded power screw and flat belt. [5] Simple trusses; analysis of trusses by method of joints and method of sections. [5] Centre of gravity and centre of mass; centroids of lines, curves and areas; first moment of area; second moment of area; polar moment of inertia; radius of gyration of an area; parallel axis theorem; mass moment of inertia. [4] Path, velocity, acceleration; rectilinear and curvilinear motion; motion of system of particles; introduction to the concept of plane kinematics of rigid bodies. [6] Newton's second law of motion; dynamic equilibrium and D'Alembert's principle; linear momentum; angular momentum; rectilinear and curvilinear motion; principles of work–energy and impulse–momentum; impact of system of particles; introduction to the concept of plane kinetics of rigid bodies. [12] Principle of Virtual Work, Solution of Problems on Mechanics using Principle of Virtual Work [3]
Text Books, and/or reference material	1) S P Timoshenko and D H Young, Engineering Mechanics, 5th Edition 2) J L Meriam and L G Kraige, Engineering Mechanics, 5th Edition, Wiley India 3) F P Beer and E R Johnston, Vector Mechanics for Engineers 4) I H Shames, Engineering Mechanics

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA

Course Outcomes	• CO1: Understand the importance of environment and ecosystem. • CO2: Understand the fundamental aspect of pollutant tracking and its implementation in natural and anthropogenic pollution of air and water system. • CO3: Understand the scientific basis of local and as well as global issues. • CO4: Apply of knowledge to develop sustainable solution.
Topics Covered	**Introduction:** Multidisciplinary nature of Environmental Studies; Basic issues in Environmental Studies. [2] Human population and the Environment. [1] Social issues and the Environment. [1] **Constituents of our Environment & the Natural Resources:** Atmosphere– its layers, their characters; Global warming, Ozone depletion, Acid rain, etc. [5] Hydrosphere - Its constituents, Oceans, Groundwater, Surface waters; Hydrological cycle. [4] Lithosphere - constituents of lithosphere; Rock and Mineral resources; Plate Tectonic Concept and its importance. [5] Biosphere– its components; Ecosystems and Ecology; Biodiversity; Biomes. [5] Natural disaster and their management – Earthquakes, Floods, Landslides, Cyclones. [3] **Pollution:** Pollutants and their role in air and water pollution. [2]
Text Books, and/or reference material	1. Environmental Studies – Benny Joseph – Tata McgrawHill-2005 2.Environmental Studies – Dr. D.L. Manjunath, Pearson Education-2006. 3.Principles of Environmental Science and Engineering – P. V. Rao, PHI. 4. Environmental Science and Engineering – Meenakshi, Prentice Hall India. 5.Environmental studies – R. Rajagopalan – Oxford Publication - 2005. 6. Text book of Environmental Science & Technology – M. A. Reddy – BS Pub.

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	• CO1: Ability of mental visualization of different objects • CO2: Theoretical knowledge of orthographic projection to solve problems on one/two/three dimensional objects • CO3: Able to read/interpret industrial drawing and to communicate with relevant people						
Topics Covered	Graphics as language of communication; technical drawing tools and their up-keep; types of lines; construction of geometrical figures; lettering and dimensioning. [6] Construction and use of scales; construction of curves of engineering importance such as curves of conic section; spirals, cycloids, involutes and different loci of points; use of equations for drawing some curves. [9] Descriptive geometry: necessity and importance of orthographic projection; horizontal and vertical reference planes; coordinate of points; orthographic projection of points and lines situated in different quadrants, viz. 1^{st}, 2^{nd}, 3^{rd} and 4^{th} quadrants; traces of lines. First angle and third angle projection of lines and planes; views from top, front and left (or right); true length and true inclination of lines with planes of projections; primary auxiliary projection of points, lines and planes; auxiliary plan and auxiliary elevation. [9] Projection of simple regular solids, viz. prisms, cubes, cylinders, pyramids, cones, tetrahedrons, spheres, hemi-spheres etc. [6] Section of solids; section by perpendicular planes; sectional views; true shapes of sections. [6] Dimensional techniques; international and national standards (ISO and BIS). [3] Freehand graphics. [3]						
Text and/or reference material	1)… Engineering Drawing and Graphics – K Venugopal 2)… Engineering Drawing – N D Bhat 3)… Practical Geometry and Engineering Graphics – W Abbott

PHS51	Physics Laboratory	PCR	0	0	2	2	1

Pre-requisites	Course Assessment methods: (Continuous evaluation (CE) and end assessment (EA))
NIL	CE+EA

Course Outcomes	CO1: To realize and apply different techniques for measuring refractive indices of different materials. CO2: To realize different types of waveforms in electrical signals using CRO. CO3: To understand charging and discharging mechanism of a capacitor. CO4: To understand interference, diffraction and polarization related optical phenomena. CO5: To acquire basic knowledge of light propagation through fibers.
Topics Covered	1. Find the refractive index of a liquid by a travelling microscope. 2. Determine the refractive index of the material of prism using spectrometer. 3. Determination of amplitude and frequency of electrical signals by oscilloscope. 4. To study the characteristics of RC circuits. 5. To study Brewster's law/Malus' law using laser light. 6. To study the diffraction of light by a grating. 7. To study the interference of light by Newton's ring apparatus. 8. To determine numerical aperture of optical fiber. 9. Determination of Planck constant.
Text and/or reference material	**SUGGESTED BOOKS**: 1) A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
None	CT+EA

Course Outcomes

- CO1: To learn basic analytical techniques useful for engg applications.
- CO2: Synthesis and characterization methods of few organic, inorganic and polymer compounds of industrial importance.
- CO3: Learn chromatographic separation methods.
- CO4: Applications of spectroscopic measurements.

Topics Covered

i. Experiments based on pH metry: Determination of dissociation constant of we acids by pH meter.
ii. Experiments based on conductivity measurement: Determination of amou of HCl by conductometric titration with NaOH.
iii. Estimation of metal ion: Estimation of Fe^{2+} by permangnomentry
iv. Estimation of metal ion: Determ. of total hardness of water by EDTA titration.
v. Synthesis and characterization of inorganic complexes: e. g. $Mn(acac)_3$, Fe(acac cis-bis(glycinato)copper (II) monohydrate and their characterization by m. p FTIR etc.
vi. Synthesis and charact. of organic compounds: e.g.Dibenzylideneacetone.
vii. Synthesis of polymer: polymethylmethacrylate
viii. Verification of Beer-Lamberts law and determination of amount of iron prese in a supplied solution.
ix. Chromatography: Separation of two amino acids by paper chromatography
x. Determination of saponification value of fat/ vegetable oil

<u>Suggested Text Books:</u>

1. Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall
2. Advanced Physical Chemistry Experiments: By Gurtu&Gurtu
3. Comprehensive Practical Organic Chemistry: Qualitative Analysis By V. K. Ahluwalia and S. Dhingra

<u>Suggested Reference Books:</u>

1. Practical Chemistry By R.C. Bhattacharya
2. Selected experiments in Physical Chemistry By N. G. Mukherjee

WSS51	**WORKSHOP PRACTICE**	PCR	**0**	**0**	**3**	**3**	**1.5**

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
NIL	CT+EA

Course Outcomes

- CO1: Study and practice on machine tools and their operations
- CO2: Practice on manufacturing of components using workshop trades including fitting, carpentry, foundry and welding
- CO3: Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping
- CO4: Develop basic electrical engineering knowledge for house wiring practice

Topics Covered

M/c shop & Carpentry shop -- 3X3= 9hrs.

- Introduction on machining process.
- Introduction to machine tools- Lathe, Shaper, Milling and Drill machine.
- Introduction to woods- Types, structure, disease and defect of wood.
- Introduction to wood working machines and tools.
- Making of dovetail joint and bridle joint.

Welding Shop & Sheet metal -- 3X3= 9hrs.

- Introduction to welding.Safety and precautions in welding.
- Formation of weld bead by SMAW on mild steel flat.
- Formation of weld bead by oxy-fuel welding on mild steel flat.
- Introduction to sheet Metal works.
- Tools and Machines used in sheet metal works.
- Concept of development, marking out of metal sheets.
- Cutting and joining of metal sheets.
- Safety precautions, General warning needed in the shop floor.

Black smithy & Foundry -- 3X3= 9hrs.

- Introduction Smithing and Forging- Tools, Machines, Furnaces and its accessories, fuels.
- Safety and precautions in blacksmithy.
- Making of bars of different cross-sections.
- Making of hexagonal headed bolts.
- Forge welding.
- Introduction to Foundry Technology.
- Preparation of sand mould using Solid/Split Pattern.

Fitting & Electrical shop -- 3X3= 9hrs.

- Introduction to hand metal cutting tools with specifications, nomenclature and their use.
- Marking tools, measuring tools and their use.
- Fitting of joints of mild steel flats.
- Introduction to electrical hazards and safety precaution.

	• Wire jointing and soldering. • PVC Conduit Wiring controlled by separate single way switches. • PVC Cashing Capping Wiring for two-way switches. • Conduit wiring for the connection of a Calling Bell with In& Out Indicators. • Batten Wiring and Cleat Wiring. • Tube Light Connection. • Insulation Resistance Testing of 1ph / 3ph Motor and House Wiring. • Earth Resistance Testing. • DOL Starter Connection. **Viva voce -- 1X3= 3hrs.**
Text Books, and/or reference material	1. Workshop Technology Part I and Part II by W. A. J. Chapman 2. Elements of Workshop Technology S. K. Hazra Chowdhury, A. K. Hazra Chowdhury and Nirjhar Roy 3. Mechanical Workshop Practice by K. C. John

Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Introduction of Yoga. • Sitting Posture/Asanas- Padmasana, Vajrasana, Ardhakurmasana, Ustrasana, Bakrasana, Sasankasana, Janusirshasana, Suryanamaskar. • Mudra- Gyana mudra, Chin mudra, Shuni mudra, Prana mudra, Adi mudra,						

	Anjali mudra. • Laying Posture/Asanas- PavanaMuktasana, UttanaPadasana, Sarpasana, Bhujangasana (Cobra Pose), Eka Pada Śalabhāsana, Dhanurasana, Chakrasana, Viparitkarani. • Meditation- Yognidra, Om chant, Pray chant. • Standing Posture/Asanas- Tadasana (Mountain Pose), Vrikshasana (Tree Pose), Ardhachandrasana, Trikonasana, Utkatasana, Padahastasana. • Pranayama- Deep breathing, AnulomVilom, Suryabhedi, Chandrabhedi. • Kriya- Kapalbhati, Trataka. **ATHLETICS** • Introduction of Athletic. • Starting Technique for Track events- Standing start, Crouch & Block start. • Finishing Techniques. • Relay Race- 4×100m, 4×400m & Baton Exchange Technique & Rules. • Track Marking with Fundamentals- 200m, 400m and Diagonal Distance Radius, Straight Distance, Staggers of Different Lanes & Curve Distance. **BASKETBALL** • Introduction and Players stance and ball handling. • Passing- Two hand chest pass, two hand bounce pass, One hand baseball pass, Side arm pass, Overhead pass, Hook pass. • Receiving- Two hand receiving, one hand receiving, receiving in stationary position, Receiving while jumping and Receiving while running. • Dribbling- Dribble, High dribble, Low dribble, Reverse dribble, Rolling dribble. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Introduction of Volleyball • Service- Underarm service, Sidearm service, Tennis service, Floating service, Jump service. • Pass: Underarm pass- Ready position, Teaching stage of underarm pass and Upper hand pass- Volley pass, Back pass, Short set, Jump set & Underarm set. • Rules and their interpretation. **FOOTBALL** • Introduction of Football • Push pass- Instep inside, Instep outer side. • Kicking- Spot kick, Instep kick, Lofted kick. • Dribbling- One leg, Both legs, Instep. • Trapping- Rolling ball sole trapping, High ball sole trapping, High ball chest trapping, High ball thigh trapping. • Throwing- Standing throw, Running throw, Seating throw. • Goal Keeping- Griping the ball, Full volley, Half volley, Drop Kick. • Rules and their interpretation. **CRICKET** • Introduction of Cricket

- Batting gripping & Stance, Bowling gripping technique.
- Batting front foot defense& Drive.
- Batting Back foot defense& Drive.
- Batting Square cut.
- Bowling medium pace, Bowling off break.
- Fielding drill, Catching (Short & High).
- Rules & Regulation.

BADMINTON

- Basic introduction about Badminton and Badminton court.
- Racket parts, Racket Grip, Shuttle Grip.
- Basic stance, Basic Footwork, Shadow practice (Full court movement).
- Strokes services: Forehand- Overhead & Underarm, Backhand- Overhead & Underarm.
- Match practice (Single & Double).
- Rules & Regulation.

TABLE TENNIS

- Introduction of Table Tennis.
- Basic Stance and Grip (Shake hand & Pen hold).
- Service Basic.
- Stroke: Backhand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash.
- Stroke: Forehand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash.
- Rules and their interpretations.
- Table Tennis Match (Singles & Doubles).

NCC

- FD-1 General Introduction and words of command.
- FD-2 Attention, Stand at ease and Stand easy, Turning and inclining at the halt.
- FD-3 Sizing, Forming up in three Ranks Numbering, Open and Close order March and Dressing.
- FD-4 Saluting at the halt, Getting on parade, Dismissing and falling out.
- FD-5 Marching, Length of pace and Time of Marching in quick time and Halt, Slow March and Halt.
- FD-7 Turning on the March and Wheeling.
- FD-12 Parade practice.

TAEKWONDO

- Introduction about Taekwondo- Meaning of Taekwondo, Korean language of dress, Fighting area, Punch, Block, Kicks etc.
- Stance- Ready stance, Walking stance, Fighting stance, Front stance, Back stance, Cat stance etc.
- Punch Technique- Front fist punch, Rear fist punch, Double fist punch, With stance etc. Blocks- Upper blocks, Middle block, Side block, Suto etc.
- Foot Technique (Balgisul)- Standing kick (Saseochagi), Front kick (Abchagi), Doliyo (Chagi), Abdalchagi (Butterfly kick), Back kick etc.

NSS

	• Swachha Bharat Mission • Free Medical Camp • Sanitation drive in and around the campus. • Unnat Bharat Abhiyaan • MatribhashaSaptah celebration

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 02	MATHEMATICS - II	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Basic concepts of set theory, differential equations, and probability.	CT+MT+EA

Course Outcomes	
	• CO1: Develop the concept of basic linear algebra and matrix equations so as to apply mathematical methods involving arithmetic, algebra, geometry to solve problems. • CO2: To acquire the basic concepts required to understand, construct, solve and interpret differential equations. • CO3: Develop the concepts of Laplace transformation & Fourier transformation with its property to solve ordinary differential equations with given boundary conditions which are helpful in all engineering & research work. • CO4: To grasp the basic concepts of probability theory.

Topics Covered	**Elementary algebraic structures:** Group, subgroup, ring, subring, integral domain, and field. (5) **Linear Algebra:** Vector space, Subspaces, Linear dependence and independence of vectors, Linear span, Basis and dimension of a vector space. Rank of a matrix, Elementary transformations, Matrix inversion, Solution of system of Linear equations, Eigen values and Eigen vectors, Cayley-Hamilton Theorem, Diagonalization of matrices. (15) **Ordinary Differential Equations:** Existence and uniqueness of solutions of ODE (Statement Only), Equations of first order but higher degree, Clairaut's equation, Second order differential equations, Linear dependence of solutions, Wronskian determinant, Method of variation of parameters, Solution of simultaneous equations. (12) **Fourier series:** Basic properties, Dirichlet conditions, Sine series, Cosine series, Convergence. (4)
	Laplace and Fourier Transforms: Laplace transforms, Inverse Laplace transforms, Convolution theorem, Applications to Ordinary differential equations. Fourier transforms, Inverse Fourier transform, Fourier sine and cosine transforms and their inversion, Properties of Fourier transforms, Convolution. (10) **Probability:** Historical development of the subject and basic concepts, Axiomatic definition of probability, Examples to calculate probability, Random numbers. Random variables and probability distributions, Binomial distribution, Normal distribution. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th ed, Wiley India Ed. (2010). 2. Gilbert Strang, Linear algebra and its applications (4th Ed), Thomson (2006). 3. Shepley L. Ross, Differential Equations, 3rd Edition, Wiley Student Ed (2017). **Reference Books:** 1. S. Kumaresan, Linear algebra - A Geometric approach, PHI (2000). 2. C. Grinstead, J. L. Snell, Introduction to Probability, American Math. Society.

<tr><td>Course Outcomes</td><td colspan="7">CO1: Recognize the changes in hardware and software technologies with respect to the evolution of computers and describe the function of system software's (operating Systems) and application software's, languages, number system, logic gates.
CO2: Illustrate the flowchart and inscribe an algorithm for a given problem Inscribe C programs using operators.
CO3: Develop conditional and iterative statements to write C programs.
CO4: Exercise user defined functions to solve real time problems
CO5: Inscribe C programs that use Pointers to access arrays, strings and functions.
CO6: Exercise user defined data types including structures and unions to solve problems.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Fundamentals of Computer: History of Computer, Generation of Computer, Classification of Computers 2L Basic Anatomy of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices. [2]
Languages: Assembly language, high level language, compiler, and assembler (basic concepts) [1]
Binary & Allied number systems representation of signed and unsigned numbers. BCD, ASII. Binary Arithmetic & logic gates. [2]
Basic concepts of operating systems like MS DOS, MS WINDOW, UNIX, Algorithm & flow chart. [1]
C Fundamentals: The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements. [2]
Operators & Expressions: Arithmetic operators, relational and logical operators, type, conversion, increment and decrement operators, bit wise operators, assignment operators and expressions, precedence, and order of evaluation. Input and Output: Standard input and output, formatted output -- printf, formatted input scanf. [8]
Flow of Control: Statement and blocks, if - else, switch, loops - while, for do while, break and continue, go to and labels. [5]
Fundamentals and Program Structures: Basic of functions, function types, functions returning values, functions not returning values, auto, external, static and register Variables, scope rules, recursion, function prototypes, C pre-processor, command line arguments. [5]
Arrays and Pointers: One-dimensional, two-dimensional arrays, pointers and functions, multi-dimensional arrays. [10]
Structures Union and File: Structure, union, structures and functions, arrays of structures, file read, file write.[5]</td></tr>

Pre-requisites			Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))				
(10+2) level mathematics and physics			CT+MT+EA				
Course Outcomes	• CO1: Knowledge of Semiconductor physics and devices. • CO2: Have an in depth understanding of basic electronic circuit, construction, operation. • CO3: Ability to make proper designs using these circuit elements for different applications. • CO4: Learn to analyze the circuits and to find out relation between input and output.						
Topics Covered	1. **Semiconductors** 1.1. Concept of band formation in solids; Fermi-Dirac distribution function, concept of Fermi level, invariance of Fermi level in a system under thermal equilibrium 1.2. Definitions of insulator, conductor and semiconductor using band diagram 1.3. Crystalline structure of semiconductor 1.3.1. Covalent bond 1.3.2. Generation of holes and electrons						

	1.3.3. Effect of temperature on semiconductor 1.4 Intrinsic semiconductor 1.5 Doping and Extrinsic semiconductor 1.5.1 n-Type semiconductor and band diagram 1.5.2 p-Type semiconductor and band diagram 1.5.3 Mass-action law of semiconductor 1.6. Conductivity of semiconductor (including mathematical expression) 1.7 Carrier transport phenomenon. (03 hrs.) 2. **Diodes** 2.1. Construction 2.2. Unbiased diode; Depletion layer and Barrier potential; junction capacitance (expression only) 2.3. Principle of operation with forward biasing and reverse biasing 2.4. Characteristics 2.5 Diode's three models/equivalent circuits.(02 hrs.) 3.**Diode Circuits** 3.1 Diode rectifier 3.1.1 Half wave rectifier 3.1.2 Full wave rectifier:centre tap and bridge rectifier 3.1.3 Capacitive filter and DC power supply (Numerical problems) 3.2 Special Diodes 3.2.1 Zenerdiode: Avalanche breakdown and Zener breakdown and characteristics. 3.2.2 Zener diode as a voltage regulator 3.2.3 Displaydevices: LED and LCD. (03 hrs.) 4.**Bipolar Junction Transistor (BJT)** 4.1 n-p-n and p-n-p transistor and their constructions 4.2 Principle of operation 4.3 Transistor configuration: common base, common emitter, and common collector 4.4 Transistor characteristics: input and output characteristics of CB and CE configurations 4.5 DC load line: quiescent (Q) point; cut-off, active, and saturation region 4.6 Amplifier: Principle of operation 4.7 Transistor as a switch. (04 hrs.) 5.**Transistor Biasing** 5.1 Need of biasing 5.2 Methods of biasing: base resistor or fixed bias, emitter feedback, voltage divider biasing 5.3 Stability of Q-point (qualitative discussions) 5.4 (Numerical problems). (02 hrs.) 6.**Single Stage Amplifier:** classification of amplifiers (voltage amplifier, current amplifier, power amplifier etc.) Class-A CE Amplifier with coupling and bypass capacitors, Qualitative discussions of magnitude characteristics of frequency response (graph only) (02 hrs.) 7.**Feedback Amplifier** 7.1 Positive and negative feedback

	7.2 Deduction of gain with negative feedback, explanation of stability of gain with negative feedback, other effects of negative feedback (no deduction), numerical problems. (03 hrs.) 8.**Other Semiconductor Devices** 8.1 JFET: Construction, principle of operation, characteristics 8.2 MOSFET: Construction, principle of operation, characteristics 8.3 Power Electronic Device-SCR: Brief discussions. (02 hrs.) 9.**Operational Amplifier** 9.1 Characteristics of ideal operational amplifier 9.2 Pin Configuration of IC 741, 9.3 Analysis of simple operational amplifier circuits: concept of virtual ground; noninverting amplifier and inverting amplifier. 9.4 Applications: voltage follower, summer, differentiator, integrator, and comparator (04 hrs) 10.**Oscillator** 10.1 Positive feedback and condition of oscillation 10.2 R-C phase-shift oscillator, Wien bridge oscillator.(02 hrs.) 11.**Boolean Algebra** 11.1 Boolean algebra, De Morgan's theorem, simplification of Boolean expressions 11.2 Number system, range extension of numbers, overflow 11.3 Different codes: gray code, ASCII code and BCD codes and them Applications. (01 hrs.) 12. **Logic Gates** 12.1 NOT, OR, AND, NOR, NAND, EX-OR, EX-NOR gates 12.2 Simplification of logic functions 12.3 Realizations of logic expressions using logic gates. (01 hrs.) 13. CRO and its applications and other test and measurement instruments. (01 hrs.)

Course Outcomes	Upon successful completion of this course, the student should be able to • CO1: learn the fundamentals of Electric Circuits and Network theorems and analysis of electrical network based on these concepts. • CO2: develop an idea on Magnetic circuits, Electromagnetism and learning the working principles of some fundamental electrical equipment’s • CO3: learn about single phase and poly-phase AC circuits and analysis of such circuits based on these concepts.						
Topics Covered	Introduction: Overview of Electrical power generation systems (2) Fundamentals of Electric Circuits: Ohm’s laws, Kirchhoff’s laws, Independent and Dependent sources, Analysis of simple circuits. (4) Network theorems: Superposition Theorem, Thevenin’s Theorem, Norton’s Theorem, Maximum Power Transfer Theorem (4) Magnetic circuits: Review of fundamental laws of electromagnetic induction, transformer and rotational emfs, Solution of magnetic circuits. Analysis of coupled circuits (self-inductance, mutual inductance, and dot convention)(8) Transients with D.C. excitation for R-L and R-C circuits. (3) Generation of alternating voltage and current, E.M.F. equation, Average and R.M.S. value, Phase and phase difference, Phasor representation of alternating quantity, Behavior of A.C. circuits, Resonance in series and parallel R-L-C circuits. AC Network: Superposition theorem, Thevenin’s theorem, Norton’s theorem, maximum power transfer theorem, solution of networks with AC						
Textbooks/Reference material	Textbooks: 1. Electrical & Electronic Technology by Hughes, Pearson Education India Reference Books: 1. Advanced Electrical Technology by H. Cotton, Reem Publication Pvt. Ltd 2. Electrical Engineering fundamentals by Vincent Deltoro, Pearson Edu India

BTC01	LIFE SCIENCE	PCR	2	0	0	2	2
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1: Basic understanding of basic cellular organization of organisms and cellular communications, structure and functions of the macromolecules and their biosynthesis and cata--bolism. CO2: To give an understanding of the key features of the structure, growth, physiology and behavior of bacteria, viruses, fungi and protozoa CO3: To introduce molecular biology to understand biological processes in various applications. CO4: To provide a foundation in immunological processes and an overview of the interaction between the immune system and pathogens. CO5: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them CO6: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them
Topics Covered	**1. Cell Biology (4)** a) Introduction to life science: prokaryotes & eukaryotes Definition; Difference b) Introduction to cells - Define cell, different types of cell c) Cellular organelles - All organelles and functions in brief d) Cellular communications Introduction to basic signaling; endocrine, paracrine signaling; concepts of receptor, ligand, on-off switch by phosphorylation/dephosphorylation **2. Biochemistry (4)** a) Biological function of carbohydrate and lipid - Introduction, structure and function b) Biological function of nucleic acids and protein - structure and function c) Catabolic pathways of Macromolecules - Introduction to catabolism, hydrolysis and condensation reactions; Catabolism of glucose- Glycolysis,

<table>
<tr><td></td><td>TCA; overall degradation of proteins and lipids
d) Biosynthesis of Macromolecules
Generation of ATP (ETS), Generation of Glucose (Photosynthesis)
3. Microbiology (5)
a) Types of microorganisms and their general features - Bacteria, Yeast, Fungi, Virus, Protozoa- general introduction with practical significance and diseases
b) Microbial cell organization - Internal and External features of cell- bacterial cell wall, viral capsule, pilus etc,
c) Microbial nutritional requirements and growth - Different Sources of energy; growth curve
d) Basic microbial metabolism - Fermentation, Respiration, Sulfur, N_2 cycle
4. Immunology (5)
a) Basic concept of innate and adaptive immunity - Immunity-innate and adaptive, differences, components of the immune system
b) Antigen and antibody interaction - Antigen and antibody, immunogen, factors affecting immunogenicity, basic antigen-antibody mediated assays, introduction to monoclonal antibody
c) Functions of B cell - B cell, antibody production, memory generation and principle of vaccination
d) Role of T cell in cell-mediated immunity - Th and Tc, functions of the T cell with respect to different pathogen and cancer cell
5. Molecular Biology (5)
a) Prokaryotic Genomes (Genome organization & structure) - Nucleoid, circular or linear
b) Eukaryotic Genomes (Genome organization & structure) - Intron, exon, packaging, chromatin
c) Central Dogma (Replication, Transcription and Translation)
d) Applications of Molecular Biology (Diagnostics, DNA-fingerprinting, Recombinant products etc.) - Introduction to Recombinant DNA, fingerprinting, cloning
6. Bioprocess Development (5)
a) Microbial growth kinetics - Batch, fed-batch and continuous systems, Monod Equation
b) Enzyme kinetics, kinetics of enzyme inhibition and deactivation
Definition of enzymes, activation energy, Concepts of Km, Vmax, Ki
c) Microbial sterilization techniques and kinetics
Introduction to sterilization, dry and moist sterilization
d) Thermodynamics of biological system - Concepts of Enthalpy, Entropy, favorable reactions, exergonic and endergonic reactions
e) Material and energy balance for biological reactions - Stoichiometry</td></tr>

EES51	ELECTRICAL TECHNOLOGY LABORATORY	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
None		CT+EA					
Course Outcomes	• CO1: understand the principle of superposition. • CO2: understand the principle of maximum power transfer • CO3: understand the characteristics of CFL, incandescent Lamp, carbon lamp. • CO4: understand the calibration of energy meter. • CO5: understand open circuit and short circuit test of single-phase transformer. • CO6: analyze RLC series and parallel circuits • CO7: understand three phase connections. • C08: understand determination of B-H curve						
Topics Covered	**List of Experiments:** 1. To verify Superposition and Thevenin's Theorem. 2. To verify Norton and Maximum power transfer theorem 3. Characteristics of fluorescent and compact fluorescent lamp 4. Calibration on energy meter 5. To perform the open circuit and short circuit test on single phase transformer 6. To study the balanced three phase system for star and delta connected load 7. Characteristics of different types of Incandescent lamps 8. Study of Series and parallel R-L-C circuit 9. Determination of B-H Curve for magnetic material						
Textbooks, and/or reference material	Textbooks: 1. Handbook of Laboratory Experiments in Electronics and Electrical Engineering by A M Zungeru, J M Chuma, H U Ezea 2. • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them
• CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes.
• CO4: Personality development through community engagement
• CO5: Exposure to social service</td></tr>
<tr><td>Topics Covered</td><td colspan="7">YOGA
• Sitting Posture/Asanas- Gomukhasana, Swastikasana, Siddhasana, Ustrasana, Janusirsasana, ArdhaMatsyendrasana (Half-Spinal Twist Pose), Paschimottanasana, Shashankasana, Bhadrasana.
• Mudra- Vayu, Shunya, Prithvi, Varuna, Apana, Hridaya, Bhairav mudra.
• Laying Posture/Asanas- Shalabhasana (Locust Posture), Dhanurasana (Bow Posture), ArdhaHalasana (Half Plough Pose), Sarvangasana (Shoulder Stand), Halasana (Plough Pose), Matsyasana, SuptaVajrasana, Chakrasana (Wheel Posture), Naukasana (Boat Posture), Shavasana (Relaxing Pose), Makaraasana.
• Meditation- ‘Om’meditation, Kundalini or Chakra Meditation, Mantrameditation.
• Standing Posture/Asanas- ArdhaChakrsana (Half Wheel Posture), Trikonasana (Triangle Posture), ParshwaKonasana (Side Angle Posture), Padahastasana, Vrikshasana (Tree Pose), Garudasana (Eagle Pose).
• Pranayama- Nadisodha, Shitali, Ujjayi, Bhastrika, Bhramari.
• Bandha- Uddiyana Bandha, Mula Bandha, Jalandhara Bandha, Maha Bandha.
• Kriya- Kapalabhati, Trataka, Nauli.
ATHLETICS
• Long Jump- Hitch kick, Paddling, Approach run, Take off, Velocity, Techniques, Flight & Landing
• Discus throw, Javelin throw and Shot-put- Basic skill & Technique, Grip, Stance, Release & Follow through.
• Field events marking.
• General Rules of Track & Field Events.
BASKETBALL
• Shooting- Layup shot, Set shot, Hook shot, Jump shot. Free throw.</td></tr>
</table>

	• Rebounding- Defensive rebound, Offensive rebound. • Individual Defensive- Guarding the man without ball and with ball. • Pivoting. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Spike- Straight spike, Body turn spike, Tip spike, Back attack, Slide spike, Wipe out spike. • Block- Single block, Double block, Triple block, Group block. • Field Defense- Dig pass, Double pass, Roll pass. • Rules and their interpretation. **FOOTBALL** • Dribbling- Square pass, Parallel pass, Forward pass. • Heading (Standing & Running)- Fore head, Side fore head, Drop heading, Body covering during heading. • Kicking- Full volley, Half volley, Drop kick, Back volley, Side volley, Chiping (lobe). • Tackling: Covering the angle, Chessing time sliding chese, Heading time shoulder tackle etc. • Feinting- Body movement to misbalance the opponent and find space to go with ball. • Rules of Football. **CRICKET** • Batting straight drive. • Batting pull shot. • Batting hook shot. • Bowling good length, In swing. • Bowling out swing, Leg break, Goggle. • Fielding drill. • Catching (Long & Slip). • Wicket keeping technique. • Rules & Regulation. **BADMINTON** • Net play- Tumbling net shot, Net Kill, and Net Lift. • Smashing. • Defensive high clear/Lob. • Half court toss practice, Cross court toss drop practice, Full court Game practice. • Player Positioning, Placements. • Rules & Regulation. • Doubles & Mixed doubles match practice. **TABLE TENNIS** • Stroke: Backhand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke: Forehand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke- Backhand lob with rally, Backhand lob with sidespin, Forehand lob with

	rally, Forehand lob with sidespin. • Service: Backhand/Forehand- Push service, Deep push service, Rally service. • Service: Backhand sidespin (Left to right & Right to left). • Service: Forehand- High toss backspin service, High toss sidespin service, High toss reverse spin service. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-6 Side pace, Pace Forward and to the Rear. • FD-7 Turning on the March and Wheeling. • FD-8 Saluting on the March. • FD-9 Marking time, Forward March and Halt in Quick Time. • FD-10 Changing step. • FD-11 Formation of Squad and Squad Drill. • FD-12 Parade practice. **TAEKWONDO** • Poomsae (Forms)- Jang, Yi Jang. • Self Defense Technique- Self defense from arms, Fist and Punch. • Sparring (Kyorugi)- One step sparring, Two step sparring, Fight (Free sparring). • Combination Technique- Combined kick and punch. • Board Breaking (Kyokpa)- Sheet breaking. • Interpretation Rules above Technique of Taekwondo. **NSS** • No Smoking Campaign • Anti- Terrorism Day Celebration • Any other observation/celebration proposed by Ministry/institute • Public Speaking • Discussion on Current Affairs • Viva voce

CO1: Acquire the idea about mathematical formulations of phenomena in physics and engineering.
CO2: To understand the common numerical methods to obtain the approximate solutions for the intractable mathematical problems.
CO3: To understand the basics of complex analysis and its role in modern mathematics and applied contexts.
CO4: To understand the optimization methods and algorithms developed for solving various types of optimization problems.
</td></tr>
<tr><td colspan="2">Topics Covered</td><td colspan="7">Partial Differential Equations (PDE): Formation of PDEs; Lagrange method for solution of first order quasilinear PDE; Charpit method for first order nonlinear PDE; Homogenous and Nonhomogeneous linear PDE with constant coefficients: Complimentary Function, Particular integral; Classification of second order linear PDE and canonical forms; Initial & Boundary Value Problems involving one dimensional wave equation, one dimensional heat equation and two dimensional Laplace equation. [14]
Numerical Methods: Significant digits, Errors; Difference operators; Newton's Forward, Backward and Lagrange’s interpolation formulae; Numerical solutions of nonlinear algebraic/transcendental equations by Bisection and Newton-Raphson methods; Trapezoidal and Simpson’s 1/3 rule for numerical integration; Euler’s method and modified Eular's methods for solving first order differential equations. [14]
Complex Analysis: Functions of complex variable, Limit, Continuity and Derivative; Analytic function; Harmonic function; Conformal transformation and Bilinear transformation; Complex integration; Cauchy’s integral theorem; Cauchy’s integral formula; Taylor’s theorem, Laurent’s theorem (Statement only); Singular points and residues; Cauchy’s residue theorem. [17]
Optimization:
Mathematical Preliminaries: Hyperplanes and Linear Varieties; Convex Sets, Polytopes and Polyhedra. [2]
Linear Programming Problem (LPP): Introduction; Formulation of linear programming problem (LPP); Graphical method for its solution; Standard form of LPP; Basic feasible solutions; Simplex Method for solving LPP. [9]</td></tr>

CHC331	PROCESS CALCULATIONS AND THERMODYNAMICS	PEL	3	0	0	3	3
Mathematics I and Mathematics II		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	• CO1: To develop the concept of dimension and unit conversion to check dimensional consistency of balanced equation • CO2: Learn basic laws about the behavior of gases, liquids and solids and some basic mathematical tools. • CO3: To Establish mathematical methodologies for the computation of material balances and energy balances with and without chemical reaction • CO4: To apply knowledge of the laws of thermodynamics to solve physical and chemical problems encountered in chemical and biochemical industries. • CO5: To analyze and interpret data, to identify, formulate, and solve engineering problems.
Topics Covered	Module - I (10 hrs) • Significance of Units and Dimensions: Conversion of Equations, Systems of Units, Dimensional Homogeneity and Dimensionless Quantities, Buckingham Pi-theorem for Dimensional Analysis Mathematical Requisites: Use of log-log and semi-log graph paper, Triangular Diagram. • Introduction to Chemical Engineering Calculations: Basis, Mole Fraction and Mole Percent, Mass Fraction and Mass Percent, Concentration of different forms, Conversion from one form to another. • Ideal gas laws and its significance, Molar concept, Concept of partial pressure & partial volume, Dalton's law and Amagat's law and Numerical problems on their applications. • Fundamental concept of vapor pressure & boiling point, Clausius-Clapeyron equation, Antoine equation and numerical problems on their applications.

	• Ideal & non-ideal solutions, Raoult's law, Henry's law and their applications in numerical problems. Module – II (10 hrs) • Material Balances with and without chemical reaction: Material balances in crystallizers, gas - liquid absorbers, evaporators, distillation plant. Systems with recycle,drying, extraction. • Energy Balance: Enthalpy calculation for systems without Chemical Reaction, Estimation of Heat Capacities of solids, liquids and gases. Heat of fusion and vaporization • Enthalpy calculation for systems with Chemical Reaction, Thermo-chemistry, Calculations of heat of reaction, heat of combustions, heat of formation and heat of neutralization, Effect of Temperature and Pressure on Heat of Reaction, Hess's Law, Adiabatic Flame Temperature, Theoretical Flame Temperature. Module – III (10hrs) • Scope of thermodynamics, Terminology and fundamental concepts. Microscopic and macroscopic view. State and path functions, thermodynamics processes, Zeroth and First law of thermodynamics: Applications of first law to close and open system.Limitations of first law, Heat pump, heat engine, Second law of thermodynamics: Reversibility and irreversibility, Carnot cycle, concept and estimation of entropy, third law of thermodynamics, Clausiusinequality,Gibb's and Helmholtz free energy. Module – IV (10 hrs) • PVT behavior of pure substance, Equations of state for ideal and real gases, cubic andvirial equation of state, problems, Compressibility factor,thermodynamic properties of pure substances. • Refrigeration of gases: Refrigerator, Co-efficient of performance, capacity of refrigerator, Vapour compressioncycle, Choice of refrigerants.
Text Books, and/or reference material	Suggested Text Books: 1. Chemical Process Calculations, D.C. Sikdar, HI Learning Private Limited, 2013 2. Stoichiometry and Process Calculations, K. V. Narayanan, B. Lakshmikutty, PHI Learning (2017) 3. Stoichiometry, Bhatt and Vora, Tata McGraw Hill Companies. 4. Introduction to Chemical Engineering Thermodynamics, GopinathHalder, Prentice-Hall Of India Pvt. Limited, 2009 5. A Textbook of Chemical Engineering Thermodynamics, Narayanan K.V, Prentice Hall India Learning Private Limited; 2nd edition, 2013 Suggested Reference Books: 1. Unit Operations–Chemical Process Principles – Part-I - Haugen, Wartson&Ragatz (CBS) 2. Basic Principles and Calculations in Chemical Engineering – Himmelblau ((Prentice Hall of India) 3. Chemical Engineering Thermodynamics – J. M. Smith & H. C. Van Ness and M. M. Abbott (Tata McGraw Hill) 4. Chemical & Engineering Thermodynamics – S. I. Sandler (Wiley)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					

Course Outcomes	CO1: To understand the basic organization of cells and organisms and the tools needed to study them CO2: To understand the basic processes of the cell machinery, cell-cell interaction and the eukaryotic cell cycle. CO3: To apply the knowledge of cell process regulation and cell cycle in understanding the use of a cell as a biological tool for manufacturing biomolecules. CO4: To learn the fundamentals of Genetics and its applications. CO5: To solve problems associated with genetic diseases and their transmission from one generation to the next
Topics Covered	**Classical Genetics:** Mendelian inheritance; Euploidy and aneuploidy (4) Genetic interactions (2) **Molecular Genetics**-Split and Overlapping genes; Transposons &Retrotransposons; Mutation (6) DNA Repair and human diseases (4) Recombination (2) **Internal Organization of the cell**: Cells as experimental models, Cells and cellular organelles, Tools of cell biology- Microscopy and cell Architecture, Purification of cells, Membrane structure, Membrane Transport of small molecules and electrical properties of membranes (8) **Cytoskeleton and cell movement:** Structure and organization of actin filaments, Actin myosin and cell movement, intermediate filaments, microtubules, microtubule motors and movements, cell-cell interactions (6) **Cell signalling** Signaling molecules and their receptors, function of cell surface receptors, pathways of intracellular signal transduction, signal transduction and the cytoskeleton, signalling in development and differentiation (6) **Cell cycle and cancer** Eukaryotic cell cycle, meiosis and fertilization, stem cells, Development and causes of cancer, oncogenes, tumor suppressor genes (4)
Text Books, and/or reference material	Suggested Text Books: 1. Molecular Biology of Cell by Albert et.al. John Wiley & Sons 2. The Cell by Cooper. ASM Press 3. M.W.Strickberger: Genetics, Pearson. 4. Brown, T.A., Genetics a Molecular Approach, 4th Ed. Chapman and Hall, Suggested Reference books: 1. Cell and Molecular Biology by Karp. John Wiley & Sons1992 2. Stratchan& Read: Human Molecular Genetics 3. David Freifelder: Microbial Genetics, Jones and Bartlett Publisher Inc. 1987

	4. In Introduction to genetic analysis, Griffiths, Miller, Suzuki, Lewontin and a. Gelbart, Freeman and Company

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
BTC01 (LIFE SCIENCE)		CT+MT+EA					

Course Outcomes	CO1: To develop knowledge on different types of microorganisms including viruses and microscopy for the visualization of microorganisms, their characteristic features as well as internal and external structures and their functions. CO2: To impart an understanding on microbial classification and taxonomy, microbial community and interactions, microbial nutrition, nutritional types, growth media, growthin different systems, and control of microorganisms using various physical and chemical treatments including antimicrobial drugs. CO3: To develop knowledge on microbial metabolism, energy transduction mechanisms, and microbial genetics CO4: To acquire experimental know how of microbial production of various industrial products such as alcohol, antibiotics, amino acids, vitamins exopolysaccharides, enzymes, etc. from industrial strains. CO5: To illustrate the upstream and downstream processing for product recovery and purification.
Topics Covered	**PART A: Microbiology** **Introduction to microbiology:** History and scope of microbiology, major contribution and events in microbiology, different types of microorganisms – characteristic features, microbes and diseases, microbes in human welfare.[**2]** **Microbial structures:** Different types of microscopy, preparation and staining of specimens, microbial shape, size, arrangements, overview of procaryotic and eucaryotic cell – internal and external structures, cytoplasmic matrix, nucleoid, plasmids, ribosomes, flagella, pilli, fimbrie, spores, bacterial and archaebacterial cell walls and cell membranes, Viruses – types, structures, multiplications [**4]** **Microbial classification and taxonomy:** Domains of life, classification, taxonomic ranks, techniques for determining microbial taxonomy and phylogeny, prokaryotic phylogeny and

	diversity, microbial community and interactions – Mutualism, Cooperation, Commensalism, Predation, Parasitism, Amenalism, Competition. Normal microbiota of human body. [**3]** **Microbial nutrition, growth and control:** Common nutrient requirements, nutritional types, uptake of nutrients by cell, culture media, pure culture, microbial growth – batch culture and continuous culture, growth curve, measurement of growth, influence of environmental factors on growth, control of microorganisms by physical and chemical agents, Antimicrobial drugs – general characteristics, narrow-spectrum and broad-spectrum drugs, inhibitors of cell wall synthesis, nucleic acid synthesis and protein synthesis, metabolic antagonists, Drug resistance. **[5]** **Microbial metabolism:** Energy release and conservation, chemoorganotrophic fueling processes, aerobic respiration, glycolysis, TCA cycle, electron transport and oxidative phosphorylation, anaerobic respiration - nitrate and sulphate reduction, fermentations, chemolithotrophy, phototrophy [3**]** **Microbial genetics:** Conjugation, Transduction, Transformation **[4]** **PART B: BIOPROCESS Technology** A) Introduction to Fermentation Technology: Microbial Culture systems; Media for Industrial fermentations; Media Optimization; Sterilization of Industrial Media; The development of Inoculum for Industrial fermentations; Starter Cultures; Downstream Processing and fermentation economics. .... **[4]** B) Commercial Strain Development & Microbial Processes: Sources of industrial cultures and maintenance. Alcoholic fermentation: Production of Industrial Alcohol – Fermentation mechanism. Recent developments, brewing and malting, manufacture of wine and other distilled liquors. Cellular control regulating production of microbial metabolites – Primary and Secondary metabolite – Induced mutation technique – Analogue resistant mutant – Catabolic derepressed mutants – Genetically engineered strain – Protoplast fusion technique. Basic idea on fermentation process, submerged, stationary, solid and semi-solid – with their merits and demerits. **[5]** C) Microbial production of nucleosides and nucleotides: i) Introduction ii) Classification of methods for production of 5' IMP and 5'GMP iii) Production of 5'IMP and 5'GMP by fermentation. ....**[3]** D) Microbial production of Vitamins: 1) Vitamin B12 - Organisms used, production method- process, recovery and assay. 2) Vitamin C - Organisms used, production method, process, recovery and assay. **[3]** E) Lectures Microbial Production of Antibiotics : Organism used, production process and recovery of- 1) Bacitracin & 2) Chloramphenicol **[2**] F) Lectures Microbial Production of acids, viz., citric, lactic, Acetic acid, vinegar and gluconic acid. Mechanism of each fermentation, their uses. its spoilage and prevention **[2]** G) Production of Amino acids (Lysine and glutamic acid) and Antibiotics (Pencillin, Streptomycin and Tetracyclines) and its new Developments ....**[2]**

		CT+MT+EA					

Course Outcomes	**CO1:** To understand the principles of bioenergetics and to correlate them with the metabolic pathway. **CO2:** To impart an understanding on the fates of macromolecules during metabolism. **CO3:** To provide an understanding on the importance and synthesis of energy currency molecule, ATP. **CO4:** To interpret the regulation in the metabolic pathway and to study the role of hormones in the metabolic pathway. **CO 5:** To understand mechanism and kinetics of enzyme action and their regulation for application of enzymes in living system and for industrial purpose.
Topics Covered	**Module 1** **(3+2)5** Biomolecules, Vitamins Principles of Bioenergetics **Module 2** **Carbohydrate and its metabolism** **5** **Carbohydrate Biosynthesis** - Gluconeogenesis, Biosynthesis of glycogen, starch, Sucrose , Photosynthetic Carbohydrate Synthesis, **Glycolysis and catabolism of hexoses -** Glycolysis, pentose phosphate pathway of glucose oxidation, Citric acid cycle, regulation of citric acid cycle, glyoxylate cycle . Role of hormones in metabolism **Oxidative Phosphorylation and Photo Phosphorylation** - Oxidative Phosphorylation, Regulation of Oxidative Phosphorylation, Photosynthesis **Module 3** **3** **Lipid and its metabolism** O**xidation of Fatty acids** - Transport of fatty acid, beta-oxidation, Ketone bodies **Lipid Biosynthesis** - Biosynthesis of fatty acids

	Module 4 **3** **Protein and its metabolism** **Amino acid oxidation and production of Urea** - Metabolic fates of amino groups, Nitrogen excretion and the urea cycle, Pathways of amino acid degradation Nitrogen metabolism, Biosynthesis of amino acids, **Module 5** **2** **Nucleic acid and its metabolism** Biosynthesis and degradation of Nucleotides **Module 6** **12** **Enzyme Technology and Vitamins** **Enzymes:**Nomenclature of enzymes, Enzyme kinetics, Mechanism of enzymatic, Catalysis, Active site, Activators and inhibitors, Coenzymes, Isoenzymes, Michaelis-Menten equation, Km and Vmax value, Regulation of enzyme activity (single-substrate and multi-substrate reactions). Vitamin's as coenzyme **Production of enzymes and immobilisation** : Production of industrial enzymes such as proteases, amylases, lipases, cellulases, whole cell biocatalysis. Enzyme immobilization: Methods of immobilization of enzymes-physical & chemical techniques, Kinetics of immobilized enzyme, Effect of external mass transfer & intra-particle diffusion, limitation & applications of immobilized enzymes, Bioreactors using immobilized enzyme. Engineering of Enzymes **Application of enzyme** in leather industry, detergent industry, dairy industry; Lignocellulose degrading enzymes.
Text Books, and/or reference material	Suggested Text Books: 1. Biochemistry by LubertStryer. W. H. Freeman & Company, NY 2. Biochemistry by Lehninger. McMillan publishers Suggested Reference Books: 1. Biochemistry, Voet&Voet 2. Fundamental of Enzymology by Price and Stevens (2002): Oxford University Press 3. Enzyme technology by Chaplin and Bucke. Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTS351	MICROBIOLOGY LABORATORY	PEL	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+EA					

Course Outcomes	CO1: To learn and become familiar with types of culture media, preparations of culture media, sterilization procedures, types of equipments. CO2: To understand the concept of sterility, working principles and applications of instruments: autoclaving, laminar air flow hood etc. CO3:To learn about the isolation and maintenance process of bacterial cultures. CO4: To apply the understanding of the cultural and morphological characteristics of microorganisms grown in pure culture.Applications in Antimicrobial effect and CO5: To interpret microbial growth phases its kinetics specific growth rate.to determine the effects of chemicals on bacteria and to understand the quality of water.
Topics Covered	**Microbial culture media preparation:** Basic concepts of nutrition materials in media, classes of culture media, how to prepare growth media. **The control of microbial growth :** To study the methods of sterilization: autoclaving, laminar air flow hood, irradiation, filtrations, chemical and gas. **Isolation of microorganisms from an environment of choice :** To demonstrate the ubiquity and diversity of microbes in the environment, samples from immediate areas of the environment will be obtained and cultured and dilution methods. **Isolation and Maintenance of pure cultures :** To study the different techniques of isolation and maintenance of pure cultures: subculturing, streak plate method, pour plate method, spread plate method. **Bacterial morphology and staining :** To study the physical properties and differentiation of microorganisms with the help of different staining procedures: differential and structural staining. Techniques of Gram staining, endospores staining, microscopic study. **Estimation of coliform bacteria:** To study the estimation of coliform bacteria in water by MPN (most probable number) test. **Study of bacterial growth:** To study the growth pattern of bacteria, specific growth rate calculation, different growth phases of bacteria. **Antimicrobial activity study:** To determine the antibiotic susceptibility via sensitivity disk methods, calculation of zone of inhibition.
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Benson HJ. 2002. Microbiological applications: a laboratory manual in general microbiology: McGraw-Hill New York, NY. 2. Harley JP. 2004. Laboratory exercises in microbiology: McGraw-Hill Science/Engineering/Math <u>Suggested Reference Books:</u> 1. Brown AE. 2009. Benson's Microbiological Applications: Laboratory Manual in General Microbiology, Short Version: McGraw Hill 2. Madigan MT, Martinko JM, Dunlap PV, Clark DP. 2012. Brock biology of microorganisms: Pearson/Benjamin Cummings. 3. Pollack RA. 2004. Laboratory exercises in microbiology, 3e. Recherche 67: 02

Course Outcomes	CO1: To design , analyze and solve problems and learn to plot graph and interpret data CO2: To develop skills to perform experiments and have hands on training. CO3: To apply the results and data to solve problems in daily activities and industry.
Topics Covered	1. To prepare Tris-HCl Buffer with a specific pH (eg. pH 8.8) 2. Qualitative and quantitative estimation of carbohydrates 3. Qualitative and quantitative estimation of aminoacids and determination of the unknown concentration of protein concentration by plotting a standard curve of BSA using Bradford reagent 4. Ammonium sulphate precipitation and dialysis for a protein 5. Separation and Identification of Amino acids by Paper Chromatography and Thin Layer Chromatography 6. Analysis of Protein purity and determination of molecular weight of pure protein by SDS PAGE and Coomassie Brilliant blue staining of proteins on SDS gel 7. Extraction of Enzyme Tyrosinase from commercially available mushrooms and Assay of Enzyme Tyrosinase with determination of specific activity of Enzyme Tyrosinase 8. Effect of substrate concentration on the activity of Enzyme Tyrosinase and determination of MichelesMenton parameters of Enzyme Tyrosinase 9. Effect of inhibitor concentration on the activity of Enzyme Tyrosinase
Text Books, and/or reference material	Suggested Text Books: 1. Practical Biochemistry by David T Plummer Suggested Reference Books: 2. Biochemistry by Voet and Voet

<tr><td colspan="2">Course Outcomes</td><td colspan="7">CO1: Students will acquire basic understanding of molecular biology topics: nucleic acid structure and chemistry; organization of genome in chromosomes; regulation of replication, transcription, translation and DNA repair.
CO2: Students will acquire knowledge of recombinant DNA techniques on: nucleic acid amplification and gene cloning; manipulation of DNA sequences; preparation and screening of nucleic acid libraries; gene silencing; analysis of variations in genome sequence.
CO3: Students will be proficient in applying basic understanding of molecular biology topics in analyzing and solving problems related to recombinant DNA technology.
CO4: Students will be able to design strategies to solve problems related to recombinant DNA technology.</td></tr>
<tr><td colspan="2">Topics Covered</td><td colspan="7">1. Nucleic acid structure: Nucleotides and nucleic acids, DNA structure, different forms of DNA, unusual DNA structure, different types of RNA, RNA structure. [3]
2. Nucleic acid chemistry: Denaturation and renaturation, hybridization, nonenzymatic transformation (Mutation) – spontaneous and induced, point mutation - transition, transversion, mutation involving more than one base pairs, insertion, deletion, frame shift mutation, forward and back mutation, null mutation, Loss-of-function and gain-of-function mutation, silent mutation, DNA sequencing. [4]
3. Chromosome organization: Chromosomal elements – genes and intergenic regions, regulatory sequences; DNA supercoiling, linking number, Chromosome structure: Histones, Non-histones, Nucleosome, Chromatin. Chromosome structure in prokaryotes & eukaryotes. [4]
4. DNA replication and repair: Central dogma, DNA replication in prokaryots and eukaryots – set of fundamental rules, DNA polymerases, proteins and enzymes involved in replication, process, accuracy. [4]
5. Transcription and post-transcriptional processing: DNA-dependent RNA synthesis in prokaryotes and eukaryotes, RNA polymerases, transcription process, termination, selective inhibition, RNA processing – capping, splicing of introns, differential RNA processing; RNA-dependent synthesis of RNA and DNA. [4]
6. Protein synthesis – translation: Genetic code, ribosome, transfer RNA, protein biosynthesis stages – attachment of amino acid to specific tRNA, initiation, elongation, termination, folding and processing; inhibition of protein synthesis. [4]
7. DNA repair: DNA repair – multiple repair systems. [3]</td></tr>
</table>

	8. Regulation of gene expression: Regulation of gene expression in bacteria - operon concept; Regulation of gene expression in eukaryotes, hormonal control of gene expression in eukaryotes. [3] 9. Introduction to recombinant DNA and Gene Cloning Tools of recombinant DNA: Vectors; plasmid, bacteriophage viral vectors, cosmids, yeast artificial chromosome. Expression vectors, and selection of suitable Host. [5] 10. Restriction endonucleases and other enzymes use and mechanism of action and analysis, Genomic DNA and cDNA library preparation. Strategies for engineered vectors use and regulation for enhanced gene expression and purification. [5] 11. Screening and selection of clone with desired gene and protein of interest: Colony and plaque hybridization. antibody based assay, Protein activity. Application of gene cloning and DNA Analysis. [3] 12. Molecular probes: Preparation of molecular probes DNA probes, RNA probes, radioactive labeling, Non-radioactive labeling, use of molecular probes in DNA fingerprinting. Southern blotting, Northern blotting, Western blotting, In-situ hybridization. [4] 13. MOLECULAR TECHNIQES: Polymerase chain reaction, different types and their use. Antisense RNA technology, Site directed mutagenesis, Use of RFLP, SNP and Microarray. [4]
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Gene IX by B. Lewin, Pearson 2. Molecular biology of the cell by Albertset. al., Garland science <u>Suggested Reference Books:</u> 1. Molecular Biology of the Gene, 7th edition 2013. Watson et. al. Published by Pearson. 2. Cell and molecular Biology, Concepts and experiments Gerald Karp, John Wiley and Sons. 3. The Cell - A molecular approach, GM Cooper ASM Press 4. Genomes, T. A. Brown, John Wiley and Sons PTE Ltd

CHC431	UNIT OPERATIONS OF CHEMICAL ENGINEERING I	PCR	3	1	0	4	4
Mathematics, Unit Operations		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	● CA1:To Understand fundamentals of fluid dynamics and mechanics ● CA2:Understanding the fundamentals of heat transfer operations ● CA3:To learn design of heat transfer equipment and calculations ● CA4:To develop knowledge of different mechanical operations and their applications ● CA5:To solve related problems of different difficulty levels through tutorials
Topics Covered	**Module - I** (14 hrs) Fundamental Concepts: Definition of Fluid, Terminologies of fluid flow, velocity – local, average, maximum, flow rate – mass, volumetric, velocity field; flow visualization – streamline, path line, streak line, viscosity; Newtonian fluid; Non-Newtonian fluid; Reynold's number—its significance, laminar, transition and turbulent flows. Fluid Statics: Basic equation of fluid statics; pressure variation in a static field; pressure measuring devices– manometer, U-tube, inclined tube. Introduction to rotational and irrotational flow. Introduction; flow of incompressible fluid in circular pipe; laminar flow for Newtonian fluid; Hagen-Poiseullie equation; introduction to turbulent flow in a pipe-Prandtl mixing length; energy consideration in pipe flow, relation between average and maximum velocity, Bernoulli's equation–kinetic energy correction factor. Fluid moving machines: Introduction; Basic classification of pumps: Mechanical pump: Centrifugal pumps- cavitation, NPSH, Positive displacement pumps (rotary, piston, plunger, diaphragm pumps); Peristaltic pump; Pump specification; Basic characteristics curves for centrifugal pumps **Module – II** (14 hrs) Basic modes of heat transfer; Heat transfer by conduction: One dimensional steady state heat conduction, Fourier's Law, Thermal conductivity, Compound resistance in series; Steady state heat transfer analysis through extended surface; Unsteady state heat conduction with and without heat generation, Concept of thermal diffusivity; Concept of heat transfer coefficient in convective-conductive system, Critical thickness of insulation. Heat transfer by convection: Convection heat transfer mechanism; Forced convection in systems of simple geometrics (plate, cylinder etc.), Thermal boundary layer; Co-relation for heat transfer coefficient: internal flow & external flow, Momentum & heat transfer analogies. Evaporation: Classification; Capacity, Steam economy; Boiling point elevation (Duhring rule); Material and energy balance of single effect evaporator; Introduction to multiple effect evaporator: Forward feed, Backward feed, Mixed feed, Parallel feed **Module – III** (12 hrs) Particulate solids: Characterization of solid particles, particle shape, particle size, mixed particle sizes and size analysis, specific surface of mixture, average particle size. Screen analysis: Type of screens, ideal screen, real screen, screen effective ness, differential and cumulative analysis, screen capacity.Screening equipment: stationary screens and grizzlies, gyrating screens, vibrating screens and other industrial screens like trammels etc. Comminution of solids (Size Reduction): Factors affecting commnution,comminution laws: Kick's law, Rittinger's law and Bond's law and theirlimitations. Crushing efficiency & power consumption.
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. A Textbook of Fluid Mechanics And Hydraulic Machines, R.K. Bansal, Laxmi (Publications; Tenth edition, 2018 2. Heat Transfer Principles and Application, B. K. Dutta, PHI. 3. Units Operations of Chemical Engineering: McCabe & Smith and Harriot, MGH 4. Mechanical Operations for Chemical Engineers, C.M. Narayanan and B.C. Bhattacharya, KHANNA PUBLISHERS, 1990 <u>Suggested Reference Books:</u> 1. Process Heat Transfer: D. Q. Kern, MGH, 1983

	2. Coulson, J.M., Richardson, J.F., "Chemical Engineering", Volume 2, Third Edition, Pergamon Press, 1977 3. Principles of Unit Operations by Alan S Foust, L.A. Wenzel, C.W. Clump, L. Maus, and L.B.

BTC 402	IMMUNOLOGY	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
BTC01		CT+MT+EA					
Course Outcomes	CO1: To understand the role of the components of the immune system and its classification CO2: To understand the role of the immune cells and their immunological response in the context of human diseases including infectious diseases, autoimmunity, and cancer. CO3: To learn the fundamentals and principles of immunological techniques and their application. CO4: To understand methods of generations of Polyclonal and Monoclonal Antibody and the use of custom made genetically engineered antibodies. CO5: To solve problems associated with drugs and their toxic response based on the knowledge of immunological response.						
Topics Covered	**Immunology-** fundamental concepts and anatomy of the immune system Components of innate and acquired immunity; Phagocytosis; Complement and Inflammatory responses; Haematopoesis; Organs and cells of the immune system- primary and secondary lymphoid organs; Lymphatic system; Lymphocyte circulation; Lymphocyte homing (6) **Immune responses generated by B and T lymphocytes** Immunoglobulins-basic structure, classes & subclasses of immunoglobulins, antigenic determinants; (2) Multigene organization of immunoglobulin genes; B-cell receptor; Immunoglobulin superfamily (3) Kinetics of Active and Passive Immunity, Basis of self –non-self discrimination; (4) B cell maturation, activation and differentiation; T-cell maturation, activation and differentiation and T-cell receptors; Functional T Cell Subsets; Cell-mediated immune responses (6) Hypersensitivity, Antibody Dependent Cell Cytotoxicity; Cytokines-properties, receptors and therapeutic uses; Antigen processing and presentation Hapten-carrier system. Complement						

	system. (4) **Antigen – Antibody Interaction dependent Techniques** Precipitation, Agglutination; Advanced immunological techniques- RIA, ELISA, Western blotting, ELISPOT assay, Immuno-electron microscopy and Immunoflourescence techniques (6) **Clinical Immunology** Preparation and clinical uses of Monoclonal and Polyclonal antibody. (3) Transplantation; Autoimmunity; (5) Vaccination: Principles and development of vaccines against different diseases. (3)
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Kuby J, Thomas J. Kindt, Barbara, A. Osborne Immunology, 6th Edition, Freeman, 2002. 2. </table>

Topics Covered	1) Introduction: Basic terminology, elementary data organization, structure operations, algorithm, complexity and time-space trade-off. [2] 2) Arrays: Array definition, representation and analysis, single and multidimensional arrays, address calculation, application of arrays, character string in c, character string operation, array as parameters, ordered list, sparse matrices and vectors. [4] 3) Stacks: Array representation and implementation of stack, operations on stacks: push AND pop, array representation of stack, linked representation of stack, operations associated with stacks, application of stack: conversion of infix to prefix and postfix expressions, evaluation of postfix expression using stack. [5] 4) Queues: Array and linked representation and implementation of queues, operations on queue: create, add, delete, full and empty, circular queues, d-queues and priority queues. [4] 5) Linked list: Representation and implementation of singly linked lists, two-way header list, traversing and searching of linked list, overflow and underflow, insertion and deletion to/from linked lists, insertion and deletion algorithms, doubly linked list, linked list in array, polynomial representation and addition, generalized linked list, garbage collection and compaction. [7] 6) Trees: Basic terminology, binary trees, binary tree representation, algebraic expressions, complete binary tree, extended binary trees, array and linked representation of binary trees, traversing binary trees, threaded binary trees, traversing threaded binary trees. [7] 7) Searching: Sequential search, binary search. [2] 8) Sorting: Insertion Sort, Selection Sort, Bubble Sort, Radix Sort, Quick Sort, Merge Sort and Heap Sort. [8] 9) Binary Search Trees: Binary Search Tree (BST), Insertion, Deletion and Search Operations in BST. [5] 10) Height Balance Tree: Introduction to Height Balance Tree, Insertion, Deletion and Search Operations in Height Balance Tree. [5] 11) Graphs: Terminology and representations, graphs and multi-graphs, directed graphs, sequential representations of graphs, adjacency matrices, traversal, connected component and spanning trees, minimum cost spanning trees. [7]

<tr><td>Course Outcomes</td><td colspan="7">
● CO1: Choose appropriate data structures for representation and manipulation of the data for the given problems.
● CO2: Handle operations like search, insertion, deletion, traversing and sorting on various data structures.
● CO3: Have knowledge on the applications of linear and non-linear data structures for real life problems.
● CO4: Able to store and manipulate data in an efficient manner.
● CO5: Able to implement stack, queue, binary tree, etc. using arrays and linked lists.
● CO6: Able to apply the concepts learnt through thiscourse in various domains like DBMS and compiler.
</td></tr>
<tr><td>Topics Covered</td><td colspan="7">
Linked List
● Implementations of Linked Lists menu driven program
● Implementation of different operations on linked list – copy, concatenate, split, reverse,
count no. of nodes etc.
● Representation of Sparse matrix using multilinked structure. Implementation of sparse
matrix addition and multiplication
● Implementation of polynomial operations (addition, subtraction) using Linked List
● Implementations of Doubly Linked List
Stack
● Implementations of stack menu driven program using array and linked list
● Implementation of multi-stack in one array
● Implementations of Infix to Postfix Transformation and its evaluation program
● Implementations of Infix to Prefix Transformation and its evaluation program
Queue
● Implementations of double ended queue menu driven program using array and linked list
● Implementations of circular queue menu driven program using array and linked list
● Implementation of Priority queue program using array
Tree
● Implementations of Binary Tree menu driven program
● Implementation of Binary Tree Traversal program
● Implementations of BST program
● Implementation of various operations on tree like – copying tree, mirroring a tree, counting the number of nodes in the tree, counting only leaf nodes in the tree
Sorting
</td></tr>

FIFTH SEMESTER

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTC 501	BIOCHEMICAL REACTION ENGINEERING AND BIOREACTOR DESIGN	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
None	CT+MT+EA
Course Outcomes	CO1 – To gain knowledge about Chemical and Biochemical processes, order of reactions, effect of various parameters on rate constant of a reaction C02- To study about different reactions in batch reactors, kinetics of enzyme catalyzed reactions CO3- To acquire knowledge about different ideal and non-ideal reactors, reaction kinetics, microbial growth kinetics CO4- To learn about various types of Bioreactors, their design considerations and applications in the field of Biochemical Engineering CO5- To study about mass transfer in bioprocess systems, scale up, instrumentation and control, bioreactor considerations in plant and animal cell culture
Topics Covered	Rate of chemical reaction; Effect of Temperature on Rate Constant, Arrhenius equation, Order and Molecularity of a Chemical reaction, Elementary Reactions, First, Second and Third order reactions, Pseudo-first order reaction, Determination of rate constant and order of reaction. [5] Interpretation of batch reactor data for simple and complex reactions. Kinetics of Enzyme catalyzed reactions for free and immobilized enzymes.–derivation of Michaelis-Menten equation, Briggs-Haldane relationship, the determination and significance of kinetic constants, Lineweaver-burk and Eadie-Hofstee plot, principles of enzyme inhibition – Competitive, noncompetitive and uncompetitive. [5] Fundamentals of homogeneous reactions for batch, plug flow and mixed flow reactors. [5] Concept of ideal and non ideal reactors, Residence time distribution, Models for non ideal reactors (Dispersion model, tanks-in-series model). [5] Stoichiometry of cellular reactions. Microbial growth kinetics (Batch, continuous, fed batch). Monod model and other kinetic models. Growth kinetics with plasmid instability. [6] Bioreactor design: Packed bed bioreactor, Fluidized bed bioreactor, Bubble column bioreactor, Air lift bioreactor, Tower bioreactor. Hollow fiber bioreactor, Membrane bioreactor. [4] Design of fermenter. Fermenter utilities – boiler and refrigeration system. [5] Immobilized cell bioreactor system. Mass transfer in bioprocess system. Two film theory, K_{la} determination. Scale up concepts. Bioreactor considerations for plant and animal cell culture [5] Bioprocess instrumentation and control. Computer controlled bioreactors.

	[2]
Text Books, and/or reference material	Suggested text books: 1. Bioprocess Engineering: Basic Concepts (2nd Edition), Shuler and Kargi, Prentice Hall International. 2. Bioprocess Engineering Principles – Pauline M Doran. Academic press 3. Chemical Reaction Engineering ,O Levenspiel, Wiley 4. Principles of Fermentation Technology, Stanbury and Whitaker, Pergamon press Suggested reference books: 1. Biochemical Engineering. Fundamentals, Bailey &Olis, McGraw-Hill 2. Biochemical Engineering, Humphrey and Aiba. Academic Press

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTC503	BIOSEPARATION AND BIOCHEMICAL ANALYSIS	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Basic Physics, Mathematics including basics of Differential & Integral Calculus, Basic concepts of Chemistry & Biochemistry	CT+MT+EA

Course Outcomes	CO1: To learn the concepts of separation including purification sequence and its monitoring and the properties of proteins underlying bioseparations.

	CO2: To learn techniques of biochemical analysis of biomolecules. CO3: To learn and analyze, mathematically wherever applicable, the various unit operations in bioseparation. CO4: To understand the design aspects of unit operations in bioseparation. CO5: To solve problems of bioseparations including industrial bioseparations.
Topics Covered	**Basic Concepts** **[3]** Basic concepts of Bio-separation Technology **Basic Analytical Tehniques:** **[10]** Introduction to Biomolecules, Buffers Estimation of carbohydrate, protein, and lipid, and enzyme assay Quantitation of DNA and RNA Methods of cell disintegration **Removal of Insolubles** **[9]** Flocculation and conditioning of broth. Filtration at constant pressure and at constant rate; equations for batch and continuous filtration, centrifugal and cross-flow filtration. Centrifugation: basic principles, design characteristics; ultracentrifuges: principles and applications. **Techniques Involved in Separation Processes for Solutes** **[9]** Foam-fractionation; Solvent extraction, aqueous two-phase extraction, adsorption & desorption processes; Salt precipitation Membrane based separation processes:Micro-filtration, Dialysis, Reverse osmosis, Ultrafiltration and affinity ultrafiltration, concentration polarization, rejection, flux expression, membrane modules, dead-end and cross-flow modes. **Advanced Techniques for Bioseparation:** **[9]** Chromatography: paper chromatography, TLC, gel filtration, ion exchange, hydrophobic interaction chromatography, affinity chromatography, HPLC. Electrophoresis: Theory and application of Polyacrylamide and Agarose gel electrophoresis; 2D-Gel electrophoresis **Industrial Application with an example** **[2]**
Text Books, and/or reference material	Suggested Text Books: 1. Practical Biochemistry Principles and techniques (5th ed)/ Principles and Techniques of Biochemistry and Molecular Biology (7th ed): Editor Wilson and Walker, Cambridge University Press 2. Geankoplis, Transport Processes & Unit operations, PHI. Suggested Reference Books: 1. D. Holme & H. Peck, Analytical Biochemistry, 3rd ed, Longman, 1998 2. Shuler & Kargi, Bio-process Engg. PHI 3. Bailey &Olis, Biochemical Engg. Fundamentals, McGraw-Hill

CHC531	UNIT OPERATIONS OF CHEMICAL ENGINEERING-II	PCR	3	1	0	4	4
CHC431: Unit operations of chemical engineering-I.		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	• To learn different types of mass transfer phenomena • Understanding the fundamentals of mass transfer operations • To learn design parameters, their effects and calculations • To compare different types of mass transfer operations and their applications • To solve related problems of different difficulty levels through tutorials
Topics Covered	**Module I:** Principles of mass transfer: Introduction, diffusion, classification of diffusion, Inter-phase mass transfer. [8 hr] **Module II:** Evaporation: Introduction, types of evaporators, design calculation and processes [8 hr] **Module III:** Drying: Principles of drying, drying characteristics, methods, equipment. Humidification and Dehumidification: Definitions, adiabatic saturation temperature, wet bulb temperature, processes [8 hr] **Module IV:** Absorption: Principle, operation and design calculation [8 hr] **Module V:** Distillation: Flash distillation, differential distillation, fractionation and design calculations [8 hr] **Module VI:** Extraction and Adsorption: Principles and Operations. [8 hr]
Text Books, and/or reference material	Suggested Text Books: 1. B.K.Dutta, Principles of Mass Transfer and Separation Processes, Prentice Hall India Private Limited 2. N Anantharaman and K.M.M.S. Begum, Mass Transfer theory and practice. Prentice Hall India Private Limited 3. Robert E. Treybal, Mass Transfer Operations, McGraw Hill limited Suggested Reference Books:

BTO540	MINERAL BIOTECHNOLOGY	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA
Course Outcomes	• CO1: To understand the nature and characteristics of different biogeochemical cycles and involvement important micro-organisms. • CO2: To learn the basic concepts of bioleaching and biobeneficiationalong with the microbiological aspects • CO3: To gain the detail knowledge bioleaching processes with examples. • CO4: To demonstrate and provide examples on how to use microbes for the environmental pollution control
Topics Covered	**Module-I :** Introduction to Biotechnology applied to Raw Material processing, Biogeochemical reactions – chemical mechanisms and controlling factors, Microbial interventions, Nature and characteristics of Biogeochemically important micro-organisms. 10 **Module-II:** Kinetics of bioleaching; Applications of biogeochemical process in mining and metallurgy, dump, heap and in-situ leaching. 8 **Module-III:** Reactor modeling for leaching, Beneficiation of ored and process residues: recovery of gold, silver, copper, beneficiation of sulfidic tailings from tin processing; purification of ferroginous sand. 8 **Module-IV :** Beneficiation of bauxite, applications of sulphate reducing bacteria; applications of sulphate reducing bacteria, Environmental pollution control: accumulation of metals by microbial cells. 8
Text Books, and/or reference material	Suggested Text Books: 1. H.D. Kumar and S.Kumar , Modern Concepts of Microbiology , Vikas Publishing House , 2nd Edition , 2001 2. M.E. Curtin , Microbial mining and metal recovery biotechnology (1) , pp 229-235 , 1983 Suggested Reference Books: 1. Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Life Science BTC01		CT+MT+EA					
Course Outcomes	● CO1: To impart knowledge of life science and biologicaldata ● CO2: To acquire knowledge of computational and mathematical skills for addressing important biologicalquestions. ● CO3: To learn how to develop and implement computational algorithms and tools for processing biologicaldata						
Topics Covered	1. Introduction to Computational biology and its applications(2) 2. Central dogma and biological macromolecules- DNA, RNA & proteins(2) 3. Major biological databases related to DNA, RNA, proteins &metabolic pathways(3) 4. Basic file formats & sequence representation(2) 5. Computational algorithms for Sequence Alignment: Local and global alignment, Sequence similarity, Sequence identity, Gaps, Scoring matrices, pairwise and multiple alignments, Dynamic programming, BLAST & its application,(7) 6. Algorithms for phylogenetics: Tree constructions(5) 7. StructuralBioinformatics: A. Protein Structure and itsvisualization(2) B. Protein structural alignment(3) C. Protein secondary Structure Prediction(4) D. Protein tertiary Structure Prediction(4) E. RNA Structure Prediction(3) F. Molecular docking and docking algorithms(3) 7. Application of machine learning in biological sciences (Basic concepts) (2)						
Text Books, and/or reference material	Suggested Text Books: 1. Bioinformatics: Sequence and Genome Analysis by David W Mount, Cold Spring Harbor LaboratoryPress 2. Introduction to Bioinformatics by Arthur MLesk Suggested Reference Books: 1. Protein bioinformatics: an algorithmic approach to sequence and structure analysis by Ingvar Eidhammer, IngeJonassen and William R.Taylor. 2. Essentials of Bioinformatics by JinXiong

BTS 551	IMMUNOLOGY LABORATORY	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA					
		CT+EA					
Course Outcomes	CO1: To learn the fundamentals of immunological techniques CO2: To be able to perform techniques routinely used in immunology, particularly the use of specific antibody in biomolecular applications. CO2: To be able to isolate, count and identify different types of blood cells. CO4: To develop an idea for proper documentation of the work including laboratory procedures, experimental conditions, materials used, equipment used and the results. CO5: To understand the basic hazards of working with human samples and antigens and safety measures to be taken						
Topics Covered	1. Cell count with Haemocytometer 2. Determination of viability of the cells 3. Serology: Preparation of the blood smear 4. Blood cell identification 5. Blood grouping by Agglutination assay 6. Quantitative WIDAL test (By tube test and slide test) 7. Precipitation test: Immunodiffusion 8. Enzyme linked Immunosorbent Assay (ELISA) 9. Protein detection by Western blot technique. 10. Lymphocytes isolation using FicollHypaque technique						
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Immunology Laboratory manual. 2. ArtiNigam,ArchanaAyyagari,"Lab Manual in Biochemistry, Immunology and Biotechnology",McGraw Hill Education, India, 2007 <u>Suggested Reference Books:</u>

Cell Biology and Genetics (BTC301), Biochemistry and Enzyme Technology (BTC303), Programming and Data Structure (CSC431)		CT+MT+EA					
Course Outcomes	• CO1: To learn how to integrate both biological and computer skills for addressing important biological questions. • CO2: To acquire knowledge of existing biological databases and understand the methods for storing, organizing, retrieving and analyzing biological data in an efficient way. • CO3: To learn and implement computational algorithms and tools (webservers and standalone programs) for processing biological data						
Topics Covered	1. Introduction to Bioinformatics and its applications (2) 2. Linux and Bash programming for bioinformatics (3) 3. Major Information Resources & biological databases (3)						

	4. Sequence Alignment: Sequence similarity, Sequence identity, Sequence homology, Gap Penalty, local and global alignment, pairwise and multiple alignments, sequence alignment algorithm, Dynamic programming, BLAST and PSI-BLAST, Application of BLAST tool, Concept of Scoring matrix (5) 5. Molecular phylogeny and evolution: Phylogenetics basics and methods for phylogenetic tree constructions (4) 6. Structural Bioinformatics: A. Protein Structure and its visualization, structural alignment (3), B. Protein secondary Structure Prediction (2), C. Protein tertiary Structure Prediction (2), D. RNA Structure Prediction (2) 7. Molecular Docking and Drug design (Basic concepts) (2)
Text Books, and/or reference material	Suggested Text Books: 1. Bioinformatics: Sequence and Genome Analysis by David W Mount, Cold Spring Harbor Laboratory Press 2. Introduction to Bioinformatics by Arthur M Lesk Suggested Reference Books: 1. Introduction to Bioinformatics computer Skills by Cynthia Gibas and Per Jambeck 2. Protein bioinformatics: an algorithmic approach to sequence and structure analysis by Ingvar Eidhammer, IngeJonassen and William R. Taylor. 3. Essentials of Bioinformatics by Jin Xiong

		CT+MT+EA					
Course Outcomes	CO1: Understand the basic concepts and appreciate the applications of database systems CO2. Comprehend the fundamentals of design principles for logical design of relational databases CO3: Apply the query writing skill CO4. Discuss the basic issues of transaction processing and concurrency control						
Topics Covered	1. Introduction of DBMS. 5L 2. Concept of E-R diagram, Extended E-R diagram. 5L 3. Relational Algebra 4L 4. Queries with various operations 4L						

	5. SQL Queries 4L 6. Index structure design 5L 7. Normalization (Different normal forms) 5L 8. Basic concepts on transaction processing 5L 9. Various concurrency-control protocols (2 phase locking, time stamp protocol) 5
Text Books, and/or reference material	Suggested Text Books: 1. Silberschatz, H. F. Korth and S. Sudharshan, "Database System Concepts", Sixth Edition, Tata McGraw Hill, 2011. 2. R. Elmasri, S. B. Navathe, "Fundamentals of DBMS Systems", Pearson education. Sixth Edition. 3. Kahate, "Introduction to Database Management Systems", Pearson Education, New Delhi, 2006. Suggested Reference Books: 1. C.J.Date, A.Kannan and S.Swamynathan, "An Introduction to Database Systems", Eighth Edition, Pearson Education, 2006.

Cell Biology (BTC 301/BT 403), Molecular Biology (BTC 401/ BT 404), and Immunology (BTC 402/ BT 501)	CT+MT+EA

Course Outcomes	• CO1: Acquire an understanding of virus life cycle and host-virus interactions. • CO2: Acquire an idea about detection, prevention and treatment of virus infections. • CO3: To learn about use of virus in biotechnology.
Topics Covered	Brief history and principles of virology. (1) Principles of virus classification. (2) General structure of viruses; Viroids, Virusoids, Satellite viruses, and Prions. (2) Genome of plant and animal viruses. Mobile genetic elements. (4) Replications of RNA viruses. (5) Replication of DNA viruses. (5) Virus-cell interactions: cytopathology; virus entry and egress; host cell shut off and IRES;viral persistence and latency. (6) Methods to diagnose virus infections. (3) Antiviral vaccines. (3) Antivirals: interferons and its mechanisms of action. (2) Gene silencing. (2) Culture and purification of viruses. (2) Viral vectors and gene therapy. (2) New and emerging viruses (3)
Text Books, and/or reference material	Suggested Text Books: 1. Principles of Virology: 4th Edition. By S. Jane Flint, Vincent R. Racaniello, Glenn F. Rall, Anna Marie Skalka, and Lynn W. Enquist. Suggested Reference Books: 1. Fields Virology by Lippincott Williams and Wilkins.

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Microbiology, Chemical Kinetics	CT+MT+EA

Course Outcomes	**CO1:** To recapitulate the basics of bioenergetics and to understand the relevant biogeochemistry & microbiology. **CO 2:** To learn about the concepts of bioleaching and biobeneficiation along with the microbiological aspects **CO 3:** To learn about bioleaching processes with typical examples. **CO 4:** To analyze the kinetics of bioleaching **CO 5:** To understand the enzymatic mechanism of bioleaching.
Topics Covered	Recapitulation of basics of bioenergetics (ATP as an energy-rich molecule, oxidation-reduction reactions), Biogeochemical cycles – sulphur, iron, and manganese cycles. Nature and characteristics of biogeochemically important micro-organisms. (9) Bioleaching: definition, scope, advantages & disadvantages; Types: direct, indirect, & indirect contact. Types of bioleaching with respect to reaction intermediates (thiosulphate& polysulphide mechanisms). Autotrophs & heterotrophs as candidate microorganisms for bioleaching. Bioleaching by aerobic and anaerobic microorganisms. (9) Bioleaching processes: in situ, heap & dump, & reactor bioleaching. Bioleaching of copper by *Acidithiobacillus* from chalcopyrites, chalcocite, &covellite. Dump & heap and reactor bioleaching of copper. Uranium bioleaching &biobeneficiation of gold. Environmental pollution control in gold recovery processes. (9) Kinetics of pyrite bioleaching – two-subprocess mechanism- ferric leach kinetics & kinetics of bacterial oxidation of ferrous iron. Modelling of continuous tank bioleaching of pyrite – unsegregated and segregated models. (9) Oxidation of iron by Acidithiobacillus – enzymatic mechanism; role of cytochromes &rusticyanin, elements of electron transport pathways in iron & sulphur oxidation. (6)

BTC502 (Cell & Tissue Culture of Animals & Plants)	CT+MT+EA
Course Outcomes	CO1: To develop the basic knowledge for genetic improvement of crop plants. CO2: Understanding the sources of useful genes required for engineering resistance. CO3: Learning of fundamentals of gene mapping and gene isolation. CO4: Learning the basics and methods of genetic transformation of plants. CO5: Solving problems related to biotic and abiotic stress faced by crop plants.
Topics Covered	**Introduction:** Principles of gene manipulation in plants and basic concepts of genetic improvement of crop plants**[5]** **Molecular markers & Cloning genes:**Identifying the good gene sources, general strategies for cloning genes from plants, Cloning methods based on DNA insertions, subtractive cloning, map-based cloning, chromosome walking, chromosome jumping, morphological markers, biochemical markers, molecular markers – RFLP, RAPD, AFLP, ISSR, RAMP, STMs, fingerprinting, SNPs**[10]** **Genetic Engineering:**Agrobacterium-plant interaction; virulence; Ti and Riplasmids; opines and their significance; T-DNA transfer; disarmed Ti plasmid;Genetic transformation Agrobacterium-mediated gene delivery; cointegrateandbinary vectors and their utility; direct gene transfer - PEG-mediated,electroporation, particle bombardment and alternative methods; screenableandselectable markers; characterization of transgenics; chloroplast transformation **[10]** **Applications:**Genetic engineering of resistance to biotic stress, tolerance to abiotic stress, removal of environmental pollutants, quality nutrition and health, molecular farming **[10]** **Biosafety concerns:**Removal of selectable markers from GM crops,Modern tools of genetic manipulation of plants; genome editing **[7]**
Text Books, and/or reference material	Suggested Text Books: 1. H.S.Chawla, Introduction to Plant Biotechnology, Oxford & IBH Publishing co. Pvt..Ltd 2. Slater.A.,NigelW.S,Flower.R.Mark , Plant Biotechnology: The Genetic Manipulation of Plants, 2003, Oxford Univesity Press. 3. Plant Pathology; Fifth Edition, Elsevier; By Geroge N. Agrios. 4. Primrose, S. B., &Twyman, R. M. (2006). Principles of Gene Manipulation and Genomics. Malden, MA: Blackwell Pub. Suggested Reference Book: 1. SEVENTH SEMESTER

Department of Management Studies								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MSC731	PRINCIPLES OF MANAGEMENT	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO1:To make budding engineers aware of various management functions required for any organization • CO2:To impart knowledge on various tools and techniques applied by the executives of an organization • CO3:To make potential engineers aware of managerial function so that it would help for their professional career • CO4:To impart knowledge on organizational activities operational and strategic both in nature • C05: To impart knowledge on each functional area of management like Marketing, Finance, Behavioral Science and Quantitative Techniques and decision science						
Topics Covered	**UNIT I:** Management Functions and Business Environment: Business environment-macro, Business environment -micro; Porter's five forces, Management functions – overview, Different levels and roles of management, Planning- Steps, Planning and environmental analysis with SWOT, Application of BCG matrix in organization**(8)** **UNIT II:** Quantitative tools and techniques used in management: Forecasting techniques, Decision analysis, PERT & CPM as controlling technique (7) **UNIT III:** Creating and delivering superior customer value:Basic understanding of marketing, Consumer behavior-fundamentals, Segmentation, Targeting & Positioning, Product Life cycle. (8) **UNIT IV:** Behavioral management of individual: Motivation, Leadership, Perception, Learning. (8) **UNIT V:** Finance and Accounting: Basics of Financial management of an organization, Preparation of Final Accounts, Analysis of Financial statements, Cost Volume Profit (CVP) Analysis, An overview of financial market with special reference to India. (12)						
Text Books, and/or reference material	Suggested Text Books: 1. Financial Management, 11th Edition, I M Pandey, Vikas Publishing House. 2. Marketing Management 15th Edition, Philip Kotler and Kelvin Keller, Pearson India 3. Management Principles, Processes and practice, first edition, Anil Bhat and Arya Kumar, Oxford Higher education 4. Organizational Behavior,13 th edition, Stephen P Robbins, Pearson Prentice hall India 5. Operations Management, 7th edition (Quality control, Forecasting), Buffa&Sarin, Willey Suggested Reference Books:

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
BTC301-Cell Biology and Genetics/BT-817- Cancer Biology		CT+MT+EA					
Course Outcomes	• CO1: To understand the basic concepts of cancer biology and related cellular signaling • CO2: To understand the development and causes of cancer. • CO3: To understand the therapeutic aspects of cancer prevention • CO4: To identify the target molecules that are associated with cancer so that the cancer preventive small molecule inhibitors/phytochemicals can be screened.						
Topics Covered	**Cancer Biology** Introduction to Cancer and Molecular basis of cancer [2] Mutation and DNA damage repair mechanism [2] Cell cycle [3] Oncogenes (tumor viruses) , Tumor suppressors [3] Epigenetics, non-coding RNAs and genome fluidity in cancer [4] Cancer and Stem Cells, Angiogenesis, Apoptosis [4] Cancer therapy, Future of Cancer research [3] **Cell Signaling related to cancer** Introduction to cellular signaling [3] Signaling molecules – (e.g. Hormones, Interferons and others) [3] Receptor-mediated signaling in cells [3] Role of different transcription factors and kinases (e.g. MAP kinases and other ser/thr kinases) [4] Involvement of different signal transduction pathways during cancer initiation, progression and metastasis [5] Small molecule inhibitors of cancer [3]						
Text Books, and/or reference material	Suggested Text Books: 1. Weinberg RA. The Biology of Cancer, 2nd Edition. Garland Science, 2013. 2. Cellular signal processing , 2nd Edition by Friedrich Marks, Ursula Klingmuller and Karin Muller-Decker, Garland Science Suggested ReferenceBooks: Selected reviews and primary scientific literature

BTE712	FOOD BIOTECHNOLOGY	PER	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1: To quantitate and identify the spoilage microorganisms present in food. CO2: To learn the concepts of food fermentation and increase the shelf life of food. CO3: To learn the concepts in genetically modified food and increase the agricultural yield by using genetic engineering approach. CO4: To apply the concepts of antioxidant and nutraceutical for health and wellness. CO5: To follow the regulations and ethical issues of food safety by using good manufacturing practices in industry and genetically modified food.
Topics Covered	**Food for health and wellness** **[2]** **Food Microbiology:** **[6]** Detection of microorganism in food – role of PCR, DNA CHIP, rapid methods for identification of microorganism in food, immunological methods, Bioassay, Biosensors-detection of toxin, heavy metal , pesticide and herbicides **Food preservation** **[10]** Pasteurization, sterilization, Canning, Irradiation, Dehydration, low temperature Food preservation, use of preservatives, **Food fermentation** **[8]** Role of lactic acid bacteria in fermentation and strain improvement, Fermentation of meat, fish, vegetables, beverages , dairy product, non beverage product , use of genetic engineering techniques for improved quality product. **Genetically modified food** **[6]** Fruit ripening, improvement of sweetness, flavor, starch, amino acid, vitamin content, Golden rice. Safety aspects of genetically modified food, Single cell protein, single cell oil, Spirulina, **Biotechnology in relation to food product and Food Safety** **(5+5)** Antioxidant, nutraceutical, Nutrigenomics Legal status of irradiated food and preservatives, Concept of HACCP, Hazop, codex alimentarius, ISO series
Text Books, and/or reference material	Suggested Text Books: Food microbiology by James . M. Jay Food Microbiology by Frazier and Westhoff Plant Biotechnology by Slater Suggested Reference Books: Fundamentals of Food Biotechnology by Lee

		CT+MT+EA					
Course Outcomes	CO1: To learn about the manufacturing process and facility design for biopharmaceutical products CO2: To acquire knowledge of detailed design of GMP compliant biopharma plant CO3: To study the design and optimization of downstream processes of therapeutic protein manufacture in a commercial set up CO4: To learn about technology transfer, regulation, validation and quality assurance of biopharma industry						
Topics Covered	Manufacturing process - Drug substance manufacturing, drug product manufacturing, key factors for process evaluation. Manufacturing and storage of cell bank. Comparison of batch and continuous process for fermentation. Difference between suspension fermenters for cell culture and microbial fermentation. [6] Design and construction of manufacturing facilities for mammalian cell derived pharmaceuticals. Detailed design of a GMP compliant plant with process flow diagram along with utilities, water treatment, waste management and location selection [6] Downstream processing - Harvest of therapeutic proteins from high cell density fermentation broths – centrifugation and filtration. Expanded bed adsorption for separating the biopharmaceutical product from crude solution. Ultrafiltration process design and implementation for biopharmaceutical product recovery. Virus filtration process design for biopharmaceutical product recovery. Product recovery of biopharmaceutical products from transgenic sources – aqueous two phase extraction [12] Role of process development group and manufacturing group in biopharmaceutical process start up. [3] Making changes to a biopharmaceutical manufacturing process during development and commercial manufacturing – a case study [2] Biosimilars and non-innovator biotherapeutics in India – an overview of current situation [2] Fundamental of Quality assurance, Structure of Quality Management Systems, Responsibility of Management and Training of Personnel, Quality Assurance in Development. [5] Quality assurance in manufacturing, GMP, Process validation for cell culture derived pharmaceutical proteins. Regulation [6]							

Text Books, and/or reference material	Suggested Text Books: 1. Process Scale Bioseparations for the Biopharmaceutical Industry, Abhinav A. Shukla, Mark R. Etzel, ShishirGadam, CRC Press 2. Manufacturing of Pharmaceutical Proteins, Stefan Behme, Wiley-VCH Suggested Reference Books: 1. Pharmaceutical Production Facilities: Design and Applications, Graham Cole, Informa Healthcare 2. Large-scale Mammalian Cell Culture Technology, Lubiniecki, CRC Press

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTE714	BIOENERGY	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	1. Learn about energy crisis, problems of fossil fuel use, global warming 2. Learn about production of biological solid fuel. 3. Learn about gaseous biofuel production like methane and hydrogen in detail. 4. Learn about liquid biofuels 5. Learn about benefits and deficiencies of biofuels, life cycle analysis						
Topics Covered	Energy and fossil fuel use – fossil fuel use, fossil fuel reserves, sustainable fuel sources [4] Consequences of burning fossil fuel – effects of industrial (anthropogenic) activity on greenhouse gases, sources of greenhouse gases [3] Mitigation of global warming – Kyoto protocol, reduction in global greenhouse gases, fuel cells, sequestration of carbon dioxide, alternative energy sources, energy storage. [4] Biological solid fuels – 1st, 2nd and 3rd generation biofuels, types of biomass available, energy and fuel generation using biomass. [5] Gaseous biofuels – methane production using anaerobic digestion process, sewage sludge and from landfill sites, use of methane as transport fuel. Hydrogen production from biological material, biological production of hydrogen, photosynthetic hydrogen production, hydrogen storage, use as transport fuel. Diethyl ether production [6] Liquid biofuels to replace petrol – methanol production. Large scale ethanol production from biomass, use of lignocellulosics for ethanol production, ethanol extraction after production, use of ethanol as fuel. Butanol production and use. [6] Liquid biofuel to replace diesel – synthetic diesel (FT synthesis), bio-oil (pyrolysis), microalgal biodiesel, biodiesel from plant oils and animal fats, properties of biodiesel, glycerol utilization. [5]						

	The benefits and deficiencies of biofuels – reduction in fossil fuel use, fuel economy, reduction in carbon dioxide emission from biofuels, improvement in biodiesel quantity and quality, life cycle analysis of biofuels. [6] Jatropha cultivation, National hydrogen energy road map. [3]
Text Books, and/or reference material	Suggested Text Books. 1. Biofuels production, application and development. Alan Scragg, CABI. Suggested Reference Books:

BTE715	PROJECT ENGINEERING FOR BIOTECHNOLOGY	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1: To learn about detailed design of a manufacturing plant CO2: To learn about cleaning, sterilization, waste management and utilities of a biotechnology production plant CO3: To study about Planning, construction and commissioning of a biopharmaceutical manufacturing plant CO4: To learn about project management and financial aspects of the plant
Topics Covered	Introduction Basic considerations in plant design, project identification, preliminary techno-economic feasibility. Process flow Diagrams and symbols: Symbols of Process Equipments& their concepts, types of flow diagrams, Importance of Laboratory development, pilot plant, scale up methods [6] Piping and valves for biotechnology: design, piping materials, polishing, passivation, sizing of pipes and tubes, connections and cleanability, piping applications, supporting and insulating sanitary tubing, in-line instruments, hoses, valves. [6] Cleaning of process equipment: design and practice, sterilization of process equipment, pharmaceutical water systems: design and validation, utilities for biotechnology production plant, biowaste decontamination systems, Heating, ventilating & air conditioning (HVAC) [6] Programming & facility design, project planning, containment regulations affecting the design and operation of biopharmaceutical facilities. [6]

	Planning, construction and commissioning of a biopharmaceutical manufacturing plant: planning, construction, commissioning, qualification, validation, project schedules, cost estimates, organization of an engineering project, role & selection of contractors, legal aspects of facility engineering, health, safety and environmental law, building law. [6] Product sales and manufacturing costs: basic principles of cost calculation, fixed cost, variable cost, depreciation, interest, typical costs of biotechnological manufacturing processes, profit and loss calculation. [6] Investments: investment targets, types of investments, investment appraisal, cost comparison, profit comparison, internal rate of return, dynamic payback time. [3] Production concepts: capacity planning, dilemma of in-house manufacturing, aspects of manufacturing out-sourcing, contractual agreements, technology transfer, process optimization after market launch, supply chain management. [3]
Text Books, and/or reference material	Suggested Text Books: 1. Bioprocess engineering: system, equipment and facilities, B K Lydersen, NAD'Elia, K M Nelson. Wiley 2. 		CT+MT+EA					
Course Outcomes	• CO1: To acquire understanding of the basic building blocks of life • CO2: To learn about the most common structural motifs found in protein and DNA • CO3: To understand the atomic level interaction between the protein and DNA • CO4: To learn how to determine protein structure						
Topics Covered	Basic structural principles - The building blocks, motifs of protein structure, alpha-domain structures, alpha/beta structures, beta structures, folding and flexibility, DNA structures. (8) Structure, function and engineering - DNA recognition in prokaryotes by helix-turn-helix motifs. (4) DNA recognition by eukaryotic transcription factors, specific transcription factors (5)						

	Enzyme catalysis with example of serine proteinases, membrane proteins, signal transduction, fibrous proteins (7) Recognition of foreign molecules by immune system, structure of spherical viruses (8) Prediction, engineering and design of protein structures, determination of protein structures (10)
Text Books, and/or reference material	Suggested Text Books: 1. Introduction to Protein Structure: Second Edition by Carl IV Branden, Routledge Suggested Reference Books: **1.** Structure and Mechanism in Protein Science A Guide to Enzyme Catalysis and Protein Folding: Alan Fersht

Course Outcomes	CO1: To learn about air pollution monitoring and control CO2: To learn about waste water treatment processes along with analytical procedures CO3: To study about solid waste management CO4: To acquire knowledge on bioremediation of pollutants						
Topics Covered	Air pollution control methods and equipment - Primary and secondary air pollutants, Effect of air pollutants on health, Control of gaseous and particulate pollutants, air pollution control equipments. 6 Water pollution: sampling and analysis - Sampling, BOD and COD analysis, Bacteriological measurements, Numerical problems 5 Water and waste water treatment processes - Overview of treatment principles. Primary treatment – screening, sedimentation, flotation, neutralization etc. 4 Secondary treatment - Activated sludge process, extended aeration, Trickling filter, Aerated lagoons, Waste stabilization ponds, Aquatic plant systems, UASB reactors. Design of a complete mix activated sludge process. 8 Biomethanation. Nitrification and denitrification operations. Phosphorus removal. Sludge treatment and disposal. Tertiary treatment. Membrane based treatment processes. 8 Solid waste management, Vermiculture, hazardous waste management 5 Specialized aspects - Bioremediation for recovery of metals, Xenobiotics, Degradation of chlorinated hydrocarbons, polyaromatic hydrocarbons, Phytoremediation. Reactors in						

	bioremediation. 6
Text Books, and/or reference material	<u>Suggested Text Books</u>: 1. Introduction to waste water treatment processes, Ramalho, Elsevier. 2. Environmental Engineering: A design Approach, Sincero, Arcadio. P, Sr. &Greogia; PHI 3. Waste water treatment and disposal, Arceivala, Wiley 4. Environmental Biotechnology, Alan Scragg, Oxford University press <u>Suggested Reference Books</u>: 1. Waste water Engineering: Treatment, disposal, reuse, by Metcalf & Eddy, Tata Mc Graw Hill 2. Industrial Water Pollution Control, Eckenfelder, McGraw Hill.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTE718	PROTEOMICS AND PROTEIN ENGINEERING	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
BTC303 Biochemistry and Enzyme Technology; BTC401 Molecular Biology and Recombinant DNA Technology;	CT+MT+EA
Course Outcomes	**CO1:**Students will acquire knowledge on protein structure and function and will be able to apply the understanding in designing strategies for proteomic analysis and protein engineering. **CO2:**Students will be acquainted with tools and techniques for proteomic analysis and will be able to analyze proteomic data using databases. **CO3:** Students will be acquainted with tools and techniques for protein engineering and will be able to apply them to solve problem related to protein function and efficiency.
Topics Covered	1. **Introduction to proteinstructure and function:** Elementary ideas of bonding and structure, stereochemistry; spectroscopic techniques. Amino acid structure and properties to 3D structure of protein. Basic principles of protein folding anddynamics. Protein sequence andevolution. [10] 2. **Proteomics and its application:** Chromatography principles. Analytical protein and peptide Separation, Protein Digestion Techniques, Mass Spectrometers for protein and peptide analysis, protein identification by peptide Mass fingerprinting. Mining proteomes, protein expression profiling, identifying protein-protein interactions and protein complexes, Mapping protein modifications. [16]

	3. **Protein Engineering:** Proteins design and engineering, Random, site directed mutagenesis; Strategies to alter catalytic efficiency; structure prediction and odelling proteins; Molecular graphics in protein engineering; Dynamics and mechanics; Drug-protein interactions and Design; applications of engineered proteins. [16]
Text Books, and/or reference material	Suggested Text Books: 1. R.M. Twyman; Principles of Proteomics, Bioscientific Publishers. 2. Biotechnology, 2nd Edition 2015. David Clark and Nanette Pazdernik. BTE719	MOLECULAR MODELLING &DRUG DESIGN	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Biochemistry and Enzyme Technology, Bioinformatics		CT+MT+EA					
Course Outcomes	• CO1: To understand the physical basis of the structure, the dynamic evolution of the system, and the function of biological macromolecules. • CO2: To learn the fundamental concepts of structure-activity relationships • CO3: To learn design of novel, biologically active compounds and Toelucidate the mechanism of action of drugs						
Topics Covered	2. Introduction to molecular Simulation Techniques (5) 3. Quantum chemistry for Modeling of small molecules (5) 4. Molecular Dynamics Methods- Molecular Dynamics of rigid non linear poly atomic molecules in ensembles, Structural information from M.D. (5) 5. Force fields for molecular modeling: Choice of functional form. Parametrization of a force field, Distributed multipole and polarizable forcefields, Hydrophobic effect and solvation energy. Potentials of mean force. (10) 6. Conformational analysis: Geometry optimization using steepest descent and conjugate gradients. Restrained and constrained molecular dynamics. Distance geometry. Case studies: Prediction of protein-protein interactions. DNA conformation. (10) Principles of ligand based drug design: SAR, QSAR and 3D-QSAR. Receptor based drug design:						

	Principles of receptor based de novo ligand design. Rigid body molecular Docking. (7)
Text Books, and/or reference material	Suggested Text Books: **1.** A R Leach-Molecular Modelling,. 			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTS 753	BIOCHEMICAL REACTION ENGINEERING LABORATORY	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+EA					

Course Outcomes	1. To learn the experimental protocol of microbial growth and inhibition kinetics in a batch process 2. To study substrate degradation, cell growth and product formation with immobilized cells in plug flow bioreactors. 3. To learn about functions of a fermenter 4. To study non-ideality in a plug flow reactor
Topics Covered	1. Microbial cell growth kinetics 2. Microbial cell inhibition kinetics 3. Substrate degradation, cell growth and product formation study using immobilized cells in a continuous packed bed reactor. 4. Substrate degradation, cell growth and product formation study using immobilized cells in a continuous fluidized bed reactor. 5. Function of bioreactor- a) calibration of DO electrode. B) Calibration of pH electrode.

	6. RTD studies in a packed bed reactor
Text Books, and/or reference material	Suggested text Books: Suggested Reference Books: 1. Laboratory manual

NIL		CT+MT+EA					

Course Outcomes	CO1: Students will Learn about the roles of light and various phytohormones in plant growth and development. CO2: Students will acquire knowledge about soot and root apical meristems. CO3: Students will Learn about the effect of different environmental factors on plant growth and development. CO4: Students will be able to apply the acquired knowledge in understanding and solving biotechnology issues in a societal context.
Topics Covered	Embryogenesis and Organogenesis (4) Soot and root apical meristem (2) Growth of seedlings (5) Environmental Factor (2) Totipotency (4) Phototropism and gravitropism (3) Plant morphology (2) Photomorphogenesis (6) Phytohormones (4)
Text Books, and/or reference material	Suggested Text Books: 1.Lewin B: Genes (VI and above Edition). 2. Albert, B: Molecular Biology of the Cell (any Edition). Suggested Reference: 1. Research articles will be given by the teacher.

Course Outcomes	CO1- To understand the basic concepts of site selection and plant location for a Bioprocess Plant. CO2- To understand the design concepts of Bioreactors, both conventional and unconventional. CO3- To study the various equipment used in Bioprocess plant and cost analysis performed in Bioprocess plant for various processes.
Topics Covered	**Plant Location and Site Selection: (5)** ● Site and Plant Layout ● Utilites ● Storage Methods and Material Handling ● Plant operation and Control systems ● Environmental considerations **Conventional and unconventional bioreactors and their Design: (12)** ● Batch, Continuous stirred tank bioreactors (CSTBR) ● Plug flow bioreactors ● Enzyme and immobilized bioreactors ● Fluidized bed bioreactors, ● Bubble column bioreactors and Air- lift bioreactors ● Hollow- fiber bioreactors ● Membrane bioreactors ● Bioreactors for plant and animal cell culture systems ● Ideal and non ideal reactors **Sterilization of Bioreactors: (4)** ● Design of Batch and Continuous Media Sterilizers ● Design of Air Sterilizers. **Instrumentation and Control of Bioprocesses: (4)** ● Physical and chemical environmental sensors ● Computer control of bioreactors **Modelling and Simulation of Bioprocesses: (2)** ● Study of structured and unstructured models for analysis of various processes **Design of Bioreactor systems: (6)** ● Design of Filtration and Centrifugation equipments ● Design of Driers. ● Refrigeration systems ● Steam Generation systems ● Pumps **Cost Analysis in Bioprocess Engineering: (2)** ● Estimation of capital investment and operating cost

Text Books, and/or reference material	Suggested Text Books: 1.Bioprocess Engineering Principles, by Pauline M.Doran Academic Press 2. Bioprocess Engineering ,Kinetics, Biosystems, Sustainability and Reactor Design by Shijie Liu Elsevier 3. Coulson & Richardson's Chemical Engineering Vol.6 Butterworth-Heinemann Suggested Reference Books: 1. Plant design and Economics for chemical engineers by Peter M. S. Timmerhaus, K. D. McGraw Hill. 2. Coulson & Richardson's Chemical Engineering Vol.3 Butterworth-Heinemann

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTE812	MEDICAL & PHARMACEUTICAL BIOTECHNOLOGY	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					

Course Outcomes	CO1: To give an understanding of various techniques of modern biotechnology in the field of Medical Science. CO2: To provide knowledge about the concept and application of monoclonal antibody technology CO3: To demonstrate and provide examples on how to use microbes and mammalian cells for the production of pharmaceutical products CO4: to explain the general principles of generating transgenic plants, animals and microbes
Topics Covered	**Introduction -** Biopharmaceuticals and their development, historical aspects, general steps in development of a drug, sources and strategies (including random, non-random, and rational) of discovering lead compounds 2 **Drug designing** Macromolecules as Targets of drugs: (lipids, carbohydrates, proteins, nucleic acids) 2 Drug targets: carrier proteins, structural proteins, enzymes, receptors (including mechanisms – ion channels and membrane-bound enzymes) 4 Concepts and design criteria of agonists, antagonists, partial agonists, and inverse agonists. 3 Rational drug designing, Structure –activity relationships and identification of pharmacophore and auxophore in a lead compound; drug design on the basis of drug-target interactions. 5 **Disease diagnosis** PCR, LCR immunological assay, Detection of genetic, Neurogenetic disorders involving Metabolic and Movement disorders. Treatment-products from recombinant and non-

	recombinant organisms, Interferons, Antisense therapy, cell penetrating peptides. Gene therapy, Types of gene therapy, somatic virus germline gene therapy, mechanism of gene therapy, Immunotherapy. Detection of mutations in neoplastic diseases MCC, SSCP, DGGE, PTTC. Use of enzymes in clinical diagnosis. Use of biosensors for rapid clinicalanalysis. Diagnostic kit development for microanalysis, Diagnosis of disease by proteomics. 25 **Production of pharmaceuticals** Production of pharmaceuticals by genetically engineered cells (hormones, interferons). Microbial transformation for production of important pharmaceuticals (steroids and semi-synthetic antibiotics). Techniques for development of new generation antibiotics. 15 Drug delivery
Text Books, and/or reference material	Suggested Text Book: 1. An Introduction to Medicinal Chemistry; Graham L.Patrick, Oxford Suggested Reference Book: 1. The Organic Chemistry of Drug Design and Drug Action; Richard B. Silverman, Elsevier

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
BTC402 (Cell & Tissue Culture of Animals & Plants)		CT+MT+EA					
Course Outcomes	CO1: Development of knowledge of natural resistance / tolerance to various biotic and abiotic stress to plants. CO2: Development of ability to design strategy to genetically modify crop plants for quality improvement. CO3: Learning about the strategies toward generating environment friendly GM crops.						
Topics Covered	Introduction [2] Methods of genetic transformation [4] Genetic engineering of resistance to biotic stress [6] Genetic engineering of tolerance to abiotic stress [6] Genetic engineering for removal of environmental pollutants [4] Genetic engineering for quality nutrition and health [4] Genetic engineering for molecular farming [4] Biosafety concerns [4] Removal of selectable markers from GM crops [4] Modern tools of genetic manipulation of plants [4]

BTE814	BIOETHICS AND IPR	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1: To understand the nature of hazards related to biotechnology and the importance of biosafety in research. CO2: To learn and debate on different ethical issues of applications of Biotechnology research including recombinant DNA technology and Human trials. CO3:To realize the importance and basics of intellectual property Rights and laws implemented in this regard. CO4: To learn the basic way to file claim of a patent. CO5: To understand the idea about Entrepreneurship and its economic implication in the area of biotechnology research
Topics Covered	**Biotechnology and Society:** Introduction to science, technology and society, biotechnology and social responsibility, public acceptance issues in biotechnology, issues of access, ownership, monopoly, traditional knowledge, biodiversity, benefit sharing, environmental sustainability, public vs. private funding, biotechnology in international relations, globalization and development divide. (8) **Bioethics:** Legality, morality and ethics, the principles of bioethics: autonomy, human rights, beneficence, privacy, justice, equity etc. (6) **Biotechnology and Bioethics:** The expanding scope of ethics from biomedical practice to biotechnology, ethical conflicts in biotechnology - interference with nature, fear of unknown, unequal distribution of risks and benefits of biotechnology, bioethics vs. business ethics. (7) Ethical dimensions of IPR, technology transfer and other global biotech issues. Jurisprudential definition and concept of property rights, duties and their correlations, history and evaluation of IPR – like patent design and copyright. Distinction among the various forms of IPR, requirements of a patent able invention like novelty, inventive step and prior art and state of

	art. (8) **Regulations on ethical principles in biomedical/ biotechnological practice:** The Nuremberg code, declaration of Helsinki; the Belmont report, co operational guidelines – WHO, guidelines of DBT (India), Guidelines of an informed consent Rights/ protection, infringement or violation, remedies against infringement, civil and criminal, Indian patent act 1970 and TRIPS major changes in Indian patent system, post-TRIPS effects. (7) Contents of patent specification and procedure for obtaining a) patents b) Geographical indication, c) WTO Detailed information on patenting biological products, Biodiversity (6)
Text Books, and/or reference material	Suggested Text Book: 1. F. H. Erbisch and K. M. Maredis, Intellectual Property Rights in Agricultural Biotechnology, Bios Publishers Suggested Reference Books: 1. Thomas, J.A., Fuch, R.L. (2002). Biotechnology and Safety Assessment (3rd Ed). Course Outcomes	CO1: Develop understanding of Microbial Diversity and Ecology. Understand the Physicochemical and biological factors that define the microbiome in different environments as well as the significance of microbial interaction with environment CO2: Learn about the important tools and techniques used to study microbial ecology or microbiome structure. Learn to apply “Omics” approaches to assess the microbial community structure and function. CO3: Understand the System biology approach to assess the interaction and function of microbiome members in global scale. CO4: Learn to exploit microbial community members for Resource recovery, Environmental clean-up, CH4 production and consumption, CO2 sequestration, etc.
Topics Covered	**Introduction**- Significance, developments and challenges of environmental microbiome study. (4) **Microbial Diversity and ecology**- Environments and microenvironments, ecosystem services, biogeochemistry and nutrient cycles, carbon-nitrogen-sulfur-and other nutrient cycles. (7) **Survey of microbiome in different habitats-**Microbiomes of Terrestial, Marine, Freshwater, Deep sea, Hydrothermal vents, Subsurfaces, Permafrost region etc. Earth microbiome and Human microbiome Project. (7) **Microbiome of the built environment-** Microbial interactions with environment, microbial influenced corrosion, microbial enhanced oil recovery, mineral recovery, bioremediation of heavy metals and organic pollutants, methane production and consumption (7) **Microbiome characterization**- Metagenomics, metaproteomics and metatranscriptomics, culture dependent and culture independent techniques, conventional and molecular analyses, assessment of microbial metabolic diversity and activities. (8) **System Biology and Microbial interaction**- Approach of system biology in bioremediation, bioremediation with genomics, interaction between community members within microbiome, commensalism, syntrophism, interspecies hydrogen transfer etc. Strategies of bioremediation, Microbial performance assessment. (9)
Text Books, and/or reference material	Suggested Text Books**:** Brock Biology of Microorganisms- Madigan, Martinko, Bender, Buckley and Stahl- Pearson publisher. Bioremediation and Natural Attenuation: Process Fundamentals and Mathematical models- P J J Alvarez and W A Illman- Wiley Interscience. Suggested Reference Books: Environmental Microbiology: from genomes to biogeochemistry- Eugene L.Madsen- Blackwell Publishing. Environmental Microbiology for Engineers- V.Ivanov- CRC Press. Environmental Microbiology- Maier, Pepper and Gerba- Elsevier (Academic Press).

BTO840	INDUSTRIAL BIOTECHNOLOGY	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Life science	CT+MT+EA

Course Outcomes	CO1- To understand the methods of cell 's bio processing under various conditions, strain improvement methods for better results CO-2 Demonstrate the experimental techniques associated with aseptic processes, media preparation and related upstream processes CO-3 .Design and develop medium for cell cultivation for fermentation process Apply the knowledge of sterilization techniques CO-4 Understand needs of various parts of fermenter and their operation and Design bioreactor based on thumb rules for fermentation operation CO-5 Apply the knowledge of Purification Separation and kinetics theory of Enzyme production for industrial fermentation
Topics Covered	**UNIT 1 CELL CULTIVATION ,GROWTH KINETICS** -- 10 Hrs Media development for Cell growth and culture for microbes , plant, animal -derived cells and its application. Microbial growth kinetics, logistic growth model, growth of filamentous organism Strain improvement of industrial micro organism. Measurement of cell mass. Cell immobilization. Numericals.. **UNIT 2-MEDIA PREPARATIONand STERILIZATION** 10 Hrs Sterilization: basic concepts in sterilization insitu and ex-situ sterilization, Sterilization of medium, air, filters, fermenter. Types of media, Strain preservation , inoculum preparation, Development of inocula for industrial fermentation/ seed fermenter **UNIT 3- BIOREACTOR DESIGN AND ITS OPERATION- 12 Hrs** Purpose and importance of bioreactor, Parts of fermenter and types ;Oxygen requirement, Oxygen transfer in fermenter, , KLa measurement, Measurement of dissolved oxygen concentrations, Estimating Oxygen Solubility'Operational modes of bioreactor: batch, semi-batch/fedbatch, continuous. Major components of bioreactor and its purpose, classification of Bioreactor – SLF, SSF, animal and plant cell culture. Classification of bioreactors for environmental control and management. Fixed bed bioreactor, airlift reactor, hollow fibre reactor, seed reactor. **UNIT 4 INDUSTRIAL ENZYMES ,PURIFICATION and A PPLICATIONS** -10Hour Enzyme engineered for new reactions-novel catalyst for organic synthesis. Case studies: thermozymes cold adopted enzymes. Ribozymes, therapeutic enzymes of industrial importance (amylase, glucose isomerase, cellulose, lipase, protease, xylanase, invertase, peroxidases). Separation of insolubles: filtration, centrifugation. Extraction and purification of solubles: Ultra filtration, high performance tangential flow filtration, Recovery and purification of intracellular products: cell disruption, chromatographic techniques. Analytical assays of purity level of enzymes.

BTO850	MEDICAL BIOTECHNOLOGY	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO1: To provide an understanding about Inborn errors of metabolism and genetic disorders and their consequence. • CO2: Able to analyze the key features therapeutics and drugs in current scenario. • CO3: Able to apply the knowledge for commercial production of pharmaceuticals and place it in market for marketing approvals. • CO4: Able to understand the ethical issues and the different competent regulatory authorities globally associated with clinical Biotechnology.						
Topics Covered	**Microbial pathogenesis:** Definitions - Infection, Invasion, Pathogen,Pathogenicity, Virulence, Carriers and their types, Opportunistic infections, NosocomialInfections, epidemics. **Diagnosis of Infectious diseases**–Biology of Nitric oxide implications in diagnosis and therapeutics, Ethical problems around prenatal diagnosis, *in vitro* fertilization, cloning, gene therapy. **Drug Design and Drug delivery system :** Synthesis of compounds in accordance with the molecular structure and biological activity concept. Various principles/ mode of drug action/ screening of drugs/ drug analysis using various techniques . New generation viral vectors for Gene Therapy and advancement in Drug Delivery system, antibody mediated drug delivery of vaccines, Antibiotics **Molecular Medicine:** Antibodies and vaccines-Therapeutic production of antibodies different kind of vaccines and applications of recombinant vaccines.Ribozymes for therapeutic use in viral infection .						

	Cell and tissue therapy – Gene therapy, tissue engineering, stem cell and cloning. In vivo targeted gene delivery **Clinical Toxicology**, **Clinical Research Governance and Ethics:** Basic concept in toxicology. Types and mechanism of toxin action- Epoxidation& drug toxicity, Overview on regulatory affairs for pharmaceuticals, neutraceuticals and medical devices. . International quality standard and related guidelines (ICH-E6). Risk assessment and trial monitoring. Legal and ethical issues on biotechnology, medical research and related clinical practice.
Text Books, and/or reference material	Suggested Text Books: 1. Recombinant DNA: Genes and Genomes - A Short Course, Third Edition (Watson, Recombinant DNA) by James D. Watson; Cold Spring Harbor Laboratory Press 2. Biopharmaceuticals- Biochemistry and Biotechnology: Gary Walsh; John Wiley & Sons 3. S. P. Vyas, V. BTS852	PROJECT SEMINAR	PCR	0	0	0	0	1
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
All the Program Core subjects		EA					
Course Outcomes	CO1: To familiarize developing skills of oration and ability to present an analysis/interpretation or conclusion pertaining to biological, clinical and biotechnology related research problems. CO2: To develop presentation skills including making PowerPoint presentation with proper animation and schema to convince the audience about a hypothesis/ conclusion. CO3: To develop skills to address scientific questions pertaining to hypothesis, data interpretation and conclusions.						
Topics Covered	Each student after completing the project training under a Principle Investigator has to present the progress/conclusion/interpretation explaining their research project.						
Text Books, and/or reference material	Suggested Text Books: Suggested Reference Books: • Related research papers.

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT.

6th Semester

	DEPARTMENT OF CIVIL ENGINEERING
CEE610	Advanced Design of Concrete Structures
CEE611	Advanced Structural Analysis
CEE612	Mechanics of Composite Structures
CEE613	Material Technology
CEE614	Applied Numerical Methods
CEE615	Bridge Engineering
CEE620	Analysis and Design of Pavement
CEE621	Finite Element Method
CEE622	Ground Improvement
CEE623	Remote sensing and GIS
CEE624	Traffic Engineering and Management
CEE625	System Approach to Civil Engineering

7th Semester

	DEPARTMENT OF CIVIL ENGINEERING
CEE710	Structural Dynamics
CEE711	Advanced Design of Steel Structures
CEE712	Theory of Plates and Shells
CEE713	Theory of Elasticity and Plasticity
CEE714	Structural Health Monitoring
CEE720	Soil Dynamics
CEE721	Environmental Pollution and control
CEE722	Construction Planning and Management
CEE723	Open Channel Hydraulics
CEE724	Ground Water

CEE725	Hydrology and Irrigation Engineering
CEE730	Principles of Reliability
CEE731	Offshore Structural Dynamics
CEE732	Pre-stressed Concrete
CEE733	Advanced Concrete Technology
CEE734	Advanced Structural Mechanics

8th Semester

	DEPARTMENT OF CIVIL ENGINEERING
CEE810	Sediment Transport
CEE811	Slope Stability and Reinforced Earth
CEE812	Soil Structure Interaction
CEE813	Industrial Waste
CEE814	Water Resources System Planning and Management
CEE815	Machine Foundation

DETAILED SYLLABUS

FIRST SEMESTER

Semester - I

1	MAC01	Mathematics - I	3	1	0	4.0	4
2	PHC01	Engineering Physics	2	1	0	3.0	3
3	CYC01	Engineering Chemistry	2	1	0	3.0	3
4	XEC01	Engineering Mechanics	2	1	0	3.0	3
5	ESC01	Environmental Science	2	0	0	2.0	2
6	XES51	Engineering Graphics	1	0	3	2.5	4
7	HSS51	Professional Communication Laboratory	1	0	2	2.0	3
8	PHS51	Physics Laboratory	0	0	2	1.0	2
9	CYS51	Chemistry Laboratory	0	0	2	1.0	2
10	WSS51	Workshop Practice	0	0	3	1.5	3
11	XXS51	Co-curricular Activities - I	0	0	2	1.0	2
		TOTAL	13	4	14	24.0	31

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 01	MATHEMATICS - I	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic concepts of function, limit, differentiation, and integration.		CT+MT+EA					
Course Outcomes	• CO1: To introduce the fundamentals of differential calculus of single and several variables • CO2: To develop the basic concepts of integral calculus including multiple integrals and its application in finding area, volume, centre of mass, centre of gravity etc. • CO3: To introduce the fundamental concepts of vector calculus • CO4: To develop the concept of convergence						

Topics Covered	**Functions of Single Variable:** Rolle's Theorem and Lagrange's Mean Value Theorem (MVT), Cauchy's MVT, Taylor's and Maclaurin's series, Asymptotes & Curvature (Cartesian, Polar form). (8) **Functions of several variables:** Function of two variables, Limit, Continuity and Differentiability, Partial derivatives, Partial derivatives of implicit function, Homogeneous function, Euler's theorem and its converse, Exact differential, Jacobian, Taylor's & Maclaurin's series, Maxima and Minima, Necessary and sufficient condition for maxima and minima (no proof), Stationary points, Lagrange's method of multipliers. (10) **Sequences and Series:** Sequences, Limit of a Sequence and its properties, Series of positive terms, Necessary condition for convergence, Comparison test, D Alembert's ratio test, Cauchy's root test, Alternating series, Leibnitz's rule, Absolute and conditional convergence. (6) **Integral Calculus:** Mean value theorems of integral calculus, Improper integral and it classifications, Beta and Gamma functions, Area and length in Cartesian and polar co-ordinates, Volume and surface area of solids of revolution in Cartesian and polar forms. (12) **Multiple Integrals:** Double integrals, Evaluation of double integrals, Evaluation of triple integrals, change of order of integration, Change of variables, Area and volume by double integration, Volume as a triple integral. (10) **Vector Calculus:** Vector valued functions and its differentiability, Line integral, Surface integral, Volume integral, Gradient, Curl, Divergence, Green's theorem in the plane (including vector form), Stokes' theorem, Gauss's divergence theorem and their applications. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th ed., Wiley India Ed. (2010). 2. Daniel A. Murray, Differential, and Integral Calculus, Fb & c Limited, 2018. 3. Marsden, J. E; Tromba, A. J.; Weinstein: Basic Multivariable Calculus, Springer, 2014. **Reference Books:** 1. Tom Apostal, Calculus-Vol-I & II, Wiley Student Edition, 2011. 2. Thomas and Finny: Calculus and Analytic Geometry, 11th Ed., Addison Wesley.

Course Code	**Title of the course**	**Program Core (PCR) / Electives (PEL)**	**Total Number of contact hours**				Credit
			Lecture (L)	**Tutorial (T)**	**Practical (P)**	**Total Hours**	
PHC01	**Engineering Physics**	**PCR**	**2**	**1**	**0**	**3**	**3**

Pre-requisites:	Course Assessment methods: (Continuous (CT), mid-term (MT) and end assessment (EA))
NIL	CT+MT+EA
Course Outcomes	CO1: To realize and apply the fundamental concepts of physics such as superposition principle, simple harmonic motion to real world problems. CO2: Learn about the quantum phenomenon of subatomic particles and its applications to the practical field. CO3: Gain an integrative overview and applications of fundamental optical phenomena such as interference, diffraction and polarization. CO4: Acquire basic knowledge related to the working mechanism of lasers and signal propagation through optical fibers.
Topics Covered	**Harmonic Oscillations** - Linear superposition principle, Superposition of two perpendicular oscillations having same and different frequencies and phases, Free, Damped and forced vibrations, Equation of motion, Amplitude resonance, Velocity resonance, Quality factor, sharpness of resonance, etc. [8] **Wave Motion** - Wave equation, Longitudinal waves, Transverse waves, Electro-magnetic waves. [3] **Introductory Quantum Mechanics** - Inadequacy of classical mechanics, Blackbody radiation, Planck's quantum hypothesis, de Broglie's hypothesis, Heisenberg's uncertainty principle and applications, Schrodinger's wave equation and applications to simple problems: Particle in a one-dimensional box, Simple harmonic oscillator, Tunnelling effect. [8] **Interference & Diffraction** - Huygens' principle, Young's experiment, Superposition of waves, Conditions of sustained Interference, Concepts of coherent sources, Interference by division of wavefront, Interference by division of amplitude with examples, The Michelson interferometer and some problems; Fraunhofer diffraction, Single slit, Multiple slits, Resolving power of grating. [13] **Polarisation** - Polarisation, Qualitative discussion on Plane, Circularly and elliptically polarized light, Malus law, Brewster's law, Double refraction (birefringence) - Ordinary and extra-ordinary rays, Optic axis etc.; Polaroid, Nicol prism, Retardation plates and analysis of polarized lights. [5] **Laser and Optical Fiber** - Spontaneous and stimulated emission of radiation, Population inversion, Einstein's A & B co-efficient, Optical resonator and pumping methods, He-Ne laser. Optical Fibre– Core and cladding, Total internal reflection, Calculation of numerical aperture and acceptance angle, Applications. [5]
Text Books, and/or reference material	**TEXT BOOKS**: 1. The Physics of Vibrations and Waves, H. John Pain, Willy and Sons 2. A Text Book of Oscillations and Waves, M. Goswami and S. Sahoo, Scitech Publications 3. Engineering Physics, H. K. Malik and A. K. Singh, McGraw-Hill.

	REFERENCE BOOKS: 1. Vibrations and Waves in Physics, Iain G. Main, Cambridge University Press 2. Quantum Physics, R. Eisberg and R. Resnick, John Wiley and Sons 3. Fundamental of Optics, Jankins and White, McGraw-Hill 4. Optics, A. K. Ghatak, Tata McGraw-Hill 5. Waves and Oscillations, N. K. Bajaj, Tata McGraw-Hill 6. Lasers and Non-linear Optics, B. B. Laud , New Age International Pvt Lt

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CYC 01	Engineering Chemistry	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	• CO1: Introduced to chemical thermodynamics, kinetics, electrochemistry, absorption, and catalytic processes for engineering applications • CO2: To learn fundamentals of polymer chemistry and petroleum engineering. • CO3: Introduced to basic spectroscopic techniques for structure determination and characterization. • CO4: To study few inorganic and bioinorganic compounds of industrial importance.						
Topics Covered	**ORGANIC CHEMISTRY** i. Fundamentals of organic reaction mechanisms; Few important reactions and their mechanism along with their applications; Robinson annulation, Hydroboration reaction, Organometallic reagents (Gilman reagents), Metathesis using Grubb's catalyst and Wittig reaction. (3) ii. Fundamental concept on stereochemistry and application: Conformation and configuration of organic compounds, Diastereo-selective, enantio-selective, regio-selective, stereo-specific, and stereo-selective reactions. (3) iii. Polymer chemistry and polymer engineering: Fundamental concept on polymer chemistry; synthesis and application of important polymers, Rubber, and plastic materials. Conducting polymer. (2) iv. Petroleum Engineering and oil refinery: origin of mineral oils, separation principle and techniques of distillation of crude oil, Uses of different fractions,						

	octane number, cetane number, Knocking, anti-knock compounds, and Bio-Fuel. (2) v. Structure elucidation of organic compounds by modern spectroscopic methods; Application of UV-Visible and FT-IR spectroscopy. (3) **INORGANIC CHEMISTRY** i. **Coordination Chemistry:** Crystal Field Theory of octahedral and tetrahedral complexes, colour and magnetic properties, Jahn-Teller distortion, pseudo Jahn-Teller distortion, Isomerism, and stereochemistry. (5) ii. **Bioinorganic Chemistry:** Heme and non-heme O_2 transport protein (Haemoglobin, Myoglobin), Chlorophyll and photosynthesis. (3) iii. **Inorganic Materials:** Introduction towards industrially important inorganic materials like cementing material, refractory material, fertiliser, inorganic polymer. (2) iv. **Organometallic Chemistry:** π-acid ligands, stabilization of metal low oxidation state and 18 electron rules, metal carbonyls and nitrosyls, metal-alkene complexes. (4) **PHYSICAL CHEMISTRY** i. **Thermodynamics:** 2nd law of thermodynamics, entropy, free energy, Gibbs Helmholtz equation, change of phase. Cryogenics: joule Thomson experiment. (4) ii. **Chemical Kinetics:** 2nd and 3rd order rate expression, Reversible reaction, Chain reaction, Consecutive reaction, Temp effect on reaction rate. (4) iii. **Electrochemistry:** Electrochemical cell, Effect of pH, precipitation, and complex formation on EMF of oxidation/reduction processes. (2) iv. **Absorption:** Physical and Chemical absorption, Absorption isotherms. (1) v. **Catalysis:** Types of catalysis, Rate expression for Catalysed reaction, Acid-base and Enzyme catalysis. (2)
Text Books, and/or reference material	<u>Suggested Text Books:</u> (i) Physical Chemistry by P. Atkins, Oxford (ii) A guidebook to mechanism in Organic chemistry: Peter Sykes; Pearson Edu. (iii) Inorganic Chemistry Part-I & II, R. L. Dutta, The new book stall <u>Suggested Reference Books:</u> **Organic Chemistry**: (i) Basic stereochemistry of organic molecules: S. Sengupta; Oxford University press (ii) Engineering Chemistry: Wiley (iii) Elementary Organic Spectroscopy: William Kemp, ELBS with Macmillan **Inorganic Chemistry:** (i) Inorganic Chemistry: Principle structure and reactivity, J. E. Huheey, E. A. Keiter and R. L. Keiter, Pearson Education (ii) Bioinorganic Chemistry -- Inorganic Elements in the Chemistry of Life: An Introductionand Guide, 2nd Edition, Wolfgang Kaim, Brigitte Schwederski, Axel Klein. (iii) Inorganic Chemistry Fourth Edition, Shriver & Atkins, Oxford **Physical Chemistry:** (i) Physical Chemistry by G.W Castellan (ii) Physical Chemistry by P. C. Rakshit

Correlation levels 1, 2 or 3 as defined below:
1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)#	Total Hours	
XEC01	**ENGINEERING MECHANICS**	PCR	2	1	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA

Course Outcomes	• CO1: Acquire knowledge of mechanics and ability to draw free body diagrams. • CO2: Apply knowledge of mechanics for solving special problems like truss and frame analysis. • CO3: Ability to calculate centroid, moments of inertia for various shapes. • CO4: Learn momentum and energy principles. • CO5: Knowledge on virtual Work Principle and its application
Topics Covered	Engineering Mechanics; measurement and SI units. [1] Vectors and force as a vector; Resultant of a system of forces on a particle; free body diagram and conditions of equilibrium of a particle; problems on particles; equilibrium of particles in space. [2] Resultant of a system of forces and couples on a rigid body; conditions of equilibrium of a rigid body; free body diagrams of rigid bodies subjected to different types of constraints; simple space problems of rigid bodies. [4] Coefficients of static and kinetic friction; problems involving friction; theories of friction on square threaded power screw and flat belt. [5] Simple trusses; analysis of trusses by method of joints and method of sections. [5] Centre of gravity and centre of mass; centroids of lines, curves and areas; first moment of area; second moment of area; polar moment of inertia; radius of gyration of an area; parallel axis theorem; mass moment of inertia. [4] Path, velocity, acceleration; rectilinear and curvilinear motion; motion of system of particles; introduction to the concept of plane kinematics of rigid bodies. [6] Newton's second law of motion; dynamic equilibrium and D'Alembert's principle; linear momentum; angular momentum; rectilinear and curvilinear motion; principles of work–energy and impulse–momentum; impact of system of particles; introduction to the concept of plane kinetics of rigid bodies. [12] Principle of Virtual Work, Solution of Problems on Mechanics using Principle of Virtual Work [3]

ESC01	**Environmental Science**	PCR	2	0	0	2	2
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO1: Understand the importance of environment and ecosystem. • CO2: Understand the fundamental aspect of pollutant tracking and its implementation in natural and anthropogenic pollution of air and water system. • CO3: Understand the scientific basis of local and as well as global issues. • CO4: Apply of knowledge to develop sustainable solution.						
Topics Covered	**Introduction:** Multidisciplinary nature of Environmental Studies; Basic issues in Environmental Studies. [2] Human population and the Environment. [1] Social issues and the Environment. [1] **Constituents of our Environment & the Natural Resources:** Atmosphere– its layers, their characters; Global warming, Ozone depletion, Acid rain, etc. [5] Hydrosphere - Its constituents, Oceans, Groundwater, Surface waters; Hydrological cycle. [4] Lithosphere - constituents of lithosphere; Rock and Mineral resources; Plate Tectonic Concept and its importance. [5] Biosphere– its components; Ecosystems and Ecology; Biodiversity; Biomes. [5] Natural disaster and their management – Earthquakes, Floods, Landslides, Cyclones. [3] **Pollution:** Pollutants and their role in air and water pollution. [2]

NIL		CT+EA					
Course Outcomes	• CO1: Ability of mental visualization of different objects • CO2: Theoretical knowledge of orthographic projection to solve problems on one/two/three dimensional objects • CO3: Able to read/interpret industrial drawing and to communicate with relevant people						
Topics Covered	Graphics as language of communication; technical drawing tools and their up-keep; types of lines; construction of geometrical figures; lettering and dimensioning. [6] Construction and use of scales; construction of curves of engineering importance such as curves of conic section; spirals, cycloids, involutes and different loci of points; use of equations for drawing some curves. [9] Descriptive geometry: necessity and importance of orthographic projection; horizontal and vertical reference planes; coordinate of points; orthographic projection of points and lines situated in different quadrants, viz. 1st, 2nd, 3rd and 4th quadrants; traces of lines. First angle and third angle projection of lines and planes; views from top, front and left (or right); true length and true inclination of lines with planes of projections; primary auxiliary projection of points, lines and planes; auxiliary plan and auxiliary elevation. [9] Projection of simple regular solids, viz. prisms, cubes, cylinders, pyramids, cones, tetrahedrons, spheres, hemi-spheres etc. [6] Section of solids; section by perpendicular planes; sectional views; true shapes of sections. [6] Dimensional techniques; international and national standards (ISO and BIS). [3] Freehand graphics. [3]

PHS51	Physics Laboratory	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods: (Continuous evaluation (CE) and end assessment (EA))					
NIL		CE+EA					
Course Outcomes	CO1: To realize and apply different techniques for measuring refractive indices of different materials. CO2: To realize different types of waveforms in electrical signals using CRO. CO3: To understand charging and discharging mechanism of a capacitor. CO4: To understand interference, diffraction and polarization related optical phenomena. CO5: To acquire basic knowledge of light propagation through fibers.						
Topics Covered	1. Find the refractive index of a liquid by a travelling microscope. 2. Determine the refractive index of the material of prism using spectrometer. 3. Determination of amplitude and frequency of electrical signals by oscilloscope. 4. To study the characteristics of RC circuits. 5. To study Brewster's law/Malus' law using laser light. 6. To study the diffraction of light by a grating. 7. To study the interference of light by Newton's ring apparatus. 8. To determine numerical aperture of optical fiber. 9. Determination of Planck constant.						
Text and/or reference material	**SUGGESTED BOOKS**: 1) A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
None	CT+EA

Course Outcomes	• CO1: To learn basic analytical techniques useful for engg applications. • CO2: Synthesis and characterization methods of few organic, inorganic and polymer compounds of industrial importance. • CO3: Learn chromatographic separation methods. • CO4: Applications of spectroscopic measurements.
Topics Covered	i. Experiments based on pH metry: Determination of dissociation constant of we acids by pH meter. ii. Experiments based on conductivity measurement: Determination of amou of HCl by conductometric titration with NaOH. iii. Estimation of metal ion: Estimation of Fe^{2+} by permangnomentry iv. Estimation of metal ion: Determ. of total hardness of water by EDTA titration. v. Synthesis and characterization of inorganic complexes: e. g. $Mn(acac)_3$, Fe(acac cis-bis(glycinato)copper (II) monohydrate and their characterization by m. p FTIR etc. vi. Synthesis and charact. of organic compounds: e.g.Dibenzylideneacetone. vii. Synthesis of polymer: polymethylmethacrylate viii. Verification of Beer-Lamberts law and determination of amount of iron prese in a supplied solution. ix. Chromatography: Separation of two amino acids by paper chromatography x. Determination of saponification value of fat/ vegetable oil
	Suggested Text Books: 1. Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall 2. Advanced Physical Chemistry Experiments: By Gurtu&Gurtu 3. Comprehensive Practical Organic Chemistry: Qualitative Analysis By V. K. Ahluwalia and S. Dhingra Suggested Reference Books: 1. Practical Chemistry By R.C. Bhattacharya 2. Selected experiments in Physical Chemistry By N. G. Mukherjee

<tr><td>Course Outcomes</td><td colspan="7">
• CO1: Study and practice on machine tools and their operations
• CO2: Practice on manufacturing of components using workshop trades including fitting, carpentry, foundry and welding
• CO3: Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping
• CO4: Develop basic electrical engineering knowledge for house wiring practice</td></tr>
<tr><td>Topics Covered</td><td colspan="7">
M/c shop & Carpentry shop -- 3X3= 9hrs.
• Introduction on machining process.
• Introduction to machine tools- Lathe, Shaper, Milling and Drill machine.
• Introduction to woods- Types, structure, disease and defect of wood.
• Introduction to wood working machines and tools.
• Making of dovetail joint and bridle joint.
Welding Shop & Sheet metal -- 3X3= 9hrs.
• Introduction to welding.Safety and precautions in welding.
• Formation of weld bead by SMAW on mild steel flat.
• Formation of weld bead by oxy-fuel welding on mild steel flat.
• Introduction to sheet Metal works.
• Tools and Machines used in sheet metal works.
• Concept of development, marking out of metal sheets.
• Cutting and joining of metal sheets.
• Safety precautions, General warning needed in the shop floor.
Black smithy & Foundry -- 3X3= 9hrs.
• Introduction Smithing and Forging- Tools, Machines, Furnaces and its accessories, fuels.
• Safety and precautions in blacksmithy.
• Making of bars of different cross-sections.
• Making of hexagonal headed bolts.
• Forge welding.
• Introduction to Foundry Technology.
• Preparation of sand mould using Solid/Split Pattern.
Fitting & Electrical shop -- 3X3= 9hrs.
• Introduction to hand metal cutting tools with specifications, nomenclature and their use.
• Marking tools, measuring tools and their use.</td></tr>
</table>

	• Fitting of joints of mild steel flats. • Introduction to electrical hazards and safety precaution. • Wire jointing and soldering. • PVC Conduit Wiring controlled by separate single way switches. • PVC Cashing Capping Wiring for two-way switches. • Conduit wiring for the connection of a Calling Bell with In& Out Indicators. • Batten Wiring and Cleat Wiring. • Tube Light Connection. • Insulation Resistance Testing of 1ph / 3ph Motor and House Wiring. • Earth Resistance Testing. • DOL Starter Connection. **Viva voce -- 1X3= 3hrs.**
Text Books, and/or reference material	1. Workshop Technology Part I and Part II by W. A. J. Chapman 2. Elements of Workshop Technology S. K. Hazra Chowdhury, A. K. Hazra Chowdhury and Nirjhar Roy 3. Mechanical Workshop Practice by K. C. John

Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement

<table>
<tr><td></td><td>CO5: Exposure to social service</td></tr>
<tr><td>Topics Covered</td><td>YOGA

Introduction of Yoga.
Sitting Posture/Asanas- Padmasana, Vajrasana, Ardhakurmasana, Ustrasana, Bakrasana, Sasankasana, Janusirshasana, Suryanamaskar.
Mudra- Gyana mudra, Chin mudra, Shuni mudra, Prana mudra, Adi mudra, Anjali mudra.
Laying Posture/Asanas- PavanaMuktasana, UttanaPadasana, Sarpasana, Bhujangasana (Cobra Pose), Eka Pada Śalabhāsana, Dhanurasana, Chakrasana, Viparitkarani.
Meditation- Yognidra, Om chant, Pray chant.
Standing Posture/Asanas- Tadasana (Mountain Pose), Vrikshasana (Tree Pose), Ardhachandrasana, Trikonasana, Utkatasana, Padahastasana.
Pranayama- Deep breathing, AnulomVilom, Suryabhedi, Chandrabhedi.
Kriya- Kapalbhati, Trataka.

ATHLETICS

Introduction of Athletic.
Starting Technique for Track events- Standing start, Crouch & Block start.
Finishing Techniques.
Relay Race- 4×100m, 4×400m & Baton Exchange Technique & Rules.
Track Marking with Fundamentals- 200m, 400m and Diagonal Distance Radius, Straight Distance, Staggers of Different Lanes & Curve Distance.

BASKETBALL

Introduction and Players stance and ball handling.
Passing- Two hand chest pass, two hand bounce pass, One hand baseball pass, Side arm pass, Overhead pass, Hook pass.
Receiving- Two hand receiving, one hand receiving, receiving in stationary position, Receiving while jumping and Receiving while running.
Dribbling- Dribble, High dribble, Low dribble, Reverse dribble, Rolling dribble.
Rules of Basketball.
Basketball game.

VOLLEYBALL

Introduction of Volleyball
Service- Underarm service, Sidearm service, Tennis service, Floating service, Jump service.
Pass: Underarm pass- Ready position, Teaching stage of underarm pass and Upper hand pass- Volley pass, Back pass, Short set, Jump set & Underarm set.
Rules and their interpretation.

FOOTBALL

Introduction of Football
</td></tr>
</table>

- Push pass- Instep inside, Instep outer side.
- Kicking- Spot kick, Instep kick, Lofted kick.
- Dribbling- One leg, Both legs, Instep.
- Trapping- Rolling ball sole trapping, High ball sole trapping, High ball chest trapping, High ball thigh trapping.
- Throwing- Standing throw, Running throw, Seating throw.
- Goal Keeping- Griping the ball, Full volley, Half volley, Drop Kick.
- Rules and their interpretation.

CRICKET

- Introduction of Cricket
- Batting gripping & Stance, Bowling gripping technique.
- Batting front foot defense& Drive.
- Batting Back foot defense& Drive.
- Batting Square cut.
- Bowling medium pace, Bowling off break.
- Fielding drill, Catching (Short & High).
- Rules & Regulation.

BADMINTON

- Basic introduction about Badminton and Badminton court.
- Racket parts, Racket Grip, Shuttle Grip.
- Basic stance, Basic Footwork, Shadow practice (Full court movement).
- Strokes services: Forehand- Overhead & Underarm, Backhand- Overhead & Underarm.
- Match practice (Single & Double).
- Rules & Regulation.

TABLE TENNIS

- Introduction of Table Tennis.
- Basic Stance and Grip (Shake hand & Pen hold).
- Service Basic.
- Stroke: Backhand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash.
- Stroke: Forehand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash.
- Rules and their interpretations.
- Table Tennis Match (Singles & Doubles).

NCC

- FD-1 General Introduction and words of command.
- FD-2 Attention, Stand at ease and Stand easy, Turning and inclining at the halt.
- FD-3 Sizing, Forming up in three Ranks Numbering, Open and Close order March and Dressing.
- FD-4 Saluting at the halt, Getting on parade, Dismissing and falling out.

- FD-5 Marching, Length of pace and Time of Marching in quick time and Halt, Slow March and Halt.
- FD-7 Turning on the March and Wheeling.
- FD-12 Parade practice.

TAEKWONDO

- Introduction about Taekwondo- Meaning of Taekwondo, Korean language of dress, Fighting area, Punch, Block, Kicks etc.
- Stance- Ready stance, Walking stance, Fighting stance, Front stance, Back stance, Cat stance etc.
- Punch Technique- Front fist punch, Rear fist punch, Double fist punch, With stance etc. Blocks- Upper blocks, Middle block, Side block, Suto etc.
- Foot Technique (Balgisul)- Standing kick (Saseochagi), Front kick (Abchagi), Doliyo (Chagi), Abdalchagi (Butterfly kick), Back kick etc.

NSS

- Swachha Bharat Mission
- Free Medical Camp
- Sanitation drive in and around the campus.
- Unnat Bharat Abhiyaan
- MatribhashaSaptah celebration

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 02	MATHEMATICS - II	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic concepts of set theory, differential equations, and probability.		CT+MT+EA					
Course Outcomes	• CO1: Develop the concept of basic linear algebra and matrix equations so as to apply mathematical methods involving arithmetic, algebra, geometry to solve problems. • CO2: To acquire the basic concepts required to understand, construct, solve and interpret differential equations. • CO3: Develop the concepts of Laplace transformation & Fourier transformation with its property to solve ordinary differential equations with given boundary conditions which are helpful in all engineering & research work. • CO4: To grasp the basic concepts of probability theory.						

Topics Covered	**Elementary algebraic structures:** Group, subgroup, ring, subring, integral domain, and field. (5) **Linear Algebra:** Vector space, Subspaces, Linear dependence and independence of vectors, Linear span, Basis and dimension of a vector space. Rank of a matrix, Elementary transformations, Matrix inversion, Solution of system of Linear equations, Eigen values and Eigen vectors, Cayley-Hamilton Theorem, Diagonalization of matrices. (15) **Ordinary Differential Equations:** Existence and uniqueness of solutions of ODE (Statement Only), Equations of first order but higher degree, Clairaut's equation, Second order differential equations, Linear dependence of solutions, Wronskian determinant, Method of variation of parameters, Solution of simultaneous equations. (12) **Fourier series:** Basic properties, Dirichlet conditions, Sine series, Cosine series, Convergence. (4)
	Laplace and Fourier Transforms: Laplace transforms, Inverse Laplace transforms, Convolution theorem, Applications to Ordinary differential equations. Fourier transforms, Inverse Fourier transform, Fourier sine and cosine transforms and their inversion, Properties of Fourier transforms, Convolution. (10) **Probability:** Historical development of the subject and basic concepts, Axiomatic definition of probability, Examples to calculate probability, Random numbers. Random variables and probability distributions, Binomial distribution, Normal distribution. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10^{th}ed, Wiley India Ed. (2010). 2. Gilbert Strang, Linear algebra and its applications (4th Ed), Thomson (2006). 3. Shepley L. Ross, Differential Equations, 3^{rd} Edition, Wiley Student Ed (2017). **Reference Books:** 1. S. Kumaresan, Linear algebra - A Geometric approach, PHI (2000). 2. C. Grinstead, J. L. Snell, Introduction to Probability, American Math. Society.

CO2: Illustrate the flowchart and inscribe an algorithm for a given problem Inscribe C programs using operators.
CO3: Develop conditional and iterative statements to write C programs.
CO4: Exercise user defined functions to solve real time problems
CO5: Inscribe C programs that use Pointers to access arrays, strings and functions.
CO6: Exercise user defined data types including structures and unions to solve problems.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Fundamentals of Computer: History of Computer, Generation of Computer, Classification of Computers 2L Basic Anatomy of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices. [2]
Languages: Assembly language, high level language, compiler, and assembler (basic concepts) [1]
Binary & Allied number systems representation of signed and unsigned numbers. BCD, ASII. Binary Arithmetic & logic gates. [2]
Basic concepts of operating systems like MS DOS, MS WINDOW, UNIX, Algorithm & flow chart. [1]
C Fundamentals: The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements. [2]
Operators & Expressions: Arithmetic operators, relational and logical operators, type, conversion, increment and decrement operators, bit wise operators, assignment operators and expressions, precedence, and order of evaluation. Input and Output: Standard input and output, formatted output -- printf, formatted input scanf. [8]
Flow of Control: Statement and blocks, if - else, switch, loops - while, for do while, break and continue, go to and labels. [5]
Fundamentals and Program Structures: Basic of functions, function types, functions returning values, functions not returning values, auto, external, static and register Variables, scope rules, recursion, function prototypes, C pre-processor, command line arguments. [5]
Arrays and Pointers: One-dimensional, two-dimensional arrays, pointers and functions, multi-dimensional arrays. [10]
Structures Union and File: Structure, union, structures and functions, arrays of structures, file read, file write.[5]</td></tr>

	CO6	2	-	3	-	1	-	-	-	-	-	-	-

Correlation levels 1, 2 or 3 as defined below:
1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECC01	**Basic Electronics**	PCR	2	1	0	3	3
Pre-requisites			Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))				
(10+2) level mathematics and physics			CT+MT+EA				
Course Outcomes	• CO1: Knowledge of Semiconductor physics and devices. • CO2: Have an in depth understanding of basic electronic circuit, construction, operation. • CO3: Ability to make proper designs using these circuit elements for different applications. • CO4: Learn to analyze the circuits and to find out relation between input and output.						
Topics Covered	1. **Semiconductors** 1.1. Concept of band formation in solids; Fermi-Dirac distribution function, concept of Fermi level, invariance of Fermi level in a system under thermal equilibrium 1.2. Definitions of insulator, conductor and semiconductor using band diagram 1.3. Crystalline structure of semiconductor 1.3.1. Covalent bond 1.3.2. Generation of holes and electrons						

	1.3.3. Effect of temperature on semiconductor 1.4 Intrinsic semiconductor 1.5 Doping and Extrinsic semiconductor 1.5.1 n-Type semiconductor and band diagram 1.5.2 p-Type semiconductor and band diagram 1.5.3 Mass-action law of semiconductor 1.6. Conductivity of semiconductor (including mathematical expression) 1.7 Carrier transport phenomenon. (03 hrs.) 2. **Diodes** 2.1. Construction 2.2. Unbiased diode; Depletion layer and Barrier potential; junction capacitance (expression only) 2.3. Principle of operation with forward biasing and reverse biasing 2.4. Characteristics 2.5 Diode's three models/equivalent circuits.(02 hrs.) 3.**Diode Circuits** 3.1 Diode rectifier 3.1.1 Half wave rectifier 3.1.2 Full wave rectifier:centre tap and bridge rectifier 3.1.3 Capacitive filter and DC power supply (Numerical problems) 3.2 Special Diodes 3.2.1 Zenerdiode: Avalanche breakdown and Zener breakdown and characteristics. 3.2.2 Zener diode as a voltage regulator 3.2.3 Displaydevices: LED and LCD. (03 hrs.) 4.**Bipolar Junction Transistor (BJT)** 4.1 n-p-n and p-n-p transistor and their constructions 4.2 Principle of operation 4.3 Transistor configuration: common base, common emitter, and common collector 4.4 Transistor characteristics: input and output characteristics of CB and CE configurations 4.5 DC load line: quiescent (Q) point; cut-off, active, and saturation region 4.6 Amplifier: Principle of operation 4.7 Transistor as a switch. (04 hrs.) 5.**Transistor Biasing** 5.1 Need of biasing 5.2 Methods of biasing: base resistor or fixed bias, emitter feedback, voltage divider biasing 5.3 Stability of Q-point (qualitative discussions) 5.4 (Numerical problems). (02 hrs.) 6.**Single Stage Amplifier:** classification of amplifiers (voltage amplifier, current amplifier, power amplifier etc.) Class-A CE Amplifier with coupling and bypass capacitors, Qualitative discussions of magnitude characteristics of frequency response (graph only) (02 hrs.) 7.**Feedback Amplifier** 7.1 Positive and negative feedback

	7.2 Deduction of gain with negative feedback, explanation of stability of gain with negative feedback, other effects of negative feedback (no deduction), numerical problems. (03 hrs.) 8.**Other Semiconductor Devices** 8.1 JFET: Construction, principle of operation, characteristics 8.2 MOSFET: Construction, principle of operation, characteristics 8.3 Power Electronic Device-SCR: Brief discussions. (02 hrs.) 9.**Operational Amplifier** 9.1 Characteristics of ideal operational amplifier 9.2 Pin Configuration of IC 741, 9.3 Analysis of simple operational amplifier circuits: concept of virtual ground; noninverting amplifier and inverting amplifier. 9.4 Applications: voltage follower, summer, differentiator, integrator, and comparator (04 hrs) 10.**Oscillator** 10.1 Positive feedback and condition of oscillation 10.2 R-C phase-shift oscillator, Wien bridge oscillator.(02 hrs.) 11.**Boolean Algebra** 11.1 Boolean algebra, De Morgan's theorem, simplification of Boolean expressions 11.2 Number system, range extension of numbers, overflow 11.3 Different codes: gray code, ASCII code and BCD codes and them Applications. (01 hrs.) 12. **Logic Gates** 12.1 NOT, OR, AND, NOR, NAND, EX-OR, EX-NOR gates 12.2 Simplification of logic functions 12.3 Realizations of logic expressions using logic gates. (01 hrs.) 13. CRO and its applications and other test and measurement instruments. (01 hrs.)

BTC01	LIFE SCIENCE	PCR	2	0	0	2	2
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1: Basic understanding of basic cellular organization of organisms and cellular communications, structure and functions of the macromolecules and their biosynthesis and cata--bolism. CO2: To give an understanding of the key features of the structure, growth, physiology and behavior of bacteria, viruses, fungi and protozoa CO3: To introduce molecular biology to understand biological processes in various applications. CO4: To provide a foundation in immunological processes and an overview of the interaction between the immune system and pathogens. CO5: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them CO6: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them
Topics Covered	**1. Cell Biology (4)** a) Introduction to life science: prokaryotes & eukaryotes Definition; Difference b) Introduction to cells - Define cell, different types of cell c) Cellular organelles - All organelles and functions in brief d) Cellular communications Introduction to basic signaling; endocrine, paracrine signaling; concepts of receptor, ligand, on-off switch by phosphorylation/dephosphorylation **2. Biochemistry (4)** a) Biological function of carbohydrate and lipid - Introduction, structure and function b) Biological function of nucleic acids and protein - structure and function c) Catabolic pathways of Macromolecules - Introduction to catabolism, hydrolysis and condensation reactions; Catabolism of glucose- Glycolysis,

	TCA; overall degradation of proteins and lipids d) Biosynthesis of Macromolecules Generation of ATP (ETS), Generation of Glucose (Photosynthesis) **3. Microbiology (5)** a) Types of microorganisms and their general features - Bacteria, Yeast, Fungi, Virus, Protozoa- general introduction with practical significance and diseases b) Microbial cell organization - Internal and External features of cell- bacterial cell wall, viral capsule, pilus etc, c) Microbial nutritional requirements and growth - Different Sources of energy; growth curve d) Basic microbial metabolism - Fermentation, Respiration, Sulfur, N_2 cycle **4. Immunology (5)** a) Basic concept of innate and adaptive immunity - Immunity-innate and adaptive, differences, components of the immune system b) Antigen and antibody interaction - Antigen and antibody, immunogen, factors affecting immunogenicity, basic antigen-antibody mediated assays, introduction to monoclonal antibody c) Functions of B cell - B cell, antibody production, memory generation and principle of vaccination d) Role of T cell in cell-mediated immunity - Th and Tc, functions of the T cell with respect to different pathogen and cancer cell **5. Molecular Biology (5)** a) Prokaryotic Genomes (Genome organization & structure) - Nucleoid, circular or linear b) Eukaryotic Genomes (Genome organization & structure) - Intron, exon, packaging, chromatin c) Central Dogma (Replication, Transcription and Translation) d) Applications of Molecular Biology (Diagnostics, DNA-fingerprinting, Recombinant products etc.) - Introduction to Recombinant DNA, fingerprinting, cloning **6. Bioprocess Development (5)** a) Microbial growth kinetics - Batch, fed-batch and continuous systems, Monod Equation b) Enzyme kinetics, kinetics of enzyme inhibition and deactivation Definition of enzymes, activation energy, Concepts of Km, Vmax, Ki c) Microbial sterilization techniques and kinetics Introduction to sterilization, dry and moist sterilization d) Thermodynamics of biological system - Concepts of Enthalpy, Entropy, favorable reactions, exergonic and endergonic reactions e) Material and energy balance for biological reactions - Stoichiometry

Course Outcomes	• CO1: Acquire idea about basic electronic components, identification, and behavior. • CO2: To determine IV characteristics of these Circuit elements for different applications. • CO3: Learn to analyze the circuits and observe and relate input and output signals.
Labs Conducted.	1. To know your laboratory: To identify and understand the use of different electronic and electrical instruments. 2. To identify and understand name and related terms of various electronics components used in electronic circuits.: Identify different terminals of components, fid their values and observe numbering associate with it. 3. Use of oscilloscope and function generator: Use of oscilloscope to measure voltage, frequency/time and Lissajous figures of displayed waveforms. 4. Study of half wave and Full-wave (Bridge) rectifier with and without capacitor filter circuit. 5. Realization of basic logic gates: Truth table verification of OR, AND, NOT, NOT and NAND logic gates from TTL ICs 6. Regulated power supply: study LM78XX and LM79XX voltage regulator ICs 7. Transistor as a Switch: study and perform transistor as a switch through NOT gate 8. Zenner diode as voltage regulator 9. To study clipping and Clamping circuits 10. To study different biasing cirtis. 11. Study of CE amplifier and observe its frequency response.

NIL	CE + EA						
Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Sitting Posture/Asanas- Gomukhasana, Swastikasana, Siddhasana, Ustrasana, Janusirsasana, ArdhaMatsyendrasana (Half-Spinal Twist Pose), Paschimottanasana, Shashankasana, Bhadrasana. • Mudra- Vayu, Shunya, Prithvi, Varuna, Apana, Hridaya, Bhairav mudra. • Laying Posture/Asanas- Shalabhasana (Locust Posture), Dhanurasana (Bow Posture), ArdhaHalasana (Half Plough Pose), Sarvangasana (Shoulder Stand), Halasana (Plough Pose), Matsyasana, SuptaVajrasana, Chakrasana (Wheel Posture), Naukasana (Boat Posture), Shavasana (Relaxing Pose), Makaraasana. • Meditation- 'Om'meditation, Kundalini or Chakra Meditation, Mantrameditation. • Standing Posture/Asanas- ArdhaChakrsana (Half Wheel Posture), Trikonasana (Triangle Posture), ParshwaKonasana (Side Angle Posture), Padahastasana, Vrikshasana (Tree Pose), Garudasana (Eagle Pose). • Pranayama- Nadisodha, Shitali, Ujjayi, Bhastrika, Bhramari. • Bandha- Uddiyana Bandha, Mula Bandha, Jalandhara Bandha, Maha Bandha. • Kriya- Kapalabhati, Trataka, Nauli. **ATHLETICS** • Long Jump- Hitch kick, Paddling, Approach run, Take off, Velocity, Techniques, Flight & Landing						

	• Discus throw, Javelin throw and Shot-put- Basic skill & Technique, Grip, Stance, Release & Follow through. • Field events marking. • General Rules of Track & Field Events. **BASKETBALL** • Shooting- Layup shot, Set shot, Hook shot, Jump shot. Free throw. • Rebounding- Defensive rebound, Offensive rebound. • Individual Defensive- Guarding the man without ball and with ball. • Pivoting. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Spike- Straight spike, Body turn spike, Tip spike, Back attack, Slide spike, Wipe out spike. • Block- Single block, Double block, Triple block, Group block. • Field Defense- Dig pass, Double pass, Roll pass. • Rules and their interpretation. **FOOTBALL** • Dribbling- Square pass, Parallel pass, Forward pass. • Heading (Standing & Running)- Fore head, Side fore head, Drop heading, Body covering during heading. • Kicking- Full volley, Half volley, Drop kick, Back volley, Side volley, Chiping (lobe). • Tackling: Covering the angle, Chessing time sliding chese, Heading time shoulder tackle etc. • Feinting- Body movement to misbalance the opponent and find space to go with ball. • Rules of Football. **CRICKET** • Batting straight drive. • Batting pull shot. • Batting hook shot. • Bowling good length, In swing. • Bowling out swing, Leg break, Goggle. • Fielding drill. • Catching (Long & Slip). • Wicket keeping technique. • Rules & Regulation. **BADMINTON** • Net play- Tumbling net shot, Net Kill, and Net Lift. • Smashing. • Defensive high clear/Lob. • Half court toss practice, Cross court toss drop practice, Full court Game practice. • Player Positioning, Placements.

	• Rules & Regulation. • Doubles & Mixed doubles match practice. **TABLE TENNIS** • Stroke: Backhand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke: Forehand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke- Backhand lob with rally, Backhand lob with sidespin, Forehand lob with rally, Forehand lob with sidespin. • Service: Backhand/Forehand- Push service, Deep push service, Rally service. • Service: Backhand sidespin (Left to right & Right to left). • Service: Forehand- High toss backspin service, High toss sidespin service, High toss reverse spin service. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-6 Side pace, Pace Forward and to the Rear. • FD-7 Turning on the March and Wheeling. • FD-8 Saluting on the March. • FD-9 Marking time, Forward March and Halt in Quick Time. • FD-10 Changing step. • FD-11 Formation of Squad and Squad Drill. • FD-12 Parade practice. **TAEKWONDO** • Poomsae (Forms)- Jang, Yi Jang. • Self Defense Technique- Self defense from arms, Fist and Punch. • Sparring (Kyorugi)- One step sparring, Two step sparring, Fight (Free sparring). • Combination Technique- Combined kick and punch. • Board Breaking (Kyokpa)- Sheet breaking. • Interpretation Rules above Technique of Taekwondo. **NSS** • No Smoking Campaign • Anti- Terrorism Day Celebration • Any other observation/celebration proposed by Ministry/institute • Public Speaking • Discussion on Current Affairs • Viva voce

THIRD SEMESTER

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CEC301	**Solid Mechanics**	**PCR**	**3**	**1**	**0**	**4**	**4**

Pre-requisite(s)	Course Assessment methods
Knowledge of Engineering Mechanics and Mathematics	Continuous (CT) and end assessment (EA). CT+EA

Course Outcomes (COs):	• CO1: Development of skills for predicting structural behaviour of solids under different loads • CO2: Knowledge of basics of analysis and design of structural components made of variety of materials • CO3: Developing the requisite skill that helps in studying the advanced courses
Topics Covered (Hrs)	**Concept of stress and strain**: Normal and shear stresses and strains in axially loaded members, Elastic moduli and their inter-relationships, strain energy due to direct stresses, impact loads. **(4)** **Beam Statics**: Definitions, support types and support reactions, concepts of redundancy, shear force and bending moment diagrams for beams. **(8)** **Symmetric Beam Bending**: Basic kinematical assumptions, moment of inertia, elastic flexure formulae and its application, moment carrying capacity. **(3)** **Bending stress and Shear stress distributions** in beam sections, Combined bending and direct stresses. **(8)** **Strain energy**: Due to pure bending and shearing stress. **(2)** **Deflection of beams**: Moment-curvature relationship, determination of deflection by direct integration method, moment area method and energy method. **(6)** **Torsion**: Pure torsion, Torsion of circular solid shaft, closed coil helical spring. Combined bending and torsion. **(4)** **Two dimensional stress problems**: Principal stresses, maximum shear stresses, Mohr's circle of stresses, construction of Mohr's circle. **(4)** **Thin pressure vessels**: Hoop stress and meridional stress, volumetric changes **(2)** **Columns**: Fundamentals, different types of equilibrium, column buckling theory, Euler's load for columns, limitations of Euler's theory – problems, eccentric load and secant formulae, empirical column formulae & IS code formulae. **(4)**
Text Books, and/or reference material (s)	***Text Books:*** 1. Elements of Strength of Material by S. P. Timoshenko & D. H. Young 2. Strength of Materials by S SBhavikatti 3. Engineering Mechanics of Solids by E. P. Popov ***Reference Books:*** 4. Strength of Material by Singer &Pytel 5. A Text Book of Strength of Materials by Ghosh &Datta, New Age International Publication Pvt. Ltd, New Delhi

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CEC303	**Building Construction& Concrete Technology**	**PCR**	**3**	**1**	**0**	**4**	**4**
Pre-requisite(s)		Course Assessment methods					
No pre-requisites		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs) :	• CO1: Acquire knowledge ofselection and application of building materials • CO2: Understand the building components and planning • CO3: Gain an integrative ideaon materials, preparation and mix design of concrete						

Topics Covered (Hrs)	**A). Building planning and construction:**Planning and orientation of buildings, Introduction to different components and functions of a building in details: Foundation, Wall, Beam, Floor, Roof, Stair &Staircase, Door, Window, and etc.**(10)** **B). Building Materials:** Brief idea on different building materials **(2)** **Aggregates:** Classification, sampling, mechanical, physical properties of fine and coarse aggregates, standard tests, deleterious substances, Alkali-aggregate reaction, thermal properties, grading of aggregate. **(4)** **Cement:** Introduction, chemical composition, major compounds, hydration, physical properties, testing, fineness, consistency, setting time, soundness, strength, heat of hydration, specific gravity, types of cement **(8)** **Water:** Source, quality, impurities and effect of on concrete, sea water **(2)** **Admixture:** Introduction, classification, specifications and functions of admixtures. **(2)** **Other materials:** Brick, Timber, Lime, Cement mortar, Timber, Steel and Paint. **(8)** **C). Concrete Technology:** Introduction, classification, properties, grades, advantage, disadvantages and quality control of concrete.**(2)** **Fresh concrete:** Introduction, workability, factors, measurement, segregation, bleeding and manufacture of concrete – batching, mixing, transporting, placing, compaction, finishing and curing.**(6)** **Hardened concrete:** Introduction, strength, stress–strain characteristics, destructive and non-destructive test, shrinkage, creep, permeability, durability, attack of sulphates, acid, efflorescence, thermal properties and fire resistance.**(4)** **Concrete mix design:** Factors andmix design using Indian Standard code. **(4)** **Special concrete:** Introduction of Light weight, High density, High strength, Fibre reinforced, Polymer concrete and Ferro cement. **(4)**
Text Books, and/or reference material(s)	***Text Books:*** 1. Engineering Materials by S. C. Rangwala, K. S. Rangwala and P. S. Rangwala,Charotar Publishing House, Anand 2. 			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CES351	**Fluid and Strength of Material Laboratory**	**PS**	**0**	**0**	**3**	**3**	**1.5**
Pre-requisite(s)		Course Assessment methods					
NIL		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes	• CO1: Conduct experiments for the determining the properties of harden concrete and mild steel, and other construction materials.						

(COs) :	• CO2: Perform different experiments on fluid mechanics related problems for determination of properties of flow through pipes and calibration of few flow rate measuring instruments. • CO3: Use modern instruments and tools to determine the properties of harden concrete and other civil engineering materials and work in a group. • CO4: Prepare the report on experimental results.
Topics Covered (Hrs)	Determination of compressive strength, split tensile strength & flexural strength of concrete. To observe the behavior of a mild steel specimen while being tested and to determine (i) upper and lower yield points, (ii) ultimate strength, (iii) breaking strength, (iv) percentage elongation of length, (v) percentage reduction of cross-section. To apply torsional load on circular rods and to determine the value of modulus of rigidity by measuring the angle of twist. Experiment on Rockwell Hardness Test. Determination of coefficient of bend loss in flow through pipes. Experiment on friction loss in flow through pipes. Calibration of Venturimeter. Calibration of V-notch. Calibration of Orifice meter. Experiment on impact of jet.
Text Books and/or reference material(s)	***Text Books:*** 1. Concrete Technology by M. S. Shetty, S. Chand & Co 2. Concrete Technology by M. L. Gambhir, Tata McGraw Hill 3. Elements of Strength of Material by S. P. Timoshenko, and D. H. Young, Affiliated East-West Press. ***Reference Books:*** 3. Fluid Mechanics by M White Frank, Tata McGraw-Hill 4. Introduction to Fluid Mechanics by W Fox Robert & T Alan McDonald, WILEY 5. Fluid Mechanics by V. L. Streeter, & E B, Wylie, McGraw-Hill.

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC331	**MATHEMATICS-III**	**PCR**	**3**	**1**	**0**	**4**	**4**
Pre-requisites		Basic knowledge of topics included in MAC01 & MAC02					
Course Outcomes	• CO1: Acquire the idea about mathematical formulations of phenomena in physics and engineering. • CO2: To understand the common numerical methods to obtain the approximate solutions for the intractable mathematical problems. • CO3: To understand the basics of complex analysis and its role in modern mathematics and applied contexts. • CO4: To understand the optimization methods and algorithms developed for						

	solving various types of optimization problems.
Topics Covered	**Partial Differential Equations (PDE):** Formation of PDEs; Lagrange method for solution of first order quasilinear PDE; Charpit method for first order nonlinear PDE; Homogenous and Nonhomogeneous linear PDE with constant coefficients: Complimentary Function, Particular integral; Classification of second order linear PDE and canonical forms; Initial & Boundary Value Problems involving one dimensional wave equation, one dimensional heat equation and two dimensional Laplace equation. [14] **Numerical Methods:** Significant digits, Errors; Difference operators; Newton's Forward, Backward and Lagrange's interpolation formulae; Numerical solutions of nonlinear algebraic/transcendental equations by Bisection and Newton-Raphson methods; Trapezoidal and Simpson's 1/3 rule for numerical integration; Euler's method and modified Eular's methods for solving first order differential equations. [14] **Complex Analysis:**Functions of complex variable, Limit, Continuity and Derivative; Analytic function; Harmonic function; Conformal transformation and Bilinear transformation; Complex integration; Cauchy's integral theorem; Cauchy's integral formula; Taylor's theorem, Laurent's theorem (Statement only); Singular points and residues; Cauchy's residue theorem. [17] **Optimization:** **Mathematical Preliminaries:** Hyperplanes and Linear Varieties; Convex Sets, Polytopes and Polyhedra. [2] **Linear Programming Problem (LPP):** Introduction; Formulation of linear programming problem (LPP); Graphical method for its solution; Standard form of LPP; Basic feasible solutions; Simplex Method for solving LPP. [9]
Text Books, and/or reference material	**Text Books:** 1. An Elementary Course in Partial Differential Equations-T. Amarnath 2. Numerical Methods for scientific & Engineering Computation- M.K.Jain, S.R.K. Iyengar& R.K. Jain. 3. Foundations of Complex Analysis- S. Ponnuswami 4. Operations Research Principles and Practices- Ravindran, Phillips, Solberg 5. Advanced Engineering Mathematics- E. Kreyszig **Reference Books:** 1. Complex Analysis-L. V. Ahfors 2. Elements of partial differential equations- I. N. Sneddon 3. Operations Research- H. A. Taha

<tr><td>Course Outcomes</td><td colspan="7">• Assimilation of Geological knowledge with Civil Engineering for better design of Engineering Structures (Dam, Tunnels etc.).
• Enhancing skill of problem solving in dam, tunnel and landslide etc.
• Better understanding of groundwater as a vital resource in Water Resource Engineering.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Mineralogy: Definition, simple classifications, examples; Physical properties of minerals, chemical characteristics, occurrence [2]
Petrology: Three types of rocks – Igneous, Sedimentary, Metamorphic, Igneous rocks – definition, classifications and examples, structures of intrusive and extrusive rocks, textures; Sedimentary rocks – Origin, classifications and examples, primary structures, textures; Metamorphic rocks – roles of agents of metamorphism, types of metamorphism, grades and degrees of metamorphism, metamorphic textures. [10]
Structural Geology: Strike and Dip of planes, True dip, Apparent dip; Folds – Hinge, limbs, axis, axial plane, types of folds; Faults – Common terms for describing faults, types and classification of faults; Joints – Definition, types and classification of joints; Cleavage and Schistosity – Definitions and types of cleavages. [5]
Hydrogeology: Groundwater occurrence, vertical distribution, water bearing properties of rocks- porosity, retention, yield, permeability, Zone of aeration and saturation, perched water table, Coefficient of storage, Natural springs & seepages, Recharge and Discharge area criteria, Geological Control on groundwater movement – Darcy's law, Fluctuation of water table in unconfined aquifer, Cone of depression, Groundwater exploration, Effects of excessive trapping, Water logging, Water well. [8]
Engineering Geology: Engineering properties of rocks – drifted rocks, in situ rocks, Building materials, Strength characteristics, Geological characteristics, general characteristics, Dams & Reservoirs, Tunnel, Landslide, Bridge. [8]
Physical Geology: Gradation of a country; Geological works of wind and Running water. [3]</td></tr>

FOURTH SEMESTER

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CEC401	**Structural Analysis-I**	**PCR**	**3**	**1**	**0**	**4**	**4**

Pre-requisite(s)	Course Assessment methods
Engineering &Solid Mechanics	Continuous (CT) and end assessment (EA). CT+EA

Course Outcomes (COs) :	• CO1: Acquire the knowledge of structural systems, elements, joints, loads, stability, equilibrium, compatibility and indeterminacy • CO2: Able to computethe internal forces in cable, arch, trusses, beams and frames • CO3: Achieved the idea to applygeometric methods to obtain slope and deflections • CO4: Gain the idea to apply Energy methods to obtain slope and deflections • CO5: Evaluate & draw the influence lines for reactions, shears, & bending moments in beams & girders due to moving load.
Topics Covered (Hrs)	**Introduction:** Structural system, support condition different load and system**(2)** **Shear force and bending moment:**Recapitulation of bending moment and shear force of determinate structures.**(4)** **Slopes and deflections:** Slopes and deflections in beams and frames, elastic curve, application of elastic beam theory with Maculay's notation, moment area method, conjugate beam method. **(14)** **Energy methods:**Strain energy, complementary energy, real work, virtual work, applicationofCastigliano's Theorems & virtual work methods to beams, frames, trusses, Maxwell's Reciprocal theorem, Betti's Law **(18)** **Static and kinematic indeterminacy:**Application on different type of structures**(4)** **Influence Lines:** Application of influence lines & rolling loads for determinate beams / girders**(10)**
Text Books, and/or reference material (s)	***Text Books:*** 1. Basic Structural Analysis by C. S. Reddy, Tata McGraw Hill 2. Elementary Structural Analysis by Wilbur & Norris, Mcgraw-Hill College 3. Elements of structural analysis by N. C. Sinha, New Central book agency pvt. Ltd. 4. Structural Analysis by R. C. Hibbeler, Pearson Education ***Reference Books:*** 5. Structural Analysis by G. S. Pandit& S. P. Gupta, Tata McGraw Hill 6. Theory of structures by S. P. Timoshenko and D. H. Young, Mc. Graw Hill book Co

Pre-requisites	Course Assessment methods: (Continuous (CT), Mid-Term (MT) and End Assessment (EA)
CSC 01 in 1st year	CT+MT+EA

Course Outcomes	At the end of the course, a student will be able to: CO1.Describe linear data structures using array and linked list CO2. Apply data structures like stacks, queues in linear data structure. CO3. Discuss non-linear data structures tree and its application. CO4. Apply various algorithms in graph. CO5. Solve searching, sorting and hashing techniques in data structures CO6. Interpret sorting algorithms for a given problem.
Topics Covered	**Fundamentals of Python:** Basic Python programming, Data types, while & for loops, if-else statements, function, List, Tuples and Dictionary, file handling, Object & Classes.[10] **Searching Techniques:** Linear search, Binary search, Fibonacci search. [4] **Sorting Techniques:** Bubble sort, Insertion sort, Selection sort, Quick sort, Merge sort. [5] **Single Linked List:** Implementation of Single Linked List and different operation like (i) Creation (ii) insertion (iii) deletion (iv)traversal. Implementation of Circular Linked List using single linked list.[4] **Double Linked List:** Implementation of Single Linked List and different operation like (i) Creation (ii) insertion (iii) deletion (iv)traversal. [3] **Stack and Queue:** Design and Implementation of Stack and Queue and different operation on them, Stack operations to convert infix expression into postfixexpression, Stack operations for evaluating the postfixexpression. [8] **Graph:** Implementation of Graph, Depth first search, Breadth first search. [5] **Binary Search Tree:** Design and Implementation of Binary search tree, Traverse the above binary search tree recursively in pre-order, post-order andin-order. Count the number of nodes in the binary searchtree. [6]

Pre-requisites	Course Assessment methods: (Continuous evaluation (CE) and End Assessment (EA))
CSS 51 in 1st year.	CE+EA

Course Outcomes

At the end of the course, a student will be able to:
CO1. **Understand** various data representation techniques in the realworld.
CO2. **Implement** linear and non-linear datastructures.
CO3. **Analyze** various algorithms based on their time and spacecomplexity.
CO4. **Develop** real-time applications using suitable datastructure.
CO5. **Identify** suitable data structure to solve various computingproblems.

Topics Covered

List of Experiments:

Week1: Write Python programs for implementing the following sorting techniques to arrange a list of integers in ascending order

a. Linearsearch
b. Binary search
c. Fibonaccisearch

Week2: Write Python programs for implementing the following sorting techniques to arrange a list of integers in ascending order.

a. Bubblesort
b. Insertionsort
c. Selectionsort

Week3: Write Python programs for implementing the following sorting techniques to arrange a list of integers in ascending order.

a. Quicksort
b. Mergesort

Week4: Write Python programs to

a. Design and implement Stack and its operations using List.
b. Design and implement Queue and its operations using List.

Week5: Write Python programs for the following:

a. Uses Stack operations to convert infix expression into postfix expression.
b. Uses Stack operations for evaluating the postfix expression.

Week6: Write Python programs for the following operations on Single Linked List.

a. (i) Creation (ii) insertion (iii) deletion (iv) traversal
b. To store a polynomial expression in memory using single linked list.

Week7: Write Python programs for the following operations on Circular Linked List.

(i) Creation (ii) insertion (iii) deletion (iv) traversal

Week8: Write Python programs for the following:

Uses functions to perform the following operations on Double Linked List.
(i) Creation (ii) insertion (iii) deletion (iv) traversal in both ways.

Week9: Write a Python program to implement Stack using linked list.

Week10: Write a Python program to implement Linear Queue using linked list.

Week11: Write Python programs to implement the following graph traversal algorithms:

a. Depth first search.
b. Breadth first search.

Week12: Write a Python program to perform the following:

	a. Create a binary search tree. b. Traverse the above binary search tree recursively in pre-order, post-order and in-order. c. Count the number of nodes in the binary search tree.

Solid Mechanics		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs) :	• CO1: Apply knowledge of solid mechanics for design solutions. • CO2: Understand basic design philosophy applicable to steel structures. • CO3: Formulate, analyze, and designbasic components of Civil Engineering Steel structures.						
Topics Covered (Hrs)	**Introduction**, Properties of structural steel, I.S. rolled sections, I.S. specifications **(2)** **Design philosophy** of Limit State method for Steel Structures**(6)** **Design of Tension members**, Compression members in truss**(6)** **Design of Beams** (laterally supported /unsupported) : Simple beam using rolled sections, Built up sections /compound beams **(6)** **Design of Gantry girders(4)** **Design of Plate girders**, Connections, Stiffeners and curtailment of flange plates, Splicing – riveted and welded. **(2)** **Design of Simple Connections**: Riveted, Bolted and welded connections, moment resisting connections**. (6)** **Design of Struts and columns** including built-up columns under axial and eccentric loadings, Lacing and battens, Column splicing. **(6)** **Design of Column bases** – slab base, Gusseted base. **(4)**						
Text Books, and/or reference material(s)	***Text Books:*** 1. Design of steel Structures by N. Subrhamanium (Oxford publications) 2. IS 800-2007: General Construction in Steel-Code of Practice 3. IS 808-1989: Dimensions of Hot Rolled Steel beam, column, channel and angle sections 4. www.nptel.iitm.ac.in/courses/ ***Reference Books:*** 5. Limit State Design of Steel Structures by S.K. Duggal (McGraw Hill publications) 6. Limit State Design of Steel structures by VirendraGehlot&Dr. Ram Chandra (Scientific publisher) 7. Design of steel Structures by S. S. Bhavikatti (IK Intl Publishing House, N Delhi)

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CEC503	**Soil Mechanics**	**PCR**	**3**	**0**	**0**	**3**	**3**
Pre-requisite(s)		Course Assessment methods					
Engineering and Fluid Mechanics		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs) :	• CO1: Acquire knowledge of classifying the soil from Civil Engg. Aspect • CO2: Ability to conduct Experiment and Analyze the data with interpretation • CO3: Ability to analyze Soil for Soil-Structure like Dams (Earthen/Rigid) • CO4: Ability to Design Soil related Civil Engg. Structure • CO5: Understanding need of the Professional Ethics & future studies						
Topics Covered (Hrs)	**Introduction:**Type of soil, Mineralogical composition, Basic definitions of soil parameters, Inter-phase relationships, Problems **(4)** **Index properties:**Index properties of soils and their determination, classification based on index properties. Problems **(4)** **Classification:**Various classification systems, IS, MIT, US bureau and soil classification, PRA, Plasticity chart. Group Index. Problems. **(3)** **Soil-Water Pressure:**Total, effective, and pore pressure in soil. Capillary rise, effect of seepage on pore pressure, Quick condition. Problems. **(3)** **Permeability:**Permeability and seepage through soil, Darcy's law, Determination of permeability by laboratory methods and field methods. Factors affecting permeability. Flow through stratified soil. Problems. **(4)** **Seepage analysis:**Laplace's equation for Isotropic & an-isotropic soils, Flow-nets, Seepage through sub-soil, earthen embankment& piping failure, Problems **(4)** **Stress distribution:**Stress distribution in soils, point loads, line loads, strip loads, rectangular footings, circular footings, arbitrary footings. Boussineq's equation, Westtergards' equation, Newmarks's equation. Significant depth, pressure bulb, Newmark's influence coefficients, stress due to linearly varying loads. Problems. **(5)** **Consolidation:**One-dimensional Consolidation theory, Oedometer test, e-$\log_{10}$P curve, settlement&its time required, determination of C_v, m_v, C_c. Definition of Normally &Overconsolidated soils. Problems. **(7)** **Compaction:**Compaction, Standard Proctor Test, Modified Proctor Test, γ_d vs ω curve. Field compaction tests and Field compaction. Problems. **(3)**

Pre-requisites:		Course Assessment methods:					
CEC 303 & CEC403		Continuous (CT) and end assessment (EA). CT+EA					

Course Outcomes	• CO1: learn the basic surveying techniques and the use of basic surveying instruments. • CO2: learn the art of quantity estimation, preparation of Bill of Quantities, and writing specification. • CO3: Learn rate analysis
	A). Surveying Fieldwork 1). Chain Survey. 2). Compass traverse work. 3). Uses of dumpy level, Profile levelling and cross-sectioning.

Topics Covered	4). Plane table surveying work – using radiation and intersection methods. 5). Contouring by any method (Optional subject to availability of time). 6). Study of theodolite,function of its different parts, Measurement of horizontal and vertical angle **(7 laboratory classes)** **B). Estimation** Introduction to quantity surveying, Methods of measurement and units of measurement for various items of work, Procedures of computation, Use of proforma. **(2)** Types of estimates, Data required for estimation. **(2)** Preparing detailed estimates for various types of Civil Engineering works. **(7) + 5 sessional classes)** Specifications of different items of work. **(1 hr. theory class lectures)** Analysis of rates of different items of work, Schedule of rates, Cost of works, Overhead charges, Contingencies, Contractors' profit margin etc. **(2 + 1 sessional)** Practical work on estimation as assigned by the teacher. Total: (**14 hrs of theory classes + 7 sessional classes)**

SIXTH SEMESTER

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CEC601	**Water Resource Engineering**	**PCR**	**3**	**1**	**0**	**4**	**4**
Pre-requisite(s)		Course Assessment methods					
Fluid mechanics		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs):	• CO1: Understanding of occurrence, distribution, storage & transmission of water in different form in the space, on the surface and below the surface of the earth. • CO2: Understanding of tempo-spatial collection of data and preparation of hydro-meteorological information system. • CO3: learning importance, requirement, method & infrastructure for imparting irrigation water to crop, development & conservation of water for its economic & efficient use						
Topics Covered (Hrs)	**Hydrology:** Hydrologic cycle&system model, Hydro-meteorological Information Systemand its Definition, need, generation, maintenance, validation, calibration of data sets, estimation of missing data, retrieval of data **(5)** **Precipitation:** Forms, types&measurement, Recording & non-recording gauges, Network, Analysis& Adjustment of data, Average depth, depth-area-duration analysis, Surface retention, Detention, Overland flow, Interception, Depression storage**.(6)** **Evaporation & Transpiration**: Factors, Measurement, formula consumptive use **(2)** **Stream flow:**Stage, discharge&relations, interpretation of stream flow records. Factors affecting the run off, yield, flow duration & mass curve **(4)** **Infiltration**: Process, Capacity, Measurement, Estimation **(3)** **Run-off:** Factors, Yield, Flow-duration curve, Flow mass curve. **(3)** **Hydrograph**: Base flow separation, Unit hydrograph, Synthetic hydrograph **(3)** **Irrigation:**Necessity, Advantages, Disadvantages, Types, Water distribution techniques, Quality of water, Duty, Delta, Base period, Indian crop seasons, Irrigation efficiencies, Soil-moisture – irrigation relationships, Estimating depth and frequency of irrigation. **(5)** **Canal irrigation system:**Capacities, losses, Design & construction of unlined, lined & stable channels,Sediment transport, Economics of canal lining, Cross drainage works**(3)** **Water-logging and control**: Causes, Control, Reclamation of saline and alkaline lands, Surface & Sub-surface drainage **(3)** **Diversion head-works:** Definition of weirs, barrages & their classification, Layout of typical diversion head-works & function of its components. **(2)** **Reservoirs:**Types,selection of site, Storage zones, Fixation of capacity, regulation.**(3)** **Dam:**Earthen and concrete dam, selection criteria,design**(4)** **Spillways and energy dissipaters:** Location, types, energy dissipation, stilling basin & spillway gate **(4)** **Flood Forecasting:** Estimation, forecasting & mitigation, flood land management **(4)** **Flood routing:** Reservoir & Channel routing (hydrological method only) **(2)**						
Text Books, and/or reference material(s)	***Text Books:*** 1. Engineering Hydrology by K. Subramanya, Fourth Edition, McGraw Hills Education (India) 2.Irrigation Engineering and Hydraulic Structures by S. K. Garg, Khanna Publishers, New Delhi ***Reference Books:*** 3.Irrigation and Water Power Engineering by B. C. Punmia, B. B. Pande, A. K. Jain, A. Kumar,, 16th Edition, Laxmi Publications (P) Limited, New Delhi

Soil Mechanics	Continuous (CT) and end assessment (EA). CT+EA

Course Outcomes (COs) :

- CO1: Calculate shear strength of soil
- CO2: Determine the earth pressures on foundations and retaining structures
- CO3: Analyse stability of finite and infinite soil & rock slopes
- CO4: Calculate the bearing capacity of soils and foundation settlements

Topics Covered (Hrs)

Shear strength of soil: Determination of shear strength in laboratory and in field, Mohr-Coulomb failure criterion, Failure envelopes and shear strength parameters for different test conditions, Problem. **(6)**

Lateral earth pressure theories: Analytical and graphical methods, Effect of surcharge, water table and stratification on earth pressure, Design of cantilever sheet pile, Problem. **(8)Stability of slopes**, infinite slopes, Analysis of finite slopes by method of slices, modified method of slices, friction circle method, Taylor's stability number, Effect of pore water pressure, Problem **(8)**

Bearing capacity of shallow foundations: Selection of location and depth, Analytical method of using Terzaghi's equation, I.S. method, Skempton's equation, Field test method, Method based on SPT, Design of combined footings. **(8)**

Bearing capacity of pile foundation: Types of piles, Bearing capacity of single and group of piles, Problem. **(6)**

Well foundation: Elements of wells, Types. **(2)**

Text Books, and/or reference material(s)

Text Books:

1. Geotechnical Engineering: Principal and Practices of Soil Mechanics and foundation Engineering by V N S Murthy.
2. Basic and Applied Soil Mechanics by G.Ranjan and A.S.Rao

Pre-requisite(s)	Course Assessment methods
Building Construction & Concrete Technology	Continuous (CT) and end assessment (EA). CT+EA

Course Outcomes (COs)	• CO1: Conduct experiments for determining the properties of different engineering materials like cement, fine &coarse aggregates, concrete etc. and work in a group. • CO2: Design concrete mix proportion based on the properties of concrete ingredients. • CO3: Use modern instruments & tools for conducting the experiment on different engineering materials. • CO4: Prepare the report on experimental results.
Topics Covered (Hrs)	To determine the (a) fineness of cement by sieving, (b) standard consistency of cement and (c) setting time of cement. **(6)** To determine the (a) specific gravity of cement (b) compressive strength of cement and (c) soundness of cement. **(6)** To determine the (a) particle size distribution, (b) specific gravity and water absorption and (c) bulk density and voids in coarse aggregate**. (6)** To determine the (a) particle size distribution, (b) specific gravity and water absorption and (c) bulk density and voids in fine aggregate. **(6)** Concrete mix design by I.S Method**. (6)** (a) Preparation of concrete specimens to determine the compressive strength flexural strength and split tensile strength of concrete of a given mix proportions.**(6)** (i) Compressive strength at 07 days - 3 nos cube + 3 nos cylinder (ii) Compressive strength at 28 days - 3 nos cube + 3 nos cylinder (iii) Split tensile strength at 28 days - 3 nos cylinder (iv) Flexural strength at 28 days - 3 nos prism (b) Test above specimen according to the proper testing day (7 days and 28 days) **(3)** (c) To determine the consistency and workability of freshly mixed concrete by i) Slump test and ii) Compacting factor test

Course Outcomes

- To review basic economic principles with students;
- To introduce students basic capital appraisal methods used for carrying out economic analysis of different alternatives of engineering projects or works;
- To educate the students on how to evaluate systematically the various cost elements of a typical manufactured product, an engineering project or service, with a view to determining the price offer.

Topics Covered

PART 1: Economics

Group A: Microeconomics

Sl. No.	Name	L	T	P	Cr	H
Unit 1:	Economics: Basic Concepts	2	0	0	2	2
Unit 2:	Theory of Consumer Behaviour	3	0	0	3	3
Unit 3:	Theory of Production, Cost and Firms	3	0	0	3	3
Unit 4:	Analyses of Market Structures: Perfect Competition	3	0	0	3	3
Unit 5:	Monopoly Market	2	0	0	2	2
Unit 6:	General Equilibrium & Welfare Economics	2	0	0	2	2
	TOTAL	**15**	**0**	**0**	**15**	**15**

Group B: Macroeconomics

Sl. No.	Name	L	T	P	Cr	H
Unit 1:	Introduction to Macroeconomic Theory	2	0	0	2	2
Unit 2:	National Income Accounting	3	0	0	3	3
Unit 3:	Determination of Equilibrium Level of Income	4	0	0	4	4
Unit 4:	Money, Interest and Income	2	0	0	2	2
Unit 5:	Inflation and Unemployment	2	0	0	2	2
Unit 6:	Output, Price and Employment	2	0	0	2	2
	TOTAL	**15**	**0**	**0**	**15**	**15**

PART 2: Accountancy

Sl. No.	Name	L	T	P	Cr	H
Unit 1:	Introduction to Accounting	3	0	0	3	3
Unit 2:	Financial Statement Preparation and Analysis	5	0	0	5	5
Unit 3:	Financial Ratio Analysis	4	0	0	4	4
	TOTAL	**12**	**0**	**0**	**12**	**12**

Text Books, and/or reference material

PART 1: Economics

Group A: Microeconomics

1. Koutsoyiannis: Modern Microeconomics
2. Maddala and Miller: Microeconomics
3. AnindyaSen: Microeconomics: Theory and Applications

	4. Pindyck&Rubenfeld: Microeconomics **Group B: Microeconomics** 1. W. H. Branson: Macroeconomics – Theory and Policy (2nd ed) 2. N. G. Mankiw: Macroeconomics, Worth Publishers 3. Dornbush and Fisher: Macroeconomic Theory 4. SoumyenSikder: Principles of Macroeconomics **PART 2: Accountancy** 1. Gupta, R. L. and Radhaswamy, M: Financial Accounting; S. Chand & Sons 2. Ashoke Banerjee: Financial Accounting; Excel Books 3. Maheshwari: Introduction to Accounting; Vikas Publishing 4. Shukla, MC, Grewal TS and Gupta, SC: Advanced Accounts; S. Chand & Co.

Department of Management Studies								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MSC731	PRINCIPLES OF MANAGEMENT	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	• CO1:To make budding engineers aware of various management functions required for any organization • CO2:To impart knowledge on various tools and techniques applied by the executives of an organization • CO3:To make potential engineers aware of managerial function so that it would help for their professional career • CO4:To impart knowledge on organizational activities operational and strategic both in nature • C05: To impart knowledge on each functional area of management like Marketing, Finance, Behavioral Science and Quantitative Techniques and decision science
Topics Covered	**UNIT I:** Management Functions and Business Environment: Business environment-macro, Business environment -micro; Porter's five forces, Management functions – overview, Different levels and roles of management, Planning- Steps, Planning and environmental analysis with SWOT, Application of BCG matrix in organization**(8)** **UNIT II:** Quantitative tools and techniques used in management: Forecasting techniques, Decision analysis, PERT & CPM as controlling technique (7) **UNIT III:** Creating and delivering superior customer value:Basic understanding of marketing, Consumer behavior-fundamentals, Segmentation, Targeting & Positioning, Product Life cycle. (8) **UNIT IV:** Behavioral management of individual: Motivation, Leadership, Perception, Learning. (8) **UNIT V:** Finance and Accounting: Basics of Financial management of an organization, Preparation of Final Accounts, Analysis of Financial statements, Cost Volume Profit (CVP) Analysis, An overview of financial market with special reference to India. (12)
Text Books, and/or reference material	<u>Suggested Text Books</u>: 1. Financial Management, 11th Edition, I M Pandey, Vikas Publishing House. 2. Marketing Management 15th Edition, Philip Kotler and Kelvin Keller, Pearson India 3. Management Principles, Processes and practice, first edition, Anil Bhat and Arya Kumar, Oxford Higher education 4. Organizational Behavior,13 th edition, Stephen P Robbins, Pearson Prentice hall India 5. Operations Management, 7th edition (Quality control, Forecasting), Buffa&Sarin, Willey <u>Suggested Reference Books:</u>

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CES752	**Structural Engineering & Computational Lab-II**	**PS**	**0**	**0**	**3**	**3**	**1.5**

Pre-requisite(s)	Course Assessment methods
Design of Concrete Structuresalong with Concrete Technology Laboratory	Continuous (CT) and end assessment (EA). CT+EA

Course Outcomes (COs) :

- CO1: Design concrete mix proportion based on the properties of concrete ingredients and design and detailing of reinforced concrete beam under given conditions and work in a group.
- CO2: Use modern instruments and tools for experimenting on different engineering materials in a group.
- CO3: Prepare the report on experimental results.
- CO4: Ability to apply computational software to analyse and design of different civil engineering problems and apply in industries

Topics Covered (Hrs)

1. Concrete mix design for different grades of concrete (as per Indian Standard guidelines).
2. Design, detailing and bar bending schedule for R.C. beam under given conditions.
3. Casting and study on the strength and deflection behavior of R.C. beams.
4. Application of commercial software for solving Civil Engineering problems

Text Books, and/or reference material(s)

Text Books:

1. Limit State Design of Reinforced Concrete by P. C. Varghese, Prentice Hall, Inc.
2. Concrete Technology by M. S. Shetty, S. Chand Publication.
3. Concrete Technology y M. L. Gambhir, Tata McGraw Hill.
4. IS code of practice: 383-2016, 10262-2019, 456-2000 etc.

Reference Books:

5. Manuals of Commercial /Open source software related to Civil Engineering Applications (Eg. SAP, STAAD, ABAQUS,ETAB, LS DYNA, Plaxis, Geomedia, ERDAS …etc)

Course Outcomes (COs) :	• CO1: Development of skills for predicting structural behaviour of different materials under different loads • CO2: Knowledge of basics of analysis and design of structural components, made of variety of materials • CO3: Developing the requisite skill that helps in studying the advanced courses related to Structural Analysis, Design of Structures
Topics Covered (Hrs)	**Material and Material Defects**: Metallic materials, Polymeric Materials, Ceramics and Composites, elastic and plastic deformation, Mechanism of deformation and its significance in design and shaping **(8)** **Failure mechanisms of Materials**:**Fracture:** Definition and types of facture, Brittle fracture: Critical stress and crack propagation velocity for brittle fracture. Ductile fracture: Notch effect on fracture. Fracture toughness. Ductility transition. Definition and signification. Conditions of ductility transition factors affecting it. **(6)** **Fatigue Failure:** Definition of fatigue and significance of cyclic stress. Mechanism of fatigue and theories of fatigue failure, Fatigue testing. Test data presentation and statistical evolution. S-N Curve and its interpretation. Influence of important factors on fatigue. Notch effect, surface effect, Effect of pre-stressing, corrosion fatigue, Thermal fatigue. **(5)** **Creep:** Definition and significance of creep. Effect of temperature and creep on mechanical behaviors of materials. Creep testing and data presentation. **(6)** **Introduction to New Materials**: **Composites:** Basic concepts of composites, Processing of composites, advantages over metallic materials, various types of composites and their applications. Nano Materials: Introduction, Concepts, synthesis of nano materials, examples, applications and nano-composites. Polymers: Basic concepts, Processing methods, advantages and disadvantages over metallic materials, examples and applications. **(10)** **Strength Analysis of materials under different loading:** Stress, strain due to normal, shear, flexure, impact, torsion loads. Analysis by energy method. **(7)**

Survey, Water Resource Engineering,analysis and design of structures			Continuous (CT) and end assessment (EA). CT+EA				
Course Outcomes	• CO1: Acquire knowledge to select different type bridges by assessing their material, capacity, quality & suitability						

(COs)	• CO2: Ability to make a bridge plan and design following requisite criteria • CO3: Supervise the construction procedure of different components of a bridge • CO4: Assess the quality and roles of various components of bridge
Topics Covered (Hrs)	**Hydraulic design:**Survey,Catchment, Site selection, Hydraulic geometry, Linear waterways, Economic span, Afflux and Scour. **(4)** **Loads onbridge:** Different types of load acting on bridge along with numerical**(6)** **Slab andboxculvert:**Analysis of deck slab - effective width & length method and numerical example with different type of live load. **(4)** **R.C. beam-slab and steel composite bridges:**R.C. T-beam bridgeand steel composite bridge design using Pigeaud's method and Courbon's method **(6)** **Dynamic response of bridge deck:** General features, factor affecting vibration, practical approach for vibration analysis and numerical examples.**(2)** **Prestressed concrete bridge:** General features, advantage of P.S.C. Bridge, design details of pre-tensioned and post–tensioned bridge and numerical (**6**) **Bridge bearing:** Introduction, types of bearing, design principles of different bearing and numerical examples **(4)** **Substructure:** Introduction, type of piers, forces acting on piers, stability analysis of abutment, types of wing wall and numerical examples of Pier and Abutment. **(4)** **Bridge foundation:** General aspect, types of foundations, design aspect of pile and well foundations and numerical examples of pile and well foundations.(**4**)
Text Books, and/or reference material(s)	***Text Books:*** 1. Bridge Engineering by S. Ponnuswamy, Tata McGraw-Hill Publishing Company Limited, New Delhi. 2. IRC:6-2017 Standard Specifications and Code of Practice for Road Bridges 3. www.nptel.ac.in ***Reference Books:*** 4. Design and construction of Highway Bridges by K. S. Rakshit, New Central Book Agency (P) Ltd

Pre-requisite(s)		Course Assessment methods					
Solid Mechanics, Structural Engineering &Engg. Mathematics		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs) :	• CO1: Understanding the advantage of FEM over classical methods and use it for modelling and analysis of real life engineering structures. • CO2: Skill to simulate simple engineering structures through FE modellling and interpret data from the FE analysis to ascertain their reliability and applicability in light of physical constraints of the system and common engineering sense. • CO3: Ability to use computational tools for solving Civil Engineering problems. • CO4: Skill of using advanced FEA software packages and development of FE codes for						

	modelling, analysis and investigation of problems related to industry and research.
Topics Covered (Hrs)	**Introduction**: Engineering Problems, Different numerical methods, History of Finite Element Method (FEM), Steps in FEM, Areas of Application, Verification problems, implementation of Engineering Problems in FEM. **(10)** **Solution of Engineering Problems using Matrix operation**: Importance, Matrix Manipulation Techniques, Solution of Simultaneous Linear Equations, Inverse of Matrix, Computer Implementation. **(6)** **Spring Element:** General, Implementation in FEM, Applications in civil engineering, Problems. **(6)** **Bar Elements**: Definition, Stiffness Matrix, Load vector and displacement vector, Implementation in FEM, Problems and Validation. **(6)** **FE Modelling of Engineering Problems:** Trusses, beams, Frames etc. **(14)** **Computer Programs**/ SOFTWARES based on FEM: Use in solution of Engineering Problems. **(3)**

Transportation Engineering		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs):	• CO1: Apply knowledge of traffic study & analysis for design solutions. • CO2: Understand basic design philosophy applicable to traffic flow & highway intersections. • CO3: Formulate, analyze, and design basic components of highway intersections.						
Topics Covered (Hrs)	**Traffic characteristics**, Traffic engineering studies and analysis: Volume, speed, delay, origin and destination. (18) **Highway intersections**, Traffic flow theory, Traffic capacity, Traffic operations and control, Signal systems, Parking and terminal facilities, Traffic safety. (20) **Impact of highway traffic** on environment. (4)

CEE710	**Structural Dynamics**	**PEL**	**3**	**0**	**0**	**3**	**3**

Pre-requisite(s)	Course Assessment methods
Solid Mechanics	Continuous (CT) and end assessment (EA). CT+EA

Course Outcomes (COs) :	• CO1: Develop &analyze damped & un-damped SDOF systems for free & forced vibration. • CO2: Develop and analyze the MDOF systems for free & forced vibration. • CO3: Model civil engineering structures & derive the dynamic properties of structures • CO4: Calculate natural frequencies, mode shapes& structural responses numerically • CO5: Apply the concepts & principles of structural dynamics for earthquake analysis of civil engineering structures & evaluate their seismic performance
Topics Covered (Hrs)	**Introduction:** D'Alembert's principle, dynamic loads, definition of degrees of freedom **(1)** **SDOF system:** Equations of motion, undamped and damped SDOF systems, viscous damping, critically damped, over-damped and under-damped system, damping coefficient determination, dynamic magnification factor and transmissibility. **(7)** **Forced vibration ofSDOF systems:** Vibrationunder sinusoidal loads, response to general dynamic loading - Duhamel's integral: impulse, rectangular, triangular loading problems. **(5)** **Fourier analysis and response in the frequency domain** theory, problems **(2)** **MDOF system:** Development and solution of equations of motion, problems **(2)**

	Free vibration ofMDOF systems: Eigen values and vectors, natural frequencies and modes, orthogonality of modes, normalization of modes, modal expansion, concept of normal/generalized coordinates, problems **(5)** **Free vibration response**: Free vibration of un-damped systems, modal analysis. **(3)** **Forced vibration of MDOF systems:** Modal expansion of excitation vector, modal analysis, modal contribution factors. **(3)** **Forced vibration response:**Modal analysis, forced vibration for un-damped systems subjected to sinusoidal loading and arbitrary loading**. (5)** **Damping in structures:** Classical, non-classical damping, mass proportional, stiffness proportional, Rayleigh, Caughey damping, Modal analysis for classically damped free and forced vibration systems **(4)** **Earthquake analysis of structures:** Equations of motion for un-damped and classically damped systems single and multiple degree of freedom systems, modal participation factors, modal analysis, response spectrum analysis, modal combination rules **(4)**
Text Books, and/or reference material(s)	***Text Books:*** 1. Dynamics of Structures by Anil K. Chopra, PHI 2. Earthquake Resistant Design of structure by Pankaj Agarwal and Manish Shrikhande. 3. Pre-requisite(s)		Course Assessment methods					
Solid Mechanics, Structural Analysis		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs):	• CO1: Derive the expressions of the curvature and displacement relationships of plates subjected to bending moments, twisting moments and shear force. • CO2:Analyse the simply supported plates and solve them by using Navier's and Levy's Methods. • CO3: Analyse the thin shell structures using membrane theory. • CO4: Design the cylinder shell and review the IS codal provisions of it.						
Topics Covered (Hrs	**Basic curvature and displacement relationships**. Expressions for bending, moment, twisting moments, shear forces. **(4)** **Plate equation**, Edge conditions. Solution of simply supported plates by Navier's and Levy's methods. Introduction to anisotropic plates. **(10)** **Plate subjected to in plane forces**, Buckling of plates. Numerical analysis of plates. Design of plates. **(6)** **Shell structures** Classification, Differential geometry, Curvature, Strain, Displacement relations. **(4)** **Membrane theory of thin shells** and design of cylindrical shells of double curvature (Synclastic and anticlastic), Shells of revolution, North light shell. **(10)** **Design of shell** and review of IS code provisions, Introduction to bending theories: Application to cylindrical shells and design.**(6)**						
Text Books,	***Text Book (s):*** 1. Theory of Plates and Shells by Timoshenko and Krieger, McGraw Hill 2. Theory and Analysis of Plates by Classic and Numerical Methods, Rudolph Szilard,

Pre-requisite(s)	Course Assessment methods
Engineering & Solid Mechanics	Continuous (CT) and end assessment (EA). CT+EA

Course Outcomes	• CO1: To develop basic understanding of the behaviour of materials. • CO2: To define the stress and strain behaviour of structural elements. • CO3: To apply theory of elasticity in bending and torsion problems. • CO4: To apply theory of plasticity in failures of different materials and structures.
Topics Covered	**Stress & Strain**: Stress equilibrium equations, rectangular, cylindrical and spherical co-ordinates, Generalized Hooke's Law, Stress and strain compatibility equations. Plane stress and plane strain problems, Airy's stress function, Principal Stresses and strains, stress & strain invariants, numerical problems. **(15)** **Torsion**: Shafts of circular and non-circular prismatic sections, Saint Venant theory, warping function, stress function. **(7)** **Theories of Failure**: Basic concepts and Yield Criteria, Different Theories of Failure, Yield Locus and Yield Surfaces. Equations of Plasticity. **(8)** **Plasticity**: hydrostatic stresses, deviatoric stresses, invariants of deviatoric stresses, yield criteria, von Misses, Tresca yield criteria, theories of plastic flow, plane stress, plane strain problems in plasticity, thick cylinders, thick spheres. **(12)**

Pre-requisite(s)	Course Assessment methods
Knowledge of Solid Mechanics and Structural Design	Continuous (CT) and end assessment (EA). CT+EA

Course Outcomes (COs) :	• CO1: Knowledge of assessment and monitoring of existing structures as well as for newly constructed structures. • CO2: Exposure and skill to use relevant NDT equipment for research and industrial applications. • CO3: Knowledge on instrumentations in structures, their use and interpret the collected data from instrumentations. • CO4: Based on the above, the students are expected to suggest remedial measures for distressed structures.
Topics Covered (Hrs)	**Preamble:** Definition of structure, different types of structures, behaviour of structures under variety of loading conditions, deterioration and failure of structures, structural materials. **(4)** **Introduction:** What is structural health and SHM, importance, application and present scenario of SHM in India and abroad, parameter related to structural health. **(4)** **Types of SHM:** Periodic and continuous, methods for implementation of each. **(6)** **Measurement techniques**: Destructive and non-destructive **(6)** **Equipment:** For non-destructive testing, working principles of this equipment and use **(8)** **Health monitoring in dynamic condition:** Basics of structural dynamics, sensing technologies, data collection and analysis, basic concept of signal processing, identification of structural health using modal parameters. **(14)** **Field visit:** Visitto the site(s) of old structure(s) for assessing their existing condition for SHM purpose. **(3)**
Text Books, and/or reference material(s)	***Text Books:*** 1. Structural Health Monitoring by Victor Giurgiutiu 2. New trends in Structural Health Monitoring by Ostachowich, Witslaw, Guemes, Alfredo. 3. Dynamics of structures by A K Chopra, Pearson/Prentice Hall. ***Reference Books:*** 4. Non-destructive Testing of Materials and structures by Buyukozturk and Tasdemir: Springer

CEE720	**Soil Dynamics**	**PEL**	**3**	**0**	**0**	**3**	**3**

Pre-requisite(s)	Course Assessment methods
Soil Mechanics	Continuous (CT) and end assessment (EA). CT+EA

Course Outcomes	• CO1: develop a mechanism to design the foundations for resisting vibrations and achieve static equilibrium conditions of structures. • CO2: understand the classical geotechnical failures due to liquefaction and mitigate the same. • CO3: design of foundations in large structures like power plants, other industrial buildings etc., for analysing the vibrating waves which can be isolated and measures for achieving safety of the adjacent foundations.
Topics Covered (Hrs)	Vibration of elementary system, Single degree and two-degree freedom systems, Wave propagation in an elastic, homogeneous, isotropic medium. **(10)** Propagation of waves in saturated media, Behaviour of dynamically loaded soils, Evaluation of dynamic properties of soil. **(10)** Theories for vibration of foundations in elastic media, Design procedures for dynamically loaded foundations for vertical and rocking vibrations. **(14)** Foundations under reciprocating engines, Foundations for forge hammers, motor generators, turbo-generators and crushers. **(10)**
Text Books, and/or reference material (s)	***Text Books:*** 1. Soil Dynamics and Machine Foundation by Swami Saran, GalgotiaPublicaions 2. Vibrations Vibration Analysis and Foundation Dynamics by NSV Kameswara Rao, Wheeler Publishing, New Delhi. 3. Fundamentals of Soil Dynamics by B M Das ***Reference Books:*** 4. Vibrations of Soils and Foundations by Richart Hall and Woods 5. Foundations of Machines-Analysis and Design by Prakash and Puri. 6. Analysis and design of Foundations for Vibrations by P J Moore 7. Dynamics of bases and Foundations by D DBarkar

Pre-requisite(s)	Course Assessment methods
None	Continuous (CT) and end assessment (EA). CT+EA

Course Outcomes (COs) :	• CO1: Apply knowledge of different types of environmental affecting the community life pollutants (air, solid wastes and noise) for design solutions. • CO2: Understand basic design philosophies applicable to control and safe disposal of different types of environmental pollutants.

	• CO3: Formulate, analyze, and design basic control and disposal systems of different types of environmental pollutants.
Topics Covered (Hrs)	**Natural & man made sources of pollution**, types of pollutants. **(2)** **Air pollution**: Its effects, measurement, methods of control, air pollution control equipment. **(16)** **Community Solid wastes** – quantity & characteristics, methods of collection, disposal & reuse. **(16)** **Noise pollution** - Its effects, noise measurement, methods of control of environmental noise. **(6)** **Legal aspects** of environmental pollution & control. **(2)**

CEE722	**Construction Planning and Management**	**PEL**	**3**	**0**	**0**	**3**	**3**
Pre-requisites:			Course Assessment methods				
CEC303 + CES544			Continuous (CT) and end assessment (EA). CT+EA				
Course Outcomes (COs)	• CO1: Learn preliminaries of construction planning and management. • CO2: Learn construction safety aspects. • CO3: Learn contract management. Get exposed to tendering and contracting. • CO4: Learn about the running &operation of government–run–engineering depart., elements of project financing, project selection& use of construction equipment.						
Topics Covered	**Construction planning:** Introduction to planning, Stages of planning, Work breakdown structure, Scheduling, Preparation of schedules for job, materials, labour, equipment and finance, Network techniques in construction management.**(8)** **Organizing construction:** Principles of organization, Types of organization, Site organisation, Temporary services, Job layout. **(6)** **Safety in construction:** Importance of safety& its measures in construction activities.**(3)** **Construction labour:**Welfare facilities, Labour laws. **(3)** **Contract management:** Different types of contracts, Notice inviting tender, Contract documents, Condition of contract, Earnest money, Security money, Termination of contract, Arbitration, Specification – different types. **(8)** **Public works accounts:** Muster roll, Measurement book, Cash book, Material-at-site account, Imprest, Temporary advance, Mode of payment, Bill, Voucher, Running account bill, Final bill, Advance payment to contractor, Secured advance, Stock, Tools and plants. **(7)**						

	Construction practices: Various construction equipment, Factors affecting selection of equipment, Output of various equipment, Time value of money, Investment and operating cost, Depreciation. **(7)**
Text Books, and/or reference material	***Text Books:*** 1. Estimating and costing in civil engineering by B. N. Dutta,theory and practice 2. Estimating, costing and specification in civil engineering by M. Chakraborty 3. Text book of estimating and costing (civil engineering) by G. S. Birdie, Dhanpat Rai & Sons 4. Civil engineering Contracts and Estimates by B. S. Patil, Orient Longman, New Delhi, 1981. 5. PERT & CPM principles and applications by L. S. Srinath, Affiliated East-West Press Pvt. 6. Construction Management and Accounts by V. N. Vazirani, and S. P. Chandola, Khanna Publishers, Delhi-6, 1978. ***Reference Books:*** 7. Management in Construction Industry by P. P. Dharwadker, Oxford & IBH Publishing Co. Pvt. Ltd. New Delhi, 1992. 8. Building Construction by S. C. Rangawala, Charotar Book Stall, Anand, 1980. 9. Construction equipment and its planning & application by M. Verma, Metropolitan book co. (p) Ltd. New Delhi, 1979

CEE723	**Open channel Hydraulics**	**PEL**	**3**	**0**	**0**	**3**	**3**
Pre-requisite(s)		Course Assessment methods					
Fluid Mechanics		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs) :	• **CO1:** Understanding mechanics of flow, energy & momentum in an open channel • **CO2:** Computation of different components of flow in an open stream. • **CO3:** Capability for design of different type of open channel for operationalization of water-resources systems						
Topics Covered (Hrs)	**Introduction:** Descriptions, types of flow, state of flow, regime of flow **(2)** **Open-Channels and their properties:** Types, geometry, geometric elements of channel sections, velocity distribution, wide open channel, measurement of velocity, velocity-distribution coefficients and determination, pressure distribution in a channel section, effect of slope on pressure distribution.**(8)** **Energy and Momentum Principles:** Energy, specific energy, criterion for a critical state of flow, interpretation of local phenomena, energy in non-prismatic channels, momentum in open-channel flow, specific force, momentum principle applied to non-prismatic channels. **(6)** **Critical flowcomputations and Applications:** Critical flow, factors, flow computation, hydraulic exponent for flow computation, control&measurement**(6)** **Uniform flow in open channels:**Qualifications, establishment, expressing the velocity of a uniform flow, hydraulic gradient, Equation for uniform flow, Chezy formula, Chezy'sresistance,factor, Manning's formula, Mannining's roughness coefficient, factors, Mannining's roughness coefficient table. **(6)**						

	Computations of Uniform Flow: The conveyance of a channel section, the section factor for uniform-flow computation, the hydraulic exponent for uniform-flow computation, flow in a channel section with composite roughness. Determination of the Normal Depth and Velocity, determination of the Normal and Critical Slopes, problems of uniform flow computation, computation of flood discharge, uniform surface flow **(6)** **Design of Channels for Uniform Flow: (6)** **(a) Non-erodible channels:** Non-erodible channel, non-erodible material and lining, minimum permissible velocity, channel slopes, freeboard, best hydraulic section, determination of section dimensions **(b) Erodible channels with scour not silt:** Method of approach, maximum permissible velocity, method of permissible velocity, tractive force, tractive-force ratio, permissible tractive force, method of tractive force, stable hydraulic section **(c)Grassed channel:** Grassed channel, retardance coefficient, the permissible velocity, selection of grass, procedure of design.
Text Books, and/or reference material(s)	***Text Books:*** 1. Open Channel Hydraulics by K. Subramanya, Fourth Edition, McGraw Hills Education (India) Private Limited, New Delhi. ***Reference Books:*** 2. Open-Channel Hydraulics by V. T. Chow, McGraw-Hill Book Company, Inc., New York

CEE724	**Ground Water**	**PEL**	**3**	**0**	**0**	**3**	**3**
Pre-requisite(s)		Course Assessment methods					
Fluid Mechanics and Water Resources Engineering		Continuous (CT) and end assessment (EA). CT+EA					

Course Outcomes (COs) :	• CO1: Understanding of occurrence, distribution, storage and transmission of water below the ground level. • CO2: Understanding of mechanics of flow of water under the ground • CO3: Techniques for exploitation of ground water on sustainable basis. • CO4: Ability to develop models for storage and transmission of ground water. • CO5: Development of capabilities in recharging, management & conjunctive use of ground water
Topics Covered (Hrs)	**Fundamentals of ground water:** Introduction – Characteristic of Ground water – Distribution of water - ground water column –Permeability - Darcy's Law - Types of aquifers - Hydrogeological Cycle – water level fluctuations. **(6)** **Hydraulics of flow:**Storage coefficient - Specific field - Heterogeneity and Anisotropy - Transmissivity– Governingequations of ground water flow - Steady state flow – DupuitForchheimer assumptions – Velocity potential - Flow nets**(6)** **Estimation of parameters:**Transmissivity and Storativity – Pumping test - Unsteady state flow - Thiess method – Jacobmethod - Image well theory – Effect of partial penetrations of wells - Collectors wells. **(6)** **Ground water development:** Infiltration gallery - Conjunctive use - Artificial recharge

	Rainwater harvesting - Safe yield –Yield test – Geophysical methods – Selection of pumps. **(6)** **Water quality:** Ground water chemistry - Origin, movement and quality - Water quality standards – Saltwater intrusion –Environmental concern**(6)** **Artificial recharge:** Artificial recharge of ground water; concept of artificial recharge – recharge methods, relative merits, Application of GIS and Remote Sensing in Artificial Recharge of Ground Water **(3)** **Groundwater management:** Ground water basin management; concepts of conjunction use**(3)**
Text Books, and/or reference material(s)	***Text Books:*** 1. Ground Water Hydrology by H.M. Raghunath, Wiley Eastern Ltd., 2000. 2. Ground Water Hydrology by D. K. Todd, John Wiley and Sons, 2000. 3. Ground Water by Bawvwr, John Wiley & Sons 4. Groundwater System Planning & Management by R. Willes & W.W.G. Yeh, Printice Hall. 5. Applied Hydrogeology by C.W. Fetta, CBS Publishers & Distributers. ***Reference Books:*** 6. Principles of Pavement Engineering by Nick Tom

Pre-requisite(s)			Course Assessment methods				
Engineering Mathematics and Design of Concrete Structures			Continuous (CT) and end assessment (EA). CT+EA				
Course Outcomes (COs) :	• CO1: Understand of reliability theory based on knowledge of fundamentals of probability and statistics. • CO2: Apply Monte carlo simulation technique to solve different civil engineering problems. • CO3: Understand the different reliability analysis methods. • CO4: To design the elements of civil engineering structures by using reliability methods.						
Topics Covered (Hrs)	**Basic statistics and probability:** Definition of probability, Axioms of probability, Conditional probability, Total probability theorem, Bayes' theorem, Basics of statistics, Definition of random variable, Different functions of random variable, Discrete and continuous random variables, Multiple random variables, probability distribution of random variables (Bernoulli and Binomial distribution, Poisson, geometric, hypergeometric, uniform, normal, lognormal, gamma). **(10)** **Simulation technique:** Monte Carlo method, theory and applications. **(5)** **Reliability analysis:** Definition of reliability, Limit state function, Reliability Index, Different classical reliability analysis methods, First order reliability method, Hasofer-Lind reliability						

	method, Rackwitz-Fiessler reliability method, Introduction to second order reliability method. **(15)** **Reliability-based design:** Load and resistance parameter model, reliability based code format, Calibration of partial safety factors for a level I code, Applications to solve design problems. **(10)**
Text Books, and/or reference material(s)	***Text Books:*** 1. Structural Reliability Analysis and Design by Ranganathan, Jaico Publishing House 2. Solid Mechanics	Continuous (CT) and end assessment (EA). CT+EA

Course Outcomes (COs) :	• CO1: To develop basic understanding of the fundamental concepts of the advanced topics. • CO2: To define the stress and strain tensors for structural members and to write the stress-strain relationships. • CO3: To evaluate the state of stress or state of strain with respect to the different theories of failure and compare. • CO4: To apply the principles of structural mechanics to special structures.
Topics Covered (Hrs)	**Analysis of stress:** Definition of stresses; stress matrix; state of stress; Cauchy's stress relations; stress transformation, principal stresses; equations of equilibrium; different types of stresses; polar coordinates; three-dimensional Mohr's circle. **(7)** **Analysis of strain:** Definition of strains; deformation vector; strain-displacement relations; strain matrix; principal strains; total distortion and rigid body rotation; strain compatibility conditions; volumetric strain; polar coordinates. **(6)** **Stress-strain constitutive relations:** (4) **Theories of failure:**(3) **Analysis of non-prismatic members**: General Euler-Bernoulli Law; linear Euler-Bernoulli equation; effect of bending of non-prismatic members. **(2)** **Thin Walled Pressure Vessels**: Stresses, strains in cylindrical and spherical vessels; change in volume, strengthening of thin cylinders, solution of numerical problems to implement the above concepts. **(4)** **Thick Walled Pressure Vessels:** Cylinders and Spheres: stresses; compatibility; Lame's equation; special case of solid shaft; thick spherical shells. **(4)** **Curved Beams**: Introduction; stresses in curved beams; eccentricity; rings under loads; distribution of stresses and bending moments in rings. **(4)** **Unsymmetrical Beam Bending**:Introduction; beams with doubly symmetric cross-sections; beams with arbitrary cross sections. **(4)** **Introduction To Plates** (4)
Text Books, and/or reference material(s)	***Text Books:*** 1. Solid Mechanics by S.M.A. Kazimi, Tata McGraw-Hill Publishing Company Limited 2. Advanced Mechanics of Solids by L.S. Srinath, Tata McGraw-Hill Publishing ***Reference Books:*** 3. Mechanics of Solids by Abdul Mubeen

EIGHTH SEMESTER

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CEE810	**Sediment Transport**	**PEL**	**3**	**0**	**0**	**3**	**3**
Pre-requisite(s)		Course Assessment methods					
CEC 302, CEC 601.		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs):	• CO1: Understanding of the origin and mechanism of sediment transport • CO2: Development of capabilities to analyze sediment load. • CO3: Ability to develop model to predict sediment load. • CO4: Capability to design stable channel to carry the predicted sediment load						
Topics Covered (Hrs)	**Introduction:(2)** **Sediment properties:** particle size shape and density, fall velocity, viscosity, colloids and flocculation. Introduction **(4)** **Threshold of particle motion. (4)** **Sand transport by air:** Surface creep, effects of sand movement on wind, instability of a flat sand surface, ridges and dunes. **(4)** **Sediment movement in water:** bed features and meanders, analytical models, stresses in flow of fluid-solid mixtures. **(4)** **Channel roughness and resistance to flow.(2)** **Sediment load:** Bed Load, Bed Forms; Effective bed roughness; Armouring, suspended sediment, diffusion approach, energy approach, statistical approach, suspended sediment load, total Load. **(8)** **Stable Channel Design**: The empirical stable channel design - Tractive force method of stable channel design - Drag distribution and resistance to motion - Design values for boundary shear - The stable cross-section - Design by tractive force method **(8)** **Cohesive sediments: (2)** Erosion, deposition, scour, local scour at different structures. **(2)** Dimensional Analysis and Similitude **(2)**						
Text Books, and/or reference material(s)	***Text Books:*** 1. Mechanics of Sediment Transportation and Alluvial Stream Problems by R. J. Garde, K. G. Ranga Raju, Revised Third Edition, New Age International Publishers, and New Delhi. 2. Loose boundary hydraulics by A. J. Raudkivi, 2nd edition Pergamon press ***Reference Books:*** 3. Sediment Transport by V. T. Chow, McGraw-Hill Book Company, Inc., New York

Pre-requisite(s)		Course Assessment methods					
Foundation Engineering		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs) :	• CO1: learn basic mechanism of reinforced earth. • CO2: design wall with reinforced backfill • CO3: analyze stability of reinforced slopes						
Topics Covered (Hrs)	**Introduction,** Basic mechanism of reinforced earth, Practical application. **(6)** **Basic components of reinforced soil**: Soil or fill matrix, Reinforcements, facing elements. **(6)** **Strength characteristics of reinforced soil**: Basic concept, Sigma and Tau models, laboratory studies, sliding shear test, pull-out tests. **(8)** **Wall with reinforced backfill**: Pressure intensity on the wall, Stability against sliding, overturning and bearing failure, Increase of earth pressure due to a line load on the backfill, design procedure. **(10)** **Methods of Slope Stability**: Taylor Charts, Method of Slices, Effect of Tension Cracks, Vertical Cuts. Bishop's Analysis. Non-circular Failure Surfaces, Stabilization of slopes: Drainage measures, Soil reinforcement (geosynthetics/soil nailing etc). **(15)**						
Text Books, and/or reference material(s)	***Text Books:*** 1. Reinforced Earth & Geotextiles by Koerner 2. Reinforced Earth & Geotextiles by G. V. Rao 3. Earth and Earth-Rock Dams by Sherard, Woodward, Gizienski and Clevenger. John Wiley &. Sons. 1963 4. Earth and RockFill Dams by Bharat Singh and H. D. Sharma, 1999 ***Reference Books****:* 5. Slope Stability and Stabilisation methods by L. W. Abramson, T. S. Lee, and S. Sharma, John Wiley & sons. (2002) 6. The Stability of Slopes by E. N. Bromhead, (1992), Blackie academic and professional, London. 7. Earth &Rockfill Dams, Principles of Design and Construction by Christian, Kutzner Published Oxford and IBH. 8. Handbook of Slope Stabilization by J. A. R. Ortiago, and A. S. F. J. Sayao, 2004.

Semester	I + II	III	IV	V	VI	VII	VIII	TOTAL
Credit Unit	45.0	22.0	22.5	23.5	21.5	21.5	16.0	172.0

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT.

6th Semester

	DEPARTMENT OF CHEMICAL ENGINEERING
CHE610	Chemical Reactor Analysis
CHE611	Industrial Pollution Control and Treatment
CHE612	Non-conventional Energy Engineering
CHE613	Combustion Engineering
CHE614	Artificial Intelligence in Chemical Industries

7th Semester

	DEPARTMENT OF CHEMICAL ENGINEERING
CHE710	Energy Sources & Utilization
CHE711	Bioprocess and Bioreactor Engineering
CHE712	Process Engineering
CHE713	Chemical Plant Design and Economics
CHE714	Process Safety in Chemical Industries
CHE715	Membrane Separation Processes
CHE716	Process Intensification
CHE717	Colloids and Interface Engineering
CHE718	Pinch Technology
CHE719	Energy Management and Process Optimization in Chemical Industry
CHE720	Self-Mastery

8th Semester

	DEPARTMENT OF CHEMICAL ENGINEERING
CHE810	Multiphase Flow
CHE811	Process Analysis and Optimisation
CHE812	Boiling Heat Transfer
CHE813	CFD Applications in Chemical Engineering
CHE814	Nanotechnology

DETAILED SYLLABUS

FIRST SEMESTER

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 01	MATHEMATICS - I	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Basic concepts of function, limit, differentiation, and integration.	CT+MT+EA

Course Outcomes	• CO1: To introduce the fundamentals of differential calculus of single and several variables • CO2: To develop the basic concepts of integral calculus including multiple integrals and its application in finding area, volume, centre of mass, centre of gravity etc. • CO3: To introduce the fundamental concepts of vector calculus • CO4: To develop the concept of convergence

Topics Covered	**Functions of Single Variable:** Rolle's Theorem and Lagrange's Mean Value Theorem (MVT), Cauchy's MVT, Taylor's and Maclaurin's series, Asymptotes & Curvature (Cartesian, Polar form). (8) **Functions of several variables:** Function of two variables, Limit, Continuity and Differentiability, Partial derivatives, Partial derivatives of implicit function, Homogeneous function, Euler's theorem and its converse, Exact differential, Jacobian, Taylor's & Maclaurin's series, Maxima and Minima, Necessary and sufficient condition for maxima and minima (no proof), Stationary points, Lagrange's method of multipliers. (10) **Sequences and Series:** Sequences, Limit of a Sequence and its properties, Series of positive terms, Necessary condition for convergence, Comparison test, D Alembert's ratio test, Cauchy's root test, Alternating series, Leibnitz's rule, Absolute and conditional convergence. (6) **Integral Calculus:** Mean value theorems of integral calculus, Improper integral and it classifications, Beta and Gamma functions, Area and length in Cartesian and polar co-ordinates, Volume and surface area of solids of revolution in Cartesian and polar forms. (12) **Multiple Integrals:** Double integrals, Evaluation of double integrals, Evaluation of triple integrals, change of order of integration, Change of variables, Area and volume by double integration, Volume as a triple integral. (10) **Vector Calculus:** Vector valued functions and its differentiability, Line integral, Surface integral, Volume integral, Gradient, Curl, Divergence, Green's theorem in the plane (including vector form), Stokes' theorem, Gauss's divergence theorem and their applications. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th ed., Wiley India Ed. (2010). 2. Daniel A. Murray, Differential, and Integral Calculus, Fb & c Limited, 2018. 3. Marsden, J. E; Tromba, A. J.; Weinstein: Basic Multivariable Calculus, Springer, 2014. **Reference Books:** 1. Tom Apostal, Calculus-Vol-I & II, Wiley Student Edition, 2011. 2. Thomas and Finny: Calculus and Analytic Geometry, 11th Ed., Addison Wesley.

<tr><td>Course Outcomes</td><td colspan="7">CO1: To realize and apply the fundamental concepts of physics such as superposition principle, simple harmonic motion to real world problems.
CO2: Learn about the quantum phenomenon of subatomic particles and its applications to the practical field.
CO3: Gain an integrative overview and applications of fundamental optical phenomena such as interference, diffraction and polarization.
CO4: Acquire basic knowledge related to the working mechanism of lasers and signal propagation through optical fibers.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Harmonic Oscillations - Linear superposition principle, Superposition of two perpendicular oscillations having same and different frequencies and phases, Free, Damped and forced vibrations, Equation of motion, Amplitude resonance, Velocity resonance, Quality factor, sharpness of resonance, etc. [8]
Wave Motion - Wave equation, Longitudinal waves, Transverse waves, Electro-magnetic waves. [3]
Introductory Quantum Mechanics - Inadequacy of classical mechanics, Blackbody radiation, Planck's quantum hypothesis, de Broglie's hypothesis, Heisenberg's uncertainty principle and applications, Schrodinger's wave equation and applications to simple problems: Particle in a one-dimensional box, Simple harmonic oscillator, Tunnelling effect. [8]
Interference & Diffraction - Huygens' principle, Young's experiment, Superposition of waves, Conditions of sustained Interference, Concepts of coherent sources, Interference by division of wavefront, Interference by division of amplitude with examples, The Michelson interferometer and some problems; Fraunhofer diffraction, Single slit, Multiple slits, Resolving power of grating. [13]
Polarisation - Polarisation, Qualitative discussion on Plane, Circularly and elliptically polarized light, Malus law, Brewster's law, Double refraction (birefringence) - Ordinary and extra-ordinary rays, Optic axis etc.; Polaroid, Nicol prism, Retardation plates and analysis of polarized lights. [5]
Laser and Optical Fiber - Spontaneous and stimulated emission of radiation, Population inversion, Einstein's A & B co-efficient, Optical resonator and pumping methods, He-Ne laser. Optical Fibre– Core and cladding, Total internal reflection, Calculation of numerical aperture and acceptance angle, Applications. [5]</td></tr>

CYC 01	Engineering Chemistry	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	• CO1: Introduced to chemical thermodynamics, kinetics, electrochemistry, absorption, and catalytic processes for engineering applications • CO2: To learn fundamentals of polymer chemistry and petroleum engineering. • CO3: Introduced to basic spectroscopic techniques for structure determination and characterization. • CO4: To study few inorganic and bioinorganic compounds of industrial importance.						
Topics Covered	**ORGANIC CHEMISTRY** i. Fundamentals of organic reaction mechanisms; Few important reactions and their mechanism along with their applications; Robinson annulation, Hydroboration reaction, Organometallic reagents (Gilman reagents), Metathesis using Grubb's catalyst and Wittig reaction. (3) ii. Fundamental concept on stereochemistry and application: Conformation and configuration of organic compounds, Diastereo-selective, enantio-selective, regio-selective, stereo-specific, and stereo-selective reactions. (3) iii. Polymer chemistry and polymer engineering: Fundamental concept on polymer chemistry; synthesis and application of important polymers, Rubber, and plastic materials. Conducting polymer. (2) iv. Petroleum Engineering and oil refinery: origin of mineral oils, separation principle and techniques of distillation of crude oil, Uses of different fractions,						

<table>
<tr><td></td><td>octane number, cetane number, Knocking, anti-knock compounds, and Bio-Fuel. (2)
v. Structure elucidation of organic compounds by modern spectroscopic methods; Application of UV-Visible and FT-IR spectroscopy. (3)
INORGANIC CHEMISTRY
i. Coordination Chemistry: Crystal Field Theory of octahedral and tetrahedral complexes, colour and magnetic properties, Jahn-Teller distortion, pseudo Jahn-Teller distortion, Isomerism, and stereochemistry. (5)
ii. Bioinorganic Chemistry: Heme and non-heme O_2 transport protein (Haemoglobin, Myoglobin), Chlorophyll and photosynthesis. (3)
iii. Inorganic Materials: Introduction towards industrially important inorganic materials like cementing material, refractory material, fertiliser, inorganic polymer. (2)
iv. Organometallic Chemistry: π-acid ligands, stabilization of metal low oxidation state and 18 electron rules, metal carbonyls and nitrosyls, metal-alkene complexes. (4)
PHYSICAL CHEMISTRY
i. Thermodynamics: 2nd law of thermodynamics, entropy, free energy, Gibbs Helmholtz equation, change of phase. Cryogenics: joule Thomson experiment. (4)
ii. Chemical Kinetics: 2nd and 3rd order rate expression, Reversible reaction, Chain reaction, Consecutive reaction, Temp effect on reaction rate. (4)
iii. Electrochemistry: Electrochemical cell, Effect of pH, precipitation, and complex formation on EMF of oxidation/reduction processes. (2)
iv. Absorption: Physical and Chemical absorption, Absorption isotherms. (1)
v. Catalysis: Types of catalysis, Rate expression for Catalysed reaction, Acid-base and Enzyme catalysis. (2)</td></tr>

XEC01	**ENGINEERING MECHANICS**	PCR	2	1	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA

Course Outcomes	
	• CO1: Acquire knowledge of mechanics and ability to draw free body diagrams. • CO2: Apply knowledge of mechanics for solving special problems like truss and frame analysis. • CO3: Ability to calculate centroid, moments of inertia for various shapes. • CO4: Learn momentum and energy principles. • CO5: Knowledge on virtual Work Principle and its application
Topics Covered	Engineering Mechanics; measurement and SI units. [1] Vectors and force as a vector; Resultant of a system of forces on a particle; free body diagram and conditions of equilibrium of a particle; problems on particles; equilibrium of particles in space. [2] Resultant of a system of forces and couples on a rigid body; conditions of equilibrium of a rigid body; free body diagrams of rigid bodies subjected to different types of constraints; simple space problems of rigid bodies. [4] Coefficients of static and kinetic friction; problems involving friction; theories of friction on square threaded power screw and flat belt. [5] Simple trusses; analysis of trusses by method of joints and method of sections. [5] Centre of gravity and centre of mass; centroids of lines, curves and areas; first moment of area; second moment of area; polar moment of inertia; radius of gyration of an area; parallel axis theorem; mass moment of inertia. [4] Path, velocity, acceleration; rectilinear and curvilinear motion; motion of system of particles; introduction to the concept of plane kinematics of rigid bodies. [6] Newton's second law of motion; dynamic equilibrium and D'Alembert's principle; linear momentum; angular momentum; rectilinear and curvilinear motion; principles of work–energy and impulse–momentum; impact of system of particles; introduction to the concept of plane kinetics of rigid bodies. [12] Principle of Virtual Work, Solution of Problems on Mechanics using Principle of Virtual Work [3]

		CT+MT+EA					
Course Outcomes	• CO1: Understand the importance of environment and ecosystem. • CO2: Understand the fundamental aspect of pollutant tracking and its implementation in natural and anthropogenic pollution of air and water system. • CO3: Understand the scientific basis of local and as well as global issues. • CO4: Apply of knowledge to develop sustainable solution.						
Topics Covered	**Introduction:** Multidisciplinary nature of Environmental Studies; Basic issues in Environmental Studies. [2] Human population and the Environment. [1] Social issues and the Environment. [1] **Constituents of our Environment & the Natural Resources:** Atmosphere– its layers, their characters; Global warming, Ozone depletion, Acid rain, etc. [5] Hydrosphere - Its constituents, Oceans, Groundwater, Surface waters; Hydrological cycle. [4] Lithosphere - constituents of lithosphere; Rock and Mineral resources; Plate Tectonic Concept and its importance. [5] Biosphere– its components; Ecosystems and Ecology; Biodiversity; Biomes. [5] Natural disaster and their management – Earthquakes, Floods, Landslides, Cyclones. [3] **Pollution:** Pollutants and their role in air and water pollution. [2]

NIL		CT+EA					
Course Outcomes	• CO1: Ability of mental visualization of different objects • CO2: Theoretical knowledge of orthographic projection to solve problems on one/two/three dimensional objects • CO3: Able to read/interpret industrial drawing and to communicate with relevant people						
Topics Covered	Graphics as language of communication; technical drawing tools and their up-keep; types of lines; construction of geometrical figures; lettering and dimensioning. [6] Construction and use of scales; construction of curves of engineering importance such as curves of conic section; spirals, cycloids, involutes and different loci of points; use of equations for drawing some curves. [9] Descriptive geometry: necessity and importance of orthographic projection; horizontal and vertical reference planes; coordinate of points; orthographic projection of points and lines situated in different quadrants, viz. 1st, 2nd, 3rd and 4th quadrants; traces of lines. First angle and third angle projection of lines and planes; views from top, front and left (or right); true length and true inclination of lines with planes of projections; primary auxiliary projection of points, lines and planes; auxiliary plan and auxiliary elevation. [9] Projection of simple regular solids, viz. prisms, cubes, cylinders, pyramids, cones, tetrahedrons, spheres, hemi-spheres etc. [6] Section of solids; section by perpendicular planes; sectional views; true shapes of sections. [6]						

	Dimensional techniques; international and national standards (ISO and BIS). [3] Freehand graphics. [3]
Text and/or reference material	1)… Engineering Drawing and Graphics – K Venugopal 2)… Engineering Drawing – N D Bhat 3)… Practical Geometry and Engineering Graphics – W Abbott

NIL		CE+EA					

Course Outcomes	CO1: To realize and apply different techniques for measuring refractive indices of different materials. CO2: To realize different types of waveforms in electrical signals using CRO. CO3: To understand charging and discharging mechanism of a capacitor. CO4: To understand interference, diffraction and polarization related optical phenomena. CO5: To acquire basic knowledge of light propagation through fibers.
Topics Covered	1. Find the refractive index of a liquid by a travelling microscope. 2. Determine the refractive index of the material of prism using spectrometer. 3. Determination of amplitude and frequency of electrical signals by oscilloscope. 4. To study the characteristics of RC circuits. 5. To study Brewster's law/Malus' law using laser light. 6. To study the diffraction of light by a grating. 7. To study the interference of light by Newton's ring apparatus. 8. To determine numerical aperture of optical fiber. 9. Determination of Planck constant.
Text and/or reference material	**SUGGESTED BOOKS**: 1) A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
None	CT+EA

Course Outcomes	• CO1: To learn basic analytical techniques useful for engg applications. • CO2: Synthesis and characterization methods of few organic, inorganic and polymer compounds of industrial importance. • CO3: Learn chromatographic separation methods. • CO4: Applications of spectroscopic measurements.
Topics Covered	i. Experiments based on pH metry: Determination of dissociation constant of we acids by pH meter. ii. Experiments based on conductivity measurement: Determination of amou of HCl by conductometric titration with NaOH. iii. Estimation of metal ion: Estimation of Fe^{2+} by permangnomentry iv. Estimation of metal ion: Determ. of total hardness of water by EDTA titration. v. Synthesis and characterization of inorganic complexes: e. g. $Mn(acac)_3$, Fe(acac cis-bis(glycinato)copper (II) monohydrate and their characterization by m. p FTIR etc. vi. Synthesis and charact. of organic compounds: e.g.Dibenzylideneacetone. vii. Synthesis of polymer: polymethylmethacrylate viii. Verification of Beer-Lamberts law and determination of amount of iron prese in a supplied solution. ix. Chromatography: Separation of two amino acids by paper chromatography x. Determination of saponification value of fat/ vegetable oil
	Suggested Text Books: 1. Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall 2. Advanced Physical Chemistry Experiments: By Gurtu&Gurtu 3. Comprehensive Practical Organic Chemistry: Qualitative Analysis By V. K. Ahluwalia and S. Dhingra Suggested Reference Books: 1. Practical Chemistry By R.C. Bhattacharya 2. Selected experiments in Physical Chemistry By N. G. Mukherjee

WSS51	**WORKSHOP PRACTICE**	PCR	**0**	**0**	**3**	**3**	**1.5**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					

Course Outcomes

- CO1: Study and practice on machine tools and their operations
- CO2: Practice on manufacturing of components using workshop trades including fitting, carpentry, foundry and welding
- CO3: Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping
- CO4: Develop basic electrical engineering knowledge for house wiring practice

Topics Covered

M/c shop & Carpentry shop -- 3X3= 9hrs.

- Introduction on machining process.
- Introduction to machine tools- Lathe, Shaper, Milling and Drill machine.
- Introduction to woods- Types, structure, disease and defect of wood.
- Introduction to wood working machines and tools.
- Making of dovetail joint and bridle joint.

Welding Shop & Sheet metal -- 3X3= 9hrs.

- Introduction to welding.Safety and precautions in welding.
- Formation of weld bead by SMAW on mild steel flat.
- Formation of weld bead by oxy-fuel welding on mild steel flat.
- Introduction to sheet Metal works.
- Tools and Machines used in sheet metal works.
- Concept of development, marking out of metal sheets.
- Cutting and joining of metal sheets.
- Safety precautions, General warning needed in the shop floor.

Black smithy & Foundry -- 3X3= 9hrs.

- Introduction Smithing and Forging- Tools, Machines, Furnaces and its accessories, fuels.
- Safety and precautions in blacksmithy.
- Making of bars of different cross-sections.

	• Making of hexagonal headed bolts. • Forge welding. • Introduction to Foundry Technology. • Preparation of sand mould using Solid/Split Pattern. **Fitting & Electrical shop -- 3X3= 9hrs.** • Introduction to hand metal cutting tools with specifications, nomenclature and their use. • Marking tools, measuring tools and their use. • Fitting of joints of mild steel flats. • Introduction to electrical hazards and safety precaution. • Wire jointing and soldering. • PVC Conduit Wiring controlled by separate single way switches. • PVC Cashing Capping Wiring for two-way switches. • Conduit wiring for the connection of a Calling Bell with In& Out Indicators. • Batten Wiring and Cleat Wiring. • Tube Light Connection. • Insulation Resistance Testing of 1ph / 3ph Motor and House Wiring. • Earth Resistance Testing. • DOL Starter Connection. **Viva voce -- 1X3= 3hrs.**
Text Books, and/or reference material	1. Workshop Technology Part I and Part II by W. A. J. Chapman 2. Elements of Workshop Technology S. K. Hazra Chowdhury, A. K. Hazra Chowdhury and Nirjhar Roy 3. Mechanical Workshop Practice by K. C. John

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
NIL	CT+EA

Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service
Topics Covered	**YOGA** • Introduction of Yoga. • Sitting Posture/Asanas- Padmasana, Vajrasana, Ardhakurmasana, Ustrasana, Bakrasana, Sasankasana, Janusirshasana, Suryanamaskar. • Mudra- Gyana mudra, Chin mudra, Shuni mudra, Prana mudra, Adi mudra, Anjali mudra. • Laying Posture/Asanas- PavanaMuktasana, UttanaPadasana, Sarpasana, Bhujangasana (Cobra Pose), Eka Pada Śalabhāsana, Dhanurasana, Chakrasana, Viparitkarani. • Meditation- Yognidra, Om chant, Pray chant. • Standing Posture/Asanas- Tadasana (Mountain Pose), Vrikshasana (Tree Pose), Ardhachandrasana, Trikonasana, Utkatasana, Padahastasana. • Pranayama- Deep breathing, AnulomVilom, Suryabhedi, Chandrabhedi. • Kriya- Kapalbhati, Trataka. **ATHLETICS** • Introduction of Athletic. • Starting Technique for Track events- Standing start, Crouch & Block start. • Finishing Techniques. • Relay Race- 4×100m, 4×400m & Baton Exchange Technique & Rules. • Track Marking with Fundamentals- 200m, 400m and Diagonal Distance Radius, Straight Distance, Staggers of Different Lanes & Curve Distance. **BASKETBALL** • Introduction and Players stance and ball handling. • Passing- Two hand chest pass, two hand bounce pass, One hand baseball pass, Side arm pass, Overhead pass, Hook pass. • Receiving- Two hand receiving, one hand receiving, receiving in stationary position, Receiving while jumping and Receiving while running. • Dribbling- Dribble, High dribble, Low dribble, Reverse dribble, Rolling dribble. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Introduction of Volleyball • Service- Underarm service, Sidearm service, Tennis service, Floating service, Jump service.

	• Pass: Underarm pass- Ready position, Teaching stage of underarm pass and Upper hand pass- Volley pass, Back pass, Short set, Jump set & Underarm set. • Rules and their interpretation. **FOOTBALL** • Introduction of Football • Push pass- Instep inside, Instep outer side. • Kicking- Spot kick, Instep kick, Lofted kick. • Dribbling- One leg, Both legs, Instep. • Trapping- Rolling ball sole trapping, High ball sole trapping, High ball chest trapping, High ball thigh trapping. • Throwing- Standing throw, Running throw, Seating throw. • Goal Keeping- Griping the ball, Full volley, Half volley, Drop Kick. • Rules and their interpretation. **CRICKET** • Introduction of Cricket • Batting gripping & Stance, Bowling gripping technique. • Batting front foot defense& Drive. • Batting Back foot defense& Drive. • Batting Square cut. • Bowling medium pace, Bowling off break. • Fielding drill, Catching (Short & High). • Rules & Regulation. **BADMINTON** • Basic introduction about Badminton and Badminton court. • Racket parts, Racket Grip, Shuttle Grip. • Basic stance, Basic Footwork, Shadow practice (Full court movement). • Strokes services: Forehand- Overhead & Underarm, Backhand- Overhead & Underarm. • Match practice (Single & Double). • Rules & Regulation. **TABLE TENNIS** • Introduction of Table Tennis. • Basic Stance and Grip (Shake hand & Pen hold). • Service Basic. • Stroke: Backhand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Stroke: Forehand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-1 General Introduction and words of command. • FD-2 Attention, Stand at ease and Stand easy, Turning and inclining at the

halt.

- FD-3 Sizing, Forming up in three Ranks Numbering, Open and Close order March and Dressing.
- FD-4 Saluting at the halt, Getting on parade, Dismissing and falling out.
- FD-5 Marching, Length of pace and Time of Marching in quick time and Halt, Slow March and Halt.
- FD-7 Turning on the March and Wheeling.
- FD-12 Parade practice.

TAEKWONDO

- Introduction about Taekwondo- Meaning of Taekwondo, Korean language of dress, Fighting area, Punch, Block, Kicks etc.
- Stance- Ready stance, Walking stance, Fighting stance, Front stance, Back stance, Cat stance etc.
- Punch Technique- Front fist punch, Rear fist punch, Double fist punch, With stance etc. Blocks- Upper blocks, Middle block, Side block, Suto etc.
- Foot Technique (Balgisul)- Standing kick (Saseochagi), Front kick (Abchagi), Doliyo (Chagi), Abdalchagi (Butterfly kick), Back kick etc.

NSS

- Swachha Bharat Mission
- Free Medical Camp
- Sanitation drive in and around the campus.
- Unnat Bharat Abhiyaan
- MatribhashaSaptah celebration

<tr><td>Course Outcomes</td><td colspan="7">• CO1: Develop the concept of basic linear algebra and matrix equations so as to apply mathematical methods involving arithmetic, algebra, geometry to solve problems.
• CO2: To acquire the basic concepts required to understand, construct, solve and interpret differential equations.
• CO3: Develop the concepts of Laplace transformation & Fourier transformation with its property to solve ordinary differential equations with given boundary conditions which are helpful in all engineering & research work.
• CO4: To grasp the basic concepts of probability theory.</td></tr>
</table>

Topics Covered	**Elementary algebraic structures:** Group, subgroup, ring, subring, integral domain, and field. (5) **Linear Algebra:** Vector space, Subspaces, Linear dependence and independence of vectors, Linear span, Basis and dimension of a vector space. Rank of a matrix, Elementary transformations, Matrix inversion, Solution of system of Linear equations, Eigen values and Eigen vectors, Cayley-Hamilton Theorem, Diagonalization of matrices. (15) **Ordinary Differential Equations:** Existence and uniqueness of solutions of ODE (Statement Only), Equations of first order but higher degree, Clairaut's equation, Second order differential equations, Linear dependence of solutions, Wronskian determinant, Method of variation of parameters, Solution of simultaneous equations. (12) **Fourier series:** Basic properties, Dirichlet conditions, Sine series, Cosine series, Convergence. (4)
	Laplace and Fourier Transforms: Laplace transforms, Inverse Laplace transforms, Convolution theorem, Applications to Ordinary differential equations. Fourier transforms, Inverse Fourier transform, Fourier sine and cosine transforms and their inversion, Properties of Fourier transforms, Convolution. (10) **Probability:** Historical development of the subject and basic concepts, Axiomatic definition of probability, Examples to calculate probability, Random numbers. Random variables and probability distributions, Binomial distribution, Normal distribution. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10thed, Wiley India Ed. (2010). 2. Gilbert Strang, Linear algebra and its applications (4th Ed), Thomson (2006). 3. Shepley L. Ross, Differential Equations, 3rd Edition, Wiley Student Ed (2017). **Reference Books:** 1. S. Kumaresan, Linear algebra - A Geometric approach, PHI (2000). 2. C. Grinstead, J. L. Snell, Introduction to Probability, American Math. Society.

<tr><td>Course Outcomes</td><td colspan="8">CO1: Recognize the changes in hardware and software technologies with respect to the evolution of computers and describe the function of system software's (operating Systems) and application software's, languages, number system, logic gates.
CO2: Illustrate the flowchart and inscribe an algorithm for a given problem Inscribe C programs using operators.
CO3: Develop conditional and iterative statements to write C programs.
CO4: Exercise user defined functions to solve real time problems
CO5: Inscribe C programs that use Pointers to access arrays, strings and functions.
CO6: Exercise user defined data types including structures and unions to solve problems.</td></tr>
<tr><td>Topics Covered</td><td colspan="8">Fundamentals of Computer: History of Computer, Generation of Computer, Classification of Computers 2L Basic Anatomy of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices. [2]
Languages: Assembly language, high level language, compiler, and assembler (basic concepts) [1]
Binary & Allied number systems representation of signed and unsigned numbers. BCD, ASII. Binary Arithmetic & logic gates. [2]
Basic concepts of operating systems like MS DOS, MS WINDOW, UNIX, Algorithm & flow chart. [1]
C Fundamentals: The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements. [2]
Operators & Expressions: Arithmetic operators, relational and logical operators, type, conversion, increment and decrement operators, bit wise operators, assignment operators and expressions, precedence, and order of evaluation. Input and Output: Standard input and output, formatted output -- printf, formatted input scanf. [8]
Flow of Control: Statement and blocks, if - else, switch, loops - while, for do while, break and continue, go to and labels. [5]
Fundamentals and Program Structures: Basic of functions, function types, functions returning values, functions not returning values, auto, external, static and register Variables, scope rules, recursion, function prototypes, C pre-processor, command line arguments. [5]
Arrays and Pointers: One-dimensional, two-dimensional arrays, pointers and functions, multi-dimensional arrays. [10]
Structures Union and File: Structure, union, structures and functions, arrays of structures, file read, file write.[5]</td></tr>

Pre-requisites			Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))				
(10+2) level mathematics and physics			CT+MT+EA				
Course Outcomes	• CO1: Knowledge of Semiconductor physics and devices. • CO2: Have an in depth understanding of basic electronic circuit, construction, operation. • CO3: Ability to make proper designs using these circuit elements for different applications. • CO4: Learn to analyze the circuits and to find out relation between input and output.						
Topics Covered	1. **Semiconductors** 1.1. Concept of band formation in solids; Fermi-Dirac distribution function, concept of Fermi level, invariance of Fermi level in a system under thermal equilibrium 1.2. Definitions of insulator, conductor and semiconductor using band diagram 1.3. Crystalline structure of semiconductor 1.3.1. Covalent bond 1.3.2. Generation of holes and electrons						

	1.3.3. Effect of temperature on semiconductor 1.4 Intrinsic semiconductor 1.5 Doping and Extrinsic semiconductor 1.5.1 n-Type semiconductor and band diagram 1.5.2 p-Type semiconductor and band diagram 1.5.3 Mass-action law of semiconductor 1.6. Conductivity of semiconductor (including mathematical expression) 1.7 Carrier transport phenomenon. (03 hrs.) 2. **Diodes** 2.1. Construction 2.2. Unbiased diode; Depletion layer and Barrier potential; junction capacitance (expression only) 2.3. Principle of operation with forward biasing and reverse biasing 2.4. Characteristics 2.5 Diode's three models/equivalent circuits.(02 hrs.) 3.**Diode Circuits** 3.1 Diode rectifier 3.1.1 Half wave rectifier 3.1.2 Full wave rectifier:centre tap and bridge rectifier 3.1.3 Capacitive filter and DC power supply (Numerical problems) 3.2 Special Diodes 3.2.1 Zenerdiode: Avalanche breakdown and Zener breakdown and characteristics. 3.2.2 Zener diode as a voltage regulator 3.2.3 Displaydevices: LED and LCD. (03 hrs.) 4.**Bipolar Junction Transistor (BJT)** 4.1 n-p-n and p-n-p transistor and their constructions 4.2 Principle of operation 4.3 Transistor configuration: common base, common emitter, and common collector 4.4 Transistor characteristics: input and output characteristics of CB and CE configurations 4.5 DC load line: quiescent (Q) point; cut-off, active, and saturation region 4.6 Amplifier: Principle of operation 4.7 Transistor as a switch. (04 hrs.) 5.**Transistor Biasing** 5.1 Need of biasing 5.2 Methods of biasing: base resistor or fixed bias, emitter feedback, voltage divider biasing 5.3 Stability of Q-point (qualitative discussions) 5.4 (Numerical problems). (02 hrs.) 6.**Single Stage Amplifier:** classification of amplifiers (voltage amplifier, current amplifier, power amplifier etc.) Class-A CE Amplifier with coupling and bypass capacitors, Qualitative discussions of magnitude characteristics of frequency response (graph only) (02 hrs.) 7.**Feedback Amplifier** 7.1 Positive and negative feedback

	7.2 Deduction of gain with negative feedback, explanation of stability of gain with negative feedback, other effects of negative feedback (no deduction), numerical problems. (03 hrs.) 8.**Other Semiconductor Devices** 8.1 JFET: Construction, principle of operation, characteristics 8.2 MOSFET: Construction, principle of operation, characteristics 8.3 Power Electronic Device-SCR: Brief discussions. (02 hrs.) 9.**Operational Amplifier** 9.1 Characteristics of ideal operational amplifier 9.2 Pin Configuration of IC 741, 9.3 Analysis of simple operational amplifier circuits: concept of virtual ground; noninverting amplifier and inverting amplifier. 9.4 Applications: voltage follower, summer, differentiator, integrator, and comparator (04 hrs) 10.**Oscillator** 10.1 Positive feedback and condition of oscillation 10.2 R-C phase-shift oscillator, Wien bridge oscillator.(02 hrs.) 11.**Boolean Algebra** 11.1 Boolean algebra, De Morgan's theorem, simplification of Boolean expressions 11.2 Number system, range extension of numbers, overflow 11.3 Different codes: gray code, ASCII code and BCD codes and them Applications. (01 hrs.) 12. **Logic Gates** 12.1 NOT, OR, AND, NOR, NAND, EX-OR, EX-NOR gates 12.2 Simplification of logic functions 12.3 Realizations of logic expressions using logic gates. (01 hrs.) 13. CRO and its applications and other test and measurement instruments. (01 hrs.)
Text Books, and/or reference material	Text Books: 1. Introduction Electronic Devices & Circuit Theory,11/e, 2012, Pearson: Boylestad & Nashelsky 2. <tr><td>Course Outcomes</td><td colspan="7">Upon successful completion of this course, the student should be able to
• CO1: learn the fundamentals of Electric Circuits and Network theorems and analysis of electrical network based on these concepts.
• CO2: develop an idea on Magnetic circuits, Electromagnetism and learning the working principles of some fundamental electrical equipment's
• CO3: learn about single phase and poly-phase AC circuits and analysis of such circuits based on these concepts.
• CO4: introduce the basic concept of single-phase transformer.
• CO5: analyze the transient phenomena in electrical circuits with DC</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Introduction: Overview of Electrical power generation systems (2)
Fundamentals of Electric Circuits: Ohm's laws, Kirchhoff's laws, Independent and Dependent sources, Analysis of simple circuits. (4)
Network theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem (4)
Magnetic circuits: Review of fundamental laws of electromagnetic induction, transformer and rotational emfs, Solution of magnetic circuits. Analysis of coupled circuits (self-inductance, mutual inductance, and dot convention)(8)
Transients with D.C. excitation for R-L and R-C circuits. (3)
Generation of alternating voltage and current, E.M.F. equation, Average and R.M.S. value, Phase and phase difference, Phasor representation of alternating quantity, Behavior of A.C. circuits, Resonance in series and parallel R-L-C circuits. AC Network: Superposition theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem, solution of networks with AC sources. (10)
Single-Phase Transformer, equivalent circuits, open circuit and short circuit tests (6)
Poly-phase system, Advantages of 3-phase system, Generation of 3-phase voltages, Voltage, current and power in a star and delta connected systems, 3-phase balanced and unbalanced circuits, Power measurement in 3-phase circuits. (5)</td></tr>

<tr><td>Course Outcomes</td><td colspan="7">CO1: Basic understanding of basic cellular organization of organisms and cellular communications, structure and functions of the macromolecules and their biosynthesis and cata--bolism.
CO2: To give an understanding of the key features of the structure, growth, physiology and behavior of bacteria, viruses, fungi and protozoa
CO3: To introduce molecular biology to understand biological processes in various applications.
CO4: To provide a foundation in immunological processes and an overview of the interaction between the immune system and pathogens.
CO5: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them
CO6: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them</td></tr>
<tr><td>Topics Covered</td><td colspan="7">1. Cell Biology (4)
a) Introduction to life science: prokaryotes & eukaryotes
Definition; Difference
b) Introduction to cells - Define cell, different types of cell
c) Cellular organelles - All organelles and functions in brief
d) Cellular communications
Introduction to basic signaling; endocrine, paracrine signaling; concepts of</td></tr>
</table>

	receptor, ligand, on-off switch by phosphorylation/dephosphorylation **2. Biochemistry (4)** a) Biological function of carbohydrate and lipid - Introduction, structure and function b) Biological function of nucleic acids and protein - structure and function c) Catabolic pathways of Macromolecules - Introduction to catabolism, hydrolysis and condensation reactions; Catabolism of glucose- Glycolysis, TCA; overall degradation of proteins and lipids d) Biosynthesis of Macromolecules Generation of ATP (ETS), Generation of Glucose (Photosynthesis) **3. Microbiology (5)** a) Types of microorganisms and their general features - Bacteria, Yeast, Fungi, Virus, Protozoa- general introduction with practical significance and diseases b) Microbial cell organization - Internal and External features of cell- bacterial cell wall, viral capsule, pilus etc, c) Microbial nutritional requirements and growth - Different Sources of energy; growth curve d) Basic microbial metabolism - Fermentation, Respiration, Sulfur, N_2 cycle **4. Immunology (5)** a) Basic concept of innate and adaptive immunity - Immunity-innate and adaptive, differences, components of the immune system b) Antigen and antibody interaction - Antigen and antibody, immunogen, factors affecting immunogenicity, basic antigen-antibody mediated assays, introduction to monoclonal antibody c) Functions of B cell - B cell, antibody production, memory generation and principle of vaccination d) Role of T cell in cell-mediated immunity - Th and Tc, functions of the T cell with respect to different pathogen and cancer cell **5. Molecular Biology (5)** a) Prokaryotic Genomes (Genome organization & structure) - Nucleoid, circular or linear b) Eukaryotic Genomes (Genome organization & structure) - Intron, exon, packaging, chromatin c) Central Dogma (Replication, Transcription and Translation) d) Applications of Molecular Biology (Diagnostics, DNA-fingerprinting, Recombinant products etc.) - Introduction to Recombinant DNA, fingerprinting, cloning **6. Bioprocess Development (5)** a) Microbial growth kinetics - Batch, fed-batch and continuous systems, Monod Equation b) Enzyme kinetics, kinetics of enzyme inhibition and deactivation Definition of enzymes, activation energy, Concepts of Km, Vmax, Ki c) Microbial sterilization techniques and kinetics Introduction to sterilization, dry and moist sterilization d) Thermodynamics of biological system - Concepts of Enthalpy, Entropy, favorable reactions, exergonic and endergonic reactions

	e) Material and energy balance for biological reactions - Stoichiometry
Text Books, and/or reference material	1. Biotechnology 01 Edition, authored by U. Satyanarayana, BOOKS & ALLIED (P) LTD. 2. Biochemistry by Lehninger. McMillan publishers 3. Microbiology by Pelczar, Chan and Krieg, Tata McGraw Hill 4. Brown, T.A., Genetics a Molecular Approach, 4th Ed. Chapman and Hall, 1992 5. Kuby J, Thomas J. Kindt, Barbara, A. Osborne Immunology, 6th Edition, Freeman, 2002. 6. Bioprocess Engineering: Basic Concepts (2nd Ed), Shuler and Kargi, PHI.

Mapping of CO (Course outcome) and PO (Programme Outcome)

Course	COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
BTC01	CO1	2	1	1	-	1	-	-	-	-	-	-	-
	CO2	2	1	1	-	1	-	1	-	-	-	-	-
	CO3	2	1	1	-	1	-	-	-	-	-	-	-
	CO4	2	1	1	-	1	-	-	1	-	-	-	1
	CO5	2	1	1	-	1	1	1	-	-	-	-	-

Correlation levels 1, 2 or 3 as defined below:
1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
XXC01	The Constitution of India and Civic Norms	PCR	1	0	0	1	1
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	CO1: Elementary understanding of the evolution of historical events that led to the making of the Indian constitution, the philosophical values, basic structure and fundamental concerns enshrined in the Constitution of India. CO2: Aware of the fundamental rights and duties as a citizen of the country. CO3: Enable to know the civic norms to be followed according to the Indian constitution						
Topics Covered	**1.** Historical background of the Making of Indian Constitution (1 Hour) **2.** Preamble and the Philosophical Values of the Constitution (1 Hour) **3.** Brief Overview of Salient Features of Indian Constitution (1 Hour) **4.** Parts I & II: Territoriality and Citizenship (1 Hour) **5.** Part III: Fundamental Rights (2 Hours) **6.** Part IV: Directive Principles of State Policy (1 Hour) **7.** Part IVA: Fundamental Duties (1 Hour) **8.** Union Government: President, Prime Minister and Council of Ministers (2						

	Hours) **9.** Parliament: Council of States and House of the People (1 Hour) **10.** State Government: Governor, Chief Mister and Council of Ministers (1 Hour) **11.** State Legislature: Legislative Assemblies and Legislative Councils (1 Hour) **12.** Indian Judiciary: Supreme Court and High Courts (1 Hour) **13.** Centre-State Relations (1 Hour) **14.** Reservation Policy, Language Policy and Constitution Amendment (1 Hour)
Text Books, and/or reference material	Primary Readings: 1) P. M. Bakshi, *The Constitution of India*, 18th ed. (2022) 2) Durga Das Basu, *Introduction to the Constitution of India*, 25th ed. (2021) 3) J.C. Johari, *Indian Government and Politics*, Vol. II, (2012) Secondary Readings: Granville Austin, *The Indian Constitution: Cornerstone of a Nation* (1966; paperback ed. 1999); Granville Austin, *Working a Democratic Constitution: The Indian Experience* (1999; paperback ed. 2003).

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
XES52	**GRAPHICAL ANALYSIS USING CAD**	PCR	0	0	2	2	1

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
NIL	CT+EA

Course Outcomes	• CO1: Introduction to graphical solution of mechanics problems • CO2: Knowledge on graphical solution methods for solving equilibrium in coplanar force system • CO3: Introducing Maxwell diagram and solution of plane trusses by graphical method • CO4: Determination of centroid of plane figures by graphical method • CO5: Exposure to AutoCAD software for computer aided graphical solution
Topics Covered	• Graphical analysis of problems on statics. [14] • Graphical solution of engineering problems using CAD (with the help of "AutoCAD") [14]
Text and/or reference material	1)… Engineering Drawing and Graphics – K Venugopal 2)… AutoCAD — George Omura 3)… Practical Geometry and Engineering Graphics – W Abbott

CSS51	**COMPUTING LABORATORY**	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	• CO1: To understand the principle of operators, loops, branching statements, function, recursion, arrays, pointer, parameter passing techniques • CO2: To detail out the operations of strings • CO3: To understand structure, union • CO4: Application of C-programming to solve various real time problems						
Topics Covered	**List of Experiments:** 1. Assignments on expression evaluation 2. Assignments on conditional branching, iterations, pattern matching 3. Assignments on function, recursion 4. Assignments on arrays, pointers, parameter passing 5. Assignments on string using array and pointers 6. Assignments on structures, union						
Text Books, and/or reference material	**Text Books:** 1. Let us C by Kanetkar 2. C Programming by Gottfried 3. Introduction to Computing by Balaguruswamy 4. The C-programming language by Dennis Ritchie **Reference Books:** 1. Computer fundamental and programming in C by P Dey and M. Ghosh 2. Computer fundamental and programming in C by Reema Thareja 3. programming with C by Schaum Series

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECS 51	**Basic electronics Lab**	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					

Course Outcomes	• CO1: Acquire idea about basic electronic components, identification, and behavior. • CO2: To determine IV characteristics of these Circuit elements for different applications. • CO3: Learn to analyze the circuits and observe and relate input and output signals.
Labs Conducted.	1. To know your laboratory: To identify and understand the use of different electronic and electrical instruments. 2. To identify and understand name and related terms of various electronics components used in electronic circuits.: Identify different terminals of components, fid their values and observe numbering associate with it. 3. Use of oscilloscope and function generator: Use of oscilloscope to measure voltage, frequency/time and Lissajous figures of displayed waveforms. 4. Study of half wave and Full-wave (Bridge) rectifier with and without capacitor filter circuit. 5. Realization of basic logic gates: Truth table verification of OR, AND, NOT, NOT and NAND logic gates from TTL ICs 6. Regulated power supply: study LM78XX and LM79XX voltage regulator ICs 7. Transistor as a Switch: study and perform transistor as a switch through NOT gate 8. Zenner diode as voltage regulator 9. To study clipping and Clamping circuits 10. To study different biasing cirtis. 11. Study of CE amplifier and observe its frequency response.
Text Books, and/or reference material	Text Books: 1. Experiments Manual for use with Electronic Principles (Engineering Technologies & the Trades) by Albert Paul MalvinoDr., David J. Bates, et al. Reference Books: 1. The Art of Electronics 3e, by Paul Horowitz, Winfield Hill 2. Electronic Principles, by Albert Paul MalvinoDr. and David J. Bates

• CO1: understand the principle of superposition.
• CO2: understand the principle of maximum power transfer
• CO3: understand the characteristics of CFL, incandescent Lamp, carbon lamp.
• CO4: understand the calibration of energy meter.
• CO5: understand open circuit and short circuit test of single-phase transformer.
• CO6: analyze RLC series and parallel circuits
• CO7: understand three phase connections.
• C08: understand determination of B-H curve</td></tr>
<tr><td>Topics Covered</td><td colspan="7">List of Experiments:
1. To verify Superposition and Thevenin’s Theorem.
2. To verify Norton and Maximum power transfer theorem
3. Characteristics of fluorescent and compact fluorescent lamp
4. Calibration on energy meter
5. To perform the open circuit and short circuit test on single phase transformer
6. To study the balanced three phase system for star and delta connected load
7. Characteristics of different types of Incandescent lamps
8. Study of Series and parallel R-L-C circuit
9. Determination of B-H Curve for magnetic material</td></tr>

XXS-52	**Co-curricular Activities**	PCR	**0**	**0**	**2**	**2**	**1**
Pre-requisites	Course assessment methods: (Continuous evaluation((CE) and end assessment (EA)						
NIL	CE + EA						
Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Sitting Posture/Asanas- Gomukhasana, Swastikasana, Siddhasana, Ustrasana, Janusirsasana, ArdhaMatsyendrasana (Half-Spinal Twist Pose), Paschimottanasana, Shashankasana, Bhadrasana. • Mudra- Vayu, Shunya, Prithvi, Varuna, Apana, Hridaya, Bhairav mudra. • Laying Posture/Asanas- Shalabhasana (Locust Posture), Dhanurasana (Bow Posture), ArdhaHalasana (Half Plough Pose), Sarvangasana (Shoulder Stand), Halasana (Plough Pose), Matsyasana, SuptaVajrasana, Chakrasana (Wheel Posture), Naukasana (Boat Posture), Shavasana (Relaxing Pose), Makaraasana. • Meditation- 'Om'meditation, Kundalini or Chakra Meditation, Mantrameditation. • Standing Posture/Asanas- ArdhaChakrsana (Half Wheel Posture), Trikonasana (Triangle Posture), ParshwaKonasana (Side Angle Posture), Padahastasana, Vrikshasana (Tree Pose), Garudasana (Eagle Pose). • Pranayama- Nadisodha, Shitali, Ujjayi, Bhastrika, Bhramari. • Bandha- Uddiyana Bandha, Mula Bandha, Jalandhara Bandha, Maha Bandha. • Kriya- Kapalabhati, Trataka, Nauli.						

	ATHLETICS • Long Jump- Hitch kick, Paddling, Approach run, Take off, Velocity, Techniques, Flight & Landing • Discus throw, Javelin throw and Shot-put- Basic skill & Technique, Grip, Stance, Release & Follow through. • Field events marking. • General Rules of Track & Field Events. **BASKETBALL** • Shooting- Layup shot, Set shot, Hook shot, Jump shot. Free throw. • Rebounding- Defensive rebound, Offensive rebound. • Individual Defensive- Guarding the man without ball and with ball. • Pivoting. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Spike- Straight spike, Body turn spike, Tip spike, Back attack, Slide spike, Wipe out spike. • Block- Single block, Double block, Triple block, Group block. • Field Defense- Dig pass, Double pass, Roll pass. • Rules and their interpretation. **FOOTBALL** • Dribbling- Square pass, Parallel pass, Forward pass. • Heading (Standing & Running)- Fore head, Side fore head, Drop heading, Body covering during heading. • Kicking- Full volley, Half volley, Drop kick, Back volley, Side volley, Chiping (lobe). • Tackling: Covering the angle, Chessing time sliding chese, Heading time shoulder tackle etc. • Feinting- Body movement to misbalance the opponent and find space to go with ball. • Rules of Football. **CRICKET** • Batting straight drive. • Batting pull shot. • Batting hook shot. • Bowling good length, In swing. • Bowling out swing, Leg break, Goggle. • Fielding drill. • Catching (Long & Slip). • Wicket keeping technique. • Rules & Regulation. **BADMINTON**

	• Net play- Tumbling net shot, Net Kill, and Net Lift. • Smashing. • Defensive high clear/Lob. • Half court toss practice, Cross court toss drop practice, Full court Game practice. • Player Positioning, Placements. • Rules & Regulation. • Doubles & Mixed doubles match practice. **TABLE TENNIS** • Stroke: Backhand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke: Forehand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke- Backhand lob with rally, Backhand lob with sidespin, Forehand lob with rally, Forehand lob with sidespin. • Service: Backhand/Forehand- Push service, Deep push service, Rally service. • Service: Backhand sidespin (Left to right & Right to left). • Service: Forehand- High toss backspin service, High toss sidespin service, High toss reverse spin service. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-6 Side pace, Pace Forward and to the Rear. • FD-7 Turning on the March and Wheeling. • FD-8 Saluting on the March. • FD-9 Marking time, Forward March and Halt in Quick Time. • FD-10 Changing step. • FD-11 Formation of Squad and Squad Drill. • FD-12 Parade practice. **TAEKWONDO** • Poomsae (Forms)- Jang, Yi Jang. • Self Defense Technique- Self defense from arms, Fist and Punch. • Sparring (Kyorugi)- One step sparring, Two step sparring, Fight (Free sparring). • Combination Technique- Combined kick and punch. • Board Breaking (Kyokpa)- Sheet breaking. • Interpretation Rules above Technique of Taekwondo. **NSS** • No Smoking Campaign • Anti- Terrorism Day Celebration • Any other observation/celebration proposed by Ministry/institute • Public Speaking • Discussion on Current Affairs • Viva voce

<tr><td colspan="2">Pre-requisites</td><td colspan="6">Basic knowledge of topics included in MAC01 & MAC02</td></tr>
<tr><td>Course Outcomes</td><td colspan="7">• CO1: Acquire the idea about mathematical formulations of phenomena in physics and engineering.
• CO2: To understand the common numerical methods to obtain the approximate solutions for the intractable mathematical problems.
• CO3: To understand the basics of complex analysis and its role in modern mathematics and applied contexts.
• CO4: To understand the optimization methods and algorithms developed for solving various types of optimization problems.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module - I
Partial Differential Equations (PDE): Formation of PDEs; Lagrange method for solution of first order quasilinear PDE; Charpit method for first order nonlinear PDE;</td></tr>
</table>

	Homogenous and Nonhomogeneous linear PDE with constant coefficients: Complimentary Function, Particular integral; Classification of second order linear PDE and canonical forms; Initial & Boundary Value Problems involving one dimensional wave equation, one dimensional heat equation and two dimensional Laplace equation. [14 hrs] **Module - II** **Numerical Methods:** Significant digits, Errors; Difference operators; Newton's Forward, Backward and Lagrange's interpolation formulae; Numerical solutions of nonlinear algebraic/transcendental equations by Bisection and Newton-Raphson methods; Trapezoidal and Simpson's 1/3 rule for numerical integration; Euler's method and modified Eular's methods for solving first order differential equations.[14 hrs] **Module - III** **Complex Analysis:** Functions of complex variable, Limit, Continuity and Derivative; Analytic function; Harmonic function; Conformal transformation and Bilinear transformation; Complex integration; Cauchy's integral theorem; Cauchy's integral formula; Taylor's theorem, Laurent's theorem (Statement only); Singular points and residues; Cauchy's residue theorem. [17 hrs.] **Module - VI** **Optimization:** **Mathematical Preliminaries:** Hyperplanes and Linear Varieties; Convex Sets, Polytopes and Polyhedra. **Linear Programming Problem (LPP):** Introduction; Formulation of linear programming problem (LPP); Graphical method for its solution; Standard form of LPP; Basic feasible solutions; Simplex Method for solving LPP. [11 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. An Elementary Course in Partial Differential Equations-T. Amarnath 2. Numerical Methods for scientific & Engineering Computation- M.K.Jain, S.R.K. Iyengar& R.K. Jain. 3. Foundations of Complex Analysis- S. Ponnuswami 4. Operations Research Principles and Practices- Ravindran, Phillips, Solberg 5. Advanced Engineering Mathematics- E. Kreyszig Suggested Reference Books: 1. Complex Analysis-L. V. Ahfors 2. Elements of partial differential equations- I. N. Sneddon 3. Operations Research- H. A. Taha

CHC301	**PROCESS CALCULATIONS**	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (CT) and End Sem Assessment (EA)					
Nil		CT+EA					
Course Outcomes	• CO1: Learn fundamentals of units and dimension, dimensionless groups and their implications. • CO2:Graphical interpretation of experimental data, use of log-log and semi log plots for non-linear equations • CO3:Understanding of mass and energy balance for various chemical processes • CO4:Understanding the Ideal gas equation, Raoult's law, Henry's law, and psychrometric property						
Topics Covered	**Module - I** Units and dimension, Dimensionless groups and their significance, Dimensional homogeneity and analysis: Buckingham's pi theorem and its application, repeating variables, Rayleigh methods, Stepwise methodology Adiabatic Flame Temperature and its importance, Energy balance in thermal reactor, Computation of AFT, effect of temperature and pressure Basic understanding of application of semi-log and log-log graph, Unit operation and experimental data fittings in log-log and semi-log graph paper, Problem-solving techniques [9 hrs.] **Module - II** Ideal gas laws and its significance, Molar concept, Concept of partial pressure & partial volume, Dalton's law and Amagat's law and Numerical problems on their applications Fundamental concept of vapor pressure & boiling point, Clausius-Clapeyron equation, Antoine equation and numerical problems on their applications, Numerical problems on Duhring& Cox plots. Ideal& non-ideal solutions, Raoult's law, Henry's law and their applications in numerical problems. [8 hrs.] **Module - III** Concept of Material balance, basis of calculation, bypass and recycling operation, various problems on material balance- drying, evaporation, crystallization, leaching. Material balance with chemical reaction. Atmospheric air and its composition, the property of moist air and ideal gas law, Humidity and its significance, various humidity/saturation terms like molar, absolute, relative & percentage saturation Fundamental concept of dry-bulb, wet-bulb, adiabatic saturation temperatures, and dew point. Psychometric/humidity chart and its application							

	Humid volume, enthalpy and specific heat of moist air, humidification and de-humidification operation and material balance. Theoretical analysis and Energy balance during adiabatic saturation and wet bulb temperature [13 hrs.] **Module - IV** Energy conservation laws, Energy balance, Laws of thermodynamics with examples, Enthalpy calculation for systems without Chemical Reaction, Estimation of Heat Capacities of solids, Estimation of Heat Capacities: liquids and gases. Heat of fusion and vaporization. Enthalpy calculation for systems with Chemical Reaction, Calculations of heat of reaction, heat of combustions, heat of formation and heat of neutralization, Kopps rule Effect of Temperature and Pressure on Heat of Reaction, Hess's Law, Application of Energy balance to problems of various chemical processes [12 hrs.] • **Tutorial on above topics and class tests (14)**
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Basic Principles and Calculations in Chemical Engineering – David Himmelblau, PHI <u>Suggested Reference Books:</u> 1. Chemical Process Principles – Hougen and Watson, Part-I, CRC Press, CBS. 2. Stoichiometry-4thedn, Bhatt and Vora, Tata Mc-Graw Hill

• CO3: Apply the concept of phase equilibrium to multi-phase systems.</td></tr>
</table>

	• CO4: Solve problems of single and multi-phase chemically reactive systems using the concept of chemical reaction equilibrium.
Topics Covered	**Module - I** Scope of thermodynamics and fundamental concepts. Microscopic and microscopic view. First law of thermodynamics: Applications to batch and flow systems. Second and third law of thermodynamics: Reversibility and irreversibility, Carnot cycle, entropy, free energies, exergy [5 hrs.] **Module - II** Real gases: Equations of state, compressibility charts, departure functions Thermodynamics of flow processes: Single and multi-stage compression, expansion through nozzles. Refrigeration and liquefaction of gases: Vapour compression, cascade, absorption and gas refrigeration cycles, Choice of refrigerants, Linde and Claude processes of liquefaction of gases. [9 hrs.] **Module - III** Thermodynamic property relations: Maxwell's relations and thermodynamic functions of pure substances. Residual properties, fugacity. [5 hrs.] **Module - IV** Solution thermodynamics and phase equilibrium: Multi-component gaseous systems and solution. Partial molal properties and thermodynamic potential, criteria for equilibrium, thermodynamic properties of solutions, Gibbs-Duhem equation and consistency of thermodynamic data. Activity and activity coefficient, estimation of activity coefficient- Margules and Van laar equations, ASOG and UNIFAC methods. Generation of VLE data. Calculation of bubble and dew points of ideal and non-ideal solutions. Azeotropes. systems. Phase equilibrium at elevated pressure. [12hrs.] **Module - V** Chemical reaction equilibrium: Estimation of equilibrium constant. Homogeneous reactions. Heterogeneous reactions. [9hrs.] Tutorial on above topics and class tests. [14 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Chemical Engineering Thermodynamics – J. M. Smith & H. C. Van Ness and M. M. Abbott (Tata McGraw Hill) 2. Fluids and fluid properties, continuum concept, Fluid statics: Pressure and pressure measuring devices, Fluid kinematics, different flow regimes, equation of continuity. Boundary layer, Skin and form friction. [6 hrs.]
Module - II
Bernoulli’s equation, Hagen-Poiseuille equation, Fanning’s equation and their applications
Pipes, fittings and valves. Pressure losses due to sudden expansion, contraction and fittings
Navier-Stoke’s equation and total energy balance equation
Turbulent flow, Reynold’s stress, universal velocity profile [16 hrs.]
Module - III
Flow past solid surface, drag, flow through packed bed, fluidization, pneumatic conveying
Flow of compressible fluids, flow through convergent-divergent nozzles
Non-Newtonian fluids: Their characteristics and calculation of pressure drop due to their flow through pipes
Flow measuring devices: Orificemeter, venturimeter, rotameter, weirs, anemometer, pitot tubes, etc. [11hrs.]</td></tr>
</table>

	Module - IV Fluid machineries: Pumps, blowers and compressors [10hrs.] Tutorial on above topics and class tests [14 hrs.]

CYC 331	**CHEMISTRY - II**	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Engineering Chemistry CYC 01		CT+MT+EA					
Course Outcomes	• CO1: To learn advanced analytical techniques useful for chemical engineering. • CO2: To learn the few catalytic process commonly used in industrial applications. • CO3: To learn thermodynamics of solutions and understanding of phase diagrams of single and multicomponent systems. • CO4: To learn fundamentals of fats, oils and carbohydrate chemistry together with basics of large scale organic synthesis.						
Topics Covered	**Module - I** Organic Chemistry Organic C-C bond formation: application of Grignard reagents, ethyl acetoacetate and malonic esters. Principles of large scale organic synthesis having industrial importance.						

	Carbohydrate chemistry: Classification, structure elucidation. Reactions of glucose and fructose; mutarotation, inversion of cane sugar. Fats and oils, soaps and detergents.[11 hrs.] **Module - II** Inorganic Chemistry Application of coordination compound in analytical chemistry: complexometric titration, biological application. Analytical methods used to metal ions estimation: Gravimetric, UV-Vis spectrophotometric, atomic absorption spectrometric, solvent extraction etc. Catalyst: General principles, homogeneous catalysts: hydrogenation of alkenes, hydroformylation, methanol carbonylation, Wacker oxidation of alkenes etc. Heterogeneous catalyst: hydrogenation catalysts, ammonia synthesis, alkene polymerisation (Zigler Natta catalyst). [11 hrs.] **Module - III** Physical Chemistry Thermodynamic condition of chemical equilibrium, Chemical potential, Activity, Fugacity, Gibbs-Duhem equation, Duhem-Margulesequatuion. 1st and 2nd order transition. Transition state theory towards rate of elementary chemical reaction, salt effect on rate of a chemical reaction. photochemical and photophysical processes, Jablonsky diagram. Phase rule and its derivation, phase diagram of CO_2, H_2O and Sulphur system, two component system, solid-liquid and binary liquid mixture, fractional distillation, steam distillation, azotrope, ideal and nonideal solution, Routs law and Henrys law, Colligative properties. Conductance and tansport number, Buffer solution, Debye-Huckel limiting law, Salt effect and common ion effect on solubility of weak electrolytes. Ion-solvent and ion-ion interaction. Electrochemical cell with transference: liquid junction potential. [15 hrs.]

FOURTH SEMESTER

Department of Chemical Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)#	Total Hours	
CHC401	**HEAT TRANSFER**	**PCR**	**3**	**1**	**0**	**4**	**4**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
CHC301, CHC303		CT+EA					
Course Outcomes	• CO1:Illustrate principles and laws of heat transfer of different heat exchanging phenomena • CO2**:** Solve heat transfer problems of different difficulty levels • CO3**:**Design and analyze heat transfer equipment						
Topics Covered	**Module - I** Mechanism of heat transmission: Conduction, Convection and Radiation. Conduction: Fourier's law; Steady-state heat transfer through plane wall and composite slabs, cylinders and spheres; Thermal contact resistance, Critical thickness of insulation, Optimum thickness of insulation; Unsteady-state heat transfer - use of Gurnie-Lurie chart, one and two-dimensional conduction in different geometry. [10 hrs.] **Module - II** Convection: Forced convection; Heat transfer coefficients; Overall Heat Transfer Coefficients; Log-mean temperature difference; Dimensional analysis of heat transfer; Equivalent diameter; General equation for forced convection; Thermal boundary layer; Analogy between heat and momentum transfer. [10 hrs.] **Module - III** Natural convection: Empirical equations; Condensation: Film Condensation, Derivation of heat transfer coefficient, Empirical equations; Boiling of liquids: Concept of excess temperature, Pool boiling, Forced convection boiling; Radiation: Black body and Gray body; Laws of radiation; View factor; Radiant heat exchange between surfaces [12hrs.] **Module - IV** Heat exchangers: Type of different heat exchangers and their design - Double pipe, Shell and tube, Finned tube and Compact heat exchangers; Condensers and reboilers. Evaporation: Type of evaporators with accessories; Capacity and Steam economy; Boiling point rise/elevation; Multiple effect evaporators; Design of single and						

	multiple effect evaporators. [10 hrs.] Tutorial on above topics and class Tests [14 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Process Heat Transfer: D. Q. Kern, MGH 2. Heat Transfer Principles and Application, B. K. Dutta, PHI. SuggestedReference Books: 1. Heat Transfer: An Engineering Approach: Cengel and Boles, Tata Mc-Graw Hill

CHC402	**MECHANICAL OPERATIONS**	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Fluid Mechanics		CT+MT+EA					
Course Outcomes	• CO1: Identify principles of separation of liquid-solid, gas-solid, and solid-solid • CO2: Design and analyze mechanical operation equipment • CO3: Compare performances and select type of size separation, solid-liquid separation and size reduction equipment • CO4: Learn industrial applications of size separation, solid-liquid separation, size reduction equipment						
Topics Covered	**Module - I** Particle size and shape, particle size distribution: Determination of mean particle size, Sieve analysis, Industrial screens, Effectiveness of screens Size reduction and classification of solid particles: Principles of crushing and grinding, Equipment – selection, Operating principles of Coarse crushing equipment, Intermediate & Grinding equipment, Laws of crushing and grinding – limitation and applicability Size enlargement: Granulation and other size enlargement operations. [18 hrs.]						

	Module - II Agitation and mixing: solid-solid mixture, solid-liquid paste and solution preparation, Types of equipment and power requirement, Mixing Index.[8 hrs.] **Module - III** Fluid – particles separation: Terminal settling velocity, free and hindered settling, equal settling velocity and sedimentation; Classifications and clarifications; Settling chambers, thickening, tabling, jigging, floatation, centrifugal separators, centrifuge, cyclone separators, electro-static precipitator, magnetic separator, etc. [8 hrs.] **Module - IV** Filtration: Introduction; Types of filtration; Filtration equations; batch and continuous filtration equipment – Bed, Plate and Frame, Leaf and Rotary Drum Vacuum Filters; Filter Aid and Filter Medium; Washing Conveying of solids: Bins, silo and hoppers, Conveyors and elevators, Hydraulic and pneumatic transport [10 hrs.] Tutorial on above topics and class tests [14hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. G. G. Brown, Unit Operations, CBS Publishers & Distributors, 2005 2. W. McCabe. J. • CO2 Various laws of mass transfer and mass balance of chemical processes
• CO3 Design and analyze mass transfer equipment through problem solution</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module - I
Mass transfer operation and principles. General principles of diffusion process, Molecular and eddy diffusion in fluids, Diffusion in solids and measurement of diffusivity, Multi-component diffusion, Diffusion through a variable area, Knudsen diffusion, surface diffusion and self-diffusion [10 hrs.]
Module - II
Convective mass transfer and mass transfer coefficients: Introduction. Dimensionless groups in mass transfer and correlations for the convective mass transfer coefficient. Theories of mass transfer, Analogy between Momentum, Heat and Mass Transfer, Inter-phase mass transfer and Basic laws, Two-film theory, overall mass transfer coefficient, Material balance in contacting equipment – the operating line and Mass transfer in stage-wise contact of two phases. [10 hrs.]
Module III
Gas absorption and stripping: Introduction. Design of a packed tower: Design method based on individual mass transfer coefficients. Design method based on the overall mass transfer coefficient. Determination of the number of stages in a tray tower, HETP, Tray efficiency, Gas-liquid contacting equipment, tray or plate column, operational features of tray column: Hydraulic gradient and multi-pass trays, weeping and dumping, entrainment, flooding, turndown ratio and estimation of diameter of tray. [12 hrs]
Module IV
Elementary idea about multi-component absorption and adsorption with chemical reactions. Extraction: Liquid-liquid extraction, Equilibrium data, Use of triangular diagrams, selectivity and choice of solvent, Single and multi-stage calculation in liquid-liquid extraction. Extraction efficiency, Principles of leaching and stage calculation methods. [10 hrs.]
Tutorial on above topics and class Tests [14 hrs]</td></tr>

CO3	3		3		3		1		1		3	

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Department of Chemical Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEC 432	**MECHANICAL DESIGN OF EQUIPMENT AND COMPONENTS**	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	• CO1: To develop a workable idea of the thermo-mechanical behaviour of industrial equipment used in various chemical industries. • CO2: To study the application of different thermodynamic principles for thermal system design • CO3: To learn the concepts of stress and strain, the properties of engineering materials, and the methods of machine design pertaining to chemical engineering						
Topics Covered	**Module – I** Relation between system and control volume approaches, Equation of states. Zeroth, first and second law of thermodynamics. Gouy-Stodola theorem; Applications of SFEE. Carnot cycle, reversed Carnot cycle, Heat engine, heat pump and refrigerators. First and second law-based performances.Properties of pure substances, Vapour power cycle—Rankine cycle. Air standard cycles—Otto, Diesel, dual and Joule-Brayton cycles. [20 hrs.] **Module – II** Review of stress, strain and deformation. Engineering materials and their properties. General principle of machine design. Factor of safety,Use of data book in mechanical design. Design of shaft and key, Mechanical drives: Introduction to simple gear drive and belt drive. Types of pressure vessels: Thin cylinder and thick cylinder. [20 hrs.]						

Text Books, and/or reference material	Suggested Text Books 1. Y. A. Cengel and M. A. Boles, Thermodynamics: An Engineering Approach, McGraw-Hill. 2. M. Zemansky and R. Dittman, Heat and Thermodynamics, McGraw-Hill. 3. V B Vhandari, Design of Machine elements [3rd edition] Suggested Reference Books: 1. M. Planck. Treatise on thermodynamics. Dover. 2. E. P. Gyftopoulos, G. P. Beretta, Thermodynamics: Foundations and applications, Dover.

Pre-requisites		Course Assessment methods (Continuous evaluation (CE) and end assessment (EA))					
CHC 303 [Fluid Mechanics]		CE+EA					
Course Outcomes	•CO1 To prove experimentally laws/equations like Bernoulli's equation, Fanning's equation, etc. •CO2. To determine discharge coefficients of flow meters like orifice and venture meter, and velocity profiles using pitot tube •CO3. To determine K factor of pipe fittings and valves •CO4. To draw characteristic curves of pumps •CO5. To create an experimental understanding of laminar and turbulent flow regimes						
Topics Covered	1. To study different types of flow using Reynold's apparatus. 2. To verify Bernoulli's equation experimentally. 3. To determine point velocity by using Pitot tube. 4. To determine flow velocity by using Venturi meter and Orifice meter. 5. To study the flow characteristic in packed bed. 6. To study the flow characteristic in a helical coil. 7. To study the reciprocating pump characteristics.						

	8. To determine the losses due to friction in pipes and fittings. 9. Flow measurement by using V-notches [36 hrs]
Text Books, and/or reference material	<u>Suggested Text Books</u> 1. Transport Processes and Unit Operations - C. J. Geankoplis 2. Principle of Unit Operations – Foust A S, Wenzel L A, Curtis W, Maus L, Anderson L B (Wiley) <u>Suggested Reference Books:</u> 1. W. McCabe. J. Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		Report submission and Viva-Voce					
Course Outcomes	• CO1: Knowledge of basics of process equipment design and important parameters of equipment design • CO2: Ability to choose material for equipment design • CO3: Ability to design pressurize vessels and various parts of vessels • CO4: Knowledge of equipment fabrication and testing methods						
Topics Covered	1. Introduction to the basic principles and criteria of pressure vessel design. 2. Unfired pressure vessels with internal and external and external pressure. 3. Introduction to standards, codes and regulations. 4. Selection of material and design of various parts of vessel 5. Design of storage vessels and their design. 6. Design of supports for vertical and horizontal towers. 7. Pipe joints and fittings, gaskets. 8. Sketching and drawing of vessel						

	9. Numerical solutions for vessel design [36 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Process Equipment Design by Lloyd E. Brownell & Edwin H. Young 2. Process Equipment Design by M. V. Joshi Suggested Reference Books: 1. Introduction to Chemical Equipment Design: Mechanical Aspects by B. C. Bhattacharya 2. Plant Design and Economics for Chemical Engineers by M.S. Peters and K.D. Timmerhaus 3. Chemical Process Equipment: Selection and Design by James R. Couper

Workshop							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Contact Hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
WSS481	**ADVANCED WORKSHOP TECHNOLOGY**	PCR	**0**	**0**	**3**	**3**	**3**
Pre-requisites WSS51 (Workshop Practices)		Course Assessment methods : Viva-voce, Checking Job, Report					
Course Outcomes	• CO1: Acquiring the skills in conventional machining operations like turning, milling and knowledge in machine tools. • CO2: Acquiring the skills in CNC machining. • CO3: Acquiring the skills in Pattern making. • CO4: Acquiring the skills in Foundry.						
Topics Covered	Machine Shop : 1) Introduction to lathe Machine. 2) Explanation of All Gear Headstock Mechanism. 3) Explanation of Norton Gearbox Mechanism with Tumbler Gear Arrangement. 4) Job on Lathe & Milling Machine. CNC Shop : 1) Introduction to Conventional Machine, NC Machine & CNC Machine with their advantages & disadvantages.						

	2) Explanation of various G Codes & M Codes. 3) Introduction to programming on CNC Lathe & CNC Milling Machine. Pattern Shop : 1) Introduction to Pattern Shop 2) Drawing Orthographic Projection of a “V Block“ Pattern using Pattern Maker Scale on a wooden board. 3) Preparation of a Wooden V Block Pattern using various carpentry tools in accordance with the previously prepared drawing. Foundry Shop : 1) Introduction to Metal Casting Process. ❖ General Foundry Safety Precautions. ❖ Process Selection of Casting. ❖ Classification of Pattern with Allowances. ❖ Tools & Equipment used in hand moulding. ❖ Organic & Inorganic Bonding agents used in moulding sand. ❖ Furnaces used for Melting. ❖ Casting Defects & their remedies. 2) Testing of Green Moulding Sand ❖ Preparation of Standard Sand Sample. ❖ Determining Moisture Content of Green Moulding Sand. ❖ To determine Green Compressive Strength of Sand Sample. ❖ To determine Green Shear Strength of Sand Sample. ❖ Determination of Permeability of Sand Sample. ❖ Mould Hardness Test. 3) Preparation of green sand mold using Split Pattern. 4) Preparation of green sand core using Split Core Box. 5) Casting of the above mould using Aluminium. 6) Foundry Tooling Design of Gate Valve Body with Selection of Parting Plane, Riser & Gating Design, Use of Chaplet, Chills & Ceramic Filters. [36 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Elements of Workshop Technology (Volume I and II) by Hazra and Choudhury 2. Workshop Technology by W.A.J. Chapman 3. A Course in Workshop Technology by Raghuwanshi Suggested Reference Books: 1. Principles of Foundry Technology by P.L. Jain 2. Production Technology, hmt

• CO2: Design and analyzeideal and non-ideal chemical reactors and bioreactors
• CO3: Design and analyze the fluid-solid catalytic &noncatalytic reactors, and fluid-fluid reactors</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module - I
Review of elements of reaction kinetics: The rate expression, mechanism of reactions, Arrhenius’ equation.
Interpretation of rate data: Constant volume and variable volume batch reactors [6 hrs.]

Module - II
Single homogeneous reaction: Design of isothermal and adiabatic batch, plug flow and back mix reactors
Multiple reactions: Independent, parallel and series reactions, autocatalytic reactions. Choice of reactors for single and multiple reactions and multiple reactor systems [12 hrs.]

Module - III
Biochemical reactions: Enzyme-catalyzed and biomass growth reaction kinetics, design of bioreactors
Non-ideal flow in reactors:, residence time distribution of fluid in vessels, RTD in ideal and non-ideal reactors, modeling of non-ideal reactors [8 hrs.]

Module - IV
Solid-fluid catalyzed reactions: Catalysis, porous catalyst, steps in catalytic reactions, surface kinetics, pore diffusion resistance, performance equations, interaction of physical and chemical rate processes, effectiveness factor, selectivity, product distribution in multiple reactions, effect of pore distribution, experimental methods. Catalytic reactors
Fluid-fluid reactions: Overall rate equations, application to reactor design [9hrs.]

Module - IV
Solid-fluid noncatalytic reactions: Shrinking core model, determination of rate-</td></tr>

CHC 502	**MASS TRANSFER-2**	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CHC 403, CHC301		CT+MT+EA					
Course Outcomes	• CO1: Understanding fundamentals of some major Mass transfer operations • CO2: Application of design principles for mass transfer devices • CO3: Learning operations of various mass transfer systems • CO4: Building foundation for process intensification • CO5:Motivation towards innovations for novel systems of mass transfer						
Topics Covered	**Module-I** Humidification & Dehumidification Operations: Principles of Humidification & Dehumidification Wet & dry bulb thermometry, Construction and use of humidity charts, characteristics of saturated and unsaturated vapor- gas mixtures, design & operation of cooling tower, Design problems [10 hrs.] **Module-II** Drying: Theory and mechanism of drying, steady and unsteady state drying, classification and selection of industrial dryers, estimation of drying rates, drying characteristics of materials, performance and design of batch and continuous dryers [10 hrs.]						

	Module-III Distillation processes: Vapor- liquid equilibrium, relative volatility, azeotropism, Equilibrium and flash distillation, types of distillation columns and construction, Rectification of binary systems, enthalpy-composition diagram and construction. [6 hrs.] **Module-IV** Rectification column design methods: Lewis-Sorel &Ponchon–Savarit, McCabe-Thiele method, Design problems [6 hrs.] **Module-V** Special distillation processes: Membrane, molecular, extractive, catalytic Distillation, multi-component Distillation & introduction to ASPEN PLUS [9 hrs.] **Module-VI** Theory of crystallization, Nucleation and crystal growth, Batch and continuous crystallizers, Design calculations for crystallizers [3 hrs.] **Module- VII** Membrane separation basics, classification, transport & exclusion mechanisms, Membrane modules and design problems on micro, ultra, nano& reverse osmosis [3hrs.] Tutorial on above topics and class Tests [14 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Unit Operations of Chemical Engineering: W.L. McCabe & J.C. Smith 2. Principles of Mass Transfer & Separation Processes: B. K. Dutta 3. Mass Transfer Operations: R.E. Treybal Suggested Reference Books: 1. Introduction to chemical engineering: W.L.Badger&J.T.Banchero 2. Membrane Science & Technology, Osada& Nakagawa 3. Industrial Water Treatment Process Technology, P. Pal, Elsevier Science 4. Chemical Engineering: Coulson & Richardson 5. Principles of Unit Operation: C. J. Geankoplis

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)#	Total Hours	
CHC503	**CHEMICAL PROCESS TECHNOLOGY**	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Knowledge of Unit operations and Unit processes		CT+MT+EA					
Course Outcomes	• CO1:Ability to understand the manufacturing of various inorganic and organic chemicals. • CO2: Ability to understand the process flow diagram and various process parameters. • CO3: Ability to identify and solve engineering problems during production. • CO4: Knows current scenario of chemical & allied process industries.						
Topics Covered	**Module I:** Basic philosophy of a process flow diagram (PFD). Elements of a PFD. General discussion on Influence of various parameters on deciding process for a product and method of drawing PFD. Water-sources and it's economic use. Water conditioning processes, Industrial waste water treatment - different processes Industrial production of oxygen and nitrogen, cryogenic and non-cryogenic processes. Hydrogen manufacture from different source-steam reforming and partial oxidation processes. Cement, glass, ceramic industries: Raw materials, principles of manufacture, flow-sheet [20 hrs.] **Module II:** Chlor-alkali industries: Production and consumption pattern, manufacture of Chlorine-caustic soda: Raw materials, principles of manufacture, Mercury-cathode & Membrane process: flow-sheet and sequence of operation, other processes, advancement of process technology and major engineering problems, uses. Soda-ash: Production and consumption pattern, Raw materials, Solvey process Physico-chemical principles of manufacture, carbonation and ammonia recovery step, flow-sheet and sequence of operation, other processes, advancement of process technology and modified Solvey process, major engineering problems, uses. [12 hrs.] **Module III:** Industrial Acids: Hydrochloric Acid: Raw materials, principles of manufacture, flow-sheet and sequence of operation, Sulfuric acid: sulfuric acid production process, Contact process, Physico-chemical principles and general theory of contact reaction with						

	thermodynamic and reaction engineering aspects, different types of catalyst, DCDA process, uses. Nitric Acid: Raw materials, Ostwald Process –physico-chemical principles, catalyst, process flow sheet, Phosphoric Acid: Raw materials, manufacturing process with process flow sheet [5 hrs.] **Module IV:** Fertilizer Industries: Nitrogenous fertilizers: Synthesis of ammonia- physico chemical principles, catalyst for synthesis of ammonia, process flow sheet, Urea - Raw materials, manufacturing process with flow sheet, sequence of operation, Ammonium sulphate: Raw materials, manufacturing process with flow sheet, Phosphatic fertilizers: Manufacturing process of super phosphate of lime ,triple super phosphate and ammonium phosphate, Mixed fertilizers: NPK –manufacturing process, details of major equipment.[7 hrs.] **Module V:** Organic chemical industries Oils & Fats: Methods of extracting vegetable oils, Hydrogenation of oils, major engineering problems and improved technology Soaps, Detergents &Glycerin: Classification of cleaning compounds, uses, Methods of soap production, Methods of detergent manufacture, Methods of production of Glycerin. Process description& flow sheet of each process. Sugar and starch industries: Manufacturing process with flow diagram, Sugar refining, manufacturing process of starch and their different by-products; Glucose, Sorbitol & PolyolsPulp and paper Industries, technology and manufacturing methods, world market [12hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Dryden, C. E., and Rao, M.G. (Ed.), Outlines of Chemical Technology Affiliated East West Press. 2. Austins, G.T., Sherve's Chemical Process Industries, MGH 5thEdn. Suggested Reference Books: 1. Venkateswarlu, S. (Ed.) Chemtech (II) Chemical Engineering Development Centre, IIT, Madras. 2. S. K. Ghoshal, S. K. Sanyal and S. Datta, Introduction to Chemical Engineering, Tata McGraw Hill, New Delhi. 3. Kirk &Othmer (Ed.), Encyclopedia of Chemical Technology

<tr><td>Course Outcomes</td><td colspan="7">CO1: Understanding the working principle of various measuring instruments like, level, temperature, pressure, flow and concentration etc.

CO2: Process modeling fundamentals: Differential equation models, Laplace transforms, linearization, idealized dynamic behavior, transfer functions, block diagram, and process optimization.

CO3: Evaluate stability, frequency response, and other characteristics relevant to process control.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module I:
Introduction to Instrumentation
Measurement of High temperature, Measurement of Moderate to Low Temperature, Measurement of High Pressure, Measurement of Moderate to Low Pressure, Measurement of gas and liquid flow, Measurement of multiphase flow, Measurement of liquid level & Composition [15hrs.]

Module II:
Process Dynamics & Transfer function
Process Dynamics & Model: I/O model-first-order and second-order process, Linearization and concept of deviation variable, Laplace Transform, Block Diagram, Different forcing function: step, pulse, impulse, ramp, and sinusoid. Lumped and distributed parameter system
Transfer function: SISO & MIMO systems, Transient response of first, second and higher order systems, Transportation lag; Pade approximation, Control valve: Characteristics curves and transfer function. Open loop transfer [10 hrs.]

Module III:
Closed loop systems and Stability
Closed loop systems and its components: Measuring device, Controller, Final Control Element (FCE), transmission line; Block diagram, Servo and Regulator control, closed loop response, Different type of analog controller: P, PI, PD, PID, On-Off.
Concept of Stability: BIBO, characteristics equation, Routh– Hurwitz method, root locus method.</td></tr>
</table>

	Frequency Response Analysis and Controller Tuning: Amplitude Ratio and Phase Lag calculation for: General, first, second and higher order systems, Dead time, P, PI, PD, PID controllers and their respective Bode plot &Nyquist plot; Bode &Nyquist stability criteria; [10 hrs.] **Module IV:** Controller design Empirical tuning criteria: one quarter decay ratio, ISE, IAE, ITAE. Controller tuning: Cohen-Coon, Zeigler-Nicholas method; Elementary idea of feed forward, cascade, ratio, adaptive and digital computer control. Model-based control –Internal model controller [7hrs.]
Text Books, and/or reference material	SuggestedText Book: 1. Process Systems Analysis and Control, Donald Coughanowr McGraw-Hill Science/Engineering/Math; 2 edition (March 1, 1991) 2. Chemical Process control, G. Stephanopoulos, PHI, 2008 3. Essentials of Process Control, Luyben et al. McGraw-Hill Companies (August 1, 1996) Suggested Reference Books: 1. Process control, Thomas Marlin, McGraw-Hill Education; 2nd International edition (July 1, 2000)

Pre-requisites		Course Assessment methods: Continuous (CT) and Viva-Voce					
Basic knowledge of heat transfer		CT+Viva-Voce					
Course Outcomes	• CO1: Apply the knowledge of fundamentals of heat transfer equipment on laboratory						

	• CO2: Experimentation and data analysis • CO3: Handling various instruments and solve various difficulty levels • CO4: Learn industrial applications of heat transfer equipment • CO5: Complete process design through assignment / group task
Topics Covered	1. Determination of overall heat transfer coefficient using plate type heat exchanger 2. Determination of overall heat transfer coefficient for drop wise & film wise condensation 3. Determination of overall heat transfer coefficient using counter flow/parallel flow concentric pipe heat exchanger. 4. Determination of boiling point elevation of aqueous salt solutions. 5. Determination of thermal conductivity of metal rod. 6. Determination of emissivity for black body and test plate. 7. Determination of overall heat transfer coefficient using shell and tube heat exchanger. [36 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Laboratory manual Suggested Reference Books: 1. Process Heat Transfer: D Q Kern 2. Heat Transfer: Principles and Applications: B. K Dutta

Pre-requisites							
	Viva-Voce						
Course Outcomes	• CO1 : Understand of the fundamental principles underlying mechanical operation through practical experimentation. • CO2: Know the principles of different mechanical operation equipment.						

	• CO3: Design and analyse mechanical operation equipment. • CO4: Compare performances and select type of mechanical operation equipment. • CO4: Learn industrial applications of size reduction equipment (k)
Topics Covered	1. To verify Rittinger's Law in a Jaw Crusher 2. To Study comminution through a Ball Mill and calculate its theoretical Efficiency 3. Studies on the performance of the Cyclone Separator-(I. To study the characteristics of a cyclone separator. II. To measure the fractional collection efficiency of different particle size ratio) 4. To determine overall effectiveness of a vibrating screen for a given solid sample of unknown size 5. To determine the mixing index of flour and pulses in kneader mixer 6. To determine the power consumption in a propeller mixer and compare it with the actual power requirements in agitated vessel 7. To run the operation of Plate and Frame Filter Press For filtration of calcium carbonate slurry. (I. To determine the lost quantity of calcium carbonate after filtration process.) 8. To study the influence of different flow rates of water on separation efficiency of an Elutriator 9. To determine average size of a group of particles in a mixture based on volume and surface and graphical representation of screen analysis data for size distribution of the mixture. 10. To study the working of continuous type thickener [36 hrs]
Text Books, and/or reference material	<u>Suggested Text Books:</u> Lab Manual 1. Unit Operations- G. G Brown (CBS Publishers & Distribution) 2. SIXTH SEMESTER

Department of Humanities and Social Sciences							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
HSC631	**ECONOMICS AND MANAGEMENT ACCOUNTANCY**	PCR	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
NIL	CT+MT+EA

Course Outcomes	• CO1: To review basic economic principles with students; • CO2: To introduce students basic capital appraisal methods used for carrying out economic analysis of different alternatives of engineering projects or works; • CO3: To educate the students on how to evaluate systematically the various cost elements of a typical manufactured product, an engineering project or service, with a view to determining the price offer.
Topics Covered	**Module I:** PART 1: Economics Group A: Microeconomics Economics: Basic Concepts Theory of Production, Cost and Firms, Analyses of Market Structures: Perfect Competition, Monopoly Market, General Equilibrium & Welfare Economics [14 hrs.] **Module II:** Group B: Macroeconomics Introduction to Macroeconomic Theory, National Income Accounting, Determination of Equilibrium Level of Income, Money, Interest and Income, Inflation and Unemployment, Output, Price and Employment. [14 hrs.] **Module III:** PART 2: Accountancy Introduction to Accounting, Financial Statement Preparation and Analysis Financial Ratio Analysis. [14 hrs.]
Text Books, and/or reference material	Suggested Text Books 1. Koutsoyiannis: Modern Microeconomics 2. Maddala and Miller: Microeconomics 3. Gupta, R. L. and Radhaswamy, M: Financial Accounting; S. Chand & Sons 4. Ashoke Banerjee: Financial Accounting; Excel Books 5. W. H. Branson: Macroeconomics – Theory and Policy (2nd ed) 6. N. G. Mankiw: Macroeconomics, Worth Publishers Suggested Reference book 1. Dornbush and Fisher: Macroeconomic Theory 2. SoumyenSikder: Principles of Macroeconomics 3. AnindyaSen: Microeconomics: Theory and Applications 4. Pindyck&Rubenfeld: Microeconomics 5. Maheshwari: Introduction to Accounting; Vikas Publishing 6. Shukla, MC, Grewal TS and Gupta, SC: Advanced Accounts; S. Chand & Co.

CHC601	**TRANSPORT PHENOMENA**	PCR	3	1	0	4	4
Pre-requisites CHC301, CHC303,CHC401, CHC403,CHC501, CHC503		CourseAssessment methods(Continuous (CT)andend assessment(EA))					
		CT+EA					
Course Outcomes (CO)	• CO1:To createan understanding on universal approach of transport phenomena and fundamental transport processeslike mass, momentum and energy. • CO2:Togivean understanding onshellbalancetechnique, setting of boundaryconditions etc.fordifferent geometryofasystem • CO3:TodevelopNSE, equation ofcontinuity, equationofenergyetc. from thefundamental conceptofconservation • CO4:To solveproblemsonmass,momentumandenergytransportusing						

Topics Covered	**Module I** Transport Phenomena: Basic concepts, fundamental transport Processes and theirrelation, transport properties, measurement of properties, boundary conditionsetc. [6hrs.] **Module II:** Momentumtransport phenomena: Shell balance technique, Derivationmomentum,velocity, shear force. in rectangular, cylindrical and spherical coordinate systems by using shell balance, Equation of continuity and change (mass, momentum & energy), Navier stokes equation (NSE), Euler equation, application of NSE in rectangular, cylindrical and spherical coordinate systems. [10 hrs.] **Module III :** Flow of fluids in thin films, parallel plates, circular tubes and annulus, adjacent flow of two immiscible fluids, couette flow, rotating surface flow and radial flow, flow near a wall suddenly set in motion.[10 hrs.] **Module IV:** Energy transport: Basic energy transport equations, derivation using elementar y volume concept and conservation theorems in different coordinate system, analysis of energy transport using hell balance techniques and basic transport equations. [8 hrs.] **Module V:** Conduction with energy sources in fixed bed catalytic reactors and in cooling fins, forced convection circular tubes, natural convection from a heated plate and unsteady state conduction of inthe slab [10 hrs.] **Module VI:** Mass transport : Types of fluxes and their relation, continuity equation for a binary mixture, boundary conditions , analysis of mass transport using shell balancetechniques andequation of continuity fordifferent coordinate systems, steadyand unsteadystate systems, diffusion in porous catalyst with and without chemical reaction, diffusion in falling liquid film, turbulent mass flux, interphasemass transport [12hrs.]
TextBooks , and/or reference material	Suggested TextBooks: 1. TransportPhenomena byBird,Stewart&Lightfoot, Wiley, 2nd Edition,2010. 2. Introduction toTransportPhenomena:Momentum, HeatandMassby BodhRaj, PHILearning, 2012 Suggested ReferenceBooks: 1.TransportPhenomena:AUnified Approachby Brodkey&Hershey,McGraw-HillChemicalEngineering Series,BrodkeyPublishing, 2003

Pre-requisites			Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))				
None			CT+MT+EA				
Course Outcomes	• CO1: Understanding technical, economic, environmental and international market issues in petroleum refining business • CO2: Understanding correlation of petroleum properties with system design and operation • CO3: Understanding design and safe operation of complex refinery units for various petroleum products • CO4: Knowledge of application of Chemical Engineering Principles in one of most relevant industrial sectors of the economy • CO5: Ignited minds with passion for innovation and sustainable development						
Topics Covered	**Module I:** Petroleum - Origin and Occurrence, Exploration, Estimation and recovery [3 hrs.] **Module II:** Evaluation of crude, Properties, testing and specifications of petroleum products [6hrs.] **Module III:** Technical, Economic, environmental and societal issuesinPetroleum Refining and marketing business. [4 hrs.] **Module IV:** Processing of Crude Petroleum: crude pre-treatment, Atmospheric and Vacuum distillation, column control schemes. [6 hrs.] **Module V:** Cracking, Reforming, Vis-breaking, Delayed Coking processes to cater to the market demand of various petroproducts, Environmental pollution associated with such processing and abatement strategies [10 hrs.] **Module VI**: Rebuilding possibilities with small molecules**:** Alkylation, Isomerization. [3 hrs.] **Module VII:** Production of finished petroleum goods like, LPG, Kerosene, Petrol, Diesel, Lubricating Oil, Bitumen, Hydro processing; Innovations and novel approaches in Hydrogen production as green fuel. [10 hrs.] **Module VIII:** Petrochemical- feedstocks, classification of petrochemicals, Cracking of raw feed stock for intermediate feed stock production, manufacture of importantpetrochemicalproducts [8 hrs.]						

Text Books, and/or reference material	Suggested Text Books: 1. Petroleum Refining Engineering: W.L. Nelson 2. Advanced Petroleum Refining: G.M. Sarkar 3. Modern Petroleum Refining: B.K.B. Rao 4. Petroleum Refining: J.P. Fauquier 5. Petroleum Refining Technology: Ram Das Suggested Reference Books: 1. Catalytic Naphtha Reforming: Sc. & Technology: G.M. Antos, A.M. Aitani, J.M. Pereira 2. Environmental Control in Petroleum Refining: J.C. Reis 3. Petroleum Refining Technology & Economics: J.H. Gary & G.E. Handwerk 4. Petrochemicals Technology: B.K.B. Rao 5. Lubricant base oil and wax processing: AvilinoSequeira Jr. 6. Hydrocarbon Technology Journal (Center for High Technology, Delhi)

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHC 603	**PROCESS MODELLING AND SIMULATION**	PEL	3	0	0	3	3
Pre-requisites: Process calculation, Engg. Math I-III			Course Assessment methods (Continuous (CT), Midterm (MT) and end assessment (EA))				
			CT+MT+EA				
Course Outcomes	• CO1: Understanding the principle ofmass, energy and momentum conservation equations. • CO2: Concept of steady state and unsteady state model equations • CO3: Numerical techniques to solve Algebraic, ODE and PDE (a,c,e) • CO4: Solution of various model equationsand graphical presentation (a,c,e, m)						
Topics Cove	**Module I:** Introduction to Mathematical Model and its Necessity: Empirical relationship, experimentation, data interpretation, correlation and mathematical modelling using						

red	example Model Development Principles and Classification of Models: Dimensional Analysis, Synthesis of sub-models, Experimental facts, Hypothesis, Scale up concept, Steady state, unsteady state model, dynamic response, Constitutive relationships, Deterministic and Stochastic – Macroscopic diffusion equation, Lumped and Distributed Parameter - Stirred tank and plug flow models, Linear and non-linear models Conservation principles of mass and energy and momentum balance equations and Modelling of few simple systems**,** Gravity flow tank, Flash drum, Distillation column, Double pipe heat exchanger, Gas-liquid absorption column, CSTR, Batch reactor, Plug flow reactor. **[**18 hrs.] **Module II:** Development of dynamic model, Input output model vs. state model, system parameters, numerical integration,Linear models and deviation variables, linearization of non-linear models, System with one state variables, one input. State space model, Heated mixing tank, Isothermal CSTR, Non-isothermal CSTR with 2^{nd} order chemical reaction, linearized model for the system and state space representation, Stability analysis and Eigen values. Model development of Pyrolysis, Combustion, Gasification process of coal and biomass and comprehensive modelling in TGDA, Isothermal mass loss Apparatus. [12 hrs.] **Module III:** Specialized Modeling for distributed parameter system: Distributed parameter system and model equations,the general conservation equation and interpretation of individual terms, the, Detail derivation of Finite Volume Method (FVM) and its application to steady state diffusive, convective and convective-diffusive problem. Extensions of the same for unsteady state operation, Presence of non-linear reaction terms, radiation term and linearization technique. Solution ofmodel equations. [14hrs.] Tutorial and class test [14 hrs.]
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1.*Lyuben*, W.L, *Process Modelling*, Simulation and Control, McGraw-Hill, N.Y. 1990. <u>Suggested Reference books:</u> 1. Patankar, S. V., 'Numerical fluid flow and heat transfer', 1980, Hemisphere

Pre-requisites							
		Viva-Voce					
Course Outcomes	• CO1: Demonstrate and understand the principles of fuel properties testing instrument. • CO2:Conduct the experiments for determination of properties of different fuels. • CO3:Analyze the performance of equipment through group tasks.						
Topics Covered	1. Proximate Analysis of Coal determines the moisture ash, volatile matter and fixed carbon of coal in terms of weight percentage. 2. Shattering Index of Coke 3. Caking Index 4. Swelling Index 5. Viscosity of Fuel Oils 6. Determination of Flash point and Fire point of an oil by closed cup Pensky Martin Apparatus 7. Determination of moisture content of fuel oil by Dean and Stark Apparatus 8. Aniline point determination by thin film 9. Determination of vapour pressure of petroleum products using Reid Apparatus. 10. To perform atmospheric distillation of petroleum product and to find out percent recovery, percent total recovery, percent loss, percent residue. 11. Determination of calorific value of solid fuel by Bomb Calorimeter 12. Determination of carbon residue of fuel by Conradson Method [36 hrs.]						
Text Books, and/or reference material	Suggested Text Books: 1. Modern Petroleum Refining: B. K. B. Rao 2. Fuels & Combustion: Samir Sarkar Suggested Reference Books: 1. Petroleum Refining Engineering: W. L. Nelson 2. Petroleum Refining Technology & Economics: J.H. Gary & G.E. Handwerk

Pre-requisites							
		Viva-Voce					
Course Outcomes	• CO1:Understand the fundamental principles of reaction kinetics in different reactor through practical experimentation • CO2:Study the non-catalytic homogeneous saponification reaction in CSTR and residence time distribution in a CSTR. • CO3:Study the non-catalytic homogeneous saponification reaction in plug flow reactor. • CO4:Study the non-catalytic homogeneous saponification reaction in isothermal batch reactor.						
Topics Covered	1. Study of Non-catalytic homogeneous reaction in an Isothermal Batch Reactor. 2. Study of non-catalytic homogeneous saponification reaction in a tubular flow reactor and to interpret the kinetic data of the given reaction in the form of a rate equation. 3. Residence distribution (RTD) Studies in CSTR. 4. Study of non-catalytic homogeneous saponification reaction in a continuous stirred tank reactor and to interpret the kinetic data of the given reaction in the form of a rate equation. 5. Removal of dye using Fenton oxidation process and evaluation of its Kinetic data. 6. Study the performance of a cascade of three equal volume CSTRs in series for the saponification of ethyl acetate with NaOH. 7. Study RTD of a packed bed reactor. [36 hrs.]						
Text Books, and/or reference material	Suggested Text Books: 1. Laboratory Manual 2. Chemical Reaction Engineering, Octave Levenspiel , Wiley; Third edition (2006) 3. Elements of Chemical Reaction Engineering 4th Ed - H. Scott Fogler Suggested Reference Books: 1. The engineering of chemical reactions, Lanny D. Schmidt, Oxford University Press Inc; 2nd edition (2004)

CHS653	**MASS TRANSFER LABORATORY**	PCR	0	0	3	3	1.5
Pre-requisites							
		Viva-Voce					

Course Outcomes	• CO1: To demonstrate an understanding of mass transfer modes and models • CO2: To formulate the idea of the different types of set up • CO3:To apply principles of mass transfer phenomena to chemical process industries • CO4: To enable solving the problems on process and materials related to mass transfer phenomena
Topics Covered	1. Study the characteristics of simple batch distillation 2. Determination of diffusivity of a hydrocarbon liquid through air 3. Study the performance of drying in atmospheric tray drier 4. Find out the heat transfer co-efficient for drop wise & film wise condensation 5. Study characteristics of bubble cap column 6. Determination of overall heat transfer coefficient of an open pan evaporator 7. Calculate hold up in a rotary drier 8. Experiment on flooding & loading phenomena in a packed absorption tower [36 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Mass Transfer: R.E.Treybal 2. Unit operations of chemical engineering: W.L. McCabe &J.C.Smith 3. Laboratory manual Suggested Reference Books: 1. Principles of Mass Transfer & Separation Processes: B. K. Dutta

Knowledge of all Unit Operations and Unit processes		CT+MT+EA					
Course Outcomes	• CO1: The fundamental concepts in environmental engineering dealing with water, air, and land pollution. • CO2: Graduates will learn a solid foundation in mathematics, sciences, and technical skills needed to analyze and design environmental engineering systems. • CO3: Graduates will be familiar with current and emerging environmental engineering and global issues, and have an understanding of ethical and societal responsibilities. • CO4: The necessary qualifications for employment in environmental engineering and related professions, for entry into advanced studies, and for assuming eventual leadership roles in their profession.						

<table>
<tr><td>Topics Covered</td><td>Module I:
Introduction to Water Treatment: National & International Scenario; World-wide Water resources Management; Water quality standards – Drinking water standards; Industrial effluent standards [3 hrs]

Module II:
Physico-Chemical Treatment Technology: Aeration, Ion exchange, Ozone treatment, adsorption. Chemical coagulation-precipitation, settling, flocculation theorems, Chlorination, advanced scheme for municipal water treatment.[6hrs.]

Module III:
Biological Treatment: Basics of biological water treatment, relevant kinetics, biological reactor configurations, Activated sludge process, trickling filtration, lagoon treatment, submerged aerators, upward flow sludge blanket reactor, rotating disc biological contactors, advances in biological treatment. [7hrs.]

Module IV:
Membrane Treatment: Different membranes and modules in water treatment; Transport mechanisms in membrane separation; Principles of Forward and Reverse osmosis; Membrane distillation, Micro and ultrafiltration; Nanofiltration and hybrid processes in water treatment processes.[7 hrs.]
Module V:
Industry-specific advanced water treatment schemes: Petroleum refinery waste treatment, coke-oven waste treatment, pharmaceutical waste treatment, tannery wastewater treatment.[5 hrs.]
Module VI
Air Pollution
Environmental threats
Role of Atmosphere in dispersion , Plume behavior
Dispersion problems and Stack Design(Tutorial):
Control devices –Cyclone Separators, ESP, Venturi scrubber, gravity separator, filters
Design Problems (Tutorial)
Abatement of gaseous pollutants & VOCs [10 hrs.]
ModuleVII:
Solid and hazardous Waste management [4 hrs.]</td></tr>

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
CHC401		CT+EA					
Course Outcomes	• CO1: Learn about energy technology of different conventional and non-conventional energy resource and Recent worldwide energy market scenario • CO2: Design & analyze of different renewable energy collectors and renewable energy thermal power plants • CO3: Learn industrial and domestic applications of different renewable energy sources • CO4: Solve energy technology problems of different difficulty levels through tutorials						
Topics Covered	**Module I:** Wind Energy: Sources and potentials, Wind energy conversion, General formula -Lift and Drag- Basis of wind energy conversion – Effect of density, frequency variances, angle of attack, and wind speed. Windmill rotors Horizontal axis and vertical axis rotors. Determination of torque coefficient, horizontal and vertical axis windmills, performance characteristics, Betz criteria, Design and analysis of wind turbines. geographical aspects. [10 hrs.] **Module II:** Solar Energy: Energy available form Sun, Solar radiation data, Solar energy conversion into heat, Flat plate and Concentrating collectors, Construction and performance analysis of solar flat plate collectors, Mathematical analysis of Flat plate collectors and collector efficiency, collector efficiency factor, tilt factors, collector						

	heat removal factor, Hottel-Willier-Bliss equation. Principle of Natural and Forced convection, Salt gradient solar ponds: construction, operation, technical problems, Solar drying and dehumidification: Solar cabinet dryers, convective dryers Solar engines-Stirling, Brayton engines, Photovoltaic, p-n junction, solar cells, PV systems, Stand-alone, Grid connected solar power satellite. [10 hrs.] **Module III:** Nuclear Energy: Nuclear fission principles, types of nuclear reactors (BWR, PWR, PHWR, LMCR, GCR, FFR). Nuclear reactor analysis: four factor formula, resonance absorption, reactor buckling, multiplication factor, thermal utilisation coefficient, reflector saving, fast fission factor, optimum moderator to fuel ratio. Radioactive waste disposal Energy from Ocean: Wave, Tidal and OTEC energy- Difference between tidal and wave power generation, Principles of tidal and wave power generation, OTEC power plants (closed cycle, open cycle, hybrid cycle), operation and technical problems, environmental impact, Tidal power, salinity power plants, Geothermal systems: Resources, types of wells, methods of harnessing the energy, Hot water and dry steam systems, energy extraction principles. [10 hrs.] **Module IV:** Energy from biomass: Biomass utilization: pyrolysis, gasification, anaerobic digestion (biogas production). Principles of Bio-Conversion, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion characteristics of bio-gas, Biodiesels: Manufacture and characteristics. Gasohol: Characteristics and manufacture, use of pervaporation technology. Synthetic liquid fuels from coal: F – T Process, Coal hydrogenation, MTOG process. [10 hrs.]

<tr><td colspan="4"></td><td colspan="5">CT+MT+EA</td></tr>
<tr><td>Course Outcomes</td><td colspan="8">• CO1: Clean coal technologies, coal bed methane blending of biomass with coal.
• CO2: Mass and energy balance during combustion of solid, liquid and gaseous fuel.
• CO3: Reaction kinetics and mechanism of Pyrolysis, Combustion and gasification.
• CO4: Burner design for different industrial application.</td></tr>
<tr><td>Topics Covered</td><td colspan="8">Module I:
Properties of solid liquid and gaseous fuels
Classification, Composition, Calorific Values, Lower and higher heating values, ASTM test techniques of solid, liquid and gaseous fuels.
Gasification of coal –Coal gasification technologies, chemical reactions, process conditions, design of gasification equipment. Underground coal gasification technology, process route. Clean coal Technologies:
What is clean coal technology? Principle and objectives.Oxyfuel combustion, Biochar, Carbon capture and storage, Carbon sequestration, Kyoto Protocol, Mitigation of global warming, Refined coal, Coal bed methane deposits, CBM recovery through microporous network, Primary method-Dewatering process, Secondary method (Carbon dioxide injection technique). [24 hrs.]

Module II:
Stoichiometry of combustion -
Chemical equations, Mass and energy balance of solid liquid and gaseous fuel combustion, concept of mixture fraction and equivalence ratio, problems on Fuel efficiency, excess air ratio and draft.Gas analyzers- Orsat and modern gas analyzers [7 hrs.]
Module III:
Combustion of liquid and gaseous fuels, Theory of diffusion flame, development diffusion flame equations and its solution technique, length of diffusion flame, chemical properties of diffusion flame & Premixed flame and its nature. Burner design for liquid and gaseous fuel, Types of Burners, design parameters and problems.[7 hrs.]

Module IV: 12h
Combustion of solid fuels, Stages of combustion- drying, devolatilization, volatile combustion, combustion of residual char, Pulverized coal combustion,
Combustion in fluidized bed system, burning rate in fluidized bed, factors affecting</td></tr>
</table>

	combustion efficiency. Combustion in bubbling fluidized bed boilers Combustion mechanism dense phase and lean phase concept and mass and energy balance, Recirculation of fly ash, effect of design parameters on combustion efficiency. Single particle combustion modelling- Single particle combustion modelling using volume reaction model, reaction mechanism and role of pore surface area. Heat and species transport equation in porous medium.Excremental technique in TG/DTA and drop tube furnace. [24 hrs.] Tutorial and class test [5 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Combustion and Fuel Technology, A.K.Saha 2. Combustion and gasification in Fluidized bed, PrabirBasu, Taylor & Francis Suggested Reference Books: 1. Fundamentals of Combustion Engineering by Achintya Mukhopadhyay and Swarnendu Sen

Mapping of CO (Course Outcome) and PO (Programme Outcome)

POs / COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3		3		3					1	3	1
CO2	3	1	1		3			2				
CO3	3		3		3					1	3	1
CO4	1	3	3		3		1		1		3	

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Department of Chemical Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHE 614	**ARTIFICIAL INTELLIGENCE (AI) IN PROCESS INDUSTRY**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), Midterm (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO1 : Acquire an idea about the application of artificial intelligence in chemical process industry • CO2 : To learn the fundamental knowledge of Neural network base modeling and their application in chemical process industries • CO3: To learn the fundamental knowledge of different stochastic optimization						

	techniques and their application in industry
Topics Covered	**Module I:** Basic concept and introduction Challenges faces by process industries, Paradigm shift of chemical business, What is artificial intelligence (AI)?, What is advance data analytics (ADA)?, Use of artificial intelligence (AI) and advance data analytics in different fields, Use of AI in chemical process industry and changing business scenario of chemical process industry , Areas where AI have impact on process industry, Different real life case studies of application of AI in process industry , How AI based techniques can be used to increase profit in chemical industry. [08 hrs.] **Module II:** Application of artificial neural network (ANN) for modeling industrial processes What is process modeling? ,Difference between process design and process simulation , Different process modeling strategy , Comparative advantage and disadvantage of different modeling strategy , Limitations of first principle base modeling , Limitations of commercial simulators to model complex industrial reactors ,Data driven black box or grey box modeling technique and its advantage ,Necessity to build a platform to utilize large number of process data , Artificial neural network (ANN) as effective tool of black box modeling, What is artificial neural network (ANN)?, Network architecture, Back propagation algorithm, How ANN can be used to develop complex industrial processes, Steps in ANN modeling technique ,Modeling of process performance parameters like selectivity, yield, efficiency etc. , Different examples of ANN modeling applied in diverse field of process industries, A step by step matlab based ANN case study for modeling of industrial reactor ,Different aspects of ANN modeling**.** [12 hrs.] **Module III:** **Artificial intelligence based process optimization** What is process optimization? , How parameter optimization can increase profit? , Limitations of conventional methods to apply complex industrial context, Use of metaheuristic method for optimization, Different Meta heuristics strategies like genetic programming, differential evolution and particle swarm optimization, Genetic algorithm (GA), what is GA? Basic algorithm and matlabcode ,Explanation of different parameters in GA algorithm ,Different uses of GA in various fields of process optimization , Differential evolution (DE), what is DE? Basic algorithm and matlabcode ,Explanation of different parameters in DE algorithm,Different uses of DE in various fields of process optimization Particle swarm optimization (PSO), What is PSO?, Basic algorithm and matlab code, Explanation of different parameters in PSO algorithm, Different uses of PSO in various fields of process optimization ,How metaheuristics algorithm can be used for parameter optimization,3 case study in reactor optimization, Advantage of metaheuristics methods over conventional methods. [10 hrs.]

	Module IV: Artificial intelligence based fault diagnosis in process industry Development of system to use and generate knowledge from process data ,Online advance process monitoring ,Generation of dashboard of different KPI ,Use of different advance computational technique to visualize data ,Artificial neural network based monitoring system ,How ANN can be used to develop advance process monitoring system ,Steps to develop ANN based process monitoring system Principal component based monitoring system, What is Principal component analysis (PCA)?, PCA algorithm, How PCA can be used to develop advance process monitoring system ,Advantage of PCA based monitoring system ,Steps to develop PCA based process monitoring system Development of Fault diagnosis system What is fault diagnosis system?, Features of fault diagnosis system ,How a robust fault diagnosis system can be made by PCA and ANN , Steps to build efficient fault diagnosis system ,Matlab code ,Case study. [10 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Profit Maximization Techniques for operating Chemical Plants, Sandip Kumar Lahiri, Wiley, ISBN 978-1-119-53215-6 2. Process plant simulations, B.V. Babu ,Oxford University Press 2004, ISBN **0-**19-566805-7 Suggested Reference books : 3. Energy and process optimization for the process industries By Frank (Xin X) Zhu (Wiley, ISBN 978-1-118-10116-2)

SEVENTH SEMESTER

Department of Chemical Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit	
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours		
MSC731	**PRINCIPLES OF MANAGEMENT**	PCR	3	0	0	3	3	
Pre-requisites		Course Assessment methods (Continuous assessment (CA) and end assessment (EA))						
		CA+EA						

Course Outcomes	• CO1:To make budding engineers aware of various management functions required for any organization • CO2:To impart knowledge on various tools and techniques applied by the executives of an organization • CO3:To make potential engineers aware of managerial function so that it would help for their professional career • CO4:To impart knowledge on organizational activities operational and strategic both in nature • C05: To impart knowledge on each functional area of management like Marketing, Finance, Behavioral Science, Quantitative Techniques and Decision Science
Topics Covered	**Module I:** Management Functions and Business Environment: Business environment- macro, Business environment -micro; Porter's five forces, Management functions –overview, Different levels and roles of management, Planning- Steps, Planning andenvironmental analysis with SWOT, Application of BCG matrix in organization [8 hrs.] **Module II:** Quantitative tools and techniques used in management: Forecasting techniques, Decision analysis, PERT & CPM as controlling technique [7 hrs.] **Module III:** Creating and delivering superior customer value: Basic understanding of marketing, Consumer behavior-fundamentals, Segmentation, Targeting & Positioning, Product Life cycle. [8 hrs.] **Module IV:** Behavioral management of individual: Motivation, Leadership, Perception, Learning. [8 hrs.] **Module V:** Finance and Accounting: Basics of Financial management of an organization, Preparation of Final Accounts, Analysis of Financial statements, Cost Volume Profit

	(CVP) Analysis, An overview of financial market with special reference to India. [12 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Financial Management, 11th Edition, I M Pandey, Vikas Publishing House. 2. Marketing Management 15th Edition, Philip Kotler and Kelvin Keller, Pearson India 3. Management Principles, Processes and practice, first edition, Anil Bhat and Arya Kumar, Oxford Higher education Suggested Reference Books: 1. Organizational Behavior,13 th edition, Stephen P Robbins, Pearson Prentice hall India 2. Operations Management, 7th edition (Quality control, Forecasting), Buffa & Sarin, Willey

Mapping of CO (Course Outcome) and PO (Programme Outcome)

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1									3	2	2	
CO2				2					2	2		
CO3				2					3	2		
CO4							1		3			
CO5				2					2	2	2	

Correlation levels 1, 2 or 3 as defined below:
1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Department of Chemical Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHS 751	**PROCESS CONTROL AND INSTRUMENTATION LABORATORY**	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Process Control and Instrumentation		CT and Viva-Voce					
Course Outcomes	• CO1: Understand the fundamental principles of process control through practical experimentation • CO2: Handling various instruments and solve various difficulty levels						
Topics Covered	1. Study the control valve flow coefficient (C_v) and its inherent characteristics. 2. Study the temperature control trainer and to find out steady state process gain. 3. Study the level control trainer and to find out steady state process gain. 4. Compare the observed transient response with the theoretical transient response for the interacting – non-interacting system. 5. Study the step response of mercury manometer and water manometer.						

	6. Plot Bode diagram of manometer systems and design the controller using Z-N tuning method. 7. Study the root locus of a manometer and hence to determine the region of stability. [36 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Process Systems Analysis and Control, Donald Coughanowr McGraw-Hill Science/Engineering/Math; 2 Edition (1991) 2. Chemical Process Control, G. Stephanopoulos, PHI, (2008) Suggested Reference Books: 1. Essentials of Process Control, Luyben et al. McGraw-Hill Companies (1996)

Mapping of CO (Course Outcome) and PO (Programme Outcome)

POs / COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3		2	1	2				1		2	
CO2	3		2	1	2				1		2	

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHS 752	**CHEMICAL ENGINEERING COMPUTING LABORATORY- 2**	PCR	0	0	3	3	1.5

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
CHEMICAL ENGINEERING COMPUTING LABORATORY- 1 (CHS 351)	EA and Viva-Voce
Course Outcomes	• CO1: To improve the skill of programming with numerical methods • CO2: To solve Chemical Engg problems using computers (using Matlab/Aspen/Ansys)
Topics Covered	**Module I** 1. Arrays Operations, Loops in Matlab 2. Script and Functions in Matlab 3. Plotting in Matlab 4. Truncation Error and Numerical error in Matlab 5. Numerical Differentiation and Integration using Matlab **Module II** Solving Linera/non-linear equations using Matlab

	Solving set of linear equation Solving ODEs in Matlab (RK/ODE45) **Module III** Intruduction to Matlab-Simulink Tuning of PID controller using Simulink Example cases using Simulink **Module IV** Introduction to Aspen-Plus Property analysis using Aspen-Plus Process Modelling and simulation using Aspen-Plus [36 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Computational Techniques for Process Simulation and Analysis Using MATLAB, Niket S. Kaisare, CRC Press 2. Teach Yourself the Basics of Aspen Plus, Ralph Schefflan, 2nd Edition, AIChE, Willey Suggested Reference Books: 1. Introduction to Simulink: With Engineering Applications,by Steven T. Karris, Orchard Pubns; 3rd edition

Mapping of CO (Course Outcome) and PO (Programme Outcome)

POs / COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3		2	1	2				1		2

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHS 753	**COMPUTER-AIDED PROCESS EQUIPMENT DESIGN**	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Process Equipment Design I & II		Report submission and Viva-Voce					
Course Outcomes	• CO1: Students are groomed to become confident design engineers / process simulators. They are also made conversant with all aspects of chemical engineering science, since development of CAD packages demands proficiency in all unit operations and unit processes.						
Topics Covered	1. Introduction to the basic principles of pressure vessel, Heat Exchanger, Evaporator and distillation process and its applications						

	2. Computer Aided process design of Pressure Vessel by Auto-CAD 3. Computer Aided process design of Heat Exchanger column by Auto-CAD 4. Computer Aided process design of Evaporator by Auto-CAD 5. Computer Aided process design of distillation column by Auto-CAD
Text Books, and/or reference material	Suggested Text Books: 1. L. E. Brownell, E. H. Youg, "Process Equipment Design" John Wiley & Sons Publications, 2004. 2. J.M. Coulson and J. Richardson, "Chemical Engineering", Vol. 6, Asian Books Printers Ltd. 3. Indian Standard Specifications IS-803, 1962; IS-4072, 1967; IS-2825, 1969. Indian Standards Institution, New Delhi. Suggested Reference Books: 1. R.H. Perry, "Chemical Engineers' Handbook", McGraw-Hill. 2. W.L. McCabe, J.C. Smith and P. Harriot, "Unit Operation of Chemical Engineering", McGraw-Hill, 2001.

• CO2: Identify characteristic properties of fuels and analyze fuel processing equipment
• CO3: Compare performances and select type of fuel processing equipment</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module I:
Introduction: Survey of different sources of energy and their utilization.
Fossil fuels: Coal, Petroleum and gaseous fuels.
Coal: Origin and formation of coal . Petrographic constituents of coal, Properties and testing. Classifition of coal, Coal preparation- washing and blending, Metallurgical and other uses. Carbonisation of coal, coke ovens and recovery of by-products. [5 hrs.]
Module II:
Petroleum : Constitution of petroleum, Origin and Occurrence of crude, Evaluation of crude, Properties, testing and specifications of petroleum products- Octane no.; Reid vapor pressure; Flash point; Fire point; Smoke point; Pour point; Cloud point; Aniline point and Diesel index; Cetane no. , Processing of Crude Petroleum.[12hrs.]
Module III:
Gaseous fuels: Classification. Manufacture of producer and water gas.
Combustion and furnace: Combustion characteristics, Combustion appliances--furnaces, waste heat recovery system, burners. [11 hrs.]
Module IV:
Non-conventional energy sources: Solar energy, Wind, Tidal Energy, Wave Energy, Energy from biomass, [4 hrs.]</td></tr>

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CHC 301, CHC 403, CHC501		CT+MT+EA					
Course Outcomes	• CO1: Apply kinetics of biochemical reactions for design of bioreactor. • CO2: Analyze performance of ideal and non-ideal bioreactors. • CO3: Integrate different type of reactor and reactor assembly.						
Topics Covered	**Module I:** Introduction to the kinetics of Bioprocess; Free enzyme kinetics; Inhibition in enzymatic reactions. Kinetics of immobilized enzymes. Bioreactors for enzymatic reactions. [15 hrs.] **Module II:** Cell growth kinetics; Growth models, Inhibition in cell growth kinetics, Immobilized cell growth system. Reactors for cell growth system. Combination of bioreactors for cell growth. [15 hrs.] **Module III:** Multiplicity in Biosystems, Global and local stability analyses of Bioreactors. Bioreactor controlling probes, Characteristics of bioreactor sensors, Temperature measurement and control, DO measurement and control, pH/redox measurement and control, Detection and prevention of the foam. [10 hrs.] **Module IV:** Downstream processing in bioprocesses; Intra and extracellular product extraction and separation. Industrial application of bioprocesses. [10 hrs.]

Pre-requisites: Unit operations and Chemical reactor, Chemical Process Technology, Optimal design methods		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					
Course Outcomes	• CO1:Managing various process design projects						

	• CO2: Understanding process design concept based on mass-energy balance and optimization • CO3: Determining design-project feasibility and implementation time
Topics Covered	**Module I:** Plant Design life cycle: Various stages of a plant design project – managing the various stages of plant design project – various approaches. Various scheduling methods for plant design[10hrs.] **Module II:** Plant Design Projects: Process design principles; process selection-DOF-design variable; -mass balance and energy balance; flowsheeting; sizing of equipment; P&ID-basic engineering package (BEP); Principles of equipment layout in and site selection for chemical plants; Types and selection of materials of construction for process equipment. [12 hrs.] **Module III:** Feasibility of Plant Design **:** Estimation of cost and profit - taxes & depreciation-rate of return (ROI)-case studies; Screening of Process Alternatives; Concepts of investment, interest and time value of money; Profitability analysis. Analysis of alternative investments and replacements.[10hrs.] **Module IV:** Case studies : Design of Reactors; Design of Separation Processes; Energy Integration and Design of Heat Exchanger Network (Pinch Technology);[13 hrs.]

Department of Chemical Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHC 715	**MEMBRANE SEPARATION PROCESS**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CHC 502		CT+MT+EA					
Course Outcomes	• CO1: Learn fundamentals of membrane separation processes and current market scenario • CO2: Classify and characterize membrane separation processes • CO3: Principles and methodologies of separation and transport of molecules through membrane and latest development • CO4: Complete process design of separation and exercise problems through tutorials/ assignment / group task							
Topics Covered	**Module I:** Membrane Separation Processes: Types of membranes and membrane characterization, Membrane modules and motion of molecules through membrane, Classification & characterization of Membrane Separation Processes. Reserve Osmosis (RO): Fundamentals, Osmotic Pressure, Models of Solvent and solute Transport through membrane – Fluxes, Rejection and Separation factor, Mechanism of salt rejection by CA membrane, Concentration Polarization, applications [12 hrs.] **Module II:** Nano-filtration (NF): Fundamentals of NF, Models and Types of transport mechanism in NF membranes, Applications of NF Ultra-filtration (UF): Models and Types of transport in UF membranes, Membranes for UF – Fouling and concentration Polarization in UF, Separation schemes using UF, Dia-filtration – process design – batch, continuous, multistage Micro-filtration (MF): Membranes for MF – transport mechanism [12 hrs.] **Module III:** Dialysis: Solute transport in dialyzer – analysis of dialysis operation, Mode of dialysis, Hemo-dialysis – dialysis equipment – applications Electro –dialysis (ED): Types of ED – ion transport fundamentals, Resistances and voltages in ED cells – power requirement, ED membranes and cells, Problems of ED operation, Plant design and process cost. [8 hrs.] **Module IV:** Pervaporation (PV): Theory of PV – parameter study, Classification of PV – air heated							

	PV, Osmotic distillation, thermo-pervaporation, Advantages and disadvantages of PV, Application of PV, Gas Separation: Membrane gas separation, Industrial applications. [8 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Separation Processes – C. J. King 2. Synthetic membranes – P. M. Bungay, H. K. Lonsdale, M. N. de Pinho Suggested Reference Books: 1. Membrane Separation Processes – KaushikNath 2. Membrane Hand Book – W. Ho and K. K. Sirkar 3. Industrial Processing with membranes – R. E. Lacey & S Loeb 4. Reverse Osmosis – S. Sourirajan 5. Ultrafiltration Handbook – M. Cheryan 6. Principles of Mass Transfer and Separation Processes – B. K. Dutta 7. Membrane Technology in Environmental Pollution Control, P.Pal 8. Industrial Water Treatment Process Technology, P.Pal, Elsevier Science 9. Membrane Technology in Environmental Pollution Control. P.Pal

CHE 716	**PROCESS INTENSIFICATION**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					
Course Outcomes	• CO1: Understanding the concept, need and benefits of process intensification amidst • stringent environmental regulations, concerns for energy security and sustainable • development • CO2: Learn different approaches of achieving process intensification • CO3: Learning design, operation, analysis and application of selected process intensification technologies						

Topics Covered	**Module I:** Basics of Process Intensification, definitions, routes, benefits, need for process intensification, sustainable development issues [4 hrs.] **Module II:** Twelve principles of green chemistry. Matrices for chemistry: Effective mass yield, carbon efficiency, atom economy, reaction mass efficiency, Environmental factor (E) [4 hrs.] **Module III:** Process Intensification by Multifunctional equipment, Principles, design, operation and case studies [4 hrs.] **Module IV:** Process Intensification by reactive distillation: Principles, design, control, feasibility, technical evaluation, case studies [4 hrs.] **Module V:** Process Intensification by catalytic distillation: Principles, design, operation, application, economics [4 hrs.] **Module VI:** Process Intensification by Membrane application: principles, modular design issues, energy saving prospects, space-saving prospects, green processing prospects, case studies [4 hrs.] **Module VII**: Case studies of process intensification in lactic acid manufacture, glutamic acid manufacture, industrial wastewater treatment and reuse, recovery of valuables. [6hrs.] **Module VIII:** Process Intensification through cavitation reactors, oscillatory baffled reactors, sono-chemical, hydrodynamic cavitation reactors, case studies [4 hrs.] **Module IX:** Process Intensification through monolith reactors: Hydrodynamics, design, advantages, applications [4 hrs.]
Text Books, and/or reference material	Suggested Text Book: 1. Intensification of bio-based processes, A. Gorak, Andrzej Stankiewicz edited. RSC publication 2. A.Stankiewicz, J.A. Moulijin, Re-engineering the Chemical Processing Plant, Process intensification, Marcel Dekker, New York (2004) Suggested References Book: 1. Membrane based technologies for environmental pollution control, P.Pal, Elsevier Sci.

Department of Chemical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHE 717	**COLLOIDS AND INTERFACE ENGINEERING**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	• CO1: Acquire an idea about the application of colloidal chemistry, fluid-fluid and solid-fluid interface engineering in different industrial fields. • CO2: To learn the fundamental knowledge of intermolecular forces involved in colloids and interfaces • CO3: Introduction to surface active agent and learn about the application of surface active agents to enhance the efficiency in the process.						
Topics Covered	**Module I:** Importance and scope of the subject. Overview of colloidal systems, interfaces and surface. Properties and application of the colloids. Colloidal stability factor. Kinetic theory of colloidal systems: sedimentation, centrifugation, diffusion, Domestic and industrial application of colloidal solution. Adsorption at fluid-fluid and fluid-solid interface, Thermodynamics of interfaces, Interfacial rheology and transport process.[10hrs.] **Module II:** Surface active agent: Surfactant, Surface and interfacial tension, surface free energy. Surface tension for curved interfaces, Surface excess and Gibbs equation. Theory of surface tension, contact angle, and wetting. Thermodynamics of micelle and mixed micellar formation. Adsorption of single and mixed surfactants at interfaces, Mixed micellar properties, Rheology of surfactant systems. Preparation, mechanistic details of stabilization and relationship between HLB and solubility parameter, characterization and Application. [10hrs.] **Module III:** Intermolecular forces relevant to colloidal systems: Electrostatic and van der Waals forces. DLVO theory.Measurement techniques of surface tension, contact angle, zeta potential, particle size.[4 hrs.] **Module IV:** Overview of industrial applications of various interfacial phenomena in the industries [Mattress industry (Foam: preparation, characterization, stability), petroleum industry, Mineral processing industry Pesticides, firefighting, personal care						

	formulations], Super hydrophobic surface and self-cleaning surfaces. Case studies related interfacial science. Application of interfacial engineering concept through the surface modification for the synthesis of nanostructured material by using surface active agent.[12hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. P. C. Hiemenz, and R. Rajagopalan, Principle of colloid and surface chemistry, 3rd edition, MercelDekher, N. Y. 1997. 2. Pallab Ghosh, Colloid and Interface Science, 1st Edition, PHI Learning, 2009. 3. M. J. Rosen, Surfactants and Interfacial Phenomena, Wiley-Interscience Publication, New York, 2004. Suggested Reference Books: 1. Drew Myers, Surfaces, Interfaces and Colloids, 3rd Edition, Wiley, 2006. 2. Tharwat F. Tadros, Applied Surfactants Principles and Applications, Wiley-VCH Verlag GmbH & Co. KGaA, Weinheim, 2005. 3. J. Israelachvili, Intermolecular and Surface Forces, Academic Press, New York, 1992.

CHE 718	**PINCH TECHNOLOGY**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Heat Transfer		CT+EA					
Course Outcomes	CO1: Identify the minimum heating and cooling requirements for a process based on thermodynamic knowledge. CO2: Evaluate lower cost solutions for arrangements of heat exchangers. CO3: Design optimal heat exchangers networks to improve energy recovery and global energy efficiency of processes.						
Topics Covered	**Module I:** Introduction to process Intensification and Process Integration (PI). Areas of						

	application and techniques available for PI, onion diagram. **Introduction to Pinch Technology, Concept** of ΔT_{min}, Data Extraction, Composite curve, Grand Composite Curve Targeting, Grid Diagram, Problem Table Algorithm. [4 hrs.] **Module II:** Energy Targeting, Area Targeting, Number of units targeting, Shell Targeting and Cost targeting. [8hrs.] **Module III:** Pinch Design Methods of HEN, Heuristic rules, stream splitting, and design of maximum energy recovery (MER). Use of multiple utilities and concept of utility pinches, Design for multiple utilities pinches, Concept of threshold problems and design strategy. Network evolution and evaluation-identification of loops and paths, loop breaking and path relaxation. [10hrs.] **Module IV:** Design tools to achieve targets, driving force plot, remaining problem analysis, diverse pinch concepts, MCp ratio heuristics. Targeting and designing of HENs. [4 hrs.] **Module V:** Case studies on heat integration by pinch technology. [8hrs.]
Text Books, and/or reference material	Suggested Text Books: **1.** Ian C. Kemp, Pinch Analysis and Process Integration: A User Guide on Process Integration for the Efficient Use of Energy, 2nd Edition, ISBN: 9780750682602, Butterworth-Heinemann, 2016. **2.** Shenoy U. V.; "Heat Exchanger Network Synthesis", Gulf Publishing Co. **3.** Linnhoff B., Townsend D. W., Boland D, Hewitt G. F., Thomas B. E. A., Guy A. R., and Marsland R. H.; "A User Guide on Process Integration for the Efficient Uses of Energy", Inst. Of Chemical Engineers. Suggested Reference Book: **1.** Smith R.; "Chemical Process Design", McGraw-Hill.

	OPTIMIZATION IN CHEMICAL INDUSTRIES						
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO1: Acquire an idea about the energy intensity in industry context and benchmarking energy intensity • CO2: To learn the step by step methodology for energy assessment in industry, finding optimization opportunities and how to exploit them in industry. • CO3: To learn the fundamental knowledge of different Process optimization techniques to increase profit						
Topics Covered	**Module I:** Basic concept and introduction Challenges faces by process industries ,Paradigm shift of chemical business ,Background of energy and process optimization in industry ,Five ways to improve energy efficiency , Four key element for continuous improvement , Theory of energy intensity ,Definition of process energy intensity ,Concept of fuel equivalent ,Energy intensity for a total site, Benchmarking energy intensity, Data extraction from historian ,Convert all energy usage to fuel equivalent ,Energy balance, Energy performance index method ,Key indicators and targets ,Define key indicators, Set up targets for key indicators, Economic evaluation of key indicators ,Implementing key indicators into energy dashboard. [10hrs.] **Module II:** Pinch Technology for heat exchanger network, Basic concept of pinch, Hot and cold composite curve, Pinch temperature, Golden rules of pinch, cross pinch heat transfer, Minimum hot and cold utility target, Optimum delta T min. [12hrs.] **Module III:** Heat exchanger Distillation system performance assessment, Basic concept and calculations, understanding performance criteria –U values, understanding pressure drop,Improving heat exchanger performance, Heat exchanger fouling assessment, Fouling mechanism, Fouling mitigation, Fouling resistance calculations, A cost based model for clean cycle optimization,Energy loss assessment, Energy loss audit, Energy loss evaluations,Brainstorming, Energy audit report, Distillation system assessment Distillation operating window,Distillation efficiency,Understanding operating window,Typical capacity limit, Distillation system optimization, Define a base case,Building process simulation, Tower efficiency assessment,Tower optimization basis,Energy optimization for distillation system,Overall process optimization. [10hrs.] **Module IV**: Process optimization in industryCollect online data for the whole operation cycle, Determine the true benefit from process variation, Map the whole process in cost term,How to detect opportunities for optimization,Common tools available to exploit those opportunities. [12hrs.]						

Text Books, and/or reference material	Suggested Text Books: 1. Energy and process optimization for the process industries By Frank (Xin X) Zhu (Wiley, ISBN 978-1-118-10116-2) 2. Profit Maximization Techniques for operating Chemical Plants, Sandip Kumar Lahiri, Wiley, ISBN 978-1-119-53215-6 Suggested Reference books: 1. Process Heat Transfer – D.Q.Kern (McGraw-Hill)

<tr><td colspan="2">CHC-303 (Fluid Mechanics)</td><td colspan="6">CT+EA</td></tr>
<tr><td>Course Outcomes</td><td colspan="7">• CO1: To learn fundamental and modeling methods of multiphase flow
• CO2: To learn transport mechanism of multiphase flow and industrial application of multiphase flow
• CO3: To learn differentflow patterns and flow pattern maps and measurement methods in multiphase flow.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module I:
Introduction to multiphase flow: Two phase flow: Gas/Liquid and Liquid/liquid systems: Flow patterns in pipes, analysis of two phase flow situations, Prediction of holdup and pressure drop or volume fraction, Bubble size in pipe flow, Lockchart-Martinelli parameters, Bubble column and its design aspects, Minimum carryover velocity. holdup ratios, pressure drop and transport velocities and their prediction. [7hrs.]

Module II:
Flow Models:Flow patterns - identification and classification - flow pattern maps and transition - momentum and energy balance - homogeneous and separated flow models -correlations for use with homogeneous and separated flow models - void fraction and slip ratio correlations - influence of pressure gradient - empirical treatment of two phase flow - drift flux model - correlations for bubble, slug and annular flows Introduction to three phase flow. [10hrs.]

Module III:
Design and Stability of multiphase system:Dynamics of gas-solid liquid contactors (agitated vessels, packed bed, fluidized bed, pneumatic conveying, bubble column, trickle beds), Flow regimes, pressure drop, holdup, distributions, mass and heat transfer, reactions, Applications of these contactors. [10hrs.]

Module IV:
Measurement techniques for multiphase flow:Measurement techniques in multiphase flow: Conventional and novel measurement techniques for multiphase systems (Laser Doppler anemometry, Particle Image Velocimetry). [10hrs.]</td></tr>
</table>

	Module V: Hydrodynamics of three phase systems:An introduction of three phase flow; liquid – solid flow, gas-solid flow; liquid-liquid-gas flow; gas-liquid-solid flow; principle of hydraulic and pneumatic transportation; flow regime identification; related measurement techniques. [5hrs.]
Text Books, and/or reference material	Suggested Text Books 1. Clift, R., Weber, M.E. and Grace, J.R., Bubbles, Drops, and Particles, Academic Press, New York, 1978. 2. Y. T. Shah, Gas-Liquid-Solid reactors design, McGraw Hill Inc, 1979 3. Fan, L. S. and Zhu, C., Principles of Gas-solid Flows, Cambridge University Press, 1998 4. Govier, G. W. and Aziz. K., “The Flow of Complex Mixture in Pipes”, Van Nostrand Reinhold, New York, 1972. Suggested Reference Books 1. Wallis, G.B., “One Dimensional Two Phase Flow”, McGraw Hill Book Co., New York, 1969. 2. Crowe, C. T., Sommerfeld, M. and Tsuji, Y., Multiphase Flows with Droplets and Particles, CRC Press, 1998 3.Kleinstreuer, C., Two-phase Flow: Theory and Applications, Taylor & Francis, 2003 Rhodes, M., Introduction to Particle Technology, John Wiley & Sons, New York. 1998.

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MAC 331, CHC 303		CT+MT+EA					

Course Outcomes	• CO1: To learn basics of continuum-based modelling and simulation; Its area of applications and limitations • CO2: To learn different discretization methods of continuum based governing equations • CO3: To learn different steps of CFD simulations • CO4: To learn the use of CFD techniques in realistic problems
Topics Covered	**Module I:** Introduction to Computational Fluid Dynamics, Conservation Equations, Discretization. Different Numerical methods and their comparison; Finite Difference Method, Finite Volume Method, Finite Element Method, etc. Source terms and their linearization, Solution of discretized equations. [12hrs.] **Module II:** Solution of mass and energy equations:Solution of diffusive problems: Steady 1D, Steady 2D and Steady 3D problems. Unsteady 1D, 2D unsteady and 3D unsteady problems, Solution of convective-diffusion problems: Steady and unsteady problems; Different schemes, [18hrs.] **Module III:** Solution of momentum equations: SIMPLE, SIMPLER, SIMPLEC algorithms [10hrs.]
Text Books, and/or reference material	Suggested Text Books: 1.Numerical heat transfer and fluid flow by S.V. Patankar, Hemisphere Publishing Corporation, 1980. 2.Introduction to Computational Fluid Dynamics by Anil W. Date, Cambridge University Press, 1st Edition, 2005. Suggested Reference Books: 1. Computational Fluid Dynamics and Heat Transfer by P. S. Ghosh Dastidar, Cengage India Private Limited

Resolution of UGAC meeting	10-05-2019	
Final approval in 53rd Senate	13-05-2019	Item no: 52.3
Publication date	30-05-2019	

V1:

Incorporation of new elective subjects	27-06-2019

V2:

Rectification of minor errors	UGAC 31-08-2022

Final Approval in ______ Senate # _______________ # Item no: _______

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Program Name: Bachelor of Technology in Computer Science & Engineering

DETAILED CURRICULUM

CURRICULUM OF 2021 ONWARD UNDERGRADUATE ADMISSION BATCH FOR COMPUTER SCIENCE & ENGINEERING- B.TECH.

L= Lecture hour/ week; T= Tutorial hour/ week; S= Sessional/ practical hour/ week

C= Subject credit point; H= Subject contact hour/ week.

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT.

6th Semester

	DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING
CSE612	System Software
CSE613	Internet and Web Technologies
CSE614	Advanced Computer Architecture
CSE615	Optimization Techniques
CSE616	Artificial Intelligence
CSE617	Advanced Algorithms
CSE618	Information Coding Theory
CSE619	Computer Graphics
CSE620	Game Theory and its Applications
CSE621	Digital Systems Testing
CSE622	Soft Computing
CSE623	Advanced Database Systems

7th Semester

	DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING
CSE710	Machine Learning
CSE711	Graph Theory
CSE712	Electronic Design Automation
CSE713	Natural Language Processing
CSE714	Data Warehousing and Data Mining
CSE715	Digital Image Processing
CSE716	Data Analytics
CSE717	Biometrics
CSE718	Cryptography and Network Security
CSE719	Multimedia Information Systems

CSE720	Cellular Automata and its Application
CSE721	Computational Geometry
CSE722	Complex Network Theory
CSE723	Pattern Recognition
CSE724	Semantic Web Technology
CSE725	Human Computer Interaction
CSE726	Incentive Mechanism in Computer Science

8th Semester

	DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING
CSE811	Distributed Systems
CSE812	Computer Vision
CSE813	Optical Networks
CSE814	Internet of Things
CSE815	Cloud Computing
CSE816	Mobile Computing
CSE817	Expert Systems
CSE818	Ethics Society and Computer Science
CSE819	Knowledge Management

DETAILED SYLLABUS

FIRST SEMESTER

Semester - I							
Sl. No	Code	Subject	L	T	S	C	H
1	MAC01	Mathematics - I	3	1	0	4.0	4
2	PHC01	Engineering Physics	2	1	0	3.0	3
3	CYC01	Engineering Chemistry	2	1	0	3.0	3
4	XEC01	Engineering Mechanics	2	1	0	3.0	3
5	ESC01	Environmental Science	2	0	0	2.0	2
6	XES51	Engineering Graphics	1	0	3	2.5	4
7	HSS51	Professional Communication Laboratory	1	0	2	2.0	3
8	PHS51	Physics Laboratory	0	0	2	1.0	2
9	CYS51	Chemistry Laboratory	0	0	2	1.0	2
10	WSS51	Workshop Practice	0	0	3	1.5	3
11	XXS51	Co-curricular Activities - I	0	0	2	1.0	2
		TOTAL	13	4	14	24.0	31

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 01	MATHEMATICS - I	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Basic concepts of function, limit, differentiation, and integration.	CT+MT+EA

Course Outcomes	• CO1: To introduce the fundamentals of differential calculus of single and several variables • CO2: To develop the basic concepts of integral calculus including multiple integrals and its application in finding area, volume, centre of mass, centre of gravity etc. • CO3: To introduce the fundamental concepts of vector calculus • CO4: To develop the concept of convergence
Topics Covered	**Functions of Single Variable:** Rolle's Theorem and Lagrange's Mean Value Theorem (MVT), Cauchy's MVT, Taylor's and Maclaurin's series, Asymptotes & Curvature (Cartesian, Polar form). (8) **Functions of several variables:** Function of two variables, Limit, Continuity and Differentiability, Partial derivatives, Partial derivatives of implicit function, Homogeneous function, Euler's theorem and its converse, Exact differential, Jacobian, Taylor's & Maclaurin's series, Maxima and Minima, Necessary and sufficient condition for maxima and minima (no proof), Stationary points, Lagrange's method of multipliers. (10)

	Sequences and Series: Sequences, Limit of a Sequence and its properties, Series of positive terms, Necessary condition for convergence, Comparison test, D Alembert's ratio test, Cauchy's root test, Alternating series, Leibnitz's rule, Absolute and conditional convergence. (6) **Integral Calculus:** Mean value theorems of integral calculus, Improper integral and it classifications, Beta and Gamma functions, Area and length in Cartesian and polar co-ordinates, Volume and surface area of solids of revolution in Cartesian and polar forms. (12) **Multiple Integrals:** Double integrals, Evaluation of double integrals, Evaluation of triple integrals, change of order of integration, Change of variables, Area and volume by double integration, Volume as a triple integral. (10) **Vector Calculus:** Vector valued functions and its differentiability, Line integral, Surface integral, Volume integral, Gradient, Curl, Divergence, Green's theorem in the plane (including vector form), Stokes' theorem, Gauss's divergence theorem and their applications. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th ed., Wiley India Ed. (2010). 2. Daniel A. Murray, Differential, and Integral Calculus, Fb & c Limited, 2018. 3. Marsden, J. E; Tromba, A. J.; Weinstein: Basic Multivariable Calculus, Springer, 2014. **Reference Books:** 1. Tom Apostal, Calculus-Vol-I & II, Wiley Student Edition, 2011. 2. Thomas and Finny: Calculus and Analytic Geometry, 11th Ed., Addison Wesley.

	CO4	3	3	2	3	1	1	-	1	-	2	1	2

Correlation levels 1, 2 or 3 as defined below:
1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	**Title of the course**	**Program Core (PCR) / Electives (PEL)**	**Total Number of contact hours**				Credit
			Lecture (L)	**Tutorial (T)**	**Practical (P)**	**Total Hours**	
PHC01	**Engineering Physics**	**PCR**	**2**	**1**	**0**	**3**	**3**
Pre-requisites:		Course Assessment methods: (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	CO1: To realize and apply the fundamental concepts of physics such as superposition principle, simple harmonic motion to real world problems.						

	CO2: Learn about the quantum phenomenon of subatomic particles and its applications to the practical field. CO3: Gain an integrative overview and applications of fundamental optical phenomena such as interference, diffraction and polarization. CO4: Acquire basic knowledge related to the working mechanism of lasers and signal propagation through optical fibers.
Topics Covered	**Harmonic Oscillations** - Linear superposition principle, Superposition of two perpendicular oscillations having same and different frequencies and phases, Free, Damped and forced vibrations, Equation of motion, Amplitude resonance, Velocity resonance, Quality factor, sharpness of resonance, etc. [8] **Wave Motion** - Wave equation, Longitudinal waves, Transverse waves, Electro-magnetic waves. [3] **Introductory Quantum Mechanics** - Inadequacy of classical mechanics, Blackbody radiation, Planck's quantum hypothesis, de Broglie's hypothesis, Heisenberg's uncertainty principle and applications, Schrodinger's wave equation and applications to simple problems: Particle in a one-dimensional box, Simple harmonic oscillator, Tunnelling effect. [8] **Interference & Diffraction** - Huygens' principle, Young's experiment, Superposition of waves, Conditions of sustained Interference, Concepts of coherent sources, Interference by division of wavefront, Interference by division of amplitude with examples, The Michelson interferometer and some problems; Fraunhofer diffraction, Single slit, Multiple slits, Resolving power of grating. [13] **Polarisation** - Polarisation, Qualitative discussion on Plane, Circularly and elliptically polarized light, Malus law, Brewster's law, Double refraction (birefringence) - Ordinary and extra-ordinary rays, Optic axis etc.; Polaroid, Nicol prism, Retardation plates and analysis of polarized lights. [5] **Laser and Optical Fiber** - Spontaneous and stimulated emission of radiation, Population inversion, Einstein's A & B co-efficient, Optical resonator and pumping methods, He-Ne laser. Optical Fibre– Core and cladding, Total internal reflection, Calculation of numerical aperture and acceptance angle, Applications. [5]
Text Books, and/or reference material	**TEXT BOOKS**: 1. The Physics of Vibrations and Waves, H. John Pain, Willy and Sons 2. A Text Book of Oscillations and Waves, M. Goswami and S. Sahoo, Scitech Publications 3. Engineering Physics, H. K. Malik and A. K. Singh, McGraw-Hill. **REFERENCE BOOKS**: 1. Vibrations and Waves in Physics, Iain G. Main, Cambridge University Press 2. Quantum Physics, R. Eisberg and R. Resnick, John Wiley and Sons 3. Fundamental of Optics, Jankins and White, McGraw-Hill 4. Optics, A. K. Ghatak, Tata McGraw-Hill 5. Waves and Oscillations, N. K. Bajaj, Tata McGraw-Hill 6. Lasers and Non-linear Optics, B. B. Laud , New Age International Pvt Lt

<tr><td>Course Outcomes</td><td colspan="7">• CO1: Introduced to chemical thermodynamics, kinetics, electrochemistry, absorption, and catalytic processes for engineering applications
• CO2: To learn fundamentals of polymer chemistry and petroleum engineering.
• CO3: Introduced to basic spectroscopic techniques for structure determination and characterization.
• CO4: To study few inorganic and bioinorganic compounds of industrial importance.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">ORGANIC CHEMISTRY
i. Fundamentals of organic reaction mechanisms; Few important reactions and their mechanism along with their applications; Robinson annulation, Hydroboration reaction, Organometallic reagents (Gilman reagents), Metathesis using Grubb's catalyst and Wittig reaction. (3)
ii. Fundamental concept on stereochemistry and application: Conformation and configuration of organic compounds, Diastereo-selective, enantio-selective, regio-selective, stereo-specific, and stereo-selective reactions. (3)
iii. Polymer chemistry and polymer engineering: Fundamental concept on polymer chemistry; synthesis and application of important polymers, Rubber, and plastic materials. Conducting polymer. (2)
iv. Petroleum Engineering and oil refinery: origin of mineral oils, separation principle and techniques of distillation of crude oil, Uses of different fractions, octane number, cetane number, Knocking, anti-knock compounds, and Bio-Fuel. (2)
v. Structure elucidation of organic compounds by modern spectroscopic methods; Application of UV-Visible and FT-IR spectroscopy. (3)
INORGANIC CHEMISTRY
i. Coordination Chemistry: Crystal Field Theory of octahedral and tetrahedral complexes, colour and magnetic properties, Jahn-Teller distortion, pseudo Jahn-</td></tr>
</table>

	Teller distortion, Isomerism, and stereochemistry. (5) ii. **Bioinorganic Chemistry:** Heme and non-heme O_2 transport protein (Haemoglobin, Myoglobin), Chlorophyll and photosynthesis. (3) iii. **Inorganic Materials:** Introduction towards industrially important inorganic materials like cementing material, refractory material, fertiliser, inorganic polymer. (2) iv. **Organometallic Chemistry:** π-acid ligands, stabilization of metal low oxidation state and 18 electron rules, metal carbonyls and nitrosyls, metal-alkene complexes. (4) **PHYSICAL CHEMISTRY** i. **Thermodynamics:** 2nd law of thermodynamics, entropy, free energy, Gibbs Helmholtz equation, change of phase. Cryogenics: joule Thomson experiment. (4) ii. **Chemical Kinetics:** 2nd and 3rd order rate expression, Reversible reaction, Chain reaction, Consecutive reaction, Temp effect on reaction rate. (4) iii. **Electrochemistry:** Electrochemical cell, Effect of pH, precipitation, and complex formation on EMF of oxidation/reduction processes. (2) iv. **Absorption:** Physical and Chemical absorption, Absorption isotherms. (1) v. **Catalysis:** Types of catalysis, Rate expression for Catalysed reaction, Acid-base and Enzyme catalysis. (2)
Text Books, and/or reference material	Suggested Text Books: (i) Physical Chemistry by P. Atkins, Oxford (ii) A guidebook to mechanism in Organic chemistry: Peter Sykes; Pearson Edu. (iii) Inorganic Chemistry Part-I & II, R. L. Dutta, The new book stall Suggested Reference Books: **Organic Chemistry**: (i) Basic stereochemistry of organic molecules: S. Sengupta; Oxford University press (ii) Engineering Chemistry: Wiley (iii) Elementary Organic Spectroscopy: William Kemp, ELBS with Macmillan **Inorganic Chemistry:** (i) Inorganic Chemistry: Principle structure and reactivity, J. E. Huheey, E. A. Keiter and R. L. Keiter, Pearson Education (ii) Bioinorganic Chemistry -- Inorganic Elements in the Chemistry of Life: An Introductionand Guide, 2nd Edition, Wolfgang Kaim, Brigitte Schwederski, Axel Klein. (iii) Inorganic Chemistry Fourth Edition, Shriver & Atkins, Oxford **Physical Chemistry:** (i) Physical Chemistry by G.W Castellan (ii) Physical Chemistry by P. C. Rakshit

• CO2: Apply knowledge of mechanics for solving special problems like truss and frame analysis.
• CO3: Ability to calculate centroid, moments of inertia for various shapes.
• CO4: Learn momentum and energy principles.
• CO5: Knowledge on virtual Work Principle and its application</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Engineering Mechanics; measurement and SI units. [1]
Vectors and force as a vector; Resultant of a system of forces on a particle; free body diagram and conditions of equilibrium of a particle; problems on particles; equilibrium of particles in space. [2]
Resultant of a system of forces and couples on a rigid body; conditions of equilibrium of a rigid body; free body diagrams of rigid bodies subjected to different types of constraints; simple space problems of rigid bodies. [4]
Coefficients of static and kinetic friction; problems involving friction; theories of friction on square threaded power screw and flat belt. [5]
Simple trusses; analysis of trusses by method of joints and method of sections. [5]
Centre of gravity and centre of mass; centroids of lines, curves and areas; first moment of area; second moment of area; polar moment of inertia; radius of gyration of an area; parallel axis theorem; mass moment of inertia. [4]
Path, velocity, acceleration; rectilinear and curvilinear motion; motion of system of particles; introduction to the concept of plane kinematics of rigid bodies. [6]
Newton's second law of motion; dynamic equilibrium and D'Alembert's principle; linear momentum; angular momentum; rectilinear and curvilinear motion; principles of work–energy and impulse–momentum; impact of system of particles; introduction to the concept of plane kinetics of rigid bodies. [12]
Principle of Virtual Work, Solution of Problems on Mechanics using Principle of Virtual Work [3]</td></tr>

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO1: Understand the importance of environment and ecosystem. • CO2: Understand the fundamental aspect of pollutant tracking and its implementation in natural and anthropogenic pollution of air and water system. • CO3: Understand the scientific basis of local and as well as global issues. • CO4: Apply of knowledge to develop sustainable solution.						
Topics Covered	**Introduction:** Multidisciplinary nature of Environmental Studies; Basic issues in Environmental Studies. [2] Human population and the Environment. [1] Social issues and the Environment. [1] **Constituents of our Environment & the Natural Resources:** Atmosphere– its layers, their characters; Global warming, Ozone depletion, Acid rain, etc. [5] Hydrosphere - Its constituents, Oceans, Groundwater, Surface waters; Hydrological cycle. [4] Lithosphere - constituents of lithosphere; Rock and Mineral resources; Plate Tectonic Concept and its importance. [5] Biosphere– its components; Ecosystems and Ecology; Biodiversity; Biomes. [5] Natural disaster and their management – Earthquakes, Floods, Landslides, Cyclones. [3] **Pollution:** Pollutants and their role in air and water pollution. [2]						
Text Books, and/or reference material	1. Environmental Studies – Benny Joseph – Tata McgrawHill-2005 2.Environmental Studies – Dr. D.L. Manjunath, Pearson Education-2006. 3.Principles of Environmental Science and Engineering – P. V. Rao, PHI. 4. Environmental Science and Engineering – Meenakshi, Prentice Hall India. 5.Environmental studies – R. Rajagopalan – Oxford Publication - 2005. 6. Text book of Environmental Science & Technology – M. A. Reddy – BS Pub.

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
XES51	**ENGINEERING GRAPHICS**	PCR	1	0	3	4	2.5
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	• CO1: Ability of mental visualization of different objects • CO2: Theoretical knowledge of orthographic projection to solve problems on one/two/three dimensional objects • CO3: Able to read/interpret industrial drawing and to communicate with relevant people						
Topics Covered	Graphics as language of communication; technical drawing tools and their up-keep; types of lines; construction of geometrical figures; lettering and dimensioning. [6] Construction and use of scales; construction of curves of engineering importance such as curves of conic section; spirals, cycloids, involutes and different loci of points; use of equations for drawing some curves. [9] Descriptive geometry: necessity and importance of orthographic projection; horizontal and vertical reference planes; coordinate of points; orthographic projection of points and lines situated in different quadrants, viz. 1st, 2nd, 3rd and 4th quadrants; traces of lines. First angle and third angle projection of lines and planes; views from top, front and left (or right); true length and true inclination of lines with planes of projections; primary auxiliary projection of points, lines and planes; auxiliary plan and auxiliary elevation. [9] Projection of simple regular solids, viz. prisms, cubes, cylinders, pyramids, cones, tetrahedrons, spheres, hemi-spheres etc. [6] Section of solids; section by perpendicular planes; sectional views; true shapes of sections. [6] Dimensional techniques; international and national standards (ISO and BIS). [3] Freehand graphics. [3]						
Text and/or reference material	1)… Engineering Drawing and Graphics – K Venugopal 2)… Engineering Drawing – N D Bhat 3)… Practical Geometry and Engineering Graphics – W Abbott

PHS51	**Physics Laboratory**	PCR	**0**	**0**	**2**	**2**	**1**
Pre-requisites		Course Assessment methods: (Continuous evaluation (CE) and end assessment (EA))					
NIL		CE+EA					
Course Outcomes	CO1: To realize and apply different techniques for measuring refractive indices of different materials. CO2: To realize different types of waveforms in electrical signals using CRO. CO3: To understand charging and discharging mechanism of a capacitor. CO4: To understand interference, diffraction and polarization related optical phenomena. CO5: To acquire basic knowledge of light propagation through fibers.						
Topics Covered	1. Find the refractive index of a liquid by a travelling microscope. 2. Determine the refractive index of the material of prism using spectrometer. 3. Determination of amplitude and frequency of electrical signals by oscilloscope. 4. To study the characteristics of RC circuits. 5. To study Brewster's law/Malus' law using laser light. 6. To study the diffraction of light by a grating. 7. To study the interference of light by Newton's ring apparatus. 8. To determine numerical aperture of optical fiber. 9. Determination of Planck constant.						
Text and/or reference material	**SUGGESTED BOOKS**: 1) A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

CYS51	**CHEMISTRY LABORATORY**	PCR	0	0	2	2	1

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
None	CT+EA

Course Outcomes

- CO1: To learn basic analytical techniques useful for engg applications.
- CO2: Synthesis and characterization methods of few organic, inorganic and polymer compounds of industrial importance.
- CO3: Learn chromatographic separation methods.
- CO4: Applications of spectroscopic measurements.

Topics Covered

i. Experiments based on pH metry: Determination of dissociation constant of we acids by pH meter.
ii. Experiments based on conductivity measurement: Determination of amou of HCl by conductometric titration with NaOH.
iii. Estimation of metal ion: Estimation of Fe^{2+} by permangnomentry
iv. Estimation of metal ion: Determ. of total hardness of water by EDTA titration.
v. Synthesis and characterization of inorganic complexes: e. g. $Mn(acac)_3$, Fe(acac cis-bis(glycinato)copper (II) monohydrate and their characterization by m. p FTIR etc.
vi. Synthesis and charact. of organic compounds: e.g.Dibenzylideneacetone.
vii. Synthesis of polymer: polymethylmethacrylate
viii. Verification of Beer-Lamberts law and determination of amount of iron prese in a supplied solution.
ix. Chromatography: Separation of two amino acids by paper chromatography
x. Determination of saponification value of fat/ vegetable oil

<u>Suggested Text Books:</u>

1. Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall
2. Advanced Physical Chemistry Experiments: By Gurtu&Gurtu
3. Comprehensive Practical Organic Chemistry: Qualitative Analysis By V. K. Ahluwalia and S. Dhingra

<u>Suggested Reference Books:</u>

1. Practical Chemistry By R.C. Bhattacharya
2. Selected experiments in Physical Chemistry By N. G. Mukherjee

• CO2: Practice on manufacturing of components using workshop trades including fitting, carpentry, foundry and welding
• CO3: Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping
• CO4: Develop basic electrical engineering knowledge for house wiring practice</td></tr>
<tr><td>Topics Covered</td><td colspan="7">M/c shop & Carpentry shop -- 3X3= 9hrs.
• Introduction on machining process.
• Introduction to machine tools- Lathe, Shaper, Milling and Drill machine.
• Introduction to woods- Types, structure, disease and defect of wood.
• Introduction to wood working machines and tools.
• Making of dovetail joint and bridle joint.
Welding Shop & Sheet metal -- 3X3= 9hrs.
• Introduction to welding.Safety and precautions in welding.
• Formation of weld bead by SMAW on mild steel flat.
• Formation of weld bead by oxy-fuel welding on mild steel flat.
• Introduction to sheet Metal works.
• Tools and Machines used in sheet metal works.
• Concept of development, marking out of metal sheets.
• Cutting and joining of metal sheets.
• Safety precautions, General warning needed in the shop floor.
Black smithy & Foundry -- 3X3= 9hrs.
• Introduction Smithing and Forging- Tools, Machines, Furnaces and its accessories, fuels.
• Safety and precautions in blacksmithy.
• Making of bars of different cross-sections.
• Making of hexagonal headed bolts.
• Forge welding.
• Introduction to Foundry Technology.
• Preparation of sand mould using Solid/Split Pattern.
Fitting & Electrical shop -- 3X3= 9hrs.
• Introduction to hand metal cutting tools with specifications, nomenclature and their use.
• Marking tools, measuring tools and their use.
• Fitting of joints of mild steel flats.</td></tr>
</table>

	• Introduction to electrical hazards and safety precaution. • Wire jointing and soldering. • PVC Conduit Wiring controlled by separate single way switches. • PVC Cashing Capping Wiring for two-way switches. • Conduit wiring for the connection of a Calling Bell with In& Out Indicators. • Batten Wiring and Cleat Wiring. • Tube Light Connection. • Insulation Resistance Testing of 1ph / 3ph Motor and House Wiring. • Earth Resistance Testing. • DOL Starter Connection. **Viva voce -- 1X3= 3hrs.**
Text Books, and/or reference material	1. Workshop Technology Part I and Part II by W. A. J. Chapman 2. Elements of Workshop Technology S. K. Hazra Chowdhury, A. K. Hazra Chowdhury and Nirjhar Roy 3. Mechanical Workshop Practice by K. C. John

Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Introduction of Yoga. • Sitting Posture/Asanas- Padmasana, Vajrasana, Ardhakurmasana, Ustrasana, Bakrasana, Sasankasana, Janusirshasana, Suryanamaskar.						

	• Mudra- Gyana mudra, Chin mudra, Shuni mudra, Prana mudra, Adi mudra, Anjali mudra. • Laying Posture/Asanas- PavanaMuktasana, UttanaPadasana, Sarpasana, Bhujangasana (Cobra Pose), Eka Pada Śalabhāsana, Dhanurasana, Chakrasana, Viparitkarani. • Meditation- Yognidra, Om chant, Pray chant. • Standing Posture/Asanas- Tadasana (Mountain Pose), Vrikshasana (Tree Pose), Ardhachandrasana, Trikonasana, Utkatasana, Padahastasana. • Pranayama- Deep breathing, AnulomVilom, Suryabhedi, Chandrabhedi. • Kriya- Kapalbhati, Trataka. **ATHLETICS** • Introduction of Athletic. • Starting Technique for Track events- Standing start, Crouch & Block start. • Finishing Techniques. • Relay Race- 4×100m, 4×400m & Baton Exchange Technique & Rules. • Track Marking with Fundamentals- 200m, 400m and Diagonal Distance Radius, Straight Distance, Staggers of Different Lanes & Curve Distance. **BASKETBALL** • Introduction and Players stance and ball handling. • Passing- Two hand chest pass, two hand bounce pass, One hand baseball pass, Side arm pass, Overhead pass, Hook pass. • Receiving- Two hand receiving, one hand receiving, receiving in stationary position, Receiving while jumping and Receiving while running. • Dribbling- Dribble, High dribble, Low dribble, Reverse dribble, Rolling dribble. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Introduction of Volleyball • Service- Underarm service, Sidearm service, Tennis service, Floating service, Jump service. • Pass: Underarm pass- Ready position, Teaching stage of underarm pass and Upper hand pass- Volley pass, Back pass, Short set, Jump set & Underarm set. • Rules and their interpretation. **FOOTBALL** • Introduction of Football • Push pass- Instep inside, Instep outer side. • Kicking- Spot kick, Instep kick, Lofted kick. • Dribbling- One leg, Both legs, Instep. • Trapping- Rolling ball sole trapping, High ball sole trapping, High ball chest trapping, High ball thigh trapping. • Throwing- Standing throw, Running throw, Seating throw. • Goal Keeping- Griping the ball, Full volley, Half volley, Drop Kick. • Rules and their interpretation. **CRICKET**

	• Introduction of Cricket • Batting gripping & Stance, Bowling gripping technique. • Batting front foot defense& Drive. • Batting Back foot defense& Drive. • Batting Square cut. • Bowling medium pace, Bowling off break. • Fielding drill, Catching (Short & High). • Rules & Regulation. **BADMINTON** • Basic introduction about Badminton and Badminton court. • Racket parts, Racket Grip, Shuttle Grip. • Basic stance, Basic Footwork, Shadow practice (Full court movement). • Strokes services: Forehand- Overhead & Underarm, Backhand- Overhead & Underarm. • Match practice (Single & Double). • Rules & Regulation. **TABLE TENNIS** • Introduction of Table Tennis. • Basic Stance and Grip (Shake hand & Pen hold). • Service Basic. • Stroke: Backhand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Stroke: Forehand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-1 General Introduction and words of command. • FD-2 Attention, Stand at ease and Stand easy, Turning and inclining at the halt. • FD-3 Sizing, Forming up in three Ranks Numbering, Open and Close order March and Dressing. • FD-4 Saluting at the halt, Getting on parade, Dismissing and falling out. • FD-5 Marching, Length of pace and Time of Marching in quick time and Halt, Slow March and Halt. • FD-7 Turning on the March and Wheeling. • FD-12 Parade practice. **TAEKWONDO** • Introduction about Taekwondo- Meaning of Taekwondo, Korean language of dress, Fighting area, Punch, Block, Kicks etc. • Stance- Ready stance, Walking stance, Fighting stance, Front stance, Back stance, Cat stance etc. • Punch Technique- Front fist punch, Rear fist punch, Double fist punch, With stance etc. Blocks- Upper blocks, Middle block, Side block, Suto etc. • Foot Technique (Balgisul)- Standing kick (Saseochagi), Front kick (Abchagi),

	Doliyo (Chagi), Abdalchagi (Butterfly kick), Back kick etc. **NSS** • Swachha Bharat Mission • Free Medical Camp • Sanitation drive in and around the campus. • Unnat Bharat Abhiyaan • MatribhashaSaptah celebration

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 02	MATHEMATICS - II	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic concepts of set theory, differential equations, and probability.		CT+MT+EA					

Course Outcomes	• CO1: Develop the concept of basic linear algebra and matrix equations so as to apply mathematical methods involving arithmetic, algebra, geometry to solve problems. • CO2: To acquire the basic concepts required to understand, construct, solve and interpret differential equations. • CO3: Develop the concepts of Laplace transformation & Fourier transformation with its property to solve ordinary differential equations with given boundary conditions which are helpful in all engineering & research work. • CO4: To grasp the basic concepts of probability theory.
Topics Covered	**Elementary algebraic structures:** Group, subgroup, ring, subring, integral domain, and field. (5) **Linear Algebra:** Vector space, Subspaces, Linear dependence and independence of vectors, Linear span, Basis and dimension of a vector space. Rank of a matrix, Elementary transformations, Matrix inversion, Solution of system of Linear equations, Eigen values and Eigen vectors, Cayley-Hamilton Theorem, Diagonalization of matrices. (15)

	Ordinary Differential Equations: Existence and uniqueness of solutions of ODE (Statement Only), Equations of first order but higher degree, Clairaut's equation, Second order differential equations, Linear dependence of solutions, Wronskian determinant, Method of variation of parameters, Solution of simultaneous equations. (12) **Fourier series:** Basic properties, Dirichlet conditions, Sine series, Cosine series, Convergence. (4)
	Laplace and Fourier Transforms: Laplace transforms, Inverse Laplace transforms, Convolution theorem, Applications to Ordinary differential equations. Fourier transforms, Inverse Fourier transform, Fourier sine and cosine transforms and their inversion, Properties of Fourier transforms, Convolution. (10) **Probability:** Historical development of the subject and basic concepts, Axiomatic definition of probability, Examples to calculate probability, Random numbers. Random variables and probability distributions, Binomial distribution, Normal distribution. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10^{th} ed, Wiley India Ed. (2010). 2. Gilbert Strang, Linear algebra and its applications (4th Ed), Thomson (2006). 3. Shepley L. Ross, Differential Equations, 3^{rd} Edition, Wiley Student Ed (2017). **Reference Books:** 1. S. Kumaresan, Linear algebra - A Geometric approach, PHI (2000). 2. C. Grinstead, J. L. Snell, Introduction to Probability, American Math. Society.

CSC01	**INTRODUCTION TO COMPUTING**	PCR	2	1	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Basic knowledge of computer.	CT+MT+EA
Course Outcomes	CO1: Recognize the changes in hardware and software technologies with respect to the evolution of computers and describe the function of system software's

	(operating Systems) and application software's, languages, number system, logic gates. CO2: Illustrate the flowchart and inscribe an algorithm for a given problem Inscribe C programs using operators. CO3: Develop conditional and iterative statements to write C programs. CO4: Exercise user defined functions to solve real time problems CO5: Inscribe C programs that use Pointers to access arrays, strings and functions. CO6: Exercise user defined data types including structures and unions to solve problems.
Topics Covered	Fundamentals of Computer: History of Computer, Generation of Computer, Classification of Computers 2L Basic Anatomy of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices. [2] Languages: Assembly language, high level language, compiler, and assembler (basic concepts) [1] Binary & Allied number systems representation of signed and unsigned numbers. BCD, ASII. Binary Arithmetic & logic gates. [2] Basic concepts of operating systems like MS DOS, MS WINDOW, UNIX, Algorithm & flow chart. [1] C Fundamentals: The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements. [2] Operators & Expressions: Arithmetic operators, relational and logical operators, type, conversion, increment and decrement operators, bit wise operators, assignment operators and expressions, precedence, and order of evaluation. Input and Output: Standard input and output, formatted output -- printf, formatted input scanf. [8] Flow of Control: Statement and blocks, if - else, switch, loops - while, for do while, break and continue, go to and labels. [5] Fundamentals and Program Structures: Basic of functions, function types, functions returning values, functions not returning values, auto, external, static and register Variables, scope rules, recursion, function prototypes, C pre-processor, command line arguments. [5] Arrays and Pointers: One-dimensional, two-dimensional arrays, pointers and functions, multi-dimensional arrays. [10] Structures Union and File: Structure, union, structures and functions, arrays of structures, file read, file write.[5]
Text Books, and/or reference material	Text Books: 1. Let us C by Kanetkar 2. C Programming by Gottfried 3. Introduction to Computing by Balaguruswamy 4. The C-programming language by Dennis Ritchie Reference Books: 1. Computer fundamental and programming in C by P Dey and M. Ghosh 2. Computer fundamental and programming in C by Reema Thareja 3. programming with C by Schaum Series

<tr><td>Topics Covered</td><td colspan="7">1. Semiconductors
1.1. Concept of band formation in solids; Fermi-Dirac distribution function, concept of Fermi level, invariance of Fermi level in a system under thermal equilibrium
1.2. Definitions of insulator, conductor and semiconductor using band diagram
1.3. Crystalline structure of semiconductor
1.3.1. Covalent bond
1.3.2. Generation of holes and electrons
1.3.3. Effect of temperature on semiconductor
1.4 Intrinsic semiconductor
1.5 Doping and Extrinsic semiconductor
1.5.1 n-Type semiconductor and band diagram
1.5.2 p-Type semiconductor and band diagram
1.5.3 Mass-action law of semiconductor
1.6. Conductivity of semiconductor (including mathematical expression)
1.7 Carrier transport phenomenon. (03 hrs.)
2. Diodes
2.1. Construction</td></tr>
</table>

	2.2. Unbiased diode; Depletion layer and Barrier potential; junction capacitance (expression only) 2.3. Principle of operation with forward biasing and reverse biasing 2.4. Characteristics 2.5 Diode's three models/equivalent circuits.(02 hrs.) 3.**Diode Circuits** 3.1 Diode rectifier 3.1.1 Half wave rectifier 3.1.2 Full wave rectifier:centre tap and bridge rectifier 3.1.3 Capacitive filter and DC power supply (Numerical problems) 3.2 Special Diodes 3.2.1 Zenerdiode: Avalanche breakdown and Zener breakdown and characteristics. 3.2.2 Zener diode as a voltage regulator 3.2.3 Displaydevices: LED and LCD. (03 hrs.) 4.**Bipolar Junction Transistor (BJT)** 4.1 n-p-n and p-n-p transistor and their constructions 4.2 Principle of operation 4.3 Transistor configuration: common base, common emitter, and common collector 4.4 Transistor characteristics: input and output characteristics of CB and CE configurations 4.5 DC load line: quiescent (Q) point; cut-off, active, and saturation region 4.6 Amplifier: Principle of operation 4.7 Transistor as a switch. (04 hrs.) 5.**Transistor Biasing** 5.1 Need of biasing 5.2 Methods of biasing: base resistor or fixed bias, emitter feedback, voltage divider biasing 5.3 Stability of Q-point (qualitative discussions) 5.4 (Numerical problems). (02 hrs.) 6.**Single Stage Amplifier:** classification of amplifiers (voltage amplifier, current amplifier, power amplifier etc.) Class-A CE Amplifier with coupling and bypass capacitors, Qualitative discussions of magnitude characteristics of frequency response (graph only) (02 hrs.) 7.**Feedback Amplifier** 7.1 Positive and negative feedback 7.2 Deduction of gain with negative feedback, explanation of stability of gain with negative feedback, other effects of negative feedback (no deduction), numerical problems. (03 hrs.) 8.**Other Semiconductor Devices** 8.1 JFET: Construction, principle of operation, characteristics 8.2 MOSFET: Construction, principle of operation, characteristics 8.3 Power Electronic Device-SCR: Brief discussions. (02 hrs.) 9.**Operational Amplifier** 9.1 Characteristics of ideal operational amplifier 9.2 Pin Configuration of IC 741,

	9.3 Analysis of simple operational amplifier circuits: concept of virtual ground; noninverting amplifier and inverting amplifier. 9.4 Applications: voltage follower, summer, differentiator, integrator, and comparator (04 hrs) 10.**Oscillator** 10.1 Positive feedback and condition of oscillation 10.2 R-C phase-shift oscillator, Wien bridge oscillator.(02 hrs.) 11.**Boolean Algebra** 11.1 Boolean algebra, De Morgan's theorem, simplification of Boolean expressions 11.2 Number system, range extension of numbers, overflow 11.3 Different codes: gray code, ASCII code and BCD codes and them Applications. (01 hrs.) 12. **Logic Gates** 12.1 NOT, OR, AND, NOR, NAND, EX-OR, EX-NOR gates 12.2 Simplification of logic functions 12.3 Realizations of logic expressions using logic gates. (01 hrs.) 13. CRO and its applications and other test and measurement instruments. (01 hrs.)

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTC01	LIFE SCIENCE	PCR	2	0	0	2	2
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1: Basic understanding of basic cellular organization of organisms and cellular communications, structure and functions of the macromolecules and their biosynthesis and cata--bolism. CO2: To give an understanding of the key features of the structure, growth, physiology and behavior of bacteria, viruses, fungi and protozoa CO3: To introduce molecular biology to understand biological processes in various applications. CO4: To provide a foundation in immunological processes and an overview of the interaction between the immune system and pathogens. CO5: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them CO6: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them
Topics Covered	**1. Cell Biology (4)** a) Introduction to life science: prokaryotes & eukaryotes Definition; Difference b) Introduction to cells - Define cell, different types of cell c) Cellular organelles - All organelles and functions in brief d) Cellular communications Introduction to basic signaling; endocrine, paracrine signaling; concepts of receptor, ligand, on-off switch by phosphorylation/dephosphorylation **2. Biochemistry (4)** a) Biological function of carbohydrate and lipid - Introduction, structure and function b) Biological function of nucleic acids and protein - structure and function c) Catabolic pathways of Macromolecules - Introduction to catabolism, hydrolysis and condensation reactions; Catabolism of glucose- Glycolysis,

	TCA; overall degradation of proteins and lipids d) Biosynthesis of Macromolecules Generation of ATP (ETS), Generation of Glucose (Photosynthesis) **3. Microbiology (5)** a) Types of microorganisms and their general features - Bacteria, Yeast, Fungi, Virus, Protozoa- general introduction with practical significance and diseases b) Microbial cell organization - Internal and External features of cell- bacterial cell wall, viral capsule, pilus etc, c) Microbial nutritional requirements and growth - Different Sources of energy; growth curve d) Basic microbial metabolism - Fermentation, Respiration, Sulfur, N_2 cycle **4. Immunology (5)** a) Basic concept of innate and adaptive immunity - Immunity-innate and adaptive, differences, components of the immune system b) Antigen and antibody interaction - Antigen and antibody, immunogen, factors affecting immunogenicity, basic antigen-antibody mediated assays, introduction to monoclonal antibody c) Functions of B cell - B cell, antibody production, memory generation and principle of vaccination d) Role of T cell in cell-mediated immunity - Th and Tc, functions of the T cell with respect to different pathogen and cancer cell **5. Molecular Biology (5)** a) Prokaryotic Genomes (Genome organization & structure) - Nucleoid, circular or linear b) Eukaryotic Genomes (Genome organization & structure) - Intron, exon, packaging, chromatin c) Central Dogma (Replication, Transcription and Translation) d) Applications of Molecular Biology (Diagnostics, DNA-fingerprinting, Recombinant products etc.) - Introduction to Recombinant DNA, fingerprinting, cloning **6. Bioprocess Development (5)** a) Microbial growth kinetics - Batch, fed-batch and continuous systems, Monod Equation b) Enzyme kinetics, kinetics of enzyme inhibition and deactivation Definition of enzymes, activation energy, Concepts of Km, Vmax, Ki c) Microbial sterilization techniques and kinetics Introduction to sterilization, dry and moist sterilization d) Thermodynamics of biological system - Concepts of Enthalpy, Entropy, favorable reactions, exergonic and endergonic reactions e) Material and energy balance for biological reactions - Stoichiometry

MAC331 MATHEMATICS-III 3-1-0 4 Credit 4 Hrs

Department of Mathematics								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC331	MATHEMATICS-III	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Basic knowledge of topics included in MAC01 & MAC02		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Acquire the idea about mathematical formulations of phenomena in physics and engineering. • CO2: To understand the common numerical methods to obtain the approximate solutions for the intractable mathematical problems. • CO3: To understand the basics of complex analysis and its role in modern mathematics and applied contexts. • CO4: To understand the optimization methods and algorithms developed for solving various types of optimization problems.						
Topics Covered	**<u>Partial Differential Equations (PDE):</u>** Formation of PDEs; Lagrange method for solution of first order quasilinear PDE; Charpit method for first order nonlinear PDE; Homogenous and Nonhomogeneous linear PDE with constant coefficients: Complimentary Function, Particular integral; Classification of second order linear PDE and canonical forms; Initial & Boundary Value Problems involving one dimensional wave equation, one dimensional heat equation and two dimensional Laplace equation. [14] **<u>Numerical Methods:</u>** Significant digits, Errors; Difference operators; Newton's Forward, Backward and Lagrange's interpolation formulae; Numerical solutions of nonlinear algebraic/transcendental equations by Bisection and Newton-Raphson methods; Trapezoidal and Simpson's 1/3 rule for numerical integration; Euler's method and modified Eular's methods for solving first order differential equations. [14] **<u>Complex Analysis:</u>** Functions of complex variable, Limit, Continuity and Derivative; Analytic function; Harmonic function; Conformal transformation and Bilinear transformation; Complex integration; Cauchy's integral theorem; Cauchy's integral formula; Taylor's theorem, Laurent's theorem (Statement only); Singular points and residues; Cauchy's residue theorem. [17] **<u>Optimization:</u>** **Mathematical Preliminaries:** Hyperplanes and Linear Varieties; Convex Sets, Polytopes and Polyhedra. [2] **Linear Programming Problem (LPP):** Introduction; Formulation of linear programming problem (LPP); Graphical method for its solution; Standard form of LPP; Basic feasible solutions; Simplex Method for solving LPP. [9]							

Text Books, and/or reference material	**Text Books:** 1. An Elementary Course in Partial Differential Equations-T. Amarnath 2. Numerical Methods for scientific & Engineering Computation- M.K.Jain, S.R.K. Iyengar & R.K.Jain. 3. Foundations of Complex Analysis- S. Ponnuswami 4. Operations Research Principles and Practices- Ravindran, Phillips, Solberg 5. Advanced Engineering Mathematics- E. Kreyszig **Reference Books:** 1. Complex Analysis-L. V. Ahfors 2. Elements of partial differential equations- I. N. Sneddon 3. Operations Research- H. A. Taha

CSC 301 Discrete Mathematics 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSC 301	Discrete Mathematics	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Remember the basic terms, definitions and concepts of mathematics. • CO2: Students will be able to understand the key concepts of discrete mathematics such as functional mapping, mathematical logic, counting principles, generating functions, algebraic structures and graph theory. • CO3: Students will be able to apply the learned concepts to solve various problems. • CO4: Students will be able to differentiate or relate the various ideas with respect to problems. • CO5:Students will be able to judge the formulas and ideas to be applicable to a problem.						
Topics Covered	**Set Theory:** Definition of Sets, Venn Diagrams, complements, cartesian products, power sets, counting principle, cardinality and countability (Countable and Uncountable sets), proofs of some general identities on sets, pigeonhole principle. (3L)						

	Relation: Definition, types of relation (reflexive, symmetric, transitive, antisymmetric, Equivalence, partial ordering relations), composition of relations, domain and range of a relation, pictorial representation of relation, properties of relation, Partial Order, Lattice, Hasse Diagram. (6L) **Function:** Definition and types of function, composition of functions, recursively defined functions, Surjection, Injection, Bijection, Composition of Function, Asymptotic notations: big-Oh, Theta, big-Omega. (4L) **Propositional logic:** Proposition logic, basic logic, logical connectives, truth tables, tautologies, contradiction, normal forms (conjunctive and disjunctive), modus ponens and modus tollens, validity, predicate logic, universal and existential quantification. Notion of proof: proof by implication, converse, inverse, contrapositive, negation, and contradiction, direct proof, proof by using truth table, Proof by Well ordering principle. (6L) **Combinatorics:** Mathematical induction, recursive mathematical definitions, basics of counting, permutations, combinations, inclusion-exclusion, recurrence relations (nth order recurrence relation with constant coefficients, Homogeneous recurrence relations), generating function (closed form expression, properties of G.F., solution of recurrence relation using G.F, solution of combinatorial problem using G.F.). (8L) **Algebraic Structure:** Binary composition and its properties definition of algebraic structure; Semi group, Monoid, Groups, Abelian Group, properties of groups, Permutation Groups, Sub Group, Cyclic Group. (6L) **Graphs:** Graph terminology, types of graph, connected graphs, components of graph, Euler graph, Hamiltonian path and circuits, Degree Sequence, Radius, Diameter, Center of a graph, Graph coloring, Chromatic number. Planarity of a graph: K(3,3) and K(5). Clique, Independent set, bipartite graph, Tree: Definition, types of tree (rooted, binary), properties of trees. (9L)
Text Books, and/or reference material	**Text Books:** 1. C. L. Liu, Elements of Discrete Mathematics, Tata McGraw Hill. 2. Norman L. Biggs, Discrete Mathematics, Oxford. 3. Douglas B. West, Introduction to Graph Theory, Prentice Hall, India. **Reference Books:** 1. Ronald L. Graham, Donald E. Knuth and O. Patashnik, Concrete Mathematics, Pearson Education.

CSC302 Digital Logic Design 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSC 302	Digital Logic Design	PCR	3	0	0	3	3
Pre-requisites:		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	At the completion of this course students will be able to: • CO1: Realize the various logic gates and laws of Boolean algebra. Analyze different types of digital electronic circuit using various mapping and logical tools. • CO2: Design and analyses the various combinational circuits. • CO3: Design and analyze the various sequential circuits. • CO4: Design and analyze combinational and sequential logic circuits through HDL models. • CO5: Synthesis the various logic using ASM charts.						
Topics Covered	**UNIT-I**: **Switching Circuits,** Various number system and their conversions: Arithmetic of these number systems, Complements, Data Representation: Binary numbers, binary codes, fixed point representation, floating point representation, Code and their conversions, Addition and Subtraction on Codes, Error Detection codes (Hamming code etc), representation of signed binary number in Fixed and Floating Points. (5L) **UNIT-II**: **Boolean algebra**, logic gates, and switching functions, truth tables and switching expressions, minimization of completely and incompletely specified switching functions, Karnaugh map and Quine-McCluskey method, multiple output minimization, representation and manipulation of functions using BDDs, two-level and multi-level logic circuit synthesis. (10L) **UNIT-III**: **Combinational logic circuits**: Realization of Boolean functions using AND/NOR Gates, Decoders, multiplexers. Logic design using ROMs, PLAs and FPGAs. Case Studies.						

	(8L) **UNIT-IV**: **Sequential circuits:** Clocks, flip-flops, latches, counters and shift registers, finite-state machine model, synthesis of synchronous sequential circuits, minimization and state assignment, asynchronous sequential circuit synthesis. (12L) **UNIT-V**: FSM and **ASM charts**: Representation of sequential circuits using FSM and ASM charts, synthesis of output and next state functions, data path control path partition-based Design. (7L)
Text Books, and/or reference material	**Text Books:** 1. Digital Logic Design, M. Morris Mano, Michael D Cilleti, PHI. **Reference Books:** 1. Digital Principles & Application, 5th Edition, Leach & Malvino, McGraw Hill Company. 2. Modern Digital Electronics, 2nd Edition, R.P. Jain. Tata Mc Graw Hill Company Limited.

CSC303 Data Structures and Algorithms 3-1-0 4 Credits 4 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSC 303	Data Structures and Algorithms	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
CSC-01 (Introduction to Computing)		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Understanding the fundamental concepts of data, data types and abstract data types. • CO2: Implementation of different abstract data types using different data structures. • CO3: Apply different types of data structures to implement different						

	application problems. ● CO4: Different searching and sorting techniques. ● CO5: Analysis of the suitability/compatibility of different data structures based on the types of applications. ● CO6: Design and development of algorithms for real-life applications.
Topics Covered	Introduction to problem solving through computer, Design of algorithm to solve a problem, Concept of static and dynamic memory allocation, Algorithms and data structures, Concept of Abstract Data Type (ADT) with examples. (3L) Efficiency of an algorithm, Asymptotic notations, Time and space complexities, Analysis of algorithms, Comparing asymptotic running times, Impact of data structure on the performance of an algorithm. (4L) Array, Single and multi-dimensional array, Memory representation (row major and column major) of array, Insertion, and deletions in array, Advantages and disadvantages of array. (3L) Linked list as an ADT, Memory allocation and deallocation for a linked list, Linked list versus array, Types of linked lists: singly linked list, doubly linked list and circular linked list, Operations on linked list: creation, display, insertion and deletion (in different positions), summation, average, maximum, minimum etc. Application of linked list: representations and operations on polynomials, sparse matrices. (7L) Stack as an ADT, Main operations (push and pop), auxiliary operations and axioms, Array implementation of stack, Limitation of array implementation, Linked list implementation of stack, Applications of stack: Recursion, Function call, Evaluation of postfix expression using stack, Conversion of infix to postfix using stack. (6L) Queue as an ADT, Main operations (enqueue and dequeue), Auxiliary operations and axioms, Array implementation of queue, Limitation of array implementation and Circular queue, Linked list implementation of queue, Double ended queue (dequeue) Priority queue and its applications. (5L) Binary Tree, Definition and properties, Representation of binary tree in memory: linked representation, array representation, Binary tree traversal, Preorder, Inorder and Postorder, Expression tree, Heap and its applications. (5L) Search trees: Binary search tree, Balanced binary search tree, AVL tree, Red Black tree, M-way tree, M-way search tree, B tree, B+ Tree. (7L)

	Searching: Linear search and binary search. (3L) Sorting: Bubble, selection, insertion, Quick sort, Merge sort, Heap sort, Radix sort. (7L) Graphs: Mathematical Properties, Degree, Connectedness, Representation using matrix, Adjacency list, Directed Graphs, Directed Acyclic Graph. (2L) Hashing: Hash functions. Collision, Collision resolution techniques: linear probing, quadratic probing, double hashing, chaining, Rehashing. (4L)

PHS 51 in 1st year.		CE+EA					
Course Outcomes	At the end of the course, a student will be able to: • CO1. Calculate different characteristic parameter of semiconductor materials. • CO2. Measure and understand different characteristic of semiconductor devices. • CO3. Draw the current-voltage characteristics of solar cell for calculation of conversion efficiency.						
Topics Covered	**List of Experiments:** 1. To determine the energy bandgap of a semiconductor. 2. Measurement of resistivity of semiconductors by four-probe method at different temperatures. 3. Determination of Hall coefficient of a given semiconductor and its temperature						

	dependence. 4. To determine the value of e/m of an electron by using a cathode ray tube and a pair of bar magnet. 5. Determination of Stefan's constant. 6. Study of p-n junction diode characteristics. 7. Study of Zener diode characteristics and voltage regulator. 8. Determination of photo conversion efficiency of a Solar cell.
Text Books, and/or reference material	**Text Books** 1. An advanced course in practical physics, Chattapadhyay and Rakshit. 2. Advanced Practical Physics, B. Ghosh and K. G. Mazumdar

Pre-requisites		Course Assessment methods (Continuous (CT) and End assessment (EA))					
NIL		CT+EA [CT: 60%, EA(Laboratory assignment + Viva Voce): 40%]					
Course Outcomes	● CO1: Understand basic gate operations. ● CO2: Realize the boolean function using basic gates in both SOP/POS form. ● CO3: Realize different combinational circuits with basic gates. ● CO4: Understand the basic structure of different digital components- multiplexer, decoder, encoder etc. ● CO5: Verification of state table of different flip flop using NAND/NOR gate.						
Topics Covered	1. Familiarization with IC, study of the data sheet, VCC, Ground. Verification of the truth tables. 2. Implementation of a given Boolean function using logic gates in both SOP and POS forms. Verify the Universal logic gate (NAND, NOR). 3. Verify DE Morgan's law.						

	4. Implement NAND based logic circuit for any Boolean expression. Verify that a Boolean expression, e.g. F= AB + A'C'. is functionally complete. 5. Implement a Full adder using Half Adder. Implement the combinational circuit to realize both Adder and Subtractor together. 6. Implementation and verification of Decoder, Multiplexer, Encoder and Priority Encoder etc. 7. Implement and verify Ripple Carry Adder, Carry Look Ahead Adder and BCD Adder. 8. Verification of state tables of RS, JK, T and D flip-flops using NAND & NOR gates. 9. Implement and verify the 4-bit counter
Text Books, and/or reference material	**Text Books:** 1. Digital Logic Design, M. Morris Mano, Michael D Cilleti, PHI. **Others:** 1. Laboratory Manual.

Pre-requisites	Course Assessment methods (Continuous Assessment (CT) and End assessment (EA))
CSC-01 (Introduction to Computing), CSS-51 (Computing Laboratory)	CT+EA [CT: 60%, EA (Programming assignment + Viva Voce): 40%]

Course Outcomes	• CO1: Implement linear and non-linear data structures using linked list. • CO2: Implement stack, queue, tree using array and linked list for problem solving. • CO3: Implement operations and techniques like insertion and deletion, traversal, searching and sorting on various data structures. • CO4: Analyze the time and space complexity of the algorithms.

	• CO5: Choose appropriate data structures for representation and manipulation of the data for the given problems.
Topics Covered	1. Insertion and deletion in arrays using dynamic memory allocation. 2. Linear search, Binary search (recursive, non-recursive). 3. Memory allocation and deallocation for linked list. 4. Operations on linked list: creation, display, insertion and deletion (in different positions), summation, average, maximum, minimum etc. 5. Array implementation of stack and queue. 6. Linked implementation of stack and queue. 7. Evaluation of postfix expression using stack. 8. Conversion of infix expression to its postfix version using stack. 9. Linked implementation of binary tree and preorder, inorder and postorder traversal on binary tree. 10. Implementation of binary search tree and operations on it (searching, insertion, deletion). 11. Implementation of height-balanced binary search tree (AVL tree). 12. Implementation of 2-3 tree. 13. Implementation of Chaining. 14. Implementation of sorting algorithms: Selection sort, insertion sort, bubble sort, quick sort, heap sort, merge sort, radix sort. 15. Implementation of few basic graph operations (such as breadth first and depth first traversal, finding minimum spanning tree, shortest path) on graph.

FOURTH SEMESTER

CSC 401 Computer Organization and Architecture 3-1-0 4 Credits 4 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSC 401	Computer Organization and Architecture	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Digital Logic Design (CSC302)		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Analyze the various parts of a modern computer functional units, bus structure, addressing modes and Computer arithmetic. • CO2: Identify the process involved in executing an instruction and fetching the word from memory. • CO3: Design the hardwired and micro-programmed control units and implementation of interrupts. • CO4: Understand the memory hierarchy and design a memory system. • CO5: Understand Pipelined execution and instruction scheduling.						
Topics Covered	**UNIT-I**: Introduction: Evolution of computers, Basic Structure of Computers: Basic Operational Concepts, GPR based and stack based organisation. Bus Structures, Performance Measurement: Processor Clock, Basic Performance Equation, Clock Rate, Machine Instructions and Programs: Memory Location and Addresses, Memory Operations, Instructions and Instruction Sequencing, Addressing Modes, Assembly Language, Basic Input and Output Operations, Encoding of Machine Instructions (Huffman encoding etc). (12L) **UNIT-II**: Fundamental concepts of the processing Unit: Fetching and Storing words, Register Transfer, Execution of instruction, Arithmetic Operations: Addition and Subtraction of Signed Numbers, Design of Fast Adders, Combinational and Sequential ALU, ALU expansion strategies, Design of Multipliers and Dividers, Wallace tree and Booth's Multipliers, Floating Point Numbers (IEEE754), Floating Point Operations, Multiplication of Positive Numbers, Signed Operand Multiplication (Booth's Multiplication etc.), Fast Multiplication, Integer Division. (10L) **UNIT-III**: Computer Organization and Design (Datapath and control path): Instruction codes, computer registers, computer instructions, timing & control, instruction cycle, memory reference instructions, Hard-wired Control, Micro programmed Control: Micro instruction, Microprogram sequencing, Input/output Organization: Accessing I/O Devices, Interrupts – Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, Controlling Device Requests, Exceptions, Direct Memory Access, Buses, Interface Circuits, Standard I/O Interfaces – PCI Bus, SCSI Bus, Bus Arbitration schemes, USB. (Brief overview of 8085/8086 microprocessor). (12L)						

	UNIT-IV: Memory System: Basic Concepts, Semiconductor RAM Memories, Read Only Memories, Speed, Size, and Cost, Cache Memories – Mapping Functions, Replacement Algorithms, page mode access, interleaved access. Performance Considerations, Virtual Memories, Secondary Storage. (12L) **UNIT-V**: Basic concepts of pipelining, the instruction pipeline – pipeline hazards – instruction level parallelism – reduced instruction set –Computer principles – RISC versus CISC. Introduction to GPP, ASIP and ASIC etc. (10L)
Text Books, and/or reference material	**Text Books:** 1. David A Patterson, John L Hennessy, "Computer Organization and Design", (The Hardware/Software Interface) Morgan Kaufmann. 2. Carl Hamacher, Zvonko Vranesic, Safwat Zaky: Computer Organization, 5th Edition, Tata McGraw Hill. **Reference Books:** 1. **William Stallings, "Computer Organization and Architecture".** 2. Nicholas P Carter, "Computer Architecture & Organisation".

Mapping of CO (Course Outcome) and PO (Programme Outcome)

CSC 402 Theory of Computation 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSC402	Theory of Computation	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Discrete Mathematics (CSC 301)		CA+ MT + ET [CA: 15%, MT: 25%, ET: 60%]					
Course Outcomes	• CO1: Explain the concept of regular languages through regular expressions and finite automata. • CO2: Describe context-free languages and context free grammars. • CO3: Design grammars and automata for various languages. • CO4: Examine the power of Turing machines and design TM for simple problems. • CO5: Analyze the concept of undecidability in the context of Turing						

	machine design.
Topics Covered	1. Regular sets and Regular Expression, Non-deterministic and deterministic finite automata and their equivalence, Minimization of deterministic finite automata, Regular expressions to Finite Automata. (10L) 2. Finite Automata with outputs. (2L) 3. Properties of Regular Sets: Pumping Lemma, Closure Properties, Decision algorithms. (5L) 4. Context Free Grammars. Derivations. Ambiguity in grammars. (3L) 5. Chomsky hierarchy of languages and grammars. Regular grammars. (3L) 6. Normal Forms for Context free grammars. CNF and GNF. Closure properties of context free languages, Pumping lemma for context free languages. Decision Properties. (10L) 7. Pushdown automata. (3L) 8. Turing machines. Unrestricted Grammars. Properties of recursive and r.e. languages, Undecidability. (6L)
Text Books, and/or reference material	**Text Books:** 1. Introduction to Automata Theory, Languages and Computation by J.E.Hopcroft, Rajiv Motwani and J.M.Ullman. Pearson Education. 2. Introduction to Languages and Theory of Computation By John C. Martin McGraw Hill Education **Reference Books:** 1. Elements of the Theory of Computation By Harry R. Lewis and Christos H. Papadimitriou Prentice Hall of India. 2. Theory of Automata and Formal Languages By Anand Sharma University Science Press

<tr><td>Course Outcomes</td><td colspan="7">CO1: Students will be able to understand many important concepts such as asymptotic analysis, dynamic programming, recurrences etc.
CO2: Students will be able to describe the key ideas of different algorithm design paradigms.
CO3: Can apply different algorithmic ideas efficiently to solve new problems.
CO4: Students can analyze and understand the time complexity of the algorithms, and its correctness.
CO5: Can evaluate the hardness of an algorithm if required.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Introduction and basic concepts: Algorithm, Asymptotic notations (big-Oh, big Omega, Theta, small-oh) and their significance, introduction to RAM model of computation, complexity (Time Complexity, Space Complexity) analysis of algorithms, worst case and average case. Solving Recurrences – Substitution method, Recurrence tree method and Master Method, Finding maximum and minimum of n numbers, Finding the second largest of n numbers and exact number of comparisons.
Lower bound: Lower bound for a problem. Computing the lower bound for sorting (comparison based sorting) and computing the lower bound for computing convex hull using the lower bound for sorting problem. (2L)
Amortized complexity analysis: aggregate analysis, accounting method and potential method. Examples: storage allocation problem, binary counting problem and heap sort. (4L)
Using Induction to Design algorithm: The celebrity problem, Majority Finding problem (2L)
Divide and conquer Problem: Multiplication of two n-bit integers, Strassen’s Matrix Multiplication problem, Closest pair of points, linear time median finding algorithm, Convex hull and its computation. (6L)
The Greedy Algorithm: Greedy algorithms and their correctness proof: Interval scheduling problem, Interval partitioning problem, Minimizing the Lateness of Intervals problem, Fractional Knapsack Problem. (5L)
Dynamic Programming: Longest Common Subsequence, Matrix Chain Multiplication, 0-1 Knapsack Problem, longest common subsequence problem. (6L)</td></tr>
</table>

	Backtracking Method, Branch and Bound Method. (2L) **Graph Algorithms:** Depth First Search, Breadth First Search, Dijkstra's Single Source Shortest Path algorithm; All pair shortest path algorithm, Minimum Spanning Tree (Prim's and Kruskal's algorithm). (7L) **Randomized Algorithm**: Las Vegas and Monte Carlo; Randomized Quick Sort algorithm and Min Cut problem. (3L) **Reducibility between problems and NP-completeness:** Different class of Problems (P, NP, NP-Hard, NP-Complete), Discussion of different NP-complete problems like satisfiability, clique, vertex cover, independent set, Hamiltonian cycle, set cover, dominating set problem. (6L) **Approximation Algorithm:** Approximation ratio for maximization problem and minimization problem, Constant ratio approximation algorithms for metric travelling salesperson problem (TSP) and vertex cover problem, log n ratio approximation algorithm for Set Cover problem. (6L)
Text Books, and/or reference material	**Text Books:** 1. T. H. Cormen, C. E. Leiserson, R. L. Rivest and C. Stein, Introduction to Algorithms, by Prentice Hall India. 2. J. Kleinberg and Eva Tardo, Algorithm Design by Pearson Education (Indian edition). 3. S. Dasgupta, C. Papadimitriou and U. Vazirani, Algorithms, by Tata McGraw-Hill. **Reference Books:** 1. Michael T. Goodrich and Roberto Tamassia, Algorithm Design: Foundations, Analysis, and Internet Examples, Second Edition, Wiley, 2006. 2. Algorithms: Design Techniques and Analysis Volume 7 of Lecture notes series on computing, World Scientific, 1999. **Others:** Tim Roughgarden's video lectures and notes of CS161 and *CS261; NPTEL's lectures on Design and Analysis of Algorithms; NMEICT video on Design of Algorithms (http://www.nmeict.iitkgp.ac.in/Home/videoLink/10/3gp).*

CSC 404 Object Oriented Programming 2-1-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSC 404	Object Oriented	PCR	2	1	0	3	3

	Programming						

Pre-requisites	Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))
Introduction to Computing (CSC01), Data Structures and Algorithms (CSC303)	CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**
Course Outcomes	• CO1: Understanding of Object Oriented Design Approach and its real world applications • CO2: Analyzing problems in terms of object oriented methodologies. • CO3: Implement programs using concepts of classes and objects. • CO4: Specify the forms of inheritance and use them in problem solving. • CO5: Learn and implement different forms of polymorphism. • CO6: Developing skills to write generic codes
Topics Covered	**Course Introduction-** Concepts of Object Oriented Programming, Procedural approach, Limitation of Procedural Language, Object concept. (2L) **Object Oriented Terminologies**- Class concept, ADT, encapsulation, Cardinality, Data hiding, Inheritance, Polymorphism, Advantages of OOPs, Advantages of OOPs, difference between Procedural and Object Oriented Language, Evolution of C++. (4L) **Basic Input/Output in C++ -** The 1st C++ Program (temperature conversion), compilation, Input stream and output stream, Advantages of cin a cout over pritnf and scanf. (3L) **Basic C++ features -** Literals, Constants, Manipulators, Assertions, Enumerated Data Types, Scope resolution operator. (4L) **Pointers & References in C++**- Basic operations on pointers, Array of pointers, pointer to an array, self referential structures, References in C++ , use of references. (4L) **Dynamic memory allocation/deallocation**- Use of new and delete operator, multi-dimensional array allocation, Examples. (4L) **Constructor and Destructor**, Various examples of constructors, Constructor Salient Features, Destructors,, Examples. (2L) **Functions in C++; Overloading**- function call, Macros, and it's limitations, Inline function, Function Overloading, Constructor Overloading, Examples, Function with Default arguments, Various Examples of Default arguments. (5L) **Writing C++ Classes-** Class, C++ class vs Structure, This pointer, Memory Layout of C++ program, Static member of class. Static Member Functions, Static Object, Examples. (4L) **C++ Constants Revisited** - Storage Allocation, Constants and References, Constant member data and Functions, Constants Objects, Examples. (2L) **Friend Function & Operator Overloading -** Friend Functions, Use of friend

	functions, friends as bridges, Various examples, Operator Overloading, examples, advantages of friend functions during overloading. (4L) **Templates in C++**, Generic function and classes, examples, syntax of a template, Template class (4L) **Inheritance in C++**, Derive class, Parameterized constructor in derive class, Protector Specifier, Examples of different types of inheritance, Virtual Base Class, Up casting. Polymorphism and virtual function, Function call finding, Virtual Functions, Examples. Lecture (38): V Table and V pointer, Pure Virtual Function, Examples. Lecture (39-40): Exception Handling in C++ Lecture (41): Unformatted Input/ Output operations, Formatted I/O functions, File handling. 2-3 Lectures are planned for doubt clearance.
Text Books, and/or reference material	**Text Books:** 1. Adam Drosdek, "DATA STRUCTURES AND ALGORITHMS IN C++" , Brooks/Cole Thomson Learning. 2. Bjarne Stroustrup "The C++ Programming Language", Pearson Education. **3. E. Balaguruswamy, "Object Oriented Programming with C++", Tata McGraw Hill.** **Reference Books:** 1. <tr><td>Course Outcomes</td><td colspan="7">The students, after successfully completing the course, will be able to:
• CO1: Understand the definitions, classifications, properties and applications of signals and systems.
• CO2: Apply Laplace transform, Fourier transform, Z-transform and other mathematical operations for the purpose of analyzing signals and systems.
• CO3: Design and analysis of continuous and discrete time systems.
• CO4: Compare continuous time and discrete time systems in real life applications.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Introduction to Signals and systems, introduction to signals, classification of signals; mathematical operations of signals, some standard signals, generating signals using standard signals.
(6L)

Introduction to systems, classification of systems, Linear Time Invariant (LTI) Systems (continuous-time and discrete-time systems), properties of LTI systems, impulse response, convolution, causality, stability;
(6L)
Impulse response of discrete-time LTI systems, discrete time convolution, difference equations and analysis, developing equivalent discrete-time system from a given continuous-time system and analysis of their stability;
(4L)

Laplace Transform, Properties of Laplace Transform, Inverse Laplace Transform;
(4L)

Applications of Laplace Transforms to design and analyse continuous-time systems, transfer function of continuous-time systems, poles and zeros, stability analysis; (4L)

Introduction to Z-Transform, Properties of z-Transform, Region of Convergence, Inverse z-Transform;
(3L)

Applications of Z-Transforms to design and analyse Discrete Time Systems
(3L)</td></tr>
</table>

	Introduction to Fourier analysis, Fourier series for periodic signals, discrete spectrum of periodic signals; (2L) Introduction to Fourier transform, properties of Fourier transform, energy and power spectral density, frequency response of continuous-time systems, some problem examples; (4L) Fourier analysis of Discrete Signals, Discrete Time Fourier Transform (DTFT), Properties of DTFT, Examples of DTFT, DFT. (4L) Concept of state, state space analysis, state space representation of continuous time systems (2L)
Text Books, and/or reference material	**Text Books:** 1. Signals and Systems, 2nd ed., Simon Heykin and Barry Van Veen, John Wiley & Sons. 2. Signals and Systems, Oppenheim and Willsky, Prentice Hall Signal Processing Series. **Reference Books:** 1. Signal Processing and linear systems, B. P. Lathi, Oxford University Press. 2. 			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSS 451	Computer Organization Laboratory	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT) and End assessment (EA))					
Digital Logic Design (CSC302), Digital Logic Design laboratory (CSS351)		CT+EA [CT: 60%, EA(Laboratory assignment + Viva Voce): 40%]					
Course	• CO1: Understand the basic structure of digital computer.						

Outcomes	• CO2: Understand the synchronous / asynchronous logic. • CO3: Perform different operations with flip-flop. • CO4: Understand arithmetic and control unit operation. • CO5: Understand the basic concepts of Memory.
Topics Covered	1. Introduction to Verilog HDL and Implementation of basic logic gates using Verilog. 2. Familiarization of Assembly language programming. 3. Implementation of combinational circuits using Verilog. 4. Implementation of sequential circuits using Verilog. 5. Implementation of Booth's Multiplier circuit. 6. Synthesis of simple data path and Controllers, Processor Design 7. Implementation of Random Access Memory (RAM) to perform both R/W operation. 8. Mini project.
Text Books, and/or reference material	**Text Books:** 1. David A Patterson, John L Hennessy, "Computer Organization and Design", (The Hardware/Software Interface) Morgan Kaufmann. 2. Pre-requisites:		Course Assessment methods (Continuous (CT) and End assessment (EA))					
MATLAB, Python		CT+EA [CT: 60%, ET(Laboratory assignment + Viva Voce): 40%]					

Course Outcomes

- CO1: Simulate signals and systems using modern computer software packages (Matlab/Python).
- CO2: Apply Laplace transform, Fourier transform, Z-transform and other mathematical operations for the purpose of analyzing signals and systems.
- CO3: Design and analysis of continuous and discrete time systems.
- CO4: Compare continuous time and discrete time systems in real life applications.

Topics Covered

1. Introduction to Computer Software Package Matlab/Python
2. Simulation of standard of signals like
   a. Unit step
   b. Unit impulse
   c. Ramp
   d. Periodic sinusoidal sequences.
3. Basic operation on signals: Addition, Subtraction, Multiplication, Division, shifting, scaling, etc.
4. Convolve and analyze signals in time domain.
5. Laplace transform and inverse Laplace transform of signals.
6. Convolution of signals in transformed domain and verification of convolution property of Fourier and Z-transform.
7. Study of LTI system and its stability.
8. Design of Stable LTI systems.
9. Design of FIR and IIR systems.
10. Implement Fast Fourier Transform algorithm of a signal.

Text Books, and/or reference material

Text Books:

1. Signals and Systems Laboratory with MATLAB, Alex Palamides and Anastasia Veloni, CRC Press, 2011.

Reference Books:

2. Anywhere-Anytime Signals and Systems Laboratory, Nasser Kehtarnavaz, Fatemeh Saki, Morgan & Claypool, 2017.

FIFTH SEMESTER

CSC 501 Operating Systems 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSC 501	Operating Systems	PCR	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))
Computer Organization and Architecture (CSC401),Introduction to Computing (CSC01), Data Structures and Algorithms (CSC303)	CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**

Course Outcomes	● CO1: Explain the functional architecture of an operating system. ● CO2: Design the process control algorithms, solution to deadlocks and multi-threading applications ● CO3: Implement application programs using UNIX system calls. ● CO4: Design and solve control & data access synchronization problems. ● CO5: Explain virtual memory organization and management in OS. ● CO6: Implantation of standard FAT & UNIX file system.
Topics Covered	**Introductory Concepts:** Introduction to Operating System as a whole, memory, CPU(registers and ALU), Evolution of Operating System-types of OS(advantages and drawbacks), Performance measurement metrics. (3L) **Process Data Structures and State transitions:** Process management, Basic Definitions, Process table, PCB(process control block), PTE(process table entry), Process states, Transition diagram, context of process-user level, kernel-level and process Level. (3L) **Process Control:** Process creation, Parent and Child processes, System calls--fork(), exit(), wait(), kill(), Signal handling, Process scheduling strategies-FCFS, SPN, SRT, Round Robin, HRRN, Fair share scheduling. (5L) **Multi-threading:** Threads in OS, thread vs process, ULT & KLT, Applications of threads, Use of POSIX threads library. (3L) **Process synchronization -** Race condition, Critical section, Process Sync Solution using Algorithmic approach (Lamport bakery Algorithm), Creating shared memory using POSIX library. (2L) **Semaphore**- Binary and Counting semaphore, P() and V() operations, Solving Classical problem using semaphores- Sleeping barber, Producer-consumer, Reader-writer, Dining philosophers's problem, Posix library for semaphores. (6L) **Monitors** - Solving Classical problems using monitors. (3L) **Deadlocks** - Necessary and sufficient conditions for deadlocks, approaches to deal with deadlocks, Deadlock Prevention, Avoidance (Banker's algorithm) and Detection. (3L)

	Memory organization & management - Virtual memory organization, Pure Paging, Pure Segmentation, Combined Paging-Segmentation, Inverted PMT, Page fault handling algorithms, Working set theory. (7L) **File management**- Directory structure, Storage of files on disks, contiguous and non-contiguous file allocation strategies, Internal and external fragmentation, FAT & Inode Structure, Free Space management, Disk scheduling strategies. (5L) **I/O management concepts** (2L)
Text Books, and/or reference material	**Text Books:** 1. “Operating System Concepts”, Silberschatz and Galvin. 2. “Operating Systems: Internals and Design Principles” by William Stalling. 3. “Operating Systems: A Concept-Based Approach” by D M Dhamdhere. **Reference Books:** 1. “Operating System: A Design-oriented Approach” by Charles Crowley. 2. “Operating Systems: A Modern Perspective” by Gary J Nutt. 3. “Design of the Unix Operating Systems” by Maurice Bach. 4. “MODERN OPERATING SYSTEMS” by Andrew S Tanenbaum. **Others:** • https://nptel.ac.in/courses/106/106/106106144/#Course “Introduction to Operating Systems” by PROF. CHESTER REBERIO, IIT Madras. • https://nptel.ac.in/courses/106105214/ Course “Operating System Fundamentals” by Prof. Santunu Chattopadhyay, IIT Kharagpur.

CSC 502 Database Management System 3-1-0 4 Credits 4 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSC 502	Database Management System	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))
Programming knowledge, Data Structures and Algorithms	CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**
Course Outcomes	• CO1: Understand the basic concepts and appreciate the applications of database systems. • CO2: Comprehend the fundamentals of design principles for logical design of relational databases. • CO3: Apply the query writing skill and its subsequent optimization. • CO4: Understand the basic issues of transaction processing and concurrency control.
Topics Covered	**Introduction:** Concept & Overview of DBMS, Applications, Data Models, Database Languages, Database Administrator, Database Users, Three Schema architecture of DBMS. (4L) **Entity-Relationship Model:** Basic concepts, Design Issues, Mapping Constraints, Keys, Entity-Relationship Diagram, Weak Entity Sets, Extended E-R features. (5L) **Relational Model:** Structure of relational Databases, Relational Algebra, Relational Calculus, Extended Relational Algebra Operations, Views, Modifications of the Database. **(7L)** **SQL and Integrity Constraints:** Concept of DDL, DML, DCL. Basic Structure, Set operations, Aggregate Functions, Null Values, Domain Constraints, Referential Integrity Constraints, assertions, views, Nested Subqueries, Database security application development using SQL, Stored procedures and triggers. (7L) **Index Structures:** Necessity of index structures, Types of Single-Level Index (primary, secondary, clustering), Multilevel Indexes, Dynamic Multilevel Indexes using B tree and B+ tree . (4L) **Normalization:** Functional Dependency, Anomalies in a Database, The normalization process: Conversion to first normal form, Conversion to second normal form, Conversion to third normal form and BCNF, Fourth Normal form and fifth normal form, normalization and database design, Denormalization, Loss-less join decomposition, Dependency preservation. (8L) **Transaction processing:** Introduction of transaction processing, advantages and disadvantages of transaction processing system, online transaction processing system, serializability and recoverability, view serializability. (5L) **Concurrency Control:** Serializability: Enforcing, Serializability by Locks, Locking Systems With Several, Lock Modes, Architecture for a Locking Scheduler Managing Hierarchies of Database Elements, Concurrency Control by Timestamps, Concurrency Control by Validation. (5L) **Database recovery management:** Deferred database modification Vs. Immediate

	database modification, Check point technique. (3L) **Query Optimization:** Heuristics in Query Optimization, Converting Query Tree to Query Evaluation Plan. (4L) **Distributed Database (DDB):** Introduction of DDB, DDBMS architectures, Homogeneous and Heterogeneous databases, Distributed data storage, Advantages of Data Distribution, Disadvantages of Data Distribution Distributed transactions, Commit protocols, Data Replication, Data Fragmentation. Distributed database transparency features. (4L)
Text Books, and/or reference material	**Text Books:** 1. "An Introduction to Database Systems", C. J Date, Pearson Education. 2. "DatabaseSystem Concepts", Abraham Silberschatz, Henry F. Korth and S. Sudarshan, McGraw-Hill. 3. "Distributed Databases Principles & Systems", Stefano Ceri and Giuseppe Pelagatti, McGraw-Hill International Editions. **Reference Books:** 1. "Fundamentals of Database Systems", Ramez Elmasri and Shamkant B. Navathe, Addison-Wesley. **Others:** https://onlinecourses-archive.nptel.ac.in/noc18_cs15/preview

Mapping of CO (Course Outcome) and PO (Programme Outcome)

CSC 504 Embedded Systems 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSC504	Embedded Systems	PCR	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))
Computer Organization and Architecture (CSC401)	CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**

Course Outcomes

- CO1:. Understand the Building Blocks of Embedded Systems
- CO2 : Learn to implement circuits using FPGAs and HDL programming
- CO3 :. Learn the working of microcontrollers in building embedded systems.
- CO4 : Understand the importance of power in the design process.
- CO5 : Understand the concepts and constraints of realtime systems.
- CO6 : Learn the techniques of synthesising hardware design from HDL.

Topics Covered

UNIT-1

Introduction to embedded System, Modular approach to embedded system design using six-box approach: Input devices, output devices, embedded computer, communication block, host and storage elements, and power supply., Processor, General Purpose and ASICs Processor, Designing a single purpose processor, Optimization Issues

6L

UNIT-2

Introduction to FPGA, Behavioral synthesis on FPGA using VHDL/Verilog

4L

UNIT-3

Microcontroller based embedded system Design, Salient feature of modern microcontroller, Arduino Uno, Serial Communication and Timer, Controller Design using Arduino

5L

UNIT-4

Sensors and Signals, Discretization of signals and A/D Converter, Quantization Noise, SNR and A/D converter,

5L

UNIT-5

Power Aware Embedded System, SD and DD Algorithm, Parallel operations and VLIW, Code efficiency, DSP Application and address generation Unit

6L

UNIT-6

	Real time operating system, RMS Algorithm, EDF Algorithm and resource constraint issue, Priority inversion and Priority inheritance 5L UNIT-7 Modelling and specification, FSM and state chart, state mate semantics, Program state machine, SDL, Data flow model 5L UNIT-8 Hardware synthesis, Scheduling, Digital camera design, Digital camera-iterative design, HW-SW partitioning, Optimization, Simulation, Formal verification 6L

CSS 551 Design and Analysis of Algorithms Laboratory 0-0-3 1.5 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSS 551	Design and Analysis of Algorithms	PCR	0	0	3	3	1.5

	Laboratory
Pre-requisites	Course Assessment methods (Continuous (CT) and End assessment (EA))
Design and analysis of Algorithm (CSC 503), Data Structures and Algorithms Laboratory (CSS 352)	CT+EA [CT: 60%, EA(Laboratory assignment + Viva Voce): 40%]
Course Outcomes	After completion of this course, the students will be: ● CO1: Able to identify the essence of theory into implementation. ● CO2: Able to interpret the theory efficiently through coding. ● CO3: Able to verify the theory experimentally. ● CO4: Able to explain the behaviour of an algorithm efficiently. ● CO5: Able to compare the efficiency of different algorithms.
Topics Covered	**Assignment 1:** Exponential versus Polynomial Running time solution of a problem. **Assignment 2:** Heaps and priority queue. **Assignment 3:** Problem based on Linear time sorting algorithm. **Assignment 4:** Problem using Divide and Conquer algorithm. **Assignment 5:** Problem using Greedy algorithm. **Assignment 6:** Problem using Dynamic Programming algorithm. **Assignment 7:** Graph representation and traversal. **Assignment 8:** Problem using Union Find structure. **Assignment 9:** Problem using Interval tree. **Assignment 10:** Convex Hull computation from a given set of n points in 2D and then determining the farthest pair of these point set.
Text Books, and/or reference material	**Text Books:** 1. T. H. Cormen, C. E. Leiserson, R. L. Rivest and C. Stein, Introduction to Algorithms, by Prentice Hall India. 2. J. Kleinberg and Eva Tardo, Algorithm Design by Pearson Education (Indian edition). **Reference Books:** 1. Michael T. Goodrich and Roberto Tamassia, Algorithm Design: Foundations, Analysis, and Internet Examples, Second Edition, Wiley, 2006. 2. S. Dasgupta, C. Papadimitriou and U. Vazirani, Algorithms, by Tata McGraw-Hill. **Others:** The Algorithm Design Manual 2nd ed. 2008 Edition by Steven S S. Skiena, Springer.

Pre-requisites			Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))				
CSS 451 Computer Org. Laboratory			CT+EA [CT: 60%, EA(Laboratory assignment + Viva Voce): 40%]				

Course Outcomes	After the course the students are expected to be able to CO1: Learn the working of microcontroller. CO2 : Understand the Building Blocks of Embedded Systems CO3 : Learn to implement circuits using FPGAs and HDL programming. CO4 : Learn to solve problems using Arduino/Raspberry Pi CO5 : Know the characteristics ARM processor and use it in designing embedded systems.
Topics Covered	List of Experiments: 1. Familiarization with 8051 microcontroller based programming. 2. Interfacing of 8051 Microcontroller with ADC and DAC/LCD Display/Traffic signal Processing etc. 3. Simulating simple circuits using Verilog/VHDL and FPGA kits. 4. LED blink for different amounts of time using Arduino (with/without using delay() function). 5. Controlling the LED blinking using a Potentiometer (Read potentiometer). 6. Interfacing Arduino with simple LED Matrix. 7. Sensing temperature using Raspberry Pi. 8. Familiarization with ARM DEVELOPMENT KIT microcontroller using embedded C program. 9. Develop and verify the interfacing LED and PWM with ARM DEVELOPMENT KIT microcontroller using embedded C program 10. Develop and verify the interfacing of real time clock and serial port with ARM DEVELOPMENT KIT microcontroller using embedded C program. 11. Verify the Interrupt performance characteristics of ARM and FPGA by using embedded C program
Text Books, and/or reference material	**Text Books:** 1. Peatman,J.B., "Design with PIC Micro Controllers"PearsonEducation,3rdEdition, 2004. 2. Programming Arduino: Getting Started with Sketches Book by Simon Monk 3. R. Kapadia, 8051 Microcontroller and Embedded Systems, Jaico.

CSS 553 Operating Systems Laboratory 0-0-3 1.5 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSS 553	Operating Systems Laboratory	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT) and End assessment (EA))					
Introduction to Computing (CSC01), Data Structures and Algorithms (CSC303)		CT+EA [CT: 60%, EA(Laboratory assignment + Viva Voce): 40%]					
Course Outcomes	• CO1: Implement elementary UNIX system commands. • CO2: Devise programs to test synchronization problems. • CO3: Design and develop user level thread library. • CO4: Design and implement file system.						
Topics Covered	**Assignment 1**: Getting a feel of race conditions through read/write operations by multiple process (run the same program in four terminals simultaneously) on a single binary file. **Assignment 2**: Design application where the parent process uses fork system call to create multiple child processes in the different given hierarchy and displaying and storing the process hierarchy in a separate file. **Assignment 3**: Design application where parent sync with several child processes using fork & wait system call to solve a particular task (searching, prime number generation, etc.) like parallely also try to understand and change process priorities using system calls. **Assignment 4**: Implement signal handling among parent child processes. **Assignment 5**: Design multithreaded application using POSIX thread library. **Assignment 6**: Create shared memory to be used among a set of concurrent processes using POSIX library. **Assignment 7**: Implement semaphores (named) and solve data access sync						

	problems like (producer/consumer) using multiple processes. **Assignment 8**: Implement semaphores (unnamed) and solve data access sync problems like (producer/consumer) using multiple threads. **Assignment 9**: Use other IPC mechanisms like message queues, named pipe.
Text Books, and/or reference material	**Text Books:** "Beginning Linux Programming", 4th Edition by Richard Stones, Neil Matthew, Wiley Publishing, Inc. **Reference Books:** "Advanced Programming in the UNIX environment", 3rd Edition, W. Richard Stevens and Stephen A. Rago, Addison-Wesley, 2013.

SIXTH SEMESTER

HSC 631 Economics and Management Accountancy 3-0-0 3 Credits 3 Hrs

Department of Humanities and Social Sciences							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
HSC631	Economics and Management Accountancy	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					

Course Outcomes

- CO1 Learners will be able to review basic economic principles.
- CO2 Learners will be introduced to the basic capital appraisal methods used for carrying out economic analysis of different alternatives of engineering projects or works.
- CO3 Learners will gain a good knowledge of financial accounting, enabling them prepare, analyse and interpret financial statements for taking informed decisions.

Topics Covered

PART 1: Economics

Group A: Microeconomics

Sl. No.	Name	L	T	P	Cr	H
Unit 1:	Economics: Basic Concepts	2	0	0	2	2
Unit 2:	Theory of Consumer Behaviour	3	0	0	3	3
Unit 3:	Theory of Production, Cost and Firms	3	0	0	3	3
Unit 4:	Analyses of Market Structures: Perfect Competition	3	0	0	3	3
Unit 5:	Monopoly Market	2	0	0	2	2
Unit 6:	General Equilibrium & Welfare Economics	2	0	0	2	2
	TOTAL	**15**	**0**	**0**	**15**	**15**

Group B: Macroeconomics

Sl. No.	Name	L	T	P	Cr	H
Unit 1:	Introduction to Macroeconomic Theory	2	0	0	2	2
Unit 2:	National Income Accounting	3	0	0	3	3
Unit 3:	Determination of Equilibrium Level of Income	4	0	0	4	4
Unit 4:	Money, Interest and Income	2	0	0	2	2
Unit 5:	Inflation and Unemployment	2	0	0	2	2
Unit 6:	Output, Price and Employment	2	0	0	2	2
	TOTAL	**15**	**0**	**0**	**15**	**15**

	PART 2: Management Accountancy						
	Sl. No.	**Name**	**L**	**T**	**P**	**Cr**	**H**
	Unit 1:	**Introduction to Accounting**: Accounting Environment of Business; Objectives of Accounting; Accounting Equations for Financial Statements. Books of Accounting: Journal, Ledger, Cash book.	3	0	0	3	3
	Unit 2:	**Financial Statement Preparation and Analysis:** Preparation of Trial Balance, Trading, Profit & Loss account and Balance Sheet. Case study discussion.	5	0	0	5	5
	Unit 3:	**Financial Ratio Analysis:** Common Size Statements; Computation of Financial Ratios; Interpretation and analysis of Financial Ratios with the help of case studies.	4	0	0	4	4
		TOTAL	**12**	**0**	**0**	**12**	**12**
Text Books, and/or reference material	**PART 1: Economics** **Group A: Microeconomics** 1. Koutsoyiannis: Modern Microeconomics 2. Maddala and Miller: Microeconomics 3. AnindyaSen: Microeconomics: Theory and Applications 4. Pindyck&Rubenfeld: Microeconomics **Group B: Microeconomics** 1. W. H. Branson: Macroeconomics – Theory and Policy (2nd ed) 2. N. G. Mankiw: Macroeconomics, Worth Publishers 3. Dornbush and Fisher: Macroeconomic Theory 4. Soumyen Sikder: Principles of Macroeconomics **PART 2: Management Accountancy** 1. Gupta, R. L. and Radhaswamy, M: Financial Accounting; S. Chand & Sons 2. Ashoke Banerjee: Financial Accounting; Excel Books 3. Maheshwari: Introduction to Accounting; Vikas Publishing 4. Shukla, MC, Grewal TS and Gupta, SC: Advanced Accounts; S. Chand & Co.

CSS 651 Compiler Laboratory 0-0-3 1.5 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSS651	Compiler Laboratory	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT) and End assessment (EA))					
Compiler Design Theory of Computation CSC402		CT+EA [CT: 60%, EA(Laboratory assignment + Viva Voce): 40%]					
Course Outcomes	● CO1: To apply the concept of regular expressions in the identification of tokens in a lexical analyzer.						

	• CO2: To explore the use of program generating softwares like LEX and FLEX. • CO3: To generate context -free grammar to represent the syntax of the language. • CO4: To use compiler generators like YACC and BISON. • CO5: To use syntax directed translation to generate intermediate code.
Topics Covered	1. Handle tokens in an input using LEX generated program. 2. Describe class of tokens using regular expressions in LEX. 3. Use context free grammars with YACC to describe simple syntactic structures. 4. Remove ambiguity in if-then-else constructs using YACC's inbuilt features. 5. Use syntax directed translation in YACC to generate simple intermediate code.
Text Books, and/or reference material	**Text Books:** 1. Lex - A Lexical Analyzer Generator ***M. E. Lesk and E. Schmidt*** Online Manual. 2. Yacc: Yet Another Compiler-Compiler ***Stephen C. Johnson*** Online Manual. 3. Lex & Yacc*John R. Levine, Tony Mason, Doug Brown* , O'Reilly & Associates. **Reference Books:** **1. Compilers: Principles, Techniques, and Tools** By Alfred V. Aho, Ravi Sethi, Jeffrey D. Ullman. Addison-Wesley Pub Co.

	assessment (EA))
Operating System Laboratory	CT+EA [CT: 60%, EA(Laboratory assignment + Viva Voce): 40%]
Course Outcomes	• CO1: Develop programs for client-server applications. • CO2: Perform packet sniffing and analyze packets in network traffic. • CO3: Implement error detecting and correcting codes.
Topics Covered	Assignment 1 : Packet capturing and analyzing using wireshark packet sniffer tool Assignment 2 : Socket Programming for TCP client server (Iterative server). Assignment 3 : Socket Programming for TCP client server (Concurrent Server). Assignment 4 : Socket programming for UDP client. Assignment 5 : Handling both TCP client and UDP client using select() system call. Assignment 6 : Simplified FTP implementation. Assignment 7 : Two player game (Tic Tac Toe) implementation. Assignment 8 : Implementation of CRC and Hamming code for error handling Assignment 9 : RPC (Remote Procedure Call) implementation.

Pre-requisites		Course Assessment methods (Continuous (CT) and End assessment (EA))					
Programming knowledge, Data structure knowledge		CT+EA [CT: 60%, EA(Laboratory assignment + Viva Voce): 40%]					

Course Outcomes	• CO1: Understand, appreciate and effectively explain the underlying concepts of database technologies. • CO2: Design and implement a database schema for a given problem-domain. • CO3: Populate and query a database using SQL DML/DDL commands. • CO4: Programming PL/SQL including stored procedures, stored functions, cursors, packages.
Topics Covered	**Structured Query Language (SQL):** 1. Creating Database Creating a Database Creating a Table Specifying Relational Data Types Specifying Constraints Creating Indexes. 2. Table and Record Handling INSERT statement Using SELECT and INSERT together DELETE, UPDATE, TRUNCATE statements DROP, ALTER statements. 3. Retrieving Data from a Database The SELECT statement Using the WHERE clause Using Logical Operators in the WHERE clause Using IN, BETWEEN, LIKE, ORDER BY, GROUP BY and HAVING Clause Using Aggregate Functions Combining Tables Using JOINS Subqueries. 4. Database Management Creating Views Creating Column Aliases Creating Database Users Using GRANT and REVOKE. **PL / SQL:** Decision-control in PL / SQL, Cursors in PL / SQL, Stored Procedures. **Case Studies:** Real-life case studies.
Text Books, and/or reference material	**Text Books:** SQL, PL/SQL the Programming Language of Oracle by Ivan Bayross**,** PHI, 2010. **Reference Books:** SQL The Complete Reference, Groff James, 3rd Edition, Tata McGraw-Hill Education, India.

CSE 612 System Software 3-0-0 3 Credits 3Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE612	System Software	PEL	3	0	0	3	3
Pre-requisites: Programming		Course Assessment methods (Continuous Assessment (CA), Mid-					

Language Paradigms, Theory of Computing, Computer Architecture, Operating Systems, Compilers	Term (MT), End Term (ET))
	CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**
Course Outcomes	● CO1: To introduce the students to the collection of programs and procedures which constitute the system software of a computer platform. ● CO2: To allow the students to understand & acknowledge the main objectives, problems faced and programming techniques used by a system programmer in designing and implementing system software. ● CO3: To emphasize on the conceptual framework in which the system software is developed and used rather than a broad overview of programs which belong to the system software running on a particular computer platform. ● CO4: To enable the students to deduce the logical relationship between the software components of any software system. ● CO5: To enable students to understand the mechanism of Integration of different System Software components.
Topics Covered	Part I: The Methodology ● The fundamental objective of this part is to develop a concept of a System. ○ Concept is to be built upon both Mathematical construction(Algebraic and Logic Systems) as well as around construction based on Abstract Machines. (3L) ● Programs and documents that are part of System Software are to be defined. (1L) ● A structuring of System Software Components are to be defined and built. ○ Vertical Structuring: Components of the system software are layered on a hierarchy of levels. The hardware system is taken as the first level of this hierarchy. The interface relationship between the components of the system software vertical hierarchy is then established. (2L) ○ Horizontal Structuring: Each level of the system software vertical hierarchy is discussed as a horizontal structure. The elements of this horizontal structure (formal definitions will also be given) are specific software components of the system software organized as software systems. (2L) ● The specific problems posed by the interaction between the software system components of a horizontal level of the system software hierarchy are discussed and illustrated. The problems raised by the **reliability, efficiency, convenience**, and evolution of a system software are introduced and illustrated. (2L) Part II: Programming Support Environment: ● of a System Software is to be discussed as the collection of tools offered by a computer platform to computer users to help them use the computer to develop programs that solve their problems. (2L) ● Detailed discussions on Topics like: Language, Translators, Interpreters, Mechanism of target machine code generation; proper emphasis on

distinguishing between Compilers, Assemblers, Linker/Loaders, and Interpreters will be there. Interfacing users with the Operating System environment as tolls from the support environment is to be discussed. (6L)

- Case study of JVM, GNU GCC implementation of the Linux Assembler, Linker and Loader will be dealt with in detail, introducing implementation of symbol tables. (7L)

Part III: Execution Support Environment:

- A software system that manages computer resources of the computer platform and the processes running on the computer platform will be introduced and illustrated by the operating system. (3L)
- The components of the operating system itself are layered on the levels of a hierarchy. (2L)
- The mechanism of a system call (system function call) will be discussed as a tool for implementing this hierarchy relation. (2L)
- The following layers of an operating system will be discussed with a practical illustration with the Linux kernel, with mechanisms of designing system programs developed with and for the support of: (10L)
  - Interrupt System ⇔ designing interrupt handlers.
  - Process Management System ⇔ designing schedulers.
  - Memory Management System ⇔ designing page-fault exception handlers
  - Input/Output Management System ⇔ designing device drivers
  - Information Management System (File System) ⇔ examining ext2/ext3/ext4.

CSE 614 Advanced Computer Architecture 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 614	Advanced Computer Architecture	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))
Digital Electronics, Computer Organisation	CA+ MT + ET [CA: 15%, MT: 25%, ET: 60%]
Course Outcomes	• ·CO1: Understand classes of computers and interpret the performance of a processor based on different metrics. • CO2: Design and describe pipeline data-path for performance enhancement. • CO3: Understanding the challenges in realizing different levels of parallelism and leverage them for performance enhancement. • CO4: Design of memory hierarchy for efficient memory design. • CO5: Appreciate and evaluate the new trends and developments in computer architecture.
Topics Covered	OVERVIEW OF VON NEUMANN ARCHITECTURE: Instruction set architecture; The Arithmetic and Logic Unit, The Control Unit, Memory and I/O devices and their interfacing to the CPU; Measuring and reporting performance; CISC and RISC processors. (4L) PIPELINING: Pipelining fundamentals, Linear and Nonlinear Pipeline Processors, Arithmetic and instruction pipelining, Pipeline hazards, Techniques for overcoming or reducing the effects of various hazards, superscalar and super pipelined and VLIW architectures. (8L) INSTRUCTION –LEVEL PARALLELISM (ILP): Concepts and challenges of ILP; Compiler Techniques for exposing ILP; Branch costs reductions - Static and Dynamic predictions; Hardware-based speculation. (8L) MEMORY HIERARCHY DESIGN: Introduction; Memory technology and optimizations, Virtual memory, Cache memory, Cache performance; Cache Optimizations, Cache coherence, Cache coherence protocols – snoop based and directory based protocols, Advanced optimizations of cache performance. (10L)

	MULTIPROCESSORS ARCHITECTURES: Introduction; Taxonomy of parallel architectures, Centralized shared-memory architecture: synchronization, memory consistency, interconnection networks. Distributed shared-memory architecture. (8L) INTERCONNECTION NETWORKS: Topology, Different interconnection Networks, Routing Mechanism. (4L)
Text Books, and/or reference material	**Text Books:** 1. Computer Architecture, A Quantitative Approach – John L. Hennessey and David A. Patterson; 4th edition, Morgan Kaufmann. 2. <tr><td colspan="2">Course Outcomes</td><td colspan="7">CO1: To understand the Basic principles of optimization.
CO2: To able to formulate optimization problem mathematically.
CO3: To know various solution methods in optimization Problems.
CO4: Able to perform sensitivity analysis and post processing of optimal solutions.
CO5: Able to explore a wide range of engineering optimization problems.</td></tr>
<tr><td colspan="2">Topics Covered</td><td colspan="7">Introduction to Optimization- Development, mathematical problem formulation, engineering applications of optimization, classification of optimization problems. (3L)

Classical Optimization of Single and Multi variable- Optimality criterion for single and multi-variable method, Region elimination methods, Gradient based methods for single variable and Multivariable, unidirectional search, direct search methods. (10L)

Linear Programming- Standard form of linear programming (LP) problem, Graphical method, Simplex algorithm, Simplex criterion, Duality in LP, Sensitivity or post optimality analysis, Transportation Problem and Assignment Problem. (12L)
Dynamic Programming- Introduction, Sequential optimization, computational procedure, discrete versus continuous dynamic programming, curse of dimensionality. (3L)
Integer Programming- Introduction, Linear and Nonlinear integer programming, Methods for integer programming. (2L)
Non-Linear Programming- Introduction, examples of non-linear programming, types of non-linear programming, Constraint and Unconstrained optimization, methods of nonlinear programming. (7L)
Modern Optimization- Multi-objective optimization, many optimization, Genetic</td></tr>
</table>

	Algorithms, Particle Swarm Optimization, Differential Evolution, CMA-ES, applications in engineering optimization problems. (5L)
Text Books, and/or reference material	**Text Books:** 1. S. S. Rao, Engineering Optimization: Theory and Practice, New Age International. 2. K. Deb, Optimization for Engineering Design, Prentice Hall of India. 3. A. Ravindran, K. M. Ragsdell and G. V. Reklaitis, Engineering Optimization: Methods and Applications, Wiley. 4. Hillier & Lieberman, Introduction to Operations Research, TMH. **Reference Books:** 1. S. M. Sinha, Mathematical Programming, Elsevier. 2. Handy Taha, Operations Research – An Introduction, Prentice Hall of India, New Delhi. 3. R. Fletcher, Practical Methods of Optimization, Wiley.

CSE 616 Artificial Intelligence 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 616	Artificial Intelligence	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Data Structure and Algorithm, DBMS, Object Oriented Programming		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Learns Concepts of Intelligence, Artificial Intelligence, Problem Representation and Characterization. • CO2: Conceptualizes Intelligent Search, different heuristics. • CO3: Understands Knowledge Representation Techniques and Uncertainty Managements. • CO4: Learns Semantic Knowledge, Semantic Net and Frame. • CO5: Learns Game Playing Program Design.						

	• CO6: Learns Expert Systems and Various Machine Learning Systems. • CO7: Learns Neural Networks.
Topics Covered	Introduction to Artificial Intelligence (AI): Features of natural intelligence, Definition of Artificial Intelligence (AI), Turing Test. (4L) Problem Representation and Characterization: State Space Representation, Production Systems, Search, Problem Characterization. (5L) Intelligent Search Techniques: Search Classifications, Heuristic Function, Various Types of Heuristic Search Techniques, Performance Measure of Heuristic Search with Penetrance. (5L) Knowledge Representation Methodologies: Types of Knowledge, Propositional vs. Predicate Logic, Resolution Proof, Logic Programming, Knowledge representation using Rules, Declarative and Procedural Representation, Uncertainty Management in Knowledge Representation, Certainty Factors in facts and rules, Concept of Fuzzy Logic. (5L) Semantic Knowledge Representation: Syntactic vs. Semantic Knowledge, examples of Semantic Knowledge, Semantic Net, Frame, OOP, Property Inheritance, Tangled Hierarchies. (4L) Game Playing: Game Tree, Minimax Search, Search Reduction by alpha and beta cutoffs. Planning: Introduction to Planning, Goal Stack Planning, Nonlinear, Hierarchical and Reactive Planning. (4L) Learning: Learning and Intelligence, Learning Spectrum, Various Types of Learning Techniques and Systems. (5L) Expert Systems (ES) and ES Shells: Definition of Expert Systems, Components of Expert Systems. Types of ES – Manual, Semi-automatic, and Automatic ES, Techniques of Knowledge Acquisition (KA) for ES.-- ES Shell. Advantages and disadvantages of ES Shell over ES. (5L) Neural Networks: Symbolic vs. Neural Network AI, Hofield Network, Perceptron as a model of neuron, Single and multiplayer Perceptron for classification and knowledge representation, Back propagation Network, Supervised, Reinforcement and Unsupervised Learning. AI standardization: Needs for standardization, Data quality analysis standards, bias compliance standard, standardization efforts underISO/IEC/ CD 42000 series

	and ISO/IEC CD 5200X series. (5L)

CSE 617 Advanced Algorithms 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit	
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours		
CSE 617	Advanced Algorithms	PEL	3	0	0	3	3	
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))						
CSC 303, CSC 403		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**						
Course Outcomes	• CO1. Can have the efficiency in the complexity analysis of the algorithms. • CO2. Detecting and applying the algorithmic structures in many different fields of engineering. • CO3. Will have the knowledge for state of the art development in the field of algorithms. • CO4. Can have the proficiency of coding and comparing different algorithms.							
Topics Covered	**Revisit:** Different Complexity analysis and Algorithm's correctness by Loop-Invariant techniques.							

	(2L) **Data Structures:** van Emde Boas Trees, Dynamic graphs, Bloom filters, Hashing (Open addressing). (5L) **Randomized Algorithm-** Las Vegas and Monte Carlo algorithms, Essential mathematical tools for Randomized algorithms: Linearity of expectation, Markov inequality, Chebyshev's inequality, Chernoff bound, and Union bound with examples to Randomized algorithm design. Examples and analysis of: Hiring Assistant Problem, Randomized selection, Skip list. (4L) **Network Flow -** Flow networks, Augmenting paths, Ford- Fulkerson Algorithm, Edmonds - Karp algorithm, Max flow min-cut theorem, Push-relabel algorithm, Maximum bipartite matching, Some applications of network flow. (5L) **Linear Programming:** Introduction, algorithms, and its applications, Linear programming duality. (4L) **Parallel Algorithms** – Multithreaded Algorithms: Multithreaded matrix multiplication, Multithreaded merge sort. (3L) **Online Algorithms:** Overview, Online scheduling and online Steiner tree, Online Bipartite matching,Online learning and multiplicative weights algorithm. (5L) **NP- Completeness** - Reduction revisited; NP-Completeness proof of different problems: CLIQUE, VERTEX COVER, INDEPENDENT SET, SET COVER. (4L) **Approximation Algorithms** - Constant factor approximation algorithm: VERTEX COVER and TSP; Christofides algorithm on TSP with 1.5 approximation factor; SET-COVER problem with log n factor approximation algorithm; PTAS and FPTAS, Linear programs and approximation algorithms. (7L) **Semidefinite Programming:** Introduction with the problem: The Maximum Cut Problem and Semidefinite Programming. (2L) **Overview of some Special Topics:** Communication complexity, Spectral graph theory, Compressive sensing . (1L)

Text Books, and/or reference material	**Text Books:** 1. Rajeev Motwani and Prabhakar Raghavan, Randomized Algorithms, 2nd Edition, Cambridge University press, Cambridge, MA, 1995. 2. Thomas H. CSE 618 Information Coding Theory 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 618	Information	PEL	3	0	0	3	3

	coding theory						

Pre-requisites	Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))
Probability and statistics, linear algebra, calculus.	CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**
Course Outcomes	• CO1: Understanding definition and measurement of information. • CO2: Understanding source coding and Design and analysis of data compression techniques. • CO3: Understanding Channel coding theory • CO4: Design and analysis of Error correction coding
Topics Covered	Introduction, Mathematical Measure of Information, Average and Mutual Information and Entropy, Properties of Entropy, Discrete memoryless sources (DMS), Extension of DMS, Markov sources, Source coding theorem, Fixed length and variable length coding, Kraft inequality, Properties of prefix codes. (8L) Source Coding: Lossless entropy encoding, Huffman code, Huffman code applied on the symbols of extended sources, Shannon-Fano coding, efficiency calculations, Lempel-Ziv codes, arithmetic coding, Rate distortion Theory. (8L) Lossless and lossy predictive coding and decoding, Quantization, PCM, DM, ADM, DPCM. (6L) Channels and Channel Capacity: Discrete memoryless channel model, Binary symmetric channels and channel capacity, entropy rate and channel coding theorem, information capacity theorem. (6L) Error correction codes: Introduction, Basic concepts of linear algebra including group, ring, field, vector space etc. (3L) Block codes: Introduction, single parity check codes, product codes, repetition codes. (3L) Linear Codes: Definition, encoding and decoding of linear codes, generator matrix, error detection and correction, Perfect codes, Hamming codes. (5L) Cyclic codes: Definition, polynomials, encoding and decoding techniques, cyclic redundancy check. (3L)
Text Books, and/or reference material	**Text Books:** 1. Information Theory and Coding Hardcover by Norman Abramson, McGraw-Hill. 2. Elements of Information Theory (Wiley Series in Telecommunications and Signal Processing) by Thomas M. Cover, Joy A. Thomas, Wiley-Blackwell. 3. Error Control Coding by Shu Lin, Daniel J. Costello, Pearson. **Reference Books:** 1. Coding and Information Theory by Steven Roman, Springer-Verlag. 2. Error Control Coding by Peter Sweeney, John Wiley & Sons.

CSE 620 Game Theory and its Applications 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 620	Game Theory and its Applications	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), Mid-Term (MT) end assessment (EA))
1. MAC 01: Mathematics - I 2. MAC 02: Mathematics - II 3. MAC 331 : MAC 01: Mathematics - III	CT: 15%, MT: 25%, EA: 60%

Course Outcomes	After completion of this course, the students: • CO1: Can have the efficiency to remember concepts to act in a strategic situation. • CO2: Can analyse the strategic interactions among agents. • CO3: Can understand modern state of the art in Game Theory. • CO4: Will have the knowledge of related area where Game Theory can be

	applied.
Topics Covered	**Introduction:** Motivation to the course. (2L) **Non-Coperative Game Theory:** Introduction to Game Theory, Extensive Form Games, Strategic Form Games, Dominat Strategy Equllibria, Pure Strategy Nash Equlibrium, Mixed Strategy Nash Equlibrium, Fixed Point Theorem and Existence of Nash Equillibrium, Computation of Nash Equillibrium, Complexity of Computing Nash Equillibrium, Matrix Games (Two Players Zero sum Games), Bayesian Games, Subgame Perfect Equlibrium. (10L) **Mechanism Design without Money**: One sided and two sided matching with strict preferences, Voting theory, and Participatory democracy. (4L) **Mechanism Design with Money:** Auction basics, sponsored search auctions, Revenue optimal auctions, VCG Mechanisms. (5L) **Cooperative Game Theory**: Correlated Strategies and Correlated Equilibrium, Two Person Bargaining Problem, Coalitional Games, The Core, and The Shapley Value. (5L) **Repeated Games:** Introduction to repeated games and its Applications. (4L) **Applications:** Incentive Study in - P2P Networks, Crowdsourcing, Digital currency. (5L) **Some Special Topics**: Fair Division, Price of Anarchy, Scoring rules, Learning in Auction, Synergies between Machine Learning & Game Theory. (7L)
Text Books, and/or reference material	**Text Books:** 1. N. Nisan, T. Roughgarden, E. Tardos, and V. V. Vazirani. Algorithmic Game Theory. CSE 621 Digital Systems Testing 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE621	Digital Systems Testing	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Digital Logic Design, Computer Organisation		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: To explain and exemplify basic and advanced concepts of Testing of Digital Circuits. • CO2: To understand fault modeling and test generation. • CO3 : To fully appreciate the need for testability measures in the design stage of circuits. • CO4: To understand the use of built in testing measures for online testing. • CO5: To appreciate the different testing strategies for memory based devices.						
Topics Covered	Introduction to VLSI testing and verification. Logic and Event Driven Simulation. (2L) Fault Modeling. Single Stuck-at Fault model. Fault Collapsing. Fault Equivalence. Fault Domination. Checkpoint Theorem. (8L) Fault Simulation. Serial, Parallel, Deductive and Concurrent. (3L) Test Generation. Boolean Difference Method. D-Algorithm. PODEM. FAN. (8L) Testability Analysis (3L) Design for Testability. Adhoc approaches. Scan based Design. Random Scan. Scan FF design. LSSD. Scan-Hold FF. (8L) Built-in Self Test. Pseudo-Random Pattern Generation. LFSR (8L) Memory testing. (2L)						
Text Books, and/or reference material	**Text Books:** 1. Essentials of Electronic Testing for Digital, Memory and Mixed Signal VLSI Circuits. Bushnell and Agrawal. Kluwer Academic Publishers. 2. Digital Systems Testing and Testable Design. Abramovici et.al. Jaico Publications. **Reference Books:** **1.**VLSI Test Principles and Architectures. LT Wang et.al. Morgan Kaufman.

CSE 622 Soft Computing 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 622	Soft Computing	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Introduction to computing, Data Structures and Analysis of Algorithms		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: To familiarize with neural networks and learning methods for neural networks and its limitations. • CO2: To introduce basics of genetic algorithms and their applications in optimization and planning. • CO3: To introduce the ideas of fuzzy sets, fuzzy logic and fuzzy inference system. • CO4: To introduce students' tools and techniques of Soft Computing. • CO5: To develop skills thorough understanding of the theoretical and practical aspects of Soft Computing.						
Topics Covered	**Module I: Introduction** (6L) Introduction and different definitions of Soft Computing, Basic tools/members of Soft Computing: Fuzzy Logic, Neural Network and Evolutionary Computing. **Module II: Fuzzy Logic** (10L) **Fuzzy Logic-I:** Crisp Sets, Fuzzy sets, Fuzzy membership functions, Basic operations on fuzzy sets, Fuzzy relations and Composition of fuzzy relations. **Fuzzy Logic –II (Fuzzy Rules and Approximate Reasoning):** Fuzzy if-then rules: M-A and TSK Rules, Fuzzification, Compositional rule of Inference/Approximate Reasoning, Defuzzification, Applications: Pattern Recognition, Fuzzy c-means Clustering and Control. **Module III: Neural Networks** (10L) **Neural Networks-1 (Introduction & Architecture):** Introduction to neural						

	networks: Artificial Neuron and its model, Activation functions, Neural network architecture, learning algorithms/rules, Training and testing. **Neural Networks-II:** Perceptron model: single layer and multilayer perceptron (MLP), Error back propagation, Radial basis function network (RBFN), Self-organizing map network (SOMN), Recurrent neural network, Applications of ANN. **Module IV: Evolutionary Computing** **(**12L**)** **Genetic Algorithm–I:** Evolutionary Computing, Basic concepts and working principle of simple GA (SGA), Genetic Operators: Selection, Crossover and Mutation, flow chart of SGA, Chromosome Encoding & Decoding, Population Initialization, Objective/fitness Function, variable length Chromosome, Applications: Travelling Salesman Problem (TSP). **Genetic Algorithm–II (Multi-objective Genetic Algorithm (MOGA)):** Conflicting objectives, Objective space and variable space, Domination, Pareto front, Pareto Set, NSGA-II: Non-dominated Sorting, Crowding distance operator, Applications. Particle Swarm Optimization (PSO), Ant Colony Optimization (ACO), Local Search and Memetic algorithm. **Module V: Hybridization of different Soft Computing Tools** (4L)
Text Books, and/or reference material	**Text Books:** 1. S. CSE 623 Advanced Database Systems 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 623	Advanced Database Systems	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))
Fundamentals of DBMS, Data Structures	CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**
Course Outcomes	• CO1: Acquire knowledge about the design and application view of DBMS. • CO2: Able to analyze query expression, specially importance of query optimization. • CO3: To learn about design, features and operations in the field of DDBMS, OODBMS and DW. • CO4: To learn the concept of multimedia database as a real-life application.
Topics Covered	**Unit-1:** Comparison between different databases: Significance of Databases, Database System Applications, Advantages and Disadvantages of different Database Management systems, Comparison between DBMS, RDBMS, Distributed and Centralized DB, Introduction of various types of index structures: Primary, Secondary, Multilevel, Dynamic multilevel (B-tree and B+- tree). (3L) **Unit-2:** Normalization: Functional Dependency, Anomalies in a Database, The normalization process: Conversion to first normal form, Conversion to second normal form, Conversion to third normal form, The boyce-code normal form(BCNF), Fourth Normal form and fifth normal form, normalization and database design, Denormalization, Lossless join decomposition, Dependency preservation. (3L)

	Unit-3: Transaction processing: Introduction of transaction processing, advantages and disadvantages of transaction processing system, online transaction processing system, serializability and recoverability, view serializability, Transaction management in multi-database system, long duration transaction, high-performance transaction system. (3L) **Unit-4:** Concurrency Control Serializability: Enforcing, Serializability by Locks, Locking Systems With Several, Lock Modes, Architecture for a Locking Scheduler Managing Hierarchies of Database Elements, Concurrency Control by Timestamps, Concurrency Control by Validation, Database recovery management. (3L) **Unit-5:** Query Optimization: Algorithm for Executing Query Operations: External sorting, Select operation, Join operation, PROJECT and set operation, Aggregate operations, Outer join, Heuristics in Query Optimization, Semantic Query Optimization, Converting Query Tree to Query Evaluation Plan, multi-query optimization and application, Efficient and extensible algorithms for multi-query optimization. (5L) **Unit-6:** Query Execution: Introduction to Physical-Query-Plan Operators, One-Pass Algorithms for Database, Operations, Nested-Loop Joins, Two-Pass Algorithms Based on Sorting, Two-Pass, Algorithms Based on Hashing, Index-Based Algorithms, Buffer Management, Parallel Algorithms for Relational Operations, Using Heuristics in Query Optimization, Basic Algorithms for Executing Query Operations. (5L) **Unit-7:** Distributed Database (DDB): Introduction of DDB, DDBMS architectures, Homogeneous and Heterogeneous databases, Distributed data storage, Advantages of Data Distribution, Disadvantages of Data Distribution Distributed transactions, Commit protocols, Availability, Concurrency control & recovery in distributed databases, Directory systems, Data Replication, Data Fragmentation. Distributed database transparency features, distribution transparency. (5L) **Unit–8:** Object Oriented DBMS(OODBMS): Overview of object: oriented paradigm, OODBMS architectural approaches, Object identity, procedures and encapsulation, Object oriented data model: relationship ,identifiers, Basic OODBMS terminology, Inheritance , Basic interface and class structure, Type hierarchies and inheritance, Type extents and persistent programming languages, OODBMS storage issues. (5L) **Unit –9:** XML Query processing: XML query languages: XML-QL, Lorel, Quilt, XQL, XQuery, and Approaches for XML query processing, Query processing on relational structure and storage schema, XML database management system. (4L) **Unit –10:** Data Warehousing: Overview of DW, Multidimensional Data Model, Dimension Modelling, OLAP Operations, Warehouse Schema (Star Schema, Snowflake Schema), Data Warehousing Architecture, Virtual Data, Metadata and Types of Metadata, OLAP Engine, Data Extraction, Data Cleaning, Loading, Refreshing. (4L) **Unit-11:** Database application: Multimedia database, Video database management: storage management for video, video preprocessing for

	content representation and indexing. (2L)

CSS 751 Software Engineering Laboratory 0-0-3 1.5 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSS 751	Software Engineering Laboratory	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT) and End assessment (EA))					
		CT+EA [CT: 60%, EA(Laboratory assignment + Viva Voce): 40%]					
Course Outcomes	• CO1: Understand Control Flow Graph (CFG) and CFG based Functional Complexity of the software. • CO2: Understand the Coverage Criteria (Statement, Branch, Decision). • CO3: Software modelling through ERD, DFD and ERD for distinct cases. • CO4: Unified Modelling Language based system Design and code Generation. • CO5: Understand the basic concepts of Testing and Verification (Decision tree & graph, WBT, BBT, Unit testing).						
Topics Covered	1) Control Flow Graph based problems (Tool: C++/Java Language Compiler). 2) ERD / DFD related problems (Tool: StarUML ER Extension or Other OpenSource Tools). 3) UML based Design problems (Tool: Rational Rose/StarUML). 4) Software Testing related Problems (Tool: Junit) - Implementation Program on Java and testing using Junit. Suggested List of Applications:1. Student Marks Analysing System, 2. online Ticket Reservation System, 3. Payroll System, 4. Course Registration System, 5. Expert Systems, 6. ATM Systems, 7. Stock						

	Maintenance.

CSS 752 Modeling and Simulation Laboratory 0-1-3 2.5 Credits 4 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSS 752	Modeling and Simulation Laboratory	PCR	0	1	3	4	2.5
Pre-requisites		Course Assessment methods (Continuous (CT) and End assessment (EA))					
		CT+EA [CT: 60%, EA(Laboratory assignment + Viva Voce): 40%]					
Course Outcomes	• CO1: Demonstrate the characteristics of mathematical modelling and Python packages. • CO2: Understand the concepts of mathematical modelling for a problem. • CO3: Understand the user-friendly editor of Python and various libraries for simulation of the problems. • CO4: Developed and implement the mathematical problems using Python.						
Topics Covered	1. Study the basic concepts of mathematical formulation for a problem. 2. Study the characteristics and packages of Python programming language. 3. Modeling and simulation of linear programming problems. a) Graphical Method b) Simplex Method 4. Modelling and simulation of Transportation problem. a) Different initialization solution techniques b) Balanced and Unbalanced						

	c) Degenerate problem 5. Modelling and simulation of Assignment problem. 6. Modelling and simulation of travelling salesman problem. 7. Modelling and simulation of network flow problem. 8. Modelling and simulation to find the dual of a primal problem. 9. Modelling and simulation to determine optimal strategy for a two person zero game. a) Pure Strategy b) Mixed strategy

Depth Elective – 3, 4, 5

CSE 710 Machine Learning 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 710	Machine Learning	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Probability and Statistics, Artificial Intelligence		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Understanding of the basic concepts, fundamental issues and challenges of machine learning. • CO2: Comprehend the principle and techniques of supervised learning. • CO3: Explain the basic concepts and techniques of unsupervised learning. • CO4: Understanding of the basic concepts and challenges of reinforced learning. • CO5: Ability to apply the concepts of machine learning in different domains.						
Topics Covered	1. Introduction: what is Machine Learning; Human learning and Machine learning; Well-posed learning problem; Types of Machine Learning: Supervised, Unsupervised, and Reinforcement learning; Applications,						

	Issues, and tools of Machine Learning. (3L) 2. Concept Learning: Inductive learning hypothesis, general to specific ordering of hypothesis; FIND-S algorithm; Version space, candidate elimination algorithm; Inductive bias. (4L) 3. Bayesian Learning, Naïve Bayes Classifier, Optimal Classifier. (3L) 4. Supervised learning: Classification- k-Nearest Neighbour, Decision Tree, Support vector machine. Regression- Simple and Multiple linear regression. (9L) 5. Artificial Neural Networks: Biological neuron and artificial neuron, How ANN works, Parallel distributed model of ANN; Activation functions; Perceptron, McCulloch-Pits model, ADALINE network model; Architecture of ANN- single-layer feed forward, multi-layer feed forward, competitive network, recurrent network; Backpropagation algorithm; Basic concept of deep learning. (9L) 6. Unsupervised learning and Clustering: Different clustering techniques- Partitioning methods (k-means, k-medoid), Hierarchical methods (Agglomerative and Divisive techniques, MIN, MAX, Group average, Ward's methods) and Density-based method (DBSCAN). (5L) 7. Dimensionality Reduction: principal component analysis, singular value decomposition, Linear discriminant analysis, Independent conponent analysis, stochastic neighbour embeddingy. (6L) 8. Reinforcement Learning: Basic concept, Model based learning, Temporal difference based learning. (3L)
Text Books, and/or reference material	**Text Books:** 1.Machine Learning by Tom Mitchell [Mc. Graw-Hill]. 2. Pattern Recognition and Machine Learning by Christopher M bishop, Springer. 3.Applied machine Learning by M. Gopal [Mc. Graw-Hill, 2018] 4.NPTEL Course materials. **Reference Books:** 1. Introduction to Machine Learning by Ethem Alpaydin [MIT Press].

CSE 711 Graph Theory 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering				
Course	Title of the course	Program Core	Total Number of contact hours	Cred

Code		(PCR) / Electives (PEL)	Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	it
CSE 711	Graph Theory	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Discrete Mathematics and Data Structures		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					

Course Outcomes	• CO1: Understand the basic concept of graph and its properties. • CO2: Apply the basic properties of graph theory to prove different problems • CO3: Discuss chromatic characteristics and planar graphs. • CO4: Students can explore knowledge of graph theory to solve technology driven and research oriented problems. • CO5: Use a combination of theoretical knowledge and mathematical thinking to solve various computer science applications.
Topics Covered	**Preliminaries:** Graphs, isomorphism, automorphism, components, sub-graphs, degree, operations on graphs, radius, diameter, bipartite graph, Operations on graph: deletion of vertex/edge, fusion, union, intersection, ring sum, decomposition, join, Cartesian product, complement. Self-complementary graphs, circuits. (8L) **Connected graphs and shortest paths:** Walks, trails, paths, connected graphs, distance, cut-vertices, cut-edges, connectivity: edge and vertex connectivity, relationship between edge and vertex connectivity, k-connected graph, Menger's theorem, separable graph, blocks, block-cut vertex tree, block tree, cut vertex tree,1-isomorphism, 2-isomorphism, topological ordering. (8L) **Trees:** Characterizations, number of trees, minimum spanning trees, Distance between spanning tree of a connected graph, eccentricity, Centre(s) of trees and connected graph, diameter of tree and connected graph , nullity of tree, labelled graph. (3L) **Planarity:** Planar graph, Kuratowski's theorem , Euler's formula, Detection of planarity , duality, uniqueness of duality, Homomorphism: subdivision, merging, planarity detection using homeomorphism graphs, five color and four color problem. (5L) **Covering, Independent sets, Dominating Set, Matching:** Basic concepts, vertex and edge covering, minimal covering, independent set, maximal independent set, relationship between covering and independent set, theorems, dominating set, MDS, CDS, matching in bipartite graphs, perfect matching, maximal matching, minimum matching, Hall's theorem. (6L) **Factorization :** Factor, 1-factor, 2-factor Tutte's theorem. (3L)

	Vertex coloring: Chromatic number and cliques, greedy coloring algorithm, Brook's theorem, chromatic partition, Uniquely colourable graph. (3L) **Edge coloring:** Gupta-Vizing theorem, color edge, equitable edge-coloring. (2L) **Line Graph:** Properties and proof. (2L) **Eulerian graphs:** Characterization, Arbitrarily traceable graph, Fleury's algorithm. (2L)
Text Books, and/or reference material	**Text Books:** 1. Douglas B. West. Introduction to Graph Theory. Pearson Education, Second Edition. 2. R. Deistel. Graph Theory. Digital Electronics, Computer		CA+ MT + ET [CA: 15%, MT: 25%, ET: 60%]					

Organisation, Algorithm Analysis and Design.	
Course Outcomes	• CO1: To visit the various stages of the VLSI design cycle and appreciate the role of automation therein. • CO2: To appreciate how High Level Synthesis converts an HDL code into an architecture level design. • CO3: To discuss the algorithmic approach to physical design. • CO4: To emphasize the importance to testability measures in the design.
Topics Covered	VLSI Design cycle. Design styles. System packaging styles. Fabrication of VLSI devices. Design rules-overview. (3L) HLS: Scheduling in High Level Synthesis. ASAP and ALAP schedules. Time constrained and Resource constrained scheduling. (4L) HLS: Allocation and Binding. Datapath Architectures and Allocation tasks. (4L) Partitioning. Clustering techniques. Group Migration algorithms. (4L) Floorplanning. Constraint based Floorplanning. Rectangular Dualization. Hierarchical Tree based methods. Simulated Evolution approaches. Timing Driven floorplanning. (5L) Placement. Simulation based placement algorithms. Partitioning based placement algorithms. Cluster Growth. (5L) Global Routing. Maze Routing algorithms. Line probe algorithms. Shortest Path based algorithms. Steiner's Tree based algorithms. (5L) Detailed Routing. Channel Routing Algorithms. Switchbox Routing. Over-the-cell routing. Clock and Power Routing. (4L) Design for testability. Fault testing. Ad-hoc and structured DFT techniques. (8L)
Text Books, and/or reference material	**Text Books:** 1. Algorithms for VLSI Physical Design Automation. N.A.Sherwani. Kluwer Academic Publishers. 2. 1. Basics of probability and statistics 2. CSC303: Data Structures and Algorithms 3. CSC 01: Introduction to Computing		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Describe the fundamental concepts underlying natural language processing (NLP). • CO2: Demonstrate the approaches to syntactic and semantic analysis in NLP. • CO3: Apply the concepts of NLP to solve real-life problems. • CO4: Analyze various solutions to an NLP problem and choose the best one.						
Topics Covered	Introduction to natural language processing. (1L) Basic Text Processing: Tokenization, Stemming. (2L) Minimum Edit Distance. (2L) Language Modeling: Introduction to N-grams, Estimating N-grams probabilities. Application of language modeling to real-life examples (such as text -classification). (4L) Generative Vs. Discriminative Models. (4L) POS Tagging. (4L) Parsing: Introduction of Probabilistic Parsing, Lexicalized Parsing, Dependency Parsing. (6L) Information Retrieval. (3L) Semantics: Word meaning and Senses. (3L) Machine Translation (rule based techniques, Statistical Machine Translation						

	(SMT), parameter learning in SMT (IBM models)). (4L) Two applications: Question Answering and Text Summarization. (4L) Recent trends. (3L) Standards for Indian Languages: Key layout - IS 16350 : 2016, inscript information IS 13194:1991 (2L).

CSE 714 Data Warehousing and Data Mining 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 714	Data Warehousing and Data Mining	PEL	3	0	0	3	3
Pre-requisites Artificial Intelligence, DBMS, Object Oriented Programming		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					

	CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**
Course Outcomes	● CO1: Understanding the Concept of Data Warehousing and Data Mining. ● CO2: Association Rules: Item set, Support, Confidence. ● CO3: Classification – Pattern: Labelled Pattern, Decision Trees. ● CO4: To understand the SVM, Generalization Error. ● CO5: To understand the different types of Clustering Methods. ● CO6: To understand the detection of different types of outliers and outlier detection.
Topics Covered	Data Warehousing: Multidimensional Data Model, Dimension Modelling, OLAP Operations, Slicing and Dicing, Warehouse Schema, Star Schema, Snowflake Schema, Advantages and Disadvantages of Snowflake Schema, Data Warehousing Architecture, Virtual Data Warehouse, Advantages and Disadvantages of Virtual Data Warehouse, Metadata, Types of Metadata, OLAP Engine, Different Options for OLAP Engine, Data Extraction, Data Cleaning, Loading, Refreshing. [4L] Data Mining: Different Definitions of Data Mining, KDD vs. Data Mining, Stages of KDD , DBMS vs. DM, AI vs. DM, Classifications of Data Mining, Stages of KDD, DM Techniques , Discovery Driven Tasks, Classification, Frequent Episodes, Discovery of Association Rules , Clustering, Deviation Detection, Mining Problems, Applications of DM, Other Mining Problems. [4L] Association Rules: Item set, Support, Confidence, Problem Decomposition, Frequent Item Set, Maximal Frequent Set, Border Set, Applications of Data Mining, Spotting Fraudulent Behaviour, Astronomy etc., Association Rules, Informal a priori Algorithm for Learning Association Rules, Finding Frequent Sets and Association Rules, Formal a priori Algorithm for Association Rule. [5L] Classification – Pattern: Labelled Pattern, Approaches of Classification, Evaluation of Classifiers, Normalized Confusion Matrix, Accuracy, Precision, Recall and F – score, Cross Validation Technique, Classification Techniques. [4L] Decision Trees: Inductive Learning, ID3 Program, Algorithm for Building Decision Trees , Advantages of Decision Trees for Classification Purpose, Development of Decision Trees for Different Training Data Sets, Rule Extraction from Pattern Set, Covering the instances, Extraction of rules, Instance Space, Covering Algorithm. [4L] Bayesian Belief Nets (DAG): K nearest Neighbour, ANN, Learning in ANN, Perceptron as a model of neuron, Single and multiplayer Perceptron for classification and knowledge representation, Back propagation Network, Supervised, Reinforcement and Unsupervised Learning. [4L] Classification (Complex): Support Vector Machine (SVM), Generalization Error, SVM to find out the best classification, Margin. [3L] Clustering: Partitioned and Hierarchical Clustering, k means Clustering, Fast k Means Clustering, Fuzzy K means Clustering, Hierarchical Clustering,

	Agglomerative and Divisive Hierarchical Clustering, Single Linkage, Complete Linkage and Average Linkage Clustering. [4L] Clustering (Complex): Outlier Detection, Outlier vs. Cluster, Types of Outliers, Outlier Detection Methodologies, Supervised, Unsupervised and Semi supervised detection , Statistical Approaches, Parametric and Non Parametric Methods, Proximity Based Methods, Clustering Based Methods. [4L] Temporal and Spatial Data Mining: Temporal Data Mining, Tasks involved, Temporal Association Rules, Sequence Mining, Episode Discovery, Spatial Mining, Tasks involved , Spatial Clustering. [3] Web Mining: Web Mining Techniques, Web Content Mining, Web Structure Mining, Web Usage Mining, Text Mining. [3L]
Text Books, and/or reference material	**Text Books:** 1. Data Mining Techniques – Arun K Pujari – Universities Press. 2. Data Mining – Vikram Pudi, P. Radha Krishna – Oxford University Press. **Reference Books:** 1. Data Mining – J. Han, M. Kamber, J. Pei -- Elesvier. 2. Data Mining – Hand, Mannila and Smith – PHI.

Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
NIL		CA+ MT + ET [CA: 15%, MT: 25%, ET: 60%]					
Course	• CO1: Understand image acquisition and camera basics.						

Outcomes	• CO2: Apply image enhancement and filtering techniques to the spatial and frequency domain of images • CO3: Design edge detection and segmentation algorithms for object detection and recognition purpose • CO4: Understand color image processing • CO5: Develop image compression models. • CO6: Develop image processing algorithms using ImageJ and Python.
Topics Covered	Introduction, Image acquisition process, image sensors, camera basics. (4L) Transform functions, Histogram, spatial and frequency filtering. (10L) Redundancy, compression models, coding methods. (8L) Point, Line, edge detection, thresholding, region based segmentation. (6L) Color models, color image processing, segmentation and compression using colors. (8L) Introduction to Image Processing using ImageJ and Python, Image databases. (6L)
Text Books, and/or reference material	**Text Books:** 1.Digital Image Processing by Rafael C Gonzalez & Richard E Woods. 2.Fundamentals of Digital Image Processing by Anil K Jain. **Reference Books:** Digital Image Processing by William K Pratt. **Others:** NPTEL online course.

CSE 716 Data Analytics 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 716	Data Analytics	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))
	CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**
Course Outcomes	• CO1: Classify the labelled dataset into different classes and group the unlabelled dataset into different clusters by uncovering hidden patterns and correlations among them.. • CO2: Model a problem into a graph database after absorbing and connecting a large volume of data and performing the analytical task over the graph. • CO3: Develop a recommendation system by predicting users' preferences based on similarity measures and evaluating its performance using the metrics such as Precision, recall, and F1-score. • CO4: Understand and set up the Hadoop framework, which will allow them to efficiently manage and process big data in a distributed computing environment.
Topics Covered	Introduction to Data Analytics, Types of Data Analytics: Descriptive Analytics, Diagnostic Analytics, Predictive Analytics, and Prescriptive Analytics. Use Cases, Issues and Challenges in Big Data Analytics. (4L) Fundamentals of Statistics: Population, Sample, Parameter, Statistic, Variable. Descriptive Statistics, Inferential Statistics. Basic Probability Theory: Random Experiment, Sample Space, Random Variables, Probability, Conditional Probability, Independence, Conditional Independence, Expectation, Variance, Probability Distribution, Joint Probability Distribution, Conditional Probability Distribution. (8L) Similarity Measures: Jaccard Similarity, Cosine Similarity, Adjusted Cosine Similarity. Missing Value Prediction Techniques: Mean Centering, Weighted Average, Z-Score. (6L) Basics of Complex Network: Scale-Free Networks, Small-World Phenomenon, Degree Distributions, Transitivity or Clustering. Centrality Measures: Degree Centrality, Betweenness Centrality, Closeness Centrality, Eigenvector Centrality, PageRank Centrality. Community Structure, Community Detection Algorithms: Girvan-Newman, Fast Greedy, Label Propagation, Clique Percolation Method. Community Quality Metrics: Modularity, NMI, Conductance. (10L) Introduction to Data Mining, Machine Learning Techniques: Least Square Regression, Decision-trees, SVM. Clustering Techniques: K-Means. (8L)

	Introduction to Hadoop Ecosystem – HDFS, Map-Reduce, PIG, HIVE, HBase, Mahout, Zookeeper, Flume, Sqoop, etc. (6L)
Text Books, and/or reference material	**Text Books:** 1. Data Science and Big Data Analytics: Discovering, Analyzing, Visualizing and Presenting Data – EMC Education Services – Wiley. 2. Machine Learning: Hands-On for Developers and Technical Professionals – Jason Bell – Wiley. **Reference Books:** 1. Networks: An Introduction – M. E. J. Newman – Oxford University Press. 2. CSE 717 Biometrics 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 717	Biometrics	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Basic Mathematics – Knowledge and ability to use calculus, probability, and statistics are essential.		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	● CO1: Understanding biometrics systems and its different characteristics. ● CO2: Implementation of different biometrics systems including face, fingerprint, iris, palm, signature, EEG, etc. ● CO3: Apply the concept of unimodal and multimodal paradigms in biometrics systems. ● CO4: Analyze different feature extraction and learning techniques for biometrics systems. ● CO5: Design and develop real life biometrics systems.						

Topics Covered	Biometrics Overview: Introduction, characteristics of biometric systems, biometric systems, biometric functionalities, biometrics system errors, design cycles of biometric systems, applications of biometric systems, security and privacy issues. [4L] Image Processing Techniques: What is image processing?, origin of image processing, fundamental steps in digital image processing, components of image processing system, image sensing and acquisition, image sampling and quantization, basic relationships between pixels. [6L] Filtering: Background, basic intensity transformation functions, histogram processing, fundamentals of spatial and frequency domain filtering, smoothing filters, sharpening filters, Discrete Fourier Transform, Fast Fourier Transform. [4L] Pattern Classification Techniques: Introduction, Bayesian decision theory, maximum likelihood and Bayesian parameter estimation, non-parametric techniques, linear discriminant functions, multilayer neural networks, non-metric methods. [6L] Fingerprint Recognition: Introduction, ridge pattern, fingerprint acquisition, feature extraction, matching, and fingerprint synthesis. [6L] Face Recognition: Introduction, image acquisition, face detection, feature extraction, matching and advanced topics. [6L] Iris Recognition: Introduction, iris recognition systems, image acquisition, iris segmentation, iris normalization, iris encoding and matching, iris quality and performance evaluation. [4L] Multi-modal Biometric Systems: Introduction, sources of multiple evidence, acquisition and processing architecture, fusion levels. [2L] Other Biometrics: Signature, hand shape, ear, palmprint, etc. [4L]

CSE 718 Cryptography and Network Security 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 718	Cryptography and Network Security	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
CSE 602 Basic knowledge of linear algebra, probability theory. Programming skills are desirable.		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					

Course Outcomes	• CO1: Introduce the basic mechanisms of Cryptography. • CO2: Notion of computationally hard problems and their applications. • CO3: Notion of trap-door and one-way functions and their applications. • CO4: The attack and crypto-analysis. • CO5: Ability to design secure protocols and their vulnerability analysis.
Topics Covered	1. Introduction, X.800 : Security architecture for Open Systems Interconnection, Attack, Adversarial Behavior. (2L) 2. Basic Number Theory, Field, Extension Field and applications. (5L) 3. Confidentiality, Symmetric and Asymmetric Encryption, Public key encryption mechanisms - RSA, ElGamal, Rabin's, Asymmetric Key Encryption - DES, AES. (10L) 4. Attacks- Passive attacks, Side channel Attacks, Factorizations and Index calculation methods, Countermeasures. (7L) 5. Implementational Issues - Fast Hardware for symmetric and Asymmetric key. (5L) 6. Pseudo-random number generation, Stream ciphers. (3L) 7. Message Integrity, Cryptographic hashing, Message Authenticity, Message Authentication code. (3L) 8. Entity Authentication, Digital signature, Nonrepudiation. (5L) 9. Secure protocol designing - SSL, PGP and TLS. (2L)
Text Books, and/or reference material	**Text Books:** 1. Handbook of Applied Cryptography, CRC Press (free ebook). 2. Douglas Robert Stinson, Maura Paterson, Cryptography: Theory and Practice. 3. O. Goldrich, Fundamentals of Cryptography: Basic Tools, Cambridge University Press. 4. N. Koblitz, A Course in Number Theory and Cryptography. 5. Abhijit Das, Key Cryptography: Theory and -C. E. Veni Madhavan, Public .Practice **Reference Books:** 1. M. Bellare and S. Goldwasser, Lecture Notes on Cryptography, 2001. **2.** Abhijit Das, Computational Number Theory, CRC Press. **Others:** 1. Janathan Knudsen, Java Cryptography, O'Relly Press.

CSE 720 Cellular Automata and its Application 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE720	Cellular Automata and its Application	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Digital Electronics		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	● CO1: Understanding the basic and advanced concepts of Cellular Automata (CA). ● CO2: Understanding the different phases of evolution of CA machine. ● CO3: Understanding the method of characterization of CA machine/tool. ● CO4: Modeling of physical/real-time systems with a mathematical tool such as CA. ● CO5: Applying suitable class of CA for building CA based model to study.						
Topics Covered	**Introduction:** Basic definitions of cellular automata and symbolic dynamics, Injectivity, surjectivity, reversibility, Garden-of-Eden theorem, Hedlund's theorem, Conservation laws, universal computing reversible/irreversible CA, neighbourhood, dimensions, states, follow-up and review. [6L] **Characterization of CA behaviour and its applications:** Initial Phase of						

	Development, CA-Based Models - Language Recognizer, Biological Applications, CA as Parallel and Image Processing Systems, CA based model of physical systems. [6L] **New Phase of Development**–Wolfram's model of CA, 3-neighborhood 2-state CA, CA rules, Classification of rules, CA technology, CA as an FSM, Linear/non-linear/additive CA, Polynomial Algebraic Characterization of CA Behavior, Matrix Algebraic Characterization. [6L] **Irreversible/Group CA characterization in linear domain:** Null/Periodic boundary Characterization of the State-Transition Behavior, Cycle Set Characterization, Isomorphism between a CA and an LFSR. CA based Pseudorandom Pattern Generation, Pseudo noise sequence, CABIST, Pattern Classification. [6L] **Characterization of nongroup CA/non-invertible CA in linear domain**: General Characterization of Cyclic States (attractors), Characterization of Single Length Cycle Single Attractor CA (SACA), D1*CA, Multiple-Attractor Cellular Automata (MACA)[6L] **Non-linear CA:** Characterization of non-linear rules, invertible and non-invertible CA, CA with point states; applications in VLSI domain. [6L] **Advanced Concepts:** Extension of dimension, d-state CA, introduction to Asynchronous CA, follow-up and review**.** [6L]
Text Books, and/or reference material	**Text Books:** 1. CSE 721 Computational Geometry 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 721	Computational Geometry	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
A course on Design and analysis of algorithm		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: To demonstrate familiarity with some of the basic algorithmic techniques of the area. • CO2: To design and analyze "new" geometric algorithms and to derive the lower bound for some geometric problems. • CO3: To map practical problems to computational geometric problems and finding a solution to these geometric problems help to solve a wide range of practical problems in a variety of fields such as graphics, robotics, databases, sensor network • CO4: To develop skills to work on geometrical manipulating software and to demonstrate acquaintance with modern research in the field.						
Topics Covered	**Computational Geometry Introduction:** Historical perspectives, Geometric preliminaries, Convex Hull, Algorithms to find the Convex Hull of a point set in 2D plane: Graham's Scan Algorithm, Divide and Conquer algorithm, Output sensitive algorithm: Jarvis's March Algorithm, Timothy Chan's Algorithm; Lower bound analysis for Convex Hull Algorithm [6L] **Line Segment Intersection**: Line Segment Intersection, The Doubly-Connected Edge List, Computing the Overlay of Two Subdivisions, Boolean Operations. [4L] **Polygon Triangulation:** Guarding and Triangulations, Area of a simple polygon, Counting the number of triangulations in a convex polygon, Art Gallery Theorem, Monotone Polygon, Partitioning a Polygon into Monotone Pieces, Triangulating a Monotone Polygon.						

	[6L] **Orthogonal Range Searching:** 1-Dimensional Range Searching, Kd Trees, Range Trees, Higher-Dimensional Range Trees, Fractional Cascading. [6L] **Point Location:** Point Location and Trapezoidal Maps, A Randomized Incremental Algorithm to compute a Trapezoidal Map and a Search structure, Kirkpatrick's planar point location problem. [6L] **Voronoi Diagram and Delaunay Triangulation:** Definition and Basic Properties of Voronoi Diagram, Computing the Voronoi Diagram: Fortune Sweep Algorithm, Divide and Conquer Algorithm. Closest pair Problems. Application of voronoi diagrams, Triangulations of Planar Point Sets, The Delaunay Triangulation, Computing the Delaunay Triangulation. [7L] **Arrangements and Duality:** Arrangement of lines, Zone theorem, Duality, Application of arrangements and duality, Ham Sandwich Cut. [4L] **Geometric Data Structure:** Interval Trees, Priority Search Trees. [3L]
Text Books, and/or reference material	**Text Books:** 1. Franco P. Preparata and Michael Ian Shamos, Computational Geometry- An Introduction, Springer Verlag. 2. Mark de Berg, Marc van Kreveld, Mark Overmars, Otfried Cheong, Computational Geometry: Algorithms and Applications, Third Edition, Springer Verlag. 3. Joseph O' Rourke, Computational Geometry in C, Cambridge University Press. **Reference Books:** **Others:** Lecture notes on Computational geometry by David Mount.

						s	
CSE 722	Complex Network Theory	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))
Probability, Calculus, Linear Algebra, Graph Theory	CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**
Course Outcomes	• CO1: Illustrate the modern theory and applications of network science. • CO2: Analyze structure of communities in different networks • CO3: Define random walk and design real-world applications • CO4: Apply of linear algebra and probability to real-world complex network problems • CO5: Cultivate reading of research papers and articles
Topics Covered	**Introduction to Network Science** (1L) **Graph Theory:** revision of basic concepts. (2L) **Properties of Complex networks**: Degree distribution, associativity, clustering coefficient.(4L) **Random Networks**: Poisson's distribution, giant component and its emergence, generating function, component size distribution. (6L) **Bipartite networks**: unipartite projection, giant component condition. (6L) **Centrality measures**: degree centrality, closeness centrality, betweenness centrality, eigen vector centrality, Peron Frobenius theorem.(4L) **Spectral Graph Theory**: eigen values and eigen vectors, spectrum of a graph, spectrum of a clique, eigen values and eigen vectors of special matrices like triangular and diagonal matrices, Markov matrix, trace of a matrix, physical interpretation of principal eigen vector, spectral coverage, significance of 2^{nd} eigen vector, Motifs, Frobenius norms, dimension reduction. (4L) **Network Models:** Erdos Renii graph, power law distribution in small world network, scale free networks. (4L) **Random walks on graphs and its applications:** random walks and Markov chain, transitional probability, stationery state, hitting time, commute time, cover time, mixing rate, stochastic matrix, page rank algorithm, page rank ++, HITS (Hypertext induced topic selection) algorithm by Klienberg, HITS on citation networks, bibliographic coupling, SALSA (The stochastic approach to Link Structure analysis and TKC effects). (7L) **Community detection algorithms:** what is a community, core community, Wu-Huberman Algorithm, Radicchi's Algorithm, community detection algorithms based on shortest path betweenness and random walk betweenness.(4L)
Text Books, and/or reference material	**Text Books:** • " The structure and dynamics of networks" by Newman, Barabasi, Watts, Princeton University Press. • "Networks: An Introduction" by Mark Newmann, Oxford University Press • "Network Science" by Barabasi, Cambridge University Press. **Reference Books:** • "Network Science" Theory and Applications by Ted G Lewis, Wiley. **Others:** • http://www.infocobuild.com/education/audio-video-courses/computer-

	science/complex-network-theory-iit-kharagpur.html (Video Lecture) by Dr. Animesh Mukherjee

Mapping of CO (Course Outcome) and PO (Programme Outcome)

CSE 723   Pattern Recognition   3-0-0   3 Credits   3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 723	Pattern Recognition	PEL	3	0	0	3	3
Pre-requisites Artificial Intelligence, Data Mining, DBMS, Object Oriented Programming		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Idea about Pattern and Pattern Class, Design of a Pattern Recognition System. • CO2: Idea of Instar, Outstar, Groups of Instar and Outstar, Different types of Memories. • CO3: Concept of Feedforward, Feedback and Competitive Learning Network. • CO4: Concept of Complex PR Tasks: RBF, RBF Network for Pattern Classification. • CO5 : Idea of Temporal Pattern Recognition: Concepts.						
Topics Covered	Pattern and Pattern Class: Design of a Pattern Recognition System, Syntactic and Decision Theoretic Approach, Bayesian Decision Theory, Continuous Features, Error, Risk and Loss. [4L] Parametric and Non Parametric Methods: Histogram Method – Kernel Based Methods – K - Nearest Neighbor Method -- Probabilistic Neural Network base on Parzon Window – PNN Learning. [3L] Basics of ANN: Instar , Outstar, Groups of Instar and Outstar, Different types of Memories. [3L]						

	PR Tasks: PR Problems, Different PR Tasks by FF, FB and Competitive Learning Network, Pattern Clustering, Feature Mapping Problem, Different Feature Mapping Network, Self Organizing Network. [4L] FF ANN: Pattern Association Network, Hebb's Law, Pattern Classification Network. [3L] FB ANN: Pattern Association, Pattern Storage, Pattern Environment Storage, Auto association , Hopfield Network, Capacity and Energy of a Hopfield Network, State Transition Diagram, Stochastic Network and Boltzmann Machine. [5L] Competitive Learning Network: Pattern Storage, Pattern Clustering Network, Minimal Learning, Malsburg Learning and Leaky Learning. [4L] Complex PR Tasks: RBF, RBF Network for Pattern Classification, Advantages of RBF over MLFF ANN, CPN Network. [3L] Single and Multilayer Network: Gradient Descent Procedure, Newton's Algorithm, Fixed Increment Learning, Variable Increment Learning, Support Vector Machine(SVM), Multilayer Neural Networks, Unsupervised Learning. [5L] Temporal Pattern Recognition: Concepts, Problems in temporal sequence, Architecture for temporal PR Tasks, Avalanche Structure, Jordon Network, Fully Connected Recurrent Network, Difference between Avalanche Network and Jordon Network. [4L] Similarity Measures: Mahalanabis Distance, Properties of Metrics, Minkowski Metric, Manhattan / City Block / L1 norm, Euclidean Distance L2 Norm, Maximum Value Distance L∞ Norm, Hamming Distance L1 norm. [4L]
Text Books, and/or reference material	**Text Books:** 1. Pattern Classification – Duda, Hart & Stork – J. Wiley & Sons. 2. Artificial Neural Networks – B. Yegnanarayana – PHI. **Reference Books:** 1. Neural Networks for Pattern Recognition – C.M. Bishop – Oxford.

EIGHTH SEMESTER

CSE 811 Distributed Systems 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE811	Distributed Systems	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Operating systems. Computer Networks		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: To explain the paradigm of distributed computing. • CO2: To explore various existing and possible architectures of distributed systems. • CO3: To properly appreciate the issues that arise in distributed systems and explore solutions for the problems. • CO4: To fully appreciate the advantages to be obtained from a distributed environment wrt fault tolerance, load sharing etc.						
Topics Covered	Introduction to Distributed Systems. Motivations. Design Issues. (3L) Clocks in a Distributed System. Synchronization Issues. Logical Clocks. Causal relationships. Vector Clocks. (3L) Distributed State Detection. Global State. Consistent Cut. Global State recording algorithm. (2L) Termination Detection. Credit based algorithm. Diffusion Computation based algorithm. (2L) Distributed Mutual Exclusion. Token based and non-token based algorithms. (4L) Deadlocks in Distributed Systems. Resource allocation Models. Deadlock Prevention. Deadlock Avoidance – Safe states. Deadlock detection and Correction. Phantom Deadlocks. Centralized, Distributed and Hierarchical deadlock detection algorithms. (5L) Fault recovery. Classes of Faults. Backward and Forward recovery. Log based recovery. Checkpoints. Shadow paging. (5L) Fault Tolerance. Data Replication. Quorum Algorithms. Distributed Commit Protocols. 2-phase commit. 3-phase commit. Election Algorithms. Bully algorithm. Ring topology algorithm. (8L) Byzantine faults and Agreement Protocols. (2L)							

	Distributed File systems. Mechanisms. Stateful and Stateless servers. Scalability. Naming and Name Servers. (4L) Distributed Scheduling. Load Balancing. Load Estimation. Stability. Process Migration. Remote Procedure Calls. Transparency. Binding. (4L)
Text Books, and/or reference material	**Text Books:** 1. Advanced Concepts in Operating Systems. Singhal and Sivaratri. McGraw Hill. **Refenence Books:** 1. Operating Systems: A Concept Based Approach. Dhamdhere. McGraw Hill. 2. Distributed Operating Systems: Concepts and Design. P.K.Sinha. Prentice Hall. 3. Distributed Operating Systems. A.Tanenbaum. Pearson Education. 4. Distributed Systems: Concepts and Design. Coulouris et.al. Pearson Education.

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 812	Computer Vision	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Probability and Statistics, Algebra, Optimization, Computer Graphics		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Understanding basic architecture and principles of computer vision systems. • CO2: Implementation of computer vision algorithms including depth estimation, multi-camera view and motion analysis components. • CO3: Apply basic image processing and feature extraction techniques in						

	order to design computer vision algorithms. ● CO4: Analysis of pattern analysis and image segmentation techniques used for computer vision systems. ● CO5: Design and development of real time computer vision systems.
Topics Covered	Digital Image Formation and low-level processing: Overview and State-of-the-art, Fundamentals of Image Formation, Transformation: Orthogonal, Euclidean, Affine, Projective, etc; Fourier Transform, Convolution and Filtering, Image Enhancement, Restoration, Histogram Processing. [5L] Depth estimation and Multi-camera views: Perspective, Binocular Stereopsis: Camera and Epipolar Geometry; Homography, Rectification, DLT, RANSAC, 3-D reconstruction framework; Auto-calibration. Apparel. [6L] Feature Extraction: Edges - Canny, LOG, DOG; Line detectors (Hough Transform), Corners - Harris and Hessian Affine, Orientation Histogram, SIFT, SURF, HOG, GLOH, Scale-Space Analysis- Image Pyramids and Gaussian derivative filters, Gabor Filters and DWT. [8L] Image Segmentation: Region Growing, Edge Based approaches to segmentation, Graph-Cut, Mean-Shift, MRFs, Texture Segmentation; Object detection. [5L] Pattern Analysis: Clustering: K-Means, K-Medoids, Mixture of Gaussians, Classification: Discriminant Function, Supervised, Un-supervised, Semi-supervised; Classifiers: Bayes, KNN, ANN models; Dimensionality Reduction: PCA, LDA, ICA; Non-parametric methods. [8L] Motion Analysis: Background Subtraction and Modeling, Optical Flow, KLT, Spatio-Temporal Analysis, Dynamic Stereo; Motion parameter estimation. [4L] Shape from X: Light at Surfaces; Phong Model; Reflectance Map; Albedo estimation; Photometric Stereo; Use of Surface Smoothness Constraint; Shape from Texture, color, motion and edges. [6L]

CSE 813 Optical Networks 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 813	Optical Networks	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Basic Concepts of Computer Networks, and Algorithms		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	● CO1: Understanding the fundamental concepts and identifying different issues of optical networks. ● CO2: Comprehend the basic concepts and solution techniques for the different fundamental problems like routing and wavelength assignment (RWA), virtual topology design, wavelength rerouting, and traffic grooming in optical network design. ● CO3: Acquire knowledge of the wavelength convertible network. ● CO4: Comprehend the multicast routing in optical networks.						
Topics Covered	1. **Fundamentals and Different Problems**: Optical fiber principles, Optical transmission system, Wavelength Division Multiplexing(WDM), optical networking evolution, Optical Network Architectures, Different issues in						

	wavelength routed networks. (06L) 2. **Routing and Wavelength Assignment (RWA) algorithms**: ILP formulation of the RWA problem, Route Selection algorithms – Fixed Routing, Fixed Alternate Routing, Exhaust Routing, Least Congested Path Routing, Limited alternate Routing. Wavelength Selection algorithms. Joint wavelength-Route selection algorithm. (07L) 3. **Wavelength Convertible Networks**: Need for Wavelength Converters, Wavelength convertible Switch Architecture, Routing in Convertible Networks, Performance Evaluation of Convertible networks, Network with Sparse Wavelength Conversion, Converter Placement problem. (06L) 4. **Wavelength Rerouting Algorithm**: Benefits of wavelength rerouting, Issues in wavelength rerouting, Rerouting algorithm. (04L) 5. **Virtual Topology Design**: Physical and Virtual topology, Traffic routing over virtual topology, Limitations on virtual topology, Virtual topology problem formulation, Virtual topology design heuristics. (06L) 6. **Traffic Grooming:** Basic concepts, Grooming node architecture, ILP formulation of the traffic grooming problem, Different heuristics (MST, MRU, TGCP, etc) for the traffic grooming problem. (06L) 7. **Optical Multicast Routing**: Multicast routing problem, architecture of Light spliting node and MI node, Network with full splitting and sparse splitting, Multicast Tree generation algorithms – Source based, Steiner based and Virtual source based tree generation algorithms. (07L)
Text Books, and/or reference material	**Text Books:** **1.** WDM OPTICAL NETWORKS Concepts, Design and algorithms. by C. Siva Ram Murthy and Mohan Gurusamy (PHI). 2. OPTICAL NETWORKS by Biswanath Mukherjee (TMH). **Reference Books:** 1. Optical Networks: A Practical Perspective (3rd Edition) by R. Ramaswami, K. Sivarajan, G. Sasaki (Morgan Kaufmann Publishers).

CSE 814 Internet of Things 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 814	Internet of Things	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					

Course Outcomes	• CO1: Understand the basic concepts of Internet of Things. • CO2: Preparing the right background to take up research works in emerging wireless technologies and Internet of Things. • CO3: Service computing models for IoT - edge computing, Machine learning mechanisms in IoT scenarios. • CO4: Able to understand the innovation opportunity in IoT application segments.
Topics Covered	**Module 1: Introduction to IoT and Sensing** (3L) Introduction to IoT, Sensing, Edge computing, Data processing, Learning. Introduction to layered architecture of IoT. **Module 2: Sensing and actuating** (4L) working principle of some sensors like Ultrasonic sensor, Thermal Sensors, Infrared Sensors, Pollutant Sensors, Temp, IMU Sensor etc.; basic actuation mechanisms and common actuators. **Module 3: Microcontroller/Microcomputer** (4L) Open source hardware, Play with Sensors using Arduino Programming, Local data processing using Raspberry Pi/Uddo Neo, using different Network Modules (Bluetooth, WiFi, GSM/GPRS). **Module 4:Wireless Networks Present and Future** (10L) Concept of TCP/IP protocol Stack, 802.11 Protocol (WiFi Network), LoRa Network, Acoustic Communication, Socket Programming, Wireshark Tool **Module 5: IoT Protocols** (4L) HTTP, QUIC, CoAP, MQTT. **Module 6:Performance and Security in IoT**(6L) Performance modeling of stochastic systems, QoS modeling, estimation of IoT service response times; fundamentals of lightweight security protocols. IS/ISO/IEC TR 22417: 2017 IoT general standards. **Module 7: Case Study of IoT Based Applications** (11L) Case Study 1: **(activity Identification)** Human Activity using Ultra sonic Sensors/Thermal Sensors. Case Study 2: **(Environment Monitoring)** Pollution Monitoring and Forecasting in Indoor and Outdoor. Case Study 3: **(Road Transportation System)** (a)Important PoIs using GPS trails,

	(b)Context Aware Speed Profiling from Mobile Phone Sensors, (c)My Smartphone Can Monitor My Street-lights. Case Study 4: **(Challenged Networks)** offline Crisis Mapper Design using ChatBot, IoT Protocol Stack Development using Acoustic Communication. Case Study 5: **(Agriculture Monitoring):** Smart Farming using MQTT Protocol through Cost-effective Heterogeneous Sensors. SmartCity IoT: Integration of multiple IoT application segments, dynamic directory management, service replication and server selection; putting it all together.
Text Books, and/or reference material	**Text Books** **1.** "The Internet of Things: Enabling Technologies, Platforms, and Use Cases", by Pethuru Raj and Anupama C. Raman (CRC Press). 2. "Internet of Things: A Hands-on Approach", by Arshdeep Bahga and Vijay Madisetti (Universities Press).

CSE 815 Cloud Computing 3-0-0 3 Credits 3 Hour

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 815	Cloud Computing	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	After the completion of this course, student will be able to: ● CO1: Understand the core concepts of the cloud computing paradigm: paradigm shift, the characteristics, advantages and challenges of various models and services. ● CO2: Apply fundamental concepts in cloud infrastructures to understand the tradeoffs in power, efficiency and cost, and then study how to leverage and manage single and multiple datacenters to build and deploy cloud applications that are resilient, elastic and cost-efficient. ● CO3: Learn system, network and storage virtualization and outline their role in enabling the cloud computing system model. ● CO4: Analyze the performance, scalability, and availability of the underlying cloud technologies and software. ● CO5: Identify security and privacy issues in cloud computing.						

	• CO6: Explain recent research results in cloud computing and identify their pros and cons.
Topics Covered	**Introduction to Services Oriented Computing -** Service Oriented Software, Web Applications Paradigm.[2] **Services Oriented Architecture -** SOA and Web Services Fundamentals, SOA and Service-Orientation, SOA - Planning and Analysis, SOA - Technology and Design, SOA Reference model (OASIS), SOA standard S3, Business Process and SOA, Software as a Service (SaaS) [4] **Web Services -** Introduction to Web Services, Web Service Jargon – Publishing, Discovery and Binding, Web Service Technologies – WSDL, SOAP, UDDI, Issues and Challenges – MANET, CLOUD, DTN,Formal, Representation of Services[4] **Cloud Computing Basics-** Overview, Applications, Intranets and the Cloud. Organization and Cloud Computing- Benefits, Limitations, Security Concerns. [2] **Cloud Infrastructure -** Data center, Virtualization, Clients, Security, Network, Services and Delivery Models (SaaS, PaaS, IaaS). Case study like Amazon EC2, Microsoft Azure etc. Deployment types (Private, Public, Hybrid) [4] **Software as a Service (Saas)-** Understanding the Multitenant Nature of SaaS Solutions, Understanding SOA. [2] **Platform as a Service (PaaS)-** IT Evolution Leading to the Cloud, Benefits of Paas Solutions, Disadvantages of Paas Solutions. [2] **Infrastructure as a Service (Iaas)-**Understanding IaaS, Improving Performance through Load Balancing, System and Storage Redundancy, Utilizing Cloud-Based NAS Devices, Advantages, Server Types. [3] **Virtualization-**Understanding Virtualization, History, Server Virtualization, Data Storage Virtualization. [4] **Securing the Cloud**- General Security Advantages of Cloud-Based Solutions, Introducing Business Continuity and Disaster Recovery. Disaster Recovery- Understanding the Threats. [4] **Migrating to the Cloud-**Cloud Services for Individuals, Cloud Services Aimed at the Mid-Market, Enterprise-Class Cloud Offerings, and Migration. [4] **Designing Cloud Based Solutions-**System Requirements, Design Is a Give-and-Take Process. Coding Cloud Based Applications-Creating a Simple Yahoo Pipe, Using Google App Engine and creating a Windows Azure Application. Application Scalability-Load-Balancing Process, Designing for Scalability, Capacity Planning Versus Scalability, Scalability and Diminishing Returns and Performance Tuning. [7]
Text Books, and/or reference material	**Text Books:** Cloud Computing: A Practical Approach by Anthony T. Velte Toby J. Velte, Robert Elsenpeter, The McGraw-Hill Publisher. Cloud Computing: SaaS, PaaS, IaaS, Virtualization and more. by Dr. Kris Jamsa, Jones & Bartlett Publisher. **Reference Books:** Cloud Computing Bible by Barrie Sosinsky, Published by Wiley Publishing. Cloud Computing for Dummies by Judith Hurwitz, Robin Bloor, Marcia Kaufman, and Dr. Fern Halper, Wiley Publishing. Cloud Computing Theory And Practice Danc.Marinercus, Elsevier.

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE 817	EXPERT SYSTEMS	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))
Artificial Intelligence, Data Mining, Pattern Recognition, OOP	
	CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**

Course Outcomes	
	• CO1: Idea about Knowledge Base & Expert Systems. • CO2: Idea of Inference Tool and Inference Engine and different methods of Inference Methodologies. • CO3: Idea about Reasoning under Uncertainty and Uncertainty Management which is really crucial under present day scenario. • CO4: Concept of the Design of Expert System Components and Experts Systems. • CO5: Some Examples of Practical Experts System.

Topics Covered

1. Introduction to Expert Systems: Definition of an Expert System – Advantages of Expert Systems – Characteristics of Expert Systems - Applications and Domains – Procedural and Non procedural Systems. [6L]

2. The Different Techniques for Knowledge Representation: Meaning of Knowledge – Productions – Semantic Nets- Frames – Logics – Propositional and Predicate Logic – The universal and existential quantifiers. [7L]

3. The Different Methods of Inference : Trees, Lattice and Graph – State and Problem Space – Rules of Inference – Logic Systems – Resolution Systems and Deductions – Forward and Backward Reasoning – Meta knowledge. [7L]

4. The Reasoning Under Uncertainty and Inexact Reasoning – Uncertainty – Types of Errors – Classical Probability – Experimental and Subjective probabilities – Compound and Conditional Probabilities – Temporal Reasoning – Uncertainty in Inference Chains – Evidence Combination – Uncertainty and Rules – Certainty Factors – Dempster- Shafer Theory – Approximate Reasoning. [8L]

	5. The Design of Expert Systems Tool and Expert Systems : Selecting Appropriate Problem – Stages in the development – Errors in Development – Expert System Life Cycle – A Life Cycle Model. [7L] 6. Some Practical Examples of Expert System Design – Modular Design – Phases and Control Facts – Importing and Exporting facts – Modules and Execution Control – Certainty Factors – Decision Trees – Backward Chaining – A Monitoring Problem.[7L]
Text Books, and/or reference material	**Text Books:** 1. Expert Systems Principles and Programming – Bikash Publishing House. 2. Pattern Classification- – Duda, Hart & Stork – J. Wiley & Sons. **Reference Books:** 1. Artificial Neural Networks – B. Yegnanarayana – PHI. 2. Neural Networks for Pattern Recognition – C.M. Bishop – Oxford.

CSE 818 Ethics, Society, and Computer Science 3-0-0 3 Credits 3 Hours

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSE818	Ethics, Society, and Computer Science	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Basic knowledge of programming and AI/ML		CA+ MT + ET [CA: 15%, MT: 25%, ET: 60%]					
Course Outcomes	• CO1: To understand professional and ethical responsibilities, including those defined in the ACM/IEEE Professional Code of Ethics. • CO2: To ensure fairness, accountability, and transparency while working on machine learning, artificial intelligence and related fields. • CO3: To appreciate the threats to privacy posed by modern data aggregation and data processing techniques. • CO4: To design technologies incorporating ethical considerations from the						

	specification provided.
Topics Covered	**Introduction:** What is Ethics?, Ethics and Computer Science, Social consensus on unethical practices by computer professionals, Conventional issues, Emerging issues in the age of data driven (AI/ML based) decision making, History and Evolution of ethics with advances in computer science and engineering. (4L) **Ethics in Data collection and aggregation:** Basic mechanism of data driven (AI/ML based) decision making, Data aggregation and decision making, Data Ownership, Collection and collation of digital imprints of users, Data stealing and data broking, Informed consent, Data repurposing, Privacy, Anonymity, Data validity, Establishing data protection framework with legal backing, Concept of differential privacy, GPDR. (10L) **Algorithmic Fairness:** Discriminatory impact of imperfect decisions, Case study: Facial recognition software, Criminal justice using big data, recidivism models for sentencing guidelines, predictive policing, Trust in AI/ML based decision making, Algorithmic fairness, Notions of fairness, Parity based and preference based notions, Fairness and accuracy, Identifying and mitigating inherent bias in data and/or machine learning algorithms, Proper choice of representative sample, Making training data fair, Designing fairness aware classifiers, Algorithmic audit, Challenges, Audit based on user survey, Sock puppet audit, Audit based on scrapping/crawling. (12L) **Transparency and Explainability:** Black-box phenomenon and trust, Unpredictability, Explanation/Reasoning, Right to explanation, Explainability and accuracy trade off, Transparency and interpretability, DARPA XAI, ML model explainability, Linear model explainability, Nonlinear model explainability, Neural networks explainability, LIME package, SHAP values, What-if tool. (5L) **AI Ethics:** Moral issues in autonomous and intelligent systems, Narrow (or Weak) AI and General (or Strong) AI, Weaponization of AI, Moral issues in autonomous robots, Robot ethics, Moral issues in self-driving cars, Moral Machine Quiz. (5L) **Personalization:** Personalized recommendation, search and newsfeed, Intellectual isolation associated with personalization, Objective search results, Personalized advertisement, Cross-domain tracking. (3L) **Code of Ethics:** Ethical standards by international professional societies, IEEE Global Initiative on Ethics of Autonomous and Intelligent Systems, ACM Code of Ethics and Professional Conduct. (3L)

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT.

6th Semester

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING	
ECE610	Artificial Intelligence & Soft Computing
ECE611	Computer Organization and Architecture
ECE612	Advanced Digital Communication
ECE613	Object Oriented Programming
ECE614	ASIC Design using Verilog/VHDL
ECE615	Active Filter Design
ECE616	VLSI Technology
ECE617	Probability and Random Signal Theory
ECE618	Data Comm. & Computer Networks
ECE619	Mobile Computing
ECE620	Nanoelectronics
ECE621	Measurement & Instrumentation
ECE622	Digital IC Design
ECE623	Mechatronics Systems
ECE624	Power Electronics
ECE625	Optical Communication

7th Semester

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING	
ECE710	Detection and Estimation Theory
ECE711	Information Theory & Coding
ECE712	Analog IC Design
ECE713	FPGA Based Design
ECE714	MEMS and Microsystems Technology
ECE715	Machine Learning
ECE716	Millimetre Wave Technology
ECE717	RF ID Technology and Applications
ECE718	VLSI System Design
ECE719	Telecommunication Networks
ECE720	Advanced Semiconductor Devices
ECE721	Random Processes
ECE722	Microwave Circuits & Techniques
ECE723	Semiconductor Device Modelling
ECE724	Biomedical Instrumentation
ECE725	Adhoc and Sensor Networks

8th Semester

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING	
ECE810	Wireless Communication
ECE811	Mixed Signal IC Design
ECE812	Broadband Communication

ECE813	Digital Image Processing
ECE814	Error Control Coding
ECE815	Embedded System Design
ECE816	RF and MMIC
ECE817	Design with Op. Amps. & Analog Integrated Circuits
ECE818	Satellite Communication
ECE819	RF IC Design
ECE820	Low Power Circuits & Systems
ECE821	Advanced Antenna Synthesis
ECE822	DSP Architectures in VLSI
ECE823	Internet of Things (IoT) Technology
ECE824	VLSI Testing and Verification
ECE825	Statistical Signal Processing

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 01	MATHEMATICS - I	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic concepts of function, limit, differentiation, and integration.		CT+MT+EA					
Course Outcomes	• CO1: To introduce the fundamentals of differential calculus of single and several variables • CO2: To develop the basic concepts of integral calculus including multiple integrals and its application in finding area, volume, centre of mass, centre of gravity etc. • CO3: To introduce the fundamental concepts of vector calculus • CO4: To develop the concept of convergence						

Topics Covered	**Functions of Single Variable:** Rolle's Theorem and Lagrange's Mean Value Theorem (MVT), Cauchy's MVT, Taylor's and Maclaurin's series, Asymptotes & Curvature (Cartesian, Polar form). (8) **Functions of several variables:** Function of two variables, Limit, Continuity and Differentiability, Partial derivatives, Partial derivatives of implicit function, Homogeneous function, Euler's theorem and its converse, Exact differential, Jacobian, Taylor's & Maclaurin's series, Maxima and Minima, Necessary and sufficient condition for maxima and minima (no proof), Stationary points, Lagrange's method of multipliers. (10) **Sequences and Series:** Sequences, Limit of a Sequence and its properties, Series of positive terms, Necessary condition for convergence, Comparison test, D Alembert's ratio test, Cauchy's root test, Alternating series, Leibnitz's rule, Absolute and conditional convergence. (6) **Integral Calculus:** Mean value theorems of integral calculus, Improper integral and it classifications, Beta and Gamma functions, Area and length in Cartesian and polar co-ordinates, Volume and surface area of solids of revolution in Cartesian and polar forms. (12) **Multiple Integrals:** Double integrals, Evaluation of double integrals, Evaluation of triple integrals, change of order of integration, Change of variables, Area and volume by double integration, Volume as a triple integral. (10) **Vector Calculus:** Vector valued functions and its differentiability, Line integral, Surface integral, Volume integral, Gradient, Curl, Divergence, Green's theorem in the plane (including vector form), Stokes' theorem, Gauss's divergence theorem and their applications. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th ed., Wiley India Ed. (2010). 2. Daniel A. Murray, Differential, and Integral Calculus, Fb & c Limited, 2018. 3. Marsden, J. E; Tromba, A. J.; Weinstein: Basic Multivariable Calculus, Springer, 2014. **Reference Books:** 1. Tom Apostal, Calculus-Vol-I & II, Wiley Student Edition, 2011. 2. Thomas and Finny: Calculus and Analytic Geometry, 11th Ed., Addison Wesley.

<tr><td>Course Outcomes</td><td colspan="7">CO1: To realize and apply the fundamental concepts of physics such as superposition principle, simple harmonic motion to real world problems.
CO2: Learn about the quantum phenomenon of subatomic particles and its applications to the practical field.
CO3: Gain an integrative overview and applications of fundamental optical phenomena such as interference, diffraction and polarization.
CO4: Acquire basic knowledge related to the working mechanism of lasers and signal propagation through optical fibers.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Harmonic Oscillations - Linear superposition principle, Superposition of two perpendicular oscillations having same and different frequencies and phases, Free, Damped and forced vibrations, Equation of motion, Amplitude resonance, Velocity resonance, Quality factor, sharpness of resonance, etc. [8]
Wave Motion - Wave equation, Longitudinal waves, Transverse waves, Electro-magnetic waves. [3]
Introductory Quantum Mechanics - Inadequacy of classical mechanics, Blackbody radiation, Planck's quantum hypothesis, de Broglie's hypothesis, Heisenberg's uncertainty principle and applications, Schrodinger's wave equation and applications to simple problems: Particle in a one-dimensional box, Simple harmonic oscillator, Tunnelling effect. [8]
Interference & Diffraction - Huygens' principle, Young's experiment, Superposition of waves, Conditions of sustained Interference, Concepts of coherent sources, Interference by division of wavefront, Interference by division of amplitude with examples, The Michelson interferometer and some problems; Fraunhofer diffraction, Single slit, Multiple slits, Resolving power of grating. [13]
Polarisation - Polarisation, Qualitative discussion on Plane, Circularly and elliptically polarized light, Malus law, Brewster's law, Double refraction (birefringence) - Ordinary and extra-ordinary rays, Optic axis etc.; Polaroid, Nicol prism, Retardation plates and analysis of polarized lights. [5]
Laser and Optical Fiber - Spontaneous and stimulated emission of radiation, Population inversion, Einstein's A & B co-efficient, Optical resonator and pumping methods, He-Ne laser. Optical Fibre– Core and cladding, Total internal reflection, Calculation of numerical aperture and acceptance angle, Applications. [5]</td></tr>

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CYC 01	Engineering Chemistry	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	• CO1: Introduced to chemical thermodynamics, kinetics, electrochemistry, absorption, and catalytic processes for engineering applications • CO2: To learn fundamentals of polymer chemistry and petroleum engineering. • CO3: Introduced to basic spectroscopic techniques for structure determination and characterization. • CO4: To study few inorganic and bioinorganic compounds of industrial importance.						
Topics Covered	**ORGANIC CHEMISTRY** i. Fundamentals of organic reaction mechanisms; Few important reactions and their mechanism along with their applications; Robinson annulation, Hydroboration reaction, Organometallic reagents (Gilman reagents), Metathesis using Grubb's catalyst and Wittig reaction. (3) ii. Fundamental concept on stereochemistry and application: Conformation and configuration of organic compounds, Diastereo-selective, enantio-selective, regio-selective, stereo-specific, and stereo-selective reactions. (3) iii. Polymer chemistry and polymer engineering: Fundamental concept on polymer chemistry; synthesis and application of important polymers, Rubber, and plastic materials. Conducting polymer. (2) iv. Petroleum Engineering and oil refinery: origin of mineral oils, separation principle and techniques of distillation of crude oil, Uses of different fractions, octane number, cetane number, Knocking, anti-knock compounds, and Bio-Fuel.						

	(2) v. Structure elucidation of organic compounds by modern spectroscopic methods; Application of UV-Visible and FT-IR spectroscopy. (3) **INORGANIC CHEMISTRY** i. **Coordination Chemistry:** Crystal Field Theory of octahedral and tetrahedral complexes, colour and magnetic properties, Jahn-Teller distortion, pseudo Jahn-Teller distortion, Isomerism, and stereochemistry. (5) ii. **Bioinorganic Chemistry:** Heme and non-heme O_2 transport protein (Haemoglobin, Myoglobin), Chlorophyll and photosynthesis. (3) iii. **Inorganic Materials:** Introduction towards industrially important inorganic materials like cementing material, refractory material, fertiliser, inorganic polymer. (2) iv. **Organometallic Chemistry:** π-acid ligands, stabilization of metal low oxidation state and 18 electron rules, metal carbonyls and nitrosyls, metal-alkene complexes. (4) **PHYSICAL CHEMISTRY** i. **Thermodynamics:** 2nd law of thermodynamics, entropy, free energy, Gibbs Helmholtz equation, change of phase. Cryogenics: joule Thomson experiment. (4) ii. **Chemical Kinetics:** 2nd and 3rd order rate expression, Reversible reaction, Chain reaction, Consecutive reaction, Temp effect on reaction rate. (4) iii. **Electrochemistry:** Electrochemical cell, Effect of pH, precipitation, and complex formation on EMF of oxidation/reduction processes. (2) iv. **Absorption:** Physical and Chemical absorption, Absorption isotherms. (1) v. **Catalysis:** Types of catalysis, Rate expression for Catalysed reaction, Acid-base and Enzyme catalysis. (2)
Text Books, and/or reference material	<u>Suggested Text Books:</u> (i) Physical Chemistry by P. Atkins, Oxford (ii) A guidebook to mechanism in Organic chemistry: Peter Sykes; Pearson Edu. (iii) Inorganic Chemistry Part-I & II, R. L. Dutta, The new book stall <u>Suggested Reference Books:</u> **Organic Chemistry**: (i) Basic stereochemistry of organic molecules: S. Sengupta; Oxford University press (ii) Engineering Chemistry: Wiley (iii) Elementary Organic Spectroscopy: William Kemp, ELBS with Macmillan **Inorganic Chemistry:** (i) Inorganic Chemistry: Principle structure and reactivity, J. E. Huheey, E. A. Keiter and R. L. Keiter, Pearson Education (ii) Bioinorganic Chemistry -- Inorganic Elements in the Chemistry of Life: An Introductionand Guide, 2nd Edition, Wolfgang Kaim, Brigitte Schwederski, Axel Klein. (iii) Inorganic Chemistry Fourth Edition, Shriver & Atkins, Oxford **Physical Chemistry:** (i) Physical Chemistry by G.W Castellan (ii) Physical Chemistry by P. C. Rakshit

XEC01	**ENGINEERING MECHANICS**	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO1: Acquire knowledge of mechanics and ability to draw free body diagrams. • CO2: Apply knowledge of mechanics for solving special problems like truss and frame analysis. • CO3: Ability to calculate centroid, moments of inertia for various shapes. • CO4: Learn momentum and energy principles. • CO5: Knowledge on virtual Work Principle and its application						
Topics Covered	Engineering Mechanics; measurement and SI units. [1] Vectors and force as a vector; Resultant of a system of forces on a particle; free body diagram and conditions of equilibrium of a particle; problems on particles; equilibrium of particles in space. [2] Resultant of a system of forces and couples on a rigid body; conditions of equilibrium of a rigid body; free body diagrams of rigid bodies subjected to different types of constraints; simple space problems of rigid bodies. [4] Coefficients of static and kinetic friction; problems involving friction; theories of friction on square threaded power screw and flat belt. [5] Simple trusses; analysis of trusses by method of joints and method of sections. [5] Centre of gravity and centre of mass; centroids of lines, curves and areas; first moment of area; second moment of area; polar moment of inertia; radius of gyration of an area; parallel axis theorem; mass moment of inertia. [4] Path, velocity, acceleration; rectilinear and curvilinear motion; motion of system of particles; introduction to the concept of plane kinematics of rigid bodies. [6] Newton's second law of motion; dynamic equilibrium and D'Alembert's principle; linear momentum; angular momentum; rectilinear and curvilinear motion; principles of work–energy and impulse–momentum; impact of system of particles; introduction to the concept of plane kinetics of rigid bodies. [12] Principle of Virtual Work, Solution of Problems on Mechanics using Principle of Virtual Work [3]						

Text Books, and/or reference material	1) S P Timoshenko and D H Young, Engineering Mechanics, 5th Edition 2) J L Meriam and L G Kraige, Engineering Mechanics, 5th Edition, Wiley India 3) F P Beer and E R Johnston, Vector Mechanics for Engineers 4) I H Shames, Engineering Mechanics

ESC01	**Environmental Science**	PCR	2	0	0	2	2
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	• CO1: Understand the importance of environment and ecosystem. • CO2: Understand the fundamental aspect of pollutant tracking and its implementation in natural and anthropogenic pollution of air and water system. • CO3: Understand the scientific basis of local and as well as global issues. • CO4: Apply of knowledge to develop sustainable solution.
Topics Covered	**Introduction:** Multidisciplinary nature of Environmental Studies; Basic issues in Environmental Studies. [2] Human population and the Environment. [1] Social issues and the Environment. [1] **Constituents of our Environment & the Natural Resources:** Atmosphere– its layers, their characters; Global warming, Ozone depletion, Acid rain, etc. [5] Hydrosphere - Its constituents, Oceans, Groundwater, Surface waters; Hydrological cycle. [4] Lithosphere - constituents of lithosphere; Rock and Mineral resources; Plate Tectonic Concept and its importance. [5] Biosphere– its components; Ecosystems and Ecology; Biodiversity; Biomes. [5] Natural disaster and their management – Earthquakes, Floods, Landslides, Cyclones. [3] **Pollution:** Pollutants and their role in air and water pollution. [2]

NIL		CT+EA					
Course Outcomes	• CO1: Ability of mental visualization of different objects • CO2: Theoretical knowledge of orthographic projection to solve problems on one/two/three dimensional objects • CO3: Able to read/interpret industrial drawing and to communicate with relevant people						
Topics Covered	Graphics as language of communication; technical drawing tools and their up-keep; types of lines; construction of geometrical figures; lettering and dimensioning. [6] Construction and use of scales; construction of curves of engineering importance such as curves of conic section; spirals, cycloids, involutes and different loci of points; use of equations for drawing some curves. [9] Descriptive geometry: necessity and importance of orthographic projection; horizontal and vertical reference planes; coordinate of points; orthographic projection of points and lines situated in different quadrants, viz. 1st, 2nd, 3rd and 4th quadrants; traces of lines. First angle and third angle projection of lines and planes; views from top, front and left (or right); true length and true inclination of lines with planes of projections; primary auxiliary projection of points, lines and planes; auxiliary plan and auxiliary elevation. [9] Projection of simple regular solids, viz. prisms, cubes, cylinders, pyramids, cones, tetrahedrons, spheres, hemi-spheres etc. [6] Section of solids; section by perpendicular planes; sectional views; true shapes of sections. [6] Dimensional techniques; international and national standards (ISO and BIS). [3]						

	Freehand graphics. [3]

PHS51	**Physics Laboratory**	PCR	**0**	**0**	**2**	**2**	**1**
Pre-requisites		Course Assessment methods: (Continuous evaluation (CE) and end assessment (EA))					
NIL		CE+EA					

Course Outcomes	CO1: To realize and apply different techniques for measuring refractive indices of different materials. CO2: To realize different types of waveforms in electrical signals using CRO. CO3: To understand charging and discharging mechanism of a capacitor. CO4: To understand interference, diffraction and polarization related optical phenomena. CO5: To acquire basic knowledge of light propagation through fibers.
Topics Covered	1. Find the refractive index of a liquid by a travelling microscope. 2. Determine the refractive index of the material of prism using spectrometer. 3. Determination of amplitude and frequency of electrical signals by oscilloscope. 4. To study the characteristics of RC circuits. 5. To study Brewster's law/Malus' law using laser light. 6. To study the diffraction of light by a grating. 7. To study the interference of light by Newton's ring apparatus. 8. To determine numerical aperture of optical fiber. 9. Determination of Planck constant.
Text and/or reference material	**SUGGESTED BOOKS**: 1) A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

CYS51	**CHEMISTRY LABORATORY**	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
None		CT+EA					
Course Outcomes	• CO1: To learn basic analytical techniques useful for engg applications. • CO2: Synthesis and characterization methods of few organic, inorganic and polymer compounds of industrial importance. • CO3: Learn chromatographic separation methods. • CO4: Applications of spectroscopic measurements.						
Topics Covered	i. Experiments based on pH metry: Determination of dissociation constant of we acids by pH meter. ii. Experiments based on conductivity measurement: Determination of amou of HCl by conductometric titration with NaOH. iii. Estimation of metal ion: Estimation of Fe^{2+} by permangnomentry iv. Estimation of metal ion: Determ. of total hardness of water by EDTA titration. v. Synthesis and characterization of inorganic complexes: e. g. $Mn(acac)_3$, Fe(acac cis-bis(glycinato)copper (II) monohydrate and their characterization by m. p FTIR etc. vi. Synthesis and charact. of organic compounds: e.g.Dibenzylideneacetone. vii. Synthesis of polymer: polymethylmethacrylate viii. Verification of Beer-Lamberts law and determination of amount of iron prese in a supplied solution. ix. Chromatography: Separation of two amino acids by paper chromatography x. Determination of saponification value of fat/ vegetable oil						
	<u>Suggested Text Books:</u> 1. Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall 2. Advanced Physical Chemistry Experiments: By Gurtu&Gurtu 3. Comprehensive Practical Organic Chemistry: Qualitative Analysis By V. K. Ahluwalia and S. Dhingra <u>Suggested Reference Books:</u> 1. Practical Chemistry By R.C. Bhattacharya 2. Selected experiments in Physical Chemistry By N. G. Mukherjee

CO1: Study and practice on machine tools and their operations
CO2: Practice on manufacturing of components using workshop trades including fitting, carpentry, foundry and welding
CO3: Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping
CO4: Develop basic electrical engineering knowledge for house wiring practice
</td></tr>
<tr><td colspan="2">Topics Covered</td><td colspan="6">
M/c shop & Carpentry shop -- 3X3= 9hrs.

Introduction on machining process.
Introduction to machine tools- Lathe, Shaper, Milling and Drill machine.
Introduction to woods- Types, structure, disease and defect of wood.
Introduction to wood working machines and tools.
Making of dovetail joint and bridle joint.

Welding Shop & Sheet metal -- 3X3= 9hrs.

Introduction to welding.Safety and precautions in welding.
Formation of weld bead by SMAW on mild steel flat.
Formation of weld bead by oxy-fuel welding on mild steel flat.
Introduction to sheet Metal works.
Tools and Machines used in sheet metal works.
Concept of development, marking out of metal sheets.
Cutting and joining of metal sheets.
Safety precautions, General warning needed in the shop floor.

Black smithy & Foundry -- 3X3= 9hrs.

Introduction Smithing and Forging- Tools, Machines, Furnaces and its accessories, fuels.
Safety and precautions in blacksmithy.
Making of bars of different cross-sections.
Making of hexagonal headed bolts.
Forge welding.
Introduction to Foundry Technology.
Preparation of sand mould using Solid/Split Pattern.

Fitting & Electrical shop -- 3X3= 9hrs.

Introduction to hand metal cutting tools with specifications, nomenclature and their use.
Marking tools, measuring tools and their use.
Fitting of joints of mild steel flats.
Introduction to electrical hazards and safety precaution.
</td></tr>
</table>

	• Wire jointing and soldering. • PVC Conduit Wiring controlled by separate single way switches. • PVC Cashing Capping Wiring for two-way switches. • Conduit wiring for the connection of a Calling Bell with In& Out Indicators. • Batten Wiring and Cleat Wiring. • Tube Light Connection. • Insulation Resistance Testing of 1ph / 3ph Motor and House Wiring. • Earth Resistance Testing. • DOL Starter Connection. **Viva voce -- 1X3= 3hrs.**
Text Books, and/or reference material	1. Workshop Technology Part I and Part II by W. A. J. Chapman 2. Elements of Workshop Technology S. K. Hazra Chowdhury, A. K. Hazra Chowdhury and Nirjhar Roy 3. Mechanical Workshop Practice by K. C. John

Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service

<table>
<tr><td>Topics Covered</td><td>
YOGA

Introduction of Yoga.
Sitting Posture/Asanas- Padmasana, Vajrasana, Ardhakurmasana, Ustrasana, Bakrasana, Sasankasana, Janusirshasana, Suryanamaskar.
Mudra- Gyana mudra, Chin mudra, Shuni mudra, Prana mudra, Adi mudra, Anjali mudra.
Laying Posture/Asanas- PavanaMuktasana, UttanaPadasana, Sarpasana, Bhujangasana (Cobra Pose), Eka Pada Śalabhāsana, Dhanurasana, Chakrasana, Viparitkarani.
Meditation- Yognidra, Om chant, Pray chant.
Standing Posture/Asanas- Tadasana (Mountain Pose), Vrikshasana (Tree Pose), Ardhachandrasana, Trikonasana, Utkatasana, Padahastasana.
Pranayama- Deep breathing, AnulomVilom, Suryabhedi, Chandrabhedi.
Kriya- Kapalbhati, Trataka.

ATHLETICS

Introduction of Athletic.
Starting Technique for Track events- Standing start, Crouch & Block start.
Finishing Techniques.
Relay Race- 4×100m, 4×400m & Baton Exchange Technique & Rules.
Track Marking with Fundamentals- 200m, 400m and Diagonal Distance Radius, Straight Distance, Staggers of Different Lanes & Curve Distance.

BASKETBALL

Introduction and Players stance and ball handling.
Passing- Two hand chest pass, two hand bounce pass, One hand baseball pass, Side arm pass, Overhead pass, Hook pass.
Receiving- Two hand receiving, one hand receiving, receiving in stationary position, Receiving while jumping and Receiving while running.
Dribbling- Dribble, High dribble, Low dribble, Reverse dribble, Rolling dribble.
Rules of Basketball.
Basketball game.

VOLLEYBALL

Introduction of Volleyball
Service- Underarm service, Sidearm service, Tennis service, Floating service, Jump service.
Pass: Underarm pass- Ready position, Teaching stage of underarm pass and Upper hand pass- Volley pass, Back pass, Short set, Jump set & Underarm set.
Rules and their interpretation.

FOOTBALL

Introduction of Football
Push pass- Instep inside, Instep outer side.

</td></tr>
</table>

	• Kicking- Spot kick, Instep kick, Lofted kick. • Dribbling- One leg, Both legs, Instep. • Trapping- Rolling ball sole trapping, High ball sole trapping, High ball chest trapping, High ball thigh trapping. • Throwing- Standing throw, Running throw, Seating throw. • Goal Keeping- Griping the ball, Full volley, Half volley, Drop Kick. • Rules and their interpretation. **CRICKET** • Introduction of Cricket • Batting gripping & Stance, Bowling gripping technique. • Batting front foot defense& Drive. • Batting Back foot defense& Drive. • Batting Square cut. • Bowling medium pace, Bowling off break. • Fielding drill, Catching (Short & High). • Rules & Regulation. **BADMINTON** • Basic introduction about Badminton and Badminton court. • Racket parts, Racket Grip, Shuttle Grip. • Basic stance, Basic Footwork, Shadow practice (Full court movement). • Strokes services: Forehand- Overhead & Underarm, Backhand- Overhead & Underarm. • Match practice (Single & Double). • Rules & Regulation. **TABLE TENNIS** • Introduction of Table Tennis. • Basic Stance and Grip (Shake hand & Pen hold). • Service Basic. • Stroke: Backhand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Stroke: Forehand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-1 General Introduction and words of command. • FD-2 Attention, Stand at ease and Stand easy, Turning and inclining at the halt. • FD-3 Sizing, Forming up in three Ranks Numbering, Open and Close order March and Dressing. • FD-4 Saluting at the halt, Getting on parade, Dismissing and falling out. • FD-5 Marching, Length of pace and Time of Marching in quick time and Halt,

	Slow March and Halt. • FD-7 Turning on the March and Wheeling. • FD-12 Parade practice. **TAEKWONDO** • Introduction about Taekwondo- Meaning of Taekwondo, Korean language of dress, Fighting area, Punch, Block, Kicks etc. • Stance- Ready stance, Walking stance, Fighting stance, Front stance, Back stance, Cat stance etc. • Punch Technique- Front fist punch, Rear fist punch, Double fist punch, With stance etc. Blocks- Upper blocks, Middle block, Side block, Suto etc. • Foot Technique (Balgisul)- Standing kick (Saseochagi), Front kick (Abchagi), Doliyo (Chagi), Abdalchagi (Butterfly kick), Back kick etc. **NSS** • Swachha Bharat Mission • Free Medical Camp • Sanitation drive in and around the campus. • Unnat Bharat Abhiyaan • MatribhashaSaptah celebration

CSC01	**INTRODUCTION TO COMPUTING**	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic knowledge of computer.		CT+MT+EA					

Course Outcomes	CO1: Recognize the changes in hardware and software technologies with respect to the evolution of computers and describe the function of system software's (operating Systems) and application software's, languages, number system, logic gates. CO2: Illustrate the flowchart and inscribe an algorithm for a given problem Inscribe C programs using operators. CO3: Develop conditional and iterative statements to write C programs. CO4: Exercise user defined functions to solve real time problems CO5: Inscribe C programs that use Pointers to access arrays, strings and functions. CO6: Exercise user defined data types including structures and unions to solve problems.
Topics Covered	Fundamentals of Computer: History of Computer, Generation of Computer, Classification of Computers 2L Basic Anatomy of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices. [2] Languages: Assembly language, high level language, compiler, and assembler (basic concepts) [1] Binary & Allied number systems representation of signed and unsigned numbers. BCD, ASII. Binary Arithmetic & logic gates. [2] Basic concepts of operating systems like MS DOS, MS WINDOW, UNIX, Algorithm & flow chart. [1] C Fundamentals: The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements. [2] Operators & Expressions: Arithmetic operators, relational and logical operators, type, conversion, increment and decrement operators, bit wise operators, assignment operators and expressions, precedence, and order of evaluation. Input and Output: Standard input and output, formatted output -- printf, formatted input scanf. [8] Flow of Control: Statement and blocks, if - else, switch, loops - while, for do while, break and continue, go to and labels. [5] Fundamentals and Program Structures: Basic of functions, function types, functions returning values, functions not returning values, auto, external, static and register Variables, scope rules, recursion, function prototypes, C pre-processor, command line arguments. [5] Arrays and Pointers: One-dimensional, two-dimensional arrays, pointers and functions, multi-dimensional arrays. [10] Structures Union and File: Structure, union, structures and functions, arrays of structures, file read, file write.[5]
Text Books, and/or reference material	Text Books: 1. Let us C by Kanetkar 2. C Programming by Gottfried 3. Introduction to Computing by Balaguruswamy 4. The C-programming language by Dennis Ritchie Reference Books: 1. Computer fundamental and programming in C by P Dey and M. Ghosh 2. Computer fundamental and programming in C by Reema Thareja 3. programming with C by Schaum Series

ECC01	**Basic Electronics**	PCR	2	1	0	3	3
Pre-requisites			Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))				
(10+2) level mathematics and physics			CT+MT+EA				
Course Outcomes	• CO1: Knowledge of Semiconductor physics and devices. • CO2: Have an in depth understanding of basic electronic circuit, construction, operation. • CO3: Ability to make proper designs using these circuit elements for different applications. • CO4: Learn to analyze the circuits and to find out relation between input and output.						
Topics Covered	1. **Semiconductors** 1.1. Concept of band formation in solids; Fermi-Dirac distribution function, concept of Fermi level, invariance of Fermi level in a system under thermal equilibrium 1.2. Definitions of insulator, conductor and semiconductor using band diagram 1.3. Crystalline structure of semiconductor 1.3.1. Covalent bond 1.3.2. Generation of holes and electrons 1.3.3. Effect of temperature on semiconductor 1.4 Intrinsic semiconductor 1.5 Doping and Extrinsic semiconductor 1.5.1 n-Type semiconductor and band diagram 1.5.2 p-Type semiconductor and band diagram 1.5.3 Mass-action law of semiconductor 1.6. Conductivity of semiconductor (including mathematical expression) 1.7 Carrier transport phenomenon. (03 hrs.) 2. **Diodes**						

	2.1. Construction 2.2. Unbiased diode; Depletion layer and Barrier potential; junction capacitance (expression only) 2.3. Principle of operation with forward biasing and reverse biasing 2.4. Characteristics 2.5 Diode's three models/equivalent circuits.(02 hrs.) 3.**Diode Circuits** 3.1 Diode rectifier 3.1.1 Half wave rectifier 3.1.2 Full wave rectifier:centre tap and bridge rectifier 3.1.3 Capacitive filter and DC power supply (Numerical problems) 3.2 Special Diodes 3.2.1 Zenerdiode: Avalanche breakdown and Zener breakdown and characteristics. 3.2.2 Zener diode as a voltage regulator 3.2.3 Displaydevices: LED and LCD. (03 hrs.) 4.**Bipolar Junction Transistor (BJT)** 4.1 n-p-n and p-n-p transistor and their constructions 4.2 Principle of operation 4.3 Transistor configuration: common base, common emitter, and common collector 4.4 Transistor characteristics: input and output characteristics of CB and CE configurations 4.5 DC load line: quiescent (Q) point; cut-off, active, and saturation region 4.6 Amplifier: Principle of operation 4.7 Transistor as a switch. (04 hrs.) 5.**Transistor Biasing** 5.1 Need of biasing 5.2 Methods of biasing: base resistor or fixed bias, emitter feedback, voltage divider biasing 5.3 Stability of Q-point (qualitative discussions) 5.4 (Numerical problems). (02 hrs.) 6.**Single Stage Amplifier:** classification of amplifiers (voltage amplifier, current amplifier, power amplifier etc.) Class-A CE Amplifier with coupling and bypass capacitors, Qualitative discussions of magnitude characteristics of frequency response (graph only) (02 hrs.) 7.**Feedback Amplifier** 7.1 Positive and negative feedback 7.2 Deduction of gain with negative feedback, explanation of stability of gain with negative feedback, other effects of negative feedback (no deduction), numerical problems. (03 hrs.) 8.**Other Semiconductor Devices** 8.1 JFET: Construction, principle of operation, characteristics 8.2 MOSFET: Construction, principle of operation, characteristics 8.3 Power Electronic Device-SCR: Brief discussions. (02 hrs.) 9.**Operational Amplifier** 9.1 Characteristics of ideal operational amplifier

	9.2 Pin Configuration of IC 741, 9.3 Analysis of simple operational amplifier circuits: concept of virtual ground; noninverting amplifier and inverting amplifier. 9.4 Applications: voltage follower, summer, differentiator, integrator, and comparator (04 hrs) 10.**Oscillator** 10.1 Positive feedback and condition of oscillation 10.2 R-C phase-shift oscillator, Wien bridge oscillator.(02 hrs.) 11.**Boolean Algebra** 11.1 Boolean algebra, De Morgan's theorem, simplification of Boolean expressions 11.2 Number system, range extension of numbers, overflow 11.3 Different codes: gray code, ASCII code and BCD codes and them Applications. (01 hrs.) 12. **Logic Gates** 12.1 NOT, OR, AND, NOR, NAND, EX-OR, EX-NOR gates 12.2 Simplification of logic functions 12.3 Realizations of logic expressions using logic gates. (01 hrs.) 13. CRO and its applications and other test and measurement instruments. (01 hrs.)

<tr><td>Course Outcomes</td><td colspan="7">Upon successful completion of this course, the student should be able to
• CO1: learn the fundamentals of Electric Circuits and Network theorems and analysis of electrical network based on these concepts.
• CO2: develop an idea on Magnetic circuits, Electromagnetism and learning the working principles of some fundamental electrical equipment's
• CO3: learn about single phase and poly-phase AC circuits and analysis of such circuits based on these concepts.
• CO4: introduce the basic concept of single-phase transformer.
• CO5: analyze the transient phenomena in electrical circuits with DC excitation.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Introduction: Overview of Electrical power generation systems (2)
Fundamentals of Electric Circuits: Ohm's laws, Kirchhoff's laws, Independent and Dependent sources, Analysis of simple circuits. (4)
Network theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem (4)
Magnetic circuits: Review of fundamental laws of electromagnetic induction, transformer and rotational emfs, Solution of magnetic circuits. Analysis of coupled circuits (self-inductance, mutual inductance, and dot convention)(8)
Transients with D.C. excitation for R-L and R-C circuits. (3)
Generation of alternating voltage and current, E.M.F. equation, Average and R.M.S. value, Phase and phase difference, Phasor representation of alternating quantity, Behavior of A.C. circuits, Resonance in series and parallel R-L-C circuits. AC Network: Superposition theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem, solution of networks with AC sources. (10)
Single-Phase Transformer, equivalent circuits, open circuit and short circuit tests (6)
Poly-phase system, Advantages of 3-phase system, Generation of 3-phase voltages, Voltage, current and power in a star and delta connected systems, 3-phase balanced and unbalanced circuits, Power measurement in 3-phase circuits. (5)</td></tr>

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTC01	LIFE SCIENCE	PCR	2	0	0	2	2
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	CO1: Basic understanding of basic cellular organization of organisms and cellular communications, structure and functions of the macromolecules and their biosynthesis and cata--bolism. CO2: To give an understanding of the key features of the structure, growth, physiology and behavior of bacteria, viruses, fungi and protozoa CO3: To introduce molecular biology to understand biological processes in various applications. CO4: To provide a foundation in immunological processes and an overview of the interaction between the immune system and pathogens. CO5: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them CO6: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them						
Topics Covered	**1. Cell Biology (4)** a) Introduction to life science: prokaryotes & eukaryotes Definition; Difference b) Introduction to cells - Define cell, different types of cell c) Cellular organelles - All organelles and functions in brief d) Cellular communications						

	Introduction to basic signaling; endocrine, paracrine signaling; concepts of receptor, ligand, on-off switch by phosphorylation/dephosphorylation **2. Biochemistry (4)** a) Biological function of carbohydrate and lipid - Introduction, structure and function b) Biological function of nucleic acids and protein - structure and function c) Catabolic pathways of Macromolecules - Introduction to catabolism, hydrolysis and condensation reactions; Catabolism of glucose- Glycolysis, TCA; overall degradation of proteins and lipids d) Biosynthesis of Macromolecules Generation of ATP (ETS), Generation of Glucose (Photosynthesis) **3. Microbiology (5)** a) Types of microorganisms and their general features - Bacteria, Yeast, Fungi, Virus, Protozoa- general introduction with practical significance and diseases b) Microbial cell organization - Internal and External features of cell- bacterial cell wall, viral capsule, pilus etc, c) Microbial nutritional requirements and growth - Different Sources of energy; growth curve d) Basic microbial metabolism - Fermentation, Respiration, Sulfur, N_2 cycle **4. Immunology (5)** a) Basic concept of innate and adaptive immunity - Immunity-innate and adaptive, differences, components of the immune system b) Antigen and antibody interaction - Antigen and antibody, immunogen, factors affecting immunogenicity, basic antigen-antibody mediated assays, introduction to monoclonal antibody c) Functions of B cell - B cell, antibody production, memory generation and principle of vaccination d) Role of T cell in cell-mediated immunity - Th and Tc, functions of the T cell with respect to different pathogen and cancer cell **5. Molecular Biology (5)** a) Prokaryotic Genomes (Genome organization & structure) - Nucleoid, circular or linear b) Eukaryotic Genomes (Genome organization & structure) - Intron, exon, packaging, chromatin c) Central Dogma (Replication, Transcription and Translation) d) Applications of Molecular Biology (Diagnostics, DNA-fingerprinting, Recombinant products etc.) - Introduction to Recombinant DNA, fingerprinting, cloning **6. Bioprocess Development (5)** a) Microbial growth kinetics - Batch, fed-batch and continuous systems, Monod Equation b) Enzyme kinetics, kinetics of enzyme inhibition and deactivation Definition of enzymes, activation energy, Concepts of Km, Vmax, Ki c) Microbial sterilization techniques and kinetics Introduction to sterilization, dry and moist sterilization d) Thermodynamics of biological system - Concepts of Enthalpy, Entropy,

	favorable reactions, exergonic and endergonic reactions e) Material and energy balance for biological reactions - Stoichiometry

<tr><td>Topics Covered</td><td colspan="7">YOGA
• Sitting Posture/Asanas- Gomukhasana, Swastikasana, Siddhasana, Ustrasana, Janusirsasana, ArdhaMatsyendrasana (Half-Spinal Twist Pose), Paschimottanasana, Shashankasana, Bhadrasana.
• Mudra- Vayu, Shunya, Prithvi, Varuna, Apana, Hridaya, Bhairav mudra.
• Laying Posture/Asanas- Shalabhasana (Locust Posture), Dhanurasana (Bow Posture), ArdhaHalasana (Half Plough Pose), Sarvangasana (Shoulder Stand), Halasana (Plough Pose), Matsyasana, SuptaVajrasana, Chakrasana (Wheel Posture), Naukasana (Boat Posture), Shavasana (Relaxing Pose), Makaraasana.
• Meditation- ‘Om’meditation, Kundalini or Chakra Meditation, Mantrameditation.
• Standing Posture/Asanas- ArdhaChakrsana (Half Wheel Posture), Trikonasana (Triangle Posture), ParshwaKonasana (Side Angle Posture), Padahastasana, Vrikshasana (Tree Pose), Garudasana (Eagle Pose).
• Pranayama- Nadisodha, Shitali, Ujjayi, Bhastrika, Bhramari.
• Bandha- Uddiyana Bandha, Mula Bandha, Jalandhara Bandha, Maha Bandha.
• Kriya- Kapalabhati, Trataka, Nauli.
ATHLETICS
• Long Jump- Hitch kick, Paddling, Approach run, Take off, Velocity, Techniques, Flight & Landing</td></tr>
</table>

	• Discus throw, Javelin throw and Shot-put- Basic skill & Technique, Grip, Stance, Release & Follow through. • Field events marking. • General Rules of Track & Field Events. **BASKETBALL** • Shooting- Layup shot, Set shot, Hook shot, Jump shot. Free throw. • Rebounding- Defensive rebound, Offensive rebound. • Individual Defensive- Guarding the man without ball and with ball. • Pivoting. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Spike- Straight spike, Body turn spike, Tip spike, Back attack, Slide spike, Wipe out spike. • Block- Single block, Double block, Triple block, Group block. • Field Defense- Dig pass, Double pass, Roll pass. • Rules and their interpretation. **FOOTBALL** • Dribbling- Square pass, Parallel pass, Forward pass. • Heading (Standing & Running)- Fore head, Side fore head, Drop heading, Body covering during heading. • Kicking- Full volley, Half volley, Drop kick, Back volley, Side volley, Chiping (lobe). • Tackling: Covering the angle, Chessing time sliding chese, Heading time shoulder tackle etc. • Feinting- Body movement to misbalance the opponent and find space to go with ball. • Rules of Football. **CRICKET** • Batting straight drive. • Batting pull shot. • Batting hook shot. • Bowling good length, In swing. • Bowling out swing, Leg break, Goggle. • Fielding drill. • Catching (Long & Slip). • Wicket keeping technique. • Rules & Regulation. **BADMINTON** • Net play- Tumbling net shot, Net Kill, and Net Lift. • Smashing. • Defensive high clear/Lob. • Half court toss practice, Cross court toss drop practice, Full court Game practice. • Player Positioning, Placements. • Rules & Regulation. • Doubles & Mixed doubles match practice.

TABLE TENNIS

- Stroke: Backhand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin.
- Stroke: Forehand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin.
- Stroke- Backhand lob with rally, Backhand lob with sidespin, Forehand lob with rally, Forehand lob with sidespin.
- Service: Backhand/Forehand- Push service, Deep push service, Rally service.
- Service: Backhand sidespin (Left to right & Right to left).
- Service: Forehand- High toss backspin service, High toss sidespin service, High toss reverse spin service.
- Rules and their interpretations.
- Table Tennis Match (Singles & Doubles).

NCC

- FD-6 Side pace, Pace Forward and to the Rear.
- FD-7 Turning on the March and Wheeling.
- FD-8 Saluting on the March.
- FD-9 Marking time, Forward March and Halt in Quick Time.
- FD-10 Changing step.
- FD-11 Formation of Squad and Squad Drill.
- FD-12 Parade practice.

TAEKWONDO

- Poomsae (Forms)- Jang, Yi Jang.
- Self Defense Technique- Self defense from arms, Fist and Punch.
- Sparring (Kyorugi)- One step sparring, Two step sparring, Fight (Free sparring).
- Combination Technique- Combined kick and punch.
- Board Breaking (Kyokpa)- Sheet breaking.
- Interpretation Rules above Technique of Taekwondo.

NSS

- No Smoking Campaign
- Anti- Terrorism Day Celebration
- Any other observation/celebration proposed by Ministry/institute
- Public Speaking
- Discussion on Current Affairs
- Viva voce

<tr><td>Course Outcomes</td><td colspan="7">On successful completion of this course, students should have the skills and knowledge to:
CO1. Applications of network theorems and Laplace transform in A.C. and D.C circuit analysis, time domain analysis of simple RLC circuits, transient analysis.
CO2. Graph Theory. Characterization of two port networks and Z, Y, ABCD and h parameters, inter-relationships between the parameters.
CO3. Representation of two port network in terms of T , Π and lattice networks, Bisection theorem and its applications, image impedance,characteristic impedance and propagation function
CO4. Design of various types of attenuators and determination of insertion loss
CO5.Design of prototype low pass, high pass, bandpass and bandstop filters, constant K-type filters, modern filter design concepts, application of filters.
CO6.Synthesis of LC, RC and RL driving point admittance functions using Foster and Cauer first and second forms.</td></tr>
<tr><td>Topics Covered/ Syllabus</td><td colspan="7">Unit I:Network Functions and Transient analysis (L=08 hrs.+ T=3 hrs.)
Transform Impedances,Network Theorems, Network functions of one port and two port networks, concept of poles and zeros, properties of driving point and transfer functions, time response and stability from pole zero plot, Laplace transform of various functions, Applications of Laplace transform in A.C. and D.C circuit analysis, Time domain analysis of simple RLC circuits, transient analysis.
Unit II: Two Port Networks (L=09 hrs.+T=3hrs.)
Characterization of two port networks, Z, Y, ABCD and h parameters, Reciprocity and symmetry. Inter-relationships between the parameters, Inter-connections of two port networks, T & Π Representation, Bisection theorem, Lattice network, Image impedance, Characteristic impedance and propagation function
Unit III: Network Topology (L=04 hrs +T=2 hrs.)
Network graph, Tree, Incidence matrix - Fundamental cutsets and fundamental loops – Tie set and cut set schedules – V shift and I shift – Formulation of equilibrium equation on loop basis and node basis, Formulation of equilibrium equation in matrix form – Duality, Construction of dual of a network.
Unit IV: Attenuators (L=05 hrs.+ T=2 hrs.)
Image and scattering parameters, insertion loss. Various types of attenuators (Lattice, T, Π etc. networks).
Unit V: Filters (L=07 hrs.+ T=3 hrs.)
Filters: conditions of passband and stopband, design of prototype low pass, high pass, bandpass and bandstop sections, constant K-type filters, modern filter design</td></tr>
</table>

	concepts, application of filters. **Unit VI: Network Synthesis(L=07 hrs.+ T=3 hrs.)** Hurwitz polynomials and properties – Positive real functions and its properties; definition and properties; properties of LC, RC and RL driving point functions, synthesis of LC, RC and RL driving point admittance functions using Foster and Cauerfirst and second forms.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECC302	Electronic Devices and Circuits-I	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods: Continuous (CT), Mid-Term (MT), End Assessment (EA)					
Engineering Physics (PHC01), Electrical Technology (EEC01), Basic electronics (ECC01)		The assessment methods comprise of quizzes, multiple choice type questions involving real world examples, and subjective questions all either designed in google form or assessed through pen and paper.					
Course Outcomes	CO # 1. Understanding the fundamental knowledge of analog devices and circuits CO # 2. To become familiar with the design of much more complex electronic circuits with the help of those fundamentals. CO # 3. Enriching historical developments with facts that led to this theory. Emphasis is given on IC technology but it originates from vacuum tube era. CO # 4. To be aquatinted with the present day design tools using which one can synthesize						

	and analyze the complex design problems. CO # 5. Understanding the devices and circuits as a basic building block of electrical communication and other areas and enhancing problem solving skills.
Topics Covered	**1. P-N Junction Diode:(4L+1T)** Qualitative Theory of P-N Junction, P-N Junction as a Diode, Diode Equation, Volt-Ampere Characteristics, Temperature dependence of V-I characteristic, Ideal versus Practical – Resistance levels(Static and Dynamic), Transition and Diffusion Capacitances, small Signal Model and Its Application, Diode Equivalent Circuits, Load Line Analysis, Breakdown Mechanisms in Semiconductor Diodes, Zener Diode Characteristics. **2. Special Purpose Electronic Devices: (4L+1T)** Principle of Operation and Characteristics of Tunnel Diode (with the help of Energy Band Diagram), Varactor Diode, SCR and Semiconductor Photo Diode. **3. Rectifiers and Filters :(4L+1T)** The P-N junction as a Rectifier, Half wave Rectifier, Full wave Rectifier, Bridge Rectifier, Harmonic components in a Rectifier Circuit, Inductor Filters, Capacitor Filters, L- Section Filters, π- Section Filters, Comparison of Filters, Voltage Regulation using Zener Diode. **4. Bipolar Junction Transistor and UJT: (6L+2T)** The Junction Transistor, Transistor Current Components, Transistor as an Amplifier, Transistor Construction, BJT Operation, BJT Symbol, Common Base, Common Emitter and Common Collector Configurations, Limits of Operation, BJT Specifications, BJT Hybrid Model, Determination of h-parameters from Transistor Characteristics, Comparison of CB, CE, and CC Amplifier Configurations, UJT and Characteristics; BJT small signal model – Analysis of CE, CB, CC amplifiers- Gain and frequency response **5. Transistor Biasing and Stabilization:(7L+2T)** Operating Point, The DC and AC Load lines, Need for Biasing, Fixed Bias, Collector Feedback Bias, Emitter Feedback Bias, Collector - Emitter Feedback Bias, Voltage Divider Bias, Bias Stability, Stabilization Factors, Stabilization against variations in V_{BE} and β, Bias Compensation using Diodes and Transistors, Thermal Runaway, Thermal Stability, Analysis of a Transistor Amplifier Circuit using h – Parameters: **AC Models:** Base-Biased Amplifier, Emitter-Biased Amplifier, Small-Signal operation, AC Beta, AC Resistance of the Emitter Diode, Two Transistor models, Analyzing an Amplifier **6. Field Effect Transistor:(7L+2T)** The Junction Field Effect Transistor (Construction, principle of operation, symbol) – Pinch-off Voltage - Volt-Ampere characteristics, The JFET Small Signal Model, MOSFET (Construction, principle of operation, symbol), MOSFET Characteristics in Enhancement and Depletion modes. FET Amplifiers: FET Common Source Amplifier, Common Drain Amplifier, Generalized FET Amplifier, Biasing FET, FET as Voltage Variable Resistor, MOSFET small signal model– Analysis of CS, CG and CD amplifiers – Gain and frequency response- High frequency analysis. Comparison of BJT and FET amplifiers. **7. Multistage Amplifiers: (6L+2T)** Introduction; Amplifier frequency response, Gain Bandwidth product, Need for multi-stage amplification; R-C coupled amplifiers, Cascode configuration **8. Operational Amplifiers: (6L+2T)** Basics of operational amplifiers, open loop and closed loop response, Application of op–amps (Non–linear applications): viz, inverting and non inverting amplifiers, voltage follower, adder, substractor, differentiator and integrator, Comparators, clippers and clampers, Schmitt triggers, precision rectifiers, peak detectors, Log and Antilog amplifiers, gyrator, Current to voltage and voltage to current converters, Instrumentation and isolation amplifiers, transducer Bridge amplifiers. General op–amp

	circuit design and detailed circuit description.

Mathematics I and II (MAC01, MAC02)		The assessment methods comprise of quizzes, multiple choice type questions involving real world examples, and subjective questions all either designed in google form or assessed through pen and paper.					
Course Outcomes		• CO1: To realize the difference between (i) continuous and discrete signals, (ii) analog and digital signals. • CO2: Understand mathematical techniques to solve problems involving convolution, filtering, modulation and sampling. • CO3: Ability to apply mathematical transforms for signals and systems analysis. • CO4: Analysis of stable LTI systems.					

<table>
<tr><td></td><td colspan="3">• CO5: Practical realization of various forms of anti-aliasing filters.</td></tr>
<tr><td>Topics Covered mapped to Course Outcomes</td><td><u>Topic Details</u>

Classification of signals, basic operation on signals such as time scaling and time shifting, elementary signals, impulse function, introduction to system properties such as stability, memory, causality, invertibility, time invariance and linearity.
Analyzing linear time invariant (LTI) systems through convolution sum and convolution integral, correlation of signals, relation between convolution and correlation, interconnection of LTI systems, relations between LTI system properties and impulse response, step response.
Analyzing LTI systems through discrete time difference equation and continuous time differential equation models, natural response, forced response, transient response and stability.
Concepts on Fourier series, Discrete time Fourier series, Fourier transform and Discrete time Fourier transform. Thorough analysis of the properties of Fourier representations in connection with real time systems.
Relationship between the various Fourier representations, applications of Fourier representation to mixed signal classes, analyzing sampling of signals through Fourier transforms.
Discrete Fourier transform, properties of DFT, circular convolution, computations for evaluating the DFT, decimation in time and decimation in frequency FFT algorithms.
Other essential transforms:
Hilbert transforms, properties of Hilbert transforms, representation of complex envelope and bandpass signals.
Haar transform, wavelet functions, continuous and discrete wavelet transforms, non-adaptive and adaptive transform coding, wavelet coding.
Complex frequency concept, Bilateral and Unilateral Laplace transforms, properties, inversion, solving differential equations with initial conditions, transfer function, causality and stability analysis, determining the frequency response from poles and zeros.
Z transform, properties, inversion, transfer function, causality and stability, determining the frequency response from poles and zeros, computational structures for implementing discrete time LTI systems.
Application to linear feedback systems, sensitivity and</td><td><u>(No. of classes)</u>

ECS351	Network Analysis and Synthesis Lab	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods: Continuous (CT) and End Assessment (EA)					
Electrical Technology (EEC01)		CT+EA					

Course Outcomes	CO#1 Understand the basics of DC (direct current) circuits. CO#2 Use Mutisim Simulator for circuit simulation CO#3 Able to apply network circuit theorems to analyze electrical circuits CO#4 Use an oscilloscope to measure frequency, period, voltage (magnitude, peak-to-peak, maximum, minimum, and etc), DC offset, etc, of the waveform CO#5 Understand the difference between over-damped, critically damped and under-damped circuits from the observation of step response.
Laboratory experiments covered	1. Experiment with DC Measurements 2. Experiment with AC Measurements 3. Experiment with Network Analysis Methods 4. Experiment with First Order Circuits 5. Experiment with Second Order Circuits 6. Experiment with Sinusoidal Steady State 7. Experiment with Series & Parallel Resonance 8. Experiment with Transfer Functions 9. Experiment with Frequency Response Approach: Laboratory experiments of this course are devoted to elementary design of linear circuits. In particular, time is devoted to (a) the transient voltage response of RC, RL and RLC circuits, (b) the sinusoidal steady-state response of RC, RL and RLC circuits, and (c) the frequency response of series RLC resonance networks, and the impacts on the frequency response by varying capacitance and resistance.

Pre-requisites	Course Assessment methods (Continuous evaluation (CE) and End Assessment (EA))
Physics Laboratory (PHS51)	CE+EA

Course Outcomes	At the end of the course, a student will be able to: **CO1**. Calculate different characteristic parameter of semiconductor materials. **CO2**. Measure and understand different characteristic of semiconductor devices. **CO3**. Draw the current-voltage characteristics of solar cell for calculation of conversion efficiency.
Topics Covered	**List of Experiments:** 1. To determine the energy bandgap of a semiconductor. 2. Measurement of resistivity of semiconductors by four-probe method at different temperatures. 3. Determination of Hall coefficient of a given semiconductor and its temperature dependence. 4. To determine the value of e/m of an electron by using a cathode ray tube and a pair of bar magnet. 5. Determination of Stefan's constant. 6. Study of p-n junction diode characteristics. 7. Study of Zener diode characteristics and voltage regulator. 8. Determination of photo conversion efficiency of a Solar cell.
Text Books, and/or reference material	**Text Books:** 1. An advanced course in practical physics,Chattapadhyay and Rakshit. 2. Advanced Practical Physics, B. Ghosh and K. G. Mazumdar

FOURTH SEMESTER

Department of Electronics and Communication Engineering							
Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 56				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECC401	Analog Communication	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), Mid-Term (MT), End Assessment (EA))
Network Analysis & Synthesis (ECC 301) Signal and Systems (ECC 303)	The assessment methods comprise of quizzes, multiple choice type questions involving real world examples, and subjective questions all either designed in google form or assessed through pen and paper.
Course Outcomes	At the end of the course, the students will be able to **CO1**: Define and state the elements of communication systems and issues related to transmission of signals through communication channels, radio wave propagation. **CO2**: Explain time and frequency domain equations for all forms of amplitude modulation schemes and corresponding circuits, signals and spectra. **CO3**: Use various analog pulse communication systems and solve problems related to FDM and super heterodyne receiver. **CO4**: Formulate time and frequency domain equations for angle modulation systems and justify related circuits, signals and spectra. **CO5**: Differentiate between various types of noise, and compare noise resistance, noise figure and noise temperature and discuss probability theory, random variables and random processes with related significance in communication systems. **CO6**: Assemble complete analog communication system and formulate the expression of figure of merit for different schemes of modulation.
Topics Covered	1. Introduction: Advantages of Electrical communication; block diagram of an electrical communication system, the fundamental limitation of communication systems. Communication channels and propagation characteristics [**7(L+T)**] 2. Amplitude Modulation and Demodulation: DSB, SSB, VSB. Spectra, Circuits and Systems. [**12(L+T)]** 3. Frequency Modulation and Demodulation: Spectra, Circuits and Systems. [**12(L+T)**] 4. Pulse Modulation: Sampling theorem and its proof. PAM, PWM, PPM [**5(L+T)]** 5. Probability, Random Variable & Random Processes: Mean, Moments, ACF, PSD and WSS, Ergodic and other random processes. [**10(L+T)]** 6. Noise. Noise Figure, Noise Temperature, Performance of Analog communication systems in the presence of Noise. [**10(L+T)**]
Text Books, and/or reference material	**Text Books**: 1. Principle of Communication Systems- H.Taub&D.L.Schilling (TMH). 2. Modern Digital and Analog Communication Systems- B.P.Lathi (Oxford). **Reference Books**: 1. K. Sam Shanmugam, Digital and Analog Communication Systems, Wiley. 2. B. Sklar, Digital Communications, PHI. 3. S. Haykin& M. Moher, Introduction to Analog & Digital Communication, Wiley.

<tr><td>Course Outcomes</td><td colspan="7">• CO1: Understand rules of Boolean Algebra and use it for logic synthesis.
• CO2: Design logic circuits using switches, transistors and integrated circuit building blocks.
• CO3: Understand binary number system and design corresponding arithmetic circuits.
• CO4: Explain and implement A/D and D/A converters.
• CO5: Learn sequential circuit building blocks and implement Finite State Machines.
• CO6: Understand principles of Error Detection and Correction codes.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module 1: (L- 1, T-1)
Introduction: Definition of Analog & Digital information. Characteristics of Digital Circuits. Advantages of Digital systems.
Module 2: (L-1 , T- 1)
Boolean Algebra: Introduction – rules of Boolean Algebra, axioms, D'Morgan's theorems
Module 3: (L-2 , T- 1)
Logic Gates: Basic Gates, Universal Gates, Realization of logic gates using switches, Transistors (MOS and BJT) as switch.
Module 4: (L-4 , T-2)
Logic Synthesis: Two level synthesis, SOP/POS forms, canonical forms; Minimization of logical function by - i) Algebraic method, ii)Karnaugh Map method and iii) QuineMccluskey Method.
Module 5: (L-4 , T-2)
Combinational Circuits: Multiplexer, Demultiplexer, Decoder, Encoder, decoder driver, designing using these combinational circuits and their applications.
Module 6: (L-3 , T- 2)
Digital Arithmetic: Number systems, Binary arithmetic, Representing negative numbers – sign-magnitude, 1's complement and 2's complement representations; Arithmatic circuits - Half Adder and Full adder Circuits, multi-bit ripple-carry adder and subtractor circuits. Realization of these circuits using Multiplexers.
Module 7: (L- 6, T-4)
Sequential Circuits: Definition, Elements of sequential circuits - Latches and Registers,</td></tr>
</table>

	Different kinds of flip-flops – R-S, J-K, Master-slave arrangement, D, and T type registers; Finite state machines - Moore and Mealy machines; Typical sequential circuits -counters, shift registers and sequence generator; synchronous and asynchronous circuits. **Module 8: (L-4 , T- 2)** Multivibrator: Definition of different types of Multivibrators, their realization by logic gates, op-amp and transistors. 555 Timer IC. **Module 9: (L-3 , T- 2)** A/D & D/A Converter: Different types of D/A & A/D Converters. **Module 10: (L- 3, T-2)** Codes and Code converters: Gray code, Excess-3 code, BCD Code, BCD to 7-segment decoder: Error Detection and Correction codes - error detection by parity checking, Principle of error correction, Hamming code. **Module 11: (L- 4, T-2)** Different logic families such as RTL, DCTL, DTL, HTL, TTL, ECL, MOS & CMOS logic family their importance and applications.

Department of Electronics and Communication Engineering								
Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 56				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECC403	Electromagnetic Theory and Transmission Lines	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), Mid-Term (MT), End Assessment (EA))					

Mathematics II (MAC02), Engineering Physics (PHC01), Electrical Technology (EEC01)		The assessment methods comprise of quizzes, multiple choice type questions involving real world examples, and subjective questions all either designed in google form or assessed through pen and paper.
Course Outcomes	CO # 1. Understanding electromagnetic theory as a basic building block of electrical communication and enhancing problem solving skills. CO # 2. Enriching historical developments with facts that led to this theory. Emphasis on the fact that we are actually discussing Maxwell's electromagnetic theory. CO # 3. Enhancing theoretical knowledge from a clear viewpoint of phenomenon associated when charges are *at rest*, charges *moving with constant velocity* and during *acceleration/ deceleration* which is results in time harmonic fields. CO # 4. Understanding underlying aspect of radio wave propagation in various media, retarded potentials and concept of radiated waves. CO # 5. Assimilating the transmission line theory as a merger of filed theory and network theory. Imbibing the fundamental aspects of Telegrapher's equation and its essence in the analysis of transmission line parameters.	
Topics Covered	Historical foundations that led to Maxwell's electromagnetic theory **[L-2]** Electrostatics: Coulomb's law and Field Intensity, Gauss's law- Maxwell's Equation, Application of Gauss's Law, Electric Potential. Electrostatic Boundary-Value Problem: Poisson's and Laplace's Equations, Uniqueness Theorem, Resistance and Capacitance, Method of Images. Electric Fields In Material Space: Properties of Materials, Convection and Conduction Currents, Polarization in Dielectrics, Dielectric Constant and Strength, Continuity Equation and Relaxation Time.**[L-10; T-02]** Magnetostatic Fields: Biot-Savart's Law, Ampere's Circuit Law-Maxwell's Equation, Application of Ampere's law, Magnetic Flux Density-Maxwell's Equation, Maxwell's Equations for Static Fields, Magnetic Scalar and Vector Potentials, Derivation of Biot-Savart's Law and Ampere's Law. Magnetic Forces, Materials, and Devices:Forces due to Magnetic Fields, magnetic Torque and Moment, A Magnetic Dipole, Magnetization in Materials, Classification of Materials, Magnetic Boundary Conditions, Inductors and Inductances, Magnetic Energy, Magnetic Circuits, Force on Magnetic Materials, Analogy between Electrostatics and Magnetostatics **[L-8; T-02]** Time Varying Fields, Waves, and Applications: Maxwell's Equations:Faraday's law, Transformer and Motional EMFs, Displacement Current, Maxwell's Equations in Final Forms, Time-Varying Potentials, Time-harmonic Fields.**[L-8; T-02]** Electromagnetic Wave Propagation: Wave Propagation in Lossy Dielectrics, Plane Waves in Lossless Dielectrics, Plane Waves in Free Space, Plane Waves in Good Conductors, Skin depth, Wave Polarization, Power and the Poynting Vector, Reflection of a Plane Wave at Oblique Incidence.**[L-8; T-02]** Transmission Lines: Introduction to different types of planar and non-planar guided media, Transmission line parameters, Telegrapher's equation, Input impedance, SWR, Power flow in transmission lines, Introduction to parallel plate and hollow metallic waveguides. **[L-10; T-02]**

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
EEC431	Control Systems	PCR	3	0	0	3	3

Pre-requisites	Course Assessment methods: Continuous (CT), Mid-Term (MT), End Assessment (EA)
Engineering Physics (PHC01), Signals and Systems (ECC303)	The assessment methods comprise of quizzes, multiple choice type questions involving real world examples, and subjective questions all either designed in google form or assessed through pen and paper.

Course Outcomes	At the end of the course students will be able to: **CO1**: Understand the basic objectives of control system design. **CO2**: Derive input-output relationship of systems based on their mathematical modeling governed by basic laws of physics. **CO3**: Justify stability of systems based on their transfer functions, time domain and frequency domain specifications. **CO4**: Develop concepts on root pattern with variable gains and comment on the stability. **CO5**: Determine the stability of closed-loop system based on open loop frequency response. **CO6**: Design controllers so as to meet design specifications both in time as well as frequency domain. **CO7**: Realize the controller both in software simulation through MATLAB coding as well as in real-time environment.
Topics Covered	**Introduction to control systems**:[4L] Historical development, Open and Closed loop systems, Applications, Effects of feedback, Types of feedback control systems, Servomechanism. **Mathematical Models of Physical Systems**:[4L] Modeling of electrical networks, Modeling of mechanical system elements, Transfer functions, Block diagram Algebra, Signal flow graph and Mason's Gain formula. **Introduction to State Variable Approach**:[4L] Concepts of state, state variables and state model state models for linear Continuous-time systems, state transition matrix. **Representation of Control Components**: [2L] Electrical components, Mechanical components, Electromechanical Components. **Time domain analysis and design specification of linear systems**:[8L] Standard signals, Transient response and S-plane root locations of Second and higher order systems, Design specifications, steady state errors and error constants, effects of

	adding poles and zeros to transfer functions, P, PI, PD and PID controllers. **Concepts of Stability and Algebra Criterion**:[4L] Concept of stability, characteristic equation necessary conditions for stability, Routh-Hurwitz stability criteria. **Root Locus Technique**:[4L] The root locus concept, construction of Root Loci, Important properties parameters design byRoot locus method, Root-locus Plots with MATLAB. **Frequency Response Analysis and Stability Studies in Frequency Domain**:[10L] frequency domain specifications, correlation between time and frequency response, Polar plots, Bode plots, Nyquist stability criterion, Relative stability, Conditionally stable system, M and N loci on complex and gain phase plan MATLAB tools and case studies. **Design and Compensation Technique**:[4L] Preliminary considerations of classical Design, Realization of Basic compensators, Frequency domain and S-plane design techniques,Example of control systems. Design with MATLAB.

Pre-requisites		Course Assessment methods Continuous (CT) and end assessment (EA)					
Network Analysis & Synthesis (ECC301)		CT+EA					

Course Outcomes	CO1: Understand the fundamentals to explain the functionality of modulation and demodulation. CO2: Analyze the concepts, write and simulate the concepts of AM and AM Demodulation process in Communication. CO3: Know FM and FM-Demodulation process in communication. CO4: Discriminate the AM and FM functionalities. Interpret with various angle modulation and demodulation systems. CO5: Create the simulation environments in PAM, PWM, PPM and verification of circuit and waveform in software platform.
Labs Conducted.	12. To generate amplitude modulated wave and determine the percentage modulation. 13. To demodulate the modulated wave using envelope detector. 14. To observe the output waveform of each block of super heterodyne receiver. 15. To measure modulation index in FM and show the demodulated waveform. 16. To perform pulse amplitude modulation and demodulation 17. To perform pulse position modulation and demodulation 18. To perform pulse width modulation and demodulation 19. To observe DSB, DSB-SC, SSB waveforms in time domain and frequency domain in MATLAB platform. 20. To observe DSB, DSB-SC, SSB waveform in time domain and frequency domain in MATLAB platform. 21. To design transmitter and receiver circuit for amplitude modulation using discrete components. 22. To design transmitter and receiver circuit for frequency modulation using discrete components.

<tr><td>Topics Covered</td><td colspan="7">Experiment :1
1.1 Design of half adder and half subtractor circuit using nand gates only.
1.2 Design of 5-bit even / odd parity checker circuit using xor gate.
Experiment: 2
2.1Realization of multiplexer as universal logic gate.
2.2 Design full adder and full subtractor circuit using4:1 multiplexer
Experiment: 3
3.1 Realising a bcd to decimal decoder circuit using decoder driver and seven segment led display.
3.2 Verifying the function table of 8 to 3 line priority encoder.
Experiment: 4
4.1 Design of four bit one's complement binary adder / subtractor circuit.
4.2 Design of four bit two's complement binary adder / subtractor circuit.
4.3Design of four and five bit digital magnitude comparator.
Experiment: 5
5.1Verification of excitation table of J-K flipflop.
5.2 Verification of excitation table of D flipflop.
5.3Design of T type flip flop from D type flipflop.
Experiment: 6
6.1 Design of asychronous up counter using J-K flipflop.
6.2Design of sychronous up counter using D flipflop.
Experiment: 7
7.1 Study of asynchronous decade counter IC, 7490 in different modes.
7.2 Study of asynchronous binary counter or mod 16 counter IC 7493 in different modes.
Experiment: 8
8.1Study of synchronous decade counter IC 74160 in different modes.
8.2Study of synchronous up / down counter IC 74192.
Experiment: 9
9.1Study of 64-bit read / write memory.
9.2Study of 4-bit universal shift register.
Experiment: 10
10.1Study of 4-bit arithmatic logic unit.</td></tr>

Pre-requisites		Course Assessment methods Continuous evaluation (CE) and End Assessment (EA)					
ECC303(Signals and Systems)		CE+EA					
Course Outcomes	• CO1: To understand the dynamic behaviour of real-time systems. • CO2: To simulate physical systems in real-time environment. • CO3: To design control system to improve the performance characteristics of real-time systems. • CO4: To determine the parameters and transfer function of physical systems from real-time experimentation. • CO5: To get acquainted with MATLAB programming, MATLAB-SIMULINK in order to simulate, analyze and design of control system design for different plants under consideration.						
Topics Covered	1. DC Servo Speed Control System 2. DC Servo Position Control System 3. Temperature Control System 4. Linear System Simulator 5. Lead and Lag Network 6. P, PI and PID controller 7. Study of Different real-time systems through Simulation in MATLAB 8. PID Design Method for DC motor Speed Control using MATLAB						

	9. Root Locus Design Method for DC motor Speed Control using MATLAB 10. DC motor Speed Control Based on Frequency Response using MATLAB
Text Books, and/or reference material	**Text Books:** 1. J. Nagrath and M Gopal, *Control system Engineering*, New Age International Publishers. 2. K. Ogata, *Modern Control Engineering*, Prentice Hall **Reference Books:** 1. B. Shahian, M. Hassul, *Control System Design using MATLAB*, Prentice Hall. 2. Laboratory instruction manuals.

<tr><td>Course Outcomes</td><td colspan="7">

CO1:Acquire idea about analog to digital conversion.
CO2:Understand simultaneous transmission of digital signals.
CO3:Learn communication techniques for wired channels.
CO4:Analyze and mitigate interference in wired channels.
CO5:Learn communication techniques for wireless channels.
CO6:Differentiate between different coding and modulation strategies.
CO7: Understand the basic concepts of Information theory, Source and Channel Coding, Channel Capacity and relation among them
CO8 : Learn basics of random process, modeling and analysis of systems with random signal
</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module 1: Introduction to digital communication [3 hrs.]

Module 2:Review of random process [5 hrs.]
Basic definition, Stationarity, Ergodicity, autocorrelation, cross correlation, power spectral density, Response of Linear systems to Random inputs, Gaussian process, Narrow band noise, Rayleigh pdf
Module 3:Waveform coding [12 hrs.]
PCM – generation, regenerative transmission, detection; Linear quantization, quantization noise, non-uniform quantization, companding; Channel noise and error probability; TDM, PCM-TDM hierarchy; Delta modulation, adaptive delta modulation.
Module 4:Baseband transmission [12 hrs.]
Line coding – types, criterions for choosing a line code, power spectra; ISI, Nyquist criterion for zero ISI, eye pattern; Mitigation of ISI – raised cosine filtering, equalization. Matched filter.
Module 5: Passband transmission [12 hrs.]
Relation between amplitude, time period, and energy, characterization of noise, signal space representation; Binary modulations – ASK, PSK, FSK. QPSK, MSK; Generation, detection (coherent/ non-coherent), power spectra, and error probability of digital CW modulations.
Module 6: Information theory and coding [12 hrs.]
Measure of information, Entropy, Joint and Conditional entropy, Self and Mutual Information, Channel capacity and Shannon's law; Coding for compression –Source coding theorem, variable length coding, Huffman coding; Coding for error correction – Noisy coding theorem, parity checking, Hamming code, Generator and Parity Check Matrices, Linear block codes.</td></tr>

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Department of Electronics and Communication Engineering							
Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 42				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECC502	Microwave Engineering	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), Mid-Term (MT), End Assessment (EA))					
Electromagnetic Theory and Transmission lines (ECC403)		CT+MT+EA					
Course Outcomes	**CO1:** Understand behaviour of transmission lines and waveguides, gain complete knowledge about Microwave components. **CO2:** Analyze and explain the characteristics of microwave passive components. **CO3:** Analyze and explain the characteristics of microwave active components and circuits. **CO4:** Acquire knowledge about the measurements at microwave frequencies.						

Topics Covered	**Module – I:** (L – 2; T -1) **Wave Propagation in Unbounded and Bounded Media**: Classification of Waves - TEM Waves, TE Waves and TM Waves, Parallel Plate Waveguide – TEM modes, TE modes, and TM modes; Solution techniques for modes and boundary conditions, Wave Velocities - Phase Velocity, Group Velocity, Energy-Flow Velocity. [T1] **Module – II:** (L – 6; T -3) **Waveguides:** General properties of rectangular and circular waveguides, Solution of wave equation – TE Modes, TM Modes, power transmission, power losses, excitation of modes, characteristics of standard rectangular waveguides. Solution of wave equation – TE Modes, TM Modes and TEM modes in circular waveguide, power transmission, power losses, excitation of modes, characteristics of standard circular waveguide [T1, T2] **Module – III:** (L – 2) **Dielectric waveguide and surface wave:** Surface Waves on a Grounded Dielectric Slab – TM Modes, TE – Modes. [T1, T2] **Module – IV:** (L – 2; T -1) **Impedance Matching:** Concept of impedance in guided waves, Smith-chart and its use, Impedance matching techniques - quarter wave transformer, single stub, double stub. [T2 and T3] **Module – V:** (L – 3; T -1) **Microwave Resonators:** Rectangular Waveguide Cavity resonators - Resonant Frequency, Q – factor; Circular Waveguide Cavity resonators - Resonant Frequency, Q – factor; Dielectric Resonators - Resonant Frequency; Excitation of Resonators. [T1, T2] **Module – VI:** (L – 3; T -1) **Microwave Network Theory:** Equivalent Voltages and Currents, The Concept of Impedance, Impedance and Admittance Matrices, Scattering parameters, Signal Flow Graphs, ABCD Matrix [T1] **Module – VII:** (L – 3; T -1) **Microwave Passive Components:** E-plane Tee, H-plane Tee, Magic Tee, Hybrid ring, circulator, isolators, Attenuator, Phase-shifter, directional coupler, slotted section, windows (Capacitive and Inductive), Irises. [T1, T2] **Module –VIII:** (L – 4; T -2) **Microwave Solid-state Devices:** Solid state microwave sources based on IMPATT diode, TRAPATT Diode, Gunn diode, Tunnel diode, Detectors and mixers: PIN diode, Schottky Diode, Varactor, diode, Step recovery diode. [T2] **Module – IX:** (L – 3; T -1) **Microwave Vaccum Tube Devices:** Microwave Amplifiers: Klystron amplifiers, TWT – space TWT and Helix TWT, Magnetron. [T2] **Module – X:** (L – 2; T -1) **Microwave Measurement and Communication:** Measurement of microwave power, impedance, standing wave, frequency and phase-shift. Microwave antenna, Line of sight propagation, microwave links, satellite communication. [T3]

Department of Electronics and Communication Engineering							
Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 56				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECC503	Microprocessors and Microcontrollers	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods: (Continuous (CT), Mid-semester assessment (MA) and End Assessment (EA)):					
Digital Circuits and Systems (ECC402)		CT+MT+EA					
Course Outcomes	At the end of the course, a student will be able to: • **CO1 Describe** the fundamental operations and internal architectures of microprocessors and Microcontroller's as well as **identify** the peripherals to be used for the given microprocessor and Microcontroller based problems. • **CO2 Understand** the performance of Microprocessor (8085 & 8086) and Microcontroller based systems and **select** appropriate platform to meet specified requirements. • **CO3 Apply** the knowledge of Microprocessors, Microcontrollers and peripheral devicesand demonstrate the programming proficiency using the various instruction codes of the target microprocessor and microcontroller. • **CO4 Analyze** different problems on microprocessors and microcontrollers and write appropriate assembly language programs. • **CO5 Evaluate** the machine codes to providesolutions to the real-world problems. • **CO6 Design** necessary I/O and Memory interfacing circuitry to communicate Microprocessor and Microcontroller with external devices.						
Topics Covered	**Module – I:** (L – 6; T -2) **Introduction to Microprocessor:** Basic computer architecture, stored program computer concept; Evolution of Microprocessors, 8085 Architecture, drawbacks and Instruction sets and programming with 8085.[CO#1, 2, 3, 4, 6]; [T1] **Module – II:** (L –7; T - 3) **Microprocessor 8086/8088:** 8086: Architecture-Functional diagram, Register organization, signal description, Memory Segmentation, physical memory organization, general bus						

	operation, I/O addressing capability, special purpose activities, Minimum mode, maximum mode of 8086 system and timings, the processor 8088, Programming Model, machine language instruction formats, addressing modes, instruction set, assembler directives and operators. Macros and Simple Programs involving Logical, Branch and Call Instructions, Sorting, String Manipulations. [CO#1, 2, 3, 4, 6]; [T1, T2, R1, R2] **Module – III:** (L – 5; T - 2) **Programming with 8086:** Machine level programs, programming with an assembler, Assembly language programs, and introduction to stack, stack structure of 8086/8088, interrupts and interrupt service routines, interrupt cycle of 8086, non-mask able interrupt and mask able interrupts, interrupt programming, The coprocessor 8087. [CO# 3, 4, 5];[T2, R1, R2] **Module – IV:** (L – 6; T - 2) **I/O And Memory Interface:** LCD, Keyboard, External Memory RAM, ROM Interface, ADC, DAC Interface to 8051. Serial Communication and Bus Interface: Serial Communication Standards, Serial Data Transfer Scheme, On board Communication Interfaces-I2C Bus, SPI Bus, UART; External Communication Interfaces-RS232,USB. [CO#1, 3, 6]; [T2, R2] **Module – V:** (L – 6; T - 2) Programmable Peripheral Interfacing: Description and programming of Intel 8255, 8257, 8155, 8253, 8251 and 8259A, 8279A etc.[CO#1, 3, 6];[T2, R1] **Module – VI:** (L – 1) **Development of Processors:** 80186, 80386, RISC.[CO# 1, 5]; [T2, R2] **Module – VII**; (L – 5; T - 2) **Microcontrollers:** Introduction, Overview of 8051 Microcontroller, Architecture, I/O Ports, Memory Organization, Addressing Modes and Instruction set of 8051. 8051 Real Time Control: Programming Timer Interrupts, Programming External Hardware Interrupts, Programming the Serial Communication Interrupts, Programming 8051 Timers and Counters, assembly language programming tools.[CO#1, 3, 4, 6]; [T3, R3] **Module – VIII:** (L – 2) **PIC Microcontrollers:** Introduction, Architecture, ALU, Program memory, register, Instruction Interrupts, Peripherals. [CO# 1, 3, 6]; [T4, R4] **Module –IX:** (L – 4, T -1) **Arduino Microcontroller Board and ARM:** Introduction, Introducing the Arduino Board Installing and familiarizing the Arduino IDE, Connection diagram examples and program code. ARM Special Features and applications, Architecture, Registers, processor modes, instructions, stack organization, ARM I/O System, memory interface, pipeline organization, simple example of ARM based embedded system.[3, 4, 6]; [T5, R5-R7]

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) -: No Correlation

Department of Electronics and Communication Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours = 56				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECC504	Electronic Devices and Circuits-II	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods: ((Continuous (CT), Mid-Term (MT), End Assessment (EA))					
Electronic Devices and Circuits I (ECC302), Basic Electronics (ECC01), Network Analysis and Synthesis (ECC301)		Assignments, Mid Semester and End Semester Examination					
Course Outcomes	At the end of this course students will be able to: CO # 1. Understand the fundamental principles of amplifiers and oscillators. CO # 2. Able to design Power Amplifiers CO # 3. Become familiar with the design of wave shaping circuits. CO # 4. Able to design regulated power supply circuits CO # 5. To be able to make use of the recently developed electronic devices in solving the present day complex electronic systems.						
Topics Covered	**1. Output Stages and Power Amplifiers (6L+2T)** Classification of Output Stages; Power Amplifier, Class A, Class B, Class AB and Class C amplifiers, Biasing the Class AB Stage; Push-Pull Amplifiers – Transformer Coupled and Complementary symmetry configurations; Tuned Amplifiers, Class – D amplifiers, Power Transistors–Power B.J.T'S Power MOSFETs, Power amplifier designing, Thermal analysis and						

	Heat sinks; **2. Feedback Amplifiers And Oscillators (9L+2T)** Introduction to Feedback, Basic Feedback Concepts, Ideal Close−Loop Gain, Advantages of negative feedback, Gain Sensitivity, Bandwidth Extension, Noise Sensitivity, Reduction of Non−Linear Distortion; Feedback Topologies, Series−Shunt, Shunt−Series, Series−Series, Shunt−Shunt Configurations, The Stability Problem, Bode Plots, One−Pole, Two−Pole and Three−Pole Amplifiers, Nyquist Stability Criterion, Phase and Gain Margins, Frequency Compensation Basic Theory, Closed Loop Frequency Response, Miller Compensation; Positive feedback, Condition for oscillations, phase shift, Wien bridge, Hartley, Colpitts and Crystal oscillators. Phase shift oscillators, Wien bridge oscillators, Tuned circuit oscillators, **3. Differential Amplifier (6L+2T)** Differential amplifier – Common mode and Difference mode analysis – FET input stages – Amplifier biasing: current source and Current mirror – Gain and frequency response – Neutralization methods. **4. Operational Amplifiers (7L+2T)** Basics of operational amplifiers, open loop and closed loop response, Application of op−amps, viz, inverting and non inverting amplifiers, voltage follower, adder, substractor, differentiator and integrator, Comparators, clippers andclampers, Schmitt triggers, precision rectifiers, peak detectors, Log and Antilog amplifiers, gyrator, Current to voltage and voltage to current converters, Instrumentation and isolation amplifiers, transducer Bridge amplifiers. General op−amp circuit design and detailed circuit description. **5. Signal Generator and Waveform-Shaping Circuits (6L+1T)** Op Amp-RC Oscillator Circuits; LC and Crystal Oscillators; Generation of Square and Triangular Waveforms Using AstableMultivibrators; Integrated Circuit Timers; **6. Power Supplies, Breakdown Diodes, and Voltage Regulators (6L+2T)** Unregulated Power Supply; Basics of voltage regulators, Performance specifications; linear regulators, Current Limiting; Integrated Circuit Voltage Regulators, IC 78XX, 79XX, LM317, IC 723; Voltage references - Bandgap Voltage Reference; switching regulators and monolithic switching regulators, DC to DC convertors. **7. Special-purpose Devices (5L)** Schottky barrier diodes, , MIS diode, heterojunctions devices, Tunnel Diode (with the help of Energy Band Diagram), Varactor Diode, UJT, SCR.
Text Books, and/or reference material	**Text Books:** J. Millman, C.C.Halkias, "Electronic Devices and Circuits" Thomas L. <tr><td>Course Outcomes</td><td colspan="7">At the end of thisseasonal course, a student will be able to:
• Recognize the different parts of Microprocessors, Microcontrollers and peripheral devices.
• Interpret methodologies to be adopted for the specified problems on Microprocessors and Microcontrollers.
• Apply appropriate instruction codes to develop the program for Arithmetic, logical, data transfer and copying operations as well as data communication to external devices.
• Analyze requirements of experimental setup of using Microprocessor and Microcontroller.
• Construct the necessary interfacing circuitry to communicate Microprocessor and Microcontroller with the external devices.</td></tr>
<tr><td>List of Experiments</td><td colspan="7">Part A: Programming using Microprocessor 8085 Kit
1. Perform the following arithmetic operations
a) Addition and subtraction of two 8 bit nos.
b) Addition and subtraction of two 16 bit nos.
c) Multiplication and division of two 8 bit nos.
2. Determination of factorial of a given number.
3. Display Fibonacci series.
4. Determination of the smallest and largest element of an array.
5. Sorting the data array as follows
a) Ascending order.
b)Descending order.
6. Generation of the following waveforms
a) Triangular.
b) Square.
7. Interfacing with stepper Motor.
Part B: Programing using Microprocessor 8086 Kit and simulator
1. Perform the following arithmetic operations of two 16 bit nos.
a) Addition.
b) Subtraction.
c) Multiplication.
d) Division.
2. Determination of factorial of a given number.
3. Move contents of an array from one memory location to another location.
4. Perform the following conversions of the number system
a) Convert a given decimal no. to hexadecimal.
b) Convert a hexadecimal no.</td></tr>
</table>

	5. Separation of odd and even nos. 6. Determination of the sum of n consecutive nos. of an array. 7. Sorting the elements of an array as follows a) Ascending order. b) Descending order. 8. Reverse a given string and verify whether it is a palindrome or not. 9. Interfacing with stepper Motor. 10. Interfacing with 7 segment display. 11. Interfacing with keyboard controller. **Part C: Programing using Microcontroller 8051 Kit and simulator** 1. Perform the following arithmetic operations of two 16 bit nos. a) Addition. b) Subtraction. c) Multiplication. d) Division. 2. Exchange the contents of two memory locations. 3. Determination of the sum of first n natural nos. using 8051 Microcontroller. 4. Check whether given number is palindrome or not. 5. Determination of the largest and smallest no. of a data array. 6. Sorting the data array as follows a) Ascending order. b) Descending order. 7. Perform the following conversions of the number system a) BCD to ASCII. b) ASCII to Decimal. c) Decimal to ASCII. 8. Generation of 1 second delay continuously using on-chip timer. 9. Interfacing with stepper motor. 10. Generation of square waveform. 11. Interfacing with LCD. **Part D: Programming on ARDUINO Microcontroller Board** 1. Blink the on board LED. 2. Generation of square waveform. 3. Interfacing with LCD.
Text Books, and/or reference material	**Text Books** 1. Lab. instruction manual and operation manuals supplied by the manufacturers. 2. NIL		CT+MT+EA					
Course Outcomes	• **CO1**:To make budding engineers aware of various aspects of micro economic theories which will help engineers to take decision in the organization • **CO2**:To impart knowledge on various tools and techniques applied in economics by the executives of an organization • **CO3**:To make potential engineers aware of macro economics variables affecting business • **CO4**:To impart knowledge on basics of accounting procedure and functional knowledge required in the area of accounting decision making						
Topics Covered	Group A: Microeconomics Unit 1: *Economics: Basic Concepts (2)* (a) Introduction to study of Economics and Microeconomics for Engineers (b) Markets and Prices: definition, extent (c) Demand and Supply – market mechanism – market equilibrium – elasticity of demand and supply – market equilibrium – short run versus long run (d) Understanding the effects of changing market conditions (e) Effects of government intervention in market – price control(2L) Unit 2: *Theory of Consumer Behaviour* (a) Utility – ordinal utility – cardinal utility – constructing a utility function – some examples of utility function – Marginal Utility (MU) (b) Consumer preferences – assumptions about preferences – indifference curves – perfect substitutes, perfect compliments – the marginal rate of substitution (MRS) (c) The budget constraint – properties of budget set – change of budget line – taxes, subsidies and rationing (d) Optimal choice – consumer demand – price changes and income changes – normal versus inferior goods – Engel curves – income effect and substitution effect and Giffen good (e) Price Consumption Curve and the demand curve – Slutsky decomposition – ordinary versus compensated demand curve (f) Elasticity of demand – direct effect, cross effect, substitutes and compliments (g) Consumer surplus – compensating variation and equivalent variation(3L)						

	Unit 3: *Theory of Production, Cost and Firms* (a) Technology of production – production function (b) Properties of production function with one variable input – average product and marginal product (c) Law of Diminishing Marginal Returns (d) Iso-quants, input flexibility, diminishing rate of factor substitution (e) Iso-cost curves (f) Optimizing behaviour of the firm (g) Long-run and the short-run – returns to scale (h) Cobb-Douglas Production, CES Production Function (i) Measuring cost: Economic cost versus accounting cost, opportunity cost, sunk cost, fixed cost, variable cost (j) Long-run versus short-run costs (k) Economies of scale – short run and long run(3L) Unit 4: *Analyses of Market Structures: Perfect Competition* (a) Perfect Competition – assumptions – price taking behaviour (Demand curve of an individual firm) (b) Supply schedule – very short period, short period and long period (c) Equilibrium of an individual firm (d) Long run industry supply curves – constant, increasing and decreasing cost industry (e) Efficiency of competitive market – consumer and producer surplus effects of tax and subsidy, price control(3L) Unit 5: *Monopoly Market* (a) Average Revenue and Marginal Revenue (b) Monopolist's output decision (c) The effect of tax on monopoly output and price (d) Multiplant Monopolist (e) Price discrimination – First and Second Degree - Two part tariff - Third Degree (f) Monopoly Power – Mark-up Pricing (g) Social cost of monopoly (h) Dead-weight loss (i) Natural Monopoly(2L) Unit 6: *General Equilibrium and Welfare Economics* (a) Interdependence in the economy (b) 2 persons 2 goods Pure Exchange Model – Edgeworth Box Diagram (c) Contract Curve (d) Existence of Equilibrium – offer curve (e) Walras' Law (f) General Equilibrium with production – 2 good 2 factor case (g) Contract curve (h) Production Possibility Frontier (i) Pareto optimality (j) Externalities in consumption and production – market failure Group B: Macroeconomics Unit 1: *Introduction to Macroeconomic Theory (2L)* (a) Introduction to study of Economics and Macroeconomics for Engineers (b) Economy as a circular flow between firm sector and household sector – Firm, Household and Government (c) Basic Macroeconomic Variables - Configurations of Aggregate Output, Employment, Interest and Price Level (d) Fundamental Macroeconomic Problems – unemployment, inflation

	(e) Fluctuation of output – rate of growth – high unemployment, hyper -inflation, depression and stagflation Unit 2: *National Income Accounting (3L)* (a) Gross National Product (GNP) (b) Gross Domestic Product (GDP) (c) Net National Product (NNP) (d) Personal Income (PI) (e) Relation between GNP, GDP, NNP and PI (f) Nominal and Real GNP (g) GNP Deflator (h) Methods of Measurement of GNP – Measuring Gross Value of GNP – Factor Share Method, Expenditure Method, Value Addition Method (i) Foreign or External Sector Unit 3: *Determination of Equilibrium Level of Income(3L)* (a) Aggregate Demand – Components – Consumption, Investment, Government Expenditure and Net Exports (b) Consumption Function – Consumption and Savings (c) Investment Function (c) Aggregate Demand (d) Equilibrium Output – Keynesian Cross Diagram (e) Multiplier (f) Stability of Equilibrium Output (g) Paradox of Thrift (h) Government Sector – Government Budget – the Balanced Budget Multiplier (i) Taxes as a function of income (j) Multiplier and changes in tax rate (k) The Goods Market – Consumption Demand – Investment Demand (l) Planned Investment and Interest Rate (m) Goods' Market Equilibrium – IS Curve Derivation Unit 4: *Money, Interest and Income(4L)* (g) Money: Definition and Components of Money Demand and Money Supply. (h) Money Market Equilibrium – LM Curve (i) Equilibrium in goods and money market (j) Dynamic Equilibrium Condition: Changes in Equilibrium levels of income and interest rate (l) Monetary Policy – Transmission Mechanism (m)Liquidity Trap – Interest inelasticity (n) Fiscal Policy and Crowding Out (o) Effectiveness of Fiscal and Monetary Policy in terms of IS-LM Model (p) Derivation of Aggregate Demand Function (C-M Curve) Unit 5: *Inflation and Unemployment (2L)* (a) Inflation – Measures, types and effects (b) Classical Theory of Inflation – Quantity Theory of Money and Inflation (c) Keynesian Theory of Inflation (d) Concept of Inflationary Gap (e) Unemployment and Inflation – Stagflation (f) Demand pull and Cost push inflation – interaction between demand pull and cost push inflation (g) Measures of controlling inflation (h) Unemployment – Natural Rate of Unemployment (i) Philips Curve and NAIRU

	(j) Short and Long Run Philips Curve Unit 6: *Output, Price and Employment(2L)* (a) Supply of Output – Aggregate Production Function (b) Aggregate Demand for and Supply of Labour (c) Aggregate Supply Function – Relation between Aggregate Supply and Price (e) Shifts in Aggregate Demand and Supply Curve (g) Determination of Aggregate Output, Employment, Rate of Interest and Pr ice (h) Comparison of Keynesian and Classical Position – Aggregate Supply and Demand in Classical Theory (i) Neutrality of Money – Classical Dichotomy – Effects of Monetary and Fiscal Policy in Classical Framework Part 2: Management Accountancy Unit 1: INTRODUCTION TO ACCOUNTING (2L) Definition of Accountancy; Accounting vs. Book Keeping, Attributes of Accounting, Objectives of Accounting; Branches of Accounting, Users of Accounting Statements, Generally Accepted Accounting Principles (GAAP) Unit 2: Preparation of Trial Balance and Final accounts(8L) PRIMARY BOOKSOF ACCOUNTS (JOURNAL) Meaning of Journal, Format of Journals, Rules of Debit and Credit, Opening Entry, Simple and Compound entries, Numerical Problems SECONDARY BOOSOF ACCOUNTS (LEDGER) Meaning of Ledger, Formats of Ledgers, Ledger Posting, Numerical Problems Cash Book Nature of Cash Book, Different Types of Cash Books - Single Column, Double Column and Triple Column, Petty Cash Book Concept, Preparation of Trial Balance, Numerical Problems, Advantages and Limitations of Trial Balance Concepts, Procedure for the Preparation of Trading A/c, Profit and Loss A/c and Balance Sheet and different types of adjustments. Unit 3: Cost volume and profit analysis (4L)

SIXTH SEMESTER

Department of Electronics and Communication Engineering							
Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 45				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECC601	Antenna and Wave Propagation	PCR	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Electromagnetic Theory and Transmission Lines (ECC403), Microwave Engineering (ECC 502)	CT+MT+EA

Course Outcomes	• CO1 Explain the concepts of antenna radiation patterns and various parameters for characterizing the antenna. • CO2 Understand different modes of radio wave propagation. • CO3 Classify various antennas on the basis of their electrical performances. • CO4 Analyze various antennas and antenna arrays. • CO5 Design antenna and antenna arrays for different applications.
Topics Covered	**Module I: (L – 2)** **Antenna Basics:** Definition and functions of an antenna, comparison between an antenna & transmission line, radio communication link with transmitting antenna and a receiving antenna, radiation mechanism, antenna types and their applications. [CO# 1] [T1,T2] **Module II: (L – 8)** **Radiation from Electric Current Elements:** Potential functions and the electromagnetic fields, Radiation from oscillating electric dipole, quarter wave monopole; Half wave dipole; derivations of E and H field components, far field pattern, radiation resistance, Power Radiated by a current element and its application to antennas, separation of field region, application of reciprocity theorem to antennas, directional properties of dipole antennas, antenna feeding methods. Folded dipole.[CO# 1, 4, 5] [T1,T3] **Module III: (L – 7)** **Antenna Parameters:** Radiation patterns, beam area, beam efficiency, beam width- Half-Power Beam width (HPBW) and First Null Beam width (FNBW), Polarisation, Radiation Intensity, Directivity and directive gain, radiation resistance, radiation efficiency, resolution, Antenna aperture - physical and effective apertures, effective height, transmission formula, Matching – Baluns, Polarization, Polarization mismatch, Antenna noise temperature, Transmission loss as a function of frequency, Antenna temperature and signal to noise ratio. [CO# 2, 4] [T1,T2] **Module IV: (L – 6)** **Reflector, Slot and Horn antennas:** Parabolic reflector, paraboloidal reflector, Geometry, Pattern Characteristics, aperture Pattern of large circular apertures with uniform illumination, off axis operation of paraboloidal reflectors, Feed Methods, Cassegrain feed system. Slot antenna, its pattern, Babinet's principle and complementary antennas, impedance of slot antennas, and horn antenna-function and types; Rectangular Horn, Septum Horn, Ridge Horn, Corrugated Horn, Aperture Matched Horn. [CO# 3, 4, 5] [T1, T2] **Module VI: (L – 4)** **Microstrip Patch Antennas:** Advantages and Limitations, Rectangular and circular types- function, features analysis, design considerations, Feeding methods, Method of

	analysis.[CO# 3, 4, 5] [T1] **Module VII: (L – 4)** **Antenna Arrays:** Point Sources – Definition, Patterns, arrays of two antennas – Different Cases, Principle of Pattern Multiplication, Derivation of array factor expression of Uniform Linear Array with N elements – Broadside Arrays (BSA), End fire Arrays (EFA), End fire array with Increased Directivity (EFAID), Phased Scanning Arrays, Direction of nulls and maxima, Beam-width, Comparison of BSA, EFA and EFAID characteristics. Arrays with Parasitic Elements, Yagi-Uda Array[CO# 4, 5] [T1, T2] **Module VIII: (L – 7)** **Loop, Helical and Broadband Antennas:** Introduction, Small Loop, Comparison of Far Fields of Small Loop and Short Dipole, Radiation Resistances and Directivities of Small Loops (Qualitative Analysis) Helical antenna: Helical Geometry, Helix Modes, Practical Design Considerations of Helical Antenna in Axial and Normal Modes, Broadband antenna, Frequency independent antenna, log periodic antennas. Antenna Measurements-Test Ranges, Measurement of Gain, Radiation pattern, Polarization, VSWR[CO# 4, 5] [T1, T2] **Module XII: (L – 7)** **Radio Wave Propagation:** Different Modes of Wave Propagation, Structure of atmosphere, Ground Wave Propagation (Qualitative Treatment) – Introduction, Plane Earth Reflections, Space and Surface Waves, Wave Tilt, Curved Earth Reflections. Space Wave Propagation – Introduction, Field Strength Variation with Distance and Height, Effect of Earth's Curvature, Absorption, Super Refraction, M-Curves and Duct Propagation, Scattering Phenomena, Tropospheric Propagation. Wave Propagation – Sky Wave Propagation – Introduction, Structure of Ionosphere, Refraction and Reflection of Sky Waves by Ionosphere, Ray Path, Critical Frequency, MUF, Virtual Height and Skip Distance, Relation between MUF and Skip Distance, Multi-hop Propagation[CO# 1, 2] [T3]
Text Books, and/or reference material	**Text Books**: [T1]. Balanis, Antenna Theory and Design, Wiley Publications [T2]. John D. Krauss, Antennas for all Applications, TMH. [T3]. Pre-requisites			Course Assessment methods: (Continuous Assessment (CA:15%), Mid-Term Assessment (MA:25%) and End-Term Assessment (EA:60%))				
Digital Circuits and Systems (ECC402)			Continuous Assessment (CA): Quizzes/Class tests/Assignments/Attendance				

Course Outcomes

After successful completion of the course, the student will be able to:

- **CO 1:** Acquire idea about the digital IC design techniques.
- **CO 2:** Understand the characteristics of the CMOS inverter.
- **CO 3:** Identify the basic steps of ASIC Design Flow and fabrication process.
- **CO 4:** Analyze the static and dynamic characteristics of CMOS circuits.
- **CO 5:** Design and implementation of combinational and sequential circuits.
- **CO 6:** Evaluate the performance of CMOS circuits.

Topics Covered

Module I. Overview of VLSI Design [L – 6]
Historical perspective, an overview of VLSI design methodologies, VLSI design flow, design hierarchy, concepts of regularity, modularity, and locality, VLSI design styles, design quality, packaging technology, CAD technology, Recent Trends in VLSI Design & its research issues in the industry: System case studies. Design automation of VLSI Systems: basic concepts. Deep Sub-micron Technologies: Some Design Issues.

Module II. MOS Transistor Theory [L – 4]
Introduction to The metal oxide semiconductor (MOS) structure, Long-channel I-V characteristics, C-V characteristics, non-linear I-V effects, DC transfer characteristics, sub-threshold swing in MOSFET, multi-Vt.

Module III. ASIC Design Flow [L – 6]
ASIC and SoC, Overview of ASIC flow, concepts of HDL coding, functional verification, RTL-GATE level synthesis, synthesis optimization techniques, pre-layout timing verification, static timing analysis, floor-planning, placement and routing, extraction, post-layout timing verification, extraction.

Module IV. CMOS Process Technology[L – 2]
Fabrication process flow- basic steps, the CMOS n-Well process, layout design rules, stick diagram, full-custom mask layout design.

Module V. MOS Inverter- Static Characteristics [L – 4]
Resistive-load inverter, inverter with n-type MOSFET load, CMOS inverter.

Module VI. MOS Inverters- Switching Characteristics & Interconnects effects [L-6]
Delay-time definitions, calculation of delay times, logical efforts, inverter design with delay constraints, estimation of interconnect parasitics, calculation of interconnect delay, Bus vs. Network-on-Chip (NoC), switching power dissipation of CMOS inverters.

Module VII. Combinational CMOS Logic Circuits[L – 7]
MOS logic circuits with depletion nMOS loads, CMOS logic circuits, complex logic circuits, CMOS transmission gates (pass gates), ratioed, dynamic and pass transistor logic circuits, domino circuits.

Module VIII. Sequential CMOS logic circuits [L – 7]

	Behavior of bi-stable elements, SR latch circuits, clocked latch and flip-flop circuits, CMOS D-latch, and edge-triggered flip-flop. Timing path, Setup time and hold time static, the example of setup and hold time static, setup and hold slack, clock skew and jitter, Clock, reset, and power distributions.

Correlation levels 1, 2 or 3 as defined below:1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Department of Electronics and Communication Engineering							
Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 56				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECC603	Digital Signal Processing	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), Mid-Term (MT),End Assessment (EA))					
Signals and Systems (ECC303), Mathematics-II & III (MAC02, MAC331)		Class Assignments, Mid and End term examinations					
Course Outcomes	On successful completion of this course, students should have the skills and knowledge to: **CO1**. Represent signals in time and frequency domain. **CO2**. Implement DFT, FFT and z-transform. **CO3**. Analyse a given signal or system using tools such as Fourier transform and z-transform to know the property of a signal or system. **CO4**. Design of prototype of Linear Phase Filters, FIR and IIR Filter Structure. **CO5**. Process signals to make them more useful and to design a signal processor (Digital filter structures) for a given problem.						
Topics Covered/ Syllabus	Introduction: reasons behind digital processing of signals, brief historical development, organization of the course. (L=2) Theory of discrete time linear system sequences, linear time invariant systems, causality, stability, difference equations, frequency response, discrete Fourier series, relation between continuous and discrete systems, Inverse Systems, Stability. (L=2, T=1)						

	Z –transform: definition, properties of Z transform, system function, digital filter implementation from the system function, region of convergence in the Z plane, determining filter coefficients from the singularity locations, geometric evolution of Z transform in the Z plane, relationship between Fourier transform and Z transform, inverse Z transform. (L=4, T=1) Transform technique: Fourier transform, its properties, inverse Fourier transform, discrete Fourier transform, properties of DFT, circular convolution, computations for evaluating the DFT, decimation in time and decimation in frequency FFT algorithms, discrete Hilbert transform. (L=5, T=2) Digital filter structures: system describing equations, filter categories, All Pass Filters, Comb Filters, direct form I and II structures, cascade and parallel communication of second order systems, Polyphase representation of filters, linear phase FIR filter structures, Compensatory Transfer Functions, frequency sampling structure for the FIR filter. Test for Stability using All Pass Functions. (L=6, T=2) IIR filter design techniques: Analog Filter Design, Analog Butterworth lowpass filter design techniques, Analog Chebyshev LPF, Design methods to convert analog filters into digital filters, frequency transformation for converting lowpass filters into other types, all-pass filters for phase response compensation. (L=6, T=2) Digital Filter Structures: IIR Realizations, All Pass Realizations, FIR and IIR Lattice Synthesis, IIR Design by Bilinear Transformation, Digital to Digital Frequency Transformation. (L=6, T=2) FIR filter design techniques: Windowing method for designing FIR filters, DFT method for approximating the desired unit sample response, combining DFT and window method for designing FIR filter, frequency sampling method for designing FIR filter (L=6, T=2) Non-Linear System Identification Schemes, Fractional-order digital differentiators (DDs) and digital integrators (DIs), Fractional-order low-pass Butterworth and Chebyshev filter. (L=5, T=2)

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECS651	Antenna and Wave Propagation Laboratory	PCR	0	0	3	3	1.5

Pre-requisites	Course Assessment methods (Continuous (CT), and end assessment (EA))
Electromagnetic Theory and Transmission Lines (ECC403) and Microwave Engineering (ECC 502), Microwave Engineering Lab (ECS552)	Day to day evaluation during the laboratory session and End Semester Examination

Course Outcomes	After successful completion of this course, the students will be able to CO#1: Understand theory of EM wave propagation and power transmission through free space medium. CO#2: Compare the radiation characteristics of different antenna and antenna arrays CO#3: Analyze the radiation characteristics of different antennas in terms of their radiation parameters. CO#4: Use of VNA to study antenna characteristics. CO#5: Identify the suitable antenna for the application different communication systems. CO#6: Design a particular antenna as per the requirements of given specifications.
List of Experiments	7. To plot the radiation pattern of half wave dipole antennas. 8. To plot the radiation pattern of half wave monopole antenna. 9. To plot the radiation pattern of half wave folded dipole antenna. 10. To study the radiation characteristics of Yagi-Uda antenna. 11. To the radiation characteristics of log periodic dipole antenna 12. To plot the radiation pattern of microstrip patch and slot antennas 13. Measurement of return loss of a given antenna using Network Analyzer 14. Study of radiation pattern of Horn antenna and understand the Friis transmission equation 15. To observe the characteristics of microstrip antenna using EM simulation software.

Department of Electronics and Communication Engineering							
Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 30				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECS653	Digital Signal Processing Lab	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MATLAB, Signals & Systems (ECC 303)		Quizzes and Lab Assessments					
Course Outcomes	On completion of the experiments conducted, students will be able to: CO#1: Generate different types of digital signals CO#2: Sampling, reconstruction, linear and circular convolution between signals CO#3: Simulate impulse response of systems from difference equations CO#4: Study the frequency response of LTI systems CO#5: Carry out Discrete Fourier Transform and Fast Fourier Transform CO#6: Design different Digital Filters						
Topics Covered/ Syllabus	***A. Introduction to digital signals and systems:*** **Experiment 1:** Generate and plot the following sequences: i. Unit sample sequence ii. Unit step sequence iii. Unit ramp sequence iv. Real valued exponential sequence $x(n)=(0.8)^n u(n);0\le n\le 50$ v. Square wave and Sawtooth wave sequence of length 50, having peak						

amplitude 5.

Experiment 2:

a) Generate a 50 Hz continuous time sinusoidal signal $x(t) = A\cos(2\pi ft)$ having frequency of 50 Hz and its sampled version with sampling frequency 1000 Hz. Assume the amplitude as 5.

b) Write a program to generate a signal $x(n) = u(n) - u(n-10)$. Also plot the even and odd component of the signal.

B. Sampling, reconstruction and convolution of signals:

Experiment 3:

Consider an analog signal $x(t) = \sin(20\pi t); 0 \le t \le 1$. It is sampled at sampling time interval (T_s) as 0.01 second to obtain $x(nT_s)$. Reconstruct the analog signal from the sampled signal using *sinc* interpolation.

Experiment 4:

a) Evaluate the convolution sum for a system whose impulse response $h(n)$ and input $x(n)$ are same and are described as:

$$x(n) = h(n) = \left[u(n+N) - u(n-N-1)\right]$$

b) Find the linear convolution of the following signals:

$$\underset{\uparrow}{x(n) = \{2,1,3,5,9\}} \quad \text{and} \quad \underset{\uparrow}{h(n) = \{5,5,8,9,2\}}$$

c) Write down a program to compute the correlation of the following sequence.

$$\underset{\uparrow}{x(n) = \{1,4,1,3\}}$$

C. Difference equation and impulse response:

Experiment 5:

a) Find the impulse response of the following system: y(n) -0.6y(n-1) +0.08y(n-2) = x(n)

b) Find the step response of the system y(n)=0.7y(n-1)-0.12y(n-2)+x(n-1)+x(n-2) with the initial condition y(-1)=1,y(-2)=1.

c) An LTI system is specified by the difference equation y(n) = 0.8y(n-1) + x(n) Determine H(e^{jw}). Also calculate and plot the steady state response for the input x(n) = cos(0.05πn)u(n)

D. Frequency domain transforms:

Experiment 6:

d) A symmetrical rectangular pulse is given by

$$x(n) = 1; -N \le n \le N$$
$$0; \text{otherwise}$$

Determine the DTFT for N=2, 5, 10, 15. Scale the DTFT so that $X\left(e^{j0}\right) = 1$. Plot the normalized magnitude response of the DTFT over $\left[-\pi, \pi\right]$, Study these plot and comment on their as a function of N.

e) Determine and plot the DTFT of a sinusoidal signal

$x(n) = \cos\left(\frac{\pi n}{4}\right); 0 \le n \le 100$. Also investigate the periodicity.

<table>
<tr><td></td><td>

Experiment 7:

a) A discrete time LTI system is represented by a first order difference equation
$y(n)=ay(n-1)+x(n);n\geq 0$
where $x(n)$ is the input of the system and $y(n)$ is the corresponding output. For an input $x(n)=u(n)-u(n-1)$, zero initial condition and $a=0.8$, find and plot $y(n)$.

Given a causal system $y(n)=0.9y(n-1)+x(n)$, find $H(z)$ and plot its poles and zeros. Also plot the frequency response $\left|H\left(e^{jw}\right)\right|$ and $\angle H\left(e^{jw}\right)$.

E. Discrete Fourier Transform and Fast Fourier Transform:

Experiment 8:

a) Consider a 9-point sequence $x(n)=\{1,2,3,4,5,6,7,8,9\}$. Determine and plot the sequences $x\langle\langle n-3\rangle_9\rangle$ and $x\langle\langle n+3\rangle_9\rangle$.

b) Let $x_1(n)=\{1,2,2,1\}$ and $x_2(n)=\{1,2,3,4\}$ .Write a program to perform 4-point circular convolution of these two signals. Also find the linear convolution of these two signals using circular convolution.

Experiment 9:

Compute the output of a linear filter described by impulse response
$h(n)=\{1,2,3,1,2\}$ and input $x(n)=\{1,1,1,1\}$ using fft command.

F. Digital Filters:

Experiment 10:

a) For the desired frequency response
$H_d\left(e^{j\omega}\right)=e^{-j\omega\tau};\omega_{c1}\leq|\omega|\leq\omega_{c2}$
$0;|\omega|<\omega_{c1},\omega_{c2}<|\omega|\leq\pi$

Determine $H\left(e^{j\omega}\right)$ for M=35 using Blackman window if $\omega_{c1}=\frac{\pi}{4}$ and $\omega_{c2}=\frac{\pi}{2}$.

b) Implement type 1, 2, 3, 4 linear phase FIR filter.

Experiment 11:

a) Write a MATLAB program to design an IIR low pass Butterworth filter using the impulse invariant method for the following specifications:
$0.8\leq\left|H\left(e^{j\omega}\right)\right|\leq 1;|\omega|\leq 0.2\pi$
Assume T=1 second.
$\left|H\left(e^{j\omega}\right)\right|\leq 0.2;0.6\pi\leq|\omega|\leq\pi$

b) Write a MATLAB program to design a digital low pass Butterworth filter to satisfy the following specifications:

Pass band cutoff=0.2π, pass band attenuation= 7 dB, stop band cutoff= 0.3π, stop band attenuation= 16 dB using Bilinear Transformation method. Assume T= 1 second.

Pre-requisites		Course Assessment methods (Continuous (CT), Mid-Term (MT) and End Assessment (EA))					
Digital Circuits and Systems (ECC402), Microprocessors and Microcontrollers (ECC503)		The assessment methods comprise of quizzes, multiple choice type questions, and subjective questions all either designed in google form or assessed through pen and paper.					

Course Outcomes	After successful completion of the course, the student will be able to: ● **CO 1:**Acquire idea about computer architecture and organization. ● **CO 2:**Understand the fundamental concepts of ISA. ● **CO 3:**Illustrate the operations of the memory unit. ● **CO 4:**Analyzethe control and data flow of a computer. ● **CO 5:**Design and implementation of multiprocessors. ● **CO 6:** Evaluate the performance of a computer system.
Topics Covered	**Module I. Introduction and Basics [L – 4]** History of computers, introduction to computer architecture, level of transformation, abstract layers, their benefits of comfortably crossing them, instruction set architecture I, instruction set architecture II, instruction set architecture III, architecture examples, example problem, and solution ideas. **Module II. Fundamental Concepts and ISA [L – 6]** Fundamental concepts in computer architecture: Von Neumann model and data flow model, ISA principles and trade-off, elements of an ISA, RISC vs. CISC, MIPS ISA, ISA vs. microarchitecture level trade-off, property of ISA vs. microarchitecture. **Module III. Arithmetic Operations [L – 5]** Binary arithmetic, ALU Design, multiplier design, divider design, fast addition, multiplication, floating-point arithmetic. **Module IV. Processor Design [L – 8]** Single-cycle microarchitecture, multi-cycle microarchitecture, microprogrammed microarchitecture, pipelining: issues in pipelining, data and control dependence handling, branch prediction, precise exceptions, state maintenance, state recovery; Out-of-Order execution and issues in OoO execution. **Module V. SIMD, GPUs, VLEW and DAE [L – 5]** SIMD processing: array and vector processors, SIMD operation in modern ISAs, VLIW, Decoupled Access Execute (DAE), Systolic Array. **Module VI. Memory Hierarchy and Caches [L - 7]** Memory hierarchy, physical memory and virtual memory, emerging memory technologies, main memory, memory controller, memory management, memory latency tolerance: prefetching, Cache organization and operation, high-performance caches, memory consistency, and cache coherence, in-memory processing **Module VII. Multiprocessor [L – 7]** Multiprocessor types, multiprocessing, and issues in multiprocessor, limits of parallel speedup, difficulty in parallel programming, heterogeneous systems, input/output subsystem, interfaces, I/O operations, interconnection networks: bus-based and NoC based architectures.

Signals and Systems (ECC303), Analog Communication (ECC401), Digital Communication (ECC501), Probability Theory for Engineering Application (ECO541) / any other equivalent subject from SWAYAM, NPTEL,etc.		(CA-15) +(MA-25) + (EA-60)					

Course Outcomes

- CO1: **Identify** the fundamental differences between analog and digital communication systems and the explicit need to study digital communication as a separate course. **Identify** building blocks that constitute a digital communication system.
- CO2: **Explain** why each building block is necessary and the working principle of each such block.
- CO3: **Apply** geometric concepts to understand signal constellations and its variants. **Apply** signal processing tools to infer time and frequency domain representation of signals in context to digital communications.
- CO4: **Analyze** error performance of digital communication systems in the presence of additive noise.
- CO5: **Evaluate and access** communication systems based on resource availability (bandwidth, power, etc.) and performance requirement (BER, SER, etc.).
- CO6: **Develop** strong mathematical foundation and intuition to **pursue any advanced topic in communications** (wireless communication, detection and estimation theory, etc.).

Topics Covered	1. **Introduction** **(1 hr.)** 2. **Module-1** **(3 hrs.)** Review of Autocorrelation, Cross correlation**,** Energy Spectral Density (ESD) and Power Spectral Density (PSD) **3. Module-2 :(3 hrs.)** Complex baseband representation of real bandpass signals, real bandpass LTI systems **4. Module-3 :(3 hrs.)** Digital communication through band-limited channels **5. Module-4 : (3 hrs.)** Signal Space and Signal Vector : Geometrical representation of signals **6. Module-5 : (7 hrs.)** Optimum receivers for AWGN channels: Maximum likelihood decoding of M-ary signals – Correlation receiver and Matched filter receiver, SER and BER **7. Module-6 :(5 hrs.)** Basics of Detection and Estimation theory **8. Module-7 : (5 hrs.)** Advanced modulation technique : Coherent and noncoherent modulation, MSK, M-arymodulation techniques (QPSK, QAM etc.) **9. Module-8 : (6 hrs.)** Spread spectrum for digital communications : Pseudo-Noise Sequence, Direct-Sequence Spread Spectrum, Frequency-Hop Spread Spectrum, Slow FHSS, Fast FHSS, Applications of Spread Spectrum **10. Module-9 :(6 hrs.)** Multichannel communications and OFDM : Principle of OFDM, Multicarrier modulation technique, FFT/IFFT and OFDM, OFDM transmitter, OFDM receiver, BER performance of OFDMsystem

CO6: Apply object oriented approach to design software</td></tr>
<tr><td colspan="2">Topics Covered</td><td colspan="6">Overview-[3L]
Programming in general; Programming paradigms-Procedural, Functional, Logic and Object Oriented; Basics of Object Oriented Programming; Available Object Oriented Languages; Program Compilation; Object Oriented Programming Terms – Class, Object, Encapsulation, Abstraction, Polymorphism, Inheritance, Static and Dynamic Binding.
Revisiting Array, Pointer and Structure – [2L]
Defining arrays and accessing array elements; Array initialization and assigning values to array elements; Multidimensional arrays; Addresses and Pointers; Void pointer, address-of and indirection operator; Pointer to pointers; Difference of Pointer and Array; Pointer arithmetic; Defining structures
Revisiting Functions- [2L]
Declaration, definition and call of a function; Inline functions; Main function arguments; Reference variables; Function overloading; Parameter passing concepts- call by value vs. call by reference; Concept of recursion; Scopes of variables; Return from functions by value as well as by reference; Pointer to functions.
Data Abstraction through Classes and User Defined Data Types- [4L]
C-struct and defining user defined data types through typedef; Class, Object, and members of a class; Constructor and Destructor; Dynamic memory management using new and delete operator (C++) ormalloc and free (C-way); this operator; Static members of a class; Additional scope of variables.
Operator Overloading-[4L]
Operator overloading techniques and restrictions; Overloading unary and binary operators; Overloading function operator, index operator, class member access, and cast operator; User defined conversions through constructors or cast operators; Overloaded non-member operators outside the class; Overloading new and delete operators.
Class Relationships– [4L]
The concept of inheritance- single and multiple; Constructor and Destructor calling sequences; Virtual base class; Accessibility in friends and derived classes; Virtual function and operator; Linking C file in C++ program.
Advanced Concepts – [4L]
Concept of template- class and function templates; Namespace; Need and mechanism of exception handling; Advanced cast operators- static_cast, dynamic_cast, reinterpret_cast, and</td></tr>
</table>

	const_cast; *typeid* operator **Standard Library in C++- [4L]** Standard C++ library functions for input and output handling; Standard Template Library **Data Structures and Applications in C++ - [4L]** Several fundamentally used data structures as array and linked list where from other data structures like stack, queue, tree, can be made **Object Oriented Design and Modelling–[4L]** Software development process from software engineering and quality perspective; Software architecture concepts; Best practices of software development; Phases of software development- inception, elaboration, construction, and transition; Object Oriented principles and concepts; Object Oriented modelling from views of Booch, Rumbaugh, Jacobson **Unified Modelling Language – [4L]** Basic building blocks of UML; Use case and actors; Structural and behavioural modelling aspects; Packaging and deployment; Software development process through UML. **Laboratory Workouts – [3L]**

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Department of Electronics & Communication Engineering							
Course Code	Title of the course	Program Core (PCR)/ Elective (PEL)	Total Number of contact hours = 42				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECE614	ASIC Design using Verilog/VHDL	PEL	3	0	0	3	3
Pre-requisites			Course Assessment methods: (Continuous Assessment (CA:15%), Mid-Term Assessment (MA:25%) and End-Term Assessment (EA:60%))				
Digital Circuits and Systems (ECC402)			Continuous Assessment (CA): Quizzes/Class tests/Assignments/Attendance				
Course Outcomes	After successful completion of the course, the student will be able to: • **CO 1:** Explain VLSI design flow using HDL. • **CO 2:** Analyze and design combinational and sequential digital systems. • **CO 3:** Employ EDA tools to model a digital system. • **CO 4:** Write test benches to verify the design. • **CO 5:** Compare between blocking and non-blocking statement and their uses. • **CO 6:** Create a System from simulation to synthesizable design.						
Topics Covered	**Module I. Brief introduction to VLSI using CAD tools [L - 3]** Overview of Digital Design with Verilog HDL: Evolution of CAD, the emergence of HDLs, typical HDL-based design flow, Verilog HDL, Trends in HDLs. **Module-II.Hierarchical Modeling Concepts [L – 3]** Top-down and bottom-up design methodology, differences between modules and module instances, parts of a simulation, design block, stimulus block. **Module-III. Basic Concepts [L – 3]** Lexical conventions, data types, system tasks, compiler directives.Memory modeling Logic Synthesis: Introduction synthesis of different Verilog constructs. **Module-IV. Modules and Ports [L – 3]** Module definition, port declaration, connecting ports, hierarchical name referencing. **Module-V. Gate-Level Modeling [L – 2]** Modeling using basic Verilog gate primitives, description of and/or and buf/not type gates, rise, fall and turn-off delays, min, max, and typical delays. **Module-VI. Dataflow Modeling [L – 3]** Continuous assignments, delay specification, expressions, operators, operands, operator types. **Module-VII. Behavioural Modeling [L – 3]** Structured procedures, initial and always, blocking and nonblocking statements, delay control, generate a statement, event control, conditional statements, multiway branching, loops, sequential and parallel blocks **Module-VIII. Tasks and Functions [L – 4]** Differences between tasks and functions, declaration, invocation, automatic tasks, and functions. **Module-IX. Useful Modeling Techniques [L – 4]** Procedural continuous assignments, overriding parameters, conditional compilation and execution, useful system tasks. **Module-X. Flip-Flop and Counter Design [L – 4]** Synchronous and asynchronous flip flop design with set and reset, design of basic counters. **Module-XI. FSM & Processor Design [L – 6]** FSM modeling, Data path and Controller design, Modeling Memory, Pipelining, and Design of a Processor. Introduction to Reconfigurable computing, FPGAs, the Altera /Xilinx flow. **Module-XII. Essential System Verilog for UVM [L – 4]**						

	Overview of basic SystemVerilog, UVM verification environment: introduction to UVM methodology and universal Verification Components (UVC) structure, stimulus modeling, creating a simple environment, DUT, TLM, functional coverage modeling, register modeling in UVM.

Department of Electronics and Communication Engineering								
Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 42				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECE615	Active Filter Design	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), Mid-Term (MT),End Assessment (EA))					
Electronic Devices and Circuits I (ECC302), Signal and Systems (ECC303)		Class Assignments, Mid and End term examinations					
Course Outcomes		After the completion of the course, the student will be able to: • CO1: Explain the operation of various High performance filters. • CO2: Design Analog Circuits. • CO3: Create the Layout of filters. • CO4: Analyze the performance of different active filters. • CO5: Interpret the use of Analog filter • CO6: Compare the architectures based on Area/Power/Speed.					

Topics Covered/ Syllabus	**Module-I:**[L-5] Introduction, Butterworth approximation, Chebyshev approximation, Inverse Chebyshev approximation, Synthesis of doubly terminated all-pole LC ladders filters, Synthesis of doubly terminated LC ladders with finite zeros of transmission. **Module-II:** Network sensitivity - low sensitivity of doubly terminated ladders, Introduction to frequency transformations, Properties of the driving impedance of lossless LC networks, Tellegen's theorem and positive real functions, Low Pass-to-Low Pass, Low Pass-to-Band Pass, Low Pass-to-High Pass and Low Pass-to-Band Stop transformations, Richard's Transformation, RC-CR transformation, Emulation of an inductor with a capacitor and controlled sources, the gyrator, a second order transconductor capacitor filter. [L-8] **Module-III:** Cascade of biquads realization of high order low pass filters, equivalence of the parallel RLC and series RLC circuits. Dynamic Range in active filters - impedance scaling and its effect on dynamic range, Introduction to noise in electrical networks, node scaling, Dynamic range scaling in active filters. [L-7] **Module-IV:** Biquad Ordering, Active Ladder Emulation / Leapfrog Filters, Effect of Transconductor non idelaities (parasitic capacitance/output resistance), parasitic poles, Effect of Finite Gain of the Transconductor. [L-5] **Module-V:** Single-ended Versus Differential Filters, Introducing the Differential-pair Based Fully Differential Transconductor, the Need for Common-mode Feedback, Stability of the Common-mode Feedback Loop, Common-mode Positive Feedback in Gyrators, Noise in the Differential Pair, Linearity of the Differential Pair, Cascoding, Noise in Cascodes, Layout Considerations and Multi-finger Transistors. Linearizing the Differential Pair, Resistive Degeneration. [L-7] **Module-VI:** Noise in Degenerated Transconductors, The Folded Cascode and Noise Analysis, Stabilizing filter bandwidth over process and temperature - the resistor servo loop, master-slave loops, Turning the filter into a VCO to estimate center frequency, example of a practical precision fixed-gm bias circuit, Introduction to accurate measurement and characterization techniques for active filters, Introduction to Active-RC filters, the use of an OTA instead of an opamp, swing and noise considerations, single stage OTAs, Multistage OTAs for use in CMOS Active-RC filters, The Miller compensated opamp in active-RC filters, noise considerations, noise in active-RC filters, Distortion and Intermodulation in filters, fixed gm-bias circuits [L-10]

ECE617	Probability and Random Signal Theory	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), Mid-Term (MT),End Assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	• CO1: Characterize probability models and function of random variables. • CO2: Evaluate and apply moments, ACF, PSD & characteristic functions and understand the concept of inequalities and probabilistic limits. • CO3: Recognize, interpret and apply a variety of deterministic and nondeterministic random processes that occur in engineering.						

Topics Covered	1. Introduction: Basic of Probability theory, Bernoulli's Trials (5L) 2. Random Variables: types, examples, PDF, PMF, Conditional probability density function, (10L). 3. Function of one random variable. (4L) 4. Mean, Variance, Moments, Characteristics functions of random variables (5L) 5. Two random variables, Joint density and distribution function, one function of two random variables, Two functions of two random variables (8L) 6. Random processes: definitions and notations, Autocorrelation function, Cross correlation function, Covariance, PSD, Markov Processes, Gaussian Process, Poisson Process, Systems and random signals (10L)

Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 44				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECE618	Data Communication and Computer Networks	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and End Assessment (EA))
Analog Communication (ECC401), Digital Communication (ECC501)	The assessment methods comprise of quizzes, multiple choice type questions involving real world examples, and subjective questions all either designed in google form or assessed through pen and paper.
Course Outcomes	CO1: **Understand** the rudiments of how computers communicate CO2: **Acquaintance** with the architecture of a number of different networks CO3: **Understand** the principles of protocol layering CO4: **Understand** the basic aspects of packet based protocol design and implementation

	CO5: **Analyze** and **Explain** the information flow in network traffic CO6: **Interpret** the importance of interconnection networks
Topics Covered	**Course Introduction and Physical Layer – [4L]** Data communication; Networks; Protocols and standards; Layered tasks; OSI Model; TCP/IP protocol suite; Addressing; Physical layer and media; Data and Signals; Analog and Digital; Transmission impairment; Line coding; Block coding; Sampling; Modulation of digital data; Telephone modems; Modulation of Analog signals; FDM,WDM,TDM, Guided media; Unguided media; Circuit switching; Telephone networks; DSL technology; Cable modem; SONET. **Data Link Layer, Framing, and Error Handling– [8L]** Types of errors; Error detection; Error correction; Flow and error control; Stop and wait ARQ, go back N ARQ, Selective Repeat ARQ; HDLC; Point to Point protocol; random access; Controlled access; Traditional Ethernet; Fast Ethernet; Gigabit Ethernet; IEEE802.11; Bluetooth; Backbone network; Virtual LAN; Cellular Telephony; Satellite Networks; Virtual Circuit switching; Frame relay; ATM. **Queuing Analysis in Communication Networks– [10L]** Introduction to queuing models; Little's theorem; M/M/1,M/M/m queues; Networks of queues; M/G/1 queues; M/G/1 queues with occupancy distribution; M/G/1 queues with vacations, reservations, Priority queues; Stability of queuing systems; Multiple access and ALOHA; Stabilized ALOHA; Tree algorithms; CSMA, CSMA/CD and Ethernet **Network Layer Concepts – [5L]** Internetworks; Addressing; Routing; ARP; IP; ICMP; IPV6. **Transport Layer Concepts– [5L]** Process to process delivery; User Datagram Protocol (UDP); Transmission Control Protocol (TCP); Data traffic; Congestion control; Quality of Service(QoS); Integrated services; Differentiated services; QoS in switched networks **Routing and Flow Control– [8L]** High speed LANs; Token rings; Introduction to Switch Architecture; High speed switch scheduling; Broadcast routing and spanning trees; Shortest path routing; Distributed routing algorithms; Optimal routing; Flow control window/credit schemes; Flow control rate based schemes; ATM networks. **Application Layer, WWW and HTTP – [4L]** Domain Name System, Dynamic Domain Name System; Encapsulation; Remote Logging; Electronic mail and File transfer; HTTP architecture; Simple Network Management Protocol (SNMP); Multimedia; Digitizing Audio and Video; Audio and Video compression; Streaming stored Audio/Video; Streaming live Audio/Video; Real time interactive Audio/Video; RTP; RTCP; Voice over IP.
Text Books, and/or reference material	**Text Books**: 1. Ferouzan, Behrouz A., "Data Communications and Networking", TMH. 2. <tr><td>Topics Covered</td><td colspan="7">Module 1: Physical Layer (6 Hours)
Bit transmission over Wireless, Vary Much different from Wired Network.
Module 2: Mac Layer (8 Hours)
Access in Shared Medium, Difference between Wired MAC & Wireless MAC, Different Type of MACs (a) Random MAC (b) Scheduled MAC, Examples of MAC Implementation (WiFi Protocol --802.11, Bluetooth Protocol--805.15).
Module 3: Network Layer (8 Hours)
Reactive Routing, Proactive Routing, DSR Principle, AODV Principle, Location Aware Routing. Adhoc Network, Delay Tolerant Network, Opportunistic Network Introduction, Architecture & Applications, Routing Algorithms – Epidemic, Prophet, Spray & Wait, Spray & Focus, Maxprop Simulation Tool - ONE Simulator.
Module 4: Transport Layer (8 Hours)
Wireless TCP and rationale, Difference between Wired TCP and Wireless TCP, QoS Measurement of Wireless Networks.
Module 5: Modelling (8 Hours)
Mathematical Modelling of Network Functionalities - Combining them to derived overall performance.
Module 6: Case Study: Implementation of opportunistic Networks in Challenged Network scenarios (4 hours)
(a) Connection Mechanism (b) Sync - Transferring the information in Collaborative manner (c) Offline Dashboard (Information Summarization) (d)security</td></tr>

Department of Electronics and Communication Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours = 42				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECE620	Nanoelectronics	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), Mid-Term (MT) and End Assessment (EA))					
Electronic Devices and Circuits (ECC302), Physics of Semiconductor Devices (PHC331)		CT+MT+EA					
Course Outcomes	● CO1: Understand state of the art in semiconductor device physics and materials technology to enable the Nano-Electronics. ● CO2: Apply the fundamentals of classical CMOS technology. ● CO3: Implement the scaling of MOSFET in the sub-100nm regime. ● CO4: Apprehend the need of non-classical transistors with new device structure and Nano-materials.						
Topics Covered	**Module I: (L – 4)** Introduction to nanotechnology, the size of things, history of nanotechnology, fabrication method (top-down and bottoms-up), emerging applications of nanotechnology **Module II: (L – 8)** Electronic and Optical properties of nanostructures. Energy sub-bands. Electron						

	transport in two –dimensional electron gas (density of states), Carrier scattering, resistance of a ballistic conductor, Transmission probability calculation, Electron tunneling, Resonant tunneling, Coupled nanoscale structures and Super lattices. **Module III: (L – 10)** Shrink-down approaches: Electronic devices Based on Nanostructures: Advance Heterostructure Devices, Downscaling of the MOSFET. Nanoscale FET Transistors, the Ballistic FET, Resonant Tunneling Devices and Circuits, Single Electron Transistor and Related Devices. Devices based on carbon nanotubes, Spintronic Devices. **Module IV: (L – 10)** Optoelectronic Devices using Nanostructures: Quantum well and Quantum Dot LASERS, Quantum Cascade LASER, Quantum well infrared photo detector, Super lattice LASER. **Module V: (L – 10)** Nanotechnology: Deposition techniques for Nanoscale Devices, Nanolithography, Self-Assembly Techniques, Nanomaterials, Nanoparticles, Nanowires, Nanomagnetic Materials, Nanostructure Surfaces; Instrumentation for nanoscale electronics: The Atomic Force Microscope (AFM), Scanning Tunneling Microscope and scanning near field optical microscope.

<tr><td>Course Outcomes</td><td colspan="7">At the end of the course, a student will be able to:
CO#1: Understand the characteristics of CMOS inverter and interconnects.
CO#2: Study the Static and dynamic characteristics of MOS inverter
CO#3: Learn the basic steps of ASIC and fabrication process.
CO#4: Analyze the performance of CMOS inverter circuits.
CO#5: Illustrate the combinational and sequential logic circuits
CO#6: Understand the recent trends in VLSI Design & its research issues in industry/ academia</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module-I: (L – 3)
Overview of VLSI Design: Historical perspective, overview of VLSI design methodologies, VLSI design flow, design hierarchy, concepts of regularity, modularity, and locality, VLSI design styles, design quality, packaging technology, CAD technology, ASIC Design flow.
Module-II: (L – 6)
Fabrication of MOSFETs:Fabrication process flow- basic steps, the CMOS n-Well process, layout design rules, stick diagram, full-custom mask layout design.
Module-III: (L – 6)
MOS Transistor: The metal oxide semiconductor (MOS) structure, MOS system under external bias, structure and operation of MOS transistor (MOSFET), MOSFET current-voltage characteristics, MOSFET scaling and small-geometry effects, MOSFET capacitances.
Module-IV: (L – 4)
Modelling of MOS Transistors: Basic concepts, state-of-art MOSFET models, capacitance models, comparison of SPICE MOSFET models.
Module-V: (L – 4)
MOS Inverter (Static Characteristics): Resistive-load inverter, inverter with n-type MOSFET load, CMOS inverter.
Module-VI: (L – 4)
MOS Inverters (Switching Characteristics and Interconnects effects): Delay-time definitions, calculation of delay times, logical efforts, inverter design with delay constraints, estimation of interconnect parasitics, calculation of interconnect delay, Bus vs. Network-on-Chip (NoC), switching power dissipation of CMOS inverters.
Module-VII: (L – 5)
Combination CMOS Logic Circuits: MOS logic circuits with depletion nMOS loads, CMOS logic circuits, complex logic circuits. CMOS transmission gates (pass gates).
Module-VIII: (L – 5)
Sequential MOS logic circuits:Behavior of bistable elements, SR latch circuits, clocked latch and flip-flop circuits, CMOS D-latch and edge-triggered flip-flop.
Module-IX: (L – 5)
Dynamic logic Circuits: basic principle of pass transistor circuits, voltage bootstrapping, synchronous dynamic circuit techniques, dynamic CMOS circuit techniques, high-performance dynamic CMOS circuits.</td></tr>

ECE624	Power Electronics	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods: (Continuous Assessment (CA), Mid-semester assessment (MA) and end assessment (EA))					
Basic Electronics (ECC01), Signals and Systems (ECC303)		Assignments, Quiz/class test, Mid-semester Examination and End Semester Examination					
Course Outcomes	• CO1: To learn the details of power semiconductor switches (Construction, Characteristics and operation) and working of various types of converters. • CO2: To learn how to analyse the converters and design the components of them, under various load types. • CO3: To learn about the control of various converters. Recognize the role power electronics play in the improvement of energy usage efficiency and the applications of power electronics in emerging areas.						

Topics Covered	**Module-1 (**duration- 4 hrs) Introduction: Application of Power Electronics to : 1) Motor control with emphasis on Traction and Industrial Process control 2) Power Supplies - Revolution in Personal Computers UPS 3) Power Transmission - Facts Technology, HVDC 4) Chemical Process 5) Battery charging 6) Power extraction from non-conventional enery sources 7) Automotive electronics 8) High energy physics Evolution of Power Electronics Days of Mercury arc rectification--forerunner of Power Electronics Invention of SCR and its impact Advent of Self-commutated switches and their impact **Module-2 (**duration-4hrs) Structure of Power Electronics: How structurally power electronics differs from low power analog electronics Different types of switches Power Diodes: from the viewpoint of an application engineer SCR: Device structure, Static characteristic, dynamic characteristic constraints of Turn on and Turn off time, different relevant ratings. **Module-3 (**duration-4hrs) Diode rectifiers Applications: Power Supplies, Front end converter for ac motor drives, battery charger, chemical process 1) Single phase Half wave with R load 2) Single phase Half wave with R-L load 3) Single phase Full bridge rectifier with dc link capacitive filter, issue of harmonics 4) Three phase Full bridge rectifier with dc link capacitive filter, issue of harmonics **Module-4 (**duration-5hrs) AC to DC controlled converters Application: DC Motor Drives Battery chargers HVDC transmission 1) Single phase fully controlled AC to DC converter i) Principle of operation: Issue of line commutation ii) Continuous mode of conduction: expression for average output voltage iii) Modes of operation in the voltage-current plane iv) discontinuous mode of conduction v) analysis with R-L-E load, significance of R-L-E load vi) operation as an inverter: constraints for line commutation vii) Dual converter: motivation Simultaneous and nonsimultaneous control vii) input displacement factor, distortion factor, harmonics viii) Effect of source inductance ix) Requirement of snubber 2) Single phase half controlled converter: operating principle, input displacement factor Modes of operation in the voltage-current plane Modes of operation in the voltage-current plane **Module-5 (**duration-2 hrs) Three phase half wave ac to dc converter Principle of operation Derivation of o/p voltage issue of dc magnetization of the input transformer **Module-6 (**duration-3 hrs) Three phase fully controlled ac to dc converter

	Principle of operation Derivation of average output voltage Derivation of displacement factor Inverter mode of operation Constraints of commutation in inverter mode Effect of source inductance **Moduel - 7 (**duration-4 hrs) Limitation of Line commutated converters Single phase unity powerfactor converter Principle of switched Power power conversion Bi-directional Power converters **Module- 8 (**duration-8 hrs) DC- DC Power Converters Limitations of Linear Power supplies Switched Power Power supplies (Buck, Buck-Boost, Boost, Cuk, Fly-back and Forward Convverters) Transfer fucntion for these converters **Module-9 (**duration-8 hrs) Motivation DC- AC Power Converters Principle of operation of Inverters Half bridge, full bridge, three phase- six step operation, voltage control, PWM techniques

SEVENTH SEMESTER

Department of Electronics and Communication Engineering							
Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 43				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MSC731	Principles of Management	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), Mid-Term (MT) and End Assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	• CO1:To make budding engineers aware of various management functions required for any organization • CO2:To impart knowledge on various tools and techniques applied by the executives of an organization • CO3:To make potential engineers aware of managerial function so that it would help for their professional career • CO4:To impart knowledge on org. activities operational & strategic both in nature • C05: To impart knowledge on each functional area of management like Marketing, Finance, Behavioral Science, Quantitative Techniques and Decision Science						
Topics Covered	**UNIT I:** Management Functions and Business Environment: Business environment- macro, Business environment -micro; Porter's five forces, Management functions –overview, Different levels and roles of management, Planning- Steps, Planning and environmental analysis with SWOT, Application of BCG matrix in organization **(8L)** **UNIT II:** Quantitative tools and techniques used in management: Forecasting techniques, Decision analysis, PERT & CPM as controlling technique **(7L)** **UNIT III:** Creating and delivering superior customer value: Basic understanding of marketing, Consumer behavior-fundamentals, Segmentation, Targeting & Positioning, Product Life cycle. **(8L)** **UNIT IV:** Behavioral management of individual: Motivation, Leadership, Perception, Learning. **(8L)** **UNIT V:** Finance and Accounting: Basics of Financial management of an organization, Preparation of Final Accounts, Analysis of Financial statements, Cost Volume Profit (CVP) Analysis, An overview of financial market with special reference to India. **(12L)**						
Text Books, and/or reference material	**Text Books**: 1. Financial Management, 11th Edition, I M Pandey, Vikas Publishing House. 2. CO4: Design and implementation of various components of a processor.
CO5: Evaluate the performance of VLSI Designs.
</td></tr>
<tr><td>Topics Covered</td><td colspan="7">List of experiments:

Plot the NMOS I/V characteristics and measure its VT, $\mu_N C_{OX}, g_m, f_T$ at the DC bias point of $V_{DS} = 0.5\ V$, and $V_{GS} = 0.4\ V$. Also determine the corresponding values for PMOS transistor at $V_{DS} = 0.6\ V,\ V_{GS} = 0.5\ V$
For an NMOS with W/L = 500n/500n, plot $g_m, \frac{g_m}{I_D}, V_T, f_T, r_{out}$ and self-gain by sweeping $0 < V_{GS} < 1V$ for $V_{DS} = 0.3\ V, 0.5\ V and\ 0.9\ V$. Interpret the results.
Simulate the VTC of pseudo-NMOS inverter so that $V_M = 0.5\ V_{DD}$. Now measure the Noise margins and t_{PLH}, t_{PHL} when CL = 1 pF. Also, measure the static power and dynamic power dissipation when the clock frequency is 10 MHz.
Design a CMOS Common Source Amplifier with PMOS active load from a min. gain of 20 dB. Plot its frequency response when a load of 1 pF is connected. Measure its power dissipation (PD).
Design and implementation of ALU and ALU Controller for MIPS processor.
Design and implementation of Sequence Controller for MIPS processor.
Design and implementation of Multiplexer and Program Counter for MIPS processor.
Design and implementation of Concentration, Combinational and shift-by-2 modules for MIPS processor.
Design and implementation of RAM and Register files for MIPS processor.
Design and implementation of State Register and Sign-Extend Modules for MIPS processor.

Department of Electronics and Communication Engineering							
Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 18				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECS753	Advanced Communication Lab	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					

Course Outcomes	On successful completion of this course, students should have the skills and knowledge to: CO#1. Understand Monte Carlo Simulation of Discrete and Continuous random variables CO#2. Estimate Bit Error Rate (BER) of a Communication Systems CO#3. Evaluate the performance of simple modulation over AWGN and Fading Channel (typically Rayleigh and other) CO#4. Model fading channels and understand Digital Communication concepts in context to fading channels. CO#5. Assess the performance of simple Network Access protocols like ALOHA and S-ALOHA by simulation. CO#6. Develop expertise in writing program using MATLAB and tools like SIMULINK.
Topics Covered/ Syllabus	1. Discrete Event Simulation : 1. (A) Generation of random variables. (a) Discrete (i) Poisson (ii) Binomial (iii) Geometric (b) Continuous (i) Gaussian (ii) Exponential (iii) Lognormal (iv) Rayleigh (v) Erlang (vii) Generate Gaussian from uniform distributed Random variable. Generate the r.v-s with suitable chosen parameters. 1. (B) Generate the PDF (probability density function) of the r.v-s by simulation. Match the simulated pdf with the corresponding analytical pdf-s. [show this for (b)i , b(iii) and b(iv) cases]. 2. (A) Simulation of AWGN channel and BER performance of BPSK. (Generate BPSK at baseband, Tx through a channel corrupted by Gaussian noise of a given noise var. Rx the signal bit, compare it with Tx bit and estimate BER via no. of iteration). Plot the BER vsEb/No. (B) Simulate Packet error rate (PER) in above for an arbitrary packet of size L = 500 bits. 3. Repeat the above Expt no.2 (a) for a Rayleigh faded channel. 4. Generate a PN sequence of (a) 15 bits (b) 31 bits. Simulate and plot the autocorrelation function of generated PN sequence. 5. Simulate the arrival process in a Poisson based arrival with typical mean arrival rate (for example 0.84 calls/sec.) Using above simulate Throughput for ALOHA and S-ALOHA protocol(s). 6. Simulation and Performance studies of QPSK and Offset QPSK (using MATLAB

	and SIMULINK)

Department of Electronics and Communication Engineering

Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 43				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECE710	Detection and Estimation Theory	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), Mid-Term (MT) and End Assessment (EA))
Probability Theory for Engineering Application (ECO541) / any equivalent content from NPTEL, SWAYAM etc.	CT+MT+EA

Course Outcomes	• CO1: To familiarize students with Classical Statistical Inference Techniques and their applications to Communication and Signal processing • CO2: To familiarize students with Signal Detection Theory • CO3: To develop required mathematical skills for design and implementation of statistical signal processing algorithm
Topics Covered	**Topic 1:Random Signal and Random Process Basics [5]** Important probability distribution functions: Gaussian, Chi-square, Rayleigh, Rician, Student's t, F, Cauchy etc. Bivariate and Multivariate Distribution Random Process, Correlation properties, Stationarity, Ergodicity, Gaussian Process, Power Spectral Density **Topic 2: Classical Decision Theory [10]** Introduction to signal detection problems

	Bayes Criterion: Binary Hypothesis testing, M-ary hypothesis testing Maximum Likelihood based Optimal detection, LRT (Likelihood Ratio Test) and performance. Neyman Pearson Criterion for optimal detection , Minimum probability of error detector, Minimax Criterion **Topic 3:Detection of Deterministic and random Signal[8]** Matched Filter Detection, Optimal detection for white and Nonwhite noise, Multiple Hypothesis testing, Estimator Correlator, Energy Detector **Topic 5: Detection of Signal with unknown parameters [6]** Composite Hypothesis Testing : Bayesian Approach and GLRT, Sinusoidal detection **Topic 6: Estimation Techniques [8]** Introduction to signal Estimation, Unbiased estimators, Minimum variance unbiased estimator (MVUE), MVUE Criterion, Cramer Rao Lower bound(CRLB), Best Linear Unbiased Estimator(BLUE), General CRLB for signals in white noise, Least Square Estimation and Recursive Least Square Estimation. **Topic 7:Random parameter Estimation**: [6] Bayesian Formulation, Minimum mean square error (MMSE) and MAP estimation,Linear MMSE estimation, Wiener and optimum MMSE Filtering
Text Books, and/or reference material	**Text Books:** 1.Fundamentals of Statistical Signal Processing, (Vol 1 &Vol 2) S.M. Kay, Pearson 2. Detection, Estimation, and Modulation Theory, Part-1, VanTrees, Jhon Wiley **Reference Books:** 1. Signal Detection and Estimation, Second Edition,MouradBarkatArtechhouse. 2. An Introduction to Signal detection and Estimation: H. Vincent Poor, Springer-Verlag

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECE711	Information Theory and Coding	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), Mid-Term (MT) and End Assessment (EA))					
NIL		CT+MT+EA					

Course Outcomes	**CO.1** Understand the concept of Information and quantitative from of characterization of information. **CO.2**Understand abstraction of digital information transfer and characterizestorage/transfer from mathematical viewpoint. **CO.3** Gain knowledge about techniques for information compression and its application **CO.4**Understand Channel Capacity and Shannon's Law on Information capacity. Appreciate information theoretic results as fundamental limits on performance ofCommunication systems. Analyze Capacity of Various Channels. **CO.5** Understand the fundamental difference between Source Coding theorem andChannel Coding theorem. **CO.6** Understand different approaches for error correction and suitability of theirApplication. Develop understanding of Block Coding.
Topics Covered	1.**Information Theory** : Introduction, Uncertainty and Information, Entropy, Relative Entropy, Mutual Information, Chain Rules, Differential Entropy , Properties of Differential entropy, Jensen's inequality, data processing Inequality. (9L) 2. **Source Coding**: Source Coding Theorem, Kraft Inequality, Optimal codes, Huffman Code, Shannon Fano Elias Coding, Lempel Ziv Coding, Rate Distortion function (8L) 3. **Channel Capacity and Coding** : Channel Models, Channel Capacity, Binary Symmetric Channel , Binary Erasure Channel, Channel Coding Theorem, Information Capacity Theorem, Shannon's limit, Gaussian Channel, Parallel Gaussian Channel. (10L) 4. **Error Control Coding**: Linear algebra fundamentals, Linear Block Codes, Generator matrix, Parity Check Matrix, Encoding and Decoding of linear Block Codes, Syndrome Decoding, Hamming Code, properties of linear Block Code, Cyclic Codes: Algebraic description, Encoding and Decoding of Cyclic codes , Convolution Codes: Definition, Encoding Trellis and State representation, , Viterbi decoding, Error probability, Viterbi Decoding. (15L)
Text Books, and/or reference material	1. Information Theory Coding and Cryptography, Third Edition, Ranjan Bose, McGraw-Hill Education Pvt. Limited. 2. Elements of Information Theory , Thomas M.Cover and Joy.A. Thomas, Wiley 3. Error Control Coding, Fundamentals and Application Shu Lin, Daniel J. Costello, Pearson, India 4. Error Correction Coding Mathematical Methods and application, Todd K. Moon, Wiley, India.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECE712	Analog IC Design	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CA), Mid Term(MT) and End Term (ET))
Electronic Devices and Circuits I and II (ECC302, ECC504)	(CA+MT+ET=15+25+60=100)

Course Outcomes	**CO1:** Define various parameters/terms associated with MOS transistors and Analog IC design. **CO2:** Describe the operation of a MOS transistor /Amplifier/other fundamental blocks. **CO3:** Solve any given circuit using appropriate Large/Small Signal model equations. **CO4:** Evaluate various performance metrics such as gain/BW/Power dissipation/Input & output range etc. **CO5:** Analyze feedback circuit and determine its poles, zeros, gain margin & phase margin. **CO6:** Design a Single stage Amplifier/Differential Amplifier to meet the given specifications.
Topics Covered	**Module-I: Introduction to MOS** (L – 04) MOS Device Physics – General Considerations, Overview of CMOS technology, MOS I/V Characteristics, Short Channel Effects, Noise, Large Signal MOS Device models. **Module-2: Small Signal MOS Model**(L – 02) MOS Device Capacitance, Small Signal Device Models. Different trans-conductance (front gate : g_m, output: g_ds, back-gate:g_mb). Unity gain frequency calculation. **Module-3: Basic MOS Amplifiers**(L – 08) Single Stage Amplifiers – Basic Concepts, Common Source Stage, Source Follower, Common Gate Stage, Cascode Stage, Calculation of Amplifier parameters. **Module-4: Current Mirrors/References**(L – 03) Current Mirror: Simple, Cascode, Wilson, Wide-Swing. **Module-5: Frequency Response of Amplifiers**(L – 06) Frequency Response of Amplifiers – General Considerations, Common Source Stage, Source Followers, Common Gate Stage, Cascode Stage, Differential Pair. **Module-6: Differential Amplifier**(L – 07) Differential Amplifiers – Single Ended and double ended. Differential Operation, Basic Differential Pair, Common- Mode Response, Differential Pair with MOS loads, current mirror load. **Module-7: Single stage Opamps**(L –07) Operational Amplifiers – General Considerations, Single Stage Op Amps, Two Stage Op Amps, Input Range limitations(ICMR), Slew Rate, Noise and Offset in Op Amps. **Module-8: Feedback** (L – 05) Feedback-Types, Nyquist plot, Stability- Frequency compensation techniques, Miller compensation, pole splitting, Gain Margin, Phase Margin.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECE713	FPGA based Design	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods: (Continuous Assessment (CA: 15%), Mid-Term Assessment (MA:25%) and End-Term Assessment (EA:60%))					
Digital Circuits and Systems (ECC402), VLSI Design (ECC602)		Continuous Assessment (CA): Quizzes/Class tests/Assignments/Attendance					

Course Outcomes	●**CO1:** Learn logic synthesis techniques – two-level and multilevel synthesis. ●**CO2:** Be able to design systems using FPGAs and CPLDs. ●**CO3**: Learn sequential machine design using FPGAs. ●**CO4**: Learn to design systems for low power operation.
Topics Covered	**Module-I:** (L – 04) Logic design fundamentals: Two level synthesis – SOP/POS forms, Logic minimization, Limitations of two-level synthesis, introduction to multi-level synthesis. **Module-II:** (L – 06) Programmable Logic Devices: Programmable Logic Array (PLA) architecture; Programmable Array Logic (PAL), PAL vs. PROM, Fan-in expansion feature, Architecture for sequential circuit implementation, Typical PAL chips; Complex Programmable Logic Devices (CPLD). **Module-III:** (L – 06) Programmable Gate Arrays: Gate Array concept, Mask programmable and Field Programmable

	Gate Arrays; Lookup tables (LUT) Configurable logic blocks (CLB), logic design using LUT's; Multi-level synthesis techniques – Factoring and Functional decomposition, Shannon's Expansion Theorem; Generalized FPGA Architecture; Introduction to CAD Tools for FPGA based design, design entry, and simulation – introduction to HDL, synthesis, post-synthesis simulation, interfacing external devices. **Module-IV:** (L – 08) Sequential Circuit Design: Finite State Machines, Moore and Mealy Machines; State diagrams, State table, State assignment, derivation of next-state and output expressions, state minimization; State assignment for low power operation; CAD tools for FSM synthesis; Designing a simple CPU, concept of embedded system. **Module-V:** (L – 02) Advanced features of modern FPGAs: Block RAMs, Embedded processor, Communication ports, Analog interface. **Module-VI:** (L – 06) FPGA as a Hardware Debugging platform: Hardware troubleshooting methods, Looking into the chip – Logic State Analyzer and its use; Concept of Hardware emulation – simulation vs. Emulation, FPGA as a Hardware emulator, Break-points and their utility, setting break-points in FPGA based design. **Module-VII:** (P – 8) Familiarizing with CAD tools, Design and synthesis of simple logic functions – Basic gates, adder/subtractor, decoder, encoder, multiplexer, demultiplexer; Interfacing external devices – setting user constraint file, interfacing input (switch) and output (LED) devices, BCD to seven-segment decoder, keyboard/display interface; designing memory elements and arrays; sequential machine design – sequence generators, timing generators, a typical machine design (example: vending machine); A simple CPU design, constructing a basic embedded system – interfacing on-chip CPU, memory and I/O ports. **Module-VIII:** (P – 2) Design analysis: Static timing analysis, Power analysis, Resource utilization, noise, clock network, DRC, debugging methods.
Text Books, and/or Reference Materials	**Text Books**: 1. S. Brown and Z. Vranesic, "*Fundamentals of Digital Logic with Verilog Design,*" McGraw Hill Education Special India Edition (SIE), 2017. **Reference Book**: 1. J. Bhasker, "*A Verilog HDL Primer*", B.S. ECE715	Machine Learning	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods: Continuous (CT), mid-term (MT), and End Assessment (EA)
Introduction to Computing (CSC01) & Computer Programming Languages like Python, C++, Matlab etc.	CT+MT+EA

Course Outcomes	After the completion of the course the student will be able to learn the following: • CO1: Distinguish between, supervised, unsupervised and semi-supervised learning • CO2: Apply the apt machine learning strategy for any given problem • CO3: Implement various ways of selecting suitable model parameters for different machine learning techniques • CO4: Modify existing machine learning algorithms to improve classification efficiency • CO5: Solve problems associated with batch learning and online learning, and the big data characteristics such as high dimensionality, dynamically growing data and in particular scalability issues. • CO6: Study of various machine learning algorithms including deep learning
Topics Covered	**MODULE I INTRODUCTION [L=3]** Brief Introduction to Machine Learning, Supervised Learning ,Unsupervised Learning, Reinforcement Learning Design a Learning System, Perspectives and Issues in Machine Learning ,Concept Learning **MODULE II REGRESSION [L=6]** Linear Algebra, Statistical Decision Theory, Regression & Classification, Bias – Variance, Linear Regression, Multivariate Regression **MODULE III NEURAL NETWORKS AND SUPPORT VECTOR MACHINE[L=8]** Multi-layer Perceptron , Training of Multi -layer feed forward neural network using back propagation algorithm ,Over-fitting of trained model, Radial Basis Functions neural network, Support Vector Machines **MODULE IV TREE AND UNSUPERVISED LEARNING [L=7]** Learning with Trees , Decision Trees , Constructing Decision Trees ,Classification and Regression Trees , Unsupervised Learning, Gaussian Mixture Models, K-means clustering Algorithm **MODULE V DIMENSIONALITY REDUCTION [L=6]** Dimensionality Reduction, Linear Discriminant Analysis, Principal Component Analysis **MODULE VISTUDY OF MACHINE LEARNING ALGORITHMS[L=12]** Extreme learning machine (ELM), Training and testing of ELM, Recurrent Neural Network(RNN) and long short-term memory (LSTM),Training a LSTM based RNN, Reinforcement Learning, Deep learning and Convolutional Neural Network(CNN).
Text Books, and/or Reference material	**Text Books**: 1. StephenMarsland, “Machine Learning – An Algorithmic Perspective”, Second Edition, Chapman and Hall/CRC Machine Learning and Pattern Recognition Series, 2014. 2. Tom M Mitchell, “Machine Learning”, First Edition, McGraw Hill Education, 2013.

<tr><td>Topics Covered</td><td colspan="8">Introduction: mm wave spectrum, Typical applications of microwave and mm wave, Safety considerations. Difference in High frequency and relatively low frequency behaviour of Lumped circuit components. Miniaturization and design of Lumped components at millimetre wave frequencies. Realization of reactive elements as mm wave planar circuit components. (2H)
Review of Transmission line theory. Concept of Scattering Matrix N-port networks-Properties of S matrix, Transmission matrix and their relationships (4H)
mm wave Waveguide and Resonators
Rectangular Waveguide- design consideration, TE and TM modes, TE_{10} mode analysis, cut-off frequency, propagation constant, intrinsic wave impedance, phase and group velocity, power transmission, attenuation, waveguide excitation, wall current; Introduction of circular waveguide; Rectangular waveguide resonator design consideration, resonant frequency, Q-factor, excitation. (6H)
Planar Transmission lines and Resonators at mm Waves
Propagation characteristics, comparison for different characteristics of the above mentioned lines. strip line, micro-strip line, coplanar waveguide, Slot line-design consideration, Substrate integrated waveguide, non radiating dielectric guides, Design synthesis and analysis (6H)
Passive Components and their S-matrix Representation
Millimetre wave passive components and their S matrix representation: Attenuators, Phase shifter, Directional coupler, Bethe-hole coupler, magic tee, hybrid ring, circulators, Isolators; design of planar power dividers and couplers; design procedure of filter using insertion loss method-specification, low-pass prototype design, scaling and conversion, implementation. (8H)
mm wave devices and Application to switches and mixers
TED (Gunn diode) & Avalanche Transit Time (IMPATT) device, Schottky diode, PIN & applications; Microwave bipolar transistor, Microwave field effect transistor. (6H)
Microwave Amplifier Design at mm Waves
Basic consideration in the design of microwave amplifier- transistor S-parameter, Stability,</td></tr>
</table>

	matching network, noise figure; matching network design using lumped elements and L-Section. Design of LNA. **(6H)** **mm wave measurement basics** VSWR meter, tunable detector, slotted line and probe detector, spectrum analyzer, network analyzer, measurement of VSWR – low, medium and high, measurement of power: low, medium and high, frequency measurement.**(4H)**

• CO 1: Understand the full custom and semi-custom design flow.
• CO 2: Learn about static timing analysis and design constraints.
• CO 3: Understand the design for testability flows.
• CO 4: Identify and interpret the design towards realizing VLSI design.
• CO 5: Design and analyse the performance (speed, power) of VLSI circuits and design for different specifications.
• CO 6: Evaluate and design of memory cell.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module I. Overview of VLSI System Design [L – 2]
VLSI System design methodologies, VLSI design flow, Recent Trends in VLSI Design & its research issues in the industry: System case studies. Design automation of VLSI Systems: basic concepts. Deep Sub-micron Technologies: Some Design Issues.
Module II. Full Custom Flow [L – 6]
Block specification, schematic design entry, netlist generation and simulation, simulation for process and operating corners, layout with DRC/ LVS clean, parasitic extraction for R & C, back annotation & simulation, simulation redone with parasitic information, Concepts of PCELL.
Module III. Constraints and Static Timing Analysis[L – 8]
Basic tenets of synchronous static timing: setup & hold timing, multipath & false paths, clock skew & latency, Asynchronous and synchronous clocks, crossing clock domains & clock gating; Design constraints for a design in SDC format: design objects, timing constraints, environmental constraints, case analysis; timing report, synchronous static timing.
Module IV. Semiconductor Memories[L – 8]
Memory hierarchy and types; SRAM Cell optimization and design metrics, memory read and write path; DRAM array design and related constraints, DRAM interface- address decoding, pipelining, data interface, charge pumps; non-volatile memory cell-basic principle and operation, reliability considerations of NVM; Case study- high-speed memory, low voltage memory.
Module V. Design for Testability[L – 8]
Introduction to DFT, DFT directory structure, DFT rule checker, debugging and fixing DFT violations, scan Mapping, Scan mapping, scan chain connection, using pre-compiled cores, adding testability logic, ATPG, DFT flows.
Module VI. Flow for Designing Full SoC [L – 5]
Block specification, schematic design entry, netlist generation and simulation, simulation for process and operating corners, layout with DRC/ LVS clean, parasitic extraction for R & C, back annotation & simulation, simulation redone with parasitic information, concepts of PCELL.
Module VII. Physical Design [L – 5]
Floorplanning and placement, clock tree insertion & DFT insertion, routing, post</td></tr>
</table>

	PnRfunction & timing checks, interconnection architectures.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours		
ECE723	Semiconductor Device Modeling	PEL	3	0	0	3	3	
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))						
Physics of Semiconductor Devices (PHC331), Electronic Devices and Circuits I (ECC302)		CT+MT+EA						
Course Outcomes	**CO 1:** To describe the essential properties of semiconductor materials **CO 2:** To analyse the carrier concentration as a function of temperature, doping and illumination conditions **CO 3:**To understand the transport of charge carriers for the operation of semiconductor devices. **CO 4:**To derive the physical model of P-N junctions. **CO 5:** To analyze the charge, electric field, potential and current distributions in the MOS devices **CO 6:**To develop the fundamental understanding of device modeling							
Topics Covered	**Module 1** **[6L]** Semiconductor Fundamentals: Equilibrium carrier concentrations (electron statistics, density of states, Effective Mass, Bandgap), Drift Velocity, Mobility and Scattering, Drift & Diffusion Current, Continuity equation. **Module 2** **[8L]** Metal-Semiconductor and PN Junction: Metal-Semiconductor junctions, Current-Voltage Characteristics, Surface Effect, Ideal static pnjuntionI-V characteristics, Diode Equation, Breakdown, Junction Capacitances **Module 3** **[6L]** MOS Capacitor: Modes of operation (accumulation, depletion, strong/weak inversion), Capacitance versus voltage (High ad Low Frequency), Flat Band Voltage, Nonideal effects (poly depletion, surface charges), **Module 4** **[6L]** Long Channel MOSFET Devices: Review of operation. Threshold Voltage Model, I-V Model **Module5** **[8L]** Short Channel MOSFET Devices: Scaling effects (short channel, narrow channel effects, drain induced barrier lowering), Channel velocity limitations (saturation velocity, interface scattering, mobility models). Subthreshold current, Hot carrier effects (impact ionization, gate/substrate currents, threshold voltage degradation, velocity overshoot, ballistic							

	effects) **Module 6** **[5L]** Advanced Devices: SOI, SiGe, strained Si, Alternative oxide/gate materials, Alternative geometries (raised source/drain, dual gate, vertical, FinFET), Tunnel FETs, Memory Devices (DRAM, Flash) **Module 7:** **[3L]** Introduction to BSIM Model: BSIM family of Compact device models, BSIM6 model

EIGHTH SEMESTER

Department of Electronics and Communication Engineering							
Course Code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours = 42				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECE810	Wireless Communication	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), Mid-Term (MT) and End Assessment (EA))					
NIL		CT+MT+EA					

Course Outcomes	On successful completion of this course, students should have the skills and knowledge to : **CO1**. Apply Cellular concepts to evaluate the signal reception performance in a cellular network and traffic analysis to design cellular network with given quality of service constraints. **CO2**. Determine the type and appropriate model of wireless fading channel based on the system parameters and the property of the wireless medium. **CO3**. Analyze and design receiver and transmitter diversity techniques.Determine the appropriate transceiver design of multi-antenna systems and evaluate the data rate performance. **CO4**. Application of Fundamental Digital Communication Concepts in Fading Channel. **CO5**. Understanding suitable Modulation Schemes and Multiple access forWireless Communication. **CO6**. Describe and differentiate four generations of wireless standard for cellular networks.Understand wireless communication systems with key 3G (e.g., CDMA) and 4G (OFDM) technologies.
Topics Covered/ Syllabus	1. Introduction to Wireless Personal Communication, Mobile radio systems.**(02 hrs)** 2. Cellular systems concepts, principles, system design fundamentals, spectrum efficiency, frequency management, channel assignment, handoff, power control, Call blocking, Erlang B, Cell splitting and Directional antenna etc**(06 hrs)** 3. Characterization of wireless radio channel, propagation path models. Fading and Shadowing, Statistical Characterization of fading Channel **(08 hrs)** 4. Receiver Techniques for fading Channel: Detection of Signal in Fading Channel, Diversity Techniques, Time and Frequency Diversity, Receive Diversity(SC, MRC, EGC, Switch & Stay), BER and outage with Diversity, Equalization, Fading mitigation **(10 hrs)** 5. Modulation schemes for wireless Communication (MSK, GMSK), OFDM **(07hrs)** 6. Multiple access techniques: TDMA, FDMA, spread spectrum techniques, Cellular CDMA, Wide-band CDMA, Multiple access Performance of CDMA, Capacities of multiple access schemes, comparison. **(06 hrs)** 7. Wireless Networks and Standards: GSM, CDMA cellular standard, 3G, 4G**(03 hrs)**
Text Books, and/or Reference material	**Text Books**: 1.Wireless Communications: Principles and Practice: Theodore Rappaport, Pearson, 2nd Edition. 2.Wireless Communication: Andrea Goldsmith, Cambridge University Press.
	Reference Books/Materials: 1. Principles of Modern Wireless Communication Systems Theory and Practice: Aditya K Jagannatham, McGraw-Hill India. 2. Fundamentals of Wireless Communication: David TSE and PramodViswanathan, Cambridge University Press

ECE811	Mixed Signal IC Design	PEL	3	0	0	3	3
Pre-requisites			Course Assessment methods: (Continuous Assessment (CA), Mid-semester assessment (MA) and end assessment (EA))				
Analog IC Design (ECE712) Digital IC Design (ECE622)			Assignments, Quiz/class test, Mid-semester Examination and End Semester Examination				

Course Outcomes

After the completion of the course, the student will be able to:

- **CO1:** Explain the operation of various High performance OTAs/Opamps.
- **CO2:** Design Analog Circuits using gm/ID techniques.
- **CO3:** Create the Layout of a CMOS Mixed Signal System.
- **CO4:** Analyze a Comparator.
- **CO5:** Interpret the use of Switched Capacitor Circuits in Sampled data Systems
- **CO6:** Compare Data converter architectures based on Area/Power/Speed.

Topics Covered

Module I. Introduction [L – 9]

Overview of Mixed-Signal Design flow. Design of high performance Fully Differential Opamps: Telescopic cascode, Folded cascode, two-stage, Rail-to-Rail, Gain boosted OTAs/Opamps, Comparison.

Module II. g_m over I_D Design Process [L – 4]

g_m over I_D technique: Transconductor efficiency in subthreshold, moderate and strong inversions. Various design plots: g_m/I_D, g_m/g_{ds}, f_T etc., and their use in Analog Design. Design of a CS Amplifier, and Two stage Opamp using g_m/I_D technique.

Module III. Opamp performance Metrics:[L – 2]

Slew rate & Settling time, CMRR, PSRR, Linearity, Distortion, Offset Cancellation techniques.

Module IV. Layout Techniques[L – 3]

Layout Techniques: Introduction to CMOS process, CMOS Layers, Design rule basics, DRC, LVS, Passive and Transistor layout, Fingering, Interdigitization. Matching components: Common centroid, Use of Dummy. Matching error, error propagation.

	Module V. Switched Capacitor Circuits [L – 5] Basic philosophy of Switched capacitor circuits, design of switched-capacitor amplifiers and integrators, effect of opamp finite gain, bandwidth and offset, circuit techniques for reducing effects of opamp imperfections, switches and charge injection and clock feed-through effects. **Module VI. Sample and Hold[L – 4]** Operation of sample and holds circuits and theirs non-idealities. Comparators: Opamp based, Strong Arm Regenerative Latch, Latch dynamics, Offset reduction. **Module VII. Data Converters [L – 12]** Fundamentals of data converters; Introduction to data converter metrics: SNR, DNL, INL, Offset & Gain Error, SINAD, ENOB, SFDR, SDNR, Settling time etc. Nyquist rate D/A converters - voltage, current and charge mode converters, hybrid and segmented converters. Nyquist rate A/D converters (Flash, interpolating, folding flash, SAR and pipelined architectures) **Module VIII. Phase Locked Loop [L – 3]** Basic PLL topology, dynamics of simple PLL, Multiplier, phase detectors, lock acquisition, Phase frequency detector, Loop filters, Charge Pump PLLs.

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Digital Circuits and Systems (ECC402),Digital Communication (ECC501)	CT+MT+EA

Course Outcomes	**CO1:Acquire** idea about different types of error control coding techniques. **CO2:Understand** generator matrix, encoding and decoding of different codes. **CO3:Learn** LDPC, BCH, RS and Turbo codes. **CO4:Analyze** and mitigate errors in channels. **CO5:Differentiate** between different coding strategies.
Topics Covered	1. Introduction to Linear Algebra: Group, Ring, Field, Vector Space. [L-7]2. Binary Linear Block Codes : Generator and Parity Check Matrices, Dual Codes, Decoding, General properties of linear block codes, Hamming Code. [L-9] 3.Cyclic Codes: Algebraic description, Encoding and Decoding of Cyclic codes. [L-7] 4. BCH Codes: Properties, Encoding and Decoding. Examples [L-4] 5. Reed Solomon (RS) Codes: Definition, Decoding of RS codes. Examples [L-4] 6. Convolution Codes: Definition, Encoding Trellis and State representation, Viterbi decoding, Error probability. [L-8] 7. LDPC Codes : Definition, Construction, Regular and irregular LDPC, Belief Propagation, Tanner Graph, Decoding, Iterative Decoding. [L-4] 8.Turbo Codes: Definition, Construction methods, Decoding; Polar codes. [L-3]

Microwave Engineering (ECC502)</td><td>Assignments, Quiz/class test, Mid-semester Examination and End Semester Examination</td></tr>
<tr><td>Course Outcomes</td><td colspan="2">● CO1:Grasp the in-depth account of GaAs, InP and SiGe, technologies and able to describe all the key techniques for the design
● CO2: Understand circuit design issues at RF and microwave frequencies for integrated circuit design for transceiver
● CO3: Assimilate the characterization of RF and microwave monolithic integrated circuits</td></tr>
<tr><td>Topics Covered</td><td colspan="2">Introduction to RFIC and MMIC: [L – 6]
Introduction to microwave integrated circuit (MIC), RF , microwave, mm wave and sub mm wave spectrum, history, applications and technology of MMICs Advantages and disadvantages of MMIC; enhancement of device technology that have contributed to RGIC and MMIC; Transceiver architectures, concept of IIP, nonlinearities, dynamic range and system noise
Review of Transmission line theory. Concept of Scattering Matrix[L – 4]
N-port networks-Properties of S matrix, Transmission matrix and their relationships
Microwave and mm wave Waveguide and Resonators [L – 4]
Rectangular Waveguide- design consideration, TE and TM modes, TE_{10} mode analysis, cut-off frequency, propagation constant, intrinsic wave impedance, phase and group velocity, power transmission, attenuation, waveguide excitation, wall current; Introduction of circular waveguide; Rectangular waveguide resonator design consideration, resonant frequency, Q-factor, excitation.
Planar Transmission lines and Resonators [L – 4]
Propagation characteristics, comparison for different characteristics of the above mentioned lines. strip line, micro-strip line, coplanar waveguide, Slot line-design consideration, Substrate integrated waveguide, non radiating dielectric guides, Design synthesis and analysis
Passive Components and their S-matrix Representation [L – 6]
Microwave and mm wave passive components and their S matrix representation: Attenuators, Phase shifter, Directional coupler, Bethe-hole coupler, magic tee, hybrid ring, circulators, Isolators; design of planar power dividers and couplers; design procedure of filter using insertion loss method-specification, low-pass prototype design, scaling and conversion, implementation.
Devices for RFIC and MMIC [L – 4]
CMOS, SOICMOS, GaAs, GaN and SiGe transistor technology
Amplifier Design [L – 6]
Basic consideration in the design of microwave amplifier- transistor S-parameter, Stability, matching network, noise figure; matching network design using lumped elements and L-Section. Five major MMIC amplifier topologies: the reactively matched amplifier, the lossy match amplifier, the feedback amplifier, the distributed amplifier and various forms of actively matched amplifier; design of low noise and high power amplifiers
Oscillator , Mixer, Switches, Attenuator and Phase Shifter [L – 8]CAD techniques for large-signal oscillator design; phase noise; MMIC VCO design; and MMIC injection-locked oscillator design, analysis of mixer circuits; diode mixers; coupling structures; active FET mixers; resistive FET mixers; image-rejection mixers; single-sideband mixers; sub-harmonically pumped mixers; and distributed FET mixers.GaAs FET switch mechanism and the development of an equivalent circuit for switching operation; different schemes for the</td></tr>
</table>

	realization of GaAs MMIC variable attenuators; MMIC phase shifters, implemented under either analogue or digital control. **Integrated Antenna:[L-4]**monolithic integrated antennas; integrated antenna selection; substrate choice; measurement issues; packaging; photonic bandgap antennas; micromachined antennas, including trench and cavity etching; and microelectromechanical systems antennas **Microwave and mm wave measurement basics [L – 4]** VSWR meter, tunable detector, slotted line and probe detector, spectrum analyzer, network analyzer, measurement of VSWR – low, medium and high, measurement of power: low, medium and high, frequency measurement.

ECE817	Design with Op-Amp & Analog Int. Circuits	PEL	3	0	0	3	3
Pre-requisites			Course Assessment methods: (Continuous Assessment (CA), Mid-term Assessment (MA) and End-term Assessment (EA))				

Electronic Devices and Circuits I and II (ECC302, ECC504)	CA comprises of : Assignment(s), Quiz(zes) /Class test(s)
Course Outcomes	After the completion of the course the student will be able to • **CO1:**Define various parameters/terms associated with Operational Amplifier. • **CO2:**Describe the internal structure of an Opamp using functional blocks • **CO3:**Design Adder/Subtractor/Integrator/Differentiator using Opamps • **CO4:**Define Slew rate and estimate settling time. • **CO5:**Explain the operation of a DAC. • **CO6:**Analyze the operation of an ADC.
Topics Covered	**Module I. Introduction to Operational Amplifier [L – 7]** Basic Op-amp characteristics, DC characteristics, Unity Gain Frequency, CMRR, PSRR, offset voltages and currents, Input and output impedances, Slew rate and Frequency limitations. Ideal opamp circuit analysis. Amplifiers: inverting/non-inverting, Summing amplifiers, and Difference amplifiers. Integrator and differentiator. Understanding negative feedback, concept of virtual short. **Module II. OpAmp Circuits [L – 6]** Current to Voltage and Voltage to Current converters, Current Amplifiers, Difference Amplifiers, Instrumentation Amplifiers. Log/Antilog Amplifiers, Transducer bridge Amplifiers. **Module III. Active Filters [L – 7]** Filter classification and transfer functions, First order active filters, Audio filter applications, Second order filter responses, KRC filters, State variable and bi-quad filters. Sensitivity. Filter approximations, Cascaded design **Module IV. Non liner Circuits using OpAmp [L – 6]** Voltage comparators and applications, Schmitt Trigger, Precision rectifiers, Peak detectors, Sample and Hold amplifiers. Mutivibrators, Triangular wave generators, V to F and F to V converters **Module V. Voltage references and Regulators [L – 6]** General performance considerations, Voltage references, Linear regulators and Switching regulators Voltage mode control and current mode control. **Module VI. Data Converters [L – 7]** Performance specifications, Digital to Analog Conversion techniques, Multiplying digital to analog converter applications. Analog to Digital Conversion techniques, Flash, SAR, Dual-slope ADC operation. **Module VII. Phase Locked Loop[L – 3]** Basic operation of PLL, Block diagram, performance parameters, applications.
Text Books, and/or Reference materials	**Text Book:** 1. Sergio Franco, "*Design with Operational Amplifiers and Analog Integrated Circuits*", McGraw-Hill, 2017. **Reference Book:** 1. Ramakant A Gayakwad, "*Op-Amps and Linear Integrated Circuits*", Pearson, 4th Edition 2015.

Pre-requisites		Course Assessment methods (Continuous (CT), Mid-Term (MT) and End Assessment (EA))					
Electromagnetic Theory and Transmission Lines (ECC403), Microwave Engineering (ECC502),Analog and Digital Communication(ECC401, ECC501),Antennas and Wave Propagation (ECC601)		Assignments, Mid Semester and End Semester Examination					
Course Outcomes	CO#1 To compute the satellite orbit parameters, design orbits and be able to classify them based on Kepler's six elements. CO#2 Understand the concept of satellite launching and positioning of satellites in orbits CO#3 Can do computations of link design and classify different losses in propagation for space communication. CO#4 Assimilate the concept of multiple accessing techniques in satellite communication. CO#5 Develop ability to classify different types of application of satellite communication.						

Topics Covered	**Introduction** Basic concepts, Frequency allocation for satellite services, orbital & spacecraft problems, comparison of networks and services, modulation techniques used for satellite communication. Spectrum Management**[L-4]** **Orbits** Two body problems, orbital mechanics, geostationary orbit, change in longitude, orbital manoeuvres, orbital transfer, and orbital perturbations. Launch Vehicles- principles of Rocket propulsion, powered flight, Lauch vehicles for communication satellite **[L-10]** **Satellite subsystems and satellite link design** Altitude and orbit control (AOC) Subsystem, TT&C, power system, spacecraft antenna, transponder, Friis transmission equation, G/T ratio of earth station.**[L-8]** **RF link-** noise, the basic RF link, satellite links (up and down) , optimization RF link, inter satellite link, noise temperature, Antenna temperature, overall system temperature, propagation factors, rain attenuation model. Tropospheric and Ionospheric effect.**[L-8]** **Multiple access** FDMA, TDMA, CDMA techniques, comparison of multiple access techniques, error connecting codes.**[L-8]** **Application of satellite** in remote sensing and surveillance; Basic of remote sensing, Electromagnetic Radiation principles, Atmospheric window, Indian satellite sensing satellite system, Active, Passive, ground based and space based remote sensing. **[L-8]**

• CO1: Analyze various architectures of today's digital radio transmitters and receivers.
• CO2: Analyze and design basic RF building-blocks in CMOS technology.
• CO3: Define basic RF measurements parameters such as S-parameters, sensitivity, noise figure, IIP3
• CO4: Assimilate the design techniques VCO, LNA as well as other front-end circuits</td></tr>
<tr><td>Topics Covered/ Syllabus</td><td colspan="7">Module-I: Introduction to RF IC Design Concepts [L – 6]
Basic Concepts in RF Design, passive on chip components and layouts, transceiver architectures, circuit analysis techniques at radio frequencies.
Module-II: Semiconductor radio frequency components [L – 8]
RF diodes, MOS transistor, determination of model parameters, parasitics of MOS transistors and high frequency behaviour of basic amplifier.RF Transistor Materials – The Transistor Equivalent Circuit – Y Parameters – S Parameters – Understanding RF Transistor Data Sheets; BSIM3 parameters of NMOS and PMOS transistors, matching and biasing networks for transistors
Module-III: Noise and non-linearity. [L – 4]
Noise Figure and representation of non-linearity, intermodulation products and intercept points
Module-IV: Filter Design [L – 4]
Resonator and filter configurations, realization of filter for specific transfer function, implementation of filters a coupled line filter.
Module V:RF Transistor Amplifier[L – 8]
Stability consideration, constant, gain and noise figure circles. Low Noise Amplifiers: SNR, LNA topologies, power constrained CMOS LNA design, low-current CMOS inverter LNAs, low-voltage LNA topologies, differential LNA design methodology, process variation in tuned LNAs, impact of temperature variation in tuned LNAs, low-noise bias networks for LNAs, MOSFET layout of LNA.
Module-VI: RF Mixers [L – 6]
Basic design concepts, single end diode mixer single balanced and double balanced diode mixer design. Transistor mixers, , conversion loss.
Module-VII: RF Oscillators [L – 6]
Basic Principles, Phase Noise, negative resistance oscillators, transistor oscillators, VCO design methodology, frequency scaling of CMOS VCO, VCO layoutPhase lock loops, frequency synthesizers
Module-VIII:RF power amplifiers [L – 4]
Class A, AB, B, C, D, E and F amplifiers, modulation of power amplifiers, linearity considerations</td></tr>

Department of Electronics and Communication Engineering							
Course Code	Title of the course	Program Core (PCR) / Elective(PEL)	Total Number of contact hours = 42				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECE821	Advanced Antenna Synthesis	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Electromagnetic Theory and Transmission Lines (ECC403), Analog Communication (ECC401), Digital Communication (ECC501), Antenna and Wave Propagation (ECC601)		CT+MT+EA					
Course Outcomes	• **CO 1:** Ability to characterize resonance and radiation property of an antenna based on application • **CO 2:** Learn various design parameters that affects an antenna and antenna array patterns. • **CO 3:** Understand different types of antenna based on the radiation mechanism like wire antenna, aperture antennas, traveling wave antenna. • **CO 4:** Understand different types of antenna based on the design mechanism like log periodic antenna, log spiral antenna and electrically long antenna as well as electrically small antenna. • **CO 5:** Analyze and synthesize different types of antennas for different wireless communications.						
Topics Covered	**Module I. Brief review on antenna fundamentals [L – 4]** Antenna fundamentals; Vector potentials and solution of the vector potential wave equation; Antenna theorems and definitions. **Module II. Antenna Array design and characterization [L – 6]** Linear, planar and circular array - theorems and pattern synthesis. **Module III. Integral Equations[L – 4]** Moment method, self and mutual impedances **Module IV. Scanning antennas [L – 8]** Signal processing antennas, travelling wave and broadband antenna; Concept of smart						

	antennas. **Module V. Microstrip antennas [L – 8]** Operating principle, modes, field patterns, impedance, feeding techniques and polarization; Arrays and feed networks. **Module VI.** Aperture antennas **[L – 6]** Huygen's principle, Babinet's principle; Fourier transform theory and its applications; The Geometrical theory of diffraction and uniform theory of diffraction techniques and their applications. **Module VII. Antenna measurements[L – 6]** Antenna ranges, Impedance Measurements, Radiation Patterns, Gain Measurements, Directivity Measurements, Radiation Efficiency, Current Measurements, Polarization Measurements.

<tr><td>Course Outcomes</td><td colspan="7">After the completion of the course, the student will be able to:
• CO 1: State VLSI design methodology for signal processing systems.
• CO 2: Describe VLSI algorithms and architectures for DSP.
• CO 3: Implement/Simulate basic architectures for DSP using Matlab/CAD tools.
• CO 4: Analyze DSP architectures and evaluate their performance.
• CO 5: Discuss various issues that need to be addressed when implementing DSP algorithms in real hardware with finite resources such as processing speed, memory, and bit resolution.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module I. Introduction to Digital Signal Processing [L – 6]
Review of DSPfundamentals: Discrete Systems: Representation of Systems, Properties of DSP systems, Difference equation and its relationship with system function, Impulse response and frequency response.
Module II. Digital Signal Processing Algorithms [L – 6]
Introduction for DSP algorithms: VLSI Design flow, Mapping algorithms into Architectures: Graphical representation of DSP algorithms – signal flow graph (SFG), data flow graph (DFG), critical path, dependence graph (DG). Data path synthesis, control structures, Optimization at Logic Level and architectural Design, Loop bound and iteration bound, Algorithms for computing iteration bound
Module III. Introduction to DSP systems [L – 5]
DSP Systems, Parallel and pipeline of signal processing application: Architecture for real-time systems, latency and throughput related issues, clocking strategy, power-aware structures, array architectures; Pipelining processing of Digital filter, Parallel processing, Parallel and pipelining for Low power design, Optimization with reference to speed, area and power, asynchronous and low power system design, ASIC (application-specific integrated circuits) and ASISP (application-specific instruction-set processors) design.
Module IV. Systolic Array Architecture [L – 6]
Methodology of systolic array architecture, FIR based Systolic Array, Selectionof Scheduling Vector, Matrix multiplication of systolic array.
Module V. Signal processing Architectures [L – 7]
Convolution technique, Retiming concept, Folding/Unfolding Transformation, Fast convolution, Cook-Toom algorithm, modified Cook-Toom algorithm. CORDIC architecture.
Module VI. Scaling and Round-off noise [L – 5]
Scaling and round-off noise, scaling operation, round-off noise, state variable description of digital filters, scaling and round-off noise computation, round-off noise in pipelined IIR filters.
Module VII. Low Power Design [L – 7]
Theoretical background, Scaling v/s power consumption, power analysis, Power estimation approach, Power reduction techniques.</td></tr>

<tr><td>Course Outcomes</td><td colspan="7">After successful completion of the course, the student will be able to:
• CO 1: Extend knowledge of the requirement of fault modeling in VLSI circuits.
• CO 2: Generate test vectors to test a circuit efficiently covering maximum faults.
• CO 3: Demonstrate the concept of Memory testing techniques.
• CO 4: Discuss Built-in-Self Test and its application in modern digital design.
• CO 5: Use modern tools for testing and verification.</td></tr>
<tr><td>Syllabus/
Topics Covered</td><td colspan="7">Module I. Introduction [L –4]
Physical faults and their modeling. Fault equivalence and dominance; fault collapsing, Fault simulation: parallel, deductive and concurrent techniques; critical path tracing.
Module II. Test generation for combinational circuits[L – 4]
Boolean difference, D-algorithm, Podem, random, etc. Exhaustive, random, and weighted test pattern generation; aliasing and its effect on fault coverage.
Module III. PLA testing[L – 4]
Cross-point fault model, test generation, easily testable designs.
Module IV. Memory testing [L – 4]
Permanent, intermittent and pattern-sensitive faults; test generation.
Module V. Delay faults and hazards [L – 6]
Test pattern generation techniques, ATPG and its different types.
Module VI. Test pattern generation for sequential circuits[L – 6]
Ad-hoc and structures techniques scan path and LSSD, boundary-scan.
Module VII. Built-in Self-Test techniques[L – 6]
LBIST and MBIST. Verification: logic level (combinational and sequential circuits), RTL-level (data path and control path). Verification of embedded systems. Use of formal techniques: decision diagrams, logic-based approaches.
Module VIII. ASIC/IP Verification[L – 4]
Direct and random testing, Error detection, and correction codes.
Module IX. Post-Silicon Validation [L – 4]
Functional test patterns development and validating, test program and test software to enable functional and tress testing of features, validation with real use case applications: OS boot and stress testing, performance validation with industry-standard benchmarks, characterization of various electrical and thermal parameters as per device specification.</td></tr>

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT.

6th Semester

	DEPARTMENT OF ELETRICAL ENGINEERING
EEE610	Numerical Analysis
EEE611	Instrumentation
EEE612	Modern Control Systems
EEE613	Special Electrical Machines
EEE614	Signals and Systems
EEE615	Advanced Power Electronics
EEE616	Soft Computing Theory and Applications

7th Semester

	DEPARTMENT OF ELETRICAL ENGINEERING
EEE710	Renewable Energy Systems
EEE711	Advanced Power Converters
EEE712	Generalized Theory of Electrical Machines
EEE713	Electrical Drives
EEE714	Power System Planning, Operation and Control
EEE715	Embedded Systems
EEE716	FACTS Device
EEE717	Generation & Utilization of Electrical Power
EEE718	Advanced Control Systems
EEE719	Microprocessor & Embedded Systems
EEE720	Digital Signal Processing
EEE721	Design of Flight Control Law
EEE722	Power system restructuring & deregulation

8th Semester

	DEPARTMENT OF ELETRICAL ENGINEERING
EEE810	Power System Transients & Power Quality
EEE811	Smart Grid
EEE812	Power system Reliability

Department of Mathematics

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 01	MATHEMATICS - I	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Basic concepts of function, limit, differentiation, and integration.	CT+MT+EA

Course Outcomes	• CO1: To introduce the fundamentals of differential calculus of single and several variables • CO2: To develop the basic concepts of integral calculus including multiple integrals and its application in finding area, volume, centre of mass, centre of gravity etc. • CO3: To introduce the fundamental concepts of vector calculus • CO4: To develop the concept of convergence
Topics Covered	**Functions of Single Variable:** Rolle's Theorem and Lagrange's Mean Value Theorem (MVT), Cauchy's MVT, Taylor's and Maclaurin's series, Asymptotes & Curvature (Cartesian, Polar form). (8) **Functions of several variables:** Function of two variables, Limit, Continuity and Differentiability, Partial derivatives, Partial derivatives of implicit function, Homogeneous function, Euler's theorem and its converse, Exact differential, Jacobian, Taylor's & Maclaurin's series, Maxima and Minima, Necessary and sufficient condition for maxima and minima (no proof), Stationary points, Lagrange's method of multipliers. (10) **Sequences and Series:** Sequences, Limit of a Sequence and its properties, Series of positive terms, Necessary condition for convergence, Comparison test, D Alembert's ratio test, Cauchy's root test, Alternating series, Leibnitz's rule, Absolute and conditional convergence. (6) **Integral Calculus:** Mean value theorems of integral calculus, Improper integral and it classifications, Beta and Gamma functions, Area and length in Cartesian and polar co-ordinates, Volume and surface area of solids of revolution in Cartesian and polar forms. (12) **Multiple Integrals:** Double integrals, Evaluation of double integrals, Evaluation of triple integrals, change of order of integration, Change of variables, Area and volume by double integration, Volume as a triple integral. (10) **Vector Calculus:** Vector valued functions and its differentiability, Line integral, Surface integral, Volume integral, Gradient, Curl, Divergence, Green's theorem in the plane (including vector form), Stokes' theorem, Gauss's divergence theorem and their applications. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th edition, Wiley India Edition (2010). 2. Daniel A. Murray, Differential, and Integral Calculus, Fb & c Limited, 2018. 3. Marsden, J. E; Tromba, A. J.; Weinstein: Basic Multivariable Calculus, Springer, 2014. **Reference Books:** 1. Tom Apostal, Calculus-Vol-I & II, Wiley Student Edition, 2011. 2. Thomas and Finny: Calculus and Analytic Geometry, 11th Edition, Addison Wesley.

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
PHC01	Engineering Physics	PCR	2	1	0	3	3

Pre-requisites:	Course Assessment methods: (Continuous (CT), mid-term (MT) and end assessment (EA))
NIL	CT+MT+EA

Course Outcomes	CO1: To realize and apply the fundamental concepts of physics such as superposition principle, simple harmonic motion to real world problems. CO2: Learn about the quantum phenomenon of subatomic particles and its applications to the practical field. CO3: Gain an integrative overview and applications of fundamental optical phenomena such as interference, diffraction and polarization. CO4: Acquire basic knowledge related to the working mechanism of lasers and signal propagation through optical fibers.
Topics Covered	**Harmonic Oscillations** - Linear superposition principle, Superposition of two perpendicular oscillations having same and different frequencies and phases, Free, Damped and forced vibrations, Equation of motion, Amplitude resonance, Velocity resonance, Quality factor, sharpness of resonance, etc. [8] **Wave Motion** - Wave equation, Longitudinal waves, Transverse waves, Electro-magnetic waves. [3] **Introductory Quantum Mechanics** - Inadequacy of classical mechanics, Blackbody radiation, Planck's quantum hypothesis, de Broglie's hypothesis, Heisenberg's uncertainty principle and applications, Schrodinger's wave equation and applications to simple problems: Particle in a one-dimensional box, Simple harmonic oscillator, Tunnelling effect. [8] **Interference & Diffraction** - Huygens' principle, Young's experiment, Superposition of waves, Conditions of sustained Interference, Concepts of coherent sources, Interference by division of wavefront, Interference by division of amplitude with examples, The Michelson interferometer and some problems; Fraunhofer diffraction, Single slit, Multiple slits, Resolving power of grating. [13] **Polarisation** - Polarisation, Qualitative discussion on Plane, Circularly and elliptically polarized light, Malus law, Brewster's law, Double refraction (birefringence) - Ordinary and extra-ordinary rays, Optic axis etc.; Polaroid, Nicol prism, Retardation plates and analysis of polarized lights. [5] **Laser and Optical Fiber** - Spontaneous and stimulated emission of radiation, Population inversion, Einstein's A & B co-efficient, Optical resonator and pumping methods, He-Ne laser. Optical Fibre– Core and cladding, Total internal reflection, Calculation of numerical aperture and acceptance angle, Applications. [5]

Text Books, and/or reference material	**TEXT BOOKS**: 1. The Physics of Vibrations and Waves, H. John Pain, Willy and Sons 2. A Text Book of Oscillations and Waves, M. Goswami and S. Sahoo, Scitech Publications 3. Engineering Physics, H. K. Malik and A. K. Singh, McGraw-Hill. **REFERENCE BOOKS**: 1. Vibrations and Waves in Physics, Iain G. Main, Cambridge University Press 2. Quantum Physics, R. Eisberg and R. Resnick, John Wiley and Sons 3. Fundamental of Optics, Jankins and White, McGraw-Hill 4. Optics, A. K. Ghatak, Tata McGraw-Hill 5. Waves and Oscillations, N. K. Bajaj, Tata McGraw-Hill 6. Lasers and Non-linear Optics, B. B. Laud , New Age International Pvt Lt

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CYC 01	Engineering Chemistry	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	• CO1: Introduced to chemical thermodynamics, kinetics, electrochemistry, absorption, and catalytic processes for engineering applications • CO2: To learn fundamentals of polymer chemistry and petroleum engineering. • CO3: Introduced to basic spectroscopic techniques for structure determination and characterization. • CO4: To study few inorganic and bioinorganic compounds of industrial importance.						
Topics Covered	**ORGANIC CHEMISTRY** i. Fundamentals of organic reaction mechanisms; Few important reactions and their mechanism along with their applications; Robinson annulation, Hydroboration reaction, Organometallic reagents (Gilman reagents), Metathesis using Grubb's catalyst and Wittig reaction. (3) ii. Fundamental concept on stereochemistry and application: Conformation and configuration of organic compounds, Diastereo-selective, enantio-selective, regio-selective, stereo-specific, and stereo-selective reactions. (3) iii. Polymer chemistry and polymer engineering: Fundamental concept on polymer chemistry; synthesis and application of important polymers, Rubber, and plastic materials. Conducting polymer. (2) iv. Petroleum Engineering and oil refinery: origin of mineral oils, separation principle and techniques of distillation of crude oil, Uses of different fractions, octane number, cetane number, Knocking, anti-knock compounds, and Bio-Fuel. (2)						

	v. Structure elucidation of organic compounds by modern spectroscopic methods; Application of UV-Visible and FT-IR spectroscopy. (3) **INORGANIC CHEMISTRY** i. **Coordination Chemistry:** Crystal Field Theory of octahedral and tetrahedral complexes, colour and magnetic properties, Jahn-Teller distortion, pseudo Jahn-Teller distortion, Isomerism, and stereochemistry. (5) ii. **Bioinorganic Chemistry:** Heme and non-heme O_2 transport protein (Haemoglobin, Myoglobin), Chlorophyll and photosynthesis. (3) iii. **Inorganic Materials:** Introduction towards industrially important inorganic materials like cementing material, refractory material, fertiliser, inorganic polymer. (2) iv. **Organometallic Chemistry:** π-acid ligands, stabilization of metal low oxidation state and 18 electron rules, metal carbonyls and nitrosyls, metal-alkene complexes. (4) **PHYSICAL CHEMISTRY** i. **Thermodynamics:** 2nd law of thermodynamics, entropy, free energy, Gibbs Helmholtz equation, change of phase. Cryogenics: joule Thomson experiment. (4) ii. **Chemical Kinetics:** 2nd and 3rd order rate expression, Reversible reaction, Chain reaction, Consecutive reaction, Temp effect on reaction rate. (4) iii. **Electrochemistry:** Electrochemical cell, Effect of pH, precipitation, and complex formation on EMF of oxidation/reduction processes. (2) iv. **Absorption:** Physical and Chemical absorption, Absorption isotherms. (1) v. **Catalysis:** Types of catalysis, Rate expression for Catalysed reaction, Acid-base and Enzyme catalysis. (2)
Text Books, and/or reference material	Suggested Text Books: (i) Physical Chemistry by P. Atkins, Oxford (ii) A guidebook to mechanism in Organic chemistry: Peter Sykes; Pearson Edu. (iii) Inorganic Chemistry Part-I & II, R. L. Dutta, The new book stall Suggested Reference Books: **Organic Chemistry**: (i) Basic stereochemistry of organic molecules: S. Sengupta; Oxford University press (ii) Engineering Chemistry: Wiley (iii) Elementary Organic Spectroscopy: William Kemp, ELBS with Macmillan **Inorganic Chemistry:** (i) Inorganic Chemistry: Principle structure and reactivity, J. E. Huheey, E. A. Keiter and R. L. Keiter, Pearson Education (ii) Bioinorganic Chemistry -- Inorganic Elements in the Chemistry of Life: An Introductionand Guide, 2nd Edition, Wolfgang Kaim, Brigitte Schwederski, Axel Klein. (iii) Inorganic Chemistry Fourth Edition, Shriver & Atkins, Oxford **Physical Chemistry:** (i) Physical Chemistry by G.W Castellan (ii) Physical Chemistry by P. C. Rakshit

XEC01	**ENGINEERING MECHANICS**	PCR	2	1	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA

Course Outcomes	• CO1: Acquire knowledge of mechanics and ability to draw free body diagrams. • CO2: Apply knowledge of mechanics for solving special problems like truss and frame analysis. • CO3: Ability to calculate centroid, moments of inertia for various shapes. • CO4: Learn momentum and energy principles. • CO5: Knowledge on virtual Work Principle and its application
Topics Covered	Engineering Mechanics; measurement and SI units. [1] Vectors and force as a vector; Resultant of a system of forces on a particle; free body diagram and conditions of equilibrium of a particle; problems on particles; equilibrium of particles in space. [2] Resultant of a system of forces and couples on a rigid body; conditions of equilibrium of a rigid body; free body diagrams of rigid bodies subjected to different types of constraints; simple space problems of rigid bodies. [4] Coefficients of static and kinetic friction; problems involving friction; theories of friction on square threaded power screw and flat belt. [5] Simple trusses; analysis of trusses by method of joints and method of sections. [5] Centre of gravity and centre of mass; centroids of lines, curves and areas; first moment of area; second moment of area; polar moment of inertia; radius of gyration of an area; parallel axis theorem; mass moment of inertia. [4] Path, velocity, acceleration; rectilinear and curvilinear motion; motion of system of particles; introduction to the concept of plane kinematics of rigid bodies. [6] Newton's second law of motion; dynamic equilibrium and D'Alembert's principle; linear momentum; angular momentum; rectilinear and curvilinear motion; principles of work–energy and impulse–momentum; impact of system of particles; introduction to the concept of plane kinetics of rigid bodies. [12] Principle of Virtual Work, Solution of Problems on Mechanics using Principle of Virtual Work [3]
Text Books, and/or reference material	1) S P Timoshenko and D H Young, Engineering Mechanics, 5th Edition 2) J L Meriam and L G Kraige, Engineering Mechanics, 5th Edition, Wiley India 3) F P Beer and E R Johnston, Vector Mechanics for Engineers 4) I H Shames, Engineering Mechanics

PHS51	Physics Laboratory	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods: (Continuous evaluation (CE) and end assessment (EA))					
NIL		CE+EA					

Course Outcomes	CO1: To realize and apply different techniques for measuring refractive indices of different materials. CO2: To realize different types of waveforms in electrical signals using CRO. CO3: To understand charging and discharging mechanism of a capacitor. CO4: To understand interference, diffraction and polarization related optical phenomena. CO5: To acquire basic knowledge of light propagation through fibers.
Topics Covered	1. Find the refractive index of a liquid by a travelling microscope. 2. Determine the refractive index of the material of prism using spectrometer. 3. Determination of amplitude and frequency of electrical signals by oscilloscope. 4. To study the characteristics of RC circuits. 5. To study Brewster's law/Malus' law using laser light. 6. To study the diffraction of light by a grating. 7. To study the interference of light by Newton's ring apparatus. 8. To determine numerical aperture of optical fiber. 9. Determination of Planck constant.
Text Books, and/or reference material	**SUGGESTED BOOKS**: 1) A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

None	CT+EA

Course Outcomes	• CO1: To learn basic analytical techniques useful for engg applications. • CO2: Synthesis and characterization methods of few organic, inorganic and polymer compounds of industrial importance. • CO3: Learn chromatographic separation methods. • CO4: Applications of spectroscopic measurements.
Topics Covered	i. Experiments based on pH metry: Determination of dissociation constant of weak ac by pH meter. ii. Experiments based on conductivity measurement: Determination of amount of HCl conductometric titration with NaOH. iii. Estimation of metal ion: Estimation of Fe^{2+} by permangnomentry iv. Estimation of metal ion: Determ. of total hardness of water by EDTA titration. v. Synthesis and characterization of inorganic complexes: e. g. $Mn(acac)_3$, $Fe(acac)_3$, c bis(glycinato)copper (II) monohydrate and their characterization by m. p. , FTIR etc. vi. Synthesis and charact. of organic compounds: e.g.Dibenzylideneacetone. vii. Synthesis of polymer: polymethylmethacrylate viii. Verification of Beer-Lamberts law and determination of amount of iron present i supplied solution. ix. Chromatography: Separation of two amino acids by paper chromatography x. Determination of saponification value of fat/ vegetable oil
	Suggested Text Books: 1. Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall 2. Advanced Physical Chemistry Experiments: By Gurtu&Gurtu 3. Comprehensive Practical Organic Chemistry: Qualitative Analysis By V. K. Ahluwalia and S. Dhingra Suggested Reference Books: 1. Practical Chemistry By R.C. Bhattacharya 2. Selected experiments in Physical Chemistry By N. G. Mukherjee

<tr><td>Course Outcomes</td><td colspan="7">• CO1: Study and practice on machine tools and their operations
• CO2: Practice on manufacturing of components using workshop trades including fitting, carpentry, foundry and welding
• CO3: Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping
• CO4: Develop basic electrical engineering knowledge for house wiring practice</td></tr>
<tr><td>Topics Covered</td><td colspan="7">M/c shop & Carpentry shop -- 3X3= 9hrs.
• Introduction on machining process.
• Introduction to machine tools- Lathe, Shaper, Milling and Drill machine.
• Introduction to woods- Types, structure, disease and defect of wood.
• Introduction to wood working machines and tools.
• Making of dovetail joint and bridle joint.
Welding Shop & Sheet metal -- 3X3= 9hrs.
• Introduction to welding.Safety and precautions in welding.
• Formation of weld bead by SMAW on mild steel flat.
• Formation of weld bead by oxy-fuel welding on mild steel flat.
• Introduction to sheet Metal works.
• Tools and Machines used in sheet metal works.
• Concept of development, marking out of metal sheets.
• Cutting and joining of metal sheets.
• Safety precautions, General warning needed in the shop floor.
Black smithy & Foundry -- 3X3= 9hrs.
• Introduction Smithing and Forging- Tools, Machines, Furnaces and its accessories, fuels.
• Safety and precautions in blacksmithy.
• Making of bars of different cross-sections.
• Making of hexagonal headed bolts.
• Forge welding.
• Introduction to Foundry Technology.
• Preparation of sand mould using Solid/Split Pattern.
Fitting & Electrical shop -- 3X3= 9hrs.
• Introduction to hand metal cutting tools with specifications, nomenclature and their use.
• Marking tools, measuring tools and their use.
• Fitting of joints of mild steel flats.
• Introduction to electrical hazards and safety precaution.
• Wire jointing and soldering.
• PVC Conduit Wiring controlled by separate single way switches.
• PVC Cashing Capping Wiring for two-way switches.
• Conduit wiring for the connection of a Calling Bell with In& Out Indicators.
• Batten Wiring and Cleat Wiring.</td></tr>
</table>

	• Tube Light Connection. • Insulation Resistance Testing of 1ph / 3ph Motor and House Wiring. • Earth Resistance Testing. • DOL Starter Connection. **Viva voce -- 1X3= 3hrs.**

Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Introduction of Yoga. • Sitting Posture/Asanas- Padmasana, Vajrasana, Ardhakurmasana, Ustrasana, Bakrasana, Sasankasana, Janusirshasana, Suryanamaskar. • Mudra- Gyana mudra, Chin mudra, Shuni mudra, Prana mudra, Adi mudra, Anjali mudra. • Laying Posture/Asanas- PavanaMuktasana, UttanaPadasana, Sarpasana, Bhujangasana (Cobra Pose), Eka Pada Śalabhāsana, Dhanurasana, Chakrasana, Viparitkarani. • Meditation- Yognidra, Om chant, Pray chant. • Standing Posture/Asanas- Tadasana (Mountain Pose), Vrikshasana (Tree Pose), Ardhachandrasana, Trikonasana, Utkatasana, Padahastasana.						

	• Pranayama- Deep breathing, AnulomVilom, Suryabhedi, Chandrabhedi. • Kriya- Kapalbhati, Trataka. **ATHLETICS** • Introduction of Athletic. • Starting Technique for Track events- Standing start, Crouch start & Block start. • Finishing Techniques. • Relay Race- 4×100m, 4×400m & Baton Exchange Technique & Rules. • Track Marking with Fundamentals- 200m, 400m and Diagonal Distance Radius, Straight Distance, Staggers of Different Lanes & Curve Distance. **BASKETBALL** • Introduction and Players stance and ball handling. • Passing- Two hand chest pass, two hand bounce pass, One hand baseball pass, Side arm pass, Overhead pass, Hook pass. • Receiving- Two hand receiving, one hand receiving, receiving in stationary position, Receiving while jumping and Receiving while running. • Dribbling- Dribble, High dribble, Low dribble, Reverse dribble, Rolling dribble. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Introduction of Volleyball • Service- Underarm service, Sidearm service, Tennis service, Floating service, Jump service. • Pass: Underarm pass- Ready position, Teaching stage of underarm pass and Upper hand pass- Volley pass, Back pass, Short set, Jump set & Underarm set. • Rules and their interpretation. **FOOTBALL** • Introduction of Football • Push pass- Instep inside, Instep outer side. • Kicking- Spot kick, Instep kick, Lofted kick. • Dribbling- One leg, Both legs, Instep. • Trapping- Rolling ball sole trapping, High ball sole trapping, High ball chest trapping, High ball thigh trapping. • Throwing- Standing throw, Running throw, Seating throw. • Goal Keeping- Griping the ball, Full volley, Half volley, Drop Kick. • Rules and their interpretation. **CRICKET** • Introduction of Cricket • Batting gripping & Stance, Bowling gripping technique. • Batting front foot defense& Drive. • Batting Back foot defense& Drive. • Batting Square cut. • Bowling medium pace, Bowling off break. • Fielding drill, Catching (Short & High). • Rules & Regulation. **BADMINTON** • Basic introduction about Badminton and Badminton court. • Racket parts, Racket Grip, Shuttle Grip. • Basic stance, Basic Footwork, Shadow practice (Full court movement). • Strokes services: Forehand- Overhead & Underarm, Backhand- Overhead & Underarm.

	• Match practice (Single & Double). • Rules & Regulation. **TABLE TENNIS** • Introduction of Table Tennis. • Basic Stance and Grip (Shake hand & Pen hold). • Service Basic. • Stroke: Backhand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Stroke: Forehand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-1 General Introduction and words of command. • FD-2 Attention, Stand at ease and Stand easy, Turning and inclining at the halt. • FD-3 Sizing, Forming up in three Ranks Numbering, Open and Close order March and Dressing. • FD-4 Saluting at the halt, Getting on parade, Dismissing and falling out. • FD-5 Marching, Length of pace and Time of Marching in quick time and Halt, Slow March and Halt. • FD-7 Turning on the March and Wheeling. • FD-12 Parade practice. **TAEKWONDO** • Introduction about Taekwondo- Meaning of Taekwondo, Korean language of dress, Fighting area, Punch, Block, Kicks etc. • Stance- Ready stance, Walking stance, Fighting stance, Front stance, Back stance, Cat stance etc. • Punch Technique- Front fist punch, Rear fist punch, Double fist punch, With stance etc. Blocks- Upper blocks, Middle block, Side block, Suto etc. • Foot Technique (Balgisul)- Standing kick (Saseochagi), Front kick (Abchagi), Doliyo (Chagi), Abdalchagi (Butterfly kick), Back kick etc. **NSS** • Swachha Bharat Mission • Free Medical Camp • Sanitation drive in and around the campus. • Unnat Bharat Abhiyaan • MatribhashaSaptah celebration

MAC 02	MATHEMATICS - II	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Basic concepts of set theory, differential equations, and probability.	CT+MT+EA

Course Outcomes	
	• CO1: Develop the concept of basic linear algebra and matrix equations so as to apply mathematical methods involving arithmetic, algebra, geometry to solve problems. • CO2: To acquire the basic concepts required to understand, construct, solve and interpret differential equations. • CO3: Develop the concepts of Laplace transformation & Fourier transformation with its property to solve ordinary differential equations with given boundary conditions which are helpful in all engineering & research work. • CO4: To grasp the basic concepts of probability theory.

Topics Covered	**Elementary algebraic structures:** Group, subgroup, ring, subring, integral domain, and field. (5) **Linear Algebra:** Vector space, Subspaces, Linear dependence and independence of vectors, Linear span, Basis and dimension of a vector space. Rank of a matrix, Elementary transformations, Matrix inversion, Solution of system of Linear equations, Eigen values and Eigen vectors, Cayley-Hamilton Theorem, Diagonalization of matrices. (15) **Ordinary Differential Equations:** Existence and uniqueness of solutions of ODE (Statement Only), Equations of first order but higher degree, Clairaut's equation, Second order differential equations, Linear dependence of solutions, Wronskian determinant, Method of variation of parameters, Solution of simultaneous equations. (12) **Fourier series:** Basic properties, Dirichlet conditions, Sine series, Cosine series, Convergence. (4) **Laplace and Fourier Transforms:**Laplace transforms, Inverse Laplace transforms, Convolution theorem, Applications to Ordinary differential equations. Fourier transforms, Inverse Fourier transform, Fourier sine and cosine transforms and their inversion, Properties of Fourier transforms, Convolution. (10) **Probability:** Historical development of the subject and basic concepts, Axiomatic definition of probability, Examples to calculate probability, Random numbers. Random variables and probability distributions, Binomial distribution, Normal distribution. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th edition, Wiley India Edition (2010). 2. 	2.3. Principle of operation with forward biasing and reverse biasing 2.4. Characteristics 2.5 Diode's three models/equivalent circuits.(02 hrs.) 3.**Diode Circuits** 3.1 Diode rectifier 3.1.1 Half wave rectifier 3.1.2 Full wave rectifier:centre tap and bridge rectifier 3.1.3 Capacitive filter and DC power supply (Numerical problems) 3.2 Special Diodes 3.2.1 Zenerdiode: Avalanche breakdown and Zener breakdown and characteristics. 3.2.2 Zener diode as a voltage regulator 3.2.3 Displaydevices: LED and LCD. (03 hrs.) 4.**Bipolar Junction Transistor (BJT)** 4.1 n-p-n and p-n-p transistor and their constructions 4.2 Principle of operation 4.3 Transistor configuration: common base, common emitter, and common collector 4.4 Transistor characteristics: input and output characteristics of CB and CE configurations 4.5 DC load line: quiescent (Q) point; cut-off, active, and saturation region 4.6 Amplifier: Principle of operation 4.7 Transistor as a switch. (04 hrs.) 5.**Transistor Biasing** 5.1 Need of biasing 5.2 Methods of biasing: base resistor or fixed bias, emitter feedback, voltage divider biasing 5.3 Stability of Q-point (qualitative discussions) 5.4 (Numerical problems). (02 hrs.) 6.**Single Stage Amplifier:** classification of amplifiers (voltage amplifier, current amplifier, power amplifier etc.) Class-A CE Amplifier with coupling and bypass capacitors, Qualitative discussions of magnitude characteristics of frequency response (graph only) (02 hrs.) 7.**Feedback Amplifier** 7.1 Positive and negative feedback 7.2 Deduction of gain with negative feedback, explanation of stability of gain with negative feedback, other effects of negative feedback (no deduction), numerical problems. (03 hrs.) 8.**Other Semiconductor Devices** 8.1 JFET: Construction, principle of operation, characteristics 8.2 MOSFET: Construction, principle of operation, characteristics 8.3 Power Electronic Device-SCR: Brief discussions. (02 hrs.) 9.**Operational Amplifier** 9.1 Characteristics of ideal operational amplifier 9.2 Pin Configuration of IC 741, 9.3 Analysis of simple operational amplifier circuits: concept of virtual ground; noninverting amplifier and inverting amplifier. 9.4 Applications: voltage follower, summer, differentiator, integrator, and comparator (04 hrs) 10.**Oscillator** 10.1 Positive feedback and condition of oscillation 10.2 R-C phase-shift oscillator, Wien bridge oscillator.(02 hrs.) 11.**Boolean Algebra**

	11.1 Boolean algebra, De Morgan's theorem, simplification of Boolean expressions 11.2 Number system, range extension of numbers, overflow 11.3 Different codes: gray code, ASCII code and BCD codes and them Applications. (01 hrs.) 12. **Logic Gates** 12.1 NOT, OR, AND, NOR, NAND, EX-OR, EX-NOR gates 12.2 Simplification of logic functions 12.3 Realizations of logic expressions using logic gates.(01 hrs.) 13. CRO and its applications and other test and measurement instruments. (01 hrs.)

Pre-requisites		Course Assessment methods (Continuous (CT), Mid Term (MT), and end assessment (EA))					
NIL		CT+MT+ EA					

Course Outcomes	Upon successful completion of this course, the student should be able to • CO1: learn the fundamentals of Electric Circuits and Network theorems and analysis of electrical network based on these concepts. • CO2: develop an idea on Magnetic circuits, Electromagnetism and learning the working principles of some fundamental electrical equipment's • CO3: learn about single phase and poly-phase AC circuits and analysis of such circuits based on these concepts. • CO4: introduce the basic concept of single-phase transformer. • CO5: analyze the transient phenomena in electrical circuits with DC excitation.
Topics Covered	Introduction: Overview of Electrical power generation systems (2) Fundamentals of Electric Circuits: Ohm's laws, Kirchhoff's laws, Independent and Dependent sources, Analysis of simple circuits. (4) Network theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem (4) Magnetic circuits: Review of fundamental laws of electromagnetic induction, transformer and rotational emfs, Solution of magnetic circuits. Analysis of coupled circuits (self-inductance, mutual inductance, and dot convention)(8) Transients with D.C. excitation for R-L and R-C circuits. (3) Generation of alternating voltage and current, E.M.F. equation, Average and R.M.S. value, Phase and phase difference, Phasor representation of alternating quantity, Behavior of A.C. circuits, Resonance in series and parallel R-L-C circuits. AC Network: Superposition theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem, solution of networks with AC sources. (10) Single-Phase Transformer, equivalent circuits, open circuit and short circuit tests (6) Poly-phase system, Advantages of 3-phase system, Generation of 3-phase voltages, Voltage, current and power in a star and delta connected systems, 3-phase balanced and unbalanced circuits, Power measurement in 3-phase circuits. (5)
Textbooks/Reference material	Textbooks: 1. Electrical & Electronic Technology by Hughes, Pearson Education India Reference Books: 1. Advanced Electrical Technology by H. Cotton, Reem Publication Pvt. Ltd 2. Electrical Engineering fundamentals by Vincent Deltoro, Pearson Education India

BTC01	LIFE SCIENCE	PCR	2	0	0	2	2

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA

Course Outcomes	CO1: Basic understanding of basic cellular organization of organisms and cellular communications, structure and functions of the macromolecules and their biosynthesis and cata--bolism. CO2: To give an understanding of the key features of the structure, growth, physiology and behavior of bacteria, viruses, fungi and protozoa CO3: To introduce molecular biology to understand biological processes in various applications. CO4: To provide a foundation in immunological processes and an overview of the interaction between the immune system and pathogens. CO5: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them CO6: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them
Topics Covered	**1. Cell Biology (4)** a) Introduction to life science: prokaryotes & eukaryotes Definition; Difference b) Introduction to cells - Define cell, different types of cell c) Cellular organelles - All organelles and functions in brief d) Cellular communications Introduction to basic signaling; endocrine, paracrine signaling; concepts of receptor, ligand, on-off switch by phosphorylation/dephosphorylation **2. Biochemistry (4)** a) Biological function of carbohydrate and lipid - Introduction, structure and function b) Biological function of nucleic acids and protein - structure and function c) Catabolic pathways of Macromolecules - Introduction to catabolism, hydrolysis and condensation reactions; Catabolism of glucose- Glycolysis, TCA; overall degradation of proteins and lipids d) Biosynthesis of Macromolecules Generation of ATP (ETS), Generation of Glucose (Photosynthesis) **3. Microbiology (5)** a) Types of microorganisms and their general features - Bacteria, Yeast, Fungi, Virus, Protozoa- general introduction with practical significance and diseases b) Microbial cell organization - Internal and External features of cell- bacterial cell wall, viral capsule, pilus etc, c) Microbial nutritional requirements and growth - Different Sources of energy; growth curve d) Basic microbial metabolism - Fermentation, Respiration, Sulfur, N_2 cycle **4. Immunology (5)** a) Basic concept of innate and adaptive immunity - Immunity-innate and adaptive, differences, components of the immune system b) Antigen and antibody interaction - Antigen and antibody, immunogen, factors affecting immunogenicity, basic antigen-antibody mediated assays, introduction to monoclonal antibody

	c) Functions of B cell - B cell, antibody production, memory generation and principle of vaccination d) Role of T cell in cell-mediated immunity - Th and Tc, functions of the T cell with respect to different pathogen and cancer cell **5. Molecular Biology (5)** a) Prokaryotic Genomes (Genome organization & structure) - Nucleoid, circular or linear b) Eukaryotic Genomes (Genome organization & structure) - Intron, exon, packaging, chromatin c) Central Dogma (Replication, Transcription and Translation) d) Applications of Molecular Biology (Diagnostics, DNA-fingerprinting, Recombinant products etc.) - Introduction to Recombinant DNA, fingerprinting, cloning **6. Bioprocess Development (5)** a) Microbial growth kinetics - Batch, fed-batch and continuous systems, Monod Equation b) Enzyme kinetics, kinetics of enzyme inhibition and deactivation Definition of enzymes, activation energy, Concepts of Km, Vmax, Ki c) Microbial sterilization techniques and kinetics Introduction to sterilization, dry and moist sterilization d) Thermodynamics of biological system - Concepts of Enthalpy, Entropy, favorable reactions, exergonic and endergonic reactions e) Material and energy balance for biological reactions - Stoichiometry

Course Outcomes	• CO1: Acquire idea about basic electronic components, identification, and behavior. • CO2: To determine IV characteristics of these Circuit elements for different applications. • CO3: Learn to analyze the circuits and observe and relate input and output signals.						
Labs Conducted.	1. To know your laboratory: To identify and understand the use of different electronic and electrical instruments. 2. To identify and understand name and related terms of various electronics components used in electronic circuits.: Identify different terminals of components, fid their values and observe numbering associate with it. 3. Use of oscilloscope and function generator: Use of oscilloscope to measure voltage, frequency/time and Lissajous figures of displayed waveforms. 4. Study of half wave and Full-wave (Bridge) rectifier with and without capacitor filter circuit.: 5. Realization of basic logic gates: Truth table verification of OR, AND, NOT, NOT and NAND logic gates from TTL ICs 6. Regulated power supply: study LM78XX and LM79XX voltage regulator ICs 7. Transistor as a Switch: study and perform transistor as a switch through NOT gate 8. Zenner diode as voltage regulator 9. To study clipping and Clamping circuits 10. To study different biasing cirtis. 11. Study of CE amplifier and observe its frequency response.

NIL	CE + EA						
Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Sitting Posture/Asanas- Gomukhasana, Swastikasana, Siddhasana, Ustrasana, Janusirsasana, ArdhaMatsyendrasana (Half-Spinal Twist Pose), Paschimottanasana, Shashankasana, Bhadrasana. • Mudra- Vayu, Shunya, Prithvi, Varuna, Apana, Hridaya, Bhairav mudra. • Laying Posture/Asanas- Shalabhasana (Locust Posture), Dhanurasana (Bow Posture), ArdhaHalasana (Half Plough Pose), Sarvangasana (Shoulder Stand), Halasana (Plough Pose), Matsyasana, SuptaVajrasana, Chakrasana (Wheel Posture), Naukasana (Boat Posture), Shavasana (Relaxing Pose), Makaraasana. • Meditation- 'Om'meditation, Kundalini or Chakra Meditation, Mantrameditation. • Standing Posture/Asanas- ArdhaChakrsana (Half Wheel Posture), Trikonasana (Triangle Posture), ParshwaKonasana (Side Angle Posture), Padahastasana, Vrikshasana (Tree Pose), Garudasana (Eagle Pose). • Pranayama- Nadisodha, Shitali, Ujjayi, Bhastrika, Bhramari. • Bandha- Uddiyana Bandha, Mula Bandha, Jalandhara Bandha, Maha Bandha. • Kriya- Kapalabhati, Trataka, Nauli. **ATHLETICS** • Long Jump- Hitch kick, Paddling, Approach run, Take off, Velocity, Techniques, Flight & Landing • Discus throw, Javelin throw and Shot-put- Basic skill & Technique, Grip, Stance, Release &						

Follow through.
- Field events marking.
- General Rules of Track & Field Events.

BASKETBALL
- Shooting- Layup shot, Set shot, Hook shot, Jump shot. Free throw.
- Rebounding- Defensive rebound, Offensive rebound.
- Individual Defensive- Guarding the man without ball and with ball.
- Pivoting.
- Rules of Basketball.
- Basketball game.

VOLLEYBALL
- Spike- Straight spike, Body turn spike, Tip spike, Back attack, Slide spike, Wipe out spike.
- Block- Single block, Double block, Triple block, Group block.
- Field Defense- Dig pass, Double pass, Roll pass.
- Rules and their interpretation.

FOOTBALL
- Dribbling- Square pass, Parallel pass, Forward pass.
- Heading (Standing & Running)- Fore head, Side fore head, Drop heading, Body covering during heading.
- Kicking- Full volley, Half volley, Drop kick, Back volley, Side volley, Chiping (lobe).
- Tackling: Covering the angle, Chessing time sliding chese, Heading time shoulder tackle etc.
- Feinting- Body movement to misbalance the opponent and find space to go with ball.
- Rules of Football.

CRICKET
- Batting straight drive.
- Batting pull shot.
- Batting hook shot.
- Bowling good length, In swing.
- Bowling out swing, Leg break, Goggle.
- Fielding drill.
- Catching (Long & Slip).
- Wicket keeping technique.
- Rules & Regulation.

BADMINTON
- Net play- Tumbling net shot, Net Kill, and Net Lift.
- Smashing.
- Defensive high clear/Lob.
- Half court toss practice, Cross court toss drop practice, Full court Game practice.
- Player Positioning, Placements.
- Rules & Regulation.
- Doubles & Mixed doubles match practice.

TABLE TENNIS
- Stroke: Backhand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin.
- Stroke: Forehand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin.
- Stroke- Backhand lob with rally, Backhand lob with sidespin, Forehand lob with rally, Forehand lob with sidespin.
- Service: Backhand/Forehand- Push service, Deep push service, Rally service.

	• Service: Backhand sidespin (Left to right & Right to left). • Service: Forehand- High toss backspin service, High toss sidespin service, High toss reverse spin service. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-6 Side pace, Pace Forward and to the Rear. • FD-7 Turning on the March and Wheeling. • FD-8 Saluting on the March. • FD-9 Marking time, Forward March and Halt in Quick Time. • FD-10 Changing step. • FD-11 Formation of Squad and Squad Drill. • FD-12 Parade practice. **TAEKWONDO** • Poomsae (Forms)- Jang, Yi Jang. • Self Defense Technique- Self defense from arms, Fist and Punch. • Sparring (Kyorugi)- One step sparring, Two step sparring, Fight (Free sparring). • Combination Technique- Combined kick and punch. • Board Breaking (Kyokpa)- Sheet breaking. • Interpretation Rules above Technique of Taekwondo. **NSS** • No Smoking Campaign • Anti- Terrorism Day Celebration • Any other observation/celebration proposed by Ministry/institute • Public Speaking • Discussion on Current Affairs • Viva voce

MAC331	MATHEMATICS-III	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic knowledge of topics included in MAC01 & MAC02		CT+MT+EA					

Course Outcomes

- CO1: Acquire the idea about mathematical formulations of phenomena in physics and engineering.
- CO2: To understand the common numerical methods to obtain the approximate solutions for the intractable mathematical problems.
- CO3: To understand the basics of complex analysis and its role in modern mathematics and applied contexts.
- CO4: To understand the optimization methods and algorithms developed for solving various types of optimization problems.

Topics Covered	**Partial Differential Equations (PDE):** Formation of PDEs; Lagrange method for solution of first order quasilinear PDE; Charpit method for first order nonlinear PDE; Homogenous and Nonhomogeneous linear PDE with constant coefficients: Complimentary Function, Particular integral; Classification of second order linear PDE and canonical forms; Initial & Boundary Value Problems involving one dimensional wave equation, one dimensional heat equation and two dimensional Laplace equation. [14] **Numerical Methods:** Significant digits, Errors; Difference operators; Newton's Forward, Backward and Lagrange's interpolation formulae; Numerical solutions of nonlinear algebraic/transcendental equations by Bisection and Newton-Raphson methods; Trapezoidal and Simpson's 1/3 rule for numerical integration; Euler's method and modified Eular's methods for solving first order differential equations. [14] **Complex Analysis:** Functions of complex variable, Limit, Continuity and Derivative; Analytic function; Harmonic function; Conformal transformation and Bilinear transformation; Complex integration; Cauchy's integral theorem; Cauchy's integral formula; Taylor's theorem, Laurent's theorem (Statement only); Singular points and residues; Cauchy's residue theorem. [17] **Optimization:** **Mathematical Preliminaries:** Hyperplanes and Linear Varieties; Convex Sets, Polytopes and Polyhedra. [2] **Linear Programming Problem (LPP):** Introduction; Formulation of linear programming problem (LPP); Graphical method for its solution; Standard form of LPP; Basic feasible solutions; Simplex Method for solving LPP. [9]
Text Books, and/or reference material	**Text Books:** 1. An Elementary Course in Partial Differential Equations-T. Amarnath 2. Numerical Methods for scientific & Engineering Computation- M.K.Jain, S.R.K. Iyengar & R.K. Jain. 3. Foundations of Complex Analysis- S. Ponnuswami 4. Operations Research Principles and Practices- Ravindran, Phillips, Solberg 5. Advanced Engineering Mathematics- E. Kreyszig **Reference Books:** 1. Complex Analysis-L. V. Ahfors 2. Elements of partial differential equations- I. N. Sneddon 3. Operations Research- H. A. Taha

<tr><td colspan="2">Course Outcomes</td><td colspan="6">Upon successful completion of this course, students should be able to:
• CO1: Apply the knowledge of basic circuital law, Network Theorem and network topology concepts in the formulation and solution of different electric network problems.
• CO2: Apply the Laplace transform to linear circuits and systems and analyze the signal synthesis, steady-state responses and transient response of DC and AC circuits using classical and Laplace transform methods.
• CO3: Evaluate two-port network parameters, their inter-relationship, different connections, representation two port network as T, Πand lattice form and also apply two-port network analysis in the design and analysis of filter and attenuator networks.
• CO4: Demonstrate the concept of complex frequency and analyze the behavior of the circuit’s response in frequency domain, understand the significance of network functions, pole- zero plots, Bode plot etc.of one and two port networks.
• CO5: Synthesize one port network two port network function, analyze and design different filters.</td></tr>
<tr><td colspan="2">Topics Covered</td><td colspan="6">Network Theorems for circuit analysis with both independent and dependent sources, Super node & super mesh analysis, Coupled Circuits: Ideal Transformer, Analysis of multi-winding coupled circuits, Analysis of single tuned and double tuned coupled circuits. (5)
Network Topology: Network graph, Tree, Incidence matrix - Fundamental cut-sets and fundamental loops - Tie set and cut set schedules. Formulation of equilibrium equation on loop basis and node basis, Formulation of equilibrium equation in matrix form - Duality, Construction of dual of a network. (6)
Time and Frequency response of circuits Voltage/current relations for R, L, C and their equations in time domain. Initial and final conditions, first and second order differential equations, steady state and transient response. Analysis of transient and steady state responses using Classical technique as well as by Laplace transforms. Steady state response to step, ramp, impulse and sinusoidal input functions. (12)
Two-Port parameters: Open circuit, short circuit, transmission and hybrid parameters, relationship between parameter sets, reciprocity and symmetry conditions, parallel connections, parallel connection of two port networks. Network equivalents - Analysis of T, n , ladder and lattice networks . (8)
Network Functions: poles and zeros Network functions for one port and two port networks, driving point and transfer functions, ladder network, general network, poles and zeros of network functions, restrictions on Pole and zero locations for driving point functions and Transfer functions, time domain behavior from pole and zero plot. Bode plot. (5)
Fundamentals of Network Synthesis: Causality and stability, Hurwitz polynomials, positive real functions, synthesis of one port networks with two kinds of elements. Properties and synthesis of L-C, R-C, R-L driving point impedances, synthesis of R-L-C functions. Properties</td></tr>
</table>

	of transfer functions, zeros of transmission, synthesis of Y21 and Z21 with a 1- Ohm termination, synthesis of constant - resistance networks. (12) Passive Filter as a Two Port Network - Characteristics of Ideal Filter - Low pass and High Pass Filter. Design of constant K, m derived and composite filters (6)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
EEC302	ELECTRICAL & ELECTRONIC MEASUREMENT	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	• CO1: To develop an idea about the measurement processes • CO2: To learn the operating principle of ammeter, voltmeter, wattmeter and energy meter • CO3: To gain knowledge about Potentiometer and various resistance measurement techniques • CO4: Introduction to AC Bridges & Instrument Transformers • CO5: Familiarization with CRO and introduction to Digital Instrumentation						
Topics Covered	Basics of Measurement: Significance of measurement, Direct & Indirect methods of measurement, Classification of instruments, Static and dynamic characteristics of measurement system, Various types of error in measurement system, Error analysis by conventional and statistical methods, uncertainty analysis. (6) Basic electrical Instruments: Various torques in electrical instruments, various types of damping in instruments, Principle of operation of Permanent Magnet Moving Coil (PMMC) instrument, use of shunt and multiplier to extend the range of PMMC						

	instruments, Temperature compensation of PMMC instruments, principle of operation of Moving Iron (MI) instruments, Linearization of scale of MI instrument, extension of range of moving coil and iron instrument, Measurement of 3-phase power and wattmeter errors. Principle of operation of single-phase energy meter, Creep in energy meter and its compensation, testing of energy meter, Phantom loading (14) Potentiometers: Basic principle of ordinary slide wire potentiometer, principle of operation of DC Crompton's Potentiometer, Measurement of voltage, current, resistance and power by potentiometer, calibration of voltmeter, ammeter and wattmeter by potentiometer, Drysdale polar potentiometer, Gall Tinsley Coordinate potentiometer (6) Measurement of Resistance: Measurement of medium resistance by Wheatstone bridge, measurement of low resistance by Kelvin Double Bridge, measurement of high resistance by direct deflection method, loss of charge method and Megger. (4) AC Bridges: Comparison of measurement methods with whetstone bridge, Measurement of inductance, capacitance and frequency by AC Bridges (8) Instrument Transformers: Disadvantages of using shunts and multipliers for very high current and voltage measurement, Use of Current transformer for measurement of current, construction of current transformer, current transformer errors, effect of sudden open circuit of current transformer, use of potential transformer for voltage measurement, construction of potential transformer, potential transformer errors. (6) Measurement of phase and frequency: Measurement of frequency by electrical resonance frequency meter and Weston frequency meter. Measurement of phase or power factor by dynamometer type instrument, moving iron power factor meters, measurement of phase difference by synchroscope. (4) Cathode Ray Oscilloscope: Construction and principle of operation, Measurement of current, phase difference and frequency by CRO, Sampling Oscilloscope, Theory of storage oscilloscope, Digital Storage Oscilloscope. (4) Digital Instruments: Advantages of digital instruments over their analog counterparts, Different types of digital voltmeters, digital multimeter, digital frequency meter. (4)

<tr><td>Course Outcomes</td><td>CO # 1. Understanding the fundamental knowledge of analog devices and circuits
CO # 2. Familiarizing with the design of complex electronic circuits with the help of these fundamentals.
CO # 3. Enriching historical developments with facts that led to IC technology.
CO # 4. Acquainting with the present-day design tools using which one can synthesize and analyze the complex design problems.
CO # 5. Implementing the devices and circuits as a basic building block of electrical communication and other areas and enhancing problem solving skills.</td></tr>
<tr><td>Topics Covered</td><td>Module 1: <u>Signals and Amplifiers</u> [3L + 1T]
Signals; frequency spectrum of signals; analog and digital signals; amplifiers; circuit models for amplifiers; frequency response of amplifiers.
Module 2: <u>Operational Amplifiers and its Applications</u> [4L + 2T]
Characteristics of Operational Amplifiers and learning how to apply basic op-amps to design sophisticated op-amp circuits, including summing amplifiers, instrumentation amplifiers, integrators, and differentiators.
Module 3: <u>Diodes and its Applications</u> [3L + 1T]
Characteristics of Junction Diodes and how to use diodes to analyze diode circuits operating in the various bias regions: forward, reverse and breakdown; application of diodes in voltage regulator and rectifier circuits.
Module 4: <u>MOS Field Effect Transistors</u> [4L + 2T]
The physical structure of the MOS transistor; how the voltage between two terminals of the transistor controls the current that flows through the third terminal, and the equations that describe these current voltage characteristics; analysis and design of circuits that incorporate MOS transistors, resistors, and dc sources.
Module 5: <u>Bipolar Junction Transistors</u> [3L + 1T]
The physical structure of the bipolar transistor; how the voltage between two terminals of the transistor controls the current that flows through the third terminal, and the equations that describe these current voltage characteristics; analysis and design of circuits that incorporate bipolar transistors, resistors, and dc sources.
Module 6:<u>Transistor Amplifiers</u> [5L + 2T]
The use of MOS or bipolar transistor to make an amplifier; obtaining linear amplification from fundamentally non-linear MOS and bipolar transistor; modelling linear operation of a transistor around a bias point by an equivalent circuit that can be used in the analysis and design of transistor amplifiers; three basic ways to connect MOS or bipolar transistor to construct amplifiers with different properties; practical circuits for MOS and bipolar transistor amplifiers that can be constructed using discrete components.
Module 7: <u>Differential and Multistage Amplifiers</u> [4L + 2T]
The essence of the operation of the MOS and bipolar transistor differential amplifiers which includes rejection of common mode noise or interference and amplify</td></tr>
</table>

	differential signals; structure, analysis, and design of amplifiers composed of two or more stages in cascade. **Module 8**: Feedback in Amplifiers [3L + 1T] The general structure and advantages of negative feedback in amplifier circuit design; appropriate feedback topology to employ with amplifiers of each of the four types (voltage, current, transconductance, and transresistance); intuitive and insightful approach for the analysis of practical feedback amplifier circuits; why and how negative feedback amplifiers become unstable or oscillatory and how to design the circuit to ensure stable operation. **Module 9**: Frequency Response [4L + 2T] Low frequency response of discrete circuit common source and common emitter amplifiers; internal capacitive effects and high frequency model of the MOSFET and the BJT; high frequency response of common source and common emitter amplifiers; useful tools for the analysis of high frequency response in amplifiers; high frequency response of common gate and cascode amplifiers; high frequency response of source and emitter followers; high frequency response of differential amplifiers; other wideband amplifier configurations. **Module 10**: Building Blocks of Integrated Circuit Amplifiers [4L + 1T] Integrated Circuit (IC) design philosophy; IC biasing current sources, current mirrors, and current steering circuits; the basic gain cell; cascode amplifier; current mirror circuits with improved performance; some practical transistor pairings. **Module 11**: Output stages and Power Amplifiers [3L + 1T] Classification of output stages; class A output stage; class B output stage; class AB output stage; biasing the class AB circuit; variations on the class AB configuration; CMOS class AB output stages; IC power amplifiers; class D power amplifiers; power transistors. **TOTAL number of classes = 40 Lectures and 16 Tutorials**
Text Books, and/or reference material	**Text Books:** 1. Microelectronic Circuits by A S Sedra and K C Smith, Oxford University Press. 2. Course Outcomes	CO1: Able to apply fundamental knowledge of different co-ordinate systems to describe the spatial variations of the physical quantities dealt in electromagnetic field theory. CO2: Able to explain fundamental laws governing electromagnetic fields and evaluate the physical quantities of electromagnetic fields (Field intensity, Flux density etc.). CO3: Gain an integrative overview of electromagnetic waves, its propagation in different media and different phenomena related to electromagnetic wave propagation. CO4: Acquire basic knowledge related to wave guides and transmission line.
Topics Covered	**Concept of Field and Maxwell's Equations** Vector field, Divergence of vector field, Divergence of electrostatic field, Gauss's divergence theorem, Gauss's Law of electrostatics and its applications, Laplace's equation, Poisson's equation, Continuity equation. [7] Curl of a vector field, Stoke's theorem, Curl of magnetic field, Ampere's Circuital law and its applications, Curl of electric field and divergence of magnetic field, Concepts of scalar and vector potentials. [7] Faraday's law of electromagnetic induction, Self-Inductance, Mutual-Inductance, L-C-R Circuit, Concept of displacement current, Maxwell's equation in free space, Poynting theorem. Some examples. [9] **Electromagnetic Waves** Derivation of the electromagnetic wave equation. Plane waves in vacuum. Energy, Momentum and intensity of electromagnetic waves. Electromagnetic waves in isotropic, Anisotropic medium, Conducting medium. Skin effect. Propagation of electromagnetic waves in ionized gases, Reflection, Refraction and Dispersion of electromagnetic waves, Fresnel's equations. Some examples. [12] **Wave Guide** Wave guides, TE, TM and TEM waves, Transmission line and Telegrapher's equation. [7]
Text Books, and/or reference material	**TEXT BOOKS:** 1. Introduction to Electrodynamics, David J. Griffiths, Prentice-Hall International, Inc., Englewood Cliffs. 2. PHS51		CT+EA					
Course Outcomes	CO1: To realize and apply different techniques for measuring resonance, Q-factor of series L-C-R circuit. CO2: To determine the Self-Inductance, Mutual Inductance and verification of Faraday's law. CO3: To determine the thermoelectric power of a given thermocouple. CO4: To apply the concepts to measure the horizontal component of the earth's magnetic field using a vibrational and deflection magnetometer CO5: To calculate the loss of a magnetic specimen by B-H loop measurement.						
Topics Covered	1. Study of series L-C-R Resonant Circuit: (i) To draw the resonance curve (ii) To determine the Q- Factor of the circuit (iii) To study the variation of impedance with frequency (iv) verification of maximum power transfer theorem. 2. Verification of Faraday's law. 3. To determine the mutual inductance (M) of two coils. 4. Determination of Self-Inductance of a coil. 5. To verify Fresnel's equation for reflection of electromagnetic waves. 6. Draw the (Thermo EMF) – Temperature curve of given thermocouple and hence find thermoelectric power at a given temperature. 7. Determination of horizontal component of the earth's magnetic field using a vibrational and deflection magnetometer. 8. To draw the B-H loop of a given specimen.						
Text Books, and/or reference material	**SUGGESTED BOOKS:** 1. A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2. Practical Physics – Worsnop and Flint

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEC 301 (NETWORK ANALYSIS AND SYNTHESIS)		CT+MT+EA					
Course Outcomes	On completion of the course, the students will be able to: • CO1: find out economical voltage, minimum consumer voltage for different kinds of loads for transmission of electrical energy and suggest remedy to improve the voltage if needed. • CO2: evaluate different parameters associated with electrical design and mechanical design of transmission line including the presence of neighboring communication lines. • CO3: analyze the performance of short, medium, long distance transmission lines. • CO4: apply the knowledge to find out different important parameters of insulators and know different methods to improve the performance parameters of the insulators. • CO5: select the appropriate type of power cables to be used for different applications and determine operating voltage, charging current, charging kVAR, insulation resistance, and dielectric power loss of power cables. • CO6: mitigate different adverse situation that may arise due to corona.						
Topics Covered	Distribution Systems: Systems of distribution, economics and copper efficiencies, calculations on distribution and feeders, Kelvin Law. (10) Electrical Design of Overhead Lines: Conductor materials, resistance, inductance, self and mutual GMD calculations for single, twin and multi- circuit lines including bundled conductors, cases of symmetrical and unsymmetrical lines. Capacitance: calculation for single twin and multi circuit lines effect of earth. Choice of transmission voltage, influencing factors, spacing between conductors, current rating of overhead lines. (10) Mechanical Design of Overhead Lines: Mechanical properties of different types of overhead conductors, factors of safety in relation to working conditions, calculation of sag. Supports at different levels: effect of change of temperature and loading: sag						

	templates and stringing charts. Supports for overhead lines: low voltage high voltage and extra high voltage lines. Span length: basic and economic spans. Ground clearance of conductors. (6) Insulators: Materials used, types of insulators for low voltage, high voltage and extra high voltage lines and outdoor switchyard, bushing insulators, voltage distribution in a string of suspension insulators, methods of potential equalization; arching horns and grading rings, reasons of overhead line insulator failure, puncture and flashover voltage, design criteria. (7) Insulated Cables: Types of L. V. Cables for distribution systems: conductor materials, important types of insulating materials, high voltage cables, Stresses developed, economical stress and grading of dielectric materials, screened and pressure cables, mechanism of cable break down charging Current, power factor and losses in cables, determination of current Rating of cables. (8) Transmission and Performance: Classification of transmission lines, calculation of regulation and efficiency, Nominal T. Nominal II and rigorous methods, generalized circuit parameters (A,B,C and D constants) Ferranti effect and losses in open circuited lines. Calculation of phase modifier capacity. (7) Corona: Reasons for corona, critical disruptive voltage and visual critical voltage Effects of pressure, temperature and irregularity of conductor surface, Losses in corona and its reduction. (4) Inductive interference: Electrostatic and electromagnetic interference with adjacent lines. (4)

EEC402	ELECTRICAL MACHINES - I	PCR	3	1	0	4	4	
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))						
EEC01 (ELECTRICAL TECHNOLOGY)		CT+MT+EA						
Course Outcomes	• CO 1: Able to understand the fundamental principles and classification of electromagnetic machines. • CO2: Ability to design an armature winding • CO3: Able to learn about the constructional details and principle of operation of dc machines. • CO4: Acquire knowledge about the working of dc machines as generators and motors. • CO5: Acquire knowledge about the constructional details, principle of operation of transformers. • CO6: Acquire knowledge about testing and applications of dc machines & transformers.							
Topics Covered	DC Machines: Armature winding: Lap winding, wave winding, equalizer rings. (8) Generator: Construction of dc machines, Emf equation, types of generators, losses, efficiency, armature reaction, commutation, interpoles, compensating windings, dc generator characteristics, voltage build-up of a dc shunt generator, parallel operation of dc generators. (12) Motor: DC motor principle, counter Emf, speed and torque equations, load characteristics, speed control, starting of dc motors, three-point and four-point starters, testing of dc machines. (12) Transformer: Single-phase transformer: Construction and types, principle of operation, Emf equation, transformer on no-load, transformer on load, equivalent resistance, magnetic leakage, equivalent circuit, phasor diagram, open and short circuits tests, voltage regulation, losses, efficiency, all-day efficiency, separation of hysteresis and eddy current losses, parallel operation, auto transformer. (12) Three-phase transformer: Three-phase transformer connections and vector groups, equivalent circuit, determination of equivalent circuit parameters, parallel operation, three phase to two-phase conversion and vice-versa, tap-changers on transformers, testing of transformers, cooling. (12)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Nil		CT+MT+EA					

Course Outcomes	• CO 1: Acquire an idea about digital electronics and its applications. • CO2: To learn the fundamentals of different numbers of systems and codes and code conversion techniques. • CO2: To study about the Boolean algebra and basic logic gates along with their digital design procedure using elementary logic gates. • CO3: To learn about the different sequential and combinational logic circuits and their use in digital electronics applications. • CO4: Learn about the Analog to Digital Converter (ADC), Digital to Analog Converter (DAC), and data conversion and acquisition techniques. • CO5: To study the different types of Codes (Gray code, Excess-3 code, BCD Code etc.) and Code converters
Topics Covered	Introduction to Digital Electronics: History and Evolution of Computation and Computers, Application of Digital Electronics in Modern Society. (4) Number Systems and Codes: Decimal Number System, Binary Numbers System, Octal Number System, Hexadecimal Numbers System, Numbers Conversions, Gray Code, Excess-3 Code, BCD Code, Hamming Code, Code Conversion, BCD to 7-Segment Decoder: Error Detection and Correction Codes - error detection by parity checking, Principle of error correction. (6) Boolean Algebra and Logic Gates: Binary arithmetic, Binary Addition, Binary Subtraction, Binary Multiplication, Binary Division, 1s Complement, 2s Complement, Signed Binary Number, Introduction to Logic Gates, Basic Logic Gate Operations, Universal Gates, Realization of logic gates using switches. (6) Digital Arithmetic and Arithmetic Circuits: Half Adder, Full Adder, Half Subtractor, Full Subtractor, Multi-Bit Ripple-Carry Adder and Subtractor circuits, Basics of Binary Multiplier and Divider Circuits. (5) Logic Families: Transistors (MOS and BJT) as switch, Different logic families such as RTL,

	DCTL, DTL, HTL, TTL, ECL, MOS & CMOS logic family their importance and applications. (5) Minimization Techniques Logic Synthesis: Demorgan's Theorem, SOP/POS forms, Minimization of logical function, Algebraic method, Karnaugh Map method, Quine Mccluskey Method. (6) Combinational Circuits: Multiplexer, Demultiplexer, Decoder, Encoder, Decoder Driver, Combinational Circuit Design and Their Applications. (6) Sequential Circuits: Definition, Moore and Miley Machines; Elements of Sequential Circuits - Latches and Registers, Different kinds of Flip-Flops - R-S, J-K, Master-Slave arrangement, D, and T Type Registers; Typical sequential circuits -counters, shift registers and sequence generator; synchronous and asynchronous circuits. (8) Multivibrators: Definition of different types of Multivibrators, their realization by logic gates, op-amp and transistors, 555 Timer IC and Schmitt Trigger circuit and their applications. (6) A/D & D/A Converter: Need for Data conversion, Analog to Digital Converter (ADC), Digital to Analog Converter (DAC), and data conversion and acquisition techniques, Different types of DAC & ADC ICs, data conversion and acquisition techniques, Introduction to GUI and PC Based Data Acquisition Systems, Data Acquisition System Components (Software and Hardware).(4)
Textbooks, and/or reference material	Textbooks: 1. Fundamentals of Digital Logic - Anand Kumar – PHI 2. Digital Electronics - G. K. Kharate– Oxford 3. Digital Logic and Computer Design - M. Morris Mano – PHI Reference Books: 1. Digital Fundamentals - Floyd, UBS 2. Digital Systems: Principles and Applications - Tocci, Widmer and Moss, Pearson Edu.

Department of Mechanical Engineering							
Course Code	Title of the Course	Programme core (PCR)/Electives (PEL)	Total number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEC-431	Fluid and Thermal Engineering	PCR	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Knowledge of Engineering Mechanics, Differential Equations etc	CT+MT+EA

Course Outcomes	• Co1: Study of fundamentals of Fluid Mechanics • Co2: Understanding the principles of Hydraulic Machines such as Pelton Turbine in energy conversion • Co3: Principle of Reciprocating and Centrifugal pump • Co4: Study of basics of Thermodynamics • CO5: Study of principle of steam turbine, boiler etc.
Topics Covered	Definition of fluid, Difference between solid and fluid, Continuum Concept, Knudsen No, density, specific volume, bulk modulus, compressibility of fluid. (01) Viscosity, Newton's law of viscosity, different types of fluid, effect of pressure and temperature on viscosity, numerical problem. (02) Fluid pressure, hydrostatic law of pressure, pressure variation with space in static fluid, absolute, gauge and vacuum pressure, pressure measuring devices, numerical problem. (03) Fluid kinematics, definition of flow field, Lagrangian and Eulerian approach of describing fluid motion. (01) Representation of velocity and acceleration in Cartesian coordinate, temporal, convective and total acceleration. (01) Steady and unsteady flow, uniform and non-uniform flow, laminar and turbulent flow, flow visualisation, stream line and path line. (01) Differential form of continuity equation in cartesian coordinate for compressible and incompressible flow. (01) Derivation of Euler's equation along a stream line, Bernaullis equation, pressure head, kinetic head and datum head. (01) Application of Bernaullis principle, flow measuring device, venturimeter, orifice meter and pitot tube, numerical problems. (03) Hydraulic machines, dynamic force on fixed and moving vanes. (01) Turbine and its classification, Pelton turbine and its working principle, numerical problems.(01) Pump and its classification reciprocating pump and its working principle.(01) Centrifugal pump, working principle, velocity diagram, characteristics curve, numerical problem. (03) Brief study of Thermodynamics as a pre-requisite to power plant engineering Energy analysis of steady state flow system, example with mechanical power transfer to and from steady state flow devices like compressor, turbine etc. System equilibrium, requirement for internal and total reversibility, cause of effect of irreversibility, concept of heat engine, its working cycle, its efficiency with Carnot cycle, Effect of increase in saturation pressure on phase transformation, properties of steam, use of steam table, Mollier chart. (10) Basic devices in steam power plant and their schematic arrangement, fundamental concept of processes involved in them , simple Rankine cycle with steady flow of working fluid (water and

	steam),performance parameter for efficient plant operation, effect of increase in boiler pressure on operating cycle performance, internal and external irreversibility associated with various practical processes during energy and mass transfer through the devices, reheat regeneration and their combined application for improvement of plant operation, a few numerical problems, brief description of super heater, economiser in power plant. (10) Introduction to gas turbine power plant. (01)
Text books, and/or Reference material	Suggested Text Books: 1. Hydraulic and Fluid Mechanics- Jagdish Lal 2. Hydraulic Machinery- Jagdish Lal 3. Introduction to Fluid Mechanics and fluid Machines- Som and Biswas 4. Engineering Thermodynamics- P K Nag 5. Introduction to Power Plant Engineering - P K Nag References: 1. Introduction to Fluid Mechanics - Fox, Mcdonald and Pritchard

EES451	NETWORK ANALYSIS AND SYNTHESIS LABORATORY	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), and end assessment (EA))					
		CT+EA					
Course Outcomes	• CO 1: Prepare laboratory reports that clearly communicate experimental information in a logical and scientific manner. • CO2: Students will get the basic concepts of passive components and their configurations and about how to use experimental equipment's such as function generator, CRO, regulated power supply etc. • CO3: Predict and measure the transient and sinusoidal steady-state responses of simple RL, RC and RLC circuits. • CO4: Able to apply linearity and superposition concepts to analyze RL, RC, and RLC circuits in time and frequency domains. • CO5: Able to analyze resonant circuits both in time and frequency domains. • CO6: Able to construct and make time and frequency domain measurements on elementary RL, RC, and RLC circuits.						

	• CO7: Evaluate the parameters of two port networks to analyze the performance of transmission lines • CO8: Apply computer mathematical and simulation programs to solve circuit problems.
Topics Covered	**List of Experiments:** 1. Determination of transient response of current in RL and RC circuits with step voltage input. 2. Determination of transient response of current in RLC circuit with step voltage input for under-damped, critically damped and over-damped cases. 3. Determination of frequency response of current in RLC circuit with sinusoidal ac input. 4. Determination of frequency response characteristics of a low pass and high pass active filters. 5. Determination of z and h parameters (dc only) for two port networks. 6. Determination of the driving point and transfer impedance of coupling circuit. 7. To verify different Network Theorem for ac Circuit. 8. Locus diagram of RC and RL circuit. 9. Generation of Periodic, Exponential, Sinusoidal, damped sinusoidal, Step, Impulse, and Ramp signals using MATLAB in both discrete and analog form. 10. Determination of transient and frequency response characteristics of RL, RC and RLC circuits using MATLAB. 11. Determination of frequency response characteristics of a T-network low pass and high pass passive filters using MATLAB

<tr><td>Course Outcomes</td><td colspan="7">• CO 1: Theory of electromechanical energy conversion, the concepts of voltage generation and fundamental torque equation.
• CO2: Basic understanding of the principles of operation and construction of direct and alternating current machines and transformers.
• CO3: A study of theory and concept of Electric Machines (AC & DC).
• CO4: Deriving equivalent circuit of electrical machines.
• CO5: Studying the performance and characteristics of Electrical machines (AC & DC).</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Basic principle of Faraday’s law of electro-magnetic induction, energy conversion and magnetic circuit. (4)
Transformer: Construction and principle of operation of single-phase transformer, Step-up and Step-down transformer, E.M.F. equation, Equivalent circuits, phasor diagram, Open circuit and short circuit tests, losses and efficiency, All day efficiency, Auto transformer. (8)
D.C. Machines Construction, Methods of excitation and classifications, Simple lap and wave windings, emf equation, characteristics of different dc generator, armature reaction, Commutation, Back e.m.f in a d.c. motor, Motor Starter, Speed and torque equations, Speed vs torque characteristics and speed control of DC motors, losses in dc machines, Applications. (12)
Induction Motor: Pulsating and rotating magnetic field construction and principle of operation of Single and three phase induction motors, cage and wound rotor induction motors, comparison between them slip, equivalent circuits, no load and blocked rotor tests, Circle diagram, Torque/speed curve Starting and speed control, Applications of single phase and three phase induction motors. (12)
Synchronous Machines: Construction-alternators-turbo & hydro generators, principle of operation, emf equation, excitation control, synchronization load sharing synchronous motor operation, Synchronous condenser, applications of synchronous generator and motor. (6)</td></tr>

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEC301 (NETW ORK ANALYSIS AND SYNTHESIS), ECC331 (ANALOG ELECTRONIC S), EEC402 (ELECTRICAL MACHINES-1), EEC403 (DIGITAL ELECTRONICS)		CT+MT+EA					
Course Outcomes	• CO1: Acquire the knowledge and skills to identify the basic elements and structures of feedback control systems. • CO2: To develop the mathematical model of the physical systems. • CO3: To analyze the time response of the open loop & closed loop systems. • CO4: To analyze the stability of control systems using different tools. • CO5: To learn frequency response analysis and stability studies in Frequency Domain • CO6: To learn control system design using various kinds of compensator & to apply computer skills with MATLAB						

	• CO7: To develop and analyze state space models
Topics Covered	Introduction to control systems: Historical development, Open and Closed loop systems, Applications, Effects of feedback, Types of feedback control systems, Servomechanism. (6) Mathematical Models of Physical Systems: Modeling of electrical networks, modeling of mechanical system elements, Transfer functions, Block diagram Algebra, Signal flow graph and Mason's Gain formula. (6) Representation of Control Components: Electrical components, Mechanical components, Electromechanical Components. (4) Time domain analysis and design specification of linear systems: Standard signals, Transient response and S-plane root locations of Second and higher order systems, Design specifications, steady state errors and error constants, effects of adding poles and zeros to transfer functions, P, PI, PD and PID controllers. (8) Concepts of Stability and Algebra Criterion: Concept of stability, characteristic equation necessary conditions for stability, Routh-Hurwitz stability criteria. (4) Root Locus Technique: The root locus concept, construction of Root Loci, Important properties parameters design by Root locus method, Root-locus Plots with MATLAB. (6) Frequency Response Analysis and Stability Studies in Frequency Domain: frequency domain specifications, correlation between time and frequency response, Polar plots, Bode plots, Nyquist stability criterion, Relative stability, conditionally stable system, M and N loci on complex and gain phase plot MATLAB tools and case studies. (10) Design and Compensation Technique: Preliminary considerations of classical Design, Realization of Basic compensators, Frequency domain and S-plane design techniques, Example of control systems. Design with MATLAB. (6) Introduction to State Variable Approach: Concepts of state, state variables and state model state models for linear Continuous-time systems, state transition matrix, Controllability and Observability. (6)

<tr><td>Course Outcomes</td><td colspan="7">CO1: analyze the behavior of the power systems under symmetrical and unsymmetrical fault conditions and select suitable protective schemes and circuit breakers, in addition to deployment of suitable current limiting reactors at strategic locations for expansion of the existing systems.
CO2: select bus bar arrangements suitable for any particular application in substations or generating stations. Besides, they also become acquainted with the layout of substation equipment.
CO3: be familiarized with different types of circuit interrupting devices along with their constructions, properties, operating principles, testing and appropriate placements.
CO4: be acquainted with various types of relays and their deployment, their characteristics, connections etc.
CO5: understand and design the diverse schemes used in practice to protect power systems transmission lines, generators, transformers, bus bars etc.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Short circuit calculation: Symmetrical and asymmetrical short circuits, factors influencing short circuit capacity, methods of limiting short circuit levels. Symmetrical components, sequence impedance, analysis of unsymmetrical short circuit in power systems, methods of measuring sequence components for protective relays. (15)
System of Bus bars: Different bus bar arrangements, indoor and outdoor substations, bus bar materials spacing etc. conventional layout representation. (6)
Circuit Interruption Devices: Fuses and their characteristics, circuit breakers, arc characteristics, mechanism of arc extinction, current chopping, resistance switching, L.V. air and oil circuit breakers H.V. oil circuit breakers, Air blast circuit Breakers for H.V. and E.H.V. systems, Sulphur Hexafluoride (SF6) circuit breaker, Vacuum circuit breaker, Multi break devices, miniature circuit breakers, Circuit breaker contacts, material and construction rating of circuit breakers, testing and maintenance. (8)
Protective Relays: Basic requirement of protective relays and classification on their application and principle of operation. Over current relays, directional relays, characteristics and connections. Distance relays, impedance, reactance and mho relays. Differential relays, percentage differential relays, biased beam relay, Translay relay, negative sequence relay,static relays. (12)
Protective Relaying Schemes: Protection of alternators and transformers, circulating current protection, Relay plug setting and time multiplier setting. Busbar, feeders and transmission line protection time graded protection differential protection distance protection and carrier current protection. (15)</td></tr>

EEC301 (NETW ORK ANALYSIS AND SYNTHESIS) ECC 331 (ANALOG ELECTRONIC S), EEC402 (ELECTRICAL MACHINES- 1), EEC403 (DIGITAL ELECTRONICS)	CT+EA

Course Outcomes	• CO1: To understand the dynamic behavior of real-time systems. • CO2: To simulate physical systems in real-time environment. • CO3: To design control system to improve the performance characteristics of real-time systems. • CO4: To determine the parameters and transfer function of physical systems from real-time experimentation. • CO5: To get acquainted with MATLAM programming, MATLAB-SIMULINK in order to simulate, analyze and design of control system design for different plants under consideration.
Topics Covered	List of Experiments 1. DC Servo Speed Control System 2. DC Servo Position Control System 3. Temperature Control System 4. Process Simulator 5. Linear System Simulator 6. Lead and Lag Network 7. P, PI and PID controller 8. Determination of Transfer Function of DC Motor 9. Study of Different real-time systems through Simulation in MATLAM environment. 10.PID Design Method for DC motor Speed Control using MATLAB 11.Root Locus Design Method for DC motor Speed Control using MATLAB 12.DC motor Speed Control Based on Frequency Response using MATLAB
Text Books, and/or reference material	Suggested Text Books: 1. J.Nagrath and M Gopal, Control system Engineering, New Age InternationalPublishers. 2. K. Ogata, Modern Control Engineering, Prentice Hall Suggested Reference Books: 1. B. Shahian, M. Hassul, Control System Design using MATLAB, PHI. Lab Manuals

Pre-requisites	Course Assessment methods (Continuous (CT)and end assessment (EA))
EES51 (ELECTRICAL TECHNOLOGY LAB.), EEC402 (ELECTRICAL MACHINES-I)	CT+EA

Course Outcomes	• CO1: Ability to determine the equivalent circuit parameters and evaluate the efficiency of a single-phase transformer • CO2: Ability to connect three single-phase transformers as a three-phase transformer in different configurations • CO3: Ability to determine the characteristics of dc shunt and series generators • CO4: Ability to start and control the speed of a dc shunt motor • CO5: Ability to connect two single-phase transformers in parallel • CO6: Ability to determine the losses in a dc machine and evaluate the efficiency.
Topics Covered	List of Experiments: 1. Determination of equivalent circuit parameters of a single-phase transformer. 2. No-load and load characteristics of a dc shunt generator. 3. Speed control of a dc shunt motor. 4. Open-circuit and load characteristics of a dc series generator. 5. Ward Leonard method of speed control of a dc shunt motor. 6. Three-phase transformer connections. 7. Parallel operation of single-phase transformers. 8. Swinburne's test of a dc machine.

NIL		CT+MT+EA					

Course Outcomes

- CO1: To review basic economic principles with students.
- CO2: To introduce students' basic capital appraisal methods used for carrying out economic analysis of different alternatives of engineering projects or works.
- CO3: Enable the students to gain a good knowledge of financial accounting so that to enable them to prepare, analyses and interpret financial statements for taking business decisions.

Topics Covered

PART 1: Economics

Group A: Microeconomics

Sl. No.	Name	L	T	P	Cr	H
Unit 1:	Economics: Basic Concepts	2	0	0	2	2
Unit 2:	Theory of Consumer Behavior	3	0	0	3	3
Unit 3:	Theory of Production, Cost and Firms	3	0	0	3	3
Unit 4:	Analyses of Market Structures: Perfect Competition	3	0	0	3	3
Unit 5:	Monopoly Market	2	0	0	2	2
Unit 6:	General Equilibrium & Welfare Economics	2	0	0	2	2
	TOTAL	**15**	**0**	**0**	**15**	**15**

Group B: Macroeconomics

Sl. No.	Name	L	T	P	Cr	H
Unit 1:	Introduction to Macroeconomic Theory	2	0	0	2	2
Unit 2:	National Income Accounting	3	0	0	3	3
Unit 3:	Determination of Equilibrium Level of Income	4	0	0	4	4
Unit 4:	Money, Interest and Income	2	0	0	2	2

	Unit 5:	Inflation and Unemployment	2	0	0	2	2
	Unit 6:	Output, Price and Employment	2	0	0	2	2
		TOTAL	**15**	**0**	**0**	**15**	**15**
		PART 2: Management Accountancy					
	Sl. No.	**Name**	**L**	**T**	**P**	**Cr**	**H**
	Unit 1:	**Introduction to Accounting**: Accounting Environment of Business; Objectives of Accounting; Accounting Equations and principles. Books of Accounting: Journal, Ledger, Cash book.	4	0	0	4	4
	Unit 2:	**Financial Statement Preparation and Analysis:** Preparation of Trial Balance, Trading, Profit & Loss account and Balance Sheet. Case study discussion.	5	0	0	5	5
	Unit 3:	**Financial Ratio Analysis:** Common Size Statements; Computation of Financial Ratios; Interpretation and analysis of Financial Ratios with the help of case studies.	5	0	0	5	5
		TOTAL	**14**	**0**	**0**	**14**	**14**
Text Books, and/or reference material	**PART 1: Economics** **Group A: Microeconomics** 1. Koutsoyiannis: Modern Microeconomics 2. Maddala and Miller: Microeconomics 3. AnindyaSen: Microeconomics: Theory and Applications 4. Pindyck&Rubenfeld: Microeconomics **Group B: Microeconomics** 1. W. H. Branson: Macroeconomics – Theory and Policy (2nd ed) 2. N. G. Mankiw: Macroeconomics, Worth Publishers 3. Dornbush and Fisher: Macroeconomic Theory 4. SoumyenSikder: Principles of Macroeconomics **PART 2: Management Accountancy** 1. Gupta, R. L. and Radhaswamy, M: Financial Accounting; S. Chand & Sons 2. Ashoke Banerjee: Financial Accounting; Excel Books 3. Maheshwari: Introduction to Accounting; Vikas Publishing 4. Shukla, MC, Grewal TS and Gupta, SC: Advanced Accounts; S. Chand & Co.

<tr><td>Course Outcomes</td><td colspan="7">• CO1: To understand basics of High Voltage Engineering & power system stability
• CO2: To design the insulation systemand load management module
• CO3: To design the High Voltage test system and Laboratory
• CO4: To learn about the testing of High Voltage power apparatus and to understand on line monitoring and conditioned monitoring
• CO5: Given specification of stability analysis leads to modeling of power system equipment’s like transmission line, generator and design system to obtain operating limits to satisfy the reliability criteria.
• CO6: Given specification leads to knowledge of regulation of active, reactive power and frequency of any system and its application in optimal load flow and scheduling</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Overview of Insulation, Air as an Insulation, Concept of Dielectric Strength, Electric field and electrode configuration, Parameters responsible for Break down Voltage of Insulating material (4)
Introduction to Breakdown of Insulation. Breakdown mechanism of insulting systems of Gas, Liquid, Solid, and Vacuum (7)
Generation of AC high voltages and DC High Voltages, Generation of impulse voltages and currents: - Analysis of different circuits, Marx multi-stage impulse generator (8)
Testing of High Voltage power Apparatus. Brief reviews of high voltage testing-Methods for High Voltage Power Apparatus, Introduction to Lightning phenomenon, Insulation Coordination. (5)
Introduction to partial discharge phenomena and concepts of Online testing (3)
Planning and Designing of High Voltage laboratory, Introduction of High Voltage virtual Laboratory (HVVL) and ICT enabled High Voltage laboratory (3)
HVDC Transmission: Introduction, classification, Stability limits, HVDC cable transmission, economic comparison, conversion of three phase AC line to DC line, Advantages of HVDC transmission, Economic distance of HVDC transmission, components of an HVDC transmission (4)
HVDC Converter station, converter unit, converter transformer, filters, reactive power source, smoothing reactor, HVDC system pole, ground electrodes, back-to-back HVDC station, two terminal HVDC systems, Multi terminal DC systems, DC circuit breakers, Limitations of HVDC transmission, application of HVDC transmission. (7)
Load flow studies: Network model formulation, Gauss- Siedel method, Newton-Raphson method, Decoupled load flow studies, comparison of load flow methods. (4)
Economic operation of power system: Incremental fuel cost, economic dispatch neglecting transmission losses, General loss formula, Optimum load dispatch considering transmission losses. (3)
Power system stability: Steady state stability, transient stability, Infinite bus, stability limit, power angle curve, swing equation, swing curve, M and H constants, equivalent systems equal area criteria, multi machine stability concept and methods for improving stability. (8)</td></tr>

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEC403 (DIGITAL ELECTRONICS)		CT+MT+EA					

Course Outcomes	• CO 1: Demonstrate programming proficiency using the various addressing modes and data transfer instructions of the target microprocessor microcontroller. • CO2: Describe key H/W and S/W attributes of microprocessors/microcontrollers. • CO3: Outline of the major architectural features of microprocessors. • CO4: Identify-and exercise-opportunities for hardware and software trade-offs. • CO5: Design of interfacing circuits such as memory, keyboard, display, ADC, DAC, DMA etc. and programming in assembly language for typical microprocessor-based system.
Topics Covered	Fundamentals of digital and microprocessors-based systems. (6) Basic microprocessor architectures, organizations and functional components. Instruction sets, assembly language programming, Micro operations of instructions. (10) Memory Classification: ROM, EPROM, EEPROM, RAM, Memory Interfacing with 8085, Address decoding for Memory mapped I/O and I/O mapped I/O. (8) Various types of Interrupts in 8085. (4) Programmable Peripheral Devices and Interfacing with 8085: 8255, 8259, 8257, 8251, 8253, ADC, DAC and Practical Applications. (10) 8051 Architecture and Special Function Registers, Organizations and Pin out details, Instruction sets, Special Function Registers, Assembly language programming, Memory Interfacing with 8051, Practical applications. (10) 8086 Microprocessor, Architectures, Organizations and Pin out details, Interrupts, Minimum and Maximum modes of operation, Instruction sets, Assembly language programming. (8)

Text Books, and/or reference material	Text Books: 1. The 8085 Microprocessor: Author: Ramesh Gaonkar, Pub: PRI 2. The 8051 Microcontroller and Embedded System: Author: Muhammad Ali Mazidi& J. G. Mazidi. 3. Advanced Microprocessors and Interfacing: Author: Badri Ram, Tata McGraw-Hill Publishing Co. Ltd. Reference Books: 1. Embedded Systems Design, Heath Steve, Second Edition-2003, Newness, 2. 2018 ONWARD UNDERGRADUATE ADMISSION BATCH

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT

Departmental Elective: SIXTH SEMESTER

Subject Code	Subject Name
EEE610	Numerical Analysis
EEE611	Instrumentation
EEE612	Modern Control Systems
EEE613	Special Electrical Machines
EEE614	Signals and Systems
EEE615	Advanced Power Electronics
EEE616	Soft Computing Theory and Applications

<tr><td>Course Outcomes</td><td colspan="7">• CO 1: To acquire an idea about engineering mathematics and linear algebra
• CO2: To learn the Basic concept of numerical computation
• CO3: To learn about solution techniques for linear and nonlinear equations
• CO4: To understand and learn the numerical solution of ordinary differential equation and integration</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Preliminaries of Computing: Basic Concepts, round-off errors, floating point arithmetic, convergence. (2)
Numerical solution of Nonlinear Equations: Bisection Method, fixed point iteration, Newton’s method, error analysis for iterative methods, computing roots of polynomials. (6)
Interpolation and polynomial approximation: Lagrange polynomial, divided differences, Hermite interpolation. (4)
Numerical Integration and Differentiation: Trapezoidal rule, Gaussian quadrature, Euler - Maclaurian formula. (6)
Applied Linear Algebra: Direct methods for solving linear systems, numerical factorization, eigenvalue problems. (4)
Initial Value Problem (IVP) of Ordinary differential equation (ODE): Euler’s method, Taylor’s method, Classical and higher order Runge-Kutta methods Convergence and stability analysis, Multistep method. (6)
Numerical Linear Algebra: Direct methods, Iterative methods, Jacobi or simultaneous iterations, Gauss - Seidel or Successive iterations. (8)
Approximation Theory: Least - square approximation. (2)
Approximating Eigenvalues: Power method, Householder’s method. (2)
Boundary Value problem for ODE: Shooting methods. (2)</td></tr>

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
ECC331 (ANALOG ELECTRONICS), EEC403 (DIGITAL ELECTRONICS)		CT+MT+EA					
Course Outcomes	• CO 1: Given specifications of different measuring instruments for measurement of particular parameter of some known electrical system, compare and judge to find the most suitable one. • CO2: Given application of electrical engineering for measurement of particular parameter along with specified range and accuracy, choose most suitable measuring instrument with the understanding of individual working principles, also judge to fit the given application. • CO3: For some specific parameter to be measured, along with the given range, resolution, accuracy and output format, choose suitable sensor, design associated signal conditioning and analog/digital processing circuit to meet the desired specification. • CO4: Give multi-parameter control application of electrical engineering design a suitable instrumentation, using PLC, suitable measuring instruments and actuators (including PLC programming). • CO5: Design a suitable Data Acquisition System for some complex electrical system such as. Power system sub-station, motor protection and control etc.						
Topics Covered	Basic Concepts of Measurements, Purpose of Instrumentation, Process Variables, generalized configurations and Functional Descriptions of Measuring Instruments, Generalized Performance Characteristics of Instruments. (4) Principles of Transducers, Functions and General Classification of Transducers. Resistive, Inductive, Capacitive, Piezo-electric, Photo-electric, Thermo-electric, Hall, Magneto						

	strictive etc. (8) Measurement of Process Variables, Pressure, Flow, Temperature, Liquid Level, Strain, Force, Torque, Linear and angular displacement/speed etc. (6) Ultrasonic Instrumentation: Ultrasonic transmitter and receiver properties, propagation through medium and interfaces, application in Non-destructive Testing (NDT), measurement of process variables such as flow, level, thickness etc. (4) Microprocessor based Instrumentations, Different Digital Instrumentation, Digital Measurement of Power Factor, Frequency and Time Period, Counters, Embedded systems, Microprocessor/Microcontrollers, classification, different field of application, design of microcontroller-based measuring instrument (4) Programmable Logic Controller (PLC): Introduction, Application, Physical and functional components, Timers, Counters, Shift Registers, Memory, Ladder Diagram, PLC Programming, Interfacing with sensors and actuators. Advance PLCs, analog input output, HMI, SCADA, Communication protocols, PID control through PLC. (10) Data Acquisition Systems: Objective of a DAS, single channel DAS, Multi-channel DAS, Components used in DAS- Converter Characteristics-Resolution-Non-linearity, settling time, Monotonicity. (6)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEC01 (ELECTRICAL TECHNOLOGY)		CT+MT+EA					
Course Outcomes	• CO 1: Ability to understand the operation of AC Commutator machines and AC Series motor • CO2: To develop clear concept of Universal motor and Repulsion motor • CO3: To analyze and control the operation of Stepper motor • CO4: To analyze the operation of Switched Reluctance motor • CO5: To understand the operation of PM dc motor and Brushless dc motor • CO6: To learn the working of Single-phase synchronous motors						
Topics Covered	AC Commutator machines: Production of different induced emfs, torque equations, characteristics. (3) AC Series motor: Introduction, compensated and uncompensated series motors, emf and torque equations, phasor diagrams, characteristics (3) Universal motor: Operating principle with ac and dc, comparison of speed for dc and ac supplies and characteristics. (3) Repulsion motor: Construction, principle of operation, phasor diagram andcharacteristics. (2) Stepper Motors: Introduction, operating principle, full step, half step, micro step, classification of stepper motors, motor windings, permanent magnet stepper motor, variable reluctance stepper motor, hybrid stepper motor, energization with 2-phases at a time, single-phase stepper motor, mathematical analysis of stepper motor, open loop control of 2- phase stepper motor, open loop control of 3-phase VR stepper motor, closed loop control of a stepper motor, slew speed, ramping, applications. (8) High speed operation of stepper motor: Introduction, Pull-out torque-speed characteristics for hybrid stepper motor, Pull-out torque-speed characteristics for variable reluctance stepper motor. (4) Switched Reluctance motor: Introduction; principle of operation; differences between SR and conventional reluctance motor, Torque expression, characteristics, control, advantages and disadvantages. (5) Permanent magnet materials and motors: Introduction; minor hysteresis loops and recoil line; stator frames of conventional PM dc motors; Equivalent circuit of a permanent magnet. (5) Brushless dc motor: Types of construction, principle of operation, modeling, motor characteristics and control, advantages and disadvantages. (5) Single-phase synchronous motors: Single-phase reluctance motor, hysteresis motor, Linear Induction motor. (4)							

Text Books, and/or reference material	Text Books: 1. Special Electrical Machines: K. Venkataratnam, Universities Press. 2. Stepping Motors and Their Microprocessor Controls: T. Kenjo, Clarendon Press. Reference Books: 1. Permanent Magnet and Brushless DC Motors: T. Kenjo and S. Nagamori, Oxford University Press. 2. Electric Machinery Fundamentals: Stephen J. Chapman,McGraw-Hill Education.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
EEE615	ADVANCED POWER ELECTRONICS	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEC 504 (POWER ELECTRONICS), EEC 502 (CONTROL SYSTEMS)		CT+MT+EA					
Course Outcomes	• CO1: To review of basic Power Electronic Systems • CO2: To learn the operation of isolated and non-isolated type Switch-Mode DC-DC Converters • CO3: To understand the concept of Multilevel Converters and modulation techniques • CO4: To understand converter dynamics and control, modelling techniques. • CO5: To familiarize with different Gate and Base Drive circuits for Power Devices • CO6: To get acquainted with the state-of-the-art applications of power electronics in Industry and utility systems						
Topics Covered	Review of Power Electronic Systems. Overview of Some Modern Power Semiconductor Devices. (2) Switch-Mode DC-DC Converters: Introduction, Control of DC-DC converters, Buck, Boost, Buck-Boost, Full bridge Converter. (4) Isolated Switching DC Power Supplies: Comparison between Linear & Switching Power						

	Supply, Specification of SMPS, Different Topologies, Flyback, Forward, Push-Pull, Half and Full Bridge), Control Requirements & Techniques, Practical SMPS Design Consideration. (4) Multilevel Converters: Introduction, different topologies, Neutral Point Clamped (NPC), Flying Capacitor Converter, Cascaded Multilevel Converters. (4) Different PWM techniques for Inverters: Space Vector PWM technique, Carrier Based Modulation technique. (4) Converter Dynamics and Control: State Space Averaging, Converter transfer function, concept of controller design. (4) Gate and Base Drive circuits for Power Devices: Concept, different circuits applicable to converters. (2) Applications: DC Drives, AC Drives, Power Conditioners and Uninterruptible Power Supplies, Power Line Disturbances, Power Conditioners, UPS. (6) Other Residential and Industrial Applications: Electronic ballast, Induction Heating, Electrical Welding, Static Circuit Breakers, Solid State Relays, HVDC Transmission, Static Var Compensators. Integration of Renewable Energy in Electric Power Systems. (12)

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
EEC401 (POWERSY STEMS-I) EEC503(POWER SYSTEMS- II)		CT+EA					
Course Outcomes	• CO 1: Understand various types of relay implementation using static circuits. • CO2: Realization of characteristics for over current, distance and differential relays using test bench. • CO3: Realize the various dynamic characteristics of digital relays for protection of transmission lines, transformers. • CO4: Identify the new developments in protective relaying and applications						

Topics Covered	List of Experiments: The Power system Laboratory includes the protection schemes and simulation related experiments. Facilities are available for over current, over voltage, directional, differential and distance relays including different numerical relays, Feeder Protection. Varieties of Power system Simulation packages like Load flow using MATLAB, EUROSTAG and MiPower are available. List of experiments: 1. Study of Inverse Definite Minimum Time over-current relay. 2. Study of Directional over-current relay (inverse) type CDD. 3. Study of Numerical Distance protection Relay MiCOM P442. 4. Parallel Feeder Protection. 5. Negative sequence protection of three-phase induction motor. 6. Study of over-voltage relay. 7. Study of Biased Differential Relay 8. Biased Differential Protection of a single-phase Transformer 9. Restricted E/F Protection of 3-phase Transformer 10. Over-current and Earth fault protection scheme for three phase system. 11. To study load flow and different dynamic events of the given network using EUROSTAG / Mi Power software 12. Study of Cable Fault Locator.
Text Books, and/or reference material	Laboratory Manuals

Course Outcomes

- CO1: To make budding engineers aware of various management functions required for any organization
- CO2: To impart knowledge on various tools and techniques applied by the executives of an organization
- CO3: To make potential engineers aware of managerial function so that it would help for their professional career
- CO4: To impart knowledge on organizational activities operational and strategic both in nature
- C05: To impart knowledge on each functional area of management like Marketing, Finance, Behavioral Science, Quantitative Techniques and Decision Science

Topics Covered

UNIT I: Management Functions and Business Environment: Business environment-macro, Business environment -micro; Porter's five forces, Management functions – overview, Different levels and roles of management, Planning- Steps, Planning and environmental analysis with SWOT, Application of BCG matrix in organization **(8)**

UNIT II: Quantitative tools and techniques used in management: Forecasting techniques, Decision analysis, PERT & CPM as controlling technique **(7)**

UNIT III: Creating and delivering superior customer value: Basic understanding of marketing, Consumer behavior-fundamentals, Segmentation, Targeting & Positioning, Product Life cycle. **(8)**

UNIT IV: Behavioral management of individual: Motivation, Leadership, Perception, Learning. **(8)**

UNIT V: Finance and Accounting: Basics of Financial management of an organization,

	Preparation of Final Accounts, Analysis of Financial statements, Cost Volume Profit (CVP) Analysis, An overview of financial market with special reference to India. **(12)**
Text Books, and/or reference material	Text Books: 1. Financial Management, 11th Edition, I M Pandey, Vikas Publishing House. 2. Marketing Management 15th Edition, Philip Kotler and Kelvin Keller, Pearson India 3. Management Principles, Processes, and practice, first edition, Anil Bhat and Arya Kumar, Oxford Higher education 4. 2018 ONWARD UNDERGRADUATE ADMISSION BATCH

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT

Departmental Elective: SEVENTH SEMESTER

Subject Code	Subject Name
EEE710	Renewable Energy Systems
EEE711	Advanced Power Converters
EEE712	Generalized Theory of Electrical Machines
EEE713	Electrical Drives
EEE714	Power System Planning, Operation and Control
EEE715	Embedded Systems
EEE716	FACTS Device
EEE717	Generation & Utilization of Electrical Power
EEE718	Advanced Control Systems
EEE719	Microprocessor & Embedded Systems
EEE720	Digital Signal Processing
EEE721	Design of Flight Control Law
EEE722	Power system restructuring & deregulation

EEE712	GENERALIZED THEORY OF ELECTRICAL MACHINES	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEC402 (ELECTRICAL MACHINES-1), EEC501 (ELECTRICAL MACHINES- II)		CT+MT+EA					
Course Outcomes	• CO 1: To understand the basic concept of Generalized theory of Electrical machines • CO2: To learn about Reference Frame theory • CO3: To transform 3-phase quantities to 2-phase quantities and vice-versa. • CO4: To model a 3-phase induction machine • CO5: To model a 3-phase synchronous machine • CO6: To perform both steady-state and transient analysis of DC machines						
Topics Covered	Generalized Machines:Kron's primitive machine, Voltage, power and torque equations of Kron's primitive machine, Basic two-pole machine diagrams. (6) Reference Frame theory: Commonly used reference frames, Equations of transformation, 3- axis to 2-axis transformation, Park's transformation, Clarke's transformation. (4) Theory of symmetrical Induction machines:Dynamic modeling of three-phase induction						

	machine, generalized model of three-phase induction machine in arbitrary reference frame, derivation of induction machine model in stator, rotor and synchronously rotating reference frames from the arbitrary reference frame model, Space-phasor model of induction machine, Normalized model of induction machine, Dynamic performance during sudden change in load torque. (12) Synchronous Machines:Stator and rotor flux linkages, Voltage and torque equations in machine variables, mathematical modeling of synchronous machine, Swing equation, and state- space representation of Swing equation. (8) DC machines:DC generator: Steady-state analysis, transient analysis under different conditions. (6) DC motor: Steady-state analysis, transient analysis under different conditions. (6)

EEC402 (ELECTRICAL MACHINES-1), EEC504 (POWER ELECTRONICS), EEC502 (CONTROL SYSTEMS), EEC 501 (ELECTRICAL MACHINES-II)		CT+MT+EA					

Course Outcomes	• CO 1: Acquire an idea general drives application in Industry • CO2: To learn the detailoperation of the dc drives • CO3: To learn the detailoperation of the ac drives • CO4: To identify the drives and machine combinations for any particular application • CO5: To develop a clear idea about the dynamic performance of the drives

Topics Covered	DC drives: Braking of dc motors, speed control of dc motors, Single-phase half and full-controlled rectifier control of separately excited dc motor, three phase half and full-controlled and half controlled rectifier control of separately excited dc motor, chopper-controlled dc drives, closed loop control of dc drives. (12) AC drives: Braking of ac motors, speed control of ac motors, basic inverters circuits, variable voltage frequency control, VSI fed induction motor drives, AC voltage controller, cycloconverter, closed loop control of induction motor drives. (12) Heating and selection of power rating of drive motors: Heating and temperature rise of motors, selection of motor power capacity, equivalent current, torque and power methods. (6) Transients and Dynamics: Equation of motion, equivalent system, dynamics during dynamic braking of dc shunt motor, speed, time of braking and current during dynamic braking, dynamics during counter current braking of dc shunt motor, energy associated with transient process of dc shunt motor, dynamic response of induction motor, dynamics during starting and braking of induction motor. (8) Industrial application of motors: Cement mill, paper mill, textile mills etc. (4)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEC 401 (POWER SYSTEM-I), EEC 503 (POWER SYSTEM-II)		CT+MT+EA					
Course Outcomes	On completion of the course, the students will be able to: • CO1: Analyse the performance of interconnected power systems by performing power flow analysis.						

	• CO2: Perform operation scheduling of different power plants (Hydro and Thermal) for both stable and economic operation. • CO3: Model different power system equipment like governor, turbine, transmission line, generator, load and perform regulation of active, reactive power and frequency of the system by designing suitable controllers. • CO4: Estimate the size and type of power factor correcting device required for optimal as well as stable economic operation of power system. • CO5: understand cause, effect as well as control of different types of overvoltage conditions that arise in a power system. • CO6: understand different types of tariffs normally applicable for power system operation.
Topics Covered	Load flow studies: Network model formulation, formation of Ybus, load flow problem, Gauss-Siedel method, Newton-Raphson method, Decoupled load flow studies, comparison of load flow methods. Advantages and disadvantages. (8) Tariffs: Introduction, Types of Tariff-Flat demand tariff, straight line meter rate tariff, Block meter type tariff, Two-part tariff, Power factor tariff, Peak load tariff, three-part tariff (2) Economic operation of power system: Incremental fuel cost, economic dispatch neglecting transmission losses, transmission loss as a function of plant generation, General loss formula, Optimum load dispatch considering transmission losses. (5) Optimal Hydrothermal Scheduling: Classification of hydro plants, long range problem, short range problem, hydro model, equality and inequality constraints, transmission losses. (5) Unit commitment: Definition, constraints in unit commitment, Methods available for unit commitment (priority list method & Dynamic programming). (4) Load frequency control: Necessity of keeping frequency constant, load frequency of single area, load frequency of single area model of speed governing system, load frequency control of two area system, block diagram representation of an isolated power system, steady state analysis, dynamic analysis, uncontrolled system, uncontrolled system, proportional plus integral control of single area and its block diagram, steady state response (proportional plus integral control), dynamic response (proportional plus integral control). (5) Automatic Generation Control: Types of alternator exciters, exciter modelling, modelling of alternator, static and dynamic performances of AVR, compensation in AVR loop. (4) Power Factor Improvement: Introduction, Disadvantages of low power factor, causes of low power factor, power factor improvement, power factor correction by static capacitor. Economics of power factor improvement. (5) Protection against over voltages: voltage surge, causes of over voltages, Internal causes of over voltages, lightning, protection against lightning, earthing screen, overhead ground wire, lightning arrester, surge absorber. (4)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEC602(MICROPROCESSOR & MICROCONTROLLER)		CT+MT+EA					
Course Outcomes	• CO1: Comparing different microprocessor architectures and justifying their field of application. • CO2: Given peripheral devices such as memory, ADC, DIOs, etc., design of interfacing circuit, and writing algorithms to fulfil a given specific application. • CO3: Programming processor specific and processor independent software for different complex embedded system applications. • CO4: Developing software involving Real Time Operating System. • CO5: Knowledge of advanced microcontrollers and RTOS features.						
Topics Covered	Introduction to Embedded systems: Introduction - Features - Microprocessors - ALU - Von Neumann and Harvard Architecture, Classification, SPP, ASIC, ASIP CISC and RISC - Instruction pipelining. General characteristics of embedded system, introduction to different components etc. (8) Microcontroller 89CX51/52 Series: Characteristics and Features, Overview of Architectures, and Peripherals, Timers, Counters, Serial communication, Digital I/O Ports.(7) Microcontroller PIC Series: Characteristics and Features, Overview of architectures, and Peripherals, Interrupts, Timers, watch-dog timer, I/O port Expansion, analog-to-digital converter, UART, I2C and SPI Bus for Peripheral Chips, Accessories and special features.(8) ARM Architecture: Evolution, Characteristics and Features, Overview of architectures, Modes, Registers etc. (7) Software architecture and RTOS: Software Architecture: Round Robin- Round Robin with interrupts -Function Queue. Scheduling Architecture RTOS: Architecture -Tasks and Task States -Tasks and Data -Semaphores and Shared Data Message Queues -Mail Boxes and pipes -Timer Functions -Events -Memory Management, Interrupt Routines. (7) Basic design using a real time operating system: Overview. General principles. Design of an embedded system. Development Tool: Cross-Compiler, Cross-Assemblers, Linker/locator. PROM Programmers, ROM, Emulator, In-Circuit Emulators. Debugging						

	Techniques. Instruction set simulators. The assert macro. (5)

EEC401(POWERSYSTEMS-I), EEC504(POWER ELECTRONICS), EEC503(POWER SYSTEMS– II)		CT+MT+EA					
Course Outcomes	• CO 1: Understand the basic concept of FACTS devices. • CO2: Acquire knowledge about working principles of FACTS devices and their operating characteristics of FACTS devices. • CO3: Acquire an idea about modelling of various FACTS devices and their interaction in power system. • CO4: Understand how FACTS devices improve various power system performances like power flow control, stability etc.						
Topics Covered	Introduction: Basics of Power Transmission Networks, Control of Power Flow in AC Transmission Line, Flexible AC Transmission, System Controllers, Concept and General System of Considerations, Checklist of possible benefits from FACTS technology, Application of FACTS Controllers in Distribution Systems. (2) Traditional Compensation: Analysis of Uncompensated AC Line, Passive Reactive Power Compensation, Compensation by a Series Capacitor Connected at the Mid-point of the						

	Line, Shunt Compensation Connected at the Midpoint of the Line, Basics of Phase Shifting, Effects and Applications of different Compensators. (6) Static Var Compensator (SVC): Analysis of SVC, Configuration of SVC, Variable Impedance Type Static Var Generators, TCR, TSR, TSC, FC-TCR.SVC Controller, Harmonics and Filtering, Modeling and applications of SVC. (6) Static Synchronous Compensator (STATCOM): Switching Converter Type Var Generators, Basic concept and Principle of Operation of STATCOM, Basic converter configurations, Control of converters, modeling and applications of STATCOM. (5) Static Series Compensators: Basic Concepts of Controlled Series Compensation, Operation of TCSC, Analysis of TCSC, Control of TCSC, Modeling of TCSC for Stability Studies, Mitigation of Sub-synchronous, Applications of TCSC. (6) Static Synchronous Series Compensator: Operation of SSSC and the Control of Power Flow, Modeling and Control of SSSC, SSSC with an Energy Source, Analysis of SSR with a SSSC, Applications of SSSC. (5) Static Phase Shifting: Basic Principle of a PST, Configurations of SPST, Improvement ofTransient Stability Using SPST, Damping of Low Frequency Power Oscillations, Applications of SPST. (5) Combined Compensators:Unified Power Flow Controller (UPFC), Basic operating principles, Conventional transmission control capabilities, Functional control of shunt converter and series converter, Basic control systems for P and Q control, Interline Power Flow Controller. (7)
