			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
EEE721	DESIGN OF FLIGHT CONTROL LAW	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CONTROL SYSTEMS (EEC502)		CT+MT+EA					
Course Outcomes	• **CO1:** To develop the concept of the aerodynamics, 6 degrees of freedom motion of aircraft and understanding the role of control surface for aircrafts and missile. • **CO2:** To understand the longitudinal & lateral dynamics of aircrafts & missile and to identify different modes along with the scope of improvement by designing control law. • **CO3:** To develop the concept of Static and Dynamic Stability.						

	• **CO4:** To develop insight on margin criterion, the closed loop response specifications and their relationship with the stability and flying qualities of the aircrafts. • **CO5:** To design control law based on Classical Control Theory for Autopilots, Longitudinal and Lateral/directional dynamics to meet the desired margin and flying qualities criteria • **CO6:** To design control law based on Classical Control Theory for Longitudinal and Lateral/directional dynamics to meet the desired margin and flying qualities criteria
Topics Covered	**Motions of Aircraft:** Primary Definitions, 6 DOF Motion, Aerodynamic Angles, Forces and Torques, Aircraft Position and Orientation, Stability-Frame and Body-Frame, Euler's Equations, Overview of missile equation of motion (3) **Linearization of Equations of Motion:** Small Disturbance Theory and Linearization of Equations of Motion, Stability and Control Derivatives in brief (2) **Longitudinal Dynamics:** Aircraft Longitudinal Dynamics, Longitudinal Motion Approximations, Short period mode, Phugoid mode, Influence of Stability Derivatives, Transfer Functions, Flying Qualities (5) **Lateral Dynamics:** Aircraft Lateral Dynamics, Lateral-Directional Equations, Dutch Roll, Roll and Spiral Modes, Approximate Models, Transfer Functions, Flying Qualities (5) **Stability and Control:** Static Stability Basics, Longitudinal static stability, Lateral/directional static stability, Dynamic Stability (3) **Classical Design Techniques for Flight Control:** Review of Control System Analysis/Synthesis Techniques, Closed loop performance specifications, Longitudinal Stability Augmentation System and Control Augmentation System Designs, Lateral Stability Augmentation System and Control Augmentation System Designs, Design for Aileron to Rudder interconnect gain, Concept of Autopilot design, Design of 2 Loop, 3 Loop Roll Autopilot for design (12) **Advanced Design Techniques for Flight Control:** Design of longitudinal and lateral Stability Augmentation System using Pole Placement, Linear Quadratic Regulator with Output feedback, Linear Quadratic Regulator with full state feedback, Designing Performance Index, Tracking a command (12)
Text Books, and/or reference material	Suggested Text Books: 1. Aircraft Control and Simulations by Stevens and Lewis, Wiley and Sons, 3rdEdn 2. Dynamics of Flight Stability and Control by Etkin and Reid, John Wiley & Sons, 3rdEdn Suggested Reference Books: 1. Flight Stability and Automatic Control by Nelson, WCB/McGraw-Hill, 2ndEdn 2. 2018 ONWARD UNDERGRADUATE ADMISSION BATCH

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT

Departmental Elective: EIGHTH SEMESTER

Subject Code	Subject Name
EEE810	Power System Transients & Power Quality
EEE811	Smart Grid
EEE812	Power system Reliability

Department of Electrical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
EEE 810	POWER SYSTEM TRANSIENTS & POWER QUALITY	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEC 301 (NETWORK ANALYSIS AND SYNTHESIS)		CT+MT+EA					
Course Outcomes	On completion of the course, the students will be able to: • CO1: Get an idea about nature of power system transients and analyze the electrical transients in power systems. • CO2: Understand causes of the transients and how these can be reduced or eliminated. • CO3: Acquire knowledge of various power quality problems like transients and harmonics etc, their mitigation and measuring techniques. • CO4: Apply the concept of power system transients and power quality to solve various power system abnormal situations.						

	• CO5: Evaluate the response of power system in presence of various transient & power quality related issues. • CO6: Design various circuits to protect power system in presence of various transient & power quality related issues.
Topics Covered	**Fundamental Notions about Electrical Transients: -** Introduction, Circuit Parameters, Mathematical Statement of the Problem and its physical Interpretation, The Principle of Superposition (2) **Simple Switching Transients: -** The circuit closing Transient, the recovery Transient initiated by the removal of a short circuit, Double frequency transients (3) **Damping: -** Some observation on the RLC circuits, the generalized damping curves, Resistance Switching, Load Switching, Other forms of damping, Damping and frequency (3) **Abnormal Switching Transients: -** Normal and abnormal Switching Transients, Current suppression, Capacitance switching, Transformer Magnetizing Inrush Current, Ferro resonance (4) **Transients in DC circuits: -** Introduction, Interruption of Direct Current in low voltage circuits, Transients associated with HVDC circuit Breakers, Commutation Transients- The current Limiting static circuit breaker (3) **Travelling waves and other Transients on Transmission Lines: -** Circuit with distributed constants, the wave equation, Reflection and Refraction of travelling waves, Behaviour of Travelling waves at line termination, Lattice Diagram, Attenuation and Distortion of Travelling waves, switching operation involving Transmission Lines. (4) **Protection of systems and Equipments against Transient Overvoltages:-** Protection of Transmission Lines against Lightning, Lightning Shielding of substation, Surge Suppressors, Surge Capacitors and Reactors, Surge Protection of Rotating Machines (7) **Introduction to Power Quality: -** Definition of Power Quality, Power Quality Terminology, Power Quality Issues, Power Quality Progression (2) **Power Frequency Disturbance: -**Common Power Frequency Disturbances, Voltage Sags, Cure for Low-frequency Disturbances, Isolation Transformers, Voltage Regulators (3) **Harmonics:-** Definition, Harmonic Number, Odd and even harmonics, Harmonic Phase Rotation and Phase angle Relationship, Causes of voltage and current harmonics, Individual and Total Harmonic Distortion, Harmonic Signatures-Fluroscent Lighting, Adjustable Speed Drives, Personal Computer and Monitor, Effect of Harmonics on Power System Devices- Transformers, AC Motors, Capacitor Banks, Cables, Busways, Protective devices, Harmonic Current mitigation- Equipment Design, Harmonic Current Cancellation, Harmonic Filters (7) **Power Quality Measuring Devices and Measurement: -** Harmonic Analyzers, Transient-Disturbance Analyzers, Oscilloscopes, Data Loggers and Chart Recorders, True RMS Meters, Power Quality Measurement (5)
Text Books, and/or reference material	**Text Books:** 1. "Electrical Transients in Power Systems", by Allan Greenwood; John Wiley & Sons; 2nd edition, April 1991. 2. "Power Quality", by C. • CO2: To study various smart transmission and distribution technologies
• CO3: To appreciate distribution generation and smart consumption and know the regulations and market models for smart grid
• CO4: To realize the operation of various Systems and its Functions used in the smart grid.
• CO5: To know about the initiative, present status, future aspects and development for smart gird.</td></tr>
<tr><td>Topics Covered</td><td colspan="8">Introduction: Smart Grid Concept, overview of Micro Grid, Green Grid, Intelligent Grid and Smart Grid, Necessity of Smart Grid. (2)
Impact of Smart Grid: Business Value Chain Generation, Transmission and Distribution, Customer Services, Market, Original Equipment Manufacturer (OEM). (3)
Fundamental Infrastructure: Concept of ElectrinetSM, Local Energy Networks, Electric Transportation, Low-Carbon Central Generation, Attributes of Smart Grid, Complexity and Standard Organization. (4)
Architecture of Smart Grid: Visualizing the Power System in Real Time, Framework of Smart Grid, Increasing System Capacity, Relieving Bottlenecks, Enabling a Self-Healing Grid, Enhanced Connectivity to Consumers, Fast Simulation and Modeling, Energy Resources in Advanced Automation. (7)
Systems And Functions: Distributed Control System (DCS), Energy Management Systems (EMS), Supervisory Control and Data Acquisition (SCADA), Distribution Automation (DA), Power Electronics-Based Controllers, Power Market Tools Advanced Meter Infrastructure (AMI), Demand Response, Distributed Energy Resources (DERs), Distributed Generation (DG), Electric Vehicle (EV), Energy Storage (ES). (8)
Electric Energy Efficiency: Power Plant Electricity Use, Electric Energy Efficiency in Power Production & Delivery, Efficiency in Power Delivery, Conservation Voltage Reduction. (4)</td></tr>
</table>

	Perfect Power System: Vision of Perfect Power System, Perfect Electric Energy Service System, Design Criteria, Perfect Power System Configurations, Fully Integrated Power System, Smart Grid Module with Core Factors, Graphical Representation of Smart Grid Features. (6) Smart Grid Progress: Status of Smart Grid in European Country, US, Present Power Scenario in India, Recent Initiatives, Strategy and Planning to Implement Smart Grid in Developed and Developing Countries. (6)

EEE812	Power system Reliability	PEL	3	0	0	3	3
Pre-requisites			Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))				
EEC401(POWERSYSTEMS-I) EEC501(POWER SYSTEMS–II), EEC 601: ADVANCED POWER SYSTEMS			CT+MT+EA				
Course Outcomes	CO1: Understand the importance of maintaining reliability of power system components CO2: Assess the different models of system components used in reliability studies. CO3: Apply expressions for Reliability analysis of series-parallel and Non-series parallel systems in practical power systems. CO4: Evaluate reliability of generation, transmission and distribution systems using different reliability indices. CO5: Analyse required for generation, transmission and distribution systems expansion. CO6: Design reliable power system considering generation, transmission & distribution together.						
Topics Covered	Basic Reliability Concepts: The general reliability function. The exponential distribution, Definition of different reliability indices, Mean time to failures, series and parallel systems,						

	Recursive techniques, Simple series and parallel system models. 8 Generating Capacity – Basic Probability Methods: The generation system model, Loss of load indices, Capacity expansion analysis, scheduled outages. Load forecast uncertainty Loss of energy indices. The frequency and duration method. 8 Transmission Systems Reliability Evaluation: Radial configuration, Conditional probability approach, Network configurations, State selection, System and load point Indices. 8 Distribution Systems Reliability Evaluation: Evaluation Techniques, Additional interruption indices, Effect of lateral distribution protection, Effect of disconnects. 6 Introduction to Power System Planning: Basic Principles, Power System Elements, Power System Structure , Power System Studies, Power System Planning Issues, Static Versus Dynamic Planning, Transmission Versus Distribution Planning, Long-term Versus Short-term Planning, Basic Issues in Transmission Planning 6 Single-bus Generation Expansion Planning: Problem Definition, Problem Description, Mathematical Development 2 Multi-bus Generation Expansion Planning: Problem Description, Mathematical Formulation 2 Network Expansion Planning: Problem Definition, Problem Description, Problem Formulation 2

CURRICULUM AND SYLLABUS FOR B.TECH. IN MECHANICAL ENGINEERING

CREDIT UNIT OF THE PROGRAM:

Semester	I + II	III	IV	V	VI	VII	VIII	TOTAL
Credit Unit	45	23.5	23	23	21	20.5	16	172

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT.

6th Semester

	DEPARTMENT OF MECHANICAL ENGINEERING
MEE610	Automobile Engineering
MEE611	Gas Dynamics and Propulsion
MEE612	Mechanics of Forming and Press Working
MEE613	Advanced Solid Mechanics
MEE614	Advanced Machining and CNC Machine Tools
MEE615	Operation Research
MEE616	Mechanical Equipment Design
MEE620	Advanced Foundry Engineering
MEE621	Mechanics of Composite and Functionally Graded Materials
MEE622	Engineering Optimization
MEE623	Multi-Phase Flow and Heat Transfer
MEE624	Tribology
MEE625	Computer Aided Design and Manufacturing

7th Semester

	DEPARTMENT OF MECHANICAL ENGINEERING
MEE710	Finite Element Method
MEE711	Computational Fluid Dynamics and Heat Transfer
MEE712	Design and Optimisation of Thermal Systems
MEE713	Non-Conventional Machining
MEE714	Advanced Welding Technology
MEE715	Robotics
MEE716	Mechanical Equipment Design
MEE717	Control Systems
MEE718	Fundamentals of Combustion
MEE719	Modelling and Simulation of Dynamic Systems

MEE720	Non-Linear Vibration
MEE721	Convective Heat and Mass Transfer
MEE722	Additive Manufacturing
MEE723	Energy Conversion Systems
MEE724	Hydraulic Machines
MEE725	Introduction to Aerospace Engineering

8th Semester

	DEPARTMENT OF MECHANICAL ENGINEERING
MEE810	Solar Energy
MEE811	Mechatronics
MEE812	Micro and Nano Manufacturing
MEE813	Microfluidics
MEE814	Machine Tool Engineering and Automation
MEE815	Theory of Plates
MEE816	Advanced Mechanical Vibration

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 01	MATHEMATICS - I	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic concepts of function, limit, differentiation, and integration.		CT+MT+EA					
Course Outcomes	• CO1: To introduce the fundamentals of differential calculus of single and several variables • CO2: To develop the basic concepts of integral calculus including multiple integrals and its application in finding area, volume, centre of mass, centre of gravity etc. • CO3: To introduce the fundamental concepts of vector calculus • CO4: To develop the concept of convergence						
Topics Covered	**Functions of Single Variable:** Rolle's Theorem and Lagrange's Mean Value Theorem (MVT), Cauchy's MVT, Taylor's and Maclaurin's series, Asymptotes & Curvature (Cartesian, Polar form). (8) **Functions of several variables:** Function of two variables, Limit, Continuity and Differentiability, Partial derivatives, Partial derivatives of implicit function, Homogeneous function, Euler's theorem and its converse, Exact differential, Jacobian, Taylor's & Maclaurin's series, Maxima and Minima, Necessary and sufficient condition for maxima and minima (no proof), Stationary points,						

	Lagrange's method of multipliers. (10) **Sequences and Series:** Sequences, Limit of a Sequence and its properties, Series of positive terms, Necessary condition for convergence, Comparison test, D Alembert's ratio test, Cauchy's root test, Alternating series, Leibnitz's rule, Absolute and conditional convergence. (6) **Integral Calculus:** Mean value theorems of integral calculus, Improper integral and it classifications, Beta and Gamma functions, Area and length in Cartesian and polar co-ordinates, Volume and surface area of solids of revolution in Cartesian and polar forms. (12) **Multiple Integrals:** Double integrals, Evaluation of double integrals, Evaluation of triple integrals, change of order of integration, Change of variables, Area and volume by double integration, Volume as a triple integral. (10) **Vector Calculus:** Vector valued functions and its differentiability, Line integral, Surface integral, Volume integral, Gradient, Curl, Divergence, Green's theorem in the plane (including vector form), Stokes' theorem, Gauss's divergence theorem and their applications. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th ed., Wiley India Ed. (2010). 2. Daniel A. Murray, Differential, and Integral Calculus, Fb & c Limited, 2018. 3. Marsden, J. E; Tromba, A. J.; Weinstein: Basic Multivariable Calculus, Springer, 2014. **Reference Books:** 1. Tom Apostal, Calculus-Vol-I & II, Wiley Student Edition, 2011. 2. Thomas and Finny: Calculus and Analytic Geometry, 11th Ed., Addison Wesley.

			Lecture (L)	**Tutorial (T)**	**Practical (P)**	**Total Hours**	
PHC01	**Engineering Physics**	**PCR**	**2**	**1**	**0**	**3**	**3**
Pre-requisites:		Course Assessment methods: (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course	CO1: To realize and apply the fundamental concepts of physics such as superposition						

Outcomes	principle, simple harmonic motion to real world problems. CO2: Learn about the quantum phenomenon of subatomic particles and its applications to the practical field. CO3: Gain an integrative overview and applications of fundamental optical phenomena such as interference, diffraction and polarization. CO4: Acquire basic knowledge related to the working mechanism of lasers and signal propagation through optical fibers.
Topics Covered	**Harmonic Oscillations** - Linear superposition principle, Superposition of two perpendicular oscillations having same and different frequencies and phases, Free, Damped and forced vibrations, Equation of motion, Amplitude resonance, Velocity resonance, Quality factor, sharpness of resonance, etc. [8] **Wave Motion** - Wave equation, Longitudinal waves, Transverse waves, Electro-magnetic waves. [3] **Introductory Quantum Mechanics** - Inadequacy of classical mechanics, Blackbody radiation, Planck's quantum hypothesis, de Broglie's hypothesis, Heisenberg's uncertainty principle and applications, Schrodinger's wave equation and applications to simple problems: Particle in a one-dimensional box, Simple harmonic oscillator, Tunnelling effect. [8] **Interference & Diffraction** - Huygens' principle, Young's experiment, Superposition of waves, Conditions of sustained Interference, Concepts of coherent sources, Interference by division of wavefront, Interference by division of amplitude with examples, The Michelson interferometer and some problems; Fraunhofer diffraction, Single slit, Multiple slits, Resolving power of grating. [13] **Polarisation** - Polarisation, Qualitative discussion on Plane, Circularly and elliptically polarized light, Malus law, Brewster's law, Double refraction (birefringence) - Ordinary and extra-ordinary rays, Optic axis etc.; Polaroid, Nicol prism, Retardation plates and analysis of polarized lights. [5] **Laser and Optical Fiber** - Spontaneous and stimulated emission of radiation, Population inversion, Einstein's A & B co-efficient, Optical resonator and pumping methods, He-Ne laser. Optical Fibre– Core and cladding, Total internal reflection, Calculation of numerical aperture and acceptance angle, Applications. [5]
Text Books, and/or reference material	**TEXT BOOKS**: 1. The Physics of Vibrations and Waves, H. John Pain, Willy and Sons 2. A Text Book of Oscillations and Waves, M. Goswami and S. Sahoo, Scitech Publications 3. Engineering Physics, H. K. Malik and A. K. Singh, McGraw-Hill. **REFERENCE BOOKS**: 1. Vibrations and Waves in Physics, Iain G. Main, Cambridge University Press 2. Quantum Physics, R. Eisberg and R. Resnick, John Wiley and Sons 3. Fundamental of Optics, Jankins and White, McGraw-Hill 4. Optics, A. K. Ghatak, Tata McGraw-Hill 5. Waves and Oscillations, N. K. Bajaj, Tata McGraw-Hill 6. Lasers and Non-linear Optics, B. B. Laud , New Age International Pvt Lt

<tr><td>Course Outcomes</td><td colspan="7">
• CO1: Introduced to chemical thermodynamics, kinetics, electrochemistry, absorption, and catalytic processes for engineering applications
• CO2: To learn fundamentals of polymer chemistry and petroleum engineering.
• CO3: Introduced to basic spectroscopic techniques for structure determination and characterization.
• CO4: To study few inorganic and bioinorganic compounds of industrial importance.
</td></tr>
<tr><td>Topics Covered</td><td colspan="7">
ORGANIC CHEMISTRY
i. Fundamentals of organic reaction mechanisms; Few important reactions and their mechanism along with their applications; Robinson annulation, Hydroboration reaction, Organometallic reagents (Gilman reagents), Metathesis using Grubb’s catalyst and Wittig reaction. (3)
ii. Fundamental concept on stereochemistry and application: Conformation and configuration of organic compounds, Diastereo-selective, enantio-selective, regio-selective, stereo-specific, and stereo-selective reactions. (3)
iii. Polymer chemistry and polymer engineering: Fundamental concept on polymer chemistry; synthesis and application of important polymers, Rubber, and plastic materials. Conducting polymer. (2)
iv. Petroleum Engineering and oil refinery: origin of mineral oils, separation principle and techniques of distillation of crude oil, Uses of different fractions, octane number, cetane number, Knocking, anti-knock compounds, and Bio-Fuel. (2)
v. Structure elucidation of organic compounds by modern spectroscopic methods; Application of UV-Visible and FT-IR spectroscopy. (3)
INORGANIC CHEMISTRY
i. Coordination Chemistry: Crystal Field Theory of octahedral and tetrahedral complexes, colour and magnetic properties, Jahn-Teller distortion, pseudo Jahn-Teller distortion, Isomerism, and stereochemistry. (5)
</td></tr>
</table>

	ii. **Bioinorganic Chemistry:** Heme and non-heme O_2 transport protein (Haemoglobin, Myoglobin), Chlorophyll and photosynthesis. (3) iii. **Inorganic Materials:** Introduction towards industrially important inorganic materials like cementing material, refractory material, fertiliser, inorganic polymer. (2) iv. **Organometallic Chemistry:** π-acid ligands, stabilization of metal low oxidation state and 18 electron rules, metal carbonyls and nitrosyls, metal-alkene complexes. (4) **PHYSICAL CHEMISTRY** i. **Thermodynamics:** 2nd law of thermodynamics, entropy, free energy, Gibbs Helmholtz equation, change of phase. Cryogenics: joule Thomson experiment. (4) ii. **Chemical Kinetics:** 2nd and 3rd order rate expression, Reversible reaction, Chain reaction, Consecutive reaction, Temp effect on reaction rate. (4) iii. **Electrochemistry:** Electrochemical cell, Effect of pH, precipitation, and complex formation on EMF of oxidation/reduction processes. (2) iv. **Absorption:** Physical and Chemical absorption, Absorption isotherms. (1) v. **Catalysis:** Types of catalysis, Rate expression for Catalysed reaction, Acid-base and Enzyme catalysis. (2)
Text Books, and/or reference material	Suggested Text Books: (i) Physical Chemistry by P. Atkins, Oxford (ii) A guidebook to mechanism in Organic chemistry: Peter Sykes; Pearson Edu. (iii) Inorganic Chemistry Part-I & II, R. L. Dutta, The new book stall Suggested Reference Books: **Organic Chemistry**: (i) Basic stereochemistry of organic molecules: S. Sengupta; Oxford University press (ii) Engineering Chemistry: Wiley (iii) Elementary Organic Spectroscopy: William Kemp, ELBS with Macmillan **Inorganic Chemistry:** (i) Inorganic Chemistry: Principle structure and reactivity, J. E. Huheey, E. A. Keiter and R. L. Keiter, Pearson Education (ii) Bioinorganic Chemistry -- Inorganic Elements in the Chemistry of Life: An Introductionand Guide, 2nd Edition, Wolfgang Kaim, Brigitte Schwederski, Axel Klein. (iii) Inorganic Chemistry Fourth Edition, Shriver & Atkins, Oxford **Physical Chemistry:** (i) Physical Chemistry by G.W Castellan (ii) Physical Chemistry by P. C. Rakshit

XEC01	**ENGINEERING MECHANICS**	PCR	2	1	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA

Course Outcomes	• CO1: Acquire knowledge of mechanics and ability to draw free body diagrams. • CO2: Apply knowledge of mechanics for solving special problems like truss and frame analysis. • CO3: Ability to calculate centroid, moments of inertia for various shapes. • CO4: Learn momentum and energy principles. • CO5: Knowledge on virtual Work Principle and its application
Topics Covered	Engineering Mechanics; measurement and SI units. [1] Vectors and force as a vector; Resultant of a system of forces on a particle; free body diagram and conditions of equilibrium of a particle; problems on particles; equilibrium of particles in space. [2] Resultant of a system of forces and couples on a rigid body; conditions of equilibrium of a rigid body; free body diagrams of rigid bodies subjected to different types of constraints; simple space problems of rigid bodies. [4] Coefficients of static and kinetic friction; problems involving friction; theories of friction on square threaded power screw and flat belt. [5] Simple trusses; analysis of trusses by method of joints and method of sections. [5] Centre of gravity and centre of mass; centroids of lines, curves and areas; first moment of area; second moment of area; polar moment of inertia; radius of gyration of an area; parallel axis theorem; mass moment of inertia. [4] Path, velocity, acceleration; rectilinear and curvilinear motion; motion of system of particles; introduction to the concept of plane kinematics of rigid bodies. [6] Newton's second law of motion; dynamic equilibrium and D'Alembert's principle; linear momentum; angular momentum; rectilinear and curvilinear motion; principles of work–energy and impulse–momentum; impact of system of particles; introduction to the concept of plane kinetics of rigid bodies. [12] Principle of Virtual Work, Solution of Problems on Mechanics using Principle of Virtual Work [3]
Text Books, and/or reference material	1) S P Timoshenko and D H Young, Engineering Mechanics, 5^{th} Edition 2) J L Meriam and L G Kraige, Engineering Mechanics, 5^{th} Edition, Wiley India 3) F P Beer and E R Johnston, Vector Mechanics for Engineers 4) I H Shames, Engineering Mechanics

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA

Course Outcomes	• CO1: Understand the importance of environment and ecosystem. • CO2: Understand the fundamental aspect of pollutant tracking and its implementation in natural and anthropogenic pollution of air and water system. • CO3: Understand the scientific basis of local and as well as global issues. • CO4: Apply of knowledge to develop sustainable solution.
Topics Covered	**Introduction:** Multidisciplinary nature of Environmental Studies; Basic issues in Environmental Studies. [2] Human population and the Environment. [1] Social issues and the Environment. [1] **Constituents of our Environment & the Natural Resources:** Atmosphere– its layers, their characters; Global warming, Ozone depletion, Acid rain, etc. [5] Hydrosphere - Its constituents, Oceans, Groundwater, Surface waters; Hydrological cycle. [4] Lithosphere - constituents of lithosphere; Rock and Mineral resources; Plate Tectonic Concept and its importance. [5] Biosphere– its components; Ecosystems and Ecology; Biodiversity; Biomes. [5] Natural disaster and their management – Earthquakes, Floods, Landslides, Cyclones. [3] **Pollution:** Pollutants and their role in air and water pollution. [2]

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	• CO1: Ability of mental visualization of different objects • CO2: Theoretical knowledge of orthographic projection to solve problems on one/two/three dimensional objects • CO3: Able to read/interpret industrial drawing and to communicate with relevant people						
Topics Covered	Graphics as language of communication; technical drawing tools and their up-keep; types of lines; construction of geometrical figures; lettering and dimensioning. [6] Construction and use of scales; construction of curves of engineering importance such as curves of conic section; spirals, cycloids, involutes and different loci of points; use of equations for drawing some curves. [9] Descriptive geometry: necessity and importance of orthographic projection; horizontal and vertical reference planes; coordinate of points; orthographic projection of points and lines situated in different quadrants, viz. 1^{st}, 2^{nd}, 3^{rd} and 4^{th} quadrants; traces of lines. First angle and third angle projection of lines and planes; views from top, front and left (or right); true length and true inclination of lines with planes of projections; primary auxiliary projection of points, lines and planes; auxiliary plan and auxiliary elevation. [9] Projection of simple regular solids, viz. prisms, cubes, cylinders, pyramids, cones, tetrahedrons, spheres, hemi-spheres etc. [6] Section of solids; section by perpendicular planes; sectional views; true shapes of sections. [6] Dimensional techniques; international and national standards (ISO and BIS). [3] Freehand graphics. [3]

Pre-requisites		Course Assessment methods: (Continuous evaluation (CE) and end assessment (EA))					
NIL		CE+EA					

Course Outcomes	CO1: To realize and apply different techniques for measuring refractive indices of different materials. CO2: To realize different types of waveforms in electrical signals using CRO. CO3: To understand charging and discharging mechanism of a capacitor. CO4: To understand interference, diffraction and polarization related optical phenomena. CO5: To acquire basic knowledge of light propagation through fibers.
Topics Covered	1. Find the refractive index of a liquid by a travelling microscope. 2. Determine the refractive index of the material of prism using spectrometer. 3. Determination of amplitude and frequency of electrical signals by oscilloscope. 4. To study the characteristics of RC circuits. 5. To study Brewster's law/Malus' law using laser light. 6. To study the diffraction of light by a grating. 7. To study the interference of light by Newton's ring apparatus. 8. To determine numerical aperture of optical fiber. 9. Determination of Planck constant.
Text and/or reference material	**SUGGESTED BOOKS**: 1) A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

Course Outcomes	• CO1: To learn basic analytical techniques useful for engg applications. • CO2: Synthesis and characterization methods of few organic, inorganic and polymer compounds of industrial importance. • CO3: Learn chromatographic separation methods. • CO4: Applications of spectroscopic measurements.
Topics Covered	i. Experiments based on pH metry: Determination of dissociation constant of we acids by pH meter. ii. Experiments based on conductivity measurement: Determination of amou of HCl by conductometric titration with NaOH. iii. Estimation of metal ion: Estimation of Fe^{2+} by permangnomentry iv. Estimation of metal ion: Determ. of total hardness of water by EDTA titration. v. Synthesis and characterization of inorganic complexes: e. g. $Mn(acac)_3$, Fe(acac cis-bis(glycinato)copper (II) monohydrate and their characterization by m. p FTIR etc. vi. Synthesis and charact. of organic compounds: e.g.Dibenzylideneacetone. vii. Synthesis of polymer: polymethylmethacrylate viii. Verification of Beer-Lamberts law and determination of amount of iron prese in a supplied solution. ix. Chromatography: Separation of two amino acids by paper chromatography x. Determination of saponification value of fat/ vegetable oil
	Suggested Text Books: 1. Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall 2. Advanced Physical Chemistry Experiments: By Gurtu&Gurtu 3. Comprehensive Practical Organic Chemistry: Qualitative Analysis By V. K. Ahluwalia and S. Dhingra Suggested Reference Books: 1. Practical Chemistry By R.C. Bhattacharya 2. Selected experiments in Physical Chemistry By N. G. Mukherjee

WSS51	WORKSHOP PRACTICE	PCR	0	0	3	3	1.5

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
NIL	CT+EA

Course Outcomes	• CO1: Study and practice on machine tools and their operations • CO2: Practice on manufacturing of components using workshop trades including fitting, carpentry, foundry and welding • CO3: Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping • CO4: Develop basic electrical engineering knowledge for house wiring practice
Topics Covered	**M/c shop & Carpentry shop -- 3X3= 9hrs.** • Introduction on machining process. • Introduction to machine tools- Lathe, Shaper, Milling and Drill machine. • Introduction to woods- Types, structure, disease and defect of wood. • Introduction to wood working machines and tools. • Making of dovetail joint and bridle joint. **Welding Shop & Sheet metal -- 3X3= 9hrs.** • Introduction to welding.Safety and precautions in welding. • Formation of weld bead by SMAW on mild steel flat. • Formation of weld bead by oxy-fuel welding on mild steel flat. • Introduction to sheet Metal works. • Tools and Machines used in sheet metal works. • Concept of development, marking out of metal sheets. • Cutting and joining of metal sheets. • Safety precautions, General warning needed in the shop floor. **Black smithy & Foundry -- 3X3= 9hrs.** • Introduction Smithing and Forging- Tools, Machines, Furnaces and its accessories, fuels. • Safety and precautions in blacksmithy. • Making of bars of different cross-sections. • Making of hexagonal headed bolts. • Forge welding. • Introduction to Foundry Technology. • Preparation of sand mould using Solid/Split Pattern. **Fitting & Electrical shop -- 3X3= 9hrs.** • Introduction to hand metal cutting tools with specifications, nomenclature and their use. • Marking tools, measuring tools and their use. • Fitting of joints of mild steel flats.

	• Introduction to electrical hazards and safety precaution. • Wire jointing and soldering. • PVC Conduit Wiring controlled by separate single way switches. • PVC Cashing Capping Wiring for two-way switches. • Conduit wiring for the connection of a Calling Bell with In& Out Indicators. • Batten Wiring and Cleat Wiring. • Tube Light Connection. • Insulation Resistance Testing of 1ph / 3ph Motor and House Wiring. • Earth Resistance Testing. • DOL Starter Connection. **Viva voce -- 1X3= 3hrs.**
Text Books, and/or reference material	1. Workshop Technology Part I and Part II by W. A. J. Chapman 2. Elements of Workshop Technology S. K. Hazra Chowdhury, A. K. Hazra Chowdhury and Nirjhar Roy 3. Mechanical Workshop Practice by K. C. John

Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Introduction of Yoga. • Sitting Posture/Asanas- Padmasana, Vajrasana, Ardhakurmasana, Ustrasana, Bakrasana, Sasankasana, Janusirshasana, Suryanamaskar.						

	• Mudra- Gyana mudra, Chin mudra, Shuni mudra, Prana mudra, Adi mudra, Anjali mudra. • Laying Posture/Asanas- PavanaMuktasana, UttanaPadasana, Sarpasana, Bhujangasana (Cobra Pose), Eka Pada Śalabhāsana, Dhanurasana, Chakrasana, Viparitkarani. • Meditation- Yognidra, Om chant, Pray chant. • Standing Posture/Asanas- Tadasana (Mountain Pose), Vrikshasana (Tree Pose), Ardhachandrasana, Trikonasana, Utkatasana, Padahastasana. • Pranayama- Deep breathing, AnulomVilom, Suryabhedi, Chandrabhedi. • Kriya- Kapalbhati, Trataka. **ATHLETICS** • Introduction of Athletic. • Starting Technique for Track events- Standing start, Crouch & Block start. • Finishing Techniques. • Relay Race- 4×100m, 4×400m & Baton Exchange Technique & Rules. • Track Marking with Fundamentals- 200m, 400m and Diagonal Distance Radius, Straight Distance, Staggers of Different Lanes & Curve Distance. **BASKETBALL** • Introduction and Players stance and ball handling. • Passing- Two hand chest pass, two hand bounce pass, One hand baseball pass, Side arm pass, Overhead pass, Hook pass. • Receiving- Two hand receiving, one hand receiving, receiving in stationary position, Receiving while jumping and Receiving while running. • Dribbling- Dribble, High dribble, Low dribble, Reverse dribble, Rolling dribble. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Introduction of Volleyball • Service- Underarm service, Sidearm service, Tennis service, Floating service, Jump service. • Pass: Underarm pass- Ready position, Teaching stage of underarm pass and Upper hand pass- Volley pass, Back pass, Short set, Jump set & Underarm set. • Rules and their interpretation. **FOOTBALL** • Introduction of Football • Push pass- Instep inside, Instep outer side. • Kicking- Spot kick, Instep kick, Lofted kick. • Dribbling- One leg, Both legs, Instep. • Trapping- Rolling ball sole trapping, High ball sole trapping, High ball chest trapping, High ball thigh trapping. • Throwing- Standing throw, Running throw, Seating throw. • Goal Keeping- Griping the ball, Full volley, Half volley, Drop Kick. • Rules and their interpretation. **CRICKET**

	• Introduction of Cricket • Batting gripping & Stance, Bowling gripping technique. • Batting front foot defense& Drive. • Batting Back foot defense& Drive. • Batting Square cut. • Bowling medium pace, Bowling off break. • Fielding drill, Catching (Short & High). • Rules & Regulation. **BADMINTON** • Basic introduction about Badminton and Badminton court. • Racket parts, Racket Grip, Shuttle Grip. • Basic stance, Basic Footwork, Shadow practice (Full court movement). • Strokes services: Forehand- Overhead & Underarm, Backhand- Overhead & Underarm. • Match practice (Single & Double). • Rules & Regulation. **TABLE TENNIS** • Introduction of Table Tennis. • Basic Stance and Grip (Shake hand & Pen hold). • Service Basic. • Stroke: Backhand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Stroke: Forehand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-1 General Introduction and words of command. • FD-2 Attention, Stand at ease and Stand easy, Turning and inclining at the halt. • FD-3 Sizing, Forming up in three Ranks Numbering, Open and Close order March and Dressing. • FD-4 Saluting at the halt, Getting on parade, Dismissing and falling out. • FD-5 Marching, Length of pace and Time of Marching in quick time and Halt, Slow March and Halt. • FD-7 Turning on the March and Wheeling. • FD-12 Parade practice. **TAEKWONDO** • Introduction about Taekwondo- Meaning of Taekwondo, Korean language of dress, Fighting area, Punch, Block, Kicks etc. • Stance- Ready stance, Walking stance, Fighting stance, Front stance, Back stance, Cat stance etc. • Punch Technique- Front fist punch, Rear fist punch, Double fist punch, With stance etc. Blocks- Upper blocks, Middle block, Side block, Suto etc. • Foot Technique (Balgisul)- Standing kick (Saseochagi), Front kick (Abchagi),

	Doliyo (Chagi), Abdalchagi (Butterfly kick), Back kick etc. **NSS** • Swachha Bharat Mission • Free Medical Camp • Sanitation drive in and around the campus. • Unnat Bharat Abhiyaan • MatribhashaSaptah celebration

<tr><td colspan="3">Basic concepts of set theory, differential equations, and probability.</td><td colspan="5">CT+MT+EA</td></tr>
<tr><td>Course Outcomes</td><td colspan="7">CO1: Develop the concept of basic linear algebra and matrix equations so as to apply mathematical methods involving arithmetic, algebra, geometry to solve problems.
CO2: To acquire the basic concepts required to understand, construct, solve and interpret differential equations.
CO3: Develop the concepts of Laplace transformation & Fourier transformation with its property to solve ordinary differential equations with given boundary conditions which are helpful in all engineering & research work.
CO4: To grasp the basic concepts of probability theory.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Elementary algebraic structures: Group, subgroup, ring, subring, integral domain, and field. (5)
Linear Algebra: Vector space, Subspaces, Linear dependence and independence of vectors, Linear span, Basis and dimension of a vector space. Rank of a matrix, Elementary transformations, Matrix inversion, Solution of system of Linear equations, Eigen values and Eigen vectors, Cayley-Hamilton Theorem, Diagonalization of matrices. (15)</td></tr>
</table>

	Ordinary Differential Equations: Existence and uniqueness of solutions of ODE (Statement Only), Equations of first order but higher degree, Clairaut's equation, Second order differential equations, Linear dependence of solutions,
	Wronskian determinant, Method of variation of parameters, Solution of simultaneous equations. (12) **Fourier series:** Basic properties, Dirichlet conditions, Sine series, Cosine series, Convergence. (4) **Laplace and Fourier Transforms:** Laplace transforms, Inverse Laplace transforms, Convolution theorem, Applications to Ordinary differential equations. Fourier transforms, Inverse Fourier transform, Fourier sine and cosine transforms and their inversion, Properties of Fourier transforms, Convolution. (10) **Probability:** Historical development of the subject and basic concepts, Axiomatic definition of probability, Examples to calculate probability, Random numbers. Random variables and probability distributions, Binomial distribution, Normal distribution. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10^{th}ed, Wiley India Ed. (2010). 2. Gilbert Strang, Linear algebra and its applications (4th Ed), Thomson (2006). 3. Shepley L. Ross, Differential Equations, 3^{rd} Edition, Wiley Student Ed (2017). **Reference Books:** 1. S. Kumaresan, Linear algebra - A Geometric approach, PHI (2000). 2. C. Grinstead, J. L. Snell, Introduction to Probability, American Math. Society.

CSC01	**INTRODUCTION TO COMPUTING**	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic knowledge of computer.		CT+MT+EA					
Course Outcomes	CO1: Recognize the changes in hardware and software technologies with respect to the evolution of computers and describe the function of system software's						

	(operating Systems) and application software's, languages, number system, logic gates. CO2: Illustrate the flowchart and inscribe an algorithm for a given problem Inscribe C programs using operators. CO3: Develop conditional and iterative statements to write C programs. CO4: Exercise user defined functions to solve real time problems CO5: Inscribe C programs that use Pointers to access arrays, strings and functions. CO6: Exercise user defined data types including structures and unions to solve problems.
Topics Covered	Fundamentals of Computer: History of Computer, Generation of Computer, Classification of Computers 2L Basic Anatomy of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices. [2] Languages: Assembly language, high level language, compiler, and assembler (basic concepts) [1] Binary & Allied number systems representation of signed and unsigned numbers. BCD, ASII. Binary Arithmetic & logic gates. [2] Basic concepts of operating systems like MS DOS, MS WINDOW, UNIX, Algorithm & flow chart. [1] C Fundamentals: The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements. [2] Operators & Expressions: Arithmetic operators, relational and logical operators, type, conversion, increment and decrement operators, bit wise operators, assignment operators and expressions, precedence, and order of evaluation. Input and Output: Standard input and output, formatted output -- printf, formatted input scanf. [8] Flow of Control: Statement and blocks, if - else, switch, loops - while, for do while, break and continue, go to and labels. [5] Fundamentals and Program Structures: Basic of functions, function types, functions returning values, functions not returning values, auto, external, static and register Variables, scope rules, recursion, function prototypes, C pre-processor, command line arguments. [5] Arrays and Pointers: One-dimensional, two-dimensional arrays, pointers and functions, multi-dimensional arrays. [10] Structures Union and File: Structure, union, structures and functions, arrays of structures, file read, file write.[5]

Pre-requisites			Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))				
(10+2) level mathematics and physics			CT+MT+EA				
Course Outcomes	• CO1: Knowledge of Semiconductor physics and devices. • CO2: Have an in depth understanding of basic electronic circuit, construction, operation. • CO3: Ability to make proper designs using these circuit elements for different applications. • CO4: Learn to analyze the circuits and to find out relation between input and output.						
Topics Covered	1. **Semiconductors** 1.1. Concept of band formation in solids; Fermi-Dirac distribution function, concept of Fermi level, invariance of Fermi level in a system under thermal equilibrium 1.2. Definitions of insulator, conductor and semiconductor using band diagram 1.3. Crystalline structure of semiconductor 1.3.1. Covalent bond 1.3.2. Generation of holes and electrons 1.3.3. Effect of temperature on semiconductor 1.4 Intrinsic semiconductor 1.5 Doping and Extrinsic semiconductor 1.5.1 n-Type semiconductor and band diagram 1.5.2 p-Type semiconductor and band diagram 1.5.3 Mass-action law of semiconductor 1.6. Conductivity of semiconductor (including mathematical expression) 1.7 Carrier transport phenomenon. (03 hrs.) 2. **Diodes** 2.1. Construction						

	2.2. Unbiased diode; Depletion layer and Barrier potential; junction capacitance (expression only) 2.3. Principle of operation with forward biasing and reverse biasing 2.4. Characteristics 2.5 Diode's three models/equivalent circuits.(02 hrs.) 3.**Diode Circuits** 3.1 Diode rectifier 3.1.1 Half wave rectifier 3.1.2 Full wave rectifier:centre tap and bridge rectifier 3.1.3 Capacitive filter and DC power supply (Numerical problems) 3.2 Special Diodes 3.2.1 Zenerdiode: Avalanche breakdown and Zener breakdown and characteristics. 3.2.2 Zener diode as a voltage regulator 3.2.3 Displaydevices: LED and LCD. (03 hrs.) 4.**Bipolar Junction Transistor (BJT)** 4.1 n-p-n and p-n-p transistor and their constructions 4.2 Principle of operation 4.3 Transistor configuration: common base, common emitter, and common collector 4.4 Transistor characteristics: input and output characteristics of CB and CE configurations 4.5 DC load line: quiescent (Q) point; cut-off, active, and saturation region 4.6 Amplifier: Principle of operation 4.7 Transistor as a switch. (04 hrs.) 5.**Transistor Biasing** 5.1 Need of biasing 5.2 Methods of biasing: base resistor or fixed bias, emitter feedback, voltage divider biasing 5.3 Stability of Q-point (qualitative discussions) 5.4 (Numerical problems). (02 hrs.) 6.**Single Stage Amplifier:** classification of amplifiers (voltage amplifier, current amplifier, power amplifier etc.) Class-A CE Amplifier with coupling and bypass capacitors, Qualitative discussions of magnitude characteristics of frequency response (graph only) (02 hrs.) 7.**Feedback Amplifier** 7.1 Positive and negative feedback 7.2 Deduction of gain with negative feedback, explanation of stability of gain with negative feedback, other effects of negative feedback (no deduction), numerical problems. (03 hrs.) 8.**Other Semiconductor Devices** 8.1 JFET: Construction, principle of operation, characteristics 8.2 MOSFET: Construction, principle of operation, characteristics 8.3 Power Electronic Device-SCR: Brief discussions. (02 hrs.) 9.**Operational Amplifier** 9.1 Characteristics of ideal operational amplifier 9.2 Pin Configuration of IC 741,

	9.3 Analysis of simple operational amplifier circuits: concept of virtual ground; noninverting amplifier and inverting amplifier. 9.4 Applications: voltage follower, summer, differentiator, integrator, and comparator (04 hrs) 10.**Oscillator** 10.1 Positive feedback and condition of oscillation 10.2 R-C phase-shift oscillator, Wien bridge oscillator.(02 hrs.) 11.**Boolean Algebra** 11.1 Boolean algebra, De Morgan's theorem, simplification of Boolean expressions 11.2 Number system, range extension of numbers, overflow 11.3 Different codes: gray code, ASCII code and BCD codes and them Applications. (01 hrs.) 12. **Logic Gates** 12.1 NOT, OR, AND, NOR, NAND, EX-OR, EX-NOR gates 12.2 Simplification of logic functions 12.3 Realizations of logic expressions using logic gates. (01 hrs.) 13. CRO and its applications and other test and measurement instruments. (01 hrs.)

Course Outcomes	Upon successful completion of this course, the student should be able to • CO1: learn the fundamentals of Electric Circuits and Network theorems and analysis of electrical network based on these concepts. • CO2: develop an idea on Magnetic circuits, Electromagnetism and learning the working principles of some fundamental electrical equipment's • CO3: learn about single phase and poly-phase AC circuits and analysis of such circuits based on these concepts. • CO4: introduce the basic concept of single-phase transformer. • CO5: analyze the transient phenomena in electrical circuits with DC excitation
Topics Covered	Introduction: Overview of Electrical power generation systems (2) Fundamentals of Electric Circuits: Ohm's laws, Kirchhoff's laws, Independent and Dependent sources, Analysis of simple circuits. (4) Network theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem (4) Magnetic circuits: Review of fundamental laws of electromagnetic induction, transformer and rotational emfs, Solution of magnetic circuits. Analysis of coupled circuits (self-inductance, mutual inductance, and dot convention)(8) Transients with D.C. excitation for R-L and R-C circuits. (3) Generation of alternating voltage and current, E.M.F. equation, Average and R.M.S. value, Phase and phase difference, Phasor representation of alternating quantity, Behavior of A.C. circuits, Resonance in series and parallel R-L-C circuits. AC Network: Superposition theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem, solution of networks with AC sources. (10) Single-Phase Transformer, equivalent circuits, open circuit and short circuit tests (6) Poly-phase system, Advantages of 3-phase system, Generation of 3-phase voltages, Voltage, current and power in a star and delta connected systems, 3-phase balanced and unbalanced circuits, Power measurement in 3-phase circuits. (5)
Textbooks/Reference material	Textbooks: 1. Electrical & Electronic Technology by Hughes, Pearson Education India Reference Books: 1. Advanced Electrical Technology by H. Cotton, Reem Publication Pvt. Ltd 2. Electrical Engineering fundamentals by Vincent Deltoro, Pearson Edu India

<tr><td colspan="2">Course Outcomes</td><td colspan="7">CO1: Basic understanding of basic cellular organization of organisms and cellular communications, structure and functions of the macromolecules and their biosynthesis and cata--bolism.
CO2: To give an understanding of the key features of the structure, growth, physiology and behavior of bacteria, viruses, fungi and protozoa
CO3: To introduce molecular biology to understand biological processes in various applications.
CO4: To provide a foundation in immunological processes and an overview of the interaction between the immune system and pathogens.
CO5: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them
CO6: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them</td></tr>
<tr><td colspan="2">Topics Covered</td><td colspan="7">1. Cell Biology (4)
a) Introduction to life science: prokaryotes & eukaryotes Definition; Difference
b) Introduction to cells - Define cell, different types of cell
c) Cellular organelles - All organelles and functions in brief
d) Cellular communications Introduction to basic signaling; endocrine, paracrine signaling; concepts of receptor, ligand, on-off switch by phosphorylation/dephosphorylation
2. Biochemistry (4)
a) Biological function of carbohydrate and lipid - Introduction, structure and function
b) Biological function of nucleic acids and protein - structure and function
c) Catabolic pathways of Macromolecules - Introduction to catabolism, hydrolysis and condensation reactions; Catabolism of glucose- Glycolysis,</td></tr>
</table>

<table>
<tr><td></td><td>
TCA; overall degradation of proteins and lipids
d) Biosynthesis of Macromolecules
Generation of ATP (ETS), Generation of Glucose (Photosynthesis)
3. Microbiology (5)
a) Types of microorganisms and their general features - Bacteria, Yeast, Fungi, Virus, Protozoa- general introduction with practical significance and diseases
b) Microbial cell organization - Internal and External features of cell- bacterial cell wall, viral capsule, pilus etc,
c) Microbial nutritional requirements and growth - Different Sources of energy; growth curve
d) Basic microbial metabolism - Fermentation, Respiration, Sulfur, N_2 cycle
4. Immunology (5)
a) Basic concept of innate and adaptive immunity - Immunity-innate and adaptive, differences, components of the immune system
b) Antigen and antibody interaction - Antigen and antibody, immunogen, factors affecting immunogenicity, basic antigen-antibody mediated assays, introduction to monoclonal antibody
c) Functions of B cell - B cell, antibody production, memory generation and principle of vaccination
d) Role of T cell in cell-mediated immunity - Th and Tc, functions of the T cell with respect to different pathogen and cancer cell
5. Molecular Biology (5)
a) Prokaryotic Genomes (Genome organization & structure) - Nucleoid, circular or linear
b) Eukaryotic Genomes (Genome organization & structure) - Intron, exon, packaging, chromatin
c) Central Dogma (Replication, Transcription and Translation)
d) Applications of Molecular Biology (Diagnostics, DNA-fingerprinting, Recombinant products etc.) - Introduction to Recombinant DNA, fingerprinting, cloning
6. Bioprocess Development (5)
a) Microbial growth kinetics - Batch, fed-batch and continuous systems, Monod Equation
b) Enzyme kinetics, kinetics of enzyme inhibition and deactivation
Definition of enzymes, activation energy, Concepts of Km, Vmax, Ki
c) Microbial sterilization techniques and kinetics
Introduction to sterilization, dry and moist sterilization
d) Thermodynamics of biological system - Concepts of Enthalpy, Entropy, favorable reactions, exergonic and endergonic reactions
e) Material and energy balance for biological reactions - Stoichiometry

<tr><td>Labs Conducted.</td><td colspan="7">1. To know your laboratory: To identify and understand the use of different electronic and electrical instruments.
2. To identify and understand name and related terms of various electronics components used in electronic circuits.: Identify different terminals of components, fid their values and observe numbering associate with it.
3. Use of oscilloscope and function generator: Use of oscilloscope to measure voltage, frequency/time and Lissajous figures of displayed waveforms.
4. Study of half wave and Full-wave (Bridge) rectifier with and without capacitor filter circuit.
5. Realization of basic logic gates: Truth table verification of OR, AND, NOT, NOT and NAND logic gates from TTL ICs
6. Regulated power supply: study LM78XX and LM79XX voltage regulator ICs
7. Transistor as a Switch: study and perform transistor as a switch through NOT gate
8. Zenner diode as voltage regulator
9. To study clipping and Clamping circuits
10. To study different biasing cirtis.
11. Study of CE amplifier and observe its frequency response.</td></tr>
<tr><td>Text Books, and/or reference material</td><td colspan="7"><u>Text Books</u>:
1. Experiments Manual for use with Electronic Principles (Engineering Technologies & the Trades) by Albert Paul MalvinoDr., David J. Bates, et al.

EES51	ELECTRICAL TECHNOLOGY LABORATORY	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
None		CT+EA					

Course Outcomes	•CO1: understand the principle of superposition. •CO2: understand the principle of maximum power transfer •CO3: understand the characteristics of CFL, incandescent Lamp, carbon lamp. •CO4: understand the calibration of energy meter. •CO5: understand open circuit and short circuit test of single-phase transformer. •CO6: analyze RLC series and parallel circuits •CO7: understand three phase connections. •C08: understand determination of B-H curve
Topics Covered	**List of Experiments:** 1.To verify Superposition and Thevenin's Theorem. 2.To verify Norton and Maximum power transfer theorem 3.Characteristics of fluorescent and compact fluorescent lamp 4.Calibration on energy meter 5.To perform the open circuit and short circuit test on single phase transformer 6.To study the balanced three phase system for star and delta connected load 7.Characteristics of different types of Incandescent lamps 8.Study of Series and parallel R-L-C circuit 9.Determination of B-H Curve for magnetic material
Textbooks, and/or reference material	Textbooks: 1. Handbook of Laboratory Experiments in Electronics and Electrical Engineering by A M Zungeru, J M Chuma , H U Ezea 2. Laboratory Courses in Electrical Engineering (5th Edition) by S. G. Tarnekar, P. K. Kharbanda, S. B. Bodhke, S. D. Naik, D. J. Dahigaonkar (S. Chand Publications)

XXS-52	Co-curricular Activities	PCR	0	0	2	2	1
Pre-requisites	Course assessment methods: (Continuous evaluation((CE) and end assessment (EA)						
NIL	CE + EA						
Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Sitting Posture/Asanas- Gomukhasana, Swastikasana, Siddhasana, Ustrasana, Janusirsasana, ArdhaMatsyendrasana (Half-Spinal Twist Pose), Paschimottanasana, Shashankasana, Bhadrasana. • Mudra- Vayu, Shunya, Prithvi, Varuna, Apana, Hridaya, Bhairav mudra. • Laying Posture/Asanas- Shalabhasana (Locust Posture), Dhanurasana (Bow Posture), ArdhaHalasana (Half Plough Pose), Sarvangasana (Shoulder Stand), Halasana (Plough Pose), Matsyasana, SuptaVajrasana, Chakrasana (Wheel Posture), Naukasana (Boat Posture), Shavasana (Relaxing Pose), Makaraasana. • Meditation- 'Om'meditation, Kundalini or Chakra Meditation, Mantrameditation. • Standing Posture/Asanas- ArdhaChakrsana (Half Wheel Posture), Trikonasana (Triangle Posture), ParshwaKonasana (Side Angle Posture), Padahastasana, Vrikshasana (Tree Pose), Garudasana (Eagle Pose). • Pranayama- Nadisodha, Shitali, Ujjayi, Bhastrika, Bhramari. • Bandha- Uddiyana Bandha, Mula Bandha, Jalandhara Bandha, Maha Bandha. • Kriya- Kapalabhati, Trataka, Nauli. **ATHLETICS** • Long Jump- Hitch kick, Paddling, Approach run, Take off, Velocity, Techniques, Flight & Landing • Discus throw, Javelin throw and Shot-put- Basic skill & Technique, Grip, Stance, Release & Follow through. • Field events marking. • General Rules of Track & Field Events. **BASKETBALL** • Shooting- Layup shot, Set shot, Hook shot, Jump shot. Free throw. • Rebounding- Defensive rebound, Offensive rebound. • Individual Defensive- Guarding the man without ball and with ball.						

	• Pivoting. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Spike- Straight spike, Body turn spike, Tip spike, Back attack, Slide spike, Wipe out spike. • Block- Single block, Double block, Triple block, Group block. • Field Defense- Dig pass, Double pass, Roll pass. • Rules and their interpretation. **FOOTBALL** • Dribbling- Square pass, Parallel pass, Forward pass. • Heading (Standing & Running)- Fore head, Side fore head, Drop heading, Body covering during heading. • Kicking- Full volley, Half volley, Drop kick, Back volley, Side volley, Chiping (lobe). • Tackling: Covering the angle, Chessing time sliding chese, Heading time shoulder tackle etc. • Feinting- Body movement to misbalance the opponent and find space to go with ball. • Rules of Football. **CRICKET** • Batting straight drive. • Batting pull shot. • Batting hook shot. • Bowling good length, In swing. • Bowling out swing, Leg break, Goggle. • Fielding drill. • Catching (Long & Slip). • Wicket keeping technique. • Rules & Regulation. **BADMINTON** • Net play- Tumbling net shot, Net Kill, and Net Lift. • Smashing. • Defensive high clear/Lob. • Half court toss practice, Cross court toss drop practice, Full court Game practice. • Player Positioning, Placements. • Rules & Regulation. • Doubles & Mixed doubles match practice. **TABLE TENNIS** • Stroke: Backhand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke: Forehand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke- Backhand lob with rally, Backhand lob with sidespin, Forehand lob with rally, Forehand lob with sidespin. • Service: Backhand/Forehand- Push service, Deep push service, Rally service.

	• Service: Backhand sidespin (Left to right & Right to left). • Service: Forehand- High toss backspin service, High toss sidespin service, High toss reverse spin service. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-6 Side pace, Pace Forward and to the Rear. • FD-7 Turning on the March and Wheeling. • FD-8 Saluting on the March. • FD-9 Marking time, Forward March and Halt in Quick Time. • FD-10 Changing step. • FD-11 Formation of Squad and Squad Drill. • FD-12 Parade practice. **TAEKWONDO** • Poomsae (Forms)- Jang, Yi Jang. • Self Defense Technique- Self defense from arms, Fist and Punch. • Sparring (Kyorugi)- One step sparring, Two step sparring, Fight (Free sparring). • Combination Technique- Combined kick and punch. • Board Breaking (Kyokpa)- Sheet breaking. • Interpretation Rules above Technique of Taekwondo. **NSS** • No Smoking Campaign • Anti- Terrorism Day Celebration • Any other observation/celebration proposed by Ministry/institute • Public Speaking • Discussion on Current Affairs • Viva voce

Course Outcomes	CO1: Acquire the idea about mathematical formulations of phenomena in physics and engineering. CO2: To understand the common numerical methods to obtain the approximate solutions for the intractable mathematical problems. CO3: To understand the basics of complex analysis and its role in modern mathematics and applied contexts. CO4: To understand the optimization methods and algorithms developed for solvingvarious types of optimization problems.
Topics Covered	**Partial Differential Equations (PDE):** Formation of PDEs; Lagrange method for solution of first order quasilinear PDE; Charpit method for first order nonlinear PDE; Homogenous and Nonhomogeneous linear PDE with constant coefficients: Complimentary Function, Particular integral; Classification of second order linear PDE and canonical forms; Initial & Boundary Value Problems involving one dimensional wave equation, one dimensional heat equation and two dimensional Laplace equation. [14] **Numerical Methods:** Significant digits, Errors; Difference operators; Newton's Forward, Backward and Lagrange's interpolation formulae; Numerical solutions of nonlinear algebraic/transcendental equations by Bisection and Newton-Raphson methods; Trapezoidal and Simpson's 1/3 rule for numerical integration; Euler's method and modified Eular's methods for solving first order differential equations. [14] **Complex Analysis:** Functions of complex variable, Limit, Continuity and Derivative; Analytic function; Harmonic function; Conformal transformation and Bilinear transformation; Complex integration; Cauchy's integral theorem; Cauchy's integral formula; Taylor's theorem, Laurent's theorem (Statement only); Singular points and residues; Cauchy's residue theorem.[17] **Optimization:** **Mathematical Preliminaries:** Hyperplanes and Linear Varieties; Convex Sets, Polytopes and Polyhedra. [2] **Linear Programming Problem (LPP):** Introduction; Formulation of linear programming problem (LPP); Graphical method for its solution; Standard form of LPP; Basic feasible solutions; Simplex Method for solving LPP.[9]

Text Books, and/or reference material	**Text Books:** 1. An Elementary Course in Partial Differential Equations-T. Amarnath 2. Numerical Methods for scientific & Engineering Computation- M.K.Jain, S.R.K. Iyengar & R.K.Jain. 3. Foundations of Complex Analysis- S. Ponnuswami 4. Operations Research Principles and Practices- Ravindran, Phillips, Solberg 5. Advanced Engineering Mathematics- E. Kreyszig **Reference Books:** 1. Complex Analysis-L. V. Ahfors 2. Elements of partial differential equations- I. N. Sneddon 3. Operations Research- H. A. Taha

Department of Mechanical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEC 301	**Solid Mechanics**	PCR	**3**	**1**	**0**	**4**	**4**

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
Basic knowledge on Engineering Mechanics	CT+EA
Course Outcomes	CO1 Knowledge on the analysis of stress, strains, elasticity properties of materials, strain energy principles CO2 Exposure towards members subjected to shear force, bending moments, flexure loads, torsional loads CO3 Idea about analyzing deflection of beams CO4 Acquire the fundamentals about members subjected to compressive loads.
Topics Covered	Introduction to stress and strains, Generalized Hooke's Law, Relationship among different elastic coefficients. 4 Theory of Bending, Shearing Forces and Bending Moments in beams, SF and BM Diagrams.6 Bending Stresses in Beams, Flexural rigidity, Section Modulus, Shear Flow, Shear Centre.6 Deflection of Beams: Double-Integration method, Area-Moment method;Propped cantilever and Fixed beams.6 Statically indeterminate beam problems. 4 Torsion of Circular shafts.4 Analysis of bi-axial stress and Mohr's Circle. 6 Combined Loading and Theories of Failure. 4 Columns: Buckling of columns, Euler's formula for stability of column. 6 Stresses in Thin Cylinder 2 Strain Energy methods – Castigliano's Theorem. 4
Text Books, and/or reference	**Text Books:** 1. Strength of Materials: Part I, II, S. Timoshenko, CBS Publishers, 1985. 2. Engineering Mechanics of Solids, E. P. Popov, PHI, 1993.

material	**Reference Books:** 1. Introduction to Solid Mechanics, I. H. Shames and J. M. Pittariesi, PHI, 2003. 2. Strength of Materials, F. L. Singer and A. Pytel, Harper Collins Publishers, 1991

MEC 302	**Theory of Machines & Mechanisms**	PCR)	**3**	**1**	**0**	**4**	**4**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Mechanics		CT+EA					

Course Outcomes	CO1 Knowledge of dynamics of elementary mechanisms and machines CO2 Knowledge of the fundamental of machine design
Topics Covered	Introduction to Mechanisms Linkages, Mechanisms and machines; Kinematic pair, element, chains and inversions; degrees of freedom, mobility and Gruebler's criterion; four bar mechanisms and slidercrank mechanismsSpecial Mechanisms - Indicator Diagram Mechanisms, Steering Mechanism, Hookes Joint4 Kinematics of Rigid Bodies Frame of reference in general motion, General plane motion, absolute and relative velocity in plane motion, Instantaneous center of rotation in plane motion3 Kinetics of Rigid Bodies in 3D Plane motion of rigid bodies: Force and accelerations methods, Energy and momentum methods3 Kinematic Analysis of Planar Linkages Position & displacement analysis, Velocity analysis, Acceleration analysis9 Gears& Gear trains: Fundamental law of gearing, gear tooth terminology, gear type, contact ratio & Kinematics analysis, Kinematic analysis of Gear trains:Velocity ratio and sense of rotation; simple, compound and epicyclic gear trains7 Cam Mechanisms: Cam terminology, displacement diagram, graphical layout of cam profile. 2 Kinematic Synthesis of Planar Linkages: Type, number and dimensional synthesis, Body guidance, path and function generation, Analytical linkage synthesis4 Computer Aided Mechanism Analysis 1 Dynamic Force Analysis of Machines Dynamic force analysis for slider crank mechanism; inertia forces in reciprocating parts; primary and secondary inertia forces; simple engine mechanism – gas force, piston effort, gudgeon pin load, crank effort or turning moment; single and double acting engine; inertia force analysis

	considering mass of the connecting rod; force analysis for a four bar mechanism6 Flywheels:Turning moment diagram, indicator diagrams – mean effective pressures for suction, compression, expansion and exhaust strokes; overall mean effective pressure for the cycle; mean resisting torque; fluctuation of energy and speed; flywheel6 Governor Mechanisms:Types, characteristics of centrifugal governors; conical pendulum type governors – Watt, Porter, and Proell; Spring loaded type of governors – Hartnell; controlling force, effort, power, sensitiveness, isochronism, stability and hunting of governors 5
Text Books, and/or reference material	**Text Books:** 1. Theory of Machines and Mechanisms, Uicker J.J., Pennock G.R., Shigley J.E. 2. Theory of Mechanisms and Machines, Ghosh A., Mallik A.K.
	Reference Books: 1. Introduction to the mechanics of machines, Morrison J.L.M., Crossland B.

Department of Mechanical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEC303	**Fluid Mechanics**	PCR	**3**	**1**	**0**	**4**	**4**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Nil		CT+EA					
Course Outcomes	CO1 Fundamental of Engineering fluid mechanics						
Topics Covered	I. Introduction: 08 Definition of fluid; Concept of continuum and Knudsen number; Concept of velocity, pressure and stress fields; Stress tensor; Fluid properties; Slip and no-slip; Compressibility and bulk modulus; Vapour pressure; Surface tension; Capillary rise and depression. II. Kinematics of flow and flow measurements: 08 Definition of flow field; Lagrangian and Eulerian description of fluid motion; Substantial derivative; Reynold's Transport Theorem; Integral form of conservation equations of fluid motion; Acceleration field; Pathline, streamsline, streakline, timeline and stream tube; Pure translation, rotation and linear and angular deformation of fluid element; angular velocity; vorticity and circulation; Free and forced vortex flows; Euler's equation along streamline; Bernoulli's Equation; Static, stagnation and dynamic pressures: Application of Bernoulli's Equation. III. Differential analysis of fluid motions: Differential control volume:08 Conservation of mass; conservation of momentum; Stokes's hypothesis; Navier-Stokes equation; Euler's equation of motion of an ideal fluid; Exact solutions of NS equations for steady incompressible flow: plane Poiseuille flow, Couette Flow, falling film flow,.						

	IV. Incompressible Flow through pipes and ducts:06 Hagen-Poiseuille flow, Darcy Wesibach Equation, Major and minor losses, Surge control; V. Dimensional Analysis:04 Measurement and dimension; Variables and functions; Dimensional homogeneity; Pi Theorem; Dimensionless parameters; Scaling rules, dimensionless numbers; Similitude; Similarity solutions and transformations; Geometric and dynamic similitude. VI. Boundary layer flows: 06 Boundary layer concepts; Prandtl's boundary layer equations; Blasius Equation for flow over a flat plate; Momentum integral equations for boundary layers; Wall shear stress; Separation of boundary layers; Fluid flows about immersed bodies. VII. Potential flow: 06 Irrotational flow; Velocity potential and stream function; Stream function for two-dimensional incompressible flow; Laplace equation; Method of solution; Complex potential for fundamental flows; Superposition of elementary flows; Flow about a half body; Uniform flow past a source and a sink, a doublet, and a cylinder with circulation; Aerofoil theory. VIII. Compressible flow:06 Propagation of sound wave; Types of flow regimes: Mach cone; Stagnation and critical states; Isentropic flow of an ideal gas: area variation; Isentropic flow in converging and converging-diverging nozzle; normal shock.
Text Books, and/or reference material	**Text Books:** 1. Introduction to Fluid Mechanics: Fox 2. Fluid Mechanics: Munson and Okiish 3. Fluid Mechanics: Robert Granger
	Reference Books: 1. Fluid Mechanics: Frank M. White 2. Mechanics of Fluids: B. S. Massey

MEC304	**Engineering Thermodynamics**	PCR	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Nil		CT+EA					
Course Outcomes	CO1 Knowledge of thermo-dynamical system CO2 Mastering laws of thermodynamics CO3 Study of air standard thermodynamic cycles CO4 Properties of pure substance CO5 Thermodynamic relations						

Topics Covered	Reynolds transport theorem based reformulations of conservation principles 2 PVT and non-PVT equation of states, Important slopes and projections. 2 Zeroth law of thermodynamics: Concept of temperature 1 First law of thermodynamics: Concept of heat, work and energy 2 Second law of thermodynamics: Concept of Entropy 2 Gouy-Stodola theorem: Exergy analysis, Some aspects of entropy generation minimization 1 Third law of thermodynamics: Nernst heat theorem 1 Thermodynamic relations: Partial derivatives, Maxwell relations, Thermodynamic mnemonic diagram 2 Applications of SFEE 1 Heat engine, heat pump and refrigerators. First and second law based performances 2 Air standard cycles: Carnot, reversed Carnot, Otto, Diesel, dual, Joule-Brayton, reversed Joule-Brayton 5 Properties of pure substances: Steam table, Mollier diagram, P-h chart 6 Vapour power cycles: Rankine, reheat, regenerative, binary vapour cycles 6 Reciprocating air compressor: Single stage air compressor, isothermal efficiency, clearance and clearance volume, volumetric efficiency, two stage and multistage compression, Intercooler, heat rejected per kg. air, indicator diagram, mean effective pressure, Mechanical efficiency 4 Rotary compressor: Roots blower, vane type blower, rotary dynamic compressor, centrifugal compressor. Momentum principles and Euler's equation for energy transfer. Static and total head quantities, velocity diagrams 3
Text Books, and/or reference material	**Text Books:** 1. M. J. Moran, H. N. Shapiro, Fundamentals of Engineering Thermodynamics, Wiley. 2. R. E. Sonntag, C. Borgnakke, G. J. 			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
PHC333	**Physics of Engineering Materials**	PCR	**3**	**0**	**0**	**3**	**3**

Course Outcomes	CO1: To understand fundamental theory of metal CO2: To comprehend theory and device applications of semiconductor materials CO3: To be familiar with fundamental of laser and its applications. CO4: To know about the super conductivity, dielectric and mechanical properties of material
Topics Covered	Electron Theory of Metals Fermi-Dirac Statistics and Fermi energy, Density of states, Concept of density of states in nanomaterials, Electrical conduction in metals and alloys, Current density, Drift velocity, Mobility etc., Classical electron theory of metal (Drude-Lorentz Theory), Quantum mechanical consideration (Sommerfeld Model). Origin of band gap (Kronig-Penny Model), Brillouin zone, Resistivity of pure metals and alloys, Electronic specific heat of metals, Thermal conductivity of metals, Factors affecting electrical conductivity, Resistivity of pure metals and alloys, Solders, Soft and hard and the use of fluxes and their classifications. [12L] Semiconductors Intrinsic and extrinsic semiconductors, Fermi level, Calculation of number density of carriers and their temperature dependence, Conductivity, Mobility and its temperature dependence, Hall effect. Compound semiconductors, Direct and indirect bandgap semiconductors. Applications of semiconductor material; Semiconductor devices, p-n diode, Zener diode, Tunnel diode, Solar cell. Semiconductor device fabrication (Mention only techniques). Double hetrostructure LED (ILED). [10L] Materials for Optical Applications Optical materials for Light Emitting Diode, Laser- Solid-state lasers, Liquid & Gas lasers. Semiconductor Laser, Band diagram, Pumping mechanism, Operation. Examples of nonlinear optical materials [4L] Superconductors Superconductivity; Electrical & magnetic properties of superconducting materials, Zero resistance property, Meissner effect, A.C. resistance, BCS Theory (Qualitative), Josephson's junction, Engineering applications of superconducting materials. [5L] Dielectrics Definitions, The local field, The Clauius-Mossoti relation, Sources of polarizability, Dipolar polarizability, Debye equation and study of molecular structure, Electronic polarizability, Ionic polarizability (Brief), Measurement of dielectric constant, Electrets, Piezoelectricity, Ferroelectricity and comparison with piezoelectricity, Applications of ferroelectric materials. [5L] Mechanical Beheviour of Materials Bonding of solids, Crystal structure, Crystal imperfections, Estimation of theoretical strength, Introduction of stress and strain, Hooke's law, elasticity, plasticity, Fracture of materials, (Fracture, Fatigue, Creep), Strengthening mechanism, Composites. [6L]
Text Books, and/or reference material	**TEXT BOOKS:** 1. Introduction to Modern Physics, H. S. Mani & G. K. Mehta 2. Solid State Electronic Devices, B. G. Streetman 3. Solid State Physics, S. O. Pillai **REFERENCE BOOKS:** 1. Introduction to Solid State Physics, C. Kittel 2. Introduction to Materials Science for Engineers, J. F. Shackelford & M. K. Muralidhara 3. Electronic Properties of Metals, E. Hamuel

PHS383	Physics of Engineering Materials Laboratory	PCR	**0**	**0**	**3**	**3**	**2**

Course Outcomes	CO1: To realize and apply different techniques for measuring characteristics of p-n junction and application of Zener diode as voltage regulator. CO2: To determine the properties (carrier concentration and type) of semiconductor by Hall-effect experiments. CO3: To apply the knowledge to determine the properties (bandgap and resistivity) of semiconductor materials by four-probe method at different temperatures. CO4: To determine the characteristics of solar cell. CO5: To determine the physical parameter such as e/m of an electron and Stefan's constant.
Topics Covered	1. Determination of Stefan's constant. 2. Study of Hall voltage and Hall coefficient of a given material. 3. Measurement of electrical conductivity of a semiconductor. 4. To determine the energy bandgap of a semiconductor. 5. To study the variation of thermo emf of a thermo-couple with temperature and determine its thermo-electric power. 6. Determination of power conversion efficiency of a solar cell. 7. To study the quantization of energy (Frank Hertz Experiment). 8. To determine the value of e/m of an electron by using a cathode ray tube and a pair of bar magnet.
Text Books, and/or reference material	Suggested Books: A Text Book on Practical Physics – K. G. Majumdar. Practical Physics – Worsnop and Flint

FOURTH SEMESTER

Department of Mechanical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEC401	**Design of Machine Elements**	PCR	**3**	**1**	**0**	**4**	**4**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC 301 (Solid Mechanics)		CT+EA					

Course Outcomes	CO1 Acquire an idea about engineering materials in machine design CO2 To learn the basic design procedure for different elementary machine elements CO3 To learn about design of bolt and welded joints, pressure vessels etc. CO4 Introduction to fatigue design
Topics Covered	Review of stress analysis, Theories of failure, Machine Design in continuation of strength of materials. 5 Fundamentals of machine design - General Principles and Procedures of design of machine elements, Factor of safety and Service Factor Mechanical properties of Engineering Materials 3 Design under Static load: C-frames and Crane hooks 4 Design under variable loading and Impact loading 5 Design of Shaft under Torsion, Bending, Axial load and Combined loads, Design of Shafts under fatigue load.10 Design of Keys, Splines, Rigid and flexible couplings 5 Design of Bolted joints 4 Design of Welded joints 4 Analysis and Design of thick cylinders and pressure vessels 5 Springs: Stress analysis and Design of Helical and Leaf springs. 4 Design of Connecting rods. 3
Text Books, and/or reference material	**Text Books:** 1. Mechanical Engineering Design – J.E. Shigley 2. Design of Machine Elements – M.F. Spotts 3. Design of Machine Elements – V.B. Bhandari
	Reference Books: Machine Design – Black and Adams

Department of Mechanical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEC 402	**Casting, Forming and Welding**	PCR	**3**	**1**	**0**	**4**	**4**

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
NIL	CT+EA

Course Outcomes	CO1. Learn different types of casting process. CO2. Select suitable manufacturing process for typical components. CO3. Learn the various welding process. CO4. Explain the concept of forging, rolling process and drawing.
Topics Covered	**<u>Casting</u>** (20 hrs) Foundry: foundry materials- moulding and core sand- binders – additives; sand preparation- sand control tests 2 pattern and pattern making 3 mould and core making, expendable and non-expendable moulds, 3 mould assembly; solidification of pure metals and alloys, grain growth. 1 Casting processes- sand casting, shell moulding, investment casting, slush casting, gravity and pressure die casting, centrifugal casting; continuous casting 5 casting design, gateway system design, riser design 3 casting defects- inspection, testing- destructive and non-destructive. 3 **<u>Welding</u>** (18 hrs) Metal joining- classification, welding heat sources, 1 arc welding machines, arc production, arc characteristics, metal transfer, welding electrode, 5 resistance welding, thermit welding, soldering and brazing, 2 gas welding, 3 Welding metallurgy, weldability of ferrous and nonferrous metals, 1 Welding defects , testing of welded joints 3 Other nonconventional welding methods like, ultrasonic welding, electron beam welding, laser beam welding etc. 3 **<u>Forming</u>**(18 hrs) Metal forming- cold, warm and hot working. Forging: processes and its classification- drop forging and press forging, open die, impression die, closed die and precision forging processes. grain flow in a forged product, 4 Specific forging operations like, coining, piercing, hubbing, heading, Swaging, roll forging, orbital forging, incremental and isothermal forging. 2 Forging defects. 1 Rolling: Strip rolling- recrystallisation and process details, Rolling mills, ring rolling, gear and thread rolling, various rolled sections, defects in rolled products. 5 Drawing: drawing terms and their definitions, circular drawing die, rod and wire and tube drawing. 4 Extrusion: processes- direct and indirect extrusion, impact and hydrostatic extrusion, metal extrusion practice, metal flow during extrusion. 2

Text Books, and/or reference material	**Text Books:** 1. Manufacturing Processes for Engg. Materials - Kalpakjian 2. Production Technology (vol I & II)—R. K. Jain and S.C. Gupta 3. Manufacturing Processes: H. S. Shan, Vol. 1 4. A textbook of Production Technology – P. C. Sharma
	Reference Books: 1. Manufacturing Science-- A. Ghosh, A.K.Mallik 2. Principles of Foundry Technology-- P.L.Jain

Department of Mechanical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEC 403	**Heat and Mass Transfer**	PCR	**3**	**0**	**0**	**3**	**3**
Pre-requisites			Course Assessment methods (Continuous (CT) and end assessment (EA))				
MEC 304 (Engineering Thermodynamics)			CT+EA				
Course Outcomes	CO1 Relation of thermodynamics and heat transfer CO2 Knowledge of Conduction mode of heat transfer CO3 Knowledge of Convection mode of heat transfer CO4 Knowledge of radiation mode of heat transfer CO5 Heat and mass transfer equipment's						
Topics Covered	Introduction, basic concepts and modes; relationship to thermodynamics. 1 Conduction: Mechanism; Fourier law of heat conduction in 3-D, 1-D steady state conduction with heat generation, composite plane wall, cylinders and spheres, thermal resistance network. Critical thickness of insulation; Use of analytical, numerical and graphical methods, thermal diffusivity, Fourier number, Heat Transfer from extended surface 12 Conservation principles: various conservation equations, Relation between system and control volume approach: Reynolds Transport Theorem, Entropy generation minimization as a general heat transfer objective, Basic convective configurations, Fluid flow and heat transfer aspect of internal flow, Fluid flow and heat transfer aspect of external flow, Visualization of convection, Flow over a flat plate, Concept of thermal and hydrodynamic boundary layers, Laminar and turbulent boundary layers, Scaling analysis, Natural, forced, mixed and turbulent convection, Dimensional analysis in correlations for convective heat transfer, Relation between fluid friction and heat transfer, Analysis of heat exchanger: LMTD, effectiveness-NTU method, Boiling and condensation mechanisms, Discrimination between diffusive and convective mass transfer, Fick's law of diffusion. 16 Radiation: physical mechanism, radiation properties, black body radiation, grey body, spectral dependence of radiation properties, Wien's displacement law, Kirchoff's law. Shape factor, heat exchange between infinite parallel planes, and Gray bodies; radiation shields, network representation. 7 Mass Transfer: Diffusive and Convective mass transfer, Evaporation process in the atmosphere, Fick's law and its applications. 6						

Text Books, and/or reference material	**Text Books:** 1. Heat Transfer-- J. P. Holman 2. Principles of Heat and Mass Transfer—F. P. Incropera, D. P. DeWitt, T.L. Bergan 3. A Heat Transfer Text Book, Dover - John H. Lienhard V, John H. Lienhard IV
	Reference Books: 1. Heat and Mass Transfer- Y. A. Cengel, A.J. Ghajar

Department of Electrical Engineering								
OFFERED FOR ME DEPARTMENT								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)#	Total Hours	
EEC432	**Electrical Machines**	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous evaluation (CE) and end assessment (EA))					
EEC01(ELECTRICAL TECHNOLOGY)		CE+EA					
Course Outcomes	CO1: Theory of electromechanical energy conversion, the concepts of voltage generation and fundamental torque equation. CO2: Basic understanding of the principles of operation and construction of direct and alternating current machines and transformers. CO3: A study of theory and concept of Electric Machines (AC & DC). CO4: Deriving equivalent circuit of electrical machines. CO5: Studying the performance and characteristics of Electrical machines (AC & DC).						
Topics Covered	Basic principle of Faraday's law of electro-magnetic induction, energy conversion and magnetic circuit. (4) Transformer: Construction and principle of operation of single phase transformer, Step-up and Step-down transformer, E.M.F. equation, Equivalent circuits, phasor diagram, Open circuit and short circuit tests, losses and efficiency, All day efficiency, Auto transformer. (8) D.C. Machines Construction, Methods of excitation and classifications, Simple lap and wave windings, emf equation, characteristics of different dc generator, armature reaction, Commutation, Back e.m.f in a d.c. motor, Motor Starter, Speed and torque equations, Speed vs torque characteristics and speed control of DC motors, losses in dc machines, Applications. (12)						
	Induction Motor: Pulsating and rotating magnetic field construction and principle of operation of Single and three phase induction motors, cage and wound rotor induction motors, comparison between them slip, equivalent circuits, No load and blocked rotor tests, Circle diagram, Torque/speed curve Starting and speed control, Applications of single phase and three phase induction motors. (12)						

	Synchronous Machines: Construction-alternators-turbo & hydro generators, principle of operation, emf equation, excitation control, synchronization load sharing synchronous motor operation, Synchronous condenser, applications of synchronous generator and motor. (6)
Text Books, and/or reference material	Text Books: 1. Electrical Machinery by P S Bimbhra 2. Electrical Technology Vol-II by B L Thereza Reference Books: 1. Electrical Machines by J B Gupta

Department of Mechanical Engineering

Introduction to Manufacturing processes and Metal cutting, Types of basic motions, Speed, feed and depth of cut, Shapes produced by different combination of motions, representation of chip formation in 3D. 2
Cutting Tools: Single point, Multi point, Left hand and Right hand cutting tool. Single point cutting tool nomenclature and representation in 3D, Tool geometry in ASA and ORS systems, Effect of tool geometry on performance. 2
Experimental observations in metal cutting- chip thickness, width of cut, primary deformation zone, shear angle concept, Piispanen's model, types of chips and the conditions of their formation, strain hardening, heat generation and dissipation, cutting fluid. Orthogonal and Oblique cutting- 2D and 3D representation, effect on chip formation and on mechanics of chip formation. Concept of undeformed chip thickness, chip reduction coefficient determination- experimentally from chip length. Analytical determination of shear angle and shear strain from simple geometry of chip formation. 4
Forces in Metal cutting: Free body diagram and mechanics of chip formation, direction and Representation of forces on basic plane and orthogonal plane, 3D representation of forces on cutting tool, Merchant's Circle Diagram representation of forces, transformation of forces, kinematic coefficient of friction, total work done and its distribution, different specific energies, power estimation, Merchant's first shear angle relationship and its deviation from experimental observations. 4</td></tr>
<tr><td colspan="7">Tool life: Different way of tool failure, types of tool wear- their causes and remedies, features of flank and face wear, characteristic of wear growth, definition of tool life, factors affecting tool life, Taylor's tool life equation, effects of tool geometry on tool life. 4.</td></tr>
</table>

	Grinding- Machines and processes, Transverse grinding and plunge grinding, creep-feed grinding, centreless grinding, truing and dressing of grinding wheels, balancing of grinding wheels, Details of grinding wheels- Manufacturing and specifications, grinding wheel wear, grinding temperature. 6 Nonconventional machining processes: Working principles, processes and mechanics of process parameters and applications. ECM, EDM, AJM, USM 6
	Machine tools(28 hours) Fundamental of Machine tools, Machine tool elements. 1 General feature of construction and working of Lathe, Different parts of a Lathe, Types of Lathe and specification. Back gear arrangement, Work holding devices. Screw cutting, Taper turning, Form turning and various other operations performed by a Lathe. Feed, speed, depth of cut and machining time calculation. 6 General feature of construction and working of Drilling machine, Different parts of a Drilling machine, Types of Drilling machine and Specification. Reaming, Threading and various other operations performed by a Drilling machine. Types of Drill bits. Feed, speed and machining time calculation. 4 General feature of construction and working of Milling machine, Different parts of a Milling machine, Types of Milling machine and Specification. Dividing head and Indexing method. Up milling, Down milling, Spiral milling and other operations performed by a Milling machine. Types and choice of Milling cutter. Machining time calculation. 6 General feature of construction and working of Shaping machine and Slotting machine. Quick return mechanism. Whitworth mechanism, Feed mechanism. Types of tools. Machining time calculation. 4 Gear manufacture- milling, hobbing and shaping, Gear finishing processes 4 Turret and Capstan Lathe: Types, parts, equipments and tools for use on turret and capstan lathe, operational planning and turret tool layout. 4
Text Books, and/or reference material	**Text Books:** 1. Theory of metal cutting – G. Kuppuswamy 2. Production Engineering Sciences – Pandey and Singh 3. Manufacturing Processes – H. S. Shan, Vol. 2 4. A textbook of Production Engineering – P. C. Sharma

MEC502	**IC Engine and Gas Turbines**	PCR	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC 304, MEC 403		CT+EA					

Course Outcomes	CO1 Concept of internal combustion engines CO2 Mechanism of internal combustion engines CO3 Pollution from internal combustion engines CO4 Mechanism of gas turbines CO5 Outlines of alternative fuels
Topics Covered	Internal Combustion Engines: Basic engine types and their operation, construction and application. Engine design and operating parameters, thermo-chemistry of fuel air mixture, air-fuel cycle, properties of working fluids. Indicator diagrams, engine performance and output, compression ratio, air-fuel ratio, Ignition timing and other affecting variables on engine performance. Fuel and fuel rating. Charge motion within the cylinder, combustions in SI and CI engines. Detonation and Knock, Combustion chamber, Carburation and fuel injection systems. Scavenging, natural aspiration, turbo charging and super charging, Engine friction, lubrication and cooling. Operating variables Affecting SI and CI engine performance. Modern systems for controlling engine operation. Testing of IC engines. 27 Pollution from I. C. Engines and its control: Exhaust of IC engines, Composition of exhaust gases, Apparatus for exhaust gas analysis, Permissible limits and Remedial measures for control emissions. 5 Alternative fuels for I. C. Engines. 4 Gas Turbines: Application of gas turbines, analysis of open and closed cycles, Gas turbine combustion chamber. Single and multi-shell arrangements. Inter-cooling. Reheat and regeneration. Matching of turbine and compressor. Performance characteristics. Jet propulsion and application. 6
Text Books, and/or reference material	**Text Books:** 1. Internal Combustion Engine – V Ganesan 2. A text book of Internal Combustion Engines—R. K. Rajput **Reference Books:** 1. I. C. Engines-- P. W. Gill, Smith, Zury 2. I. C. Engine Fundamentals -- Obert 3. I. C. Engine Fundamentals –Heywood

MEC 302 (Theory of Machines and Mechanisms)		CT+EA					
Course Outcomes	CO1 Knowledge of gyroscopic motion of dynamic mechanical system CO2 Knowledge of balancing of rotating and reciprocating machines CO3 Knowledge of longitudinal, torsional and transverse vibration of mechanical system						

Topics Covered	Gyroscope Spinning, precession and gyroscopic couple; gyroscopic effect on ships and aeroplane; Application of Gyroscope 14 Balancing Internal and external balancing; Balancing of rotating masses -single plane balancing and two plane balancing, Balancing of reciprocating masses – single cylinder engine, Vee cylinder engine, and multicylinder inline engine.14 Vibration Longitudinal vibration – free vibration, damped vibration, and forced damped vibration; Torsional vibration – free vibration of rotor system and torsionally equivalent shaft; Transverse vibration – vibration of shaft carrying uniformly distributed load and several concentrated load, and critical speed of shaft. 14
Text Books, and/or reference material	**Text Books:** 1. Theory of Machines and Mechanisms, Uicker J.J., Pennock G 2. Theory of Mechanisms and Machines, Ghosh A., Mallik A.K.
	Reference Books: 1. Dynamics of machinery : Holowenko, Alfred R

Department of Mechanical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEO 541	**Experimental Methods in Engineering**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Nil		CT+EA					
Course Outcomes	CO1: Acquire an idea about basic concepts of engineering measurements CO2: To learn the basics of data analysis CO3: To learn the fundamentals of data acquisition. CO4: To learn the measurement techniques for electrical signals, pressure, temperature, flow, force, motion, vibration etc.						
Topics Covered	Basic concepts: Calibration, Standards, Dynamic Measurement, System response and Fourier Analysis 4 Data analysis: Error analysis, Uncertainty analysis, Statistical analysis, Curve fitting, Goodness of fit. 6 Measurement of electrical signals: Waveform measurements, Analog/digital meters, Amplifiers, Signal Conditioner, Oscilloscope, transducers 5 Measurements of physical variables: Pressure measurement 4 Flow measurement 6 Temperature measurement 4 Force/ torque/ strain measurement, motion and vibration measurement. 9 Data acquisition and processing: Signal conditioning, Data transmission, ADC and DAC 4						

Text Books, and/or reference material	**Text Books:** 1. Experimental Methods for Engineers – J. P. Holman
	Reference Books: 1. Instrumentation, measurements and experiments in Fluids by E. Rathakrishnan 2. Handbook of experimental fluid mechanics by Foss et al. 3. Measurement systems—application and design, Doebelin, E. O.

MES 551	**Design and Dynamics Laboratory**	PCR	**0**	**0**	**3**	**3**	**1.5**
Pre-requisites		Course Assessment methods (Continuous (CT))					
XEC01, MEC 302, MEC 401		CT					
Course Outcomes	CO1: Acquire basic idea about the machine component drawing, geometric profiles of gears and cams CO2: To understand the use of gyroscope and governors CO3: Understanding vibratory systems and mass balancing concept.						

Topics Covered	• Drawings of the followings.
	  ○ Assignment 1: Dimensioning concept and detail drawing of machine components. (3hrs x3)
	  ○ Assignment 2: Generation of geometric profiles of gears and cams. (3hrs x 2)
	• Motorized gyroscope – Study of gyroscopic effect and couple (3Hrs)
	• Governor - Determination of range sensitivity, effort etc., for Watts / Porter / Proell / Hartnell Governors. (3Hrs)
	• Single degree of freedom Spring Mass System – Determination of natural Frequency and verification of Laws of springs – Damping coefficient determination (3Hrs)
	• Experiment on rotor balancing (3 Hrs x2)						

Text Books, and/or reference material	**Text Books:** 1. Theory of Mechanisms and Machines, Ghosh, Mallik 2. Theory of Machines and Mechanisms, Uicker J.J., Pennock G.R., Shigley J.E.						
	Reference Books 1. Introduction to the mechanics of machines, Morrison J.L.M., Crossland B. 2. Dynamics of machinery : Holowenko, Alfred R

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC 304, MEC 403		CT+EA					
Course Outcomes	CO1: Fundamental concepts of Temperature measurement systems CO2: Test on heat transferring apparatus CO3: Knowledge on conduction heat transfer CO4: Knowledge on convection heat transfer CO3: Knowledge on Radiation heat transfer						
Topics Covered	Various types of temperature measuring and controlling instruments. Thermocouples, Thermostats etc. Fundamental concept and function of Multi-channel temperature indicator, Experiments on- Determination of forced convection heat transfer coefficient through pin fin for variable flow rates of fluid at different inlet temperature. Determination of LMTD and effectiveness for parallel and counterflow heat exchanger. Verification of the laws of radiation with the help of radiation laboratory unit. `						
Text Books, and/or reference material	**Text Books:** 1. Heat Transfer-- J. P. Holman 2. A Course in Heat and Mass Transfer-- S.Domkundwar 3. A Course in Internal Combustion Engines-- R. P. Sharma, M. L. Mathur 4. I. C. Engines-- P. W. Gill, Smith, Zury

<tr><td rowspan="2">Topics Covered</td><td colspan="7">Machine shop -- 3X6=18hrs.
● Mechanism and function of different parts of machine tool.
● Machining operations:
1) Machining of shaft and knurling by lathe.
2) Thread cutting by lathe.
3) Taper turning by lathe.
4) Machining of gear blank by lathe.
5) Making of Square Bar by shaper.
6) Machining of surface by shaper.
7) Spur gear cutting by milling.
● Introduction of two and three axis CNC m/cs.
● Explanation of ‘G’ and ‘M’ Codes.
● Introduction to non-conventional machining.
Welding shop -- 3X2= 6hrs.
● Welded joints- square butt joint & T-fillet joint by SMAW with mild steel flat.
● Types of electrodes and coding systems of electrodes.
● Types and functions of flux.
● Positions of welding, polarity in welding.</td></tr>
<tr><td colspan="7">Pattern shop -- 3X2= 6hrs.
● Description of wooden pattern.
● Types of pattern, pattern allowance.
● Layout and design of pattern making.</td></tr>

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours		
MEC601	**Power Plant Engineering**	PCR	**2**	**1**	**0**	**3**	**3**	
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))						
MEC 304 Engineering Thermodynamics, MEC 403 Heat and Mass Transfer		CT+EA						
Course Outcomes	CO1 Study of power production CO2 Study of some power plant related equipment's							
Topics Covered	Primary and Secondary sources of energy, Global trend for per capita consumption of energy, Demand of energy and future availability in usable form. Recent developments in renovation of energy sources. 2 Analysis of steam cycles: Steam power plant outline, effect of steam condition on thermal efficiency, regenerative feed heating, feed water heaters, optimum degree of regeneration, deaerator, co-generation of power and process heat 9 Fuels and combustion: Coal- ranking and analysis, fuel oil, natural and petroleum gas, Combustion reactions 2 Combustion equipment's and firing methods: Fuel bed combustion, pulverized coal firing, Cyclone furnace, fluidized bed combustion-CFB and BFB, Coal gasifiers 7 Steam generator: High pressure boilers, Subcritical and Supercritical boilers, Calculation on economizer, Superheater, Reheater and Air preheater, Draught systems - FD, ID and balanced draught, calculation of fan power. Circulation-natural and Forced, circulation ratio, Performance rating of boilers. 8 Flow through nozzles and diffusers, Shocks, Super-saturation of steam through nozzle Flow. 3 Steam turbines: Machines working on impulse and reaction principles, Turbine blading, Velocity triangles, Blade speed ratio, Velocity and pressure compounding, Stage and overall efficiencies, Degree of reaction.8								
Text Books, and/or reference material	**Text Books:** 1. Power Plant Engineering-P.K.Nag 2. Power Plant Technology - M.M. El.Wakil 3. A Course in Power Plant Engineering- S. Domkundwar, S.C. Arora							
	Reference Books: 1. Power Plant Engineering- F.T. Morse 2. Steam Turbine Design and Practice- Kareton 3. Power Plant Engineering- Black and Veatch

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEC 602	**Industrial Engineering and Measurement**	PCR	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Basic knowledge of Engineering Mechanics		CT+EA					
Course Outcomes	CO1: Knowledge on the structures of Engineering Organization in general. CO2: Planning of manning and production line. CO3: Ability for material management. CO4: Indian standards of measurement. CO5: Techniques of engineering measurements with its application.						

Topics Covered	Organization Structure: Classical principles, Different types of organization structure- Line, Staff, Line and staff, Committee organization, Case study. 3 Plant Location: Factors affecting plant location, Plant location theories- material index theory, location factor theory, Dimensional decision making model, Force analogy method, Specific site selection. 4 Plant layout: Different types of layout, Various flow patterns, Factory building construction, Travel chart. 2 Job evaluation, Merit rating and Wage incentive schemes: Methods of job evaluation- Ranking method, Classification method, Point method, Factor comparison method. Merit rating- Point rating scale, Employee comparison system. Different wage incentive schemes. 4 Work study: Operation process chart, Flow process chart, Flow diagram, String diagram, Multiple activity chart- Man-machine chart, Man-machine-helper chart, Left hand-right hand chart, Motion study, SIMO study, Cycle graph and chronocycle graph, Performance rating, Stop watch time study. 4 Production, planning and control: Routing and scheduling, Assignment problems- 2 machines and n jobs, 3 machines and n jobs, m machines and n jobs, n machines and n jobs, Gantt chart. 4 Generalised measurement systems- Calibration, Sensitivity, Damping, Characteristics of first order and second order systems, Dynamic response, Harmonic analysis. 5 Standards of linear measurements, Interferometric measurements. 2 Limit, Fit and Tolerances: Basis of a limit system, Unilateral and Bilateral systems. 2 Indian limit system IS 919:1993; Types of fits and selection of fits, IS 2709:1982 3 Dimension chain and Dimensional analysis, Design and use of limit gauges. 2 Error of flatness and straightness: Concept of mean true plane, Measurement of flatness error using Beam Comparator, Autocollimator and Precision Block Level. 3 Dynamometers for measuring 2-component and 3-component machining forces. 2 Surface roughness measurement. 3
Text Books, and/or reference material	**Text Books:** 1. Industrial Engineering and Management-- Dr. Ravishankar 2. Industrial Engineering and Production Management-- M. Mahajan 3. A Text book of Engineering Metrology-- I.C.Gupta 4. Engineering Dimentional Metrology-- L.Miller
	Reference Books: 1. Management in Industry-- C.S.George 2. Engineering Tolerences-- H.W.Conway

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC 304, MEC403, MEC 502		CT+EA					
Course Outcomes	CO1: Classification and layouts of different vehicles CO2: Different types of Engines in use CO3: Different types of clutch, gear box and transmission used CO4: Different types of brakes, drivelines and wheels and tyres.						
Topics Covered	Automotive engine: Construction, operation and service of automotive engine. 8 Bearing, lubrication and cooling system. Fuel and exhaust, emission control. 6 Starting and charging system. Contact point and electronic ignition system. Other accessories with electrical and electronic devices. Engine trouble diagnosis and tune up. 10 Automotive power train: Transmission and transaxles, gear train, differentials and drive axles, drive lines and universal joints, clutches and brakes. 8 Automotive chassis: Springs and suspension system, steering system, wheels and tyres. 6 Automotive ventilation and air conditioning techniques. 4						
Text Books, and/or reference material	Suggested Text Books: 1. Automobile Engineering-- K. Singh 2. Automotive mechanics-- W. H. Crouse, D. L. Anglin Suggested Reference Books: 1. Automotive mechanics-- J. Heitner

<tr><td>Course Outcomes</td><td colspan="7">CO1: To learn compressible flows with constant entropy only, with friction only and with heat transfer only.
CO2: To learn Normal shock, oblique Shock and Prandtl-Meyer Flow with real life applications.
CO3: To learn Performance analysis ofAir Breathing Engines (Ramjet, Turbojet (standard): Fan exhausted turbojet & Fan mixed turbojet and Turbo prop.)
CO4: To learn Performance analysis of Non Air Breathing Engines (Solid Rocket Motors and Liquid Rocket Engines).</td></tr>
<tr><td>Topics Covered</td><td colspan="7"><u>Part-I: Gas Dynamics:</u>
Review of basic compressible flow e.g. sonic velocity, wave propagation. Flow with Variable area duct without normal shock and with normal shock. Fanno flow and Rayleigh flow. Solution of problems using gas table.7
Moving Normal shocks and Oblique shocks: Normal velocity superposition for moving Normal shock and tangential velocity superposition for oblique shock, oblique shock analysis for perfect gas, oblique shock table and charts. Problems. 7
Prandtl-Meyer flow: Isentropic turn (either around expansion or compression corner) from infinitesimal shocks, Mach waves, Prandtl-Meyer flow analysis, Prandtl-Meyer function, over-expanded and under-expanded nozzles, boundary conditions for flow direction and pressure, shock diamond, supersonic aerofoils, Working of supersonic wind tunnel. 4
Correlation of Fanno flow, Rayleigh flow, and a normal shock 2
<u>Part-II: JET PROPULSION</u>
Air Breathing Engines: Derivation of generalized equation/ expressions for thrust, propulsion efficiency, thermal efficiency and overall efficiency. Relation between them, TSFC(Thrust specific fuel consumption); stoichiometry , equivalence ratio, mass fraction, mole fraction, partial pressure, mass balance in chemical equations, heat of reaction, heat balance in constant volume and constant pressure processes, fuel air ratio, variation of temperature with F/O and its stoichiometric value. Condition for maximum efficiency.
Performance analysis of the following:</td></tr>
</table>

	(a) Ramjet, (b) Turbojet (standard): Fan exhausted turbojet & Fan mixed turbojet (c) Turbo prop. Effect of after burner on all the above. Related problems **12** **Non-air breathing engines:** Performance of Rocket vehicles such as Thrust, specific Impulse (I_{sp}),vehicle acceleration, burning time. Type of chemical Rockets: Solid Rocket Motors and Liquid Rocket Engines. Elementary theory and performance characteristics of both types of chemical rockets. Related problems.**10**
Text Books, and/or reference material	**Text Books:** 1. Fundamentals of gas dynamics -R.D. Zucker & Oscar Biblarz. 2. Mechanics and thermodynamics of propulsion: P. G. Hill & C.R. Peterson. **Reference Books:** 1. The Dynamics and Thermodynamics of Compressible Fluid Flow by A. H. Shapiro. 2. Aircraft Propulsion : V. Babu

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE 612	**Mechanics of Forming and Press Working**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC 402		CT+EA					
Course Outcomes	CO1: Detailed and in depth analysis of the forming processes. CO2: Specialized techniques in forming practiced in industry.						
Topics Covered	**Module 1:** **Stress-strain relationship:**true stress true strain, elasticity, anelasticity, plasticity, work hardening, work done or strain energy. Complex Stress System, concept of absolute maximum shearing stress in a plane-stress system, three dimensional stress system and Mohr's circle for the general state of stress (3-D). **Plastic Deformation and Yield Criteria:** maximum normal stress theory (Rankine's Theory), Tresca's maximum shear stress theory, Von Mises' maximum distortion energy theory, relation between tensile yield stress and shear yield stress, yielding under plane strain Graphical representation of Tresca's and Von Mises' theory. **Forging:** processes and its classification- drop forging and press forging, open die, impression die, closed die and precision forging processes. Grain flow in a forged product. Forging die materials, lubrication, forging defects, forgeability of metals, die-manufacturing methods. Analysis of forging load: Low friction or sliding friction condition (as in cold forming); high friction condition; and, combined slipping and sticking friction condition.						

	Rolling: strip rolling- recrystallization and process details, conditions for biting, role of friction in rolling. Rolling mills, ring rolling, gear and thread rolling, various rolled sections, defects in rolled products. Determination of roll pressure: pressure distribution in rolling, determination of neutral point, front tension and back tension, force and power calculation. Roll deflections and roll flattening, spreading, methods of reduction of rolling force, roll materials, various rolled sections. **Drawing:** drawing terms and their definitions, circular drawing die, drawing of wire and rod (homogeneous deformation), maximum possible reduction in a single pass, analysis of strip drawing, calculation of force and power, analysis of wire and rod drawing, calculation of force and power. **Extrusion:** processes- direct and indirect extrusion, impact and hydrostatic extrusion, metal extrusion practice, metal flow during extrusion. **<u>Module 2:</u>** **Sheet metal forming:** characteristics; parameters affecting sheet metal forming process such as, yield point elongation, anisotropy, grain size, residual stresses, spring back, wrinkling, coated sheet. 1 **Shearing, punching and blanking:** punch force; shearing operations like, die cutting, fine blanking, slitting, steel rules, nibbling; Shearing dies: Punch and die shapes, compound dies, progressive dies, transfer dies, tool and die materials. 5 **Bending of sheets and plates:** minimum bend radius, factors affecting bendability, spring back, compensation for spring back, common bending operations. 3 **Deep drawing:** Characteristics of deep drawing, formability of sheet metal, design considerations **Miscellaneous forming processes:** stretch forming, bulging, hydroforming, various spinning operations. 3 **High energy rate forming:** Explosive forming, electrohydraulic forming, magnetic pulse forming, superplastic forming etc. 3
Text Books, and/or reference material	**Text Books:** 1. Manufacturing Processes for Engg. Materials - Kalpakjian 2. Production Technology (vol I & II)—R. K. Jain and S.C. Gupta 3. Manufacturing Processes: H. S. Shan, Vol. 1 4. A textbook of Production Engineering – P. C. Sharma
	Reference Books: 1) Manufacturing Science-- A. Ghosh, A.K.Mallik

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE 620	**Advanced Foundry Engineering**	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
MEC402 (Casting, Forming and Welding)	CT+EA

Course Outcomes	• CO1 At the end of the course student will be able to get the knowledge about various aspects of casting processes and the underlying science • CO2 : various types of casting methods • CO3 : Application fields of various casting processes
Topics Covered	**Casting Processes:** Classification, characteristics of sand casting processes, metal mould casting process, Pattern materials, types of patterns, Mould and core making materials and their characteristics. (12) **Solidification of metals**: Nucleation and grain growth, solidification of pure metals, short and long freezing range alloys, Rate of solidification, macrostructure and microstructure. Solidification Contraction, Grain refinement (6) **Sand Casting Design**: Gating and risering design calculations, Fluidity and its measurement. (6) Investment casting, shell moulding, squeeze casting, vacuum casting, counter-gravity flow-pressure casting, Directional and monocrystal solidification, squeeze casting, semisolid metal casting, rheocasting. (8) Family of cast iron – Ductile Iron, Malleable Cast Iron, (3) **Casting defects**- inspection and testing , analysis of casting defects, nondestructive testing of casting- dye penetrant testing, magnetic flaw detection, radiography, ultrasonic testing, etc. (4) **Near net shape casting processes**, Modern foundry practices and special casting method. Continuous casting (3)
Text Books, and/or reference material	**Text Books**: 1. John Campbell, "Casting Practice" Elsevier Science Publishing Co.,2004 2. Scrope Kalpakjian, "Manufacturing processes for Engineering Materials",Addision, Wesley, 1997. 3. P.C. Mukherjee, Fundamentals of metal casting technology - Oxford and IBH 4. Beely, Foundry Technology, Newnes-Butterworths, 1979 **Reference Books**: 1. Casting properties of metals and alloys -V. Korolkove. 2. ASM Hand Book "Casting", ASM International 1998.

Engineering Mechanics, Strength of Materials	CT+EA
Course Outcomes	CO1:Concept of orthotropic materials CO2:Analysis of composite structures CO3:Concept of FGM
Topics Covered	Composites, various reinforcement and matrix materials. 3 Concept of orthotropic, transversely isotropic material, stress-strain relation for orthotropic and transversely isotropic material. Engineering constants for these materials. Transformation of stress and strain. 8 Micromechanical behavior of lamina. 6 Macro mechanical behavior of lamina, Classical lamination theory, Laminate stiffness of a few cases, Stress strain variation in a laminate. 8 Equation of equilibrium for laminated plates for bending, Solution technique for bending of simply supported laminated plates under uniformly distribute transverse load. 8 Failure criterion of composites. 4 Introduction to FGM. 5
Text Books, and/or reference material	**Text Books:** 1. Mechanics of composite materials By R. M. Jones (Taylor and Francis) 2. Engineering mechanics of composite materials By I. M. Daniel , O. Ishai (OxfordUniversity Press)
	Reference Books: 1. Mechanics of laminated composites plates and shells By J. N. Reddy (CRC Press) 2. The behavior of structures composed of composite materials By Jack R. Vinson and Robert L. Sierakowski

MEE 622	**Engineering Optimization**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	CO1: Students will be able to describe and formulate optimization problems CO2: Students will be able to apply knowledge of different optimization methods for solving engineering problems CO3: Students will be able to differentiate between optimization methods and suggest a suitable technique applicable for a specific problem.						

Topics Covered	Introduction: Engineering Application, Statement and Classification of the Optimization Problem, Classification, formulation procedures. 4 Classical Methods: Single Variable Optimization; Multivariable Optimization without any Constraints with Equality and Inequality Constraints, Kuhn–Tucker Conditions; Linear Optimization Methods, One-Dimensional Minimization Method. Unimodal Function. 6 Elimination Methods: Exhaustive search, Fibonocci and Golden Method. 3 Interpolation Method – Quadratic and Cubic Interpolation Method. 2 Unconstrained Minimization Method -- Univariate, Conjugate Directions, Steepest Descent (Cauchy) Method, Newton's Method, Marquardt Method, Quasi-Newton Method. 6 Constrained Minimization Method, Random Search Methods, Sequential Quadratic Programming. Basic Approach of the Penalty Function Method, Interior Penalty Function Method, Exterior Penalty Function Method. 5 Non-traditional Optimization Techniques - Genetic Algorithms. Simulated annealing. Particle swarm optimization. Ant Colony Optimization. Tabu search. 11 Reduction of size of an optimization problem. Scaling of design variables and constraints. 3 Introduction to optimization Toolbox in MATLAB. 2
Text Books, and/or reference material	**Text Books:** 1. S.S. Rao, Engineering Optimization, Theory and Practics, 3rd Enlarged Edition, New Age International Publishers, New Delhi, 2010. 2. Ashok D. MEE 623	**Multi Phase Flow and Heat Transfer**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC303, MEC403		CT+EA					

Course Outcomes	CO1: Leads students toward a clear understanding and firm grasp of the basic principles of multi phase flow and heat transfer. CO2: Understands the fluid-dynamic involved in convection and multi-phase heat transfer. CO3: Performs elementary analysis of most gas-liquid two-phase systems and prepares to use more advanced models. CO4: Equips the student with the analytical model to apply the fundamentals to a wide variety of complex engineering problems, formulate them and interpret the results. CO5: Student can analyze Hydrodynamics of three phase flows and compare two phase flow situations.
Topics Covered	Introduction, Flow Regimes, 5 Homogeneous Flow, Separated Flow 4 Condensation,2 One dimensional steady separated flow model,6 Flow in which inertia effects dominate, energy equations,3 The separated flow model for stratified and annular flow,2 General theory of drift flux model,3 Application of drift flux model to bubbly and slug flow, 4 Hydrodynamics of solid-liquid and gas-solid flow,4 An introduction to three phase flow,3 Fluid-Population Balance Technique, Volume of Fluid Method, Lattice Boltzmann Model.6
Text Books, and/or reference material	**Text Books:** 1. Ghiaasiaan, S. M., Two-Phase flow, Boiling, and Condensation, Cambridge University Press. 2. Brennen, C.E., Fundamentals of Multiphase Flow, Cambridge University Press Collier, J. G. and Thome, J. R., Convective Boiling and Condensation, 3rd ed., Oxford University Press 3. Wallis, G.B., One Dimensional Two Phase Flow, McGraw Hill Higher Education. 4. Hewitt, G.F., Measurement of Two Phase Flow Parameters. 5. Govier, G.W., and Aziz, k., Flow of Complex Mixtures. 6. Hetsroni, G., Handbook of Multiphase systems.

MEE 624	**Tribology**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC 301, MEC 502, MEC 504		CT+EA					

Course Outcomes	CO1: To learn the basic knowledge of surface topography and contact between engineering surfaces. CO2: To learn the basic theory and application of friction and wear for different materials CO3: To learn about lubricants and lubrication for different bearings CO4: Introduced to Bio-tribology of human joints CO5: Introduced to Micro-tribology for MEMS applications
Topics Covered	**Surface topography:** Measurement of surface topography; Quantifying surface roughness; The topography of engineering surfaces. 3 **Contact between surfaces:** Hertzian contact – sphere on sphere contact and cylinder on cylinder contact; Contact between rough surfaces. 6 **Friction and Wear of contact surfaces:** Laws and Theories of friction and wear; Friction and Wear of different materials; Application to friction materials. 12 **Lubricant and lubrication:** Viscosity of lubricants; Composition and properties of oils and greases; Reynolds equation; Type of lubrications - Hydrostatic lubrication, Hydrodynamic lubrication; Elasto hydrodynamic lubrication; Boundary lubrication, and application to bearings. 12 **Microtribology:** Surface forces and adhesion; Atomic force microscopy (AFM); Friction, wear and lubrication on atomic level; Applications to MEMS 7 **Biotribology:** Natural human joints; Structure and properties of articular cartilage; Mechanism of synovial lubrication: Mechanism of articular cartilage damage; Artificial joint replacements 8
Text Books, and/or reference material	**Text Books:** 1. Engineering Tribology, Dr. Prasanta Sahoo 2. Introduction to Tribology of Bearings-- B.C.Majumder 3. Principles of Tribology-- J.Halling 4. Basic Lubrication Theory, Alastair Cameron

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE 625	**Computer Aided Design and Manufacturing**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Machine Design, Engineering Mathematics, Machine Tool		CT+EA					
Course Outcomes	CO1: Able to understand scope and application of CAD/CAM tools in industry CO2: Able to learn geometric modelling and computer graphics concept in CAD tools CO3: Able to understand the different design analysis and optimization tools in CAD. CO4: Able to understand the fundamentals of Additive manufacturing, CNC machine tools, Part programming, FMS etc.						

Topics Covered	Introduction: Current trends in Design & Manufacturing, Fundamental concept of CAD-CAM-CAE, Product Life-cycle, Overview of CAD-CAM system. 3 Computer Graphics: Fundamentals of Geometric transformations, Graphics standards, CAD-CAM Data Exchange 4 Geometric Modeling: Basics of Wire-frame entities, curve representation methods Surface entities, Solid modeling & concepts of B-rep and CSG representation scheme 5 5Engineering Analysis Tools: Fundamentals of Finite Element Modeling (FEM), Introduction to design optimization tools. 8 Virtual Prototyping & Rapid Prototyping: Introduction to Virtual Prototyping and its applications in Mechanical Engineering, Principles & applications of Additive manufacturing technologies. 5 Industrial Robotics: Classification, definition of industrial robot, Robot anatomy, Configuration of robots, Application of robot, Robotic end-effector, Robot programming language. 3 CNC Machine tools & CNC Programming: Structure of CNC machine tool & functional units, Designation of axes, Drives & actuation systems, Feedback devices, Automatic tool changer, Part programming fundamentals, Computer Aided Part Programming, APT language structure, CAD interface. 7 Group Technology: Part family, part classification and coding, benefits of group technology 3 Introduction to FMS & CIM: Introduction to FMS, Components of FMS, Fundamentals of CAPP, Introduction to Computer Integrated Manufacturing. 4
Text Books, and/or reference material	**Text Books:** 1. CAD/CAM: Theory & Practice by I.Zeid 2. CAD/CAM by P.N.Rao 3. Principles of Computer-Aided Design and Manufacturing by Farid Amirouche 4. Computer Graphics by Roy A Plastock
	Reference Books: 1. Mastering CAD/CAM by I.Zeid 2. Robotics by Fu, Gonzalez, Lee 3. Finite Element Method by J.N.Reddy

Course Outcomes	CO1: Experimentation of refrigerating systems CO2: Experimentation on steam generators CO3: Study of steam turbines CO4: Test on diesel engine CO5: Experimentation on steam nozzle						
Topics Covered	Refrigeration and air-conditioning: Specification, performance test and loading of refrigerators. Concept of air conditioning. Types of air conditioning systems and their application. Steam generators: Fundamental concept, types, application and performance data. Use of steam for power generation. Fundamental concept and function of Turbines. *Study of-* Construction of fire tube and water tube boiler. Starting and loading of fire tube boiler. Construction of vapour compression refrigerator unit.						

	Experiments on- Determination of dryness fraction of steam. Efficiency test of a boiler. Performance test of diesel engine using mechanical type dynamometer under variable speed conditions. Determination of critical pressure ratio of a steam nozzle. Effect of humidity and outside air temperature on cooling load of air conditioning machine. Determination of output and back-work ratio of a gas turbine unit under variable load condition.
Text Books, and/or reference material	**Text Books:** 1. Refrigeration and Air-conditioning-- W. F. Stoecker, J. W. Jones 2. Refrigeration and Air-conditioning-- C. P. Arora 3. WSS51, MEC 402		CT+EA					

Course Outcomes	CO1: Hands on practice on different job manufacturing by milling machine CO2: Understanding power transmission mechanism in lathe, drilling machine, Milling machine etc. CO3: Exposure to grinding machine and job practice CO4: Exposure to NC/CNC machines, part programming, and job practice CO5: Job practice in nonconventional machining, ECM, EDM etc.
Topics Covered	Centre lathe - general features, parts and functions, Mechanism of power transmissions. Lathe operations - straight, taper and eccentric turning, thread cutting, drilling, boring, profile turning, knurling. Horizontal and Vertical milling machine – Spindle drives and feed motion - Milling cutters – indexing head – Simple, compound and differential indexing, Shaping machine – cutting motion and feed motion, slotting machine, Grinding machine – Cutting variables - selection of speeds, feeds and depth of cut - use of cutting fluids - Methods of holding work. Grinding machine – Surface grinding Unconventional machining, NC/CNC machine. **Exercises:** Shaping and slotting Exercises -Flat and bevel surfaces, grooves, Slots, guide ways, key ways etc. Exercises in horizontal and -surface, slot, key way and gear milling- Vertical milling machine. Grinding Exercises. Non – traditional Machining, NC/CNC Machining.
Text Books, and/or reference material	**Text Books:** 1. Manufacturing Processes for Engg. Materials - Kalpakjian 2. Production Technology (vol I & II)—R. K. Jain and S.C. Gupta 3. A Course in Workshop Technology (vol I & II)-- B.S.Raghuwanshi
	Reference Books: 1. Manufacturing Science-- A. Ghosh, A.K.Mallik 2. Principles of Foundry Technology-- P.L.Jain

Department of Mechanical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE711	**Computational Fluid Dynamics and Heat Transfer**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC303 (Fluid Mechanics) & MEC304(Thermodynamics)		CT+EA					
Course Outcomes	CO1: To learn to model a physical Fluid Mechanical and Heat Transfer problem (both Laminar & Turbulent Flow) mathematically in terms of PDEs. CO3: To learn discretization of the PDEs using Finite Difference and Finite Volume Methods CO3: To learn R-K4 method to solve ODEs and Techniques to solve PDEs. CO4: To learn to solve simple Heat transfer Problems and Viscous Incompressible Fluid Flow problems using MATLAB coding and checking the same by simulation using ANSYS-Fluent software.						
Topics Covered	**Conservation equations of fluid flow and heat transfer:** Mass, momentum (NS-equation), energy conservation equation and equation of state, Stream function- Vorticity method and Laminar Boundary layer equations for Viscous and Thermal Boundary layer. Classification of PDEs: Elliptical, Parabolic and Hyperbolic PDEs, Initial and Boundary value problems, some examples. Numerical methods: (1) Jacobi Iteration, (2)Point Gauss Siedel iteration (3), Line Gauss Siedel iteration (4) Point Successive over / under relaxation method and (5) TDMA using Thomas Algorithm. 9						

	Turbulence modeling: (1) RANS equations with (a) Mixing length model, (b) The k-ε model and (c) k-ω model. (2) Large eddy Simulation (Concept only) and (3) Direct Numerical Simulation, DNS (Issues and concepts). 5 **Discretization techniques of PDEs:** **Finite Difference Methods**: Central, Forward and Backward Differencing for both uniform and non-uniform grids. Numerical errors and accuracy; Consistency, Convergence and Stability of finite difference scheme. Grid generation, Discretization and solution using Matlab coding of both Steady and Unsteady Diffusion problems and Convetion-Diffusion problems. **Finite volume Method**: Conservativeness, Boundedness and Transportiveness, Central differencing schemes, Upwind differencing schemes, Hybrid differencing schemes and Power law schemes, Quadratic Upstream Interpolation for Convective Kinetics(QUICK). 14 **Numerical methods for Viscous Incompressible Fluid Flow:** Runge-Kutta methods and its application to solve Viscous Boundary layer equations (Blasius equation for flat plate) and Thermal boundary layer equations. Stream function- Vorticity method, MAC algorithm, SIPLE, SIMPLER, SIMPLEC and PISO to solve Viscous incompressible fluid flow. 14

Department of Mechanical Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE714	**Advanced Welding Technology**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC402 (Casting, Forming and Welding)		CT+EA					
Course Outcomes	• CO1 : To get the knowledge about newly developed welding process and its parameters • CO2 : To learn various nonconventional welding methods • CO3 : To learn various application fields of various welding processes						
Topics Covered	**Welding :** Definition, requirements, Conditions for ideal weld, Classification of welding processes (1) **Arc Welding :** Arc Initiation, Arc Physics, Arc Maintenance, Power Sources, Power Factor, Duty Cycle, SMAW, GMAW, GTAW, SAW, ESW, EGW, PAW, AHW (10) **Electrodes :** Electrode Classification, Electrode Nomenclature, Electrode composition, Basicity Index, Role of different elements, Coating Factor, Selection of electrodes (3) **Weld design and associated symbols (5)** **Shielding Gases:** Types, roles, features, Selection (1) **Weld Metallurgy**: Zones in a weld, HAZ and its calculation, Weld Decay, Weld Distortion, Residual Stresses – their causes, identification and remedy (3) **Solid State welding Processes** – Forge Welding, Cold Welding, Friction Welding, Friction Stir Welding (6) **Thermo- Chemical Welding Processes** – Thermite welding, etc (3) **Radiant Energy welding Processes** – Electron Beam Welding, Laser Beam Welding, Ultrasonic Welding (5) **Welding at Micro and Nano Scale (3)** **Automation in Welding (2)**						
Text Books, and/or reference material	Text Books: 1) Richard L. Little, Welding and Welding Technology, Tata McGraw Hill, 2004 2) J.F.Lancaster, Metallurgy of welding, Allen & Unwin, London, 1980 Reference Books: 1) V. Tsegelsky, The Electric Welder, Mir Publishers, Moscow, 1968

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE 715	**Robotics**	PEL	**3**	**0**	**0**	**3**	**3**

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
Knowledge on Mechanisms	CT+EA
Course Outcomes	CO1: Students will be able to discuss the history, concepts and key components of robotics technologies. (a, g) CO2: Students will be able to analyse and solve problems spatial transformation, forward and inverse kinematics, dynamics of robot manipulators, jacobian and singularities, joint trajectory for motion planning. (a, e, f, k, g) CO3: Students will be able to describe and compare various robot grippers, sensors, actuators and controllers and their perception. (a, e, k)
Topics Covered	Introduction to Robotics: Definition, Anatomy, Coordinate Systems, Work Envelopes, Basic structure, classification, applications of robots. 4 Robot Arm Kinematics: Frame transformation, Denavit-Hartenberg convention, Forward and Inverse kinematics of serial manipulator. 10 Linear and Angular Velocity of Links and Statics of Serial manipulator: Jacobians, Singularities.6 Introduction to Dynamics of Serial Manipulators: Lagrange-Euler formulation. 5 Trajectory Planning of Manipulator: Joint space scheme, Cartesian space scheme. 5 Robot Sensors: Contact type, non-contact type, internal sensor, External sensor, Range sensor, Proximity sensor, touch sensor, Force and torque sensor, Encoders, etc. 7 Robot Grippers. 3 Robot Controllers 2
Text Books, and/or reference material	**Text Books:** 1. Fu, K., Gonzalez, R. and Lee, C. S. G., Robotics: Control, Sensing, Vision and Intelligence¸ McGraw- Hill, 1987. 2. Craig, J. J., Introduction to Robotics: Mechanics and Control, 2nd Edition, Addison-Wesley, 1989. 3. Saha, S. K., Introduction to Robotics, TMH Publishing Company Ltd., New Delhi, 2008. 4. Pratihar, D. K., Fundamentals of Robotics, Narosa Publishing House, India, 2017.

MEE 716	**Mechanical Equipment Design**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC 401 Design of Machine Elements & MEC 503 Machine Design		CT+EA					
Course Outcomes	CO1: Exposure to various types of mechanical elements and their design procedure. CO2: Ability to design different mechanical systems independently. CO3: Understand the working of various types of drive systems. CO4: Dealing with the case studies help develop self-confidence.						
Topics Covered	Chain Drive 4 Rope Drive 4 Spiral Bevel Gear Drive 4 CVT Mechanism 4 Design of Pulley and Idlers 5 Design of Worm Gears 4 Cam Mechanisms 4 Disc Brakes 4 Selection of Single-Phase Induction Motors 3 Case Studies 6						
Text Books, and/or reference material	**Text Books:** 1. Black and Adams, Machine Design, McGraw Hill Book Company Private Ltd., USA, 1973. 2. Phelan R.M., Fundamentals of Mechanical Design, TMH, 2015.						
	Reference Books: 1. Burr, Arthur H., and Cheatham, John B., Mechanical Analysis and Design, Prentice Hall, USA,1995 2. Norton, R.L. , Machine Design: An Integrated Approach

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE 717	**Control Systems**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC 302, MEC 502		CT+EA					

Course Outcomes	CO1: Will get exposure to the block diagram based formulations, behavior of linear time continuous control systems. CO2: Ability to analyze the system performance and relative stability information. CO3: Understand the relevance of characteristic roots in the behavior of various dynamic systems. CO4: Ability to design simple controllers for analog systems. CO5: To study and analyze state space methods, controllability and observability of control systems.
Topics Covered	Introduction to Control, Systems and Elements, Transducers, Feedbacks, Classification of systems3 Mathematical modelling, Block Diagram and Transfer Functions 4 Analysis of Response of simple feedback control systems 5 Structure of Control systems and Control Laws 4 Root locus plot and analysis 5 Stability analysis by frequency response methods – Nyquist and Bode diagrams 5 State-space representations 5 PID controllers – Analysis and design 5 Digital Control Methods.2 Design of Control Systems in Matlab Simulink Environment.2 Examples of Control Systems, Laboratory Exercises.2
Text Books, and/or reference material	**Text Books:** 1. Kuo, B. C., Automatic Control System, 3rd Edition, Prentice Hall Inc., New Jarsey, 1975. 2. Nise, N. N., Control Systems Engineering, 6th Edition, John Wiley & Sons, Inc., USA, 2011.

MEE 718	**Fundamentals of Combustion**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC 304, MEC 403, MEC 502		CT+EA					
Course Outcomes	CO1: To understand the physical process involved in combustion CO2: To be able to model a process involving combustion. CO3: To acquire an in-depth idea about laminar flames. CO4: To understand partially premixed flames. CO5: To learn the intricacies of turbulent flames.						

Topics Covered	Review of thermodynamics, Chemical kinetics, Mass transfer definitions: Fick's law Equations of conservation of species mass, momentum, and energy; multi-component diffusion equation Schvab-Zel'dovich formulation, Rankine-Hugoniot relations. Laminar premixed flames: Flame speed, flammability limits, flame stabilization, ignition and quenching. Laminar diffusion flames: Burke-Schumann problem and droplet burning. Partially premixed flames
Text Books, and/or reference material	**Text Books:** 1. Principles of Combustion – K. K. Kuo 2. An introduction to combustion – S. R. Turns
	Reference Books: Combustion physics – C. K. Law

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE 719	**Modeling and Simulation of Dynamic Systems**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Engineering Mechanics, Strength of Material, Dynamics of Machine.		CT+EA					
Course Outcomes	CO1 By the end of the course students are able to know the fundamental of modeling and simulation and its usefulness. CO2 Overview of various modeling software and its usefulness in development of mathematical model. CO3 Modeling concept for electro-mechanical, mechatronics systems and feedback control. CO4 Interpretation of simulation results and diagnosis of systems.						
Topics Covered	Introduction to system modelling 6 Introduction to modeling with examples, introduction to simulation, MATLAB and Simulink, bond graph and Adams multi-body simulation tools. Modeling of dynamic systems 6 Introduction to dynamic systems with examples, bond graph modeling, causality, generation of system equations, Methods of drawing bond graph models of electrical and mechanical systems. Modeling of systems (fundamental model) 8						

	Fundamental models of mechanical, electrical, hydraulic, pneumatic and thermal systems, hydraulic and thermal system modeling, examples of fundamental systems such as two-tank system, thermal damping, compressor-reservoir system, etc. Modeling of systems (as a combination of subsystems) 10 Linear and nonlinear systems, modeling of systems: a combination of translational and rotational systems, hydro-mechanical systems and electro-mechanical systems, modeling of mechatronic systems and feedback control of mechanical systems. Simulation and its applications 10 Simulation using Simulink, bond graph and Adams, simulation of simple and compound pendulum, simulation of planar mechanisms, validation of simulation results with examples.
Text Books, and/or reference material	**Text Books:** 1. Bond graph in modeling simulation and fault identification, Amalendu Mukherjee, Arun Kumar Samantaray, and Ranjit Karmakar, CRC Press. 2. MATLAB for mechanical engineers, Rao V. Dukkipati, New age International.
	Reference Books: 1. Measurements, Modelling and Simulation of Dynamic Systems, Edward Layer, Krzystof Tomczyk, Springer-Verlag Berlin and Heidelberg GmbH & Co. KG. 2. Modelling and simulation Exploring Dynamic System Behavior, Louis G. Birta, Gilbert Arbez, Springer London Ltd

Department of Mechanical Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE 720	**Non-Linear Vibration**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC 301, MEC 302, MEC 504		CT+EA					
Course Outcomes	CO1: Understanding the various characteristics of nonlinear dynamic system. CO2: Development of solution procedures employing approximate methods. CO3: Develop the concept of stability and different methods for stability and bifurcation analysis. CO4: Analysis of nonlinear system employing numerical techniques and comparing the results with approximate methods.						

Topics Covered	**Introduction:** linear and nonlinear systems, conservative and non-conservativesystems; potential well, Phase planes, types of forces and responses, fixedpoints, periodic, quasi-periodic and chaotic responses; Local and globalstability; commonly observed nonlinear phenomena: multiple response, bifurcations, jump phenomena. 9 **Analytical solution methods:** Harmonic balance, perturbation techniques (Linstedt-Poincare', method of Multiple Scales, Averaging method) 6 **Stability and bifurcation analysis:** static and dynamic bifurcations of fixed pointand periodic response, different routes to chaotic response. 6 **Numerical techniques:** Time response, phase portrait, FFT, Poincare' maps, point attractors, limit cycles and their numerical computation, strange attractor sand chaos; Lyapunov exponents and their determination, basin of attraction: point to point mapping and cell to cell mapping, fractal dimension. 9 **Applications:** Single degree of freedom systems: Free vibration-Duffing'soscillator; primary-, secondary-and multiple- resonances; Forced oscillations: Van der Pol's oscillator; parametric excitation: Mathieu's and Hill's equations, Floquet theory; effects of damping and nonlinearity. Multi degree of freedom and continuous systems. 10
Text Books, and/or reference material	**Text Books:** 1. Nayfeh, A. H., and Mook, D. T., Nonlinear Oscillations, Wiley-Interscience,1979. 2. Hayashi, C. Nonlinear Oscillations in Physical Systems, McGraw-Hill,1964.

MEE 721	**Convective Heat and Mass Transfer**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC 303, MEC 304, MEC 403		CT+EA					

Course Outcomes	CO1: To acquire an idea about convective transport mechanism CO2: To learn the basics of convective heat and mass transfer CO3: To learn about internal and external convection CO4: To learn about forced and natural convections CO5: To learn about heat transfer in phase change
Topics Covered	Fundamental principles: Basic laws of fluid mechanics and thermodynamics, scale analysis 4 Laminar Boundary Layer: Concept of velocity and temperature boundary layers, integral solutions, similarity solutions, different wall heating conditions. 4 Laminar Duct Flow: Heat transfer to developed and developing duct flows. 4 External natural convection. 4 Internal natural convection. 4 Turbulent boundary layer flow and turbulent duct flow 5 Free turbulent flows: shear layer, jets and plumes. 4 Convection with change of phase. 6 Mass transfer. 7
Text Books, and/or reference material	**Text Books:** 1. Convection Heat Transfer – A. Bejan 2. Convective Heat Transfer -- L.C. Burmeister 3. Convective Heat and Mass Transfer – Kays and Crawford
	Reference Books: 1. Principles of Convective Heat Transfer – M. Kaviany 2. Convective Heat and Mass Transfer – S. M. Ghiaasiaan 3. Heat Convection – L. M. Jiji

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC601 (Power Plant Engineering)		CT+EA					
Course Outcomes	CO1: Acquire an idea about different energy conversion technologies CO2: To learn the energy efficient, economically viable, and environmental friendly power generation technologies CO3: To learn about different conventional and non-conventional power generation systems. CO4: Introduced to different direct energy conversion systems						

Topics Covered	Global and Indian Energy Scenario 3 Advanced Coal Technologies 6 Advanced Power generation Cycles-Supercritical Power plant, Cogeneration, Combined cycle power plants 7 Fluidized bed combustion 5 Gasification, Integrated Gasification Combined Cycle (IGCC) 6 Direct Energy Conversion: Fuel Cells: Proton Exchange Membrane (PEM) Fuel cells, Solid Oxide Fuel Cells (SOFC), Magneto-Hydro-Dynamic (MHD) Systems 7 Biomass based energy conversion 3 Nuclear Power generation 5
Text Books, and/or reference material	**Text Books:** 1. Principles of Energy Conversion-Archie W. Culp 2. Power Plant Engineering-P.K. Nag **Reference Books:** 1. Fluidized Bed Technology-J.R. Howard 2. PEM Fuel Cells: Theory and Practice- Frano Barbir

Department of Mechanical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE 724	**Hydraulic Machines**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MEC303		CT+EA					
Course Outcomes	CO1: To acquire an in depth knowledge of hydraulic machines used in the Industry CO2: To learn the basic design procedure for different hydraulic machines						
Topics Covered	Principles of Similarity, Specific Speed and Unit Quantities (4) General classification of hydraulic machines - basic principles, torque, power and efficiency. (2) A Brief introduction of 2 D Cascade Theory for Rotodynamic Machines (4) Hydraulic Turbines: (12) Classification and types of Turbines. Impulse Turbine:- Pelton Wheel;. Reaction Turbine:- Francis, Propeller and Kaplan turbines; Effective head, Available head and efficiency; Force, Torque, Power, Efficiency and Operation of Turbines; Principles of similarity; Specific speed; Cavitation; Setting of turbines; Draft tubes; Penstocks; Surge tanks; Performance characteristics curves; Selection of types and speeds of turbines; Governing of turbines.						

	Pumps: (12) Pumps: Classification ; Rotodynamic pumps:- Centrifugal and Axial flow pumps ; Torque, Power, Efficiency and Operation; Performance Characteristics; Principles of Similarity and Specific speed; Energy losses in pumps; Cavitation; Priming; Power requirements; Homologous operation; Series and Parallel operation; Multistage pumps; Selection and installation of pumps of various duties; Testing of pumps. Cavitation and setting height of turbo machines Reciprocating pumps:- Types; Working principle; Instantaneous discharge and average discharge; Slip; Negative slip, Coefficient of discharge and volumetric efficiency; Work done and overall efficiency; Indicator diagram:- effect of inertia and friction on suction and delivery pipes; Separation head; Effect of bend on delivery pipe; Air vessels; Power saved by air vessels in overcoming pipe friction; Discharge in and out of air vessel. Hydraulic coupling; Torque converter (2)
Text Books, and/or reference material	**Text Books:** 1. Mechanics of Fluids: Massey, B. S. 2. Introduction to Fluid Mechanics and Fluid Machines- S.K. Som, et al. 3. Hydraulic Machinery - Jagdish Lal

Department of Mechanical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE725	Introduction to Aerospace Engineering	PEL	3	0	0	3	3
Pre-requisites							
MAC301, PHC01		CT+EA					
Course Outcomes	CO1: Understand basics of aerospace engineering CO2: Apply the concept of static stability to flight vehicles CO3: Describe the concepts of stress, strain, Young's modulus, Poisson's ratio, yield strength CO4: Demonstrate understanding of basic knowledge of propulsive devices and basic knowledge of dynamics relevant to orbital mechanics						
Topics Covered	**Unit 1:** Aero/Hydrodynamics Introduction and Historical Development of flights, standard atmosphere, various altitude definitions, Define pressure, temperature and density of altitude. Viscosity and its implications, shear stress, the Lagrangian and Eulerian viewpoints of a flow field, concept of a streamline, Conservation Equations, Bernoulli's equation Introduction to compressible flow (CO1) **Unit 2:** Wing Geometry Common aircraft terminology and geometry, Identify basic aircraft types and discuss their features, Wing Loading and Thrust Loading, Basic Design - Lift and Drag, Calculation of the lift and drag coefficients using NACA data.(CO1) **Unit 3:** Performance and Propulsion Basic principles of Propulsion, Historical background, Classification of propulsive devices, Applications of aircraft and rocket engines, Elements of combustion: thermochemistry, Adiabatic temperature, Chemical Equilibrium, viscous and						

	pressure drag components on a body, flow separation, types of aerodynamic drag, lift and drag calculations on aircraft. (CO4) **Unit 4:** Aircraft Stability Six degrees of freedom of aircraft motions, Stable, unstable and neutral stability, Difference between static and dynamic stability, Static longitudinal stability for aircraft, Coupling in lateral and directional stability.(CO2) **Unit 5:**Aircraft Structure Primary load carrying members, perform a spar cap sizing example and understand the basic V-n diagram. (CO3) **Unit 6:** Space Applications History of space research, Orbital motion including typical spacecraft trajectories and basic orbital maneuvers, Six orbital elements, Kelper's laws of orbits, Newton's law of gravitation.(CO4)
Text Books, and/or referenc e material	1. John D. Anderson, Introduction to Flight, 8th Edition, McGraw-Hill Education, New York, 2015. 2. Manuel SolerArnedo, Fundamentals of Aerospace Engineering, Second Edition, Creative Commons Attributes- Share Alike 3.0,2017.

MEO 741	**Non-conventional Energy Systems**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NA		CT+EA					
Course Outcomes	CO1: Identify and explain the use of non-conventional energy systems. CO2: Develop an understanding that solutions to energy-related problems are complex involving sociological, economic, political and technological considerations, decisions and development. CO3: Gain insight into the issues surrounding non-conventional energy sources development and use. CO4: Become knowledgeable about applications of non-conventional energy systems as they apply to commercial, residential and industrial markets.						

Topics Covered	Traditional energy systems, Sources, Features and characteristics, applications2 Component of solar energy systems, Collector types and performances, Radiation and meteorological data processing, Long term conversion factors, System conversion and system design procedures, Solar power generation, Solar heating and cooling, Solar passive systems: Solar still, Pond, Greenhouse, Dryer, Trombe wall, Overhangs and Wing walls. 13 Wind energy conversion systems, Estimate of wind energy potential, Aerodynamic and mechanical aspects of wind machine design. 4 Principles and applications of wave energy, Shoreline systems, Near shore systems, Off shore systems 3 Tidal energy, Biomass energy, Operating principle, Wood gassifier, Pyrolysis, Applications, 4 Geothermal energy and OTEC. 4 Fuel cell: Types and technology status. 3 Hydel Power Plant: Introduction to hydro-electric power generation, Types of Hydel turbines, Layout and selection of turbines and installation, Geographic limitations, Turbine performance, Comparative analysis between thermal and hydel plants. 9
Text Books, and/or reference material	**Suggested Text Books:** 1) Solar Energy Fundamentals and Applications-- Garg and Prakash 2) Solar Energy-- S. P. Sukhatme **Suggested reference books:** 1) Fundamentals of Renewable Energy Systems-- D. Mukherjee and S. Chakrabarti 2) Non-conventional Energy Sources-- D. S. Chauhan and S. K. Srivastava

CO2: Develop an understanding that solutions to energy-related problems are complex involving sociological, economic, political and technological considerations, decisions and development.
CO3: Gain insight into the issues surrounding solar energy development and use.
CO4: Become knowledgeable about applications as they apply to commercial, residential and industrial markets.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Solar Radiation and Measurements: 7
Solar energy option - an overview, Fundamentals of solar radiation, Basic Earth sun- angles, Solar time and equation of time, measurements, Empirical equations for predicting the availability of solar radiation, Computation of radiation on a surface
Liquid Flat Plate Collectors: 8
Liquid flat plate collector design, Efficiency of flat plate collectors and performance analysis,
Flat plate solar air heaters, Other types of solar air heaters, some novel designs, Performance analysis and testing procedures.
Solar Concentric Collectors: 6
Cylindrical parabolic collectors, Performance analysis of cylindrical parabolic collectors, Compound parabolic concentrating collectors, Performance analysis of compound parabolic concentrating collectors, Paraboloid dish collectors.
Solar Thermal Energy Storage system: 5
Need of thermal energy storage, Size and duration of storage, Sensible heat storage, Latent heat storage, PCM, Thermo-chemical energy storage.
Solar Thermal Applications: 8
Solar space heating, active systems, passive system - Trombe wall, Solar refrigeration and air conditioning, Solar cookers, Solar desalination, Solar dryers, Solar ponds and its thermal performance, Solar energy for industrial process heat
Solar Thermo-Mechanical Power Generation: 8
Principles of solar engines, limitation of solar mechanical power conversion, Types of solar power plants, Solar chimney, Parabolic through power plants, Central receiver power plants. Solar furnaces.</td></tr>

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE 811	**Mechatronics**	PEL	**3**	**0**	**0**	**3**	**3**

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
MEC 301, MEC 504	CT+EA

Course Outcomes	CO1: Students will be able to identify the importance of amalgamation between the electronics and electro-mechanical systems. CO2: Students will be able to formulate and evaluate behavior of linear time continuous control systems. CO3: Students will be able to formulate the procedure for converting analog signals to digital form and vice-versa. CO4: Students will be able to describe signals and its processing by modern electronic methods. CO5: Students will be able to identify and critically evaluate current developments and emerging trends within the field of mechatronic systems.
Topics Covered	Mechatronic Systems: Introduction, Application of Mechatronics. 2 Sensors and Transducers - Brief review, Simple electronic elements & Operational Amplifiers.4 Actuators: Pneumatic, Hydraulic, Electrical & Mechanical actuation system, Micro-actuators.3 Modelling and Simulation of Physical System: System models, Dynamic responses of the system, System transfer functions.4 Digital logic: Number systems, Boolean algebra, Logic gates - Application gate, Design of logic of digital logic gates.5 Microprocessors and Micro-Controllers: Introduction, Microprocessor Architecture, Instruction codes, General requirements for implementation issues, Examples. 6 Programmable Logic Controllers: Basic structure, I/O processing, Programming, Timer, Inter relays and Counters.6 Signal conditioning & Digital communication system: Basics of signal conditioning, Filtering, Data acquisition and Digital signal processing, Digital communication and Communication interface. 6 Mechatronic Systems, Case Studies.6

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE 812	**Micro and Nano Manufacturing**	PEL	**3**	**0**	**0**	**3**	**3**

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
MEC402 (Casting, Forming and Welding), MEC501 (Machining and Machine Tools)	CT+EA

Course Outcomes	CO1 : To understand the need for micro and nano scale fabrication CO2 : To get acquainted with different micro and nano scale fabrication techniques and their characterization CO3 : To be able to select a suitable micro or nano scale fabrication process based upon the requirement CO4 : To compare and understand the differences between macro and nano scale fabrication processes
Topics Covered	Need for Micro and Nano Scale Manufacturing Processes : Examples of micro and nano scale parts being used in various applications, How the performances of micro/nano scale components are better AFM, STM, SEM, TEM, XRD, 2 **Photo Lithography** : Historical perspective, Overview, Electromagnetic Spectrum Clean Room – Classes, Features Photoresist: Positive and Negative Photo resists; Glass Transition Temperature, Photoresist deposition: Spin coating, Spray coating, Electro-deposition; Baking, Masks, Exposure: Contact Printing, Projection Printing, Proximity Printing, Development, Critical Dimension, Overall Resolution, Line Width Metrology, Resist Profiles, Photolithography Resolution Enhancement Technology : through Improved Resist Performance, through Improved Mask Technology, through Improved Exposure Technology Reducing the minimum feature dimension in photolithography Examples 10 **Dry Etching** Definitions, Plasma, Physics of plasma, Sputtering or Ion Etching, Ion Beam Milling, Plasma Etching, Deep Reactive Ion Etching (DRIE), ICP, Examples 3

	Wet Etching Chemical Milling, Photochemical Milling, Wet Isotropic and Anisotropic Etching, Etch Stop Techniques, 3 Moore's Law , Need for pushing the feature sizes to lower levels, **Next Generation Lithographic Techniques** : EUV , XRL, LIGA, EBL : EBL Resists, electron emission, Ion Beam Lithography, Nano Imprint Lithography, Lithographic techniques still in research and developmental state Examples 12 **Physical VaporDeposition:** Thermal evaporation, Sputtering– DC and RF Sputtering, Pulsed Laser Deposition – Laser sputtering, Aerosol Deposition Examples 4 **Chemical Vapor Deposition**: Overview, description, PVD vs CVD, APCVD, LPCVD, PECVD, ALD, Examples 4 **Micro and Nano Scale Joining Techniques** 2
Text Books, and/or reference material	**Text Books:** 1. Fundamental of Microfabrication and Nanotechnology Volume 2, by Prof Marc J Madou, CRC Press, Taylor and Francis Group 2. Micro and Nanomanufacturing, Mark J Jackson, Springerlink 3. Micro and Nanomanufacturing Volume 2, Mark J Jackson, Springerlink
	Reference Books: Micro/Nano Manufacturing, Hans Nørgaard Hansen and Guido Tosello, MDPI Publishing (for application examples)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE 813	**Microfluidics**	PEL	**3**	**0**	**0**	**3**	**3**

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
MEC303 Fluid Mechanics MEC304 Engineering Thermodynamics MEC403Heat and Mass Transfer PHC01 Engineering Physics CYC01 Engineering Chemistry, BTC01 Life Science	CT+EA

Course Outcomes	CO1: To learn micro channel flows with heat transfer. CO2: To learn Surface Tension Driven Flows with real life applications. CO3: To learn Electro-hydro-dynamics fundamentals CO4: To learn Molecular Dynamics Simulations
Topics Covered	Introduction to Microfluidics: Origin, Definition, Benefits, Challenges, Commercial activities, Physics of miniaturization, Scaling laws, Intermolecular forces, States of matter, Continuum assumption, Governing equations, Constitutive relations1 Microfluidics- Some Application Examples: Drug delivery, Diagnostics, Bio-sensing 1 Equations of Conservation 1

	Navier Stokes Equation 2 Energy Equation 2 Pressure –driven Micro flows: Exact solutions, Couette flow, Poiseuille flow 5 Some Examples of Unsteady Flows: Hydraulic resistance and Circuit analysis, Straight channel of different cross-sections, Channels in series and parallel. 3 Stokes Drag on a Sphere: Stokes drag on a sphere, Time-dependent flows, Two-phase flows 2 Lubrication Theory 2 Boundary Condition in Fluid Mechanics - Slip or No-slip: Gas and liquid flows, Boundary conditions, Slip theory, Transition to turbulence, Low Re flows, Entrance effects 2 Surface Tension Driven Flows: Surface tension and interfacial energy, Young-Laplace equation, Contact angle, Capillary length and capillary rise, Interfacial boundary conditions, Marangoni effect 6 Thin Film Dynamics 4 Introduction to Micro-fabrication: Materials, Clean room, Silicon crystallography, Miller indices. Oxidation, photolithography-mask, spin coating, exposure and development, Etching, Bulk and Surface micromachining, Wafer bonding. Polymer micro fabrication, PMMA/COC/PDMS substrates, micro molding, hot embossing, fluidic interconnections. Electrokinetics: Electrohydrodynamics fundamentals. Electro-osmosis, Debye layer, Thin EDL limit, Ideal electro-osmotic flow, Ideal EOF with back pressure, Cascade electro-osmotic micro pump, EOF of power-law fluids. Electrophoresis of particles, Electrophoretic mobility, Electrophoretic velocity dependence on particle size. Dielectrophoresis, Induced polarization and DEP, Point dipole in a dielectric fluid, DEP force on a dielectric sphere, DEP particle trapping, AC DEP force on a dielectric sphere. Electro-capillary effects, Continuous electro-wetting, Direct electro-wetting, Electro-wetting on dielectric 4 Dispersion, Introduction to Nano fluidics, Introduction to Molecular Dynamics Simulations, Bio microfluidics, Nano fluidic Energy Conversion4
Text Books, and/or reference material	**Text Books:** 1) Microfluidics -Stéphane Colin 2) Micro- and Nanoscale Fluid Mechanics, Transport in Microfluidic Devices-Brian Kirby, Cambridge University Press . **Reference Books:** 1) Theoretical Microfluidics-Henrik Bruus , Oxford University Press. 2) Fundamentals and Applications of Microfluidics: Nam- Trung Nguyen and Steven T. Wereley

Department of Mechanical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MEE 814	**Machine Tool Engineering and Automation**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
ME402		CT+EA					
Course Outcomes	CO1: In depth study of mechanical machine tools construction and design. CO2: Introduction to machine tools automation.						
Topics Covered	General principles of Machine Tool design, Machine Tool drives and mechanisms. 2 Design of speed and feed gear box, Optimum design principles for using double bound gears. 12 Design of Machine Tool structures: beds, slides and guides, selection of bearing for machine tools. 3 Hydrostatic and Hydrodynamic lubrication in Machine Tool slide ways and Guides, Stick-slip motion in Machine Tool slide ways. 3 Machine tool rigidity, system compliance and process capability of machine tools. 4 Machine tool inspection, testing and maintenance. 2 Overview on Automation: Definition, application, advantages and disadvantages. Types of automation: fixed automation (automatic machines, transfer devices and semi-automatics), Programmable automation (NC, CNC and machining centres, DNC, adaptive control machines, Industrial robots, CAD/CAM, CIM) and flexible automation (FMS). 5 CNC Hardware: Constructional features, operational characteristics of CNC machine tools, Machine tool drives, sensing devices, open and close loop control 3 CNC machining, part programming, NC tool path generation. 8						
Text Books, and/or reference material	Text Books: 1. Principles of Machine Tools – Sen and Bhattacharya 2. Computer Controlled of Manufacturing Systems – Y. Koren						
	Reference Books: 1. Machine Tool Engineering – N. K. Mehta 2. Numerical Control and Computer Aided Manufacturing – Kundra, Rao and Tiwari

MAPPING BETWEEN COURSE OUTCOMES AND PROGRAM OUTCOMES, PROGRAM SPECIFIC OUTCOMES

Couse Code and Course Name: MEC301, Solid Mechanics

COs	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
MEC301.1	Understand the analysis of stress, strains, elasticity properties of materials, strain energy principles	3	3	3	1	1	1	1	-	-	1	-	1	2	1
MEC301.2	Demonstrate the members subjected to shear force, bending moments, flexure loads, torsional loads	3	3	3	1	1	1	1	1	-	1	-	1	2	1
MEC301.3	Calculate deflection of beams	3	3	3	1	1	1	1	1	-	1	-	1	2	1
MEC301.4	Estimate the members subjected to compressive loads.	3	3	3	1	1	1	1	1	-	1	-	1	2	1
Average		**3**	**3**	**3**	**1**	**1**	**1**	**1**	**0.8**	**-**	**1**	**-**	**1**	**2**	**1**

Couse Code and Course Name: MEC302, Theory of Machines & Mechanisms

COs	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
MEC302.1	Knowledge of dynamics of elementary mechanisms and machines	3	2	-	1	3	-	-	-	1	-	-	2	3	1
MEC302.2	Knowledge of the fundamental of machine design	3	3	-	1	2	-	-	-	1	-	-	1	3	1
Average		**3**	**3**	**-**	**1**	**2.5**	**-**	**-**	**-**	**1**	**-**	**-**	**1.5**	**3**	**1**

Course Code and Course Name: MEC303, Fluid Mechanics

COs	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
MEC303.1	To understand the fundamental concepts of fluid mechanics	3	2	2	-	-	2	-	1	-	-	2	-	2	-
MEC303.2	To formulate the fundamental equations in mathematical form to solve the fluid mechanics problems	3	2	2	-	-	-	-	1	-	-	-	2	2	-
MEC303.3	To apply the conservation equations to analyse both viscous and inviscid flow	3	2	2	-	-	2	-	1	-	-	-	2	2	-
Average		**3**	**2**	**2**	**-**	**-**	**2**	**-**	**1**	**-**	**-**	**2**	**2**	**2**	**-**

Couse Code and Course Name: MEC304, Engineering Thermodynamics

COs	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
MEC304.1	Enumerate the laws of thermodynamics and systems.	3	3	-	-	-	-	-	-	-	-	-	-		-
MEC304.2	Express the proficiency in handling engineering problems to arrive at substantiated conclusions using laws of thermodynamics.	3	3	2	1	-	-	-	-	-	-	-	-	2	-
MEC304.3	Compute solutions for complex thermodynamic problems.	3	3	3	3	1	-	-	-	-	-	-	-	3	3
MEC304.4	Apply the laws of thermodynamics in different Engineering problems such as heat engines, refrigeration, power cycles, compressors etc.	3	3	3	3	-	-	-	-	-	-	-	3	2	1
MEC304.5	Evaluate the performances of Engineering applications based on thermodynamic laws.	3	3	3	3	-	-	1	-	-	-	1	3	2	2
MEC304.6	Design the Engineering applications based on Thermodynamics.	3	3	3	3	1	-	1	-	-	-	1	3	3	3
Average		**3**	**3**	**2.3**	**2.2**	**0.3**	**-**	**0.3**	**-**	**-**	**-**	**0.3**	**1.5**	**2**	**1.5**

Couse Code and Course Name: MAC-331, Mathematics-III

COs	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
MAC331.1	CO1: Acquire the idea about mathematical formulations of phenomena in physics and engineering.	3	3	3	2	2	1	2	-	-	-	-	2	3	2
MAC331.2	CO2: To understand the common numerical methods to obtain the approximate solutions for the intractable mathematical problems	3	3	2	2	2	1	2	-	-	-	1	2	3	3
MAC331.3	CO3: To understand the basics of complex analysis and its role in modern mathematics and applied contexts.	3	3	2	2	3	-	1	-	-	1	-	2	2	2
MAC331.4	CO4: To understand the optimization methods and algorithms developed for solving various types of optimization problems.	3	2	2	3	2	1	1	-	1	-	-	2	3	2

Average		**3**	**2.8**	**2.3**	**2.3**	**2.3**	**1**	**1.5**	**-**	**1**	**1**	**1**	**2**	**2.8**	**2.3**
Couse Code and Course Name: PHC333 Physics of Engineering Materials															
COs	**Statement**	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO1**	**PSO2**
PHC333.1	To understand fundamental theory of metal	3	1	2	3	1	1	2	1	-	1	1	2	-	-
PHC333.2	To comprehend theory and device applications of semiconductor materials	3	3	2	3	-	1	2	1	-	-	-	1	-	-
PHC333.3	To be familiar with fundamental of laser and its applications	3	3	2	3	-	1	2	1	1	1	1	2	2	1
PHC333.4	To know about the super conductivity, dielectric and mechanical properties of material	3	2	2	3	1	1	2	2	1	1	1	1	2	1
Average		**3**	**2**	**2**	**3**	**1**	**1**	**2**	**1**	**1**	**1**	**1**	**1**	**1**	**0.5**
Couse Code and Course Name: PHS383 Physics of Engineering Materials Laboratory															
COs	**Statement**	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO1**	**PSO2**
PHS383.1	To realize and apply different techniques for measuring characteristics of p-n junction and application of Zener diode as voltage regulator	3	2	2	3	2	2	3	2	2	1	3	2	1	-
PHS383.2	To determine the properties (carrier concentration and type) of semiconductor by Hall-effect experiments	3	2	2	2	-	1	2	2	2	1	3	2	1	-
PHS383.3	To apply the knowledge to determine the properties (bandgap and resistivity) of semiconductor materials by four-probe method at different temperatures.	3	1	1	2	-	1	2	2	2	1	3	2	1	1
PHS383.4	To determine the characteristics of solar cell	3	1	3	3	-	3	3	2	2	1	3	2	-	1
Average		**3**	**1**	**2**	**2**	**2**	**2**	**2**	**2**	**2**	**1**	**3**	**2**	**0.8**	**0.8**
MEC401 :: Design of Machine Element															
COs	**Statement**	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO1**	**PSO2**
MEC401.1	Acquire an idea about engineering materials in machine design	2	2	3	-	-	2	2	1	2	1	-	2	2	-
MEC401.2	To learn the basic design procedure for	3	3	3	1	1	-	2	2	2	1	-	2	3	1

	different elementary machine elements														
MEC401.3	To learn about design of bolt and welded joints, pressure vessels etc.	3	3	3	1	2	-	2	2	2	1	-	2	3	2
MEC401.4	Introduction to fatigue design	2	3	3	1	-	-	-	1	-	1	-	3	3	-
Average		**2.5**	**2.8**	**3**	**0.8**	**0.8**	**0.5**	**1.5**	**1.5**	**1.5**	**1**	**-**	**2.3**	**2.8**	**0.8**

MEC402 : Casting, Forming and Welding

COs	**Statement**	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO1**	**PSO2**
MEC402.1	Learn different types of casting process	3	2	3	1	-	2	1	-	-	2	-	3	2	1
MEC402.2	Select suitable manufacturing process for typical components.	3	2	2	2	-	2	1	-	-	2	-	3	3	1
MEC402.3	Learn the various welding process.	3	2	2	1	-	2	1	-	-	2	-	3	2	1
MEC402.4	Explain the concept of forging, rolling process and drawing.	3	2	3	1	-	2	1	-	-	2	-	3	2	1
Average		**3**	**2**	**2.5**	**1.2**	**-**	**2**	**1**	**-**	**-**	**2**	**-**	**3**	**2.2**	**1**

Couse Code and Course Name: MEC403, Heat and Mass Transfer

COs	**Statement**	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO1**	**PSO2**
MEC403.1	Interpret the fundamental of heat and mass transfer	3	3	-	-	-	-	-	-	-	-	-	3	3	3
MEC403.2	Express the proficiency in handling laws of heat transfer	3	3	2	2	-	-	-	-	-	-	-	3	3	3
MEC403.3	Compute solutions for Heat transfer problems.	3	3	3	3	-	-	-	-	-	-	-	3	3	3
MEC403.4	Apply the laws of heat transfer in different Engineering problems.	3	3	3	3	-	-	-	-	-	-	-	3	3	3
MEC403.5	Evaluate the performance of heat transfer equipment.	3	3	3	3	-	-	-	-	-	-	-	3	3	3
MEC403.6	Design the heat exchangers.	3	3	3	3	-	-	-	-	-	-	-	3	3	3
Average		**3**	**3**	**2.3**	**2.3**	**-**	**-**	**-**	**-**	**-**	**-**	**-**	**3**	**3**	**3**

Couse Code and Course Name: MES451, Solid Mechanics Laboratory

COs	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
MES451.1	Understand the concept of Mohr's circle for stress and strain, graphically	3	3	3	1	1	1	1	-	2	1	-	1	2	1
MES452.2	Analyze the behavior of the solid bodies subjected to tensile, impact and torsional loads	3	3	3	1	1	1	1	-	1	1	-	1	2	1
Average		**3**	**3**	**3**	**1**	**1**	**1**	**1**	**-**	**1.5**	**1**	**-**	**1**	**2**	**1**

Course Code and Course Name: MES452, Hydraulics Lab

COs	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
MEC452.1	To learn fundamentals of fluid mechanics	3	3	1	1	-	-	-	-	2	-	-	3	2	-
MEC452.2	To Measure various quantities viz. Volume flow rate, Cd, Friction factor	3	2	3	1	1	-	-	-	2	-	-	3	2	-
MEC452.3	To Calibrate of various quantities viz Venturimeter, Orificemeter and V-notch.	3	2	3	1	1	-	-	-	2	-	-	3	2	-
Average		**3**	**2.3**	**2.3**	**1**	**1**	**-**	**-**	**-**	**2**	**-**	**-**	**3**	**2**	**-**

Couse Code and Course Name: MES453, Mechanism Laboratory

COs	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
MES453.1	Students will be able to solve kinematics of mechanism by graphical method	3	1	1	-	1	-	-	-	-	-	-	2	2	1
MES453.2	Students will be able to analyze mechanism by computer aided tools	1	2	2	2	3	-	-	1	1	1	-	2	3	3
MES453.3	Students will be able to solve mechanism synthesis problems using computer aided tools	2	3	3	1	3	2	-	1	1	1	-	2	3	3
MES453.4	Students will be able to demonstrate model of few planar mechanisms	-	-	2	3	2	2	-	2	2	1	-	2	2	1
Average		**1.5**	**1.5**	**2**	**1.5**	**2.3**	**1**	**-**	**1**	**1**	**0.8**	**-**	**2**	**2.5**	**2**

Couse Code and Course Name: EEC-432, ELECTRICAL MACHINES

COs	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
EEC432.1	Theory of electromechanical energy conversion, the concepts of voltage generation and fundamental torque equation.	3	3	3	3	2	1	1	1	2	3	2	1	-	1
EEC432.2	Basic understanding of the principles of operation and construction of direct and alternating current machines and transformers.	2	2	2	2	3	1	1	1	2	3	2	1	-	1
EEC432.3	A study of theory and concept of Electric Machines (AC & DC).	2	2	2	2	3	1	1	1	2	3	2	1	3	1
EEC432.4	Deriving equivalent circuit of electrical machines.	3	3	3	3	2	1	1	1	2	3	2	1	2	1

CURRICULUM

OF

BACHELOR OF TECHNOLOGY IN METALLURGICAL AND MATERIALS ENGINEERING

2017 ONWARD UNDERGRADUATE ADMISSION BATCH

V0:

Resolution of 50th Senate	18-05-2018	Item no: 50.7
Resolution of 51st Senate	04-10-2018	Item no: 51.2
Resolution of UGAC meeting	10-05-2019	
Final approval in 53rd Senate	13-05-2019	Item no: 52.3
Publication date	30-05-2019	

V1:

Incorporation of new elective subjects	27-06-2019

V2:

Rectification of minor errors	UGAC 31-08-2022

Final Approval in _____ Senate # ______________ # Item no: ______

DEPARTMENT OF METALLURGICAL AND MATERIALS ENGINEERING

Program Name: Bachelor of Technology in Metallurgical and Materials Engineering

DETAILED CURRICULUM

CURRICULUM OF 2021 ONWARD UNDERGRADUATE ADMISSION BATCH FOR METALLURGICAL AND MATERIALS ENGINEERING - B.TECH.

L= Lecture hour/ week; T= Tutorial hour/ week; S= Sessional/ practical hour/ week

C= Subject credit point; H= Subject contact hour/ week.

Semester - I							
Sl. No	**Code**	**Subject**	**L**	**T**	**S**	**C**	**H**
1	MAC01	Mathematics - I	3	1	0	4.0	4

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT.

6th Semester

	DEPARTMENT OF METALLURGICAL AND MATERIALS ENGINEERING
MME610	Engineering Materials
MME611	Electronic and Thermal Properties of Materials
MME612	Alternative Routes of Iron Making
MME613	Production of Ferroalloys
MME615	Ceramic Technology
MME616	Solidification Phenomena
MME617	Metal Joining Processes

7th Semester

	DEPARTMENT OF METALLURGICAL AND MATERIALS ENGINEERING
MME710	Functional Materials
MME711	Fatigue, Creep and Fracture
MME712	Computational Materials Engineering
MME713	Fuel, Furnace and Refractories
MME714	Powder Metallurgy
MME715	Secondary Steel Making
MME716	Composite Materials
MME717	Corrosion Engineering
MME718	Energy and Environment in Metallurgical Industries

8th Semester

	DEPARTMENT OF METALLURGICAL AND MATERIALS ENGINEERING
MME810	Nano Science and Technology
MME811	FEM Modelling and Simulation for Materials Design
MME812	Mathematical Modelling and Simulation
MME813	Raw Materials Preparation for Iron and Steel Making

DETAILED SYLLABUS

FIRST SEMESTER

Semester - I							
Sl. No	Code	Subject	L	T	S	C	H
1	MAC01	Mathematics - I	3	1	0	4.0	4
2	PHC01	Engineering Physics	2	1	0	3.0	3
3	CYC01	Engineering Chemistry	2	1	0	3.0	3

7	HSS51	Professional Communication Laboratory	1	0	2	2.0	3
8	PHS51	Physics Laboratory	0	0	2	1.0	2
9	CYS51	Chemistry Laboratory	0	0	2	1.0	2
10	WSS51	Workshop Practice	0	0	3	1.5	3
11	XXS51	Co-curricular Activities - I	0	0	2	1.0	2
		TOTAL	13	4	14	24.0	31

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 01	MATHEMATICS - I	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic concepts of function, limit, differentiation, and integration.		CT+MT+EA					
Course Outcomes	• CO1: To introduce the fundamentals of differential calculus of single and several variables • CO2: To develop the basic concepts of integral calculus including multiple integrals and its application in finding area, volume, centre of mass, centre of gravity etc. • CO3: To introduce the fundamental concepts of vector calculus • CO4: To develop the concept of convergence						
Topics Covered	**Functions of Single Variable:** Rolle's Theorem and Lagrange's Mean Value Theorem (MVT), Cauchy's MVT, Taylor's and Maclaurin's series, Asymptotes & Curvature (Cartesian, Polar form). (8) **Functions of several variables:** Function of two variables, Limit, Continuity and Differentiability, Partial derivatives, Partial derivatives of implicit function, Homogeneous function, Euler's theorem and its converse, Exact differential, Jacobian, Taylor's & Maclaurin's series, Maxima and Minima, Necessary and sufficient condition for maxima and minima (no proof), Stationary points, Lagrange's method of multipliers. (10) **Sequences and Series:** Sequences, Limit of a Sequence and its properties, Series of positive terms, Necessary condition for convergence, Comparison test, D Alembert's						

	ratio test, Cauchy's root test, Alternating series, Leibnitz's rule, Absolute and conditional convergence. (6) **Integral Calculus:** Mean value theorems of integral calculus, Improper integral and it classifications, Beta and Gamma functions, Area and length in Cartesian and polar co-ordinates, Volume and surface area of solids of revolution in Cartesian and polar forms. (12) **Multiple Integrals:** Double integrals, Evaluation of double integrals, Evaluation of triple integrals, change of order of integration, Change of variables, Area and volume by double integration, Volume as a triple integral. (10) **Vector Calculus:** Vector valued functions and its differentiability, Line integral, Surface integral, Volume integral, Gradient, Curl, Divergence, Green's theorem in the plane (including vector form), Stokes' theorem, Gauss's divergence theorem and their applications. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th ed., Wiley India Ed. (2010). 2. Daniel A. Murray, Differential, and Integral Calculus, Fb & c Limited, 2018. 3. Marsden, J. E; Tromba, A. J.; Weinstein: Basic Multivariable Calculus, Springer, 2014. **Reference Books:** 1. Tom Apostal, Calculus-Vol-I & II, Wiley Student Edition, 2011. 2. Thomas and Finny: Calculus and Analytic Geometry, 11th Ed., Addison Wesley.

Mapping of CO (Course outcome) and PO (Programme Outcome)

Course	COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
MAC01	CO1	2	3	2	3	1	1	-	-	1	1	1	2
	CO2	2	3	2	3	-	1	-	-	1	1	2	2
	CO3	2	3	2	3	-	1	1	-	-	2	2	2
	CO4	3	3	2	3	1	1	-	1	-	2	1	2

Correlation levels 1, 2 or 3 as defined below:
1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	**Title of the course**	**Program Core (PCR) / Electives (PEL)**	**Total Number of contact hours**				Credit
			Lecture (L)	**Tutorial (T)**	**Practical (P)**	**Total Hours**	
PHC01	**Engineering Physics**	**PCR**	**2**	**1**	**0**	**3**	**3**
Pre-requisites:		Course Assessment methods: (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	CO1: To realize and apply the fundamental concepts of physics such as superposition principle, simple harmonic motion to real world problems. CO2: Learn about the quantum phenomenon of subatomic particles and its applications to the practical field. CO3: Gain an integrative overview and applications of fundamental optical phenomena such as interference, diffraction and polarization. CO4: Acquire basic knowledge related to the working mechanism of lasers and signal						

	propagation through optical fibers.
Topics Covered	**Harmonic Oscillations** - Linear superposition principle, Superposition of two perpendicular oscillations having same and different frequencies and phases, Free, Damped and forced vibrations, Equation of motion, Amplitude resonance, Velocity resonance, Quality factor, sharpness of resonance, etc. [8] **Wave Motion** - Wave equation, Longitudinal waves, Transverse waves, Electro-magnetic waves. [3] **Introductory Quantum Mechanics** - Inadequacy of classical mechanics, Blackbody radiation, Planck's quantum hypothesis, de Broglie's hypothesis, Heisenberg's uncertainty principle and applications, Schrodinger's wave equation and applications to simple problems: Particle in a one-dimensional box, Simple harmonic oscillator, Tunnelling effect. [8] **Interference & Diffraction** - Huygens' principle, Young's experiment, Superposition of waves, Conditions of sustained Interference, Concepts of coherent sources, Interference by division of wavefront, Interference by division of amplitude with examples, The Michelson interferometer and some problems; Fraunhofer diffraction, Single slit, Multiple slits, Resolving power of grating. [13] **Polarisation** - Polarisation, Qualitative discussion on Plane, Circularly and elliptically polarized light, Malus law, Brewster's law, Double refraction (birefringence) - Ordinary and extra-ordinary rays, Optic axis etc.; Polaroid, Nicol prism, Retardation plates and analysis of polarized lights. [5] **Laser and Optical Fiber** - Spontaneous and stimulated emission of radiation, Population inversion, Einstein's A & B co-efficient, Optical resonator and pumping methods, He-Ne laser. Optical Fibre– Core and cladding, Total internal reflection, Calculation of numerical aperture and acceptance angle, Applications. [5]
Text Books, and/or reference material	**TEXT BOOKS**: 1. The Physics of Vibrations and Waves, H. John Pain, Willy and Sons 2. A Text Book of Oscillations and Waves, M. Goswami and S. Sahoo, Scitech Publications 3. Engineering Physics, H. K. Malik and A. K. Singh, McGraw-Hill. **REFERENCE BOOKS**: 1. Vibrations and Waves in Physics, Iain G. Main, Cambridge University Press 2. Quantum Physics, R. Eisberg and R. Resnick, John Wiley and Sons 3. Fundamental of Optics, Jankins and White, McGraw-Hill 4. Optics, A. K. Ghatak, Tata McGraw-Hill 5. Waves and Oscillations, N. K. Bajaj, Tata McGraw-Hill 6. Lasers and Non-linear Optics, B. B. Laud , New Age International Pvt Lt

	CO3	3	2	2	2	1	1	1	1	1	-	1	1
	CO4	3	2	2	2	1	1	1	-	1	-	1	1

Correlation levels 1, 2 or 3 as defined below:
1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CYC 01	Engineering Chemistry	PCR	2	1	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
None	CT+MT+EA

Course Outcomes	• CO1: Introduced to chemical thermodynamics, kinetics, electrochemistry, absorption, and catalytic processes for engineering applications • CO2: To learn fundamentals of polymer chemistry and petroleum engineering. • CO3: Introduced to basic spectroscopic techniques for structure determination and characterization. • CO4: To study few inorganic and bioinorganic compounds of industrial importance.
Topics Covered	**ORGANIC CHEMISTRY** i. Fundamentals of organic reaction mechanisms; Few important reactions and their mechanism along with their applications; Robinson annulation, Hydroboration reaction, Organometallic reagents (Gilman reagents), Metathesis using Grubb's catalyst and Wittig reaction. (3) ii. Fundamental concept on stereochemistry and application: Conformation and configuration of organic compounds, Diastereo-selective, enantio-selective, regio-selective, stereo-specific, and stereo-selective reactions. (3) iii. Polymer chemistry and polymer engineering: Fundamental concept on polymer chemistry; synthesis and application of important polymers, Rubber, and plastic materials. Conducting polymer. (2) iv. Petroleum Engineering and oil refinery: origin of mineral oils, separation principle and techniques of distillation of crude oil, Uses of different fractions, octane number, cetane number, Knocking, anti-knock compounds, and Bio-Fuel. (2) v. Structure elucidation of organic compounds by modern spectroscopic methods; Application of UV-Visible and FT-IR spectroscopy. (3) **INORGANIC CHEMISTRY** i. **Coordination Chemistry:** Crystal Field Theory of octahedral and tetrahedral complexes, colour and magnetic properties, Jahn-Teller distortion, pseudo Jahn-Teller distortion, Isomerism, and stereochemistry. (5) ii. **Bioinorganic Chemistry:** Heme and non-heme O_2 transport protein (Haemoglobin, Myoglobin), Chlorophyll and photosynthesis. (3) iii. **Inorganic Materials:** Introduction towards industrially important inorganic materials like cementing material, refractory material, fertiliser, inorganic polymer. (2) iv. **Organometallic Chemistry:** π-acid ligands, stabilization of metal low oxidation state and 18 electron rules, metal carbonyls and nitrosyls, metal-alkene complexes. (4) **PHYSICAL CHEMISTRY** i. **Thermodynamics:** 2nd law of thermodynamics, entropy, free energy, Gibbs Helmholtz equation, change of phase. Cryogenics: joule Thomson experiment. (4) ii. **Chemical Kinetics:** 2nd and 3rd order rate expression, Reversible reaction, Chain reaction, Consecutive reaction, Temp effect on reaction rate. (4)

	iii. **Electrochemistry:** Electrochemical cell, Effect of pH, precipitation, and complex formation on EMF of oxidation/reduction processes. (2) iv. **Absorption:** Physical and Chemical absorption, Absorption isotherms. (1) v. **Catalysis:** Types of catalysis, Rate expression for Catalysed reaction, Acid-base and Enzyme catalysis. (2)
Text Books, and/or reference material	Suggested Text Books: (i) Physical Chemistry by P. Atkins, Oxford (ii) A guidebook to mechanism in Organic chemistry: Peter Sykes; Pearson Edu. (iii) Inorganic Chemistry Part-I & II, R. L. Dutta, The new book stall Suggested Reference Books: **Organic Chemistry**: (i) Basic stereochemistry of organic molecules: S. Sengupta; Oxford University press (ii) Engineering Chemistry: Wiley (iii) Elementary Organic Spectroscopy: William Kemp, ELBS with Macmillan **Inorganic Chemistry:** (i) Inorganic Chemistry: Principle structure and reactivity, J. E. Huheey, E. A. Keiter and R. L. Keiter, Pearson Education (ii) Bioinorganic Chemistry -- Inorganic Elements in the Chemistry of Life: An Introductionand Guide, 2nd Edition, Wolfgang Kaim, Brigitte Schwederski, Axel Klein. (iii) Inorganic Chemistry Fourth Edition, Shriver & Atkins, Oxford **Physical Chemistry:** (i) Physical Chemistry by G.W Castellan (ii) Physical Chemistry by P. C. Rakshit

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)#	Total Hours	
XEC01	**ENGINEERING MECHANICS**	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	• CO1: Acquire knowledge of mechanics and ability to draw free body diagrams. • CO2: Apply knowledge of mechanics for solving special problems like truss and frame analysis. • CO3: Ability to calculate centroid, moments of inertia for various shapes. • CO4: Learn momentum and energy principles. • CO5: Knowledge on virtual Work Principle and its application
Topics Covered	Engineering Mechanics; measurement and SI units. [1] Vectors and force as a vector; Resultant of a system of forces on a particle; free

	body diagram and conditions of equilibrium of a particle; problems on particles; equilibrium of particles in space. [2] Resultant of a system of forces and couples on a rigid body; conditions of equilibrium of a rigid body; free body diagrams of rigid bodies subjected to different types of constraints; simple space problems of rigid bodies. [4] Coefficients of static and kinetic friction; problems involving friction; theories of friction on square threaded power screw and flat belt. [5] Simple trusses; analysis of trusses by method of joints and method of sections. [5] Centre of gravity and centre of mass; centroids of lines, curves and areas; first moment of area; second moment of area; polar moment of inertia; radius of gyration of an area; parallel axis theorem; mass moment of inertia. [4] Path, velocity, acceleration; rectilinear and curvilinear motion; motion of system of particles; introduction to the concept of plane kinematics of rigid bodies. [6] Newton's second law of motion; dynamic equilibrium and D'Alembert's principle; linear momentum; angular momentum; rectilinear and curvilinear motion; principles of work–energy and impulse–momentum; impact of system of particles; introduction to the concept of plane kinetics of rigid bodies. [12] Principle of Virtual Work, Solution of Problems on Mechanics using Principle of Virtual Work [3]
Text Books, and/or reference material	1) S P Timoshenko and D H Young, Engineering Mechanics, 5th Edition 2) J L Meriam and L G Kraige, Engineering Mechanics, 5th Edition, Wiley India 3) F P Beer and E R Johnston, Vector Mechanics for Engineers 4) I H Shames, Engineering Mechanics

ESC01	**Environmental Science**	PCR	2	0	0	2	2
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO1: Understand the importance of environment and ecosystem. • CO2: Understand the fundamental aspect of pollutant tracking and its implementation in natural and anthropogenic pollution of air and water system. • CO3: Understand the scientific basis of local and as well as global issues.						

	• CO4: Apply of knowledge to develop sustainable solution.
Topics Covered	**Introduction:** Multidisciplinary nature of Environmental Studies; Basic issues in Environmental Studies. [2] Human population and the Environment. [1] Social issues and the Environment. [1] **Constituents of our Environment & the Natural Resources:** Atmosphere– its layers, their characters; Global warming, Ozone depletion, Acid rain, etc. [5] Hydrosphere - Its constituents, Oceans, Groundwater, Surface waters; Hydrological cycle. [4] Lithosphere - constituents of lithosphere; Rock and Mineral resources; Plate Tectonic Concept and its importance. [5] Biosphere– its components; Ecosystems and Ecology; Biodiversity; Biomes. [5] Natural disaster and their management – Earthquakes, Floods, Landslides, Cyclones. [3] **Pollution:** Pollutants and their role in air and water pollution. [2]
Text Books, and/or reference material	1. Environmental Studies – Benny Joseph – Tata McgrawHill-2005 2.Environmental Studies – Dr. D.L. Manjunath, Pearson Education-2006. 3.Principles of Environmental Science and Engineering – P. V. Rao, PHI. 4. Environmental Science and Engineering – Meenakshi, Prentice Hall India. 5.Environmental studies – R. Rajagopalan – Oxford Publication - 2005. 6. Text book of Environmental Science & Technology – M. A. Reddy – BS Pub.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
XES51	**ENGINEERING GRAPHICS**	PCR	1	0	3	4	2.5
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	• CO1: Ability of mental visualization of different objects • CO2: Theoretical knowledge of orthographic projection to solve problems on one/two/three dimensional objects • CO3: Able to read/interpret industrial drawing and to communicate with relevant people						
Topics Covered	Graphics as language of communication; technical drawing tools and their up-keep; types of lines; construction of geometrical figures; lettering and dimensioning. [6] Construction and use of scales; construction of curves of engineering importance such as curves of conic section; spirals, cycloids, involutes and different loci of						

	points; use of equations for drawing some curves. [9] Descriptive geometry: necessity and importance of orthographic projection; horizontal and vertical reference planes; coordinate of points; orthographic projection of points and lines situated in different quadrants, viz. 1st, 2nd, 3rd and 4th quadrants; traces of lines. First angle and third angle projection of lines and planes; views from top, front and left (or right); true length and true inclination of lines with planes of projections; primary auxiliary projection of points, lines and planes; auxiliary plan and auxiliary elevation. [9] Projection of simple regular solids, viz. prisms, cubes, cylinders, pyramids, cones, tetrahedrons, spheres, hemi-spheres etc. [6] Section of solids; section by perpendicular planes; sectional views; true shapes of sections. [6] Dimensional techniques; international and national standards (ISO and BIS). [3] Freehand graphics. [3]
Text and/or reference material	1)… Engineering Drawing and Graphics – K Venugopal 2)… Engineering Drawing – N D Bhat 3)… Practical Geometry and Engineering Graphics – W Abbott

PHS51	Physics Laboratory	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods: (Continuous evaluation (CE) and end assessment (EA))					
NIL		CE+EA					

Course Outcomes	CO1: To realize and apply different techniques for measuring refractive indices of different materials. CO2: To realize different types of waveforms in electrical signals using CRO. CO3: To understand charging and discharging mechanism of a capacitor. CO4: To understand interference, diffraction and polarization related optical phenomena. CO5: To acquire basic knowledge of light propagation through fibers.
Topics Covered	1. Find the refractive index of a liquid by a travelling microscope. 2. Determine the refractive index of the material of prism using spectrometer. 3. Determination of amplitude and frequency of electrical signals by oscilloscope. 4. To study the characteristics of RC circuits. 5. To study Brewster's law/Malus' law using laser light. 6. To study the diffraction of light by a grating. 7. To study the interference of light by Newton's ring apparatus. 8. To determine numerical aperture of optical fiber. 9. Determination of Planck constant.
Text and/or reference material	**SUGGESTED BOOKS**: 1) A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
None		CT+EA					
Course Outcomes	• CO1: To learn basic analytical techniques useful for engg applications. • CO2: Synthesis and characterization methods of few organic, inorganic and polymer compounds of industrial importance. • CO3: Learn chromatographic separation methods. • CO4: Applications of spectroscopic measurements.						
Topics Covered	i. Experiments based on pH metry: Determination of dissociation constant of we acids by pH meter. ii. Experiments based on conductivity measurement: Determination of amou of HCl by conductometric titration with NaOH. iii. Estimation of metal ion: Estimation of Fe^{2+} by permangnometry iv. Estimation of metal ion: Determ. of total hardness of water by EDTA titration. v. Synthesis and characterization of inorganic complexes: e. g. $Mn(acac)_3$, Fe(acac cis-bis(glycinato)copper (II) monohydrate and their characterization by m. p FTIR etc. vi. Synthesis and charact. of organic compounds: e.g.Dibenzylideneacetone. vii. Synthesis of polymer: polymethylmethacrylate viii. Verification of Beer-Lamberts law and determination of amount of iron prese in a supplied solution. ix. Chromatography: Separation of two amino acids by paper chromatography x. Determination of saponification value of fat/ vegetable oil						
	<u>Suggested Text Books:</u> 1. Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall 2. Advanced Physical Chemistry Experiments: By Gurtu&Gurtu 3. Comprehensive Practical Organic Chemistry: Qualitative Analysis By V. K. Ahluwalia and S. Dhingra <u>Suggested Reference Books:</u> 1. Practical Chemistry By R.C. Bhattacharya 2. Selected experiments in Physical Chemistry By N. G. Mukherjee

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					

Course Outcomes	• CO1: Study and practice on machine tools and their operations • CO2: Practice on manufacturing of components using workshop trades including fitting, carpentry, foundry and welding • CO3: Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping • CO4: Develop basic electrical engineering knowledge for house wiring practice
Topics Covered	**M/c shop & Carpentry shop -- 3X3= 9hrs.** • Introduction on machining process. • Introduction to machine tools- Lathe, Shaper, Milling and Drill machine. • Introduction to woods- Types, structure, disease and defect of wood. • Introduction to wood working machines and tools. • Making of dovetail joint and bridle joint. **Welding Shop & Sheet metal -- 3X3= 9hrs.** • Introduction to welding.Safety and precautions in welding. • Formation of weld bead by SMAW on mild steel flat. • Formation of weld bead by oxy-fuel welding on mild steel flat. • Introduction to sheet Metal works. • Tools and Machines used in sheet metal works. • Concept of development, marking out of metal sheets. • Cutting and joining of metal sheets. • Safety precautions, General warning needed in the shop floor. **Black smithy & Foundry -- 3X3= 9hrs.** • Introduction Smithing and Forging- Tools, Machines, Furnaces and its accessories, fuels. • Safety and precautions in blacksmithy. • Making of bars of different cross-sections. • Making of hexagonal headed bolts. • Forge welding. • Introduction to Foundry Technology.

	• Preparation of sand mould using Solid/Split Pattern. **Fitting & Electrical shop -- 3X3= 9hrs.** • Introduction to hand metal cutting tools with specifications, nomenclature and their use. • Marking tools, measuring tools and their use. • Fitting of joints of mild steel flats. • Introduction to electrical hazards and safety precaution. • Wire jointing and soldering. • PVC Conduit Wiring controlled by separate single way switches. • PVC Cashing Capping Wiring for two-way switches. • Conduit wiring for the connection of a Calling Bell with In& Out Indicators. • Batten Wiring and Cleat Wiring. • Tube Light Connection. • Insulation Resistance Testing of 1ph / 3ph Motor and House Wiring. • Earth Resistance Testing. • DOL Starter Connection. **Viva voce -- 1X3= 3hrs.**
Text Books, and/or reference material	1. Workshop Technology Part I and Part II by W. A. J. Chapman 2. Elements of Workshop Technology S. K. Hazra Chowdhury, A. K. Hazra Chowdhury and Nirjhar Roy 3. Mechanical Workshop Practice by K. C. John

NIL	CT+EA						
Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics	YOGA						

Covered	• Introduction of Yoga. • Sitting Posture/Asanas- Padmasana, Vajrasana, Ardhakurmasana, Ustrasana, Bakrasana, Sasankasana, Janusirshasana, Suryanamaskar. • Mudra- Gyana mudra, Chin mudra, Shuni mudra, Prana mudra, Adi mudra, Anjali mudra. • Laying Posture/Asanas- PavanaMuktasana, UttanaPadasana, Sarpasana, Bhujangasana (Cobra Pose), Eka Pada Śalabhāsana, Dhanurasana, Chakrasana, Viparitkarani. • Meditation- Yognidra, Om chant, Pray chant. • Standing Posture/Asanas- Tadasana (Mountain Pose), Vrikshasana (Tree Pose), Ardhachandrasana, Trikonasana, Utkatasana, Padahastasana. • Pranayama- Deep breathing, AnulomVilom, Suryabhedi, Chandrabhedi. • Kriya- Kapalbhati, Trataka. **ATHLETICS** • Introduction of Athletic. • Starting Technique for Track events- Standing start, Crouch & Block start. • Finishing Techniques. • Relay Race- 4×100m, 4×400m & Baton Exchange Technique & Rules. • Track Marking with Fundamentals- 200m, 400m and Diagonal Distance Radius, Straight Distance, Staggers of Different Lanes & Curve Distance. **BASKETBALL** • Introduction and Players stance and ball handling. • Passing- Two hand chest pass, two hand bounce pass, One hand baseball pass, Side arm pass, Overhead pass, Hook pass. • Receiving- Two hand receiving, one hand receiving, receiving in stationary position, Receiving while jumping and Receiving while running. • Dribbling- Dribble, High dribble, Low dribble, Reverse dribble, Rolling dribble. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Introduction of Volleyball • Service- Underarm service, Sidearm service, Tennis service, Floating service, Jump service. • Pass: Underarm pass- Ready position, Teaching stage of underarm pass and Upper hand pass- Volley pass, Back pass, Short set, Jump set & Underarm set. • Rules and their interpretation. **FOOTBALL** • Introduction of Football • Push pass- Instep inside, Instep outer side. • Kicking- Spot kick, Instep kick, Lofted kick. • Dribbling- One leg, Both legs, Instep. • Trapping- Rolling ball sole trapping, High ball sole trapping, High ball chest trapping, High ball thigh trapping. • Throwing- Standing throw, Running throw, Seating throw. • Goal Keeping- Griping the ball, Full volley, Half volley, Drop Kick. • Rules and their interpretation. **CRICKET**

- Introduction of Cricket
- Batting gripping & Stance, Bowling gripping technique.
- Batting front foot defense& Drive.
- Batting Back foot defense& Drive.
- Batting Square cut.
- Bowling medium pace, Bowling off break.
- Fielding drill, Catching (Short & High).
- Rules & Regulation.

BADMINTON

- Basic introduction about Badminton and Badminton court.
- Racket parts, Racket Grip, Shuttle Grip.
- Basic stance, Basic Footwork, Shadow practice (Full court movement).
- Strokes services: Forehand- Overhead & Underarm, Backhand- Overhead & Underarm.
- Match practice (Single & Double).
- Rules & Regulation.

TABLE TENNIS

- Introduction of Table Tennis.
- Basic Stance and Grip (Shake hand & Pen hold).
- Service Basic.
- Stroke: Backhand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash.
- Stroke: Forehand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash.
- Rules and their interpretations.
- Table Tennis Match (Singles & Doubles).

NCC

- FD-1 General Introduction and words of command.
- FD-2 Attention, Stand at ease and Stand easy, Turning and inclining at the halt.
- FD-3 Sizing, Forming up in three Ranks Numbering, Open and Close order March and Dressing.
- FD-4 Saluting at the halt, Getting on parade, Dismissing and falling out.
- FD-5 Marching, Length of pace and Time of Marching in quick time and Halt, Slow March and Halt.
- FD-7 Turning on the March and Wheeling.
- FD-12 Parade practice.

TAEKWONDO

- Introduction about Taekwondo- Meaning of Taekwondo, Korean language of dress, Fighting area, Punch, Block, Kicks etc.
- Stance- Ready stance, Walking stance, Fighting stance, Front stance, Back stance, Cat stance etc.
- Punch Technique- Front fist punch, Rear fist punch, Double fist punch, With stance etc. Blocks- Upper blocks, Middle block, Side block, Suto etc.
- Foot Technique (Balgisul)- Standing kick (Saseochagi), Front kick (Abchagi), Doliyo (Chagi), Abdalchagi (Butterfly kick), Back kick etc.

NSS

- Swachha Bharat Mission

	• Free Medical Camp • Sanitation drive in and around the campus. • Unnat Bharat Abhiyaan • MatribhashaSaptah celebration

CSC01	**INTRODUCTION TO COMPUTING**	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic knowledge of computer.		CT+MT+EA					
Course Outcomes	CO1: Recognize the changes in hardware and software technologies with respect to the evolution of computers and describe the function of system software's (operating Systems) and application software's, languages, number system, logic gates. CO2: Illustrate the flowchart and inscribe an algorithm for a given problem Inscribe C programs using operators. CO3: Develop conditional and iterative statements to write C programs. CO4: Exercise user defined functions to solve real time problems						

	CO5: Inscribe C programs that use Pointers to access arrays, strings and functions. CO6: Exercise user defined data types including structures and unions to solve problems.
Topics Covered	Fundamentals of Computer: History of Computer, Generation of Computer, Classification of Computers 2L Basic Anatomy of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices. [2] Languages: Assembly language, high level language, compiler, and assembler (basic concepts) [1] Binary & Allied number systems representation of signed and unsigned numbers. BCD, ASII. Binary Arithmetic & logic gates. [2] Basic concepts of operating systems like MS DOS, MS WINDOW, UNIX, Algorithm & flow chart. [1] C Fundamentals: The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements. [2] Operators & Expressions: Arithmetic operators, relational and logical operators, type, conversion, increment and decrement operators, bit wise operators, assignment operators and expressions, precedence, and order of evaluation. Input and Output: Standard input and output, formatted output -- printf, formatted input scanf. [8] Flow of Control: Statement and blocks, if - else, switch, loops - while, for do while, break and continue, go to and labels. [5] Fundamentals and Program Structures: Basic of functions, function types, functions returning values, functions not returning values, auto, external, static and register Variables, scope rules, recursion, function prototypes, C pre-processor, command line arguments. [5] Arrays and Pointers: One-dimensional, two-dimensional arrays, pointers and functions, multi-dimensional arrays. [10] Structures Union and File: Structure, union, structures and functions, arrays of structures, file read, file write.[5]
Text Books, and/or reference material	Text Books: 1. Let us C by Kanetkar 2. C Programming by Gottfried 3. Introduction to Computing by Balaguruswamy 4. The C-programming language by Dennis Ritchie Reference Books: 1. Computer fundamental and programming in C by P Dey and M. Ghosh 2. Computer fundamental and programming in C by Reema Thareja 3. programming with C by Schaum Series

• CO3: Ability to make proper designs using these circuit elements for different applications.
• CO4: Learn to analyze the circuits and to find out relation between input and output.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">
1. Semiconductors
1.1. Concept of band formation in solids; Fermi-Dirac distribution function, concept of Fermi level, invariance of Fermi level in a system under thermal equilibrium
1.2. Definitions of insulator, conductor and semiconductor using band diagram
1.3. Crystalline structure of semiconductor
1.3.1. Covalent bond
1.3.2. Generation of holes and electrons
1.3.3. Effect of temperature on semiconductor
1.4 Intrinsic semiconductor
1.5 Doping and Extrinsic semiconductor
1.5.1 n-Type semiconductor and band diagram
1.5.2 p-Type semiconductor and band diagram
1.5.3 Mass-action law of semiconductor
1.6. Conductivity of semiconductor (including mathematical expression)
1.7 Carrier transport phenomenon. (03 hrs.)
2. Diodes
2.1. Construction
2.2. Unbiased diode; Depletion layer and Barrier potential; junction capacitance (expression only)
2.3. Principle of operation with forward biasing and reverse biasing
2.4. Characteristics
2.5 Diode’s three models/equivalent circuits.(02 hrs.)
3.Diode Circuits
3.1 Diode rectifier
3.1.1 Half wave rectifier
3.1.2 Full wave rectifier:centre tap and bridge rectifier
3.1.3 Capacitive filter and DC power supply (Numerical problems)
3.2 Special Diodes
3.2.1 Zenerdiode: Avalanche breakdown and Zener breakdown and characteristics.
3.2.2 Zener diode as a voltage regulator
3.2.3 Displaydevices: LED and LCD. (03 hrs.)
4.Bipolar Junction Transistor (BJT)</td></tr>
</table>

	4.1 n-p-n and p-n-p transistor and their constructions 4.2 Principle of operation 4.3 Transistor configuration: common base, common emitter, and common collector 4.4 Transistor characteristics: input and output characteristics of CB and CE configurations 4.5 DC load line: quiescent (Q) point; cut-off, active, and saturation region 4.6 Amplifier: Principle of operation 4.7 Transistor as a switch. (04 hrs.) 5.**Transistor Biasing** 5.1 Need of biasing 5.2 Methods of biasing: base resistor or fixed bias, emitter feedback, voltage divider biasing 5.3 Stability of Q-point (qualitative discussions) 5.4 (Numerical problems). (02 hrs.) 6.**Single Stage Amplifier:** classification of amplifiers (voltage amplifier, current amplifier, power amplifier etc.) Class-A CE Amplifier with coupling and bypass capacitors, Qualitative discussions of magnitude characteristics of frequency response (graph only) (02 hrs.) 7.**Feedback Amplifier** 7.1 Positive and negative feedback 7.2 Deduction of gain with negative feedback, explanation of stability of gain with negative feedback, other effects of negative feedback (no deduction), numerical problems. (03 hrs.) 8.**Other Semiconductor Devices** 8.1 JFET: Construction, principle of operation, characteristics 8.2 MOSFET: Construction, principle of operation, characteristics 8.3 Power Electronic Device-SCR: Brief discussions. (02 hrs.) 9.**Operational Amplifier** 9.1 Characteristics of ideal operational amplifier 9.2 Pin Configuration of IC 741, 9.3 Analysis of simple operational amplifier circuits: concept of virtual ground; noninverting amplifier and inverting amplifier. 9.4 Applications: voltage follower, summer, differentiator, integrator, and comparator (04 hrs) 10.**Oscillator** 10.1 Positive feedback and condition of oscillation 10.2 R-C phase-shift oscillator, Wien bridge oscillator.(02 hrs.) 11.**Boolean Algebra** 11.1 Boolean algebra, De Morgan's theorem, simplification of Boolean expressions 11.2 Number system, range extension of numbers, overflow 11.3 Different codes: gray code, ASCII code and BCD codes and them Applications. (01 hrs.) 12. **Logic Gates** 12.1 NOT, OR, AND, NOR, NAND, EX-OR, EX-NOR gates 12.2 Simplification of logic functions 12.3 Realizations of logic expressions using logic gates. (01 hrs.) 13. CRO and its applications and other test and measurement instruments. (01

	hrs.)

Pre-requisites		Course Assessment methods (Continuous (CT), Mid Term (MT), and end assessment (EA))					
NIL		CT+MT+ EA					
Course Outcomes	Upon successful completion of this course, the student should be able to • CO1: learn the fundamentals of Electric Circuits and Network theorems and analysis of electrical network based on these concepts. • CO2: develop an idea on Magnetic circuits, Electromagnetism and learning the working principles of some fundamental electrical equipment's • CO3: learn about single phase and poly-phase AC circuits and analysis of such circuits based on these concepts. • CO4: introduce the basic concept of single-phase transformer. • CO5: analyze the transient phenomena in electrical circuits with DC excitation.						

Topics Covered	Introduction: Overview of Electrical power generation systems (2) Fundamentals of Electric Circuits: Ohm's laws, Kirchhoff's laws, Independent and Dependent sources, Analysis of simple circuits. (4) Network theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem (4) Magnetic circuits: Review of fundamental laws of electromagnetic induction, transformer and rotational emfs, Solution of magnetic circuits. Analysis of coupled circuits (self-inductance, mutual inductance, and dot convention)(8) Transients with D.C. excitation for R-L and R-C circuits. (3) Generation of alternating voltage and current, E.M.F. equation, Average and R.M.S. value, Phase and phase difference, Phasor representation of alternating quantity, Behavior of A.C. circuits, Resonance in series and parallel R-L-C circuits. AC Network: Superposition theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem, solution of networks with AC sources. (10) Single-Phase Transformer, equivalent circuits, open circuit and short circuit tests (6) Poly-phase system, Advantages of 3-phase system, Generation of 3-phase voltages, Voltage, current and power in a star and delta connected systems, 3-phase balanced and unbalanced circuits, Power measurement in 3-phase circuits. (5)
Textbooks/Reference material	Textbooks: 1. Electrical & Electronic Technology by Hughes, Pearson Education India Reference Books: 1. Advanced Electrical Technology by H. Cotton, Reem Publication Pvt. Ltd 2. Electrical Engineering fundamentals by Vincent Deltoro, Pearson Edu India

BTC01	LIFE SCIENCE	PCR	2	0	0	2	2
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	CO1: Basic understanding of basic cellular organization of organisms and cellular communications, structure and functions of the macromolecules and their biosynthesis and cata--bolism.						

	CO2: To give an understanding of the key features of the structure, growth, physiology and behavior of bacteria, viruses, fungi and protozoa CO3: To introduce molecular biology to understand biological processes in various applications. CO4: To provide a foundation in immunological processes and an overview of the interaction between the immune system and pathogens. CO5: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them CO6: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them
Topics Covered	**1. Cell Biology (4)** a) Introduction to life science: prokaryotes & eukaryotes Definition; Difference b) Introduction to cells - Define cell, different types of cell c) Cellular organelles - All organelles and functions in brief d) Cellular communications Introduction to basic signaling; endocrine, paracrine signaling; concepts of receptor, ligand, on-off switch by phosphorylation/dephosphorylation **2. Biochemistry (4)** a) Biological function of carbohydrate and lipid - Introduction, structure and function b) Biological function of nucleic acids and protein - structure and function c) Catabolic pathways of Macromolecules - Introduction to catabolism, hydrolysis and condensation reactions; Catabolism of glucose- Glycolysis, TCA; overall degradation of proteins and lipids d) Biosynthesis of Macromolecules Generation of ATP (ETS), Generation of Glucose (Photosynthesis) **3. Microbiology (5)** a) Types of microorganisms and their general features - Bacteria, Yeast, Fungi, Virus, Protozoa- general introduction with practical significance and diseases b) Microbial cell organization - Internal and External features of cell- bacterial cell wall, viral capsule, pilus etc, c) Microbial nutritional requirements and growth - Different Sources of energy; growth curve d) Basic microbial metabolism - Fermentation, Respiration, Sulfur, N_2 cycle **4. Immunology (5)** a) Basic concept of innate and adaptive immunity - Immunity-innate and adaptive, differences, components of the immune system b) Antigen and antibody interaction - Antigen and antibody, immunogen, factors affecting immunogenicity, basic antigen-antibody mediated assays, introduction to monoclonal antibody c) Functions of B cell - B cell, antibody production, memory generation and principle of vaccination d) Role of T cell in cell-mediated immunity - Th and Tc, functions of the T cell with respect to different pathogen and cancer cell **5. Molecular Biology (5)** a) Prokaryotic Genomes (Genome organization & structure) - Nucleoid, circular or linear b) Eukaryotic Genomes (Genome organization & structure) - Intron, exon,

	packaging, chromatin c) Central Dogma (Replication, Transcription and Translation) d) Applications of Molecular Biology (Diagnostics, DNA-fingerprinting, Recombinant products etc.) - Introduction to Recombinant DNA, fingerprinting, cloning **6. Bioprocess Development (5)** a) Microbial growth kinetics - Batch, fed-batch and continuous systems, Monod Equation b) Enzyme kinetics, kinetics of enzyme inhibition and deactivation Definition of enzymes, activation energy, Concepts of Km, Vmax, Ki c) Microbial sterilization techniques and kinetics Introduction to sterilization, dry and moist sterilization d) Thermodynamics of biological system - Concepts of Enthalpy, Entropy, favorable reactions, exergonic and endergonic reactions e) Material and energy balance for biological reactions - Stoichiometry
Text Books, and/or reference material	1. Biotechnology 01 Edition, authored by U. Satyanarayana, BOOKS & ALLIED (P) LTD. 2. Biochemistry by Lehninger. McMillan publishers 3. XXC01	The Constitution of India and Civic Norms	PCR	1	0	0	1	1
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	CO1: Elementary understanding of the evolution of historical events that led to the making of the Indian constitution, the philosophical values, basic structure and fundamental concerns enshrined in the Constitution of India.						

	CO2: Aware of the fundamental rights and duties as a citizen of the country. CO3: Enable to know the civic norms to be followed according to the Indian constitution
Topics Covered	**1.** Historical background of the Making of Indian Constitution (1 Hour) **2.** Preamble and the Philosophical Values of the Constitution (1 Hour) **3.** Brief Overview of Salient Features of Indian Constitution (1 Hour) **4.** Parts I & II: Territoriality and Citizenship (1 Hour) **5.** Part III: Fundamental Rights (2 Hours) **6.** Part IV: Directive Principles of State Policy (1 Hour) **7.** Part IVA: Fundamental Duties (1 Hour) **8.** Union Government: President, Prime Minister and Council of Ministers (2 Hours) **9.** Parliament: Council of States and House of the People (1 Hour) **10.** State Government: Governor, Chief Mister and Council of Ministers (1 Hour) **11.** State Legislature: Legislative Assemblies and Legislative Councils (1 Hour) **12.** Indian Judiciary: Supreme Court and High Courts (1 Hour) **13.** Centre-State Relations (1 Hour) **14.** Reservation Policy, Language Policy and Constitution Amendment (1 Hour)
Text Books, and/or reference material	Primary Readings: 1) P. M. Bakshi, *The Constitution of India*, 18th ed. (2022) 2) Durga Das Basu, *Introduction to the Constitution of India*, 25th ed. Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	• CO1: Acquire idea about basic electronic components, identification, and behavior. • CO2: To determine IV characteristics of these Circuit elements for different applications. • CO3: Learn to analyze the circuits and observe and relate input and output signals.						
Labs Conducted.	1. To know your laboratory: To identify and understand the use of different electronic and electrical instruments. 2. To identify and understand name and related terms of various electronics components used in electronic circuits.: Identify different terminals of components, fid their values and observe numbering associate with it. 3. Use of oscilloscope and function generator: Use of oscilloscope to measure voltage, frequency/time and Lissajous figures of displayed waveforms. 4. Study of half wave and Full-wave (Bridge) rectifier with and without capacitor filter circuit. 5. Realization of basic logic gates: Truth table verification of OR, AND, NOT, NOT and NAND logic gates from TTL ICs 6. Regulated power supply: study LM78XX and LM79XX voltage regulator ICs 7. Transistor as a Switch: study and perform transistor as a switch through NOT gate 8. Zenner diode as voltage regulator 9. To study clipping and Clamping circuits 10. To study different biasing cirtis. 11. Study of CE amplifier and observe its frequency response.

NIL	CE + EA						
Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Sitting Posture/Asanas- Gomukhasana, Swastikasana, Siddhasana, Ustrasana, Janusirsasana, ArdhaMatsyendrasana (Half-Spinal Twist Pose), Paschimottanasana, Shashankasana, Bhadrasana. • Mudra- Vayu, Shunya, Prithvi, Varuna, Apana, Hridaya, Bhairav mudra. • Laying Posture/Asanas- Shalabhasana (Locust Posture), Dhanurasana (Bow Posture), ArdhaHalasana (Half Plough Pose), Sarvangasana (Shoulder Stand), Halasana (Plough Pose), Matsyasana, SuptaVajrasana, Chakrasana (Wheel Posture), Naukasana (Boat Posture), Shavasana (Relaxing Pose), Makaraasana. • Meditation- 'Om'meditation, Kundalini or Chakra Meditation, Mantrameditation. • Standing Posture/Asanas- ArdhaChakrsana (Half Wheel Posture), Trikonasana (Triangle Posture), ParshwaKonasana (Side Angle Posture), Padahastasana, Vrikshasana (Tree Pose), Garudasana (Eagle Pose). • Pranayama- Nadisodha, Shitali, Ujjayi, Bhastrika, Bhramari. • Bandha- Uddiyana Bandha, Mula Bandha, Jalandhara Bandha, Maha Bandha. • Kriya- Kapalabhati, Trataka, Nauli. **ATHLETICS** • Long Jump- Hitch kick, Paddling, Approach run, Take off, Velocity, Techniques, Flight & Landing • Discus throw, Javelin throw and Shot-put- Basic skill & Technique, Grip, Stance, Release & Follow through. • Field events marking. • General Rules of Track & Field Events. **BASKETBALL** • Shooting- Layup shot, Set shot, Hook shot, Jump shot. Free throw. • Rebounding- Defensive rebound, Offensive rebound. • Individual Defensive- Guarding the man without ball and with ball. • Pivoting.						

	• Rules of Basketball. • Basketball game. **VOLLEYBALL** • Spike- Straight spike, Body turn spike, Tip spike, Back attack, Slide spike, Wipe out spike. • Block- Single block, Double block, Triple block, Group block. • Field Defense- Dig pass, Double pass, Roll pass. • Rules and their interpretation. **FOOTBALL** • Dribbling- Square pass, Parallel pass, Forward pass. • Heading (Standing & Running)- Fore head, Side fore head, Drop heading, Body covering during heading. • Kicking- Full volley, Half volley, Drop kick, Back volley, Side volley, Chiping (lobe). • Tackling: Covering the angle, Chessing time sliding chese, Heading time shoulder tackle etc. • Feinting- Body movement to misbalance the opponent and find space to go with ball. • Rules of Football. **CRICKET** • Batting straight drive. • Batting pull shot. • Batting hook shot. • Bowling good length, In swing. • Bowling out swing, Leg break, Goggle. • Fielding drill. • Catching (Long & Slip). • Wicket keeping technique. • Rules & Regulation. **BADMINTON** • Net play- Tumbling net shot, Net Kill, and Net Lift. • Smashing. • Defensive high clear/Lob. • Half court toss practice, Cross court toss drop practice, Full court Game practice. • Player Positioning, Placements. • Rules & Regulation. • Doubles & Mixed doubles match practice. **TABLE TENNIS** • Stroke: Backhand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke: Forehand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke- Backhand lob with rally, Backhand lob with sidespin, Forehand lob with rally, Forehand lob with sidespin. • Service: Backhand/Forehand- Push service, Deep push service, Rally service. • Service: Backhand sidespin (Left to right & Right to left). • Service: Forehand- High toss backspin service, High toss sidespin service, High toss reverse spin service. • Rules and their interpretations.

- Table Tennis Match (Singles & Doubles).

NCC

- FD-6 Side pace, Pace Forward and to the Rear.
- FD-7 Turning on the March and Wheeling.
- FD-8 Saluting on the March.
- FD-9 Marking time, Forward March and Halt in Quick Time.
- FD-10 Changing step.
- FD-11 Formation of Squad and Squad Drill.
- FD-12 Parade practice.

TAEKWONDO

- Poomsae (Forms)- Jang, Yi Jang.
- Self Defense Technique- Self defense from arms, Fist and Punch.
- Sparring (Kyorugi)- One step sparring, Two step sparring, Fight (Free sparring).
- Combination Technique- Combined kick and punch.
- Board Breaking (Kyokpa)- Sheet breaking.
- Interpretation Rules above Technique of Taekwondo.

NSS

- No Smoking Campaign
- Anti- Terrorism Day Celebration
- Any other observation/celebration proposed by Ministry/institute
- Public Speaking
- Discussion on Current Affairs
- Viva voce

THIRD SEMESTER

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC331	**Mathematics- III**	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic knowledge of topics included in MAC01 & MAC02		CT+MT+EA					
Course Outcomes	• CO1: Acquire the idea about mathematical formulations of phenomena in physics and engineering. • CO2: To understand the common numerical methods to obtain the approximate solutions for the intractable mathematical problems. • CO3: To understand the basics of complex analysis and its role in modern mathematics and applied contexts. • CO4: To understand the optimization methods and algorithms developed for solving various types of optimization problems.						
Topics Covered	**Partial Differential Equations (PDE):** Formation of PDEs; Lagrange method for solution of first order quasilinear PDE; Charpit method for first order nonlinear PDE; Homogenous and Nonhomogeneous linear PDE with constant coefficients: Complimentary Function, Particular integral; Classification of second order linear PDE and canonical forms; Initial & Boundary Value Problems involving one dimensional wave equation, one dimensional heat equation and two dimensional Laplace equation. [14] **Numerical Methods:** Significant digits, Errors; Difference operators; Newton's Forward, Backward and Lagrange's interpolation formulae; Numerical solutions of nonlinear algebraic/transcendental equations by Bisection and Newton-Raphson methods; Trapezoidal and Simpson's 1/3 rule for numerical integration; Euler's method and modified Eular's methods for solving first order differential equations. [14] **Complex Analysis:** Functions of complex variable, Limit, Continuity and Derivative; Analytic function; Harmonic function; Conformal transformation and Bilinear transformation; Complex integration; Cauchy's integral theorem; Cauchy's integral formula; Taylor's theorem, Laurent's theorem (Statement only); Singular points and residues; Cauchy's residue theorem. [17] **Optimization:** **Mathematical Preliminaries:** Hyperplanes and Linear Varieties; Convex Sets, Polytopes and Polyhedra. [2] **Linear Programming Problem (LPP):** Introduction; Formulation of linear programming problem (LPP); Graphical method for its solution; Standard form of LPP; Basic feasible solutions; Simplex Method for solving LPP. [9]						
Text Books, and/or reference material	**Text Books:** 1. An Elementary Course in Partial Differential Equations-T. Amarnath 2. Numerical Methods for scientific & Engineering Computation- M.K.Jain, S.R.K. Iyengar & R.K. Jain. 3. Foundations of Complex Analysis- S. Ponnuswami						

	4. Operations Research Principles and Practices- Ravindran, Phillips, Solberg 5. Advanced Engineering Mathematics- E. Kreyszig **Reference Books:** 1. Complex Analysis-L. V. Ahfors 2. Elements of partial differential equations- I. N. Sneddon 3. Operations Research- H. A. Taha

Mapping of CO (Course Outcome) and PO (Programme Outcome)

POs COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	2	2	1	2	-	-	-	-	2
CO2	3	3	2	2	2	1	2	-	-	-	1	2
CO3	3	3	2	2	3	-	1	-	-	1	-	2

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MMC301	Metallurgical Thermodynamics and Kinetics	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CYC01: Engineering Chemistry		CT+MT+EA					
Course Outcomes	CO1: Acquire the knowledge of thermodynamic laws to apply in metallurgical processes and materials. CO2: Identify the feasibility of metallurgical processes and reactions. CO3: Learn to analyze the kinetics of metallurgical processes and design the alloy systems by applying the concepts of thermodynamics.						
Topics Covered	Definitions, behaviour of gasses, vapours and gaseous moisture, materials balances in metallurgical processes. (4) First law of thermodynamics, Heat and work changes in reversible processes, Concept of Heat Capacity, Enthalpy energy balance in metallurgical processes, Reversible adiabatic process. (4) The Carnot cycle, concept of entropy, Entropy changes in reversible, irreversible processes and universe, Clausius inequality, Combined statement of first and second law, Entropy change for irreversible chemical reactions. (6) Helmholtz free energy and the Gibbs free energy, Free-energy equations in differential form, Thermodynamic potentials, The Maxwell relations, Criteria of equilibrium and spontaneity (or irreversibility), The Gibbs-Helmholtz equation, Third law of thermodynamics. (6) Concept of chemical potential, Chemical potential of oxygen, partial molar quantities, Integral molar quantities, Raoult's law and Henry's law, Alternative standard states,Sievert's law, Mixing function, Excess function, Regular solution, concept of interaction parameter. (13)						

	Fugacity, Activity, standard state, equilibrium constant, Van't Hoff reaction isotherm,Le Chatelier's Principle, Free-energy Charts and Ellingham diagrams, Gas-solid reaction, Van't Hoff equation, Sigma Function (Σ), Clausius-Clapeyron Equation, Trouton's Rule. (8) Types of electrochemical cells, Laws of electrolysis, determination of thermodynamics quantities using reversible electrochemical cells, Electrochemical cell based on solid electrolytes. (3) Types of reaction, Order of reaction, Determination of order and rate constant of a reaction. (6)
Text Books, and/or reference material	Suggested Text Books: 1. Introduction to Metallurgical Thermodynamics – David R Gaskell. 2. Metallurgical 2. Textbook of Materials and Metallurgical Thermodynamics –A. Ghosh 3. Thermochemistry – O. Kubaschewski, E LL Evans and C B Alcock Suggested Reference Books: 1. Stoichometry and thermodynamics of Metallurgical processes - Y K Rao. 2. Problems in Metallurgical Thermodynamics and Kinetics – G S Upadhyay and R K Dube. 3. Chemical Kinetics - Keith Laidler.

Mapping of CO (Course Outcome) and PO (Programme Outcome)

POs COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	1	1	1	1	1	1	1	1	1

CO3	1	2	3	1	1	1	1	1	1	1	1	1

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core(PCR) / Electives(PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MMC302	Introduction to Metallurgy and Materials	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
PHC01: Engineering Physics		CT+EA					

Course Outcomes	I. To correlate atomic structure, periodic table, elemental properties, chemical bonding and material properties. II. To interpret crystal structure in view of translational periodicity and symmetry and as well as to introspect different kinds of defects in a crystal. III. To study the binary phase diagrams and a brief introduction to different engineering materials.
TopicsCovered	Atomic Structure and chemical Bonding: Quantum mechanical approach, Schrödinger wave equation, wave function, Quantum state, Periodic Table, electronic configuration and atomic structure. Bonding in solids, different types

	of bonds, Bond energy, effect of bonding on material properties. (10) Structure of Solids: The crystalline and the noncrystalline states – Metals and Alloys,Ceramics,semiconductorsandpolymers;Crystalstructure–conceptoflatticeandcrystal,Translationalperiodicityandsymmetry,crystalsystems,spacelattice,representationofatomicposition,latticedirectionsandlatticeplanesincubicandhexagonalsystems;atomicpacking,voidsinFCC,BCCandHCPcrystals;crystalimperfections– point defect, line defect, surface defect and volume defect; equilibrium concentration of point defect. (12) Solidification of metals and alloys including Rapid Solidification Technology (6) Phase diagrams: The phase rule, single component system. Binary phase diagrams with reference to a few important metallic systems. (6) Corrosion and oxidation of materials: The principles of corrosion; Protection against corrosion; Mechanism of oxidation; Oxidation resistant materials. (6) Introduction to Materials (Classification, Selection and Applications): Metals and Alloys, Intermetallics, Polymers, Glasses and Ceramics, Composite Materials, nano-crystalline materials. (10)
Text Books,and/orreferencematerial	Text Books: 1. Materials Science and Engineering: A first course – V. Raghavan, PHI Learning Pvt.Ltd., 2004. 2. IntroductiontoMetallurgy-A.H.Cottrell,Arnold,1968. 3. Structure and Properties of Engineering Materials – R. M. Brick, A. W.Pense and R. B.Gordon. 4. The Structure and properties of Materials (I – IV) – R.M. Rose, L. A. Shepard and J.Wulff. 5. Introductiontosolids-L.V.Azaroff,TataMcGraw-Hill,1990. 6. Crystallographyappliedtosolid statephysics-A. R.Verma,O.N. Srivastava,Wiley,1982.

Department of Earh and Environmental Studeis							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)#	Total Hours	
ESC332	Economic Geology	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					

Course Outcomes	• It helps to acquire technical knowledge of basic geological principles and their application in Metallurgical Engineering. • Enhances knowledge of natural resources and their utilization for Metallurgical purposes. • It enables to scientifically assess the materials of the earth and helps in solving industrial problems related to materials.

Topics Covered	Mineralogy: Definition, simple classifications, examples; Studies of crystals - symmetry elements, crystal classes and systems, twinning of crystals; Physical properties of minerals, Optical properties of minerals, Chemical characteristics, Atomic bonding in minerals, Structural classification of silicate minerals, occurrence. [10] Petrology: Igneous rocks - Magma – composition, physical properties; Rock cycle; Formation of Igneous rocks; Form and Structure; Classification; Texture; Phase diagram and crystallisation behaviour, Bowen's Reaction Series; Sedimentary rocks – Origin, classifications and examples, primary structures, textures; Metamorphic rocks – roles of agents of metamorphism, types of metamorphism, grades and degrees of metamorphism, metamorphic textures. [12] Structural Geology: Dip, Strike; Folds, Faults, Joints, Cleavage & Schistosity. [4] Economic Geology: Processes of formation of mineral deposits; Economic mineral deposits with special reference to Indian occurrences – Metallic minerals – Iron, Copper, Manganese, Aluminium, etc.; Non-metallic minerals – Refractory minerals, phosphate minerals. [10]
Text Books, and/or reference material	1) A Textbook of Geology : P. K. Mukherjee, World Press 2) The Principles of Petrology : G. W. Tyrrel; B. I. Publications 3) Dana's Manual of Mineralogy: Dana & ford 4) Economic Mineral Deposits: Jensen M. L & Bateman A. M

Mapping of CO (Course Outcome) and PO (Programme Outcome)

MMC303	Non- Ferrous Process Metallurgy	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
CYC-01: Engineering Chemistry	CT+MT+EA
Course Outcomes	• CO1: Understand fundamentals and unit operations of Mineral Beneficiation (MB). • CO2: Understand developments in processing of non-ferrous metals. • CO3: Identify and solve the problems of industrial applications of MB unit.
Topics Covered	Sources of nonferrous metals (Sources in land and sea, exploration methods, methods of beneficiation, nonferrous metals wealth in India) (2)

	Principles of metals extraction, (Thermodynamic principles, homogeneous and heterogeneous reactions, Ellingham diagrams, kinetic principles, electro-chemistry) (8) General methods of extraction, (Pyro-metallurgy – calcinations, roasting (predominance area diagram) and smelting, Hydrometallurgy – leaching, solvent extraction, ion exchange, precipitation, and electrometallurgy – electrolysis and electro-refining)(6) General methods of refining, (Basic approaches, preparation of pure compounds, purification of crude metal produced in bulk) (2) Extraction of metals from oxide sources, (Basic approaches and special features of specific extraction processes, extraction of metals such as Mg, Al, Sn) (5) Extraction of metals from sulphide ores, (Pyro-metallurgy and hydro-metallurgy of sulphides, production of metals such as copper, lead, zinc, nickel etc.) (5) Extraction of metals from halides, (Production of halides and refining methods, production of reactive and reactor metals. Methods of extraction of metals such as Ti, Ur) (5) Production of precious metals (Methods applied for gold, silver and Pt.) (3)
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Extraction of nonferrous metals, H.S. Ray, R.Sridhar and K.P. Abraham Affiliated East West Press Pvt Ltd., New Delhi (2007). 2. H.S. Ray and A. Ghosh, Principles of extractive metallurgy,Wiley Eastern Ltd., New Delhi (1991) <u>Suggested Reference Books:</u> 1. W.H. Dennis, Extractive Metallurgy, Philosophical Library,New York (1965) 2. F. Habashi, Principles of Extractive Metallurgy, Vol.1, Gordon and Breach, New York (1969). 3. T. Rosenqvist, Principles of Extractive Metallurgy, McGraw Hill, New York (1983). 4. J.L. Bray, Nonferrous production metallurgy, Wiley, NewYork(1954).

			Lecture (L)	Tutorial (T)	Practical (P)#	Total Hours	
ESS382	Economic Geology	PCR	0	0	3	3	1.5

	Laboratory						
Pre-requisites		Course Assessment methods (Continuous (CT) assessment)					
		CT					
Course Outcomes	● Students will develop concept of Symmetry of crystals of minerals used for metallurgical purposes. ● The students will learn to study the properties of minerals including ores under polarizing microscope which will contribute to the beneficiation process. ● Students will learn to solve geological problems associated with occurrence of new materials to be used for metallurgical purposes.						
Topics Covered	Experiment 1: To study the symmetry elements of crystals (Part 1). [3] Experiment 2: To study the symmetry elements of crystals (Part 2). [3] Experiment 3: To study the physical properties of minerals in hand specimens. [3] Experiment 4: Identification of minerals in hand specimens on the basis of physical properties. [3] Experiment 5: To study optical properties of minerals under Polarising Microscopes (Part 1). [3] Experiment 6: To study optical properties of minerals under Polarising Microscopes (Part 2). [3] Experiment 7: Determination of apparent dips in given directions from true dip. [3] Experiment 8: Determination of true dip from given apparent dips. [3] Experiment 9: Study of a geological map. [3]

FOURTH SEMESTER

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MMC401	Transport Phenomena in Metallurgical Processes	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT), and end assessment (EA))
XEC-01: Engineering Mechanics	CT+MT+EA

Course Outcomes	CO1: Understand the fundamentals of fluid flow and momentum transfer. CO2: Understand different modes of heat transfer and mass transfer. CO3: Ability to solve metallurgical industry oriented problems involving heat, mass, and momentum transfer.
Topics Covered	Introduction, Conservation, fluid statics. (3) Fluid flow: Newton's law of viscosity, Non-newtonian fluids. (5) continuity equation, Navier-Stokes equations, Laminar flow. (6) Turbulence and experimental correlations, the concept of friction factor. (3) Flow through porous media, fluidized bed, Ergun equation. EX: centrifugal casting, bottom gating system. (6) Modes of heat transfer, Industrial examples, Fundamental law and Subsidiary law (3) Concept of thermal resistance and overall heat transfer coefficient, Differential equation of heat conduction. (3) Conduction-convection system, Moving fins, Application in estimating heat losses from furnaces, Two dimensional steady state heat conduction. (3) Lumped heat capacity analysis, Time constant and response time of temperature measuring instruments, Heisler's charts, application in heat treatment and solidification. (4) Concept of the boundary layer, correlation for external flow and internal flow, continuous casting cooling system, heat losses from hot surfaces. (3) View factor between surfaces, radiation heat transfer in furnace enclosures, reactors in used in materials processing, radiation shields Case studies involving multimode heat transfer in materials processing. (5) Fick's Laws of diffusion, advection due to diffusion, case of evaporation of liquid through a column, Analogy between mass and heat transfer, mass transfer coefficient, application in gas-solid reactions such as oxidation, reduction etc. (7)
Text Books, and/or reference material	Suggested Text Books: 7. Rate Phenomena In process metallurgy – J. Szekely and N.J. Themelis 8. Transport Phenomena in Metallurgy – G.H. Geiger and D.R.Poirier Suggested Reference Books: 7. Heat Transfer– J.P. Holman 8. Heat and Mass Transfer – F. P. Incropera and D. P. DeWitt 9. Transport Phenomena – R. B. Bird, W. E. Stewart and E. N. Lightfoot

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core(PCR) / Electives(PEL)	Total Number of contact hours: Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	Credit
MMC402	Phase Transformation and Phase Equilibria	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MMC302:Introduction to Metallurgy and Materials		CT+EA					
Course Outcomes	I. To understand and interpret Free energy-composition diagram and origin of phase diagrams. II. A detailed understanding on diffusion in solid and solid state phase transformations in steel. III. To understand the fundamentals of solidification in order to apply it in Foundry industry.						
Topics Covered	Introduction: Basic concepts about Stability of Phases and equilibrium; Types of PhaseTransformations,Orderoftransformations. (5 hours) Phase Equilibria: Thermodynamics of phase changes, phase diagrams and equilibria inrelationtoFreeenergy-compositiondiagrams.Interpretationofphasediagrams,determination and calculations. Solid-liquid Miscibility gap; invariant reaction. Principlesofternaryphasediagram,Examplesofafewmetallicandceramicphasediagrams.(6 hours) Diffusion:Phenomenologicalequationofdiffusion,Chemicalpotentialgradient,Fick'sfirst law of diffusion, diffusion coefficient (diffusivity), representation of diffusion flux interms of chemical potential gradient; Nernst-Einstein Equation, Diffusion in ideal solutionand in solutions with positive and negative deviation; Uphill diffusion, determination ofdiffusion coefficient (diffusivity) for ideal binary solid solution in terms of jump frequencyand jump distance, atomic mechanism of diffusion,Expression of diffusion coefficient(diffusivity) for self diffusion in pure metal or diffusion in substitutional solid solutionthrough vacancy mechanism and in interstitial solid solution; Steady state diffusion andtransientdiffusion;Fick'ssecondlawofdiffusion;determinationofselfdiffusioncoefficient by radioactive method; solution of Fick's second law: analysis of carburizinganddecarburizingprocesses;solutionofFick'ssecondlawforvariablediffusivity:Boltzmann-Matano analysis, Matano interface, determination of diffusivity as							

	a function ofconcentration;Diffusioninsubstitutionalsolidsolution:Kirkendalleffect,Darken'sanalysis. (10hours) Liquid-SolidPhaseTransformation:PrinciplesofSolidificationinmetalsandalloys:thermodynamicsinvolved,eutecticandperitecticSolidification,Homogeneousandheterogeneous nucleation,Mechanismsofgrowth.RapidSolidificationProcessing.(8 hours) Solid State Phase Transformations: Nucleation and growth Kinetics, homogeneous andheterogeneoustransformation,Precipitation:Coherency,agehardening,particleCoarsening.Ostwaldripening,Order-disordertransformation,spinodaldecomposition,massive transformations. (8hours) Solid State Phase Transformations in steel: Reconstructive and displacive transformations;Pearlitic transformation: mechanism and kinetics: Johnson-Mehl equation, morphology ofpearlite; Bainitic transformation: mechanism and kinetics; morphology of upper bainite andlowerbainite;Martensitictransformation:Mechanism-diffusionlessdisplacivenature; morphologyofhigh carbonand lowcarbon martensite. (8hours)

MMC403	Materials Characterization	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT)					

	and end assessment (EA))
MMC-302: Introduction to Metallurgy and Materials	CT+MT+EA
Course Outcomes	I. Learn fundamentals of X-ray diffraction, electron microscopy and other characterization techniques. II. Identify the crystal structure and index the diffraction patterns of different phases to meet contemporary needs (including tutorials). III. Learn different applications and developments in characterization techniques.
Topics Covered	**X-ray basics:** Production of X-ray; The continuous and characteristic spectrum; Absorption; Filters. 4h **Elementary Crystallography:** Overview the basics of crystallography; real and reciprocal lattice. 2h **X-ray diffraction:** Bragg's Law; Ewald sphere construction; Diffraction methods– Laue method, rotating crystal methods, powder methods; Diffractometers; diffraction under non ideal condition; 6h **Intensity of diffracted beams:** Structure factor calculations and other factors; Extinction rules; 4h **Application of X-ray diffraction:** Crystal structure determination; Precise lattice parameter measurements; Phase diagram determination, Chemical analysis by diffraction, residual stress determination, particle size determination. 10h **Electron microscopy:** elements of transmission electron microscopy; Sample preparation techniques for TEM, Image contrast in TEM: Identification of crystal defects and precipitates. Diffraction pattern analysis. 12h Advanced Materials Characterization: Thermal characterization of materials; Precipitation kinetics, Characterization through atomic force microscope. 6h
Text Books, and/or reference material	Text Books: 1. "Elements of X-Ray Diffraction", by B.D. Cullity, Addision Wesley Publishing Co., Massachusetts, 1968. 2. Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSC433	Data Structures	PCR	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous evaluation (CE) and end assessment (EA))
Introduction to computing which covers the following preliminary concepts: (a) Number Systems, different parts of a computer system, flowchart, Algorithm, (b) Time and Space Complexities of algorithm, high level programming (c) Language-C, etc.	CE+EA

Course Outcomes	1. Student will be able to choose appropriate data structure as applied to specified problem definition. 2. Student will be able to handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures. 3. Students will be able to implement the concepts learned in various domains like DBMS, compiler construction etc. 4. Students will be able to decide the applicability of the concepts of stacks, queues, linked list etc. in different types of applications.
Topics Covered	• Introduction: Algorithms versus Programming, Definition of Data Structures, Characteristics of algorithms, Abstract data types, Asymptotic notations, Computation of time complexity, Static and dynamic memory allocations. [6] • Arrays: Single and multi-dimensional arrays, Row and column major representation of matrices, sparse matrices [4] • Linked Lists: Linked list as ADT, Singly, doubly, and circular linked lists. Different operations on singly and doubly linked lists: insertion, deletion, searching and modification of a node. Array representation of linked lists. Applications: Operations on polynomials. [6] • Stacks: Stack as an ADT, Stack representations with array and linked lists, Operations on stacks: push AND pop, Applications of stacks: subroutine call, recursive function call, conversion of infix to postfix expressions, evaluation of postfix expression using stack, checking validity of a parenthesized expression. [5] • Queues: Queue as an ADT, Queue representations with array and linked lists, Queue operations: addqueue and dequeue, circular queue and its operations, concept of priority queues. [5] • Trees: Basic terminology, Binary tree and its implementation, Tree traversal techniques, threaded binary tree, Binary search tree and its operations. [6] • Searching: Sequential search, binary search.

	[2] • Sorting: Definition of sorting, internal and external sorts, Insertion Sort, Bubble Sort, Selection sort, Quick Sort, Merge Sort, Heap sort. [8]
Text Books, and/or reference material	Text Books: • Data Structures: A Pseudo code Approach with C, Richard F. Gilberg & Behrouz A. Forouzan, second edition, CENGAGE Learning. • Data Structures using C, Reema Thareja, Oxford University press. • Data Structure using C & C++, Angenstein & Tanenbaum, PHI. • An introduction to Data Structure, Trembly & Sorensen, MCHILL. • Data Structure & Algorithms, Aho, Hopcroft & Ullman, AddnWesley.

FIFTH SEMESTER

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MMC501	Manufacturing Processes	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
MMC-301: Metallurgical Thermodynamics and Kinetics	CT+EA

Course Outcomes	• To understand different Manufacturing Processes • Ability to design casting techniques and the basics of Welding Metallurgy • To have ability to have a practical concept of manufacturing objects.
Topics Covered	Introduction to casting as a shaping technique; Characteristic and effects of sand, binders and additives; Different types of Moulding and Machine moulding; Special casting techniques (12) Design of Gating and Risering of casting; Solidification (5) Melting furnace- cupola, rotary furnace, induction furnace; Defects in casting and their remedy; Metallurgy of cast iron, Aluminium and copper based alloy. (12) Joining: Physics of welding, Process of different welding, common welding processes of shielded metal arc welding, gas metal arc welding, gas tungsten arc welding and submerged arc welding; Welding metallurgy, problems associated with welding of steels and aluminium alloys, defects in welded joints. (14) Historical perspective of Powder Metallurgy; Reasons for using Powder Metallurgy; The Future of Powder Metallurgy; Powder Fabrication: Different powder fabrication techniques; Powder Characterization: Experimental methods for measuring particle size, shape, distribution, surface area; Significance of true, apparent and tap densities of powders; Flow rate of powders and its significance; compressibility and green strength; Powder Handling: Powder Packing; Mixing and Blending; Mixing with Binders and Lubricants; Powder Lubrication; Compaction: Phenomenology of Powder Compaction; Conventional Compaction; Fundamentals of Compaction; Influence of Material and Powder Characteristics; Sintering: Sintering fundamentals; Full Density Processing. (14)
Text Books, and/or reference material	Text Books: 1. O. P. Khanna: Foundry technology, 17th Edition, DhanpatRai Publications, 2011. 2. Rajender Singh: Introduction to Basic Manufacturing Processes & Workshop Technology, New Age International (P) Limited, Publishers, 2006. 3. R. A. Flinn: Fundamentals of Metal Casting, Addison-Wesley; Underlining edition, 4. Powder Metallurgy – AUpadhyaya and G S Upadhyaya. 5. Powder metallurgy: principles and applications- Fritz V. Lenel Reference Books: 1. P. L. Jain: Principles of Foundry Technology, 5th Edition, Tata Mcgraw Hill Education Private, 2009.

	2. M. C. Flemings: Solidification processing, McGraw-Hill, 1974. 3. Metals Handbook, Casting, vol. 15, 10th Edition, ASM International, Materials Park, Ohio, USA, 1998.

MMC 502	Heat Treatment of Materials	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Phase Transformation and Phase Equilibria (MMC 402)		CT+MT+EA					
Course Outcomes	• CO1: To learn the theory of heat treatment including the kinetic principles of solid state transformations. • CO2: To understanding of the role of heat treatment on the development of microstructure and properties of metallic materials. • CO3: The course will highlight a number of commercially-significant applications where heat treatment are important.						
Topics Covered	Objectives and Principles of heat treatment. [1 hour] Iron-Carbon Phase Equilibrium Diagram; Austenitisation, Transformation of austenite to pearlite, bainite and martensite; Characteristics of transformation products. [6 hours] T-T-T-and C-C-T diagrams; Factors affecting T-T-T curves. [6 hours] Heat treatment processes: Different types of annealing, spheroidizing, normalsing, hardening, tempering, patenting, austempering, martempering, Sub-zero treatment. [8 hours] Thermo mechanical treatment of Steels; Ausforming, Isoforming, Cryoforming, Heat removal mechanism, Hardenability of steels– Significance of hardenability, Determination of hardenability, Jominy End quench test, Factors influencing hardenability. [6 hours] Heat Treatment Defects, Residual stresses developed upon heat treatment [2 hours] Age Hardening: Basic requirements and steps, [1 hour] Heat treatment of non-ferrous metal and alloys -Aluminium alloys, Copper alloys, Magnesium alloys, Titanium alloys.							

	[6 hours] Practical considerations in heat treatment: Accessories, Cooling media, Types of furnace and Furnace atmosphere. [1 hour] Surface heat treatment – Carburizing of steels, Cyniding and Carbonitriding, Nitriding, Flame hardening, Induction hardening, Laser hardening etc. [6 hours]
Text Books, and/or reference material	**Suggested Text Books:** An Introduction to Physical Metallurgy – S. N. Avner, McGraw-Hill Book Company. ASM Metals Hand Book – Vol. IX, ASM International Materials Society. Principles of the Heat Treatment of Plain Carbon and Low Alloy Steels, Charlie R. Brooks, ASM international, 1996. **Suggested Reference Books:** Principles of Heat Treatment – R. C. Sharma, New Age International (P) Ltd. Heat Treatment of Metals – V. Singh (Standard Publication Distributors) New Delhi

MMC503	Fundamentals of Plastic Deformation & Strengthening of Materials	PCR	3	1	0	4	4
Pre-requisites			Course Assessment methods (Continuous (CT) and end assessment (EA))				
Nil			CT+EA				
Course Outcomes	CO1: To understand the fundamental concepts of plastic deformation of materials CO2: To know about various lattice defects and the roles played by these defects in plastic deformation and strengthening of materials CO3: To correlate the fundamentals ideas of deformation and strengthening with the observations in materials testing and mechanical processing						

Topics Covered	**Introduction and various types of plastic deformation:** Concept of stresses and strains, engineering stress and strain, true stress and strain, different types of loading for bulk deformation, slow strain rate deformation, evaluation of mechanical properties of materials by tensile and compression testing, stress-strain response of different materials - elastic region, yield point, plastic deformation, necking and fracture, effects of strain rate and temperature on stress-strain response of materials, superplastic behavior, evaluation of shear stress - shear strain curve from torsion testing, deformation and fracture of materials under impact loading, ductile to brittle transition, elementary concept of fatigue deformation and fracture, elementary concept of creep deformation and fracture, localized deformation at surface and indentation hardness, different methods of hardness measurement. [26 h] **Mechanisms of plastic deformation and strengthening:** Plastic deformation by slip, slip system, slip line, slip band, critical resolved shear stress (CRSS) of a material, theoretical shear strength, defects/imperfections in crystals, classification of defects, thermodynamics of defects, geometry of dislocations, Burgers vector, Burgers circuit, various types of dislocations, dislocation glide, Peierls stress, partial dislocations and stacking faults, cross slip, dislocation climb, intersection of dislocations, jogs and kinks in dislocation, force on a dislocation, line tension of a dislocation, dislocation generation - Frank-Read and grain boundary sources, stress and strain field around dislocations, strain energy of a dislocation, dislocation interactions, forces between dislocations, polygonization, dislocation movement and strain rate, deformation behavior of single crystals - flow curve and strain hardening/work hardening mechanisms of single crystals, deformation behavior of polycrystalline aggregates, plastic deformation by twinning, interaction between dislocations and interstitial atoms - yield point phenomena and strain ageing, dislocation phenomena involved in fatigue and fracture, Hall-Petch and other hardening mechanisms of polycrystalline aggregates, grain size effect, Hall-Petch breakdown, strengthening due to fine particles, fiber strengthening, solid solution strengthening, strengthening due to point defects, plastic deformation of two-phase aggregates, cold-worked structure of polycrystalline materials, annealing of cold-worked polycrystalline materials, Bauschinger effect, preferred orientation.[30 h]

SIXTH SEMESTER

Department of Humanities and Social Sciences							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
HSC631	Economics and Management Accountancy	PCR	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
NIL	CT+MT+EA

Course Outcomes

- Learners will be able to review basic economic principles.
- Learners will be introduced to the basic capital appraisal methods used for carrying out economic analysis of different alternatives of engineering projects or works.
- Learners will gain a good knowledge of financial accounting, enabling them prepare, analyse and interpret financial statements for taking informed decisions.

Topics Covered

PART 1: Economics

Group A: Microeconomics

Sl. No.	Name	L	T	P	Cr	H
Unit 1:	Economics: Basic Concepts	2	0	0	2	2
Unit 2:	Theory of Consumer Behaviour	3	0	0	3	3
Unit 3:	Theory of Production, Cost and Firms	3	0	0	3	3
Unit 4:	Analyses of Market Structures: Perfect Competition	3	0	0	3	3
Unit 5:	Monopoly Market	2	0	0	2	2
Unit 6:	General Equilibrium & Welfare Economics	2	0	0	2	2
	TOTAL	**15**	**0**	**0**	**15**	**15**

Sl. No.	Name	L	T	P	Cr	H
Unit 1:	Introduction to Macroeconomic Theory	2	0	0	2	2
Unit 2:	National Income Accounting	3	0	0	3	3
Unit 3:	Determination of Equilibrium Level of Income	4	0	0	4	4
Unit 4:	Money, Interest and Income	2	0	0	2	2
Unit 5:	Inflation and Unemployment	2	0	0	2	2
Unit 6:	Output, Price and Employment	2	0	0	2	2
	TOTAL	**15**	**0**	**0**	**15**	**15**

Group B: Macroeconomics

PART 2: Management Accountancy

Sl. No.	Name	L	T	P	Cr	H
Unit 1:	**Introduction to Accounting**: Accounting Environment of Business; Objectives of Accounting; Accounting Equations for Financial Statements. Books of Accounting: Journal, Ledger, Cash book.	3	0	0	3	3

	Unit 2:	**Financial Statement Preparation and Analysis:** Preparation of Trial Balance, Trading, Profit & Loss account and Balance Sheet. Case study discussion.	5	0	0	5	5
	Unit 3:	**Financial Ratio Analysis:** Common Size Statements; Computation of Financial Ratios; Interpretation and analysis of Financial Ratios with the help of case studies.	4	0	0	4	4
		TOTAL	**12**	**0**	**0**	**12**	**12**
Text Books, and/or reference material		**PART 1: Economics** **Group A: Microeconomics** 1. Koutsoyiannis: Modern Microeconomics 2. Maddala and Miller: Microeconomics 3. AnindyaSen: Microeconomics: Theory and Applications 4. Pindyck&Rubenfeld: Microeconomics **Group B: Microeconomics** 1. W. H. Branson: Macroeconomics – Theory and Policy (2nd ed) 2. N. G. Mankiw: Macroeconomics, Worth Publishers 3. Dornbush and Fisher: Macroeconomic Theory 4. Soumyen Sikder: Principles of Macroeconomics **PART 2: Management Accountancy** 1. Gupta, R. L. and Radhaswamy, M: Financial Accounting; S. Chand & Sons 2. Ashoke Banerjee: Financial Accounting; Excel Books 3. Maheshwari: Introduction to Accounting; Vikas Publishing 4. Shukla, MC, Grewal TS and Gupta, SC: Advanced Accounts; S. Chand & Co.

<tr><td colspan="2">MMC503: Fundamentals of Plastic Deformation & Strengthening of Materials</td><td>CT+EA</td></tr>
<tr><td>Course Outcomes</td><td colspan="2">CO1: To understand the mechanics of metal forming processes
CO2: To know about tools and techniques of different metal forming processes
CO3: To understand the parameters which are needed to be controlled for increasing quality and productivity of different metal forming operations</td></tr>
<tr><td>Topics Covered</td><td colspan="2">1) Introduction: Overview, objectives of mechanical working or plastic deformation of materials, classification of plastic deformation processes, mechanics of mechanical working of materials, influence of friction and lubrication in mechanical working processes, workability. [6h]
2) Theory of Elasticity: Description of stress and strain at a point within a loaded body, stress tensor, principal stresses under 3D state of stress, concept of Mohr's circle construction and its implications under 3D state of stress, hydrostatic and deviator components of stress, elastic stress - strain relations, strain energy. [10h]
3) Theory of Plasticity: Yielding criteria for ductile metals, yield locus, yield surface, plastic stress - strain relations, plane strain condition of plastic deformation, stress analysis under plane strain condition of plastic deformation using slip line - field theory. [10h]
4) Rolling: Classification of rolling processes, forces and geometrical relationships in rolling, angle of bite, neutral point, theories of cold rolling and hot rolling, calculation of rolling load, torque and horse power, maximum allowable back tension in cold rolling, variables controlling rolling process, common defects in rolled products and their remedies. [8h]
5) Forging: Classification of forging processes, open-die forging, closed-die forging, stress distribution in open-die forging, calculation of forging load, common forging defects. [6h]
6) Extrusion: Classification of extrusion processes, analysis of extrusion process, hot extrusion, cold extrusion, deformation, lubrication and defects in extrusion processes, hydrostatic extrusion, extrusion for producing tubes. [5h]
7) Drawing: Different types of drawing processes, analysis of wire drawing and tube drawing, limit of drawability, residual stresses in drawn products. [3h]
8) Sheet - Metal Forming: Various sheet-metal forming processes, stretch forming, deep drawing, limiting draw ratio, forming limit criteria, defects in sheet-formed products. [8h]</td></tr>

MMC-301: Thermodynamics &		CT+EA					

Kinetics of Engineering Materials	
Course Outcomes	• CO1: Apply thermodynamic knowledge to understand the fundamentals of Ferro alloys production and their use • CO2: Acquire the knowledge of reaction mechanism and the process technology of production of different ferro alloys • CO3: Learn to analyze the different design aspects of submerged arc furnace
Topics Covered	Background for ferroalloy development and it's need for steel industry. [5] Trend of growth, as commensurate with steel growth. [5] Popular categories and reactions/mechanisms involved. [6] Processing Technologies for Ferrochrome/Ferromanganese/Ferrosilicon, etc. [6] Furnace details in terms of design/operation. [6] Processing of raw materials /reduction/melting/refining/casting, etc. [6] Case studies. [6]
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. The Complete Book on Ferroalloys by B.P Bhardwaj, NIIR PROJECT CONSULTANCY SERVICES Publisher, 2014. 2. Production of ferroalloys: electrometallury, V. P. Elı͡u︡tin, State Scientific and Technical Pub. House for Literature on Ferrous and Nonferrous Metallurgy, 1957. <u>Suggested Reference Books</u>: 1. Production of ferroalloys, by M. Riss, Y. Khodorovsky, Mir Publishers, 1967. 2. Production of ferroalloys: electrometallurgy, by V.P. Elyutin, Israel Program for Scientific Translation, 1961.

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC302		CT+EA					
Course Outcomes	CO1: Describes generic classification of ceramics and their specific engineering applications. Emphasis is put on such engineering ceramics, which are traditionally and commercially important as well as new advanced ceramics. CO3: Learn various techno-economic aspects of ceramics						

	CO4: Learn structure-property relationships, and solve problems of fabrication of high performance ceramic parts
Topics Covered	**Introduction**: Knowledge of different ceramic materials [4 hours] **Structures of ceramics:** Atomic structure, crystal structures, oxide structure, silicate structure, other structures and polymorphism. [6 hours] **Structural imperfections:** Frankel defects, schottky defects, nonstoichiometry etc [4 hours] **Microstructure of ceramics:** Microstructure of different ceramic materials: Oxides, Carbides, Nitrides, Silicides, Borides, etc. Glass and Glass-ceramics [6 hours] **Properties of ceramics:** Physical, Mechanical, Electrical, Thermal and Magnetic properties of ceramics [6 hours] **Applications and processing of ceramics:** Glasses and glass ceramics, refractoties, and abrasives [6 hours] **Advanced and nanostructured ceramics:** Structure, properies and applications [4 hours] **Bioceramics:** Fundamentals of bioceramics and their applications [6 hours]
Text Books, and/or reference material	Text Books: 1. Yet-Ming Chiang, Dunbar P. Birnie, W. David Kingery: Physical Ceramics: Principles for Ceramic Science and Engineering, , John Wiley and Sons., 1996. Reference Books: 2. D.W. MME616	Solidification Phenomena	PER	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
MMC501: Manufacturing Processes	CT+MT+EA
Course Outcomes	• CO1: Understand solidification theories to industrial processes • CO2: Predict microstructures as a function of process parameters. • CO3: Understand solidification of alloys in different industrial conditions
Topics Covered	Properties of metals and alloys before and during solidification. Surface phenomena. (2) Basic terms: surface energy, surface tension, Wetting angle. Wetting speed.

	Classification and influence of wetting. (4) Rapid solidification processes (RSP). Classification of high cooling rates. Conventional and unconventional effects. (2) Under cooling and recalescence. Amorphous state. Glaze-ability. (1) Processing of alloys in the semi-solid state. Rheology. Newton's law of viscosity. Newtonian and non-Newtonian materials. (3) Distribution of non-Newtonian materials, physical models of materials and their rheograms. The apparent viscosity. Thixotropy.. Submersible rotational viscometry. (3) High-speed mixing. The intensity of the flow and its significance for the primary crystallization. The materials in the semi-solid state - SSM (Semi-Solid Metals). (2) Theories of solid solution morphology spheroidization. Types of alloys suitable for SSM. Case studies of selected castings. (4) Pressure solidification processes (PSP). Effect of pressure on the primary crystallization, change the thermo-physical properties, cooling rate and the force induced solidification flow. Alloys used in PSP. (3) Practical use of the rheological behavior of the alloys in the solidification processes and its importance. Case studies of selected castings. (4)
Text Books, and/or reference material	Suggested Text Books: 1. Principles of Solidification by Laurens Kagerman 2. Modelling the Flow and Solidification of Metals by T. A Smith 3. Physical Metallurgy- Principles and Practise by A Raghavan Suggested Reference Books: Kirkwood, D.H. – Suéry, M. – Kapranos, P. – Atkinson, H.V. – Young,K.P. Semi-solid processing of Alloys. Springer.

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
MMC501: Manufacturing Processes	CT + EA

Course Outcomes	CO1: Indicate which types of joining processes are suited for production. CO2: Determine various gas, arc, solid state, thermo chemical welding processes with their process parameters. CO3: Identify the various Weld Joints & Metallurgy
Topics Covered	Principles and theory, mechanism and key variables of different joining processes. (5) Soldering, brazing and welding processes types of tooling and equipment and consumables in welding. (6) Microstructures of fusion and HAZ: Carbon and alloy steels, corrosion resistance materials: stainless steels, aluminium alloys. Welding stresses. Heat flow in welding, chemical reactions in welding. Pre and post treatments advantages and disadvantages. (8) Weld joint consideration testing and inspection of weld joints. (6) Welding standard and specification. (5) Weldability field of application of the welding w.r.to gas welding, submerged arc welding, gas-tungsten arc welding, shielded metal arc welding, Plasma arc welding, flux core arc welding, electron beam welding, electro-slag welding, spot welding, laser welding, diffusion welding. (10)

Nil		EA
Course Outcomes	CO1: To know about the methods of rolling, forging under different conditions CO2: To learn the parameters needed to be controlled in rolling, forging processes CO3: To assess and understand the factors affecting the quality of the products	
Topics Covered	1. Hot rolling to produce round bars (merchant product) from square stock using grooved rolls and evaluating changes in microstructure and hardness 2. Cold rolling to produce sheet from plate using plain barreled rolls and evaluating changes in microstructure and hardness. Estimation of angle of contact, no-slip angle, forward slip, interfacial frictional coefficient, rolling load, rolling torque and horse power based on the process data 3. Open-die forging operation by hydraulic press and analysis of process data. Evaluation of hardness and microstructural changes of the forged product 4. Closed-die forging operation by hydraulic press and analysis of process data. Evaluation of hardness and microstructural changes of the forged product 5. Hot forging and cold forging of a given ductile (metallic) material and evaluation of hardness and microstructural variations 6. To study the effect of friction and lubrication in open-die cold forging operation

MMC-403: Materials Characterization		CT+EA					
Course Outcomes	I. Learn fundamentals and operational aspects of X-ray diffraction, electron microscopy and other characterization techniques. II. In-hand identification of the crystal structure and indexing of diffraction patterns of different phases to meet contemporary needs. III. Data analysis and report writing of various experiments.						

Topics Covered	**List of Experiments** 1.Indexing the X-ray diffraction (XRD) pattern of different phases. (a). Indexing the XRD pattern of BCC structure. (b) Indexing the XRD pattern of FCC structure. (c) Indexing the XRD pattern of HCP structure. (d) Indexing the XRD pattern containing a mixture of BCC and FCC phase. 2.Precise lattice parameter determination. 3.X-ray diffraction of powders to show the effect of powder size on peak broadening. 4.Microstructural and Fractographic study by SEM. 5.Indexing of SADP 6.Precipitation kinetics study of age hardenable Al alloy 7.Characterization through atomic force microscope

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC-302: Introduction to Metallurgy and Materials		CT+MT+EA					
Course Outcomes	I. Learn fundamental and detailed understanding of fatigue, creep and fracture (including fracture mechanics). II. Solve problems on fracture, fatigue life, creep and different design problems to meet contemporary needs (including tutorials). III. Learn different applications and developments in fatigue, creep and fracture.						
Topics Covered	**Fatigue:** Types of stress cycles, S-N diagram and endurance limit, Various failure relations, viz., Goodman, Soderberg, Gerber parabola; Fatigue crack nucleation and propagation; application of fracture mechanics for fatigue cracking cyclic stress strain curve; low cycle fatigue; effect of stress concentration on fatigue; size effect; surface effects; effect of metallurgical variables on fatigue; Increased fatigue life due to surface protection cumulative fatigue damage rule; concept reverse plastic zone; corrosion fatigue; fretting; high temperature fatigue. 14h **Creep:** Materials problem at high temperature; time dependant mechanical behavior; Creep curves, Stress rupture test; Creep mechanisms; Deformation mechanism map; Super plasticity; Creep resistant alloys; Presentation of engineering creep data; Prediction of long time properties; Creep-fatigue interaction. 7 h**Fracture:** Examples of fracture in real components; Different design philosophies; atomic view of fracture; stress concentration effects of flaws; 2 h **Linear elastic plastic fracture mechanics (LEFM):** Griffith's theory of brittle fracture; The energy release rate; R-curve; Different modes of loading; Stress analysis of cracks, crack tip plasticity; concepts of plane stress and plane strain. 10 h **Elastic plastic fracture mechanics:** CTOD, J integral, HRR singularity; 4 h Types of fracture in metals; microstructural aspects of fracture; Different toughening mechanisms; 2h **Fracture toughness testing of metals:** K_{1C}, CTOD and J_{1C}. 3h						
Text Books, and/or reference material	Text Books: 1. “Elements of X-Ray Diffraction”, by B.D. Cullity, Addision Wesley Publishing Co., Massachusetts, 1968. 2. “X-ray diffraction-a practical approach”, by C. Suryanarayana and M. Grant Norton, Springer, 1998.

CO3: To design materials for different applications</td></tr>
<tr><td>Topics Covered</td><td colspan="7">1. Introduction: Overview of different modeling approaches; aims and scopes; concept of multiscale modeling and simulation; significance of materials modeling and simulation.
[2 h]
2. DFT Modeling: Quantum Mechanics principles; Schrodinger's wave equation; waves and wave functions; solution of Schrodinger's wave equation; electron density; Hohenberg-Kohn theorems; Kohn-Sham approach; Kohn-Sham equations; exchange-correlation functionals; local density approximation; generalized gradient approximation; solution of Kohn-Sham equations; treating solids with pseudopotential approach; Bloch's theorem; plane wave expansions.
[12 h]
3. Atomistic Modeling: Classical Newtonian mechanics; overview of molecular dynamics (MD) simulation and its field of applicability; statistical mechanics principles; N-body problem; ensembles and ergodicity; interatomic potentials; initialization and thermal equilibration; boundary conditions; force calculation; potential energy cut-off and truncation schemes; integration algorithms with their relative merits and demerits; thermostatting; barostatting; evaluation of different physical, mechanical, structural,</td></tr>
</table>

	thermodynamic, and transport properties of materials using MD simulation technique; illustration of equilibrium MD and non-equilibrium MD techniques; MD exercises with LAMMPS; overview of probability theory based Monte Carlo (MC) simulation and its field of applicability; Metropolis algorithm; Kawasaki dynamics; kinetic Monte Carlo method; simulation of phase evolution and phase transformation using Monte Carlo method. [16 h] **4. Stochastic Simulation:** Overview; Brownian dynamics; modeling diffusion of a particle in a fluid medium. [4 h] **5. Continuum Modeling:** Overview; types; outline of continuum modeling using FEM technique; illustration of solving structural mechanics and heat transfer problems using FEM simulation. [5 h] **6. Multiscale Approaches:** Overview and examples; bridging the scale gaps between different simulation levels; simultaneous integration of models; sequential integration of models (hierarchical approach); illustration of coupled MD-MC model, coupled MD-FEM model, coupled MD-stochastic model. [5 h]

MME713	Fuel, Furnace and Refractories	PER	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC-301: Thermodynamics		CT+MT+EA					

& Kinetics of Engineering Materials	
Course Outcomes	• CO1: Understanding the Conventional and Non- Conventional energy sources • CO2: Understanding the property of Fuel and Refractories. • CO3 : Understanding the design of furnace with respect to usage of fuel and Refractories
Topics Covered	Definition, Comparative study of solid, liquid and gaseous fuels. Constitution, classification and grading of coal. (4) Testing of fuels like: Grindability, Caking properties, calorific value, Proximate and ultimate analysis, Flash and Fire point, viscosity. (6) Non-conventional Energy Resources like Nuclear fuel, Solar, Wind, Geo-thermal, Bio-mass, Hydrogen (2) Carbonization of coal: Coke making and by-products. (2) Producer gas, Water gas, Natural gas, LPG, Industrial Gases, Gobar Gas. Storage of fuels. (2) Combustion of fuels and problems (2) Definition and Classification of Furnaces, Batch furnaces, Continuous furnaces. (2) Construction and working of furnaces Pit furnace, Rotary furnace, Muffle furnace etc. (4) Evolution of heat and flame temperature. Available heat. Natural, forced, induced and balanced draft. Chimney height, (2) Heat losses in furnaces and minimization. Waste heat recovery. (2) Nature and Type and Properties of Refractories, Manufacture of Common Refractories (4) Furnace Design: Lay out of Refractories in a furnace. (2)
Text Books, and/or reference material	Suggested Text Books: 1. Elements of Fuels, Furnaces and Refractories, O. P. Gupta, Khanna publication. 2. Fuels, Furnaces and Refractories, J. D. Gilchrist 3. Fuels, Furnaces, Refractories and Pyrometry,-A.V.K. Suryanarayana, B. S. Publication Suggested Reference Books: Industrial Furnaces - Vol. I & II, W. Trinks and M. H. Mawhiney, Wiley

MME714	Powder Metallurgy	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC302		CT+EA					

Course Outcomes	CO1: Learn science and technological aspects of the Powder Metallurgy Techniques. CO2: The contemporary need can be met by the ability to analyze the industrial processes. CO3: Solve problems of near net shape fabrication of powder metallurgy parts and explore powder-processing-property relationship
Topics Covered	**Introduction:** Historical perspective of Powder Metallurgy; The Future of Powder Metallurgy. [4 hours] **Fabrication of Powders:** Basics methods, Mechanical fabrication techniques; Electrolytic fabrication techniques, Chemical fabrication techniques, Atomization techniques. Production of Ferrous powders [8 hours] **Powder Characterization:** Experimental methods for measuring particle size, shape, distribution, surface area; Significance of true, apparent and tap densities of powders;Flow rate; compressibility and green strength; Characteristics of common ferrous powders [6 hours] **Mixing and Blending:** Dry Mixing, wet mixing; Powder Lubrication [4 hours] **Compaction:** Injection Molding; Fundamentals of Compaction; Influence of Material and Powder Characteristics on compaction. [6 hours] **Sintering Behavior:** Sintering fundamentals; Sintering Theory; Mixed Powder Sintering; Liquid Phase Sintering; Sintering Atmosphere, Sintering Furnaces; Full Density Processing. [8 hours] **Finishing Operations:** Machining; Heat Treatments; Surface Treatments [4 hours] **Applications:** Competitive Processes; Examples of Powder Metallurgy Applications and Properties. [4 hours]
Text Books, and/or reference material	TEXT BOOKS: 1. Powder Metallurgy – A Upadhyaya and G S Upadhyaya. 2. Powder Metallurgy Science – R. M. German, 2nd Edition, MPIF, 1994 REFERENCE BOOKS: 1. Powder metallurgy: principles and applications, Fritz V. Lenel, Metal Powder Industries Federation, 1980 2. Powder Metallurgy Technology, Cambridge International Science Publishing, 2002

MME715	Secondary Steel Making	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT), and end assessment (EA))
Metallurgical Thermodynamics and Kinetics, Transport Phenomena in Metallurgical Process	CT+MT+EA

Course Outcomes	CO1: Learn fundamentals of physico-chemical principles of Secondary steel making. CO2: Apply laws of thermodynamics and kinetics for producing clean steel. CO3: Design process route for economical production of steel.
Topics Covered	A brief review of fluid flow, thermodynamics and primary steel making processes, composition of the crude steel, need for secondary refining, the objective of secondary steel making, physico-chemical principles of Secondary steel making, Slag basicity and capacities, secondary steel making equipment and processes, preheating and recycling of ladles. (8) Furnace tapping operations; Phenomena during furnace tapping; carry over slag and slag detection devices; slag making in ladles and de-oxidation: common de-oxidisers and requirement of de-oxidisers; addition methodology; melting and dissolution of deoxidisers; de-oxidation thermodynamics and kinetics; simple vs. complex de-oxidation; De-oxidation products; Elementary de-oxidation calculations. (5) Inert Gas Stirring in Ladles (objectives, Devices, gas flow regimes, stirring energy and stirring intensity); Temperature and Composition Control in Ladles (arcing, alloying addition, and aluminium wire feeding). (3) Degassing and Decarburization in liquid steel: Introduction, Principles and thermodynamics of reactions in vacuum degassing, equipment's and degassing Methods and their relative merits and demerits; slag eye area and re-oxidation, fluid flow and mixing in vacuum degassing, rates of vacuum degassing and decarburization, decarburization for Ultra-low carbon (ULC), stainless steel making. (8) Desulfurization in secondary steelmaking: Introduction, thermodynamics aspects, desulfurization with only top slag, injection metallurgy for Desulfurization. (3)

	Clean steel, Types of inclusions, Morphology, Properties of inclusions, Inclusion assessment, sources of inclusions, control of inclusions, Inclusion modification, Calcium Treatment (cored wire injection. objectives and devices reactions, calcium recovery and inclusion morphology and composition). (6) Teeming speed, Gas absorption during tapping and teeming form surrounding, Temperature changes of molten steel during secondary Steel making, phosphorus control in secondary steel making, Nitrogen control in steel making, application of Magnetohydrodynamics, Modeling of secondary steelmaking processes. (6)
Text Books, and/or reference material	Suggested Text Books: 9. Principles and Practices in Iron and Steelmaking – A. Ghosh, and A. Chatterjee. 10. Secondary Steelmaking – A. Ghosh Suggested Reference Books: 10. Making, Shaping and Treating of Steel (Steelmaking and Refining), 10th Edition, 1985, AISE, Pittsburgh

MME717	Corrosion Engineering	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
CYC-01: Engineering Chemistry		CT+EA					
Course Outcomes	CO1: To learn Fundamentals of Corrosion Engineering CO2: Techniques to acquaint with Actual Corrosion Testing CO3: To understand the Principles, Mechanism and Prevention of High Temperature Corrosion						
Topics Covered	Introduction: Definition of corrosion, Cost of Corrosion, corrosion damage, environments, and classification of corrosion. (1) Corrosion Principles: Electrochemical reactions, thermodynamics of corrosion, cell potential, emf and galvanic series, representation of cell / cell diagram, electrode kinetics, exchange current density, polarization - activation, concentration and combined, Pourbaix diagram, Evans diagram, Passivation. (11) Forms of Corrosion: Uniform attack; galvanic or two-metal corrosion; crevice corrosion; pitting corrosion; intergranular corrosion – sensitization and weld decay; Selective leaching - dezincification; erosion corrosion; Stress corrosion cracking (SCC) and hydrogen damage. Case studies of corrosion in industry e.g. steel, chemical, fertilizer and food etc. (11) Corrosion Prevention: Materials selection, alteration of environments, design, inhibitors, cathodic and anodic protection, coatings – electroplating. (5) Corrosion Testing: Purpose, standard expression of corrosion rate, polarization technique – Tafel extrapolation, linear polarization method, AC impedance method, evaluation of pitting damage, Huey and stretcher test for stainless steel, slow strain rate test (SSRT). Corrosion failure analysis. (5) High Temperature Corrosion: Introduction, oxidation, Pilling – Bedworth (PB) ratio, electrochemical and morphological aspects, oxidation kinetics, internal oxidation, corrosion in mixed environments, salt deposited hot corrosion, case studies for high temperature corrosion. (2)						

Text Books, and/or reference material	Text Books: 1. Corrosion Engineering – Mars G. Fontana, McGraw- Hill Publication, 1987. 2. The Fundamentals of corrosion – J. C. Scully Reference books: 1. An Introduction of Metallic Corrosion – R. Evans, Eward Arnold (Publishers) Ltd, London. 2. Introduction of High Temperature Corrosion – N. Birks and G. H. Meier

MME-718	Energy and environment in metallurgical industries	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MMC-301:Metallurgical Thermodynamics and Kinetics		CT+EA					
Course Outcomes	CO1: To give concept of effective utilization of energy in metallurgical processes. CO2: To provide knowledge regarding various pollutants and their methods of control in metallurgical industries. CO3: To learn the methods of minimization of energy requirements and prevention of energy loss CO4: To learn about the application of recycling methods of wastes materials generated in metallurgical industries						
Topics Covered	**UNIT I:** Energy: (14 hrs) Energy resources: non-renewable and renewable, Indian energy resources. Use of energy in metal production, process fuel equivalent. Conservation of energy in metallurgical industries with examples of aluminium, iron & steel making. Hydrogen energy: characteristics, production, storage and utilization in metal industries. **Biomass:** types of biomass, wood char as reductant in iron making.						

	UNIT II:(25 hrs) Environment: Sources and types of pollutants (wastes) from metal / minerals industries. Gaseous emissions: control of SPM, hazardous gases, viz. sulphur dioxide, fluorides, nitrogen oxides. Greenhouse gases: Greenhouse effect, global warming potential, Kyoto protocol, carbon trading. Emission and control from, iron & steelmaking and aluminium smelting. Liquid effluents: treatment of waste water, with examples from metal industries. Solid wastes: types, disposal and utilization of slime, red mud and spent pot lining, iron and steel slags. Impact of pollutants on human health, management of radioactive wastes,e-waste, noise pollution, thermal pollution.

MMC-503: Fundamentals of Plastic Deformation and Strengthening of materials	CT+EA
Course Outcomes	I. Learn fundamentals and operational aspects of wear, non-destructive and other testing techniques. II. In-hand interpretation of wear mechanisms and fractographs of different materials to meet contemporary needs. III. Data analysis and report writing of various experiments.
Topics Covered	**List of Experiments:** 1. Materials Characterization Using Non Destructive Testing (NDT) Methods: (a) Magnetic particle testing (b) Dye penetrant test. (c) Ultrasonic technique 2. Tribological study and worn surface characterisation of different materials using: (a) Pin-on-disk wear testing machine. (b) High stress abrasive wear testing machine. 3. Effect of strain rate on tensile behaviour and fracture surface of different materials 4 Determination of fracture toughness by indentation technique
Text Books, and/or reference material	Text Books: **1. Mechanical Metallurgy by George Dieter**

EIGHTH SEMESTER

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MME810	Nano Science and Technology	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MMC302: Introduction to Metallurgy and Materials		CT+EA					

Course Outcomes	CO1: To gain fundamental knowledge about the nanomaterials and their properties CO2: To learn about various techniques of the synthesis and characterization of nanomaterials CO3: To explore the various applications of nanomaterials
Topics Covered	1. Introduction: Basics of nano-scale, History of nano-technology, Uses of technology (natural and manufactures) in nano-scale, advantages and disadvantages. [6 h] 2. Nano-materails, Different types of nano-materails. Uses of current technology. [4 h] 3. Basics of mechanical, electrical, magnetic and optical properties of materials. Effect of miniaturization (nano-scale) on mechanical, electrical, magnetic and optical properties of materials. [12 h] 4. Synthesis of nano-materials (different synthesis routes: top down and bottom up approach), Characterization of nano-materials by different techniques. [12 h] 5. Application of nanomaterials, effect on daily life, environmental effects. [6 h]
Text Books, and/or reference material	Text Books: 1. Materials Science and Engineering: An Introduction - William D. Callister, Jr., John Wiley & Sons, Inc., 2007 2. Nanomaterials Nanotechnologies and Design – D.L. Schodek, P. Ferreira, M.F. Ashby, Butterworth-Heinemann, 2009 3. Introduction to Nanotechnology – C.P. Poole, F.J. Owens, Wiley Interscience, 2003

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
XEC01: Engineering Mechanics, MMC503: Fundamentals of Plastic Deformation and Strengthening of Materials	CT+EA

Course Outcomes	CO1: To understand the basics and methodologies for FEM modelling and simulation CO2: To explore materials mechanical behaviour under externally imposed variables CO3: To design materials for different structural applications
Topics Covered	1. **Introduction:** Overview of different continuum modelling techniques - finite element method (FEM) modelling and simulation - advantages and drawbacks of the method; types and applications of the method. [4 h] 2. **Basics of FEM modeling and simulation:** General steps; different approaches for deriving element properties: direct approach, variational approach, and Galerkin's method; types of elements and interpolation functions and their applicability; condensation and substructuring; continuity requirements; mesh refining; Gauss quadrature; FEM modelling for structural and thermal problems. [32 h] 3. **Applications:** Structural design; stress mapping; heat transfer; temperature mapping; FEM based design of composite materials; study of deformation of materials under different loading conditions. [10 h]
Text Books, and/or reference material	• The Finite Element Method for Engineers, 4th Edition: *Kenneth H. Huebner, Donald L. Dewhirst, Douglas E. Smith, and Ted G. Byrom,* Wiley, 2001 • An Introduction to the Finite Element Method, 3rd Edition: *J. N. Reddy,* Mcgraw Hill Series in Mechanical Engineering, 2005

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))

Transport Phenomena in Metallurgical Process	CT+MT+EA
Course Outcomes	CO1: Learn fundamentals of Modelling. CO2: Identify nature of engineering problems and solving by numerical methods CO3: Build physical and mathematical models to describe the complex physical phenomena pertaining to real world.
Topics Covered	Review of Fluid Flow, heat transfer and Mass transfer, Type of Models, Advantages of Mathematical Model, Types of Mathematical model, Method of prediction, Modeling vs. experimentation, nature of coordinates. (3) Classification of partial differential equations, Elliptic, Parabolic, and Hyperbolic Equations, Initial and Boundary Conditions, Initial Value and Boundary Value Problems, Substantial derivative, Concept of grid points, cell and mesh, methods of discretization, Types of cells and mesh, Basic approach in solving a problem. (4) Central, Forward, and Backward difference expressions for a uniform grid, Central difference expression for a nonuniform grid, Numerical errors, Accuracy of solution: optimum step size, grid Independence test. (3) Application heat of conduction and diffusion, one dimensional steady state problem, Method of solution: Gaussian elimination, Tri-diagonal matrix algorithm (TDMA), Gauss-Seidel iterative method, the concept of Relaxation factor, optimization of Relaxation factor, Two-dimensional steady state problem, Block iterative methods, There-dimensional steady state problem, Transient one dimensional problem, Euler method, Crank-Nicolson method, Pure Implicit method, Accuracy of Euler, Crank-Nicolson and Pure Implicit method, stability, Von Neumann stability analysis, Two-dimensional transient, Alternative Direction Implicit method, Problem in cylindrical and spherical geometry, Non-axissymmetric problem, Transient conduction in composite media, Treatment of non-linierities in conduction and diffusion, irregular geometry, Diffusive- convective system with Flow, Met lab codes. (22) Physical modeling: Introduction, dimensional analysis, similarity criteria, modeling of steel making processes. (4) Application related to metallurgical processes (3)
Text Books, and/or reference material	Suggested Text Books: 11. Finite difference Method in heat transfer- M. N. Ozisik 12. Computational Fluid dynamics and heat transfer – P.S. Ghoshdastidar 13. Modeling of Steelmaking Processes – D. Mazumdar and James W. Evans Suggested Reference Books: 11. Getting Started with MATLAB 7: A Quick Introduction for Scientists and Engineers– R. Pratap. 12. Numerical Methods for Engineers - D. Vaughan Griffiths and I.M. Smith.

Mapping of CO (Course Outcome) and PO (Programme Outcome)

<tr><td>Course Outcomes</td><td colspan="7">CO1: To acquire ideas of preparing raw materials as burden for different iron and steel making methods.
CO2: To learn about the different processing routes for raw materials preparation
CO3: To learn about the application of different testing methods of raw materials in context to iron and steel making</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Introduction: Need of Raw Material Preparation. [1hr]
Ore Preparation: Important minerals and their characteristics; Ore reserves in India and World; Techno - economic appraisal of ore- breaking, crushing and grinding techniques considering sizing operations. [8hrs]
Agglomeration: Purpose, technological appraisal of various methods with merits and demerits, bonding mechanism. [3hrs]
Sintering: Process, mechanism, factors affecting sinter quality, fluxed sinter, sinter mineralogy, sintering machine design, process control.[5hrs]
Pelletizing: Process, green ball formation and growth, additives and their effect, pellet drying and hardening (cold and hot), pelletizing machine types, design, pellet firing systems. [6hrs]
Briquetting and Nodulizing: Process, additives and hardening methods. Rotary hearth furnace, its operation, future prospective. Techno- economic evaluation of various iron ore feed materials. [4hrs]
Coal preparation: Coal washing purpose and methods, use of coal in iron and steel making [6hrs]
Coke quality: Stamp charging, coke quality affected by process parameters, coke testing, methods for reactivity, strength etc. [4hrs]
Industry status: Agglomeration scenario in India and world, coking coal in India and world, future prospects. [1hr]</td></tr>

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT.

6th Semester

	DEPARTMENT OF BIOTECHNOLOGY
BTE610	Animal Biotechnology
BTE611	Industrial Microbiology
BTE612	Nutraceutical and Nutrigenomics
BTE613	Human Genomics
BTE614	Molecular Virology
BTE615	Biometallurgy
BTE616	Nanobiotechnology
BTE617	Marine Biotechnology
BTE618	Folding, Misfolding and Diseases
BTE619	Engineering Resistance in Plants

7th Semester

	DEPARTMENT OF BIOTECHNOLOGY
BTE710	Molecular Plant Pathology
BTE711	Cancer Biology & Cell Signaling
BTE712	Food Biotechnology
BTE713	Biopharmaceutical Process Design
BTE714	Bioenergy
BTE715	Project Engineering for Biotechnology
BTE716	Structural Biology
BTE717	Environmental Biotechnology
BTE718	Proteomics and Protein Engineering
BTE719	Molecular Modelling & Drug Design
BTE720	Nanotherapeutics
BTE721	Biomaterials
BTE722	Vaccine Technology
BTE723	Stem Cell Biology
BTE724	Application of Molecular Cloning

8th / 9th Semester

	DEPARTMENT OF BIOTECHNOLOGY
BT9031	Human Molecular Genetics
BT9032	Cancer Biology
BT9033	Signal Transduction
BT9034	Molecular Cell Signalling
BT9035	Food Biotechnology
BT9036	Biopharmaceutical Technology
BT9037	Biomaterials
BT9038	Biomettalurgy
BT9039	BioEnergy
BT9040	Bioprocess & Plant design
BT9041	Advanced rDNA & Cellular Biotechnology
BT9042	Animal Biotechnology
BT9043	Immunotechnology
BT9044	Molecular Modelling & Drug Design
BT9045	Regenerative Medicine & Translational Research
BT9046	Microbial Biotechnology
BT9047	Environmental Biotechnology
BT9048	Protein structure, folding & misfolding
BT9049	Methods in Computational Biology

BT9050	Nanobiotechnology
BT9051	Plant Biotechnology
BT9052	Metabolic Engineering
BT9053	Nutraceuticals & Nutrigenomics
BT9054	Molecular Plant Pathogen Interactions
BT9055	Cell Biology of Human Diseases
BT9056	Infectious Diseases & Infection Control
BT9057	Project Engineering in Biotechnology
BT9058	Biological Computation
BT9059	Quality by design for Biopharmaceuticals
BT9060	Medical Biotechnology
BT9061	Biological Chemistry
BT9062	BioEntreuprenerurship

		TOTAL	13	4	14	24.0	31

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 01	MATHEMATICS - I	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Basic concepts of function, limit, differentiation, and integration.	CT+MT+EA

Course Outcomes	
	• CO1: To introduce the fundamentals of differential calculus of single and several variables • CO2: To develop the basic concepts of integral calculus including multiple integrals and its application in finding area, volume, centre of mass, centre of gravity etc. • CO3: To introduce the fundamental concepts of vector calculus • CO4: To develop the concept of convergence

Topics Covered	**Functions of Single Variable:** Rolle's Theorem and Lagrange's Mean Value Theorem (MVT), Cauchy's MVT, Taylor's and Maclaurin's series, Asymptotes & Curvature (Cartesian, Polar form). (8) **Functions of several variables:** Function of two variables, Limit, Continuity and Differentiability, Partial derivatives, Partial derivatives of implicit function, Homogeneous function, Euler's theorem and its converse, Exact differential, Jacobian, Taylor's & Maclaurin's series, Maxima and Minima, Necessary and sufficient condition for maxima and minima (no proof), Stationary points, Lagrange's method of multipliers. (10) **Sequences and Series:** Sequences, Limit of a Sequence and its properties, Series of positive terms, Necessary condition for convergence, Comparison test, D Alembert's ratio test, Cauchy's root test, Alternating series, Leibnitz's rule, Absolute and conditional convergence. (6) **Integral Calculus:** Mean value theorems of integral calculus, Improper integral and it classifications, Beta and Gamma functions, Area and length in Cartesian and polar co-ordinates, Volume and surface area of solids of revolution in Cartesian and polar forms. (12) **Multiple Integrals:** Double integrals, Evaluation of double integrals, Evaluation of triple integrals, change of order of integration, Change of variables, Area and volume by double integration, Volume as a triple integral. (10) **Vector Calculus:** Vector valued functions and its differentiability, Line integral, Surface integral, Volume integral, Gradient, Curl, Divergence, Green's theorem in the plane (including vector form), Stokes' theorem, Gauss's divergence theorem and their applications. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th ed., Wiley India Ed. (2010). 2. Daniel A. Murray, Differential, and Integral Calculus, Fb & c Limited, 2018. 3. Marsden, J. E; Tromba, A. J.; Weinstein: Basic Multivariable Calculus, Springer, 2014. **Reference Books:** 1. Tom Apostal, Calculus-Vol-I & II, Wiley Student Edition, 2011. 2. Thomas and Finny: Calculus and Analytic Geometry, 11th Ed., Addison Wesley.

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
PHC01	**Engineering Physics**	**PCR**	**2**	**1**	**0**	**3**	**3**
Pre-requisites:		Course Assessment methods: (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	CO1: To realize and apply the fundamental concepts of physics such as superposition principle, simple harmonic motion to real world problems. CO2: Learn about the quantum phenomenon of subatomic particles and its applications to the practical field. CO3: Gain an integrative overview and applications of fundamental optical phenomena such as interference, diffraction and polarization. CO4: Acquire basic knowledge related to the working mechanism of lasers and signal propagation through optical fibers.						
Topics Covered	**Harmonic Oscillations** - Linear superposition principle, Superposition of two perpendicular oscillations having same and different frequencies and phases, Free, Damped and forced vibrations, Equation of motion, Amplitude resonance, Velocity resonance, Quality factor, sharpness of resonance, etc. [8] **Wave Motion** - Wave equation, Longitudinal waves, Transverse waves, Electro-magnetic waves. [3] **Introductory Quantum Mechanics** - Inadequacy of classical mechanics, Blackbody radiation, Planck's quantum hypothesis, de Broglie's hypothesis, Heisenberg's uncertainty principle and applications, Schrodinger's wave equation and applications to simple problems: Particle in a one-dimensional box, Simple harmonic oscillator, Tunnelling effect. [8] **Interference & Diffraction** - Huygens' principle, Young's experiment, Superposition of waves, Conditions of sustained Interference, Concepts of coherent sources, Interference by division of wavefront, Interference by division of amplitude with examples, The Michelson interferometer and some problems; Fraunhofer diffraction, Single slit, Multiple slits, Resolving power of grating. [13] **Polarisation** - Polarisation, Qualitative discussion on Plane, Circularly and elliptically polarized light, Malus law, Brewster's law, Double refraction (birefringence) - Ordinary and extra-ordinary rays, Optic axis etc.; Polaroid, Nicol prism, Retardation plates and analysis of polarized lights. [5] **Laser and Optical Fiber** - Spontaneous and stimulated emission of radiation, Population inversion, Einstein's A & B co-efficient, Optical resonator and pumping methods, He-Ne laser. Optical Fibre– Core and cladding, Total internal reflection, Calculation of numerical aperture and acceptance angle, Applications. [5]						
Text Books, and/or	**TEXT BOOKS**: 1. The Physics of Vibrations and Waves, H. John Pain, Willy and Sons 2. A Text Book of Oscillations and Waves, M. Goswami and S. Sahoo, Scitech

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CYC 01	Engineering Chemistry	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	• CO1: Introduced to chemical thermodynamics, kinetics, electrochemistry, absorption, and catalytic processes for engineering applications • CO2: To learn fundamentals of polymer chemistry and petroleum engineering. • CO3: Introduced to basic spectroscopic techniques for structure determination and characterization. • CO4: To study few inorganic and bioinorganic compounds of industrial importance.						
Topics Covered	**ORGANIC CHEMISTRY** i. Fundamentals of organic reaction mechanisms; Few important reactions and their mechanism along with their applications; Robinson annulation, Hydroboration reaction, Organometallic reagents (Gilman reagents), Metathesis						

	using Grubb's catalyst and Wittig reaction. (3) ii. Fundamental concept on stereochemistry and application: Conformation and configuration of organic compounds, Diastereo-selective, enantio-selective, regio-selective, stereo-specific, and stereo-selective reactions. (3) iii. Polymer chemistry and polymer engineering: Fundamental concept on polymer chemistry; synthesis and application of important polymers, Rubber, and plastic materials. Conducting polymer. (2) iv. Petroleum Engineering and oil refinery: origin of mineral oils, separation principle and techniques of distillation of crude oil, Uses of different fractions, octane number, cetane number, Knocking, anti-knock compounds, and Bio-Fuel. (2) v. Structure elucidation of organic compounds by modern spectroscopic methods; Application of UV-Visible and FT-IR spectroscopy. (3) **INORGANIC CHEMISTRY** i. **Coordination Chemistry:** Crystal Field Theory of octahedral and tetrahedral complexes, colour and magnetic properties, Jahn-Teller distortion, pseudo Jahn-Teller distortion, Isomerism, and stereochemistry. (5) ii. **Bioinorganic Chemistry:** Heme and non-heme O_2 transport protein (Haemoglobin, Myoglobin), Chlorophyll and photosynthesis. (3) iii. **Inorganic Materials:** Introduction towards industrially important inorganic materials like cementing material, refractory material, fertiliser, inorganic polymer. (2) iv. **Organometallic Chemistry:** π-acid ligands, stabilization of metal low oxidation state and 18 electron rules, metal carbonyls and nitrosyls, metal-alkene complexes. (4) **PHYSICAL CHEMISTRY** i. **Thermodynamics:** 2nd law of thermodynamics, entropy, free energy, Gibbs Helmholtz equation, change of phase. Cryogenics: joule Thomson experiment. (4) ii. **Chemical Kinetics:** 2nd and 3rd order rate expression, Reversible reaction, Chain reaction, Consecutive reaction, Temp effect on reaction rate. (4) iii. **Electrochemistry:** Electrochemical cell, Effect of pH, precipitation, and complex formation on EMF of oxidation/reduction processes. (2) iv. **Absorption:** Physical and Chemical absorption, Absorption isotherms. (1) v. **Catalysis:** Types of catalysis, Rate expression for Catalysed reaction, Acid-base and Enzyme catalysis. (2)
Text Books, and/or reference material	<u>Suggested Text Books:</u> (i) Physical Chemistry by P. Atkins, Oxford (ii) A guidebook to mechanism in Organic chemistry: Peter Sykes; Pearson Edu. (iii) Inorganic Chemistry Part-I & II, R. L. Dutta, The new book stall <u>Suggested Reference Books:</u> **Organic Chemistry**: (i) Basic stereochemistry of organic molecules: S. Sengupta; Oxford University press (ii) Engineering Chemistry: Wiley (iii) Elementary Organic Spectroscopy: William Kemp, ELBS with Macmillan

	Inorganic Chemistry: (i) Inorganic Chemistry: Principle structure and reactivity, J. E. Huheey, E. A. Keiter and R. L. Keiter, Pearson Education (ii) Bioinorganic Chemistry -- Inorganic Elements in the Chemistry of Life: An Introductionand Guide, 2nd Edition, Wolfgang Kaim, Brigitte Schwederski, Axel Klein. (iii) Inorganic Chemistry Fourth Edition, Shriver & Atkins, Oxford **Physical Chemistry:** (i) Physical Chemistry by G.W Castellan (ii) Physical Chemistry by P. C. Rakshit

XEC01	**ENGINEERING MECHANICS**	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO1: Acquire knowledge of mechanics and ability to draw free body diagrams. • CO2: Apply knowledge of mechanics for solving special problems like truss and frame analysis. • CO3: Ability to calculate centroid, moments of inertia for various shapes. • CO4: Learn momentum and energy principles. • CO5: Knowledge on virtual Work Principle and its application						
Topics Covered	Engineering Mechanics; measurement and SI units. [1] Vectors and force as a vector; Resultant of a system of forces on a particle; free body diagram and conditions of equilibrium of a particle; problems on particles; equilibrium of particles in space. [2] Resultant of a system of forces and couples on a rigid body; conditions of equilibrium of a rigid body; free body diagrams of rigid bodies subjected to different types of constraints; simple space problems of rigid bodies. [4] Coefficients of static and kinetic friction; problems involving friction; theories of friction on square threaded power screw and flat belt. [5]						

	Simple trusses; analysis of trusses by method of joints and method of sections. [5] Centre of gravity and centre of mass; centroids of lines, curves and areas; first moment of area; second moment of area; polar moment of inertia; radius of gyration of an area; parallel axis theorem; mass moment of inertia. [4] Path, velocity, acceleration; rectilinear and curvilinear motion; motion of system of particles; introduction to the concept of plane kinematics of rigid bodies. [6] Newton's second law of motion; dynamic equilibrium and D'Alembert's principle; linear momentum; angular momentum; rectilinear and curvilinear motion; principles of work–energy and impulse–momentum; impact of system of particles; introduction to the concept of plane kinetics of rigid bodies. [12] Principle of Virtual Work, Solution of Problems on Mechanics using Principle of Virtual Work [3]

		CT+MT+EA					
Course Outcomes	• CO1: Understand the importance of environment and ecosystem. • CO2: Understand the fundamental aspect of pollutant tracking and its						

	implementation in natural and anthropogenic pollution of air and water system. • CO3: Understand the scientific basis of local and as well as global issues. • CO4: Apply of knowledge to develop sustainable solution.
Topics Covered	**Introduction:** Multidisciplinary nature of Environmental Studies; Basic issues in Environmental Studies. [2] Human population and the Environment. [1] Social issues and the Environment. [1] **Constituents of our Environment & the Natural Resources:** Atmosphere– its layers, their characters; Global warming, Ozone depletion, Acid rain, etc. [5] Hydrosphere - Its constituents, Oceans, Groundwater, Surface waters; Hydrological cycle. [4] Lithosphere - constituents of lithosphere; Rock and Mineral resources; Plate Tectonic Concept and its importance. [5] Biosphere– its components; Ecosystems and Ecology; Biodiversity; Biomes. [5] Natural disaster and their management – Earthquakes, Floods, Landslides, Cyclones. [3] **Pollution:** Pollutants and their role in air and water pollution. [2]

NIL		CT+EA					

Course Outcomes	• CO1: Ability of mental visualization of different objects • CO2: Theoretical knowledge of orthographic projection to solve problems on one/two/three dimensional objects • CO3: Able to read/interpret industrial drawing and to communicate with relevant people
Topics Covered	Graphics as language of communication; technical drawing tools and their up-keep; types of lines; construction of geometrical figures; lettering and dimensioning. [6] Construction and use of scales; construction of curves of engineering importance such as curves of conic section; spirals, cycloids, involutes and different loci of points; use of equations for drawing some curves. [9] Descriptive geometry: necessity and importance of orthographic projection; horizontal and vertical reference planes; coordinate of points; orthographic projection of points and lines situated in different quadrants, viz. 1st, 2nd, 3rd and 4th quadrants; traces of lines. First angle and third angle projection of lines and planes; views from top, front and left (or right); true length and true inclination of lines with planes of projections; primary auxiliary projection of points, lines and planes; auxiliary plan and auxiliary elevation. [9] Projection of simple regular solids, viz. prisms, cubes, cylinders, pyramids, cones, tetrahedrons, spheres, hemi-spheres etc. [6] Section of solids; section by perpendicular planes; sectional views; true shapes of sections. [6] Dimensional techniques; international and national standards (ISO and BIS). [3] Freehand graphics. [3]

Course Outcomes	CO1: To realize and apply different techniques for measuring refractive indices of different materials. CO2: To realize different types of waveforms in electrical signals using CRO. CO3: To understand charging and discharging mechanism of a capacitor. CO4: To understand interference, diffraction and polarization related optical phenomena. CO5: To acquire basic knowledge of light propagation through fibers.
Topics Covered	1. Find the refractive index of a liquid by a travelling microscope. 2. Determine the refractive index of the material of prism using spectrometer. 3. Determination of amplitude and frequency of electrical signals by oscilloscope. 4. To study the characteristics of RC circuits. 5. To study Brewster's law/Malus' law using laser light. 6. To study the diffraction of light by a grating. 7. To study the interference of light by Newton's ring apparatus. 8. To determine numerical aperture of optical fiber. 9. Determination of Planck constant.
Text and/or reference material	**SUGGESTED BOOKS**: 1) A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

Course Outcomes	• CO1: To learn basic analytical techniques useful for engg applications. • CO2: Synthesis and characterization methods of few organic, inorganic and polymer compounds of industrial importance. • CO3: Learn chromatographic separation methods. • CO4: Applications of spectroscopic measurements.						

Topics Covered	i. Experiments based on pH metry: Determination of dissociation constant of we acids by pH meter. ii. Experiments based on conductivity measurement: Determination of amou of HCl by conductometric titration with NaOH. iii. Estimation of metal ion: Estimation of Fe^{2+} by permangnomentry iv. Estimation of metal ion: Determ. of total hardness of water by EDTA titration. v. Synthesis and characterization of inorganic complexes: e. g. $Mn(acac)_3$, Fe(acac cis-bis(glycinato)copper (II) monohydrate and their characterization by m. p FTIR etc. vi. Synthesis and charact. of organic compounds: e.g.Dibenzylideneacetone. vii. Synthesis of polymer: polymethylmethacrylate viii. Verification of Beer-Lamberts law and determination of amount of iron prese in a supplied solution. ix. Chromatography: Separation of two amino acids by paper chromatography x. Determination of saponification value of fat/ vegetable oil
	Suggested Text Books: 1. Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall 2. Advanced Physical Chemistry Experiments: By Gurtu&Gurtu 3. Comprehensive Practical Organic Chemistry: Qualitative Analysis By V. K. Ahluwalia and S. Dhingra Suggested Reference Books: 1. Practical Chemistry By R.C. Bhattacharya 2. Selected experiments in Physical Chemistry By N. G. Mukherjee

NIL		CT+EA					
Course Outcomes	• CO1: Study and practice on machine tools and their operations • CO2: Practice on manufacturing of components using workshop trades						

	including fitting, carpentry, foundry and welding • CO3: Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping • CO4: Develop basic electrical engineering knowledge for house wiring practice
Topics Covered	**M/c shop & Carpentry shop -- 3X3= 9hrs.** • Introduction on machining process. • Introduction to machine tools- Lathe, Shaper, Milling and Drill machine. • Introduction to woods- Types, structure, disease and defect of wood. • Introduction to wood working machines and tools. • Making of dovetail joint and bridle joint. **Welding Shop & Sheet metal -- 3X3= 9hrs.** • Introduction to welding.Safety and precautions in welding. • Formation of weld bead by SMAW on mild steel flat. • Formation of weld bead by oxy-fuel welding on mild steel flat. • Introduction to sheet Metal works. • Tools and Machines used in sheet metal works. • Concept of development, marking out of metal sheets. • Cutting and joining of metal sheets. • Safety precautions, General warning needed in the shop floor. **Black smithy & Foundry -- 3X3= 9hrs.** • Introduction Smithing and Forging- Tools, Machines, Furnaces and its accessories, fuels. • Safety and precautions in blacksmithy. • Making of bars of different cross-sections. • Making of hexagonal headed bolts. • Forge welding. • Introduction to Foundry Technology. • Preparation of sand mould using Solid/Split Pattern. **Fitting & Electrical shop -- 3X3= 9hrs.** • Introduction to hand metal cutting tools with specifications, nomenclature and their use. • Marking tools, measuring tools and their use. • Fitting of joints of mild steel flats. • Introduction to electrical hazards and safety precaution. • Wire jointing and soldering. • PVC Conduit Wiring controlled by separate single way switches. • PVC Cashing Capping Wiring for two-way switches. • Conduit wiring for the connection of a Calling Bell with In& Out Indicators. • Batten Wiring and Cleat Wiring. • Tube Light Connection. • Insulation Resistance Testing of 1ph / 3ph Motor and House Wiring. • Earth Resistance Testing.

	• DOL Starter Connection. **Viva voce -- 1X3= 3hrs.**
Text Books, and/or reference material	1. Workshop Technology Part I and Part II by W. A. J. Chapman 2. Elements of Workshop Technology S. K. Hazra Chowdhury, A. K. Hazra Chowdhury and Nirjhar Roy 3. Mechanical Workshop Practice by K. C. John

Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service
Topics Covered	**YOGA** • Introduction of Yoga. • Sitting Posture/Asanas- Padmasana, Vajrasana, Ardhakurmasana, Ustrasana, Bakrasana, Sasankasana, Janusirshasana, Suryanamaskar. • Mudra- Gyana mudra, Chin mudra, Shuni mudra, Prana mudra, Adi mudra, Anjali mudra. • Laying Posture/Asanas- PavanaMuktasana, UttanaPadasana, Sarpasana, Bhujangasana (Cobra Pose), Eka Pada Śalabhāsana, Dhanurasana, Chakrasana, Viparitkarani. • Meditation- Yognidra, Om chant, Pray chant. • Standing Posture/Asanas- Tadasana (Mountain Pose), Vrikshasana (Tree

	Pose), Ardhachandrasana, Trikonasana, Utkatasana, Padahastasana. • Pranayama- Deep breathing, AnulomVilom, Suryabhedi, Chandrabhedi. • Kriya- Kapalbhati, Trataka. **ATHLETICS** • Introduction of Athletic. • Starting Technique for Track events- Standing start, Crouch & Block start. • Finishing Techniques. • Relay Race- 4×100m, 4×400m & Baton Exchange Technique & Rules. • Track Marking with Fundamentals- 200m, 400m and Diagonal Distance Radius, Straight Distance, Staggers of Different Lanes & Curve Distance. **BASKETBALL** • Introduction and Players stance and ball handling. • Passing- Two hand chest pass, two hand bounce pass, One hand baseball pass, Side arm pass, Overhead pass, Hook pass. • Receiving- Two hand receiving, one hand receiving, receiving in stationary position, Receiving while jumping and Receiving while running. • Dribbling- Dribble, High dribble, Low dribble, Reverse dribble, Rolling dribble. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Introduction of Volleyball • Service- Underarm service, Sidearm service, Tennis service, Floating service, Jump service. • Pass: Underarm pass- Ready position, Teaching stage of underarm pass and Upper hand pass- Volley pass, Back pass, Short set, Jump set & Underarm set. • Rules and their interpretation. **FOOTBALL** • Introduction of Football • Push pass- Instep inside, Instep outer side. • Kicking- Spot kick, Instep kick, Lofted kick. • Dribbling- One leg, Both legs, Instep. • Trapping- Rolling ball sole trapping, High ball sole trapping, High ball chest trapping, High ball thigh trapping. • Throwing- Standing throw, Running throw, Seating throw. • Goal Keeping- Griping the ball, Full volley, Half volley, Drop Kick. • Rules and their interpretation. **CRICKET** • Introduction of Cricket • Batting gripping & Stance, Bowling gripping technique. • Batting front foot defense& Drive. • Batting Back foot defense& Drive.

	• Batting Square cut. • Bowling medium pace, Bowling off break. • Fielding drill, Catching (Short & High). • Rules & Regulation. **BADMINTON** • Basic introduction about Badminton and Badminton court. • Racket parts, Racket Grip, Shuttle Grip. • Basic stance, Basic Footwork, Shadow practice (Full court movement). • Strokes services: Forehand- Overhead & Underarm, Backhand- Overhead & Underarm. • Match practice (Single & Double). • Rules & Regulation. **TABLE TENNIS** • Introduction of Table Tennis. • Basic Stance and Grip (Shake hand & Pen hold). • Service Basic. • Stroke: Backhand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Stroke: Forehand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-1 General Introduction and words of command. • FD-2 Attention, Stand at ease and Stand easy, Turning and inclining at the halt. • FD-3 Sizing, Forming up in three Ranks Numbering, Open and Close order March and Dressing. • FD-4 Saluting at the halt, Getting on parade, Dismissing and falling out. • FD-5 Marching, Length of pace and Time of Marching in quick time and Halt, Slow March and Halt. • FD-7 Turning on the March and Wheeling. • FD-12 Parade practice. **TAEKWONDO** • Introduction about Taekwondo- Meaning of Taekwondo, Korean language of dress, Fighting area, Punch, Block, Kicks etc. • Stance- Ready stance, Walking stance, Fighting stance, Front stance, Back stance, Cat stance etc. • Punch Technique- Front fist punch, Rear fist punch, Double fist punch, With stance etc. Blocks- Upper blocks, Middle block, Side block, Suto etc. • Foot Technique (Balgisul)- Standing kick (Saseochagi), Front kick (Abchagi), Doliyo (Chagi), Abdalchagi (Butterfly kick), Back kick etc. **NSS**

	• Swachha Bharat Mission • Free Medical Camp • Sanitation drive in and around the campus. • Unnat Bharat Abhiyaan • MatribhashaSaptah celebration

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 02	MATHEMATICS - II	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic concepts of set theory, differential equations, and probability.		CT+MT+EA					
Course Outcomes	• CO1: Develop the concept of basic linear algebra and matrix equations so as to apply mathematical methods involving arithmetic, algebra, geometry to solve problems. • CO2: To acquire the basic concepts required to understand, construct, solve and interpret differential equations. • CO3: Develop the concepts of Laplace transformation & Fourier transformation with its property to solve ordinary differential equations with given boundary conditions which are helpful in all engineering & research work. • CO4: To grasp the basic concepts of probability theory.						

Topics Covered	**Elementary algebraic structures:** Group, subgroup, ring, subring, integral domain, and field. (5) **Linear Algebra:** Vector space, Subspaces, Linear dependence and independence of vectors, Linear span, Basis and dimension of a vector space. Rank of a matrix, Elementary transformations, Matrix inversion, Solution of system of Linear equations, Eigen values and Eigen vectors, Cayley-Hamilton Theorem, Diagonalization of matrices. (15) **Ordinary Differential Equations:** Existence and uniqueness of solutions of ODE (Statement Only), Equations of first order but higher degree, Clairaut's equation, Second order differential equations, Linear dependence of solutions, Wronskian determinant, Method of variation of parameters, Solution of simultaneous equations. (12) **Fourier series:** Basic properties, Dirichlet conditions, Sine series, Cosine series, Convergence. (4)
	Laplace and Fourier Transforms: Laplace transforms, Inverse Laplace transforms, Convolution theorem, Applications to Ordinary differential equations. Fourier transforms, Inverse Fourier transform, Fourier sine and cosine transforms and their inversion, Properties of Fourier transforms, Convolution. (10) **Probability:** Historical development of the subject and basic concepts, Axiomatic definition of probability, Examples to calculate probability, Random numbers. Random variables and probability distributions, Binomial distribution, Normal distribution. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10thed, Wiley India Ed. (2010). 2. Gilbert Strang, Linear algebra and its applications (4th Ed), Thomson (2006). 3. Shepley L. Ross, Differential Equations, 3rd Edition, Wiley Student Ed (2017). **Reference Books:** 1. S. Kumaresan, Linear algebra - A Geometric approach, PHI (2000). 2. C. Grinstead, J. L. Snell, Introduction to Probability, American Math. Society.

			Lecture	Tutorial	Practical	Total	

		Electives (PEL)	(L)	(T)	(P)	Hours	
CSC01	**INTRODUCTION TO COMPUTING**	PCR	2	1	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Basic knowledge of computer.	CT+MT+EA
Course Outcomes	CO1: Recognize the changes in hardware and software technologies with respect to the evolution of computers and describe the function of system software's (operating Systems) and application software's, languages, number system, logic gates. CO2: Illustrate the flowchart and inscribe an algorithm for a given problem Inscribe C programs using operators. CO3: Develop conditional and iterative statements to write C programs. CO4: Exercise user defined functions to solve real time problems CO5: Inscribe C programs that use Pointers to access arrays, strings and functions. CO6: Exercise user defined data types including structures and unions to solve problems.
Topics Covered	Fundamentals of Computer: History of Computer, Generation of Computer, Classification of Computers 2L Basic Anatomy of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices. [2] Languages: Assembly language, high level language, compiler, and assembler (basic concepts) [1] Binary & Allied number systems representation of signed and unsigned numbers. BCD, ASII. Binary Arithmetic & logic gates. [2] Basic concepts of operating systems like MS DOS, MS WINDOW, UNIX, Algorithm & flow chart. [1] C Fundamentals: The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements. [2] Operators & Expressions: Arithmetic operators, relational and logical operators, type, conversion, increment and decrement operators, bit wise operators, assignment operators and expressions, precedence, and order of evaluation. Input and Output: Standard input and output, formatted output -- printf, formatted input scanf. [8] Flow of Control: Statement and blocks, if - else, switch, loops - while, for do while, break and continue, go to and labels. [5] Fundamentals and Program Structures: Basic of functions, function types, functions returning values, functions not returning values, auto, external, static and register Variables, scope rules, recursion, function prototypes, C pre-processor, command line arguments. [5] Arrays and Pointers: One-dimensional, two-dimensional arrays, pointers and functions, multi-dimensional arrays. [10] Structures Union and File: Structure, union, structures and functions, arrays of structures, file read, file write.[5]

Text Books, and/or reference material	Text Books: 1. Let us C by Kanetkar 2. C Programming by Gottfried 3. Introduction to Computing by Balaguruswamy 4. The C-programming language by Dennis Ritchie Reference Books: 1. Computer fundamental and programming in C by P Dey and M. Ghosh 2. Computer fundamental and programming in C by Reema Thareja 3. programming with C by Schaum Series

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECC01	**Basic Electronics**	PCR	2	1	0	3	3
Pre-requisites			Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))				
(10+2) level mathematics and physics			CT+MT+EA				
Course Outcomes	• CO1: Knowledge of Semiconductor physics and devices. • CO2: Have an in depth understanding of basic electronic circuit, construction, operation. • CO3: Ability to make proper designs using these circuit elements for different applications. • CO4: Learn to analyze the circuits and to find out relation between input and output.						
Topics Covered	1. **Semiconductors** 1.1. Concept of band formation in solids; Fermi-Dirac distribution function, concept of Fermi level, invariance of Fermi level in a system under thermal equilibrium						

	1.2. Definitions of insulator, conductor and semiconductor using band diagram 1.3. Crystalline structure of semiconductor 1.3.1. Covalent bond 1.3.2. Generation of holes and electrons 1.3.3. Effect of temperature on semiconductor 1.4 Intrinsic semiconductor 1.5 Doping and Extrinsic semiconductor 1.5.1 n-Type semiconductor and band diagram 1.5.2 p-Type semiconductor and band diagram 1.5.3 Mass-action law of semiconductor 1.6. Conductivity of semiconductor (including mathematical expression) 1.7 Carrier transport phenomenon. (03 hrs.) 2. **Diodes** 2.1. Construction 2.2. Unbiased diode; Depletion layer and Barrier potential; junction capacitance (expression only) 2.3. Principle of operation with forward biasing and reverse biasing 2.4. Characteristics 2.5 Diode's three models/equivalent circuits.(02 hrs.) 3.**Diode Circuits** 3.1 Diode rectifier 3.1.1 Half wave rectifier 3.1.2 Full wave rectifier:centre tap and bridge rectifier 3.1.3 Capacitive filter and DC power supply (Numerical problems) 3.2 Special Diodes 3.2.1 Zenerdiode: Avalanche breakdown and Zener breakdown and characteristics. 3.2.2 Zener diode as a voltage regulator 3.2.3 Displaydevices: LED and LCD. (03 hrs.) 4.**Bipolar Junction Transistor (BJT)** 4.1 n-p-n and p-n-p transistor and their constructions 4.2 Principle of operation 4.3 Transistor configuration: common base, common emitter, and common collector 4.4 Transistor characteristics: input and output characteristics of CB and CE configurations 4.5 DC load line: quiescent (Q) point; cut-off, active, and saturation region 4.6 Amplifier: Principle of operation 4.7 Transistor as a switch. (04 hrs.) 5.**Transistor Biasing** 5.1 Need of biasing 5.2 Methods of biasing: base resistor or fixed bias, emitter feedback, voltage divider biasing 5.3 Stability of Q-point (qualitative discussions) 5.4 (Numerical problems). (02 hrs.) 6.**Single Stage Amplifier:**

	classification of amplifiers (voltage amplifier, current amplifier, power amplifier etc.) Class-A CE Amplifier with coupling and bypass capacitors, Qualitative discussions of magnitude characteristics of frequency response (graph only) (02 hrs.) 7.**Feedback Amplifier** 7.1 Positive and negative feedback 7.2 Deduction of gain with negative feedback, explanation of stability of gain with negative feedback, other effects of negative feedback (no deduction), numerical problems. (03 hrs.) 8.**Other Semiconductor Devices** 8.1 JFET: Construction, principle of operation, characteristics 8.2 MOSFET: Construction, principle of operation, characteristics 8.3 Power Electronic Device-SCR: Brief discussions. (02 hrs.) 9.**Operational Amplifier** 9.1 Characteristics of ideal operational amplifier 9.2 Pin Configuration of IC 741, 9.3 Analysis of simple operational amplifier circuits: concept of virtual ground; noninverting amplifier and inverting amplifier. 9.4 Applications: voltage follower, summer, differentiator, integrator, and comparator (04 hrs) 10.**Oscillator** 10.1 Positive feedback and condition of oscillation 10.2 R-C phase-shift oscillator, Wien bridge oscillator.(02 hrs.) 11.**Boolean Algebra** 11.1 Boolean algebra, De Morgan's theorem, simplification of Boolean expressions 11.2 Number system, range extension of numbers, overflow 11.3 Different codes: gray code, ASCII code and BCD codes and them Applications. (01 hrs.) 12. **Logic Gates** 12.1 NOT, OR, AND, NOR, NAND, EX-OR, EX-NOR gates 12.2 Simplification of logic functions 12.3 Realizations of logic expressions using logic gates. (01 hrs.) 13. CRO and its applications and other test and measurement instruments. (01 hrs.)
Text Books, and/or reference material	<u>Text Books</u>: 1. Introduction Electronic Devices & Circuit Theory,11/e, 2012, Pearson: Boylestad & Nashelsky 2. Electronic Principles, by Albert Paul MalvinoDr. and David J. Bates, 7/e. <u>Reference Books</u>: 1. Integrated Electronics by Millman, Halkias and Parikh, 2/e, McGrawHill. 2. • CO1: learn the fundamentals of Electric Circuits and Network theorems and analysis of electrical network based on these concepts.
• CO2: develop an idea on Magnetic circuits, Electromagnetism and learning the working principles of some fundamental electrical equipment's
• CO3: learn about single phase and poly-phase AC circuits and analysis of such circuits based on these concepts.
• CO4: introduce the basic concept of single-phase transformer.
• CO5: analyze the transient phenomena in electrical circuits with DC</td></tr>
</table>

Topics Covered	Introduction: Overview of Electrical power generation systems (2) Fundamentals of Electric Circuits: Ohm's laws, Kirchhoff's laws, Independent and Dependent sources, Analysis of simple circuits. (4) Network theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem (4) Magnetic circuits: Review of fundamental laws of electromagnetic induction, transformer and rotational emfs, Solution of magnetic circuits. Analysis of coupled circuits (self-inductance, mutual inductance, and dot convention)(8) Transients with D.C. excitation for R-L and R-C circuits. (3) Generation of alternating voltage and current, E.M.F. equation, Average and R.M.S. value, Phase and phase difference, Phasor representation of alternating quantity, Behavior of A.C. circuits, Resonance in series and parallel R-L-C circuits. AC Network: Superposition theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem, solution of networks with AC sources. (10) Single-Phase Transformer, equivalent circuits, open circuit and short circuit tests (6) Poly-phase system, Advantages of 3-phase system, Generation of 3-phase voltages, Voltage, current and power in a star and delta connected systems, 3-phase balanced and unbalanced circuits, Power measurement in 3-phase circuits. CURRICULUM AND SYLLABUS FOR DUAL DEGREE PROGRAM IN BIOTECHNOLOGY

Course Outcomes	CO1: Basic understanding of basic cellular organization of organisms and cellular communications, structure and functions of the macromolecules and their biosynthesis and cata--bolism. CO2: To give an understanding of the key features of the structure, growth, physiology and behavior of bacteria, viruses, fungi and protozoa CO3: To introduce molecular biology to understand biological processes in various applications. CO4: To provide a foundation in immunological processes and an overview of the interaction between the immune system and pathogens. CO5: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them CO6: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them
Topics Covered	**1. Cell Biology (4)** a) Introduction to life science: prokaryotes & eukaryotes Definition; Difference b) Introduction to cells - Define cell, different types of cell c) Cellular organelles - All organelles and functions in brief d) Cellular communications Introduction to basic signaling; endocrine, paracrine signaling; concepts of receptor, ligand, on-off switch by phosphorylation/dephosphorylation **2. Biochemistry (4)** a) Biological function of carbohydrate and lipid - Introduction, structure and function b) Biological function of nucleic acids and protein - structure and function c) Catabolic pathways of Macromolecules - Introduction to catabolism, hydrolysis and condensation reactions; Catabolism of glucose- Glycolysis, TCA; overall degradation of proteins and lipids d) Biosynthesis of Macromolecules Generation of ATP (ETS), Generation of Glucose (Photosynthesis) **3. Microbiology (5)** a) Types of microorganisms and their general features - Bacteria, Yeast, Fungi, Virus, Protozoa- general introduction with practical significance and diseases b) Microbial cell organization - Internal and External features of cell- bacterial cell wall, viral capsule, pilus etc, c) Microbial nutritional requirements and growth - Different Sources of energy; growth curve d) Basic microbial metabolism - Fermentation, Respiration, Sulfur, N_2 cycle **4. Immunology (5)** a) Basic concept of innate and adaptive immunity - Immunity-innate and adaptive, differences, components of the immune system b) Antigen and antibody interaction - Antigen and antibody, immunogen, factors affecting immunogenicity, basic antigen-antibody mediated assays, introduction to monoclonal antibody

	c) Functions of B cell - B cell, antibody production, memory generation and principle of vaccination d) Role of T cell in cell-mediated immunity - Th and Tc, functions of the T cell with respect to different pathogen and cancer cell **5. Molecular Biology (5)** a) Prokaryotic Genomes (Genome organization & structure) - Nucleoid, circular or linear b) Eukaryotic Genomes (Genome organization & structure) - Intron, exon, packaging, chromatin c) Central Dogma (Replication, Transcription and Translation) d) Applications of Molecular Biology (Diagnostics, DNA-fingerprinting, Recombinant products etc.) - Introduction to Recombinant DNA, fingerprinting, cloning **6. Bioprocess Development (5)** a) Microbial growth kinetics - Batch, fed-batch and continuous systems, Monod Equation b) Enzyme kinetics, kinetics of enzyme inhibition and deactivation Definition of enzymes, activation energy, Concepts of Km, Vmax, Ki c) Microbial sterilization techniques and kinetics Introduction to sterilization, dry and moist sterilization d) Thermodynamics of biological system - Concepts of Enthalpy, Entropy, favorable reactions, exergonic and endergonic reactions e) Material and energy balance for biological reactions - Stoichiometry
Text Books, and/or reference material	1. Biotechnology 01 Edition, authored by U. Satyanarayana, BOOKS & ALLIED (P) LTD. 2. Biochemistry by Lehninger. McMillan publishers 3. XES52	**GRAPHICAL ANALYSIS USING CAD**	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	• CO1: Introduction to graphical solution of mechanics problems • CO2: Knowledge on graphical solution methods for solving equilibrium in coplanar force system • CO3: Introducing Maxwell diagram and solution of plane trusses by graphical method • CO4: Determination of centroid of plane figures by graphical method • CO5: Exposure to AutoCAD software for computer aided graphical solution						
Topics Covered	• Graphical analysis of problems on statics. [14] • Graphical solution of engineering problems using CAD (with the help of "AutoCAD") [14]						
Text and/or reference material	1)... Engineering Drawing and Graphics – K Venugopal 2)... AutoCAD — George Omura 3)... Practical Geometry and Engineering Graphics – W Abbott

ECS 51	**Basic electronics Lab**	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	• CO1: Acquire idea about basic electronic components, identification, and behavior. • CO2: To determine IV characteristics of these Circuit elements for different applications. • CO3: Learn to analyze the circuits and observe and relate input and output						

	signals.
Labs Conducted.	1. To know your laboratory: To identify and understand the use of different electronic and electrical instruments. 2. To identify and understand name and related terms of various electronics components used in electronic circuits.: Identify different terminals of components, fid their values and observe numbering associate with it. 3. Use of oscilloscope and function generator: Use of oscilloscope to measure voltage, frequency/time and Lissajous figures of displayed waveforms. 4. Study of half wave and Full-wave (Bridge) rectifier with and without capacitor filter circuit. 5. Realization of basic logic gates: Truth table verification of OR, AND, NOT, NOT and NAND logic gates from TTL ICs 6. Regulated power supply: study LM78XX and LM79XX voltage regulator ICs 7. Transistor as a Switch: study and perform transistor as a switch through NOT gate 8. Zenner diode as voltage regulator 9. To study clipping and Clamping circuits 10. To study different biasing cirtis. 11. Study of CE amplifier and observe its frequency response.
Text Books, and/or reference material	Text Books: 1. Experiments Manual for use with Electronic Principles (Engineering Technologies & the Trades) by Albert Paul MalvinoDr., David J. Bates, et al. Reference Books: 1. The Art of Electronics 3e, by Paul Horowitz, Winfield Hill 2. Electronic Principles, by Albert Paul MalvinoDr. and David J. Bates

Course Outcomes	Upon successful completion of this course, the student should be able to • CO1: understand the principle of superposition. • CO2: understand the principle of maximum power transfer • CO3: understand the characteristics of CFL, incandescent Lamp, carbon lamp. • CO4: understand the calibration of energy meter. • CO5: understand open circuit and short circuit test of single-phase transformer. • CO6: analyze RLC series and parallel circuits • CO7: understand three phase connections. • C08: understand determination of B-H curve
Topics Covered	**List of Experiments:** 1. To verify Superposition and Thevenin's Theorem. 2. To verify Norton and Maximum power transfer theorem 3. Characteristics of fluorescent and compact fluorescent lamp 4. Calibration on energy meter 5. To perform the open circuit and short circuit test on single phase transformer 6. To study the balanced three phase system for star and delta connected load 7. Characteristics of different types of Incandescent lamps 8. Study of Series and parallel R-L-C circuit 9. Determination of B-H Curve for magnetic material
Textbooks, and/or reference material	Textbooks: 1. Handbook of Laboratory Experiments in Electronics and Electrical Engineering by A M Zungeru (Author), J M Chuma (Author), H U Ezea (Author) 2. Laboratory Courses in Electrical Engineering (5th Edition) by S. G. Tarnekar, P. K. Kharbanda, S. B. Bodhke, S. D. Naik, D. J. Dahigaonkar (S. Chand Publications)

Pre-requisites	Course assessment methods: (Continuous evaluation((CE) and end assessment (EA)						
NIL	CE + EA						
Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Sitting Posture/Asanas- Gomukhasana, Swastikasana, Siddhasana, Ustrasana, Janusirsasana, ArdhaMatsyendrasana (Half-Spinal Twist Pose), Paschimottanasana, Shashankasana, Bhadrasana. • Mudra- Vayu, Shunya, Prithvi, Varuna, Apana, Hridaya, Bhairav mudra. • Laying Posture/Asanas- Shalabhasana (Locust Posture), Dhanurasana (Bow Posture), ArdhaHalasana (Half Plough Pose), Sarvangasana (Shoulder Stand), Halasana (Plough Pose), Matsyasana, SuptaVajrasana, Chakrasana (Wheel Posture), Naukasana (Boat Posture), Shavasana (Relaxing Pose), Makaraasana. • Meditation- 'Om'meditation, Kundalini or Chakra Meditation, Mantrameditation. • Standing Posture/Asanas- ArdhaChakrsana (Half Wheel Posture), Trikonasana (Triangle Posture), ParshwaKonasana (Side Angle Posture), Padahastasana, Vrikshasana (Tree Pose), Garudasana (Eagle Pose). • Pranayama- Nadisodha, Shitali, Ujjayi, Bhastrika, Bhramari. • Bandha- Uddiyana Bandha, Mula Bandha, Jalandhara Bandha, Maha Bandha. • Kriya- Kapalabhati, Trataka, Nauli. **ATHLETICS** • Long Jump- Hitch kick, Paddling, Approach run, Take off, Velocity, Techniques, Flight & Landing • Discus throw, Javelin throw and Shot-put- Basic skill & Technique, Grip, Stance, Release & Follow through.						

	• Field events marking. • General Rules of Track & Field Events. **BASKETBALL** • Shooting- Layup shot, Set shot, Hook shot, Jump shot. Free throw. • Rebounding- Defensive rebound, Offensive rebound. • Individual Defensive- Guarding the man without ball and with ball. • Pivoting. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Spike- Straight spike, Body turn spike, Tip spike, Back attack, Slide spike, Wipe out spike. • Block- Single block, Double block, Triple block, Group block. • Field Defense- Dig pass, Double pass, Roll pass. • Rules and their interpretation. **FOOTBALL** • Dribbling- Square pass, Parallel pass, Forward pass. • Heading (Standing & Running)- Fore head, Side fore head, Drop heading, Body covering during heading. • Kicking- Full volley, Half volley, Drop kick, Back volley, Side volley, Chiping (lobe). • Tackling: Covering the angle, Chessing time sliding chese, Heading time shoulder tackle etc. • Feinting- Body movement to misbalance the opponent and find space to go with ball. • Rules of Football. **CRICKET** • Batting straight drive. • Batting pull shot. • Batting hook shot. • Bowling good length, In swing. • Bowling out swing, Leg break, Goggle. • Fielding drill. • Catching (Long & Slip). • Wicket keeping technique. • Rules & Regulation. **BADMINTON** • Net play- Tumbling net shot, Net Kill, and Net Lift. • Smashing. • Defensive high clear/Lob. • Half court toss practice, Cross court toss drop practice, Full court Game practice. • Player Positioning, Placements. • Rules & Regulation. • Doubles & Mixed doubles match practice.

	TABLE TENNIS • Stroke: Backhand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke: Forehand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke- Backhand lob with rally, Backhand lob with sidespin, Forehand lob with rally, Forehand lob with sidespin. • Service: Backhand/Forehand- Push service, Deep push service, Rally service. • Service: Backhand sidespin (Left to right & Right to left). • Service: Forehand- High toss backspin service, High toss sidespin service, High toss reverse spin service. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-6 Side pace, Pace Forward and to the Rear. • FD-7 Turning on the March and Wheeling. • FD-8 Saluting on the March. • FD-9 Marking time, Forward March and Halt in Quick Time. • FD-10 Changing step. • FD-11 Formation of Squad and Squad Drill. • FD-12 Parade practice. **TAEKWONDO** • Poomsae (Forms)- Jang, Yi Jang. • Self Defense Technique- Self defense from arms, Fist and Punch. • Sparring (Kyorugi)- One step sparring, Two step sparring, Fight (Free sparring). • Combination Technique- Combined kick and punch. • Board Breaking (Kyokpa)- Sheet breaking. • Interpretation Rules above Technique of Taekwondo. **NSS** • No Smoking Campaign • Anti- Terrorism Day Celebration • Any other observation/celebration proposed by Ministry/institute • Public Speaking • Discussion on Current Affairs • Viva voce

THIRD SEMESTER

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC331	MATHEMATICS-III	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic knowledge of topics included in MAC01 & MAC02.		CT+MT+EA					
Course Outcomes	• CO1: Acquire the idea about mathematical formulations of phenomena in physics and engineering. • CO2: To understand the common numerical methods to obtain the approximate solutions for the intractable mathematical problems. • CO3: To understand the basics of complex analysis and its role in modern mathematics and applied contexts. • CO4: To understand the optimization methods and algorithms developed for solving various types of optimization problems.						
Topics Covered	**Partial Differential Equations (PDE):** Formation of PDEs; Lagrange method for solution of first order quasilinear PDE; Charpit method for first order nonlinear PDE; Homogenous and Nonhomogeneous linear PDE with constant coefficients: Complimentary Function, Particular integral; Classification of second order linear PDE and canonical forms; Initial & Boundary Value Problems involving one dimensional wave equation, one dimensional heat equation and two dimensional Laplace equation. [14] **Numerical Methods:** Significant digits, Errors; Difference operators; Newton's Forward, Backward and Lagrange's interpolation formulae; Numerical solutions of nonlinear algebraic/transcendental equations by Bisection and Newton-Raphson methods; Trapezoidal and Simpson's 1/3 rule for numerical integration; Euler's method and modified Eular's methods for solving first order differential equations. [14] **Complex Analysis:** Functions of complex variable, Limit, Continuity and Derivative; Analytic function; Harmonic function; Conformal transformation and Bilinear transformation; Complex integration; Cauchy's integral theorem; Cauchy's integral formula; Taylor's theorem, Laurent's theorem (Statement only); Singular points and residues; Cauchy's residue theorem. [17]						

Topics Covered	**Optimization:** **Mathematical Preliminaries:** Hyperplanes and Linear Varieties; Convex Sets, Polytopes and Polyhedra. [2] **Linear Programming Problem (LPP):** Introduction; Formulation of linear programming problem (LPP); Graphical method for its solution; Standard form of LPP; Basic feasible solutions; Simplex Method for solving LPP. [9]
Text Books, and/or reference material	Suggested Text Books: 1. An Elementary Course in Partial Differential Equations-T. Amarnath 2. Numerical Methods for scientific & Engineering Computation- M.K.Jain, S.R.K. Iyengar&R.K.Jain. 3. Foundations of Complex Analysis- S. Ponnuswami 4. Operations Research Principles and Practices- Ravindran, Phillips, Solberg 5. Advanced Engineering Mathematics- E. Kreyszig Suggested Reference Books: 1. Complex Analysis-L. V. Ahfors 2. Elements of partial differential equations- I. N. Sneddon 3. Operations Research- H. A. Taha

CHC331	PROCESS CALCULATIONS AND THERMODYNAMICS	PEL	3	0	0	3	3
Mathematics I and Mathematics II		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	● CO1: To develop the concept of dimension and unit conversion to check dimensional consistency of balanced equation ● CO2: Learn basic laws about the behavior of gases, liquids and solids and some basic mathematical tools. ● CO3: To Establish mathematical methodologies for the computation of material balances and energy balances with and without chemical reaction ● CO4: To apply knowledge of the laws of thermodynamics to solve physical and chemical problems encountered in chemical and biochemical industries. ● CO5: To analyze and interpret data, to identify, formulate, and solve engineering problems.
Topics Covered	Module - I (10 hrs) ● Significance of Units and Dimensions: Conversion of Equations, Systems of Units, Dimensional Homogeneity and Dimensionless Quantities, Buckingham Pi-theorem for Dimensional Analysis Mathematical Requisites: Use of log-log and semi-log graph paper, Triangular Diagram. ● Introduction to Chemical Engineering Calculations: Basis, Mole Fraction and Mole Percent, Mass Fraction and Mass Percent, Concentration of different forms, Conversion from one form to another. ● Ideal gas laws and its significance, Molar concept, Concept of partial pressure & partial volume, Dalton's law and Amagat's law and Numerical problems on their applications. ● Fundamental concept of vapor pressure & boiling point, Clausius-Clapeyron equation, Antoine equation and numerical problems on their applications. ● Ideal & non-ideal solutions, Raoult's law, Henry's law and their applications in numerical problems. Module – II (10 hrs) ● Material Balances with and without chemical reaction: Material balances in crystallizers, gas - liquid absorbers, evaporators, distillation plant. Systems with recycle,drying, extraction. ● Energy Balance: Enthalpy calculation for systems without Chemical Reaction, Estimation of Heat Capacities of solids, liquids and gases. Heat of fusion and vaporization ● Enthalpy calculation for systems with Chemical Reaction, Thermo-chemistry, Calculations of heat of reaction, heat of combustions, heat of formation and heat of neutralization, Effect of Temperature and Pressure on Heat of Reaction, Hess's Law, Adiabatic Flame Temperature, Theoretical Flame Temperature.

Topics Covered	Module – III (10hrs) ● Scope of thermodynamics, Terminology and fundamental concepts. Microscopic and macroscopic view. State and path functions, thermodynamics processes, Zeroth and First law of thermodynamics: Applications of first law to close and open system.Limitations of first law, Heat pump, heat engine, Second law of thermodynamics: Reversibility and irreversibility, Carnot cycle, concept and estimation of entropy, third law of thermodynamics, Clausiusinequality,Gibb's and Helmholtz free energy. Module – IV (10 hrs) ● PVT behavior of pure substance, Equations of state for ideal and real gases, cubic andvirial equation of state, problems, Compressibility factor,thermodynamic properties of pure substances. ● Refrigeration of gases: Refrigerator, Co-efficient of performance, capacity of refrigerator, Vapour compressioncycle, Choice of refrigerants.
Text Books, and/or reference material	Suggested Text Books: 1. Chemical Process Calculations, D.C. Sikdar, HI Learning Private Limited, 2013 2. Stoichiometry and Process Calculations, K. V. Narayanan, B. Lakshmikutty, PHI Learning (2017) 3. Stoichiometry, Bhatt and Vora, Tata McGraw Hill Companies. 4. Introduction to Chemical Engineering Thermodynamics, GopinathHalder, Prentice-Hall Of India Pvt. Limited, 2009 5. A Textbook of Chemical Engineering Thermodynamics, Narayanan K.V, Prentice Hall India Learning Private Limited; 2nd edition ,2013 Suggested Reference Books: 1. Unit Operations–Chemical Process Principles – Part-I - Haugen, Wartson&Ragatz (CBS) 2. Basic Principles and Calculations in Chemical Engineering – Himmelblau ((Prentice Hall of India) 3. Chemical Engineering Thermodynamics – J. M. Smith & H. C. Van Ness and M. M. Abbott (Tata McGraw Hill) 4. Chemical & Engineering Thermodynamics – S. I. Sandler (Wiley)

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTC 301	CELL BIOLOGY AND GENETICS	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					

Course Outcomes	CO1: To understand the basic organization of cells and organisms and the tools needed to study them CO2: To understand the basic processes of the cell machinery, cell-cell interaction and the eukaryotic cell cycle. CO3: To apply the knowledge of cell process regulation and cell cycle in understanding the use of a cell as a biological tool for manufacturing biomolecules. CO4: To learn the fundamentals of Genetics and its applications. CO5: To solve problems associated with genetic diseases and their transmission from one generation to the next
Topics Covered	**Classical Genetics:** Mendelian inheritance; Euploidy and aneuploidy (4) Genetic interactions (2) **Molecular Genetics**-Split and Overlapping genes; Transposons &Retrotransposons; Mutation (6) DNA Repair and human diseases (4) Recombination (2) **Internal Organization of the cell**: Cells as experimental models, Cells and cellular organelles, Tools of cell biology- Microscopy and cell Architecture, Purification of cells, Membrane structure, Membrane Transport of small molecules and electrical properties of membranes (8) **Cytoskeleton and cell movement:** Structure and organization of actin filaments, Actin myosin and cell movement, intermediate filaments, microtubules, microtubule motors and movements, cell-cell interactions (6) **Cell signalling** Signaling molecules and their receptors, function of cell surface receptors, pathways of intracellular signal transduction, signal transduction and the cytoskeleton, signalling in development and differentiation (6) **Cell cycle and cancer** Eukaryotic cell cycle, meiosis and fertilization, stem cells, Development and causes of cancer, oncogenes, tumor suppressor genes (4)
Text Books, and/or reference material	Suggested Text Books: 1. Molecular Biology of Cell by Albert et.al. John Wiley & Sons 2. The Cell by Cooper. ASM Press 3. M.W.Strickberger: Genetics, Pearson. 4. Brown, T.A., Genetics a Molecular Approach, 4th Ed. Chapman and Hall, Suggested Reference books: 1. Cell and Molecular Biology by Karp. John Wiley & Sons1992 2. Stratchan& Read: Human Molecular Genetics 3. David Freifelder: Microbial Genetics, Jones and Bartlett Publisher Inc. 1987 4. In Introduction to genetic analysis, Griffiths, Miller, Suzuki, Lewontin and a. Gelbart, Freeman and Company

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTC 302	MICROBIOLOGY AND BIOPROCESS TECHNOLOGY	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
BTC01 (LIFE SCIENCE)		CT+MT+EA					

Course Outcomes	CO1: To develop knowledge on different types of microorganisms including viruses and microscopy for the visualization of microorganisms, their characteristic features as well as internal and external structures and their functions. CO2: To impart an understanding on microbial classification and taxonomy, microbial community and interactions, microbial nutrition, nutritional types, growth media, growthin different systems, and control of microorganisms using various physical and chemical treatments including antimicrobial drugs. CO3: To develop knowledge on microbial metabolism, energy transduction mechanisms, and microbial genetics CO4: To acquire experimental know how of microbial production of various industrial products such as alcohol, antibiotics, amino acids, vitamins exopolysaccharides, enzymes, etc. from industrial strains. CO5: To illustrate the upstream and downstream processing for product recovery and purification. CO6: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them
Topics Covered	**PART A: Microbiology** **Introduction to microbiology:** History and scope of microbiology, major contribution and events in microbiology, different types of microorganisms – characteristic features, microbes and diseases, microbes in human welfare.**[2]** **Microbial structures:** Different types of microscopy, preparation and staining of specimens, microbial shape, size, arrangements, overview of procaryotic and eucaryotic cell – internal and external structures, cytoplasmic matrix, nucleoid, plasmids, ribosomes, flagella, pilli, fimbrie, spores, bacterial and archaebacterial cell walls and cell membranes, Viruses – types, structures, multiplications **[4]** **Microbial classification and taxonomy:** Domains of life, classification, taxonomic ranks, techniques for determining microbial taxonomy and phylogeny, prokaryotic phylogeny and diversity, microbial community and interactions – Mutualism, Cooperation, Commensalism, Predation, Parasitism, Amenalism, Competition. Normal microbiota of human body. **[3]**

Topics Covered	**Microbial nutrition, growth and control:** Common nutrient requirements, nutritional types, uptake of nutrients by cell, culture media, pure culture, microbial growth – batch culture and continuous culture, growth curve, measurement of growth, influence of environmental factors on growth, control of microorganisms by physical and chemical agents, Antimicrobial drugs – general characteristics, narrow-spectrum and broad-spectrum drugs, inhibitors of cell wall synthesis, nucleic acid synthesis and protein synthesis, metabolic antagonists, Drug resistance. [**5]** **Microbial metabolism:** Energy release and conservation, chemoorganotrophic fueling processes, aerobic respiration, glycolysis, TCA cycle, electron transport and oxidative phosphorylation, anaerobic respiration - nitrate and sulphate reduction, fermentations, chemolithotrophy, phototrophy [3**]** **Microbial genetics:** Conjugation, Transduction, Transformation [**4]** **PART B: BIOPROCESS Technology** A) Introduction to Fermentation Technology: Microbial Culture systems; Media for Industrial fermentations; Media Optimization; Sterilization of Industrial Media; The development of Inoculum for Industrial fermentations; Starter Cultures; Downstream Processing and fermentation economics. ………………………….. **[4]** B) Commercial Strain Development & Microbial Processes: Sources of industrial cultures and maintenance. Alcoholic fermentation: Production of Industrial Alcohol – Fermentation mechanism. Recent developments, brewing and malting, manufacture of wine and other distilled liquors. Cellular control regulating production of microbial metabolites – Primary and Secondary metabolite – Induced mutation technique – Analogue resistant mutant – Catabolic derepressed mutants – Genetically engineered strain – Protoplast fusion technique. Basic idea on fermentation process, submerged, stationary, solid and semi-solid – with their merits and demerits. **[5]** C) Microbial production of nucleosides and nucleotides: i) Introduction ii) Classification of methods for production of 5’ IMP and 5’GMP iii) Production of 5’IMP and 5’GMP by fermentation. ……………………………………………………**[3]** D) Microbial production of Vitamins: 1) Vitamin B12 - Organisms used, production method- process, recovery and assay. 2) Vitamin C - Organisms used, production method, process, recovery and assay. **[3]** E) Lectures Microbial Production of Antibiotics : Organism used, production process and recovery of- 1) Bacitracin & 2) Chloramphenicol [**2**] F) Lectures Microbial Production of acids, viz., citric, lactic, Acetic acid, vinegar and gluconic acid. Mechanism of each fermentation, their uses. its spoilage and prevention **[2]** G) Production of Amino acids (Lysine and glutamic acid) and Antibiotics (Pencillin, Streptomycin and Tetracyclines) and its new Developments ……………**[2]**

Text Books, and/or reference material	Suggested Text Books: 1. Prescott, Harley and Klein's Microbiology – McGraw Hill 2. Microbiology by Pelczar, Chan and Krieg, Tata Mc Graw Hill 3. L.E. Casida. Jr, Industrial Microbiology, New Age International Publisher 4. W. Crueger, AnneliseCrueger, Biotechnology: A Textbook of Industrial Microbiology, Pnima Publishing Corporation 5. Fermentation microbiology and biotechnology. Ed. E.M.T. El-Mansi , C.F.A. Bryce, B. Dahhou, S. Sanchez, A.L. Demain, A.R. Allman. 3rd ed. Taylor and Francis. Suggested Reference Books: 1. Microbiology by Tortora, Funke and Case 2. Brock Biology of Microorganisms 3. General Microbiology by Hans G Schlegel, Cambridge 4. Atkinson. B and Marituna. F, Biochemical Engineering and Biotechnology Handbok, The Nature Press, Macmillan Publ.Ltd.4 5. James E Bailey, David F., Ollis, Biochemical engineering fundamentals, second edition. McGraw Hill

Department of Biotechnology

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTC303	BIOCHEMISTRY AND ENZYME TECHNOLOGY	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	**CO1:** To understand the principles of bioenergetics and to correlate them with the metabolic pathway. **CO2:** To impart an understanding on the fates of macromolecules during metabolism. **CO3:** To provide an understanding on the importance and synthesis of energy currency molecule, ATP. **CO4:** To interpret the regulation in the metabolic pathway and to study the role of hormones in the metabolic pathway. **CO 5:** To understand mechanism and kinetics of enzyme action and their regulation for application of enzymes in living system and for industrial purpose.

Topics Covered	**Module 1** **(3+2)5** Biomolecules, Vitamins Principles of Bioenergetics **Module 2** **Carbohydrate and its metabolism** **5** **Carbohydrate Biosynthesis** - Gluconeogenesis, Biosynthesis of glycogen, starch, Sucrose , Photosynthetic Carbohydrate Synthesis, **Glycolysis and catabolism of hexoses -** Glycolysis, pentose phosphate pathway of glucose oxidation, Citric acid cycle, regulation of citric acid cycle, glyoxylate cycle . Role of hormones in metabolism **Oxidative Phosphorylation and Photo Phosphorylation** - Oxidative Phosphorylation, Regulation of Oxidative Phosphorylation, Photosynthesis **Module 3** **3** **Lipid and its metabolism** O**xidation of Fatty acids** - Transport of fatty acid, beta-oxidation, Ketone bodies **Lipid Biosynthesis** - Biosynthesis of fatty acids **Module 4** **3** **Protein and its metabolism** **Amino acid oxidation and production of Urea** - Metabolic fates of amino groups, Nitrogen excretion and the urea cycle, Pathways of amino acid degradation Nitrogen metabolism, Biosynthesis of amino acids, **Module 5** **2** **Nucleic acid and its metabolism** Biosynthesis and degradation of Nucleotides **Module 6** **12** **Enzyme Technology and Vitamins** **Enzymes:**Nomenclature of enzymes, Enzyme kinetics, Mechanism of enzymatic, Catalysis, Active site, Activators and inhibitors, Coenzymes, Isoenzymes, Michaelis-Menten equation, Km and Vmax value, Regulation of enzyme activity (single-substrate and multi-substrate reactions). Vitamin's as coenzyme **Production of enzymes and immobilisation** : Production of industrial enzymes such as proteases, amylases, lipases, cellulases, whole cell biocatalysis. Enzyme immobilization: Methods of immobilization of enzymes-physical & chemical techniques, Kinetics of immobilized enzyme, Effect of external mass transfer & intra-particle diffusion, limitation & applications of immobilized enzymes, Bioreactors using immobilized enzyme. Engineering of Enzymes **Application of enzyme** in leather industry, detergent industry, dairy industry; Lignocellulose degrading enzymes.
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Biochemistry by LubertStryer. W. H. Freeman & Company, NY 2. Biochemistry by Lehninger. McMillan publishers <u>Suggested Reference Books:</u> 1. Biochemistry, Voet&Voet 2. Fundamental of Enzymology by Price and Stevens (2002): Oxford University Press 3. Enzyme technology by Chaplin and Bucke. Cambridge Univerity Press

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTS351	MICROBIOLOGY LABORATORY	PEL	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+EA					

Course Outcomes	CO1: To learn and become familiar with types of culture media, preparations of culture media, sterilization procedures, types of equipments. CO2: To understand the concept of sterility, working principles and applications of instruments: autoclaving, laminar air flow hood etc. CO3:To learn about the isolation and maintenance process of bacterial cultures. CO4: To apply the understanding of the cultural and morphological characteristics of microorganisms grown in pure culture.Applications in Antimicrobial effect and CO5: To interpret microbial growth phases its kinetics specific growth rate.to determine the effects of chemicals on bacteria and to understand the quality of water.
Topics Covered	**Microbial culture media preparation:** Basic concepts of nutrition materials in media, classes of culture media, how to prepare growth media. **The control of microbial growth :** To study the methods of sterilization: autoclaving, laminar air flow hood, irradiation, filtrations, chemical and gas. **Isolation of microorganisms from an environment of choice :** To demonstrate the ubiquity and diversity of microbes in the environment, samples from immediate areas of the environment will be obtained and cultured and dilution methods. **Isolation and Maintenance of pure cultures :** To study the different techniques of isolation and maintenance of pure cultures: subculturing, streak plate method, pour plate method, spread plate method. **Bacterial morphology and staining :** To study the physical properties and differentiation of microorganisms with the help of different staining procedures: differential and structural staining. Techniques of Gram staining, endospores staining, microscopic study.

	Estimation of coliform bacteria: To study the estimation of coliform bacteria in water by MPN (most probable number) test. **Study of bacterial growth:** To study the growth pattern of bacteria, specific growth rate calculation, different growth phases of bacteria. **Antimicrobial activity study:** To determine the antibiotic susceptibility via sensitivity disk methods, calculation of zone of inhibition.
Text Books, and/or reference material	Suggested Text Books: 1. Benson HJ. 2002. Microbiological applications: a laboratory manual in general microbiology: McGraw-Hill New York, NY. 2. Harley JP. 2004. Laboratory exercises in microbiology: McGraw-Hill Science/Engineering/Math Suggested Reference Books: 1. Brown AE. 2009. Benson's Microbiological Applications: Laboratory Manual in General Microbiology, Short Version: McGraw Hill 2. Madigan MT, Martinko JM, Dunlap PV, Clark DP. 2012. Brock biology of microorganisms: Pearson/Benjamin Cummings. 3. Pollack RA. 2004. Laboratory exercises in microbiology, 3e. Recherche 67: 02

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTS352	BIOCHEMISTRY LABOARTORY	PCR		0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+EA					
Course Outcomes	CO1: To design , analyze and solve problems and learn to plot graph and interpret data CO2: To develop skills to perform experiments and have hands on training. CO3: To apply the results and data to solve problems in daily activities and industry.						

Topics Covered	1. To prepare Tris-HCl Buffer with a specific pH (eg. pH 8.8) 2. Qualitative and quantitative estimation of carbohydrates 3. Qualitative and quantitative estimation of aminoacids and determination of the unknown concentration of protein concentration by plotting a standard curve of BSA using Bradford reagent 4. Ammonium sulphate precipitation and dialysis for a protein 5. Separation and Identification of Amino acids by Paper Chromatography and Thin Layer Chromatography 6. Analysis of Protein purity and determination of molecular weight of pure protein by SDS PAGE and Coomassie Brilliant blue staining of proteins on SDS gel 7. Extraction of Enzyme Tyrosinase from commercially available mushrooms and Assay of Enzyme Tyrosinase with determination of specific activity of Enzyme Tyrosinase 8. Effect of substrate concentration on the activity of Enzyme Tyrosinase and determination of MichelesMenton parameters of Enzyme Tyrosinase 9. Effect of inhibitor concentration on the activity of Enzyme Tyrosinase
Text Books, and/or reference material	Suggested Text Books: 1. Practical Biochemistry by David T Plummer Suggested Reference Books: 2. Biochemistry by Voet and Voet

<tr><td>Course Outcomes</td><td colspan="7">CO1: Students will acquire basic understanding of molecular biology topics: nucleic acid structure and chemistry; organization of genome in chromosomes; regulation of replication, transcription, translation and DNA repair.
CO2: Students will acquire knowledge of recombinant DNA techniques on: nucleic acid amplification and gene cloning; manipulation of DNA sequences; preparation and screening of nucleic acid libraries; gene silencing; analysis of variations in genome sequence.
CO3: Students will be proficient in applying basic understanding of molecular biology topics in analyzing and solving problems related to recombinant DNA technology.
CO4: Students will be able to design strategies to solve problems related to recombinant DNA technology.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">1. Nucleic acid structure: Nucleotides and nucleic acids, DNA structure, different forms of DNA, unusual DNA structure, different types of RNA, RNA structure. [3]
2. Nucleic acid chemistry: Denaturation and renaturation, hybridization, nonenzymatic transformation (Mutation) – spontaneous and induced, point mutation - transition, transversion, mutation involving more than one base pairs, insertion, deletion, frame shift mutation, forward and back mutation, null mutation, Loss-of-function and gain-of-function mutation, silent mutation, DNA sequencing. [4]
3. Chromosome organization: Chromosomal elements – genes and intergenic regions, regulatory sequences; DNA supercoiling, linking number, Chromosome structure: Histones, Non-histones, Nucleosome, Chromatin. Chromosome structure in prokaryotes & eukaryotes. [4]</td></tr>
</table>

	4. DNA replication and repair: Central dogma, DNA replication in prokaryots and eukaryots – set of fundamental rules, DNA polymerases, proteins and enzymes involved in replication, process, accuracy. [4] 5. Transcription and post-transcriptional processing: DNA-dependent RNA synthesis in prokaryotes and eukaryotes, RNA polymerases, transcription process, termination, selective inhibition, RNA processing – capping, splicing of introns, differential RNA processing; RNA-dependent synthesis of RNA and DNA. [4] 6. Protein synthesis – translation: Genetic code, ribosome, transfer RNA, protein biosynthesis stages – attachment of amino acid to specific tRNA, initiation, elongation, termination, folding and processing; inhibition of protein synthesis. [4] 7. DNA repair: DNA repair – multiple repair systems. [3] 8. Regulation of gene expression: Regulation of gene expression in bacteria - operon concept; Regulation of gene expression in eukaryotes, hormonal control of gene expression in eukaryotes. [3] 9. Introduction to recombinant DNA and Gene Cloning Tools of recombinant DNA: Vectors; plasmid, bacteriophage viral vectors, cosmids, yeast artificial chromosome. Expression vectors, and selection of suitable Host. [5] 10. Restriction endonucleases and other enzymes use and mechanism of action and analysis, Genomic DNA and cDNA library preparation. Strategies for engineered vectors use and regulation for enhanced gene expression and purification. [5] 11. Screening and selection of clone with desired gene and protein of interest: Colony and plaque hybridization. antibody based assay, Protein activity. Application of gene cloning and DNA Analysis. [3] 12. Molecular probes: Preparation of molecular probes DNA probes, RNA probes, radioactive labeling, Non-radioactive labeling, use of molecular probes in DNA fingerprinting. Southern blotting, Northern blotting, Western blotting, In-situ hybridization. [4] 13. MOLECULAR TECHNIQES: Polymerase chain reaction, different types and their use. Antisense RNA technology, Site directed mutagenesis, Use of RFLP, SNP and Microarray. [4]
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Gene IX by B. Lewin, Pearson 2. Molecular biology of the cell by Albertset. al., Garland science <u>Suggested Reference Books:</u> 1. Molecular Biology of the Gene, 7th edition 2013. Watson et. al. Published by Pearson. 2. Cell and molecular Biology, Concepts and experiments Gerald Karp, John Wiley and Sons. 3. The Cell - A molecular approach, GM Cooper ASM Press 4. Genomes, T. A. Brown, John Wiley and Sons PTE Ltd

<tr><td>Course Outcomes</td><td colspan="8">• CA1:To Understand fundamentals of fluid dynamics and mechanics
• CA2:Understanding the fundamentals of heat transfer operations
• CA3:To learn design of heat transfer equipment and calculations
• CA4:To develop knowledge of different mechanical operations and their applications
• CA5:To solve related problems of different difficulty levels through tutorials</td></tr>
<tr><td>Topics Covered</td><td colspan="8">Module - I (14 hrs)
Fundamental Concepts: Definition of Fluid, Terminologies of fluid flow, velocity – local, average, maximum, flow rate – mass, volumetric, velocity field; flow visualization – streamline, path line, streak line, viscosity; Newtonian fluid; Non-Newtonian fluid; Reynold’s number—its significance, laminar, transition and turbulent flows.
Fluid Statics: Basic equation of fluid statics; pressure variation in a static field; pressure measuring devices– manometer, U-tube, inclined tube. Introduction to rotational and irrotational flow. Introduction; flow of incompressible fluid in circular pipe; laminar flow for Newtonian fluid; Hagen-Poiseullie equation; introduction to turbulent flow in a pipe-Prandtl mixing length; energy consideration in pipe flow, relation between average and maximum velocity, Bernoulli’s equation–kinetic energy correction factor.
Fluid moving machines: Introduction; Basic classification of pumps: Mechanical pump: Centrifugal pumps- cavitation, NPSH, Positive displacement pumps (rotary, piston, plunger, diaphragm pumps); Peristaltic pump; Pump specification; Basic characteristics curves for centrifugal pumps
Module – II (14 hrs)
Basic modes of heat transfer; Heat transfer by conduction: One dimensional steady state heat conduction, Fourier’s Law, Thermal conductivity, Compound resistance in series; Steady state heat transfer analysis through extended surface; Unsteady state heat conduction with and without heat generation, Concept of thermal diffusivity; Concept of heat transfer coefficient in convective-conductive system, Critical thickness of insulation.</td></tr>
</table>

	Heat transfer by convection: Convection heat transfer mechanism; Forced convection in systems of simple geometrics (plate, cylinder etc.), Thermal boundary layer; Co-relation for heat transfer coefficient: internal flow & external flow, Momentum & heat transfer analogies. Evaporation: Classification; Capacity, Steam economy; Boiling point elevation (Duhring rule); Material and energy balance of single effect evaporator; Introduction to multiple effect evaporator: Forward feed, Backward feed, Mixed feed, Parallel feed Module – III (12 hrs) Particulate solids: Characterization of solid particles, particle shape, particle size, mixed particle sizes and size analysis, specific surface of mixture, average particle size. Screen analysis: Type of screens, ideal screen, real screen, screen effective ness, differential and cumulative analysis, screen capacity. Screening equipment: stationary screens and grizzlies, gyrating screens, vibrating screens and other industrial screens like trammels etc. Comminution of solids (Size Reduction): Factors affecting commnution, comminution laws: Kick's law, Rittinger's law and Bond's law and their limitations. Crushing efficiency & power consumption.
Text Books, and/or reference material	Suggested Text Books: 1. A Textbook of Fluid Mechanics And Hydraulic Machines, R.K. Bansal, Laxmi Publications; Tenth edition, 2018) 2. Heat Transfer Principles and Application, B. K. Dutta, PHI. 3. Units Operations of Chemical Engineering: McCabe & Smith and Harriot, MGH 4. Mechanical Operations for Chemical Engineers, C.M. Narayanan and B.C. Bhattacharya, KHANNA PUBLISHERS, 1990 Suggested Reference Books: 1. Process Heat Transfer: D. Q. Kern, MGH, 1983 2. Coulson, J.M., Richardson, J.F., "Chemical Engineering", Volume 2, Third Edition, Pergamon Press, 1977 3. Principles of Unit Operations by Alan S Foust, L.A. Wenzel, C.W. Clump, L. Maus, and L.B.

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTC 402	IMMUNOLOGY	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
BTC01		CT+MT+EA					

Course Outcomes	CO1: To understand the role of the components of the immune system and its classification CO2: To understand the role of the immune cells and their immunological response in the context of human diseases including infectious diseases, autoimmunity, and cancer. CO3: To learn the fundamentals and principles of immunological techniques and their application. CO4: To understand methods of generations of Polyclonal and Monoclonal Antibody and the use of custom made genetically engineered antibodies. CO5: To solve problems associated with drugs and their toxic response based on the knowledge of immunological response.
Topics Covered	**Immunology-** fundamental concepts and anatomy of the immune system Components of innate and acquired immunity; Phagocytosis; Complement and Inflammatory responses; Haematopoesis; Organs and cells of the immune system- primary and secondary lymphoid organs; Lymphatic system; Lymphocyte circulation; Lymphocyte homing (6) **Immune responses generated by B and T lymphocytes** Immunoglobulins-basic structure, classes & subclasses of immunoglobulins, antigenic determinants; (2) Multigene organization of immunoglobulin genes; B-cell receptor; Immunoglobulin superfamily (3) Kinetics of Active and Passive Immunity, Basis of self –non-self discrimination; (4) B cell maturation, activation and differentiation; T-cell maturation, activation and differentiation and T-cell receptors; Functional T Cell Subsets; Cell-mediated immune responses (6) Hypersensitivity, Antibody Dependent Cell Cytotoxicity; Cytokines-properties, receptors and therapeutic uses; Antigen processing and presentation Hapten-carrier system. Complement system. (4) **Antigen – Antibody Interaction dependent Techniques** Precipitation, Agglutination; Advanced immunological techniques- RIA, ELISA, Western blotting, ELISPOT assay, Immuno-electron microscopy and Immuno flourescence techniques (6) **Clinical Immunology:** Preparation and clinical uses of Monoclonal and Polyclonal antibody. (3) Transplantation; Autoimmunity; (5) Vaccination: Principles and development of vaccines against different diseases. (3)
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Kuby J, Thomas J. Kindt, Barbara, A. Osborne Immunology, 6th Edition, Freeman, 2002. 2. <tr><td colspan="2">Knowledge of Programming Language</td><td colspan="6">CT+MT+EA</td></tr>
<tr><td>Course Outcomes</td><td colspan="7">● CO1: Understanding of the fundamental concepts of data, data types and abstract data types.
● CO2: Implementation of different abstract data types using different data structures.
● CO3: Apply different types of data structures to implement different solutions to problems.
● CO4: Analysis of the suitability/compatibility of different data structures based on the types of applications.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">1) Introduction: Basic terminology, elementary data organization, structure operations, algorithm, complexity and time-space trade-off. [2]
2) Arrays: Array definition, representation and analysis, single and multidimensional arrays, address calculation, application of arrays, character string in c, character string operation, array as parameters, ordered list, sparse matrices and vectors. [4]
3) Stacks: Array representation and implementation of stack, operations on stacks: push AND pop, array representation of stack, linked representation of stack, operations associated with stacks, application of stack: conversion of infix to prefix and postfix expressions, evaluation of postfix expression using stack. [5]
4) Queues: Array and linked representation and implementation of queues, operations on queue: create, add, delete, full and empty, circular queues, d-queues and priority queues. [4]
5) Linked list: Representation and implementation of singly linked lists, two-way header list, traversing and searching of linked list, overflow and underflow, insertion and deletion to/from linked lists, insertion and deletion algorithms, doubly linked list, linked list in array, polynomial representation and addition, generalized linked list, garbage collection and compaction. [7]</td></tr>
</table>

	6) Trees: Basic terminology, binary trees, binary tree representation, algebraic expressions, complete binary tree, extended binary trees, array and linked representation of binary trees, traversing binary trees, threaded binary trees, traversing threaded binary trees. [7] 7) Searching: Sequential search, binary search. [2] 8) Sorting: Insertion Sort, Selection Sort, Bubble Sort, Radix Sort, Quick Sort, Merge Sort and Heap Sort. [8] 9) Binary Search Trees: Binary Search Tree (BST), Insertion, Deletion and Search Operations in BST. [5] 10) Height Balance Tree: Introduction to Height Balance Tree, Insertion, Deletion and Search Operations in Height Balance Tree. [5] 11) Graphs: Terminology and representations, graphs and multi-graphs, directed graphs, sequential representations of graphs, adjacency matrices, traversal, connected component and spanning trees, minimum cost spanning trees. [7]
Text Books, and/or reference material	Suggested Text Books: 1. Horowitz and Sahani, "Fundamentals of data Structures", Galgotia Publication Pvt. Ltd., New Delhi. 2. R. BTO 441	FOOD BIOTECHNOLOGY	PER/OER	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
BTC01		CT+MT+EA					

Course Outcomes	CO1: To quantitate and identify the spoilage microorganisms present in food. CO2: To learn the concepts of food fermentation and increase the shelf life of food. CO3: To learn the concepts in genetically modified food and increase the agricultural yield by using genetic engineering approach. CO4: To apply the concepts of antioxidant and nutraceutical for health and wellness. CO5: To follow the regulations and ethical issues of food safety by using good manufacturing practices in industry and genetically modified food.
Topics Covered	**Food Microbiology: [8]** Microorganism in food, Intrinsic and extrinsic parameters of food**,** rapid methods for identification of microorganism in food, Food borne illness, Biosensors –use and application **Food preservation [8]** Pasteurization, sterilization, Canning, thermal process of food with numericals, Irradiation, Dehydration, low temperature , use of preservatives **Food fermentation [10]** **Role of lactic acid bacteria in fermentation and strain improvement**, Fermentation of meat, fish, vegetables, beverages, dairy product, non-beverage product , use of genetic engineering techniques for improved quality product**.** **Genetically modified food [8]** Fruit ripening, amino acid, vitamin content, Golden rice. Safety aspects of genetically modified food, Ethical and regulatory issues **Biotechnology in relation to food product [4]** Antioxidant, nutraceutical, **Food safety [6]** Legal status of irradiated food and preservatives, Concept of HACCP, Hazop, codex alimentarius, ISO series, detection of toxin, heavy metal , pesticide and herbicides

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTS451	CELL BIOLOGY AND GENETICS LABORATORY	PCR	0	0	3	3	1.5

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Cell Biology and Genetics (BTC301)	CT+EA

Course Outcomes	CO1: To design, analyze and solve problems related to cell biology and Molecular genetics and interpretation of data obtained by the lab experiments. CO2: To develop skills to perform experiments related to cell biology and Molecular genetics and have hands on training on the related area. CO3: To learn to interpret data, draw conclusion and develop trouble shooting skills.
Topics Covered	1. Isolation of chromosomal DNA from mammalian cells. 2. Genotyping PCR of a genetically modified cell. 3. Isolation of mRNA and RT-PCR to determine the level of transcription of the gene. 4. Studying to detect variations like single nucleotide polymorphism. 5. Studying bacterial conjugation. 6. To examine the morphology of cells 7. Identification of cellular organelles by staining method 8. Cell proliferation assay 9. Cell adhesion assay 10. Cell migration assay
Text Books, and/or reference material	Suggested Text Books: Suggested Reference Books: ● Molecular Biology of Cell by Albert et.al. John Wiley & Sons ● The Cell by Cooper. ASM Press ● M.W.Strickberger: Genetics, Pearson.

Department of Chemical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit

CHS481	UNIT OPERATIONS OF CHEMICAL ENGINEERING LABORATORY I	PCR	0	0	3	3	3

CHC431: Unit operations of chemical engineering-I.	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA

Course Outcomes	CO1: To record observations systematically and arrive at required results based on experiments conducted CO2. Understand the principles, laws and mechanism of different comminuting methods like sieve analysis crushers, and grinders, ball mill CO3. Acquire the knowledge of a cyclone separator and its efficiency CO4. Acquire the knowledge of different flow regime measuring instruments. CO5. Study and design different flow measuring instruments.
Topics Covered	• To find out the reduction ratio and capacity and to verify the laws of crushing by Jaw Crusher. • To determine the optimum speed for maximum new surface area created for the given feed size and also determines the critical speed of the ball mill. • Demonstration of the operation of a cyclone separator and determination of its overall efficiency • Experiments on Reynolds Apparatus for determination of flow regime and construction of Fanning friction factor vs. Reynolds No. plot • Determination of co efficient of Discharge for Orifice meter and Discharge for Venturi meter. • Determination of co-efficient of Pitot tube and construction of velocity profile across the cross section of pipe. • Experiment to prove Bernoulli's equation for fluid flow • To analyze a given powder for its particle size distribution. / Cumulative and Differential methods of particle size distributions and to find out screen efficiency
Text Books, and/or reference material	Suggested Text Books: 1. Units Operations of Chemical Engineering: McCabe & Smith and Harriot, MGH 2. Heat Transfer Principles and Application, B. K. Dutta, PHI. Suggested Reference Books: 1. Coulson, J.M., Richardson, J.F., "Chemical Engineering", Volume 2, Third Edition, Pergamon Press, 1977 2. Principles of Unit Operations by Alan S Foust, L.A. CSS481	PROGRAMMING AND DATA STRUCTURE LABORATORY	PCR	0	0	3	3	2
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Knowledge of Programming Language		CT+MT+EA					

Course Outcomes	• CO1: Choose appropriate data structures for representation and manipulation of the data for the given problems. • CO2: Handle operations like search, insertion, deletion, traversing and sorting on various data structures. • CO3: Have knowledge on the applications of linear and non-linear data structures for real life problems. • CO4: Able to store and manipulate data in an efficient manner. • CO5: Able to implement stack, queue, binary tree, etc. using arrays and linked lists. • CO6: Able to apply the concepts learnt through thiscourse in various domains like DBMS and compiler.
Topics Covered	**Linked List** • Implementations of Linked Lists menu driven program • Implementation of different operations on linked list – copy, concatenate, split, reverse, count no. of nodes etc. • Representation of Sparse matrix using multilinked structure. Implementation of sparse matrix addition and multiplication • Implementation of polynomial operations (addition, subtraction) using Linked List • Implementations of Doubly Linked List **Stack** • Implementations of stack menu driven program using array and linked list • Implementation of multi-stack in one array • Implementations of Infix to Postfix Transformation and its evaluation program • Implementations of Infix to Prefix Transformation and its evaluation program **Queue** • Implementations of double ended queue menu driven program using array and linked list • Implementations of circular queue menu driven program using array and linked list • Implementation of Priority queue program using array **Tree** • Implementations of Binary Tree menu driven program • Implementation of Binary Tree Traversal program • Implementations of BST program • Implementation of various operations on tree like – copying tree, mirroring a tree, counting the number of nodes in the tree, counting only leaf nodes in the tree **Sorting** • Implementations Insertion sort, Selection sort, Bubble sort and Quick sort menu driven program **Searching** 12) Implementations of Sequential and Binary Search menu driven program

FIFTH SEMESTER

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTC 501	BIOCHEMICAL REACTION ENGINEERING AND BIOREACTOR DESIGN	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	CO1 – To gain knowledge about Chemical and Biochemical processes, order of reactions, effect of various parameters on rate constant of a reaction C02- To study about different reactions in batch reactors, kinetics of enzyme catalyzed reactions CO3- To acquire knowledge about different ideal and non-ideal reactors, reaction kinetics, microbial growth kinetics CO4- To learn about various types of Bioreactors, their design considerations and applications in the field of Biochemical Engineering CO5- To study about mass transfer in bioprocess systems, scale up, instrumentation and control, bioreactor considerations in plant and animal cell culture						
Topics Covered	Rate of chemical reaction; Effect of Temperature on Rate Constant, Arrehnius equation, Order and Molecularity of a Chemical reaction, Elementary Reactions, First, Second and Third order reactions, Pseudo-first order reaction, Determination of rate constant and order of reaction. [5] Interpretation of batch reactor data for simple and complex reactions. Kinetics of Enzyme catalyzed reactions for free and immobilized enzymes.–derivation of Michaelis-Menten equation, Briggs-Haldane relationship, the determination and significance of kinetic constants, Lineweaver-burk and Eadie-Hofstee plot, principles of enzyme inhibition – Competitive, noncompetitive and uncompetitive. [5] Fundamentals of homogeneous reactions for batch, plug flow and mixed flow reactors. [5] Concept of ideal and non ideal reactors, Residence time distribution, Models for non ideal reactors (Dispersion model, tanks-in-series model). [5]						

	Stoichiometry of cellular reactions. Microbial growth kinetics (Batch, continuous, fed batch). Monod model and other kinetic models. Growth kinetics with plasmid instability. [6] Bioreactor design: Packed bed bioreactor, Fluidized bed bioreactor, Bubble column bioreactor, Air lift bioreactor, Tower bioreactor. Hollow fiber bioreactor, Membrane bioreactor. [4] Design of fermenter. Fermenter utilities – boiler and refrigeration system. [5] Immobilized cell bioreactor system. Mass transfer in bioprocess system. Two film theory, K_{la} determination. Scale up concepts. Bioreactor considerations for plant and animal cell culture [5] Bioprocess instrumentation and control. Computer controlled bioreactors. [2]
Text Books, and/or reference material	Suggested text books: 1. Bioprocess Engineering: Basic Concepts (2nd Edition), Shuler and Kargi, Prentice Hall International. 2. Bioprocess Engineering Principles – Pauline M Doran. Academic press 3. Chemical Reaction Engineering ,O Levenspiel, Wiley 4. Principles of Fermentation Technology, Stanbury and Whitaker, Pergamon press Suggested reference books: 1. Biochemical Engineering. Fundamentals, Bailey &Olis, McGraw-Hill 2. Biochemical Engineering, Humphrey and Aiba. Academic Press

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTC502	CELL AND TISSUE CULTURE	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
BTC01 Life Science BTC301 Cell Biology and Genetics		CT+MT+EA					
Course Outcomes	**CO1:** Students will acquire knowledge on plant and animal cell and tissue growth conditions. **CO2:** Students will be acquainted with plant and animal cell and tissue culture techniques in laboratory and industry setups. **CO3:** Students will be proficient in applying basic understanding of plant and animal cell and tissue growth requirements in plant and animal tissue culture techniques.						

Topics Covered	1. Introductory history, plant & animal cell culture facilities laboratory organization, media & aseptic conditions. [2] 2. Plant growth hormones, Cell culture, cellular totipotency, somatic embryogenesis, anther, pollen and ovary cultures, protoplast culture. [6] 3. Haploid production, triploid production, in vitro pollination and fertilization, zygotic embryo culture, somatic hybridization and cybridization, genetic transformation, somaclonal and gametoclonal variant selection. [7] 4. Production of disease-free plants, clonal propagation. [3] 5. Industrial applications: secondary metabolite production, germplasm conservation. [3] 6. Animal Cell Culture: Historical Background. [1] 7. Importance of and progress in Animal Cell Culture Technology. [1] 8. Biology of Animal Cell; Cellular Interactions. [5] 9. Importance of Serum and Serum Free Media. [2] 10. Culturing and Sub-Culturing of Animal Cells. [3] 11. In Vitro Transformation of Animal Cells. [1] 12. Cell Differentiation & Cell Movement. [2] 13. Cloning of Animal Cells. [2] 14. Cell Line Preservation. [1] 15. Cell Line Characterization. [2] 16. Chromosome Spreading and Karyotype Analysis. [2] 17. Mycoplasma: Detection and Control. [1] 18. Monoclonal Antibody Production. [2] 19. Insect Cell Culture: An Overview. [2]
Text Books, and/or reference material	Suggested Text Books: 1. Razdan – Introduction to Plant Tissue Culture, 2nd edition, 2007, Oxford and IBH Publishing. 2. "Culture of AnimalCells: A manual of basic technique", 4 th Edition Author(s)/Editor(s): Freshney RI. Publisher: WIELY-LISS ISBN:0-471-34889-9. Suggested Reference Books: 1. 			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTC503	BIOSEPARATION AND BIOCHEMICAL ANALYSIS	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					

Basic Physics, Mathematics including basics of Differential & Integral Calculus, Basic concepts of Chemistry & Biochemistry	CT+MT+EA
Course Outcomes	CO1: To learn the concepts of separation including purification sequence and its monitoring and the properties of proteins underlying bioseparations. CO2: To learn techniques of biochemical analysis of biomolecules. CO3: To learn and analyze, mathematically wherever applicable, the various unit operations in bioseparation. CO4: To understand the design aspects of unit operations in bioseparation. CO5: To solve problems of bioseparations including industrial bioseparations.
Topics Covered	**Basic Concepts** **[3]** Basic concepts of Bio-separation Technology **Basic Analytical Tehniques:** **[10]** Introduction to Biomolecules, Buffers Estimation of carbohydrate, protein, and lipid, and enzyme assay Quantitation of DNA and RNA Methods of cell disintegration **Removal of Insolubles** **[9]** Flocculation and conditioning of broth. Filtration at constant pressure and at constant rate; equations for batch and continuous filtration, centrifugal and cross-flow filtration. Centrifugation: basic principles, design characteristics; ultracentrifuges: principles and applications. **Techniques Involved in Separation Processes for Solutes** **[9]** Foam-fractionation; Solvent extraction, aqueous two-phase extraction, adsorption & desorption processes; Salt precipitation Membrane based separation processes:Micro-filtration, Dialysis, Reverse osmosis, Ultrafiltration and affinity ultrafiltration, concentration polarization, rejection, flux expression, membrane modules, dead-end and cross-flow modes. **Advanced Techniques for Bioseparation:** **[9]** Chromatography: paper chromatography, TLC, gel filtration, ion exchange, hydrophobic interaction chromatography, affinity chromatography, HPLC. Electrophoresis: Theory and application of Polyacrylamide and Agarose gel electrophoresis; 2D-Gel electrophoresis **Industrial Application with an example** **[2]**

Text Books, and/or reference material	Suggested Text Books: 1. Practical Biochemistry Principles and techniques (5th ed)/ Principles and Techniques of Biochemistry and Molecular Biology (7th ed): Editor Wilson and Walker, Cambridge University Press 2. Geankoplis, Transport Processes & Unit operations, PHI. Suggested Reference Books: 1. D. Holme & H. Peck, Analytical Biochemistry, 3rd ed, Longman, 1998 2. Shuler & Kargi, Bio-process Engg. PHI 3. Bailey &Olis, Biochemical Engg. Fundamentals, McGraw-Hill

CHC531	UNIT OPERATIONS OF CHEMICAL ENGINEERING-II	PCR	3	1	0	4	4
CHC431: Unit operations of chemical engineering-I.		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	• To learn different types of mass transfer phenomena • Understanding the fundamentals of mass transfer operations • To learn design parameters, their effects and calculations • To compare different types of mass transfer operations and their applications • To solve related problems of different difficulty levels through tutorials
Topics Covered	**Module I:** Principles of mass transfer: Introduction, diffusion, classification of diffusion, Inter-phase mass transfer. [8 hr] **Module II:** Evaporation: Introduction, types of evaporators, design calculation and processes [8 hr] **Module III:** Drying: Principles of drying, drying characteristics, methods, equipment. Humidification and Dehumidification: Definitions, adiabatic saturation temperature, wet bulb temperature, processes [8 hr] **Module IV:** Absorption: Principle, operation and design calculation [8 hr] **Module V:** Distillation: Flash distillation, differential distillation, fractionation and design calculations [8 hr] **Module VI:** Extraction and Adsorption: Principles and Operations. [8 hr]

Text Books, and/or reference material	Suggested Text Books: 1. B.K.Dutta, Principles of Mass Transfer and Separation Processes, Prentice Hall India Private Limited 2. N Anantharaman and K.M.M.S. Begum, Mass Transfer theory and practice. Prentice Hall India Private Limited 3. Robert E. Treybal, Mass Transfer Operations, McGraw Hill limited Suggested Reference Books:

Department of Biotechnology

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTO540	MINERAL BIOTECHNOLOGY	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO1: To understand the nature and characteristics of different biogeochemical cycles and involvement important micro-organisms. • CO2: To learn the basic concepts of bioleaching and biobeneficiationalong with the microbiological aspects • CO3: To gain the detail knowledge bioleaching processes with examples. • CO4: To demonstrate and provide examples on how to use microbes for the environmental pollution control						
Topics Covered	**Module-I :** Introduction to Biotechnology applied to Raw Material processing, Biogeochemical reactions – chemical mechanisms and controlling factors, Microbial interventions, Nature and characteristics of Biogeochemically important micro-organisms. 10 **Module-II:** Kinetics of bioleaching; Applications of biogeochemical process in mining and metallurgy, dump, heap and in-situ leaching. 8 **Module-III:** Reactor modeling for leaching, Beneficiation of ored and process residues: recovery of gold, silver, copper, beneficiation of sulfidic tailings from tin processing; purification of ferroginous sand. 8 **Module-IV :** Beneficiation of bauxite, applications of sulphate reducing bacteria; applications of sulphate reducing bacteria, Environmental pollution control: accumulation of metals by microbial cells. 8						

Text Books, and/or reference material	Suggested Text Books: 1. H.D. Kumar and S.Kumar , Modern Concepts of Microbiology , Vikas Publishing House , 2nd Edition , 2001 2. M.E. Curtin , Microbial mining and metal recovery biotechnology (1) , pp 229-235 , 1983 Suggested Reference Books: 1. Woods D, Rawling D.E., Bacterial bleaching and biomining J.L.(ed), Revolution in biotechnology , Cambridge University Press.

BTO541	INTRODUCTION TO COMPUTATIONAL BIOLOGY	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Life Science BTC01		CT+MT+EA					
Course Outcomes	• CO1: To impart knowledge of life science and biological data • CO2: To acquire knowledge of computational and mathematical skills for addressing important biological questions. • CO3: To learn how to develop and implement computational algorithms and tools for processing biological data						
Topics Covered	1. Introduction to Computational biology and its applications(2) 2. Central dogma and biological macromolecules- DNA, RNA & proteins(2) 3. Major biological databases related to DNA, RNA, proteins &metabolic pathways(3) 4. Basic file formats & sequence representation(2) 5. Computational algorithms for Sequence Alignment: Local and global alignment, Sequence similarity, Sequence identity, Gaps, Scoring matrices, pairwise and multiple alignments, Dynamic programming, BLAST & its application,(7) 6. Algorithms for phylogenetics: Tree constructions(5) 7. Structural Bioinformatics: A. Protein Structure and its visualization(2) B. Protein structural alignment(3) C. Protein secondary Structure Prediction(4) D. Protein tertiary Structure Prediction(4) E. RNA Structure Prediction(3) F. Molecular docking and docking algorithms(3) 7. Application of machine learning in biological sciences (Basic concepts) (2)						

Text Books, and/or reference material	Suggested Text Books: 1. Bioinformatics: Sequence and Genome Analysis by David W Mount, Cold Spring Harbor Laboratory Press 2. Introduction to Bioinformatics by Arthur MLesk Suggested Reference Books: 1. Protein bioinformatics: an algorithmic approach to sequence and structure analysis by Ingvar Eidhammer, IngeJonassen and William R.Taylor. 2. Essentials of Bioinformatics by JinXiong

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTS 551	IMMUNOLOGY LABORATORY	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA					
		CT+EA					
Course Outcomes	CO1: To learn the fundamentals of immunological techniques CO2: To be able to perform techniques routinely used in immunology, particularly the use of specific antibody in biomolecular applications. CO2: To be able to isolate, count and identify different types of blood cells. CO4: To develop an idea for proper documentation of the work including laboratory procedures, experimental conditions, materials used, equipment used and the results. CO5: To understand the basic hazards of working with human samples and antigens and safety measures to be taken						
Topics Covered	1. Cell count with Haemocytometer 2. Determination of viability of the cells 3. Serology: Preparation of the blood smear 4. Blood cell identification 5. Blood grouping by Agglutination assay 6. Quantitative WIDAL test (By tube test and slide test) 7. Precipitation test: Immunodiffusion 8. Enzyme linked Immunosorbent Assay (ELISA) 9. Protein detection by Western blot technique. 10. Lymphocytes isolation using FicollHypaque technique						

Text Books, and/or reference material	Suggested Text Books: 1. Immunology Laboratory manual. 2. ArtiNigam,ArchanaAyyagari,"Lab Manual in Biochemistry, Immunology and Biotechnology",McGraw Hill Education, India, 2007 Suggested Reference Books:

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTS-552	BIOPROCESS TECHNOLOGY LABORATORY	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+ EA					
Course Outcomes	CO1: To learn about surface culture fermentation in lab scale CO2: To learn about submerged culture fermentation in lab scale and various assays for antibiotics production, polysaccharide production and cell growth determination CO3: To learn about cell immobilization by entrapment method						
Topics Covered	1. Production of neomycin by fermentation 2. Production of citric acid by fermentation 3. Production of xanthan/dextran gum by fermentation 4. Production of Bakers yeast by fermentation 5. Cell Immobilization by entrapment method						
Text Books, and/or reference material	Suggested Text Books: 1. Experimental Process Biotechnology Protocols, S N Mukhopadhyay, Viva Books, 2007. Suggested Reference Books:						

Department of Chemical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)#	Total Hours	
CHS581	UNIT OPERATIONS OF CHEMICAL ENGINEERING LABORATORY II	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Unit operation of Chemical Engineering I and II		CT+MT+EA					
Course Outcomes	● CO1: Apply the knowledge of fundamentals of heat and mass transfer equipment on laboratory ● CO2: Experimentation and data analysis ● CO3: Handling various instruments and solve various difficulty levels ● CO4: Learn industrial applications of heat transfer equipment ● CO5: Complete process design through assignment / group task						
Topics Covered	● Determination of thermal conductivity of metal rod ● Determination of overall heat transfer coefficient in a counter-current & parallel flow double pipe heat exchanger. ● Determination of overall heat transfer coefficient in a shell and tube heat exchanger. ● Experimental test rig on drop-wise and film-wise condensation for assessing the performance. ● Studies on estimation of hold-up volume under steady state condition and evaluate the overall performance of a rotary dryer. ● Determination of overall efficiency of cooling tower ● Estimation of rate of drying of specific biomass under steady state condition in a atmospheric tray dryer ● Performance studies on continuous fractionating distillation column in terms of distillate, bottom product and reflux quantities, % loss, % recovery, energy consumption etc. 36 hr						
Text Books, and/or reference material	Suggested Text Books: 1) Transport Processes and Unit Operations - C. J. Geankoplis 2) Heat Transfer: Principles and Applications: B. K Dutta Suggested Reference Books:						

SIXTH SEMESTER

Department of Humanities and Social Sciences							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
HSC631	ECONOMICS AND MANAGEMENT ACCOUNTANCY	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					

Course Outcomes	• To review basic economic principles with students; • To introduce students basic capital appraisal methods used for carrying out economic analysis of different alternatives of engineering projects or works; • To educate the students on how to evaluate systematically the various cost elements of a typical manufactured product, an engineering project or service, with a view to determining the price offer.
Topics Covered	PART 1: Economics Group A: Microeconomics Unit 1: Economics: Basic Concepts Unit 2: Theory of Consumer Behaviour Unit 3: Theory of Production, Cost and Firms Unit 4: Analyses of Market Structures: Perfect Competition Unit 5: Monopoly Market Unit 6: General Equilibrium &Welfare Economics Group B: Macroeconomics Sl. No. Name Unit 1: Introduction to Macroeconomic Theory Unit 2: National Income Accounting Unit 3: Determination of Equilibrium Level of Income Unit 4: Money, Interest and Income Unit 5: Inflation and Unemployment Unit 6: Output, Price and Employment PART 2: Accountancy Sl. No. Name Unit 1: Introduction to Accounting Unit 2: Primary Books of Accounts (Journal) Unit 3: Secondary Books of Accounts (Ledger) Unit 4: Cash Book Unit 5: Bank Reconciliation Statement Unit 6: Trial Balance Unit 7: Final Accounts

Text Books, and/or reference material	Suggested Text Books: PART 1: Economics Group A: Microeconomics 1. Koutsoyiannis: Modern Microeconomics 2. Maddala and Miller: Microeconomics 3. AnindyaSen: Microeconomics: Theory and Applications 4. Pindyck&Rubenfeld: Microeconomics Group B: Microeconomics 1. W. H. Branson: Macroeconomics – Theory and Policy (2nd ed) 2. N. G. Mankiw: Macroeconomics, Worth Publishers 3. Dornbush and Fisher: Macroeconomic Theory 4. SoumyenSikder: Principles of Macroeconomics PART 2: Accountancy 1. Gupta, R. L. and Radhaswamy, M: Financial Accounting; S. Chand & Sons 2. Ashoke Banerjee: Financial Accounting; Excel Books 3. Maheshwari: Introduction to Accounting; Vikas Publishing 4. Shukla, MC, Grewal TS and Gupta, SC: Advanced Accounts; S. Chand & Co.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTC601	BIOINFORMATICS	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Cell Biology and Genetics (BTC301), Biochemistry and Enzyme Technology (BTC303), Programming and Data Structure (CSC431)		CT+MT+EA					

Course Outcomes	• CO1: To learn how to integrate both biological and computer skills for addressing important biological questions. • CO2: To acquire knowledge of existing biological databases and understand the methods for storing, organizing, retrieving and analyzing biological data in an efficient way. • CO3: To learn and implement computational algorithms and tools (webservers and standalone programs) for processing biological data

Topics Covered	1. Introduction to Bioinformatics and its applications (2) 2. Linux and Bash programming for bioinformatics (3) 3. Major Information Resources & biological databases (3) 4. Sequence Alignment: Sequence similarity, Sequence identity, Sequence homology, Gap Penalty, local and global alignment, pairwise and multiple alignments, sequence alignment algorithm, Dynamic programming, BLAST and PSI-BLAST, Application of BLAST tool, Concept of Scoring matrix (5) 5. Molecular phylogeny and evolution: Phylogenetics basics and methods for phylogenetic tree constructions (4) 6. Structural Bioinformatics: A. Protein Structure and its visualization, structural alignment (3), B. Protein secondary Structure Prediction (2), C. Protein tertiary Structure Prediction (2), D. RNA Structure Prediction (2) 7. Molecular Docking and Drug design (Basic concepts) (2)
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Bioinformatics: Sequence and Genome Analysis by David W Mount, Cold Spring Harbor Laboratory Press 2. Introduction to Bioinformatics by Arthur M Lesk <u>Suggested Reference Books:</u> 1. Introduction to Bioinformatics computer Skills by Cynthia Gibas and Per Jambeck 2. Protein bioinformatics: an algorithmic approach to sequence and structure analysis by Ingvar Eidhammer, IngeJonassen and William R. Taylor. 3. Essentials of Bioinformatics by Jin Xiong

CSC631	DATABASE MANAGEMENT SYSTEM	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1: Understand the basic concepts and appreciate the applications of database systems CO2. Comprehend the fundamentals of design principles for logical design of relational databases CO3: Apply the query writing skill CO4. Discuss the basic issues of transaction processing and concurrency control
Topics Covered	1. Introduction of DBMS. 5L 2. Concept of E-R diagram, Extended E-R diagram. 5L 3. Relational Algebra 4L 4. Queries with various operations 4L 5. SQL Queries 4L 6. Index structure design 5L 7. Normalization (Different normal forms) 5L 8. Basic concepts on transaction processing 5L 9. Various concurrency-control protocols (2 phase locking, time stamp protocol) 5L
Text Books, and/or reference material	Suggested Text Books: 1. Silberschatz, H. F. Korth and S. Sudharshan, “Database System Concepts”, Sixth Edition, Tata McGraw Hill, 2011. 2. R. Elmasri, S. B. Navathe, “Fundamentals of DBMS Systems”, Pearson education. Sixth Edition. 3. Kahate, “Introduction to Database Management Systems”, Pearson Education, New Delhi, 2006. Suggested Reference Books: 1. C.J.Date, A.Kannan and S.Swamynathan, “An Introduction to Database Systems”, Eighth Edition, Pearson Education, 2006.

Department of Chemical Engineering

CHC631	Process Control & Instrumentation	PCR	2	1	0	3	3
Mathematics, Unit Operations		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	• CO1: Analyze open-loop system • CO2: Analyze and apply the knowledge of linear closed-loop systems. • CO3: Develop working knowledge of control system by frequency response • CO4: Analyze the response of instruments and ability to integrate knowledge about instrument • CO5:Explain the importance and application of instruments
Topics Covered	Laplace Transform, 1st order response, 1st order in series, linearization, 2nd order Dynamics (12) Feedback control system, Servo and regulator problem, Transfer function of Controller, Final control element, Control valve characteristics, Transportation Lag, Routh-Hurwitz Criteria and stability (12) frequency response of closed-loop, frequency response technique, Bode Diagram and stability criteria (8) Static and dynamic responses, Measurement of temperature and pressure (5) instruments for process plant to measure flow, level and concentration of fluid (5)
Text Books, and/or reference material	Suggested Text books: 1. Process Systems Analysis and Control, Donald Coughanowr McGraw-Hill Science/Engineering/Math; 2 edition (March 1, 1991) 2. Chemical Process control, G. Stephanopoulos, PHI, 2008 3. Essentials of Process Control, Luyben et al. McGraw-Hill Companies (August 1, 1996) 4. Process control, Thomas Marlin, McGraw-Hill Education; 2nd International edition (July 1, 2000) Suggested Reference Books: 1. Jone's Instrumentation Technology (all the volumes) 2. Instrumentation and Devices by Rangan& Sharma 3. Considine's Handbook on Instrumentation 4. Atomic absorption and Emission Spectrophotometers, Ed Metcalfe 5. Industrial Instrumentation, D.P.Eckman

BTE610	Animal Biotechnology	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	CO1: To elucidate the scope of Animal Biotechnology. CO2: To learn the different areas of Animal Biotechnology applications. CO3: To learn the basic technology in each area of Animal Biotechnology. CO4: To learn the future prospect of the Animal Biotechnology.						

Topics Covered	**Animl Cell culture:**History of animal cell culture and development, Development of primary culture, Development of cell line by enzymatic disaggregation, Culture media and growth conditions. Cell type and characterization, origin of animal cell line, maintenance and characterization of different cell lines, Marker gene characterization (8) **Technology – Present and future :** Hybridoma technology/Monoclonal antibody technology, Vaccine production, Organ culture, Transfection of animal cells, Future tissue engineering (4). **In Vitro Fertilization and Embryo Transfer:** Basic knowledge on Fertilization and embryology, Steps involved in IVF, Fertilization by means of micro insemination, PZD, ICSI, SUZI, MESA (4) **Stem cells:** Classification and types, Sources, Markers, Differentiation signals, application, IPSC, Cncer stem cells (4). **Gene Therapy:** Ex-vivo gene therapy, In vivo gene therapy, Viral gene delivery system, Retrovirus vector system, Adenovirus vector system, Adeno-Associated virus vector system, Herpex simplex virus vector system, Non-viral gene delivery system, Prodrug activation therapy, Nucleic acid therapeutic agents (4) **Transgenic and Konck out Animals:** Methodology, Embryonic Stem Cell method, Microinjectionmethod, Retroviral vector method, Applications of transgenic animals **Recombinanat protein expression and purification:** Expression vectors for mammalian proteins, Cell (S cerevicea, P pasturis etc.) for large scale mammalian protein production, Post translational modification and purification.
Text Books, and/or reference material	Suggested Text Books: 1. Animal Cell Culture by John R.W. Masters; Oxford University Press Suggested Reference Books: 2. Introduction to Cell and Tissue Culture by Jennie P. Mather and Penelope E. Roberts; Plenum Press, New York and London 3. Molecular Biotechnology: Primrose. 4. Animal Cell Biotechnology: R.E. Spier and J.B. Griffiths (1988), Academic press. 5. Balasubramanian, Bryce, Dharmalingam, Green and Jayaraman (Eds.), Concepts in Biotechnology, University Press, 1996 6. Hood L.E., Weissman I., Wood W.B. and Wilson J.H. Immunology, Benjamin Cummings, 1989 7. Biotol Series – Butterworth and Heineman, Oxford, 1992

Department of Biotechnology

BTE611	Industrial Microbiology	PEL	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	CO1: To interpretbasic concepts for the production of microbial products.fermentation and separation technology CO2: To learn about the different types of Bioreators and their use. CO3: To analyse the principles, and techniques for improving the yield and desired properties in via strain improvement strategies. CO4: They will be able to apply the knowledge related to processes, equipment for industrial purpose and solve the problems.						
Topics Covered	**Industrial Microbiology– BTE611** **Introduction to Fermentation Technology: 12** Basic idea on fermentation process, submerged, stationary, solid and semi-solid – with their merits and demerits. Types of Media for Industrial fermentations; Media Optimization; Sterilization of Industrial Media; Media sterilization,.Preparation of microbial inoculum for Industrial fermentations. **Commercial strain development: 12** Induced mutations, Over producing decontrolled mutants, Catabolic derepressed mutants; Genetically engineered strain; Protoplast fusion technique. Improvement of strain by Site directed mutagenesis and Protein engineering : Definition, methods and application. Improving microbial strain forproduction of Amino acids Lysine and nucleosides and nucleotidesforaroma.Methods for production of 5' IMP and 5'GMP iii) Production of 5'IMP and 5'GMP by fermentation. **Microbial processes for production of valuables 10** Introduction, on Microbial growth and its kinetics.Primary and secondary metabolites and their regulation. Microbial production of organic acids, antibiotics,alcohol, bakers yeast, Single cell protein (SCP); Vitamins.Organisms used,(wild and mutated). production method- process, recovery of products separation parameters , purification steps..Application . **Microbial Enzyme Technology: 10** Microbial process for production of enzymes.Commercial production of enzymes; amylases, proteases,cellulase.Enzyme Modification - site directedmutagenesis;Importance of Stability of enzymes;Enzyme stabilization by selection and protein engineering for T4 Lysozyme; Principles & techniques of immobilization of Enzymes, Application of immobilized enzyme in Industrial processes						

Text Books, and/or reference material	Suggested Text Books: 1. Industrial Microbiology, Casida L E 2. Biotechnology: A textbook of industrial microbiology: CruegerW ,Crueger A 3. Industrial Microbiology, Prescott & Dunn Suggested Reference Books: 1. Prescott's and Dunn's, A. Industrial Microbiology, 4th edition. CBS Publishers, New Dehli , India , 1987. 2. L.E. Cassida.Jr, Industrial Microbiology, New Age International Publisher 3. Atkinson.B and Marituna.F, Biochemical Engineering and Biotechnology Handbok, The Nature Press, Macmillan Publ. Ltd. 4. Bailey &Olis, Biochemical Engineering Fundamentals, MGH. 5. Review papers from reputed international journals to convey the current progress .in this area.

Department of Biotechnology

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTE612	NUTRACEUTICAL AND NUTRIGENOMICS	PER	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	CO1: To establish the correlation between nutraceuticals with cell signaling pathway. CO2: To target nutraceuticals from different sources for prevention of disease. CO3: To understand the interaction between gut microbiota with functional food components and nutraceuticals and improvement of health. CO4: To formulate the concept of nutrient gene interaction for prevention of lifestyle related disorders.						

Topics Covered	Nutraceuticals : General concepts of cell apoptosis/proliferation and molecular targets of nutraceuticals. **[8]** Nutraceutical role in host immune response, in cancer, infection and chronic/acute inflammations. Mechanism of action of Nutraceutical-signaling events, proteomics and transcription factors. **[8]** Nutraceuticals from food and herbs I: Polyphenols, flavonoids and other phenolic compounds**.** **[5]** Nutraceuticals from food and herb -II: Saponins, terpenoids and sulphur compounds, Probiotic food with therapeutic applications, Prebiotics, Genomics of Lactic Acid Bacteria **[7]** Nutragenomics: An introduction, Nutrient gene interaction- Structure of nuclear receptors with reference to carbohydrate, fat and vitamin A, Type 2 Diabetes Mellitus and nutrigenomics, PPAR-γ and Diabetes Mellitus, Bioactive Peptides and its role in Nutrigenomics **[12]**
Text Books, and/or reference material	Suggested Text Books: 1. Nutritional Genomics: Discovering the Path to Personalized Nutrition by James Kaput, Raymond L. Rodriguez, Wiley Functional Food Ingredients and Nutraceuticals by John Shi , CRC Press 2. Nutraceuticals by Lisa Rapport, Brian Lockwood , Pharmaceutical press Suggested Reference Books: 1. Nutragenomics and Proteomics In Health Promotion and Disease Prevention by Mohamed M. Rafi, FereidoonShahidi, CRC Press 2. Nutraceuticals: The Complete Encyclopedia of Supplements, Herbs, Vitamins, and Healing Foods by Arthur J. Roberts, GenelleSubak-Sharpe, Mary E. O'Brien (Designer) , Perigee Trade 3. Regulation of Functional Foods and Nutraceuticals: A Global Perspective by Clare Haslr, Blackwell Publishing Professional

Course Outcomes	• CO1: To understand the general organization of human nuclear and mitochondrial genome and know about the salient features and characteristics. • CO2: To acquire knowledge the human genome project and its implication on clinical biology in the post genomic era. • CO3: To familiarize with different scientific techniques used for studying different features of genome. • CO4: To get an overview about different applications of the genomic based knowledge .
Topics Covered	1. Patterns of genome organization (10) 2. Structural genomics (2) 3. Functional genomics (2) 4. Reverse genetics (2) 5. Gene patenting (2) 6. Electronic PCR (2) 7. Genome mapping and genome sequencing (2) 8. Specialized database in molecular biology (2) 9. Human genome project progress (2) 10. Genes in health and disease(2) 11. Genomic disorders and molecular medicine (2) 12. Minimal cell Genome (2) 13. Prospects of Gene therapy in Human (2) 14. Pharmacogenomics (2) 15. Genebank (2) 16. Legal status of gene bank (2)

BTE614	MOLECULAR VIROLOGY	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Cell Biology (BTC 301/BT 403), Molecular Biology (BTC 401/ BT 404), and Immunology (BTC 402/ BT 501)	CT+MT+EA
Course Outcomes	• CO1: Acquire an understanding of virus life cycle and host-virus interactions. • CO2: Acquire an idea about detection, prevention and treatment of virus infections. • CO3: To learn about use of virus in biotechnology.
Topics Covered	Brief history and principles of virology. (1) Principles of virus classification. (2) General structure of viruses; Viroids, Virusoids, Satellite viruses, and Prions. (2) Genome of plant and animal viruses. Mobile genetic elements. (4) Replications of RNA viruses. (5) Replication of DNA viruses. (5) Virus-cell interactions: cytopathology; virus entry and egress; host cell shut off and IRES; viral persistence and latency. (6) Methods to diagnose virus infections. (3) Antiviral vaccines. (3) Antivirals: interferons and its mechanisms of action. (2) Gene silencing. (2) Culture and purification of viruses. (2) Viral vectors and gene therapy. (2) New and emerging viruses (3)
Text Books, and/or reference material	Suggested Text Books: 1. Principles of Virology: 4th Edition. By S. Jane Flint, Vincent R. Racaniello, Glenn F. Rall, Anna Marie Skalka, and Lynn W. Enquist. Suggested Reference Books: 1. Fields Virology by Lippincott Williams and Wilkins.

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTE 615	BIOMETTALURGY	PEL	3	0	0	3	3
Pre-requisites			Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))				
Microbiology, Chemical Kinetics			CT+MT+EA				

Course Outcomes	**CO1:** To recapitulate the basics of bioenergetics and to understand the relevant biogeochemistry & microbiology. **CO 2:** To learn about the concepts of bioleaching and biobeneficiation along with the microbiological aspects **CO 3:** To learn about bioleaching processes with typical examples. **CO 4:** To analyze the kinetics of bioleaching **CO 5:** To understand the enzymatic mechanism of bioleaching.
Topics Covered	Recapitulation of basics of bioenergetics (ATP as an energy-rich molecule, oxidation-reduction reactions), Biogeochemical cycles – sulphur, iron, and manganese cycles. Nature and characteristics of biogeochemically important micro-organisms. (9) Bioleaching: definition, scope, advantages & disadvantages; Types: direct, indirect, & indirect contact. Types of bioleaching with respect to reaction intermediates (thiosulphate& polysulphide mechanisms). Autotrophs & heterotrophs as candidate microorganisms for bioleaching. Bioleaching by aerobic and anaerobic microorganisms. (9) Bioleaching processes: in situ, heap & dump, & reactor bioleaching. Bioleaching of copper by *Acidithiobacillus* from chalcopyrites, chalcocite, &covellite. Dump & heap and reactor bioleaching of copper. Uranium bioleaching &biobeneficiation of gold. Environmental pollution control in gold recovery processes. (9) Kinetics of pyrite bioleaching – two-subprocess mechanism- ferric leach kinetics & kinetics of bacterial oxidation of ferrous iron. Modelling of continuous tank bioleaching of pyrite – unsegregated and segregated models. (9) Oxidation of iron by Acidithiobacillus – enzymatic mechanism; role of cytochromes & rusticyanin, elements of electron transport pathways in iron & sulphur oxidation. (6)
Text Books, and/or reference material	Suggested Text Books: **1.** Pillai Abhilash, B. D. Pandey, K. A. Natarajan. Microbiology for Minerals, Metals, Materials and the Environment, CRC Press, 2018 **2.** Ross W. Smith &ManoranjanMisra, ed. Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
BTC01 (Life Science), PHC01 (Physics), CYC01(Chemistry)	CT+MT+EA
Course Outcomes	• CO1: Acquire an idea about nanoscale phenomenon • CO2: To learn about the basic investigation tools for the nanobiotechnology • CO3: To learn about bottom up and top down synthesis of nanosystems • CO4: to get comprehensive understanding of applications of nanotechnology in biology
Topics Covered	• Nanotechnology; introduction to miniaturization. (4) • Iinvestigation tools: experimental methods and probes; basic principles of scanning force microscopy; scanning electron microscopy; transmission electron microscopy. Investigation tools: lithography (8) • Nanomaterials: organic and inorganic nanoparticles. Synthesis, assembly, and processing of nanostructures: phenomenon of self-assembly. (6) • Molecular self-assembly and bottom up synthesis of nanomaterials. (6) • Nanoparticles and cancer therapeutics; nanoparticle-based drug delivery. (6) • Nanofiber-based scaffolds and tissue engineering; nanodiagnostics and biosensing. (6) • Nanotoxicology. (4) • Future Concepts in Nanobiotechnology. (2)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1: To learn about the bioprocess engineering aspects of marine products in commercial production CO2: To learn about the industrial applications of various marine products and their production CO3: To study the specific applications in energy, pharmaceutical and environmental sector.		
Topics Covered	**Bioprocess engineering of marine products**	Marine microbiology	3
		Photobioreactors – light regime	
		mass transfer and scale up, downstream processing of marine products	6
		Management of Marine production, Storage and transport.	4
		Marine natural products, valuable chemicals, bioactive compounds from micro-algae	4
	Specialized aspects	Cultivation of marine microorganism	3
		marine biomedical and bioactive compounds from marine organisms	3
		commercial bio-products from marine organisms	2
		biohydrogen production in photobioreactor, marine enzymes	3
		Marine bio-film and bio-remediation	3
		marine bio-sensor and transgenic marine organisms	2
		Marine Pharmacology: Potentialities in the Treatment of Infectious Diseases, Osteoporosis and Alzheimer´s Disease	3
		Molecular biodiversity	2
		marine products as biomarkers	2
		Economic and Regulatory Aspects of Marine Biotechnology	2
Text Books, and/or reference material	Suggested Text Books: Suggested Reference Books: 1. Marine Bioprocess Engineering, J.G. Burgess R. Osinga R.H. Wijffels, Elsevier, 1999 2. Handbook of Marine Biotechnology, **Kim**Se-Kwon , Springer, 2015

BTE 618	FOLDING, MISFOLDING AND DISEASES	PEL	3	0	0	3	3

BTC401- Molecular biology &rDNA Technology; BTC 303 Biochemistry & Enzyme Technology; BTC 301 Cell biology and genetics		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
		CT+MT+EA
Course Outcomes	• CO1: To acquire an understanding of the protein structure • CO2: To learn about the principles of protein folding and misfolding • CO3: To obtain a comprehensive idea of different diseases related to protein misfolding • CO4: Development of cumulative understanding of protein folding, misfolding and diseases to find much-needed cure for the relevant conditions.	
Topics Covered	Basic of protein misfolding related diseases. The hierarchical structure of the protein. Principles of protein stability and folding. (16) Protein misfolding and aggregation. Protein quality control: molecular chaperones, protein degradation, autophagy and aging. (12) Prion Diseases. Alzheimer's Disease. Parkinson's Disease. Huntington's Disease and other unstable repeat disorders. Amyotrophic lateral sclerosis and frontotemporal lobar degeneration. (14)	
Text Books, and/or reference material	<u>Suggested Text Books</u>: 1. Fundamentals of Neurodegeneration and Protein Misfolding Disorders by Martin Beckerman, Springer 2. Introduction to Protein Structure by Carl IV Branden, Routledge <u>Suggested Reference Books:</u> 1. Structure and Mechanism in Protein Science: A Guide to Enzyme Catalysis and Protein Folding by Alan Fersht, W. H. Freeman.

BTE619	ENGINEERING RESISTANCE IN PLANTS	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
BTC502 (Cell & Tissue Culture of Animals & Plants)		CT+MT+EA					

Course Outcomes	CO1: To develop the basic knowledge for genetic improvement of crop plants. CO2: Understanding the sources of useful genes required for engineering resistance. CO3: Learning of fundamentals of gene mapping and gene isolation. CO4: Learning the basics and methods of genetic transformation of plants. CO5: Solving problems related to biotic and abiotic stress faced by crop plants.
Topics Covered	**Introduction:** Principles of gene manipulation in plants and basic concepts of genetic improvement of crop plants**[5]** **Molecular markers & Cloning genes:** Identifying the good gene sources, general strategies for cloning genes from plants, Cloning methods based on DNA insertions, subtractive cloning, map-based cloning, chromosome walking, chromosome jumping, morphological markers, biochemical markers, molecular markers – RFLP, RAPD, AFLP, ISSR, RAMP, STMs, fingerprinting, SNPs**[10]** **Genetic Engineering:** Agrobacterium-plant interaction; virulence; Ti and Riplasmids; opines and their significance; T-DNA transfer; disarmed Ti plasmid; Genetic transformation Agrobacterium-mediated gene delivery; co-integrate and binary vectors and their utility; direct gene transfer - PEG-mediated, electroporation, particle bombardment and alternative methods; screenable and selectable markers; characterization of transgenics; chloroplast transformation **[10]** **Applications:**Genetic engineering of resistance to biotic stress, tolerance to abiotic stress, removal of environmental pollutants, quality nutrition and health, molecular farming**[10]** **Biosafety concerns:** Removal of selectable markers from GM crops, Modern tools of genetic manipulation of plants; genome editing**[7]**
Text Books, and/or reference material	<u>Suggested Text Books</u>: 1. H.S.Chawla, Introduction to Plant Biotechnology, Oxford & IBH Publishing co. Pvt..Ltd 2. Slater.A.,NigelW.S,Flower.R.Mark , Plant Biotechnology: The Genetic Manipulation of Plants, 2003, Oxford Univesity Press. 3. Plant Pathology; Fifth Edition, Elsevier; By Geroge N. Agrios. 4. BTS651	MOLECULAR BIOLOGY AND rDNA TECHNOLOGY LABORATORY	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+EA					

Course Outcomes	CO1: To understand the principle of isolation of nucleic acids through different techniques. CO2: To understand the techniques used in manipulation of nucleic acids. CO3: To develop expertise to apply the toolsof gene cloning and solve the problems associated with production of recombinant protein from genetically modified microorganisms. CO4: To develop an idea for proper documentation of the work including laboratory procedures, experimental conditions, materials used, equipment used and the results CO5: To understand the basic hazards of working with nucleic acids and safety measures.
Topics Covered	1. Isolation of genomic DNA 2. Quantification of DNA 3.Agarose Gel Electrophoresis of DNA 4. Isolation of RNA 5. Agarose Gel Electrophoresis of RNA 6. Isolation of plasmid – agarose gel electrophoresis (quantitation and purity test) 7. Restriction digestion of plasmid – agarose gel electrophoresis 8. Bacterial transformation using plasmid having antibiotic resistant marker and some other genetic markers. 9. Southern Blotting 10. PCR technique

MSC731	PRINCIPLES OF MANAGEMENT	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1:To make budding engineers aware of various management functions required for any organization CO2:To impart knowledge on various tools and techniques applied by the executives of an organization CO3:To make potential engineers aware of managerial function so that it would help for their professional career CO4:To impart knowledge on organizational activities operational and strategic both in nature C05: To impart knowledge on each functional area of management like Marketing, Finance, Behavioral Science and Quantitative Techniques and decision science
Topics Covered	**UNIT I:** Management Functions and Business Environment: Business environment- macro, Business environment -micro; Porter's five forces, Management functions –overview, Different levels and roles of management, Planning- Steps, Planning and environmental analysis with SWOT, Application of BCG matrix in organization**(8)** **UNIT II:** Quantitative tools and techniques used in management: Forecasting techniques, Decision analysis, PERT & CPM as controlling technique (7) **UNIT III:** Creating and delivering superior customer value:Basic understanding of marketing, Consumer behavior-fundamentals, Segmentation, Targeting & Positioning, Product Life cycle. (8) **UNIT IV:** Behavioral management of individual: Motivation, Leadership, Perception, Learning. (8) **UNIT V:** Finance and Accounting: Basics of Financial management of an organization, Preparation of Final Accounts, Analysis of Financial statements, Cost Volume Profit (CVP) Analysis, An overview of financial market with special reference to India. (12)

Text Books, and/or reference material	Suggested Text Books: • Financial Management, 11th Edition, I M Pandey, Vikas Publishing House. • Marketing Management 15th Edition, Philip Kotler and Kelvin Keller, Pearson India • Management Principles, Processes and practice, first edition, Anil Bhat and Arya Kumar, Oxford Higher education • Organizational Behavior,13 th edition, Stephen P Robbins, Pearson Prentice hall India • Operations Management, 7th edition (Quality control, Forecasting), Buffa&Sarin, Willey Suggested Reference Books:

BTE712	FOOD BIOTECHNOLOGY	PER	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1: To quantitate and identify the spoilage microorganisms present in food. CO2: To learn the concepts of food fermentation & increase the shelf life of food. CO3: To learn the concepts in genetically modified food and increase the agricultural yield by using genetic engineering approach. CO4: To apply the concepts of antioxidant & nutraceutical for health and wellness. CO5: To follow the regulations and ethical issues of food safety by using good manufacturing practices in industry and genetically modified food.
Topics Covered	**Food for health and wellness [2]** **Food Microbiology: [6]** Detection of microorganism in food – role of PCR, DNA CHIP, rapid methods for identification of microorganism in food, immunological methods, Bioassay, Biosensors- detection of toxin, heavy metal , pesticide and herbicides **Food preservation [10]** Pasteurization, sterilization, Canning, Irradiation, Dehydration, low temperature Food preservation, use of preservatives, **Food fermentation [8]** Role of lactic acid bacteria in fermentation and strain improvement, Fermentation of meat, fish, vegetables, beverages , dairy product, non beverage product , use of genetic engineering techniques for improved quality product.

	Genetically modified food **[6]** Fruit ripening, improvement of sweetness, flavor, starch, amino acid, vitamin content, Golden rice. Safety aspects of genetically modified food, Single cell protein, single cell oil, Spirulina, **Biotechnology in relation to food product and Food Safety** **(5+5)** Antioxidant, nutraceutical, Nutrigenomics Legal status of irradiated food and preservatives, Concept of HACCP, Hazop, codex alimentarius, ISO series
Text Books, and/or reference material	Suggested Text Books: Food microbiology by James . M. Jay Food Microbiology by Frazier and Westhoff Plant Biotechnology by Slater Suggested Reference Books: Fundamentals of Food Biotechnology by Lee

Department of Biotechnology

BTE713	BIOPHARMACEUTICAL PROCESS DESIGN	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	CO1: To learn about the manufacturing process and facility design for biopharmaceutical products CO2: To acquire knowledge of detailed design of GMP compliant biopharma plant CO3: To study the design and optimization of downstream processes of therapeutic protein manufacture in a commercial set up CO4: To learn about technology transfer, regulation, validation and quality assurance of biopharma industry						

Topics Covered	Manufacturing process - Drug substance manufacturing, drug product manufacturing, key factors for process evaluation. Manufacturing and storage of cell bank. Comparison of batch and continuous process for fermentation. Difference between suspension fermenters for cell culture and microbial fermentation. [6] Design and construction of manufacturing facilities for mammalian cell derived pharmaceuticals. Detailed design of a GMP compliant plant with process flow diagram along with utilities, water treatment, waste management and location selection [6] Downstream processing - Harvest of therapeutic proteins from high cell density fermentation broths – centrifugation and filtration. Expanded bed adsorption for separating the biopharmaceutical product from crude solution. Ultrafiltration process design and implementation for biopharmaceutical product recovery. Virus filtration process design for biopharmaceutical product recovery. Product recovery of biopharmaceutical products from transgenic sources – aqueous two phase extraction [12] Role of process development group and manufacturing group in biopharmaceutical process start up. [3] Making changes to a biopharmaceutical manufacturing process during development and commercial manufacturing – a case study [2] Biosimilars and non-innovator biotherapeutics in India – an overview of current situation [2] Fundamental of Quality assurance, Structure of Quality Management Systems, Responsibility of Management and Training of Personnel, Quality Assurance in Development. [5] Quality assurance in manufacturing, GMP, Process validation for cell culture derived pharmaceutical proteins. Regulation [6]
Text Books, and/or reference material	Suggested Text Books: Process Scale Bioseparations for the Biopharmaceutical Industry, Abhinav A. Shukla, Mark R. Etzel, ShishirGadam, CRC Press Manufacturing of Pharmaceutical Proteins, Stefan Behme, Wiley-VCH Suggested Reference Books: Pharmaceutical Production Facilities: Design and Applications, Graham Cole, Informa Healthcare Large-scale Mammalian Cell Culture Technology, Lubiniecki, CRC Press

BTE714	BIOENERGY	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA

Course Outcomes	Learn about energy crisis, problems of fossil fuel use, global warming Learn about production of biological solid fuel. Learn about gaseous biofuel production like methane and hydrogen in detail. Learn about liquid biofuels Learn about benefits and deficiencies of biofuels, life cycle analysis
Topics Covered	Energy and fossil fuel use – fossil fuel use, fossil fuel reserves, sustainable fuel sources [4] Consequences of burning fossil fuel – effects of industrial (anthropogenic) activity on greenhouse gases, sources of greenhouse gases [3] Mitigation of global warming – Kyoto protocol, reduction in global greenhouse gases, fuel cells, sequestration of carbon dioxide, alternative energy sources, energy storage. [4] Biological solid fuels – 1st, 2nd and 3rd generation biofuels, types of biomass available, energy and fuel generation using biomass. [5] Gaseous biofuels – methane production using anaerobic digestion process, sewage sludge and from landfill sites, use of methane as transport fuel. Hydrogen production from biological material, biological production of hydrogen, photosynthetic hydrogen production, hydrogen storage, use as transport fuel. Diethyl ether production [6] Liquid biofuels to replace petrol – methanol production. Large scale ethanol production from biomass, use of lignocellulosics for ethanol production, ethanol extraction after production, use of ethanol as fuel. Butanol production and use. [6] Liquid biofuel to replace diesel – synthetic diesel (FT synthesis), bio-oil (pyrolysis), microalgal biodiesel, biodiesel from plant oils and animal fats, properties of biodiesel, glycerol utilization. [5] The benefits and deficiencies of biofuels – reduction in fossil fuel use, fuel economy, reduction in carbon dioxide emission from biofuels, improvement in biodiesel quantity and quality, life cycle analysis of biofuels. [6] Jatropha cultivation, National hydrogen energy road map. [3]
Text Books, and/or reference material	Suggested Text Books. 1. Biofuels production, application and development. Alan Scragg, CABI. Suggested Reference Books:

BTE715	PROJECT ENGINEERING FOR BIOTECHNOLOGY	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	CO1: To learn about detailed design of a manufacturing plant CO2: To learn about cleaning, sterilization, waste management and utilities of a biotechnology production plant CO3: To study about Planning, construction and commissioning of a biopharmaceutical manufacturing plant CO4: To learn about project management and financial aspects of the plant						
Topics Covered	Introduction Basic considerations in plant design, project identification, preliminary techno-economic feasibility. Process flow Diagrams and symbols: Symbols of Process Equipments & their concepts, types of flow diagrams, Importance of Laboratory development, pilot plant, scale up methods [6] Piping and valves for biotechnology: design, piping materials, polishing, passivation, sizing of pipes and tubes, connections and cleanability, piping applications, supporting and insulating sanitary tubing, in-line instruments, hoses, valves. [6] Cleaning of process equipment: design and practice, sterilization of process equipment, pharmaceutical water systems: design and validation, utilities for biotechnology production plant, biowaste decontamination systems, Heating, ventilating & air conditioning (HVAC) [6] Programming & facility design, project planning, containment regulations affecting the design and operation of biopharmaceutical facilities. [6] Planning, construction and commissioning of a biopharmaceutical manufacturing plant: planning, construction, commissioning, qualification, validation, project schedules, cost estimates, organization of an engineering project, role & selection of contractors, legal aspects of facility engineering, health, safety and environmental law, building law. [6] Product sales and manufacturing costs: basic principles of cost calculation, fixed cost, variable cost, depreciation, interest, typical costs of biotechnological manufacturing processes, profit and loss calculation. [6] Investments: investment targets, types of investments, investment appraisal, cost comparison, profit comparison, internal rate of return, dynamic payback time. [3] Production concepts: capacity planning, dilemma of in-house manufacturing, aspects of manufacturing out-sourcing, contractual agreements, technology transfer, process optimization after market launch, supply chain management. [3]

		CT+MT+EA					

Course Outcomes	CO1: To acquire understanding of the basic building blocks of life CO2: To learn about the most common structural motifs found in protein and DNA CO3: To understand the atomic level interaction between the protein and DNA CO4: To learn how to determine protein structure
Topics Covered	Basic structural principles - The building blocks, motifs of protein structure, alpha-domain structures, alpha/beta structures, beta structures, folding and flexibility, DNA structures. (8) Structure, function and engineering - DNA recognition in prokaryotes by helix-turn-helix motifs. (4) DNA recognition by eukaryotic transcription factors, specific transcription factors (5) Enzyme catalysis with example of serine proteinases, membrane proteins, signal transduction, fibrous proteins (7) Recognition of foreign molecules by immune system, structure of spherical viruses (8) Prediction, engineering and design of protein structures, determination of protein structures (10)
Text Books, and/or reference material	<u>Suggested Text Books</u>: 1. Introduction to Protein Structure: Second Edition by Carl IV Branden, Routledge <u>Suggested Reference Books</u>: Structure and Mechanism in Protein Science A Guide to Enzyme Catalysis and Protein Folding: Alan Fersht

CO2: To learn about waste water treatment processes along with analytical procedures
CO3: To study about solid waste management
CO4: To acquire knowledge on bioremediation of pollutants</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Air pollution control methods and equipment - Primary and secondary air pollutants, Effect of air pollutants on health, Control of gaseous and particulate pollutants, air pollution control equipments. 6
Water pollution: sampling and analysis - Sampling, BOD and COD analysis, Bacteriological measurements, Numerical problems 5
Water and waste water treatment processes - Overview of treatment principles. Primary treatment – screening, sedimentation, flotation, neutralization etc. 4
Secondary treatment - Activated sludge process, extended aeration, Trickling filter, Aerated lagoons, Waste stabilization ponds, Aquatic plant systems, UASB reactors. Design of a complete mix activated sludge process. 8
Biomethanation. Nitrification and denitrification operations. Phosphorus removal. Sludge treatment and disposal. Tertiary treatment. Membrane based treatment processes. 8
Solid waste management, Vermiculture, hazardous waste management 5
Specialized aspects - Bioremediation for recovery of metals, Xenobiotics, Degradation of chlorinated hydrocarbons, polyaromatic hydrocarbons, Phytoremediation. Reactors in bioremediation. 6</td></tr>

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTE718	PROTEOMICS AND PROTEIN ENGINEERING	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
BTC303 Biochemistry and Enzyme Technology; BTC401 Molecular Biology and Recombinant DNA Technology;		CT+MT+EA					
Course Outcomes	**CO1:** Students will acquire knowledge on protein structure and function and will be able to apply the understanding in designing strategies for proteomic analysis and protein engineering. **CO2:** Students will be acquainted with tools and techniques for proteomic analysis and will be able to analyze proteomic data using databases. **CO3:** Students will be acquainted with tools and techniques for protein engineering and will be able to apply them to solve problem related to protein function and efficiency.						
Topics Covered	**Introduction to proteinstructure and function:** Elementary ideas of bonding and structure, stereochemistry; spectroscopic techniques. Amino acid structure and properties to 3D structure of protein. Basic principles of protein folding anddynamics. Protein sequence andevolution. [10] **Proteomics and its application:** Chromatography principles. Analytical protein and peptide Separation, Protein Digestion Techniques, Mass Spectrometers for protein and peptide analysis, protein identification by peptide Mass fingerprinting. Mining proteomes, protein expression profiling, identifying protein-protein interactions and protein complexes, Mapping protein modifications. [16] **Protein Engineering:** Proteins design and engineering, Random, site directed mutagenesis; Strategies to alter catalytic efficiency; structure prediction and odelling proteins; Molecular graphics in protein engineering; Dynamics and mechanics; Drug-protein interactions and Design; applications of engineered proteins. [16]						

Text Books, and/or reference material	Suggested Text Books: R.M. Twyman; Principles of Proteomics, Bioscientific Publishers. Biotechnology, 2nd Edition 2015. David Clark and Nanette Pazdernik. BTE719	MOLECULAR MODELLING &DRUG DESIGN	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Biochemistry and Enzyme Technology, Bioinformatics		CT+MT+EA					
Course Outcomes	CO1: To understand the physical basis of the structure, the dynamic evolution of the system, and the function of biological macromolecules. CO2: To learn the fundamental concepts of structure-activity relationships CO3: To learn design of novel, biologically active compounds and Toelucidate the mechanism of action of drugs						
Topics Covered	Introduction to molecular Simulation Techniques (5) Quantum chemistry for Modeling of small molecules (5) Molecular Dynamics Methods- Molecular Dynamics of rigid non linear poly atomic molecules in ensembles, Structural information from M.D. (5) Force fields for molecular modeling: Choice of functional form. Parametrization of a force field, Distributed multipole and polarizable forcefields, Hydrophobic effect and solvation energy. Potentials of mean force. (10) Conformational analysis: Geometry optimization using steepest descent and conjugate gradients. Restrained and constrained molecular dynamics. Distance geometry. Case studies: Prediction of protein-protein interactions. DNA conformation. (10) Principles of ligand based drug design: SAR, QSAR and 3D-QSAR. Receptor based drug design: Principles of receptor based de novo ligand design. Rigid body molecular Docking. (7)						

Text Books, and/or reference material	Suggested Text Books: A R Leach-Molecular Modelling,. Principles and application 2nd edition–Prentice Hall. Krogsgaard, L-Text Book of Drug Design and Discovery-2002, Taylor and Francis, London Suggested Reference Books: G.Walsh-Biopharmaceuticals-Biochemistry and Biotechnology-2003, Wiley Scolnick.J.(2001) Drug Discovery and Design .Academic Press, London N. BTE720	NANOTHERAPEUTICS	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1:To understand the role of the small molecules in the drug delivery system. CO2: To learn the fundamentals and principles of nanotechnologies in drug release system. CO3: To understand methods of nanotechnology in point of care diagnosis. CO4: To understand the basic mechanism of nanotherapeutics of tumours.
Topics Covered	**UNIT -I NANOPHARMACEUTICALS** **Nano-biotechnology for Drug Discovery** -Gold Nanoparticles for Drug Discovery -Use of Quantum Dots for Drug Discovery -Nanolasers for Drug Discovery -Cells Targeting by Nanoparticles with Attached Small Molecules . 5 Dendrimers, Nanobodies, Nanospheres-Nanotubes –Nano-cochleates.-Nano-molecular Valves for Controlled Drug Release –Nano-motors for Drug Delivery. 6 **UNIT - II ROLE OF NANOTECHNOLOGY IN BIOLOGICAL THERAPIES** **Development of nano medicines** – Nano Shells – Nano pores – Tectodendrimers – Nanoparticle drug system. Biomedical nanoparticles –Liposome's Different types of drug loading – Drug release – Biodegradable polymers. 5 Applications Nano biotechnologies for Single-Molecule Detection -Protease-Activated Quantum Dot Probes. 3 Nanotechnology for Point-of-Care Diagnostics –Nano diagnostics for the Battle Field – Nano diagnostics for Integrating Diagnostics with Therapeutics. 4 **UNIT – III APPLICATION IN CANCER THERAPY & NANOMEDICINE**

	Introduction and Rationale for Nanotechnology in Cancer Therapy -- Diagnostic approach by nano-sensing. 3 Passive Targeting of Solid Tumors: Pathophysiological Principles and Physicochemical Aspects of Delivery Systems -Active Targeting Strategies in Cancer with a Focus on\Potential Nanotechnology Applications. 5 Pharmacokinetics of Nano-carrier-Mediated Drug and Gene Delivery. 4
Text Books, and/or reference material	Suggested Text Books: 1. Kewal K. Jain, The Handbook of Nano-medicine Humana Press, (2008). Suggested Reference Books**:** Zhang, Nanomedicine: A Systems Engineering Approach” 1st Ed., Pan Stanford Publishing, (2005). Robert A. Freitas Jr., —Nano-medicine Volume IIA: Biocompatibility, Landes Bioscience Publishers, (2003).

BTE72 1	BIOMATERIALS	PEL	3	0	0	3	3
BT C303 Biochemistry & Enzyme Technology, CYC01 Chemistry		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1: Classify the biomaterials and recognize their production and properties. CO2: Explain the application areas of biomaterials CO3: To realize the important basic properties and requirements for biomaterials CO4: Recognize the importance of relationships between living tissues and biomaterials
Topics Covered	Definition of biomaterials – biologically derived materials or materials compatible with biology. **(2)** Common biomaterials: some proteins, many carbohydrates and some specialized polymers. **(4)** Collagen (protein in bone and connective tissues): Structure production and its use. **(3)** Fibroin (protein in silk): Production and its use. **(2)** Production of these proteins by conventional cloning methods. **(3)** Carbohydrates: Modified carbohydrates acting as lubricants for biomedical applications; Polydextrose; Carbohydrates modified by enzymes; **(8)** Biopolymers: Synthesis from a simple biological monomer (eghyaluronate polymers); Dextrans (used in chromatography columns); Rubberllike materials produced by bacteria and fungi (Polyhydroxybutyrate PHB), Poly-caprolactone (PCL); Production of a copolymer of PHB and PHV(polyhydrovaleric acid), sold as Biopol by fermentation by Alcaligeneseutrophus; Biodegradable polymers **(8)**

	Industrial biopolymers: Production of polyphenol resins by the enzyme soybean peroxidase; Evaluation of the properties of biopolymers to make good biomaterials; Tensile strength (both elasticity and breaking strength); Hydration, visco – elastic properties; viscosity. **(8)** Biomaterials for Organ Replacement; Tissue Engineering; tissue replacements, cardiovascular; biodegradable and bioactive materials, drug delivery systems. **(4)**
Text Books, and/or reference material	Suggested Text Books: 1. Biomaterials: Principles and Applications by J.B. Park and J.D. Bronzino. 2. Biomaterials: SUJATA V. BHATT, Second Edition, Narosa Publishing House,2005. 3. Biomaterials Science: An introduction to Materials in Medicine, Edited by Ratner, Hoffman, Schoet and Lemons, Second Edition: Elsevier Academic Press, 2004. Suggested Reference book: 1. Biomaterials Science and Biocompatability, Fredrick H. Silver and David L. Christiansen, Piscataway, Springer, New Jersey.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTE723	STEM CELL BIOLOGY	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Cell Biology, Biochemistry, Genetics, Molecular Biology		CT+MT+EA					

Course Outcomes	CO1: To understand the basic mechanisms of how cells differentiate into specific tissues in response to a variety of biologic signalling molecules and the use of such factors for tissue production in-vitro. CO2: To acquire knowledge on the molecular basis of cellular and functional changes of different organs that occur in disease and treatments that cause tissue remodelling to correct these changes CO3: To gather insights on how studies of the developmental, cellular and molecular biology of regeneration have led to the discovery of new drugs/therapy for regenerative therapy. CO4: To understand the recent advances on application the regenerative therapy from well characterzied case studies.

Topics Covered	An Introduction to Stem Cells (2) Adult Stem Cells (1) Embryonic Stem Cells (1) Induced Pluripotent Stem Cells (1) Hematopoietic Stem Cells (1) Messenchymal stem cells , cord blood cells, Lessons from Medipost company products like Neurostem, Cardiostem, Cartistem, Pneumostem (4) Molecular and Cellular Bases of Organ Development (6) Cloning of Somatic Cells by Nuclear Transfer, iPSC based cloning, Production of chimera animals (4) Molecular Bases of degenerative disease (1) . Therapeutic Uses of Stem Cells with examples (2) . In vivo Regeneration of Tissues by Cell Transplantation (2) . IPS Cells as Experimental Models of Neurodegenrative Disorders: use of them as disease modelling platform, novel drug testing and tissue renerarative therapy and implantation studies(2) . Studies of Patients Treated with Stem Cells, The modalities of treatment, Preperation of cells/tissues/scaffolds and Trnasplantation procedure (3) . Tissue Regeneration Driven by Growth Hormones (2) . Organ of dish, Orgnoid culture, Tissue Bioprinting to develop transplantation quality organs, Bioartificial Organs (8) . Biobanking of stem cells and the ethical considerations in regenerative medicine. (2)
Text Books, and/or reference material	Suggested Text Books: Stem Cells, Tissue Engineering And Regenerative Medicine By: David Warburton 1st Edition. Principles of Regenerative Medicine by Anthony Atala Robert Lanza Tony Mikos Robert Nerem , 3rd Edition. Translational Regenerative Medicine by Anthony Atala and Julie G. Allickson Suggested Reference Books: The Developping Human by Keith L. Moore/T.V.N. Persaud/ Mark G. Tenth edition. Encyclopedia of Tissue Engineering and Regenerative Medicine by Rui Reis, IstEdtion.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTE72 4	APPLICATIONS OF MOLECULAR CLONING	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
BTC401 (Molecular Biology &rDNA Technology)		CT+MT+EA					

Course Outcomes	CO1: To understand the fundamentals of molecular cloning. CO2: To learn the basic methods of molecular cloning. CO3:To gain knowledge about the potential application aspects of molecular cloning. CO4: To build-up a bridging concept for extension of theoretical knowledge to practical applications of molecular cloning.
Topics Covered	**Module 1: Basic principles of molecular cloning** Why gene cloning and DNA analysis are important (2) Vectors for gene cloning (2) Purification of DNA from living cells (2) Manipulation of purified DNA (3) Introduction of DNA into living cells (3) Cloning vectors for prokaryotes (3) Cloning vectors for eukaryotes (3) How to obtain a clone of a specific gene (2) Other molecular techniques (2) **Module 2: Applications of molecular cloning in research** Sequencing genes & genomes (3) Studying gene expression & function (3) Studying genomes (4) **Module 3: Applications of molecular cloning in biotechnology** Production of protein from cloned genes (2) Gene cloning & DNA analysis in medicine (3) Gene cloning & DNA analysis in agriculture (3) Gene cloning & DNA analysis in forensic science &environment (2)
Text Books, and/or reference material	Suggested Text Books**:** T. A. Brown, Gene Cloning and DNA Analysis: An Introduction, Seventh Edition, Wiley Blackwell. Suggested Reference Books: Sandy B. Primrose, Richard Twyman& Bob Old, Principles of gene manipulation primrose: An introduction to genetic engineering, Sixth Edition, Blackwell Science

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit

BTO740	GENETIC ENGINEERING	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					

Course Outcomes	**CO1:** Students will acquire basic understanding of molecules of life and their basic chemistry. **CO2:** Students will acquire knowledge of how genetic material stores programs of life and how that information is retrieved. **CO3:** Students will acquire knowledge of basic tools of genetic engineering and their applications. **CO4:** Students will be able to apply the acquired knowledge in understanding and solving biotechnology issues surrounding us.
Topics Covered	Structures of macromolecules such as Carbohydrates, Proteins, Enzymes, Lipids and Nucleic Acids. [10] Basics of cell biology, prokaryotes vs. eukaryotes, sub-cellular structures, their organization and functions. [10] Central Dogma of molecular biology, DNA Replication, Transcription, Reverse Transcription, Translation. [10] Basic tools of nucleic acid manipulation. Methods of genetic engineering; Genetic engineering of microbes, plants and animals.[12]
Text Books, and/or reference material	Suggested Text Books: Essential Cell Biology, 4th Edition, Albertset. al. Biotechnology.2nd Edition, 2015. David Clark and Nanette Pazdernik.Academic Cell. Cecie Starr, Christine A. Evers, Lisa Starr. Biology: Today and tomorrow with physiology. Suggested Reference Books: Bruce Alberts, Alexander Johnson, Julian Lewis, Martin Raff, Keith Roberts and Peter Walter, Molecular Biology of the Cell, Garland Science. Molecular Biology of the Gene by James D. Watson, Tania A. Baker, Stephen P. Bell, Alexander Gann, Michael Levine, Richard Losick.

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit

BT1002	Bioprocess Engineering	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					
Course Outcomes	CO1: Strengthening of basic concepts of stoichiometry, kinetics, heat and mass transfer CO2: In depth learning of reactor design and operation for free and immobilized cells CO3: Learning of detailed processes of large scale mammalian cell and plant cell culture						

Topics Covered	Recapitulation: Stoichiometry of Growth and Product formation. Heat transfer for biochemical processes. Kinetics of Growth and Product formation in Batch, Continuous and Fed batch systems. 12 Media Sterilization and Air Sterilization. Design of Stirred Tank Bioreactors. 4 Mass transfer studies in stirred tank reactor and in free and immobilized cell bioreactors. 5 Design of Immobilized biocatalytic reactor, perfusion reactor, membrane reactor, Hollow fibre reactor, airlift reactor. Reactors for solid state fermentation. 5 Large scale mammalian cell culture – non perfused attachment system, fed-batch and perfusion for cell cultivation, suspension culture, microcarrier culture system, microencapsulation, large scale stirred tank and air lift reactors for cultivation of animal cell. Discussion on single use technologies. 10 Plant cell bioreactors – their design and operation. 3 Scale up, Instrumentation and Control of Bioreactors. 3
Text Books, and/or reference material	**Books** Large-scale Mammalian Cell Culture Technology, Lubiniecki, CRC Bioreactors: Analysis & Design, Tapobrata Panda, McGraw Hill Doran PM, '*Bioprocess Engineering Principles*', Academic Press **Reference:** Bioprocess Engineering: Basic Concepts (2nd Edition), Shuler and Kargi, Prentice Hall International. International Cell Culture Technology for Pharmaceutical and Cell-Based Therapies, Sadettin Ozturk, Wei-Shou Hu, CRC Bioprocess Engineering: Kinetics, Biosystems, sustainability and reactor design by Shijie Liu, Elsvier Publisher.

CO2: To gain knowledge about advanced methods needed to study macromolecular structures and functions.
CO3: To gain exposure to tools involved in manipulation of nucleic acids; advanced genetic engineering and molecular biology tools as well as advanced microscopy and immunological techniques.</td></tr>
</table>

Topics Covered	**Introduction to Genomics:** Importance of genomics; Sequencing of genomes; Assembly of genome sequences; The human genome project; Locating the genes in the genome; Determination of gene functions; Structural, comparative and functional genomics; Lessons from various prokaryotic and eukaryotic genomes; Comparative genomics in evolution and medicine; Genomic variations; Transcriptomes: measurement of gene expression; Genome and genome analysis; Bridging genomics to proteomics; Metagenomics. (14 classes) **Techniques for studying Macromolecular Structure.** Ultra centrifugation Sedimentation velocity and equilibrium determination of molecular weights; Electron microscopy; UV Visible Spectroscopy; Fluorescence Spectroscopy; Circular Dichroism Spectroscopy; Determination of protein 3D structure by Nuclear Magnetic Resonance spectroscopy; Determination of protein sequence by mass spectrometry. (14 classes) **PCR Techniques :**Multiplex, nested; reverse transcription PCR, real time PCR, touchdown PCR, hot start PCR, colony PCR, asymmetric PCR, cloning of PCR products; PCR based site specific mutagenesis; PCR in molecular diagnostics; viral and bacterial detection. (3 classes) **Genome Editing Tools:** Gene silencing: introduction to siRNA; siRNA technology; Micro RNA; construction of siRNA vectors; principle and application of gene silencing; gene knockouts and gene therapy. Restriction Enzymes; Zinc finger nucleases, TALENs, CRISPR-Cas9hybridization techniques. (4 classes) **Protein-DNA Interaction:** Study of protein-DNA interactions: electrophoretic mobility shift assay; DNase foot printing; methyl interference assay, chromatin immunoprecipitation; protein-protein interactions using yeast two-hybrid system; phage display, FRET (4 classes) **Microscopy and Immunological Techniques**: Application of following microscopes and microscopy techniques: Light and phase contrast; Fluorescence; Confocal; FRAP; TIRF; Electron (TEM and SEM); Electron tunnelling and Atomic Force Microscopy; Antibody generation, Flow cytometry (3 classes).

NA		EA					

Course Outcomes	CO1: To learn literature mining and acquire knowledge of presenting data in a proper format CO2: To enhance the communication skills of students CO3: Enable the students to face various kinds of audiences and develop self-confidence CO4: To learn application of ethical principles in various fields of research
Topics Covered	Each student is allotted a slot where he/she presents a scientific topic (related to the summer training they did in the previous semester)
Text Books, and/or reference material	Suggested Text Books: N.A. Suggested Reference Books:

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PCR)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTS755	PROJECT-I	PCR	0	0	3	3	1

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
All the Program Core subjects	CT+EA
Course Outcomes	CO1: To design, analyze and solve biological, clinical and biotechnology related research problem problems through participating in scientific project works. CO2: Familiarization with recent researches in the field of biotechnology. CO3: To develop skills to perform experiments, get familiar with different cutting edge technologies used to answer research questions and have hands on training on the related area. CO4: To learn to interpret data, draw conclusion and develop trouble shooting skills. CO5: To learn to present data, and defend a hypothesis forming the basis of a scientific study.
Topics Covered	Each student has to choose a Principle Investigator depending on his/her research interest and inclination and has to get involved in any ongoing research project. Students are required to familiarize themselves with the literature review and scientific techniques and skills.
Text Books, and/or reference material	Suggested text Books: Suggested Reference Books: Related research papers.

EIGHTH SEMESTER

Department of Biotechnology								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTO84 0	INDUSTRIAL BIOTECHNOLOGY	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Life science	CT+MT+EA

Course Outcomes	CO1- To understand the methods of cell 's bio processing under various conditions, strain improvement methods for better results CO-2 Demonstrate the experimental techniques associated with aseptic processes, media preparation and related upstream processes CO-3 .Design and develop medium for cell cultivation for fermentation process Apply the knowledge of sterilization techniques CO-4 Understand needs of various parts of fermenter and their operation and Design bioreactor based on thumb rules for fermentation operation CO-5 Apply the knowledge of Purification Separation and kinetics theory of Enzyme production for industrial fermentation
Topics Covered	**UNIT 1 CELL CULTIVATION ,GROWTH KINETICS** -- 10 Hrs Media development for Cell growth and culture for microbes , plant, animal -derived cells and its application. Microbial growth kinetics, logistic growth model, growth of filamentous organism Strain improvement of industrial micro organism. Measurement of cell mass. Cell immobilization. Numericals.. **UNIT 2-MEDIA PREPARATIONand STERILIZATION** 10 Hrs Sterilization: basic concepts in sterilization insitu and ex-situ sterilization, Sterilization of medium, air, filters, fermenter. Types of media, Strain preservation , inoculum preparation, Development of inocula for industrial fermentation/ seed fermenter **UNIT 3- BIOREACTOR DESIGN AND ITS OPERATION- 12 Hrs** Purpose and importance of bioreactor, Parts of fermenter and types ;Oxygen requirement, Oxygen transfer in fermenter, , KLa measurement, Measurement of dissolved oxygen concentrations, Estimating Oxygen Solubility'Operational modes of bioreactor: batch, semi-batch/fedbatch, continuous. Major components of bioreactor and its purpose, classification of Bioreactor – SLF, SSF, animal and plant cell culture. Classification of bioreactors for environmental control and management. Fixed bed bioreactor, airlift reactor, hollow fibre reactor, seed reactor.

	UNIT 4 INDUSTRIAL ENZYMES ,PURIFICATION and A PPLICATIONS -10Hour Enzyme engineered for new reactions-novel catalyst for organic synthesis. Case studies: thermozymes cold adopted enzymes. Ribozymes, therapeutic enzymes of industrial importance (amylase, glucose isomerase, cellulose, lipase, protease, xylanase, invertase, peroxidases). Separation of insolubles: filtration, centrifugation. Extraction and purification of solubles: Ultra filtration, high performance tangential flow filtration, Recovery and purification of intracellular products: cell disruption, chromatographic techniques. Analytical assays of purity level of enzymes.
Text Books, and/or reference material	Suggested Text Books: 1. Pauline M. Doran, “Bioprocess Engineering Principles”, Academic Press, 2 nd Ed., 2012. 2. El-Mansi (Ed.), “Fermentation Microbiology and Biotechnology”, CRC Press, 3rd Ed., 2011. Suggested Reference Books: 1. Ashok Pandey et al., “Enzyme Technology”, Springer Publisher, 2006. 2. Nielsen et al., “Bioreaction Engineering Principles”, Plenum Publishers, 2nd Ed., 2002. 3. Mohammed A. Desai (Ed.), “Downstream Processing of Proteins: Methods and Protocols”, Humana Press, 2000. 4. Satinder Ahuja, “Handbook of Bioseparations”, Vol 2, Academic Press, 1st Ed., 2000.

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BTO850	MEDICAL BIOTECHNOLOGY	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1: To provide an understanding about Inborn errors of metabolism and genetic disorders and their consequence. CO2: Able to analyze the key features therapeutics and drugs in current scenario. CO3: Able to apply the knowledge for commercial production of pharmaceuticals and place it in market for marketing approvals. CO4: Able to understand the ethical issues and the different competent regulatory authorities globally associated with clinical Biotechnology.

Topics Covered	**Microbial pathogenesis:** Definitions - Infection, Invasion, Pathogen,Pathogenicity, Virulence, Carriers and their types, Opportunistic infections, NosocomialInfections, epidemics. **Diagnosis of Infectious diseases**–Biology of Nitric oxide implications in diagnosis and therapeutics, Ethical problems around prenatal diagnosis, *in vitro* fertilization, cloning, gene therapy. **Drug Design and Drug delivery system :** Synthesis of compounds in accordance with the molecular structure and biological activity concept. Various principles/ mode of drug action/ screening of drugs/ drug analysis using various techniques . New generation viral vectors for Gene Therapy and advancement in Drug Delivery system, antibody mediated drug delivery of vaccines, Antibiotics **Molecular Medicine:** Antibodies and vaccines-Therapeutic production of antibodies different kind of vaccines and applications of recombinant vaccines.Ribozymes for therapeutic use in viral infection . **Cell and tissue therapy** – Gene therapy, tissue engineering, stem cell and cloning. In vivo targeted gene delivery **Clinical Toxicology**, **Clinical Research Governance and Ethics:** Basic concept in toxicology. Types and mechanism of toxin action- Epoxidation& drug toxicity, Overview on regulatory affairs for pharmaceuticals, neutraceuticals and medical devices. . International quality standard and related guidelines (ICH-E6). Risk assessment and trial monitoring. Legal and ethical issues on biotechnology, medical research and related clinical practice.

CO3: Development of comprehensive understanding of “Omes& Omics” to solve the existing problems of the society.</td></tr>
<tr><td colspan="2">Topics Covered</td><td colspan="7">Introduction to genomics; Importance of genomics; (2)
Sequencing of genomes; Assembly of genome sequences; (2)
The human genome project; (2)
Locating the genes in the genome; (2)
Determination of gene functions; (3)
Structural, comparative and functional genomics; (2)
Lessons from various prokaryotic and eukaryotic genomes; (3)
Comparative genomics in evolution and medicine; Genomic variations. (2)
Introduction to proteomics: (1)
Expression proteomics, Functional proteomics, Structural proteomics; (2)
Two-dimensional gel electrophoresis (2-DGE); Sample Preparation; Isoelectric focusing (IEF); (3)
Equilibration of the IPG strip, the second dimension and detection of proteins on the 2-DGE gel; (2)
Introduction to mass spectrometry; Mass spectrometry (MS) - based methods of protein identification: (3)
MALDI-MS, ESI-MS; (3)
Analysis of phosphoproteins by MS; Glycobiology and proteomics; (2)
Protein microarrays; Protein 3D structures; (2)
Protein interaction networks; Measuring proteins. (2)
Introduction to bioinformatics; (3)
Data acquisition; Databases and data retrieval; (3)
Searching sequence database; Multiple sequence alignment, (5)
phylogenetics and sequence annotation; (3)
Structural informatics; (4)</td></tr>

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT2053	**Omics and Bioinformatics Laboratory**	PCR	0	0	4	4	2
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Genomics, Proteomics & Bioinformatics		CT+EA					
Course Outcomes	CO1: To acquire knowledge of most important bioinformatics databases and learn text- and sequence-based searches to retrieve biological data in different file formats. CO2: Understanding pairwise and multiple sequence alignment using various softwares. CO3: Perform phylogenetic analysis to understand evolutionary relationships. CO4: To learn prediction of secondary and tertiary structures of protein and RNA Sequences						
Topics Covered	1. Introduction and use of various sequence and structure databases. 2.Sequence information resource: Using NCBI, EMBL, Genbank, Entrez, UniProt. 3.Pairwise Sequence Alignment: BLAST tool and interpreting the results 4.Multiple Sequence Alignment: Clustal, Muscleetc 5.Phylogeneticanalysisofproteinandnucleotidesequencesandphylogenetictree constructions using softwares like Mega, Phylip 6. Use of different protein family databases (SCOP,CATH). 7.Visualization of protein structures using Rasmol and PyMol.						

	8. Aligning protein structures. 9. Secondary structure prediction of proteins using DSSP, Pispred. 10. Homology modelling of proteins. 11. Using RNA structure prediction tools.

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
All the Program Core subjects		EA					
Course Outcomes	CO1: To design, analyze and solve biological, clinical and biotechnology related research problem problems through participating in scientific project works. CO2: Familiarization with recent researches in the field of biotechnology. CO3: To develop skills to perform experiments, get familiar with different cutting edge technologies used to answer research questions and have hands on training on the related area. CO4: To learn to interpret data, draw conclusion and develop trouble shooting skills. CO5: To learn to present data, and defend a hypothesis forming the basis of a scientific study.						
Topics Covered	Each student has to choose a Principle Investigator depending on his/her research interest and inclination and has to get involved in any ongoing research project. Students are required to familiarize themselves with the literature review and scientific techniques and skills.						
Text Books, and/or reference material	Suggested Text Books: Suggested Reference Related research papers.						

NINTH SEMESTER

Department of Biotechnology								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT 1051	**Bioprocess Engineering Laboratory**	PCR	0	0	4	4	2
Pre-requisites			Course Assessment methods (Continuous (CT) and end assessment (EA))				
Bioprocess Engineering							
Course Outcomes	**CO1**: To study the growth kinetics of E.coli and Saccharomyces cerevisiae in shake flasks and bioreactor **CO2:** To study the substrate utilization kinetics in a fermentation system **CO3:** To study the **S**terilization of a Bioreactor **CO4:** To determine Volumetric Oxygen Transfer Coefficient (K_La) in a Bioreactor **CO5:**To estimate Residence Time Distribution (RTD) in a Bioreactor **CO6:** To determine the correlation of Mixing Time with Reynold's Number in a fermentation system						
Topics Covered	1. Microbial Growth Kinetics 2. Determination Reducindg Sugar (Glucose) by Dinitrosalicylic acid (DNS) method 3. Media Sterilization and Air Sterilization 4. Aeration and Agitation in Bioreactors 5. Non ideal Flow in Bioreactors 6. Concept of Mixing Time determination

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT9033	**Signal Transduction**	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous assessment (CA) and end-term examination (ET))
Molecular Biology, Biochemistry, Cell biology and Genetics	CA+ET

Course Outcomes	CO1: Acquire an understanding on fundamental components of signal transduction processes. CO2: Acquire an understanding on various signaling steps in different physiological and developmental processes of bacteria, plants and animals. CO3: To be able to design experiments to investigate new signaling pathways and regulation of gene expression.
Topics Covered	Bacterial two-component regulatory systems (2) Ligands, Receptors, Second messengers and Effectors (3) Carriers and channels of membrane (1) G protein-coupled signal transmission (3) Protein tyrosine kinase (2) Ras/MAP Kinase pathways (2) Transcription factors and regulators (3) Chromatin remodeling (2) Ethylene signaling (1) Light perception and photoreceptors (2)
	Signal transducers and master regulators (3) Photomorphogenesis (2) Transcriptional networks of seedling development (2) Light regulated gene expression (2) Identification of novel signaling molecules (2) Functional characterization of new components (2) Cross talks among various signaling pathways (2)
Text Books, and/or reference material	Text Books: Lewin's Genes X by J.E. Krebs, E.S. Goldstein and S.T. Likpatrick Research Articles on the said topics (usually given to the students)

Bioprocesses and Biotechnology for Functional Foods and Nutraceuticals by Jean-Richard Neeser, J. Bruce German, CRC Press

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT9036	**Biopharmaceutical Technology**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Bioprocess Engineering, Bioseparation Technology		CT+EA					
Course Outcomes	CO 1: To learn about the manufacturing processes of drug substance and drug products CO 2: To learn about the detailed design of a GMP compliant plant CO 3: To learn about downstream processing of biopharmaceutical products at commercial level CO 4: To learn about biopharmaceutical process start up CO 5: To learn about quality management in a biopharmaceutical industry						

Topics Covered	Manufacturing process - Drug substance manufacturing, drug product manufacturing, key factors for process evaluation. Manufacturing and storage of cell bank. Comparison of batch and continuous process for fermentation. Difference between suspension fermenters for cell culture and microbial fermentation. [6] Design and construction of manufacturing facilities for mammalian cell derived pharmaceuticals. Detailed design of a GMP compliant plant with process flow diagram along with utilities, water treatment, waste management and location selection [6] Downstream processing - Harvest of therapeutic proteins from high cell density fermentation broths – centrifugation and filtration. Expanded bed adsorption for separating the biopharmaceutical product from crude solution. Ultrafiltration process design and implementation for biopharmaceutical product recovery. Virus filtration process design for biopharmaceutical product recovery. Product recovery of biopharmaceutical products from transgenic sources – aqueous two phase extraction [14] Role of process development group and manufacturing group in biopharmaceutical process start up. [2] Making changes to a biopharmaceutical manufacturing process during development and commercial manufacturing – a case study [2] Biosimilars and non-innovator biotherapeutics in India – an overview of current situation [2] Fundamental of Quality assurance, Structure of Quality Management Systems, Responsibility of Management and Training of Personnel, Quality Assurance in Development. [4] Quality assurance in manufacturing, GMP, Process validation for cell culture derived pharmaceutical proteins. Regulation [4] Concepts of understanding controlling factors regulating cost of production of a biopharmaceutical product. [2]
Text Books, and/or reference material	Text Process Scale Bioseparations for the Biopharmaceutical Industry, Abhinav A. Shukla, Mark R. Etzel, ShishirGadam, CRC Press Manufacturing of Pharmaceutical Proteins, Stefan Behme, Wiley-VCH References Pharmaceutical Production Facilities: Design and Applications, Graham Cole, Informa Healthcare Large-scale Mammalian Cell Culture Technology, Lubiniecki, CRC Press

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT9037	**Biomaterials**	PEL	3	0	0	3	3
Biochemistry, cell biology, Chemistry		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					
Course Outcomes	CO1: Classify the biomaterials and recognize their production and properties. CO2: Explain the application areas of biomaterials CO3: To realize the important basic properties and requirements for biomaterials CO4: Recognize the importance of relationships between living tissues and biomaterials						
Topics Covered	Definition of biomaterials – biologically derived materials or materials compatible with biology. **(2)** Common biomaterials: some proteins, many carbohydrates and some specializedpolymers. **(4)** Collagen (protein in bone and connective tissues): Structure production and its use. **(3)** Fibroin (protein in silk): Production and its use. **(2)** Production of these proteins by conventional cloning methods. **(3)** Carbohydrates: Modified carbohydrates acting as lubricants for biomedical applications; Polydextrose; Carbohydrates modified by enzymes; **(8)** Biopolymers: Synthesis from a simple biological monomer (eg., hyaluronate polymers); Dextrans (used in chromatography columns); Rubber Like materials produced by bacteria and fungi (Polyhydroxybutyrate PHB), Polycaprolactone(PCL); Production of a copolymer of PHB and PHV(polyhydrovaleric acid), sold as Biopol by fermentation by Alcaligeneseutrophus; Biodegradable polymers **(8)** Industrial biopolymers: Production of polyphenol resins by the enzyme soybean peroxidase; Evaluation of the properties of biopolymers to make good biomaterials; Tensile strength (both elasticity and breaking strength); Hydration, visco – elastic properties; viscosity. **(8)** Biomaterials for Organ Replacement; Tissue Engineering; tissue replacements, cardiovascular; biodegradable and bioactive materials, drug delivery systems.**(4)**

BT9038	**Biometallurgy**	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
Microbiology, Chemical Kinetics	CT+EA
Course Outcomes	**1:** To recapitulate the basics of bioenergetics and to understand the relevant biogeochemistry & microbiology. **2:** To learn about the concepts of bioleaching and biobeneficiation along with the microbiological aspects **3:** To learn about bioleaching processes with typical examples. **4:** To analyze the kinetics of bioleaching **5:** To understand the enzymatic mechanism of bioleaching.

Topics Covered	Recapitulation of basics of bioenergetics (ATP as an energy-rich molecule, oxidation- reduction reactions), Biogeochemical cycles – sulphur, iron, and manganese cycles. Nature and characteristics of biogeochemically important micro-organisms. (9) Bioleaching: definition, scope, advantages & disadvantages; Types: direct, indirect, & indirect contact. Types of bioleaching with respect to reaction intermediates (thiosulphate & polysulphide mechanisms). Autotrophs & heterotrophs as candidate microorganisms for bioleaching. Bioleaching by aerobic and anaerobic microorganisms. (9) Bioleaching processes: in situ, heap & dump, & reactor bioleaching. Bioleaching of copper by *Acidithiobacillus* from chalcopyrites, chalcocite, & covellite. Dump & heap and reactor bioleaching of copper. Uranium bioleaching & biobeneficiation of gold. Environmental pollution control in gold recovery processes. (9) Kinetics of pyrite bioleaching – two-subprocess mechanism- ferric leach kinetics & kinetics of bacterial oxidation of ferrous iron. Modelling of continuous tank bioleaching of pyrite – unsegregated and segregated models. (9) Oxidation of iron by Acidithiobacillus – enzymatic mechanism; role of cytochromes & rusticyanin, elements of electron transport pathways in iron & sulphur oxidation. (6)

BT9039	**BioEnergy**	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
	CT+EA

Course Outcomes	CO1: To learn about present energy scenario in the world and importance of alternate energy CO2: Detailed study on biological solid fuels CO3: Detailed study on biological liquid fuels to replace petrol and diesel CO4: Detailed study on biological gaseous fuels CO5: To learn about Indian scenario and approach to solve the problem
Topics Covered	Energy and fossil fuel use – fossil fuel use, fossil fuel reserves, sustainable fuel sources [4] Consequences of burning fossil fuel – effects of industrial (anthropogenic) activity on greenhouse gases, sources of greenhouse gases [3] Mitigation of global warming – Kyoto protocol, reduction in global greenhouse gases, fuel cells, sequestration of carbon dioxide, alternative energy sources, energy storage. [4] Biological solid fuels – 1st, 2nd and 3rd generation biofuels, types of biomass available, energy and fuel generation using biomass. [5] Gaseous biofuels – methane production using anaerobic digestion process, sewage sludge and from landfill sites, use of methane as transport fuel. Hydrogen production from biological material, biological production of hydrogen, photosynthetic hydrogen production, hydrogen storage, use as transport fuel. Diethyl ether production [6] Liquid biofuels to replace petrol – methanol production.Large scale ethanol production from biomass, use of lignocellulosics for ethanol production, ethanol extraction after production, use of ethanol as fuel.Butanol production and use. [6] Liquid biofuel to replace diesel – synthetic diesel (FT synthesis), bio-oil (pyrolysis), microalgal biodiesel, biodiesel from plant oils and animal fats, properties of biodiesel, glycerol utilization. [5] The benefits and deficiencies of biofuels – reduction in fossil fuel use, fuel economy, reduction in carbon dioxide emission from biofuels, improvement in biodiesel quantity and quality, life cycle analysis of biofuels. [6] Jatropha cultivation, National hydrogen energy road map. [3]
Text Books, and/or reference material	**Text Books:** 1. Biofuels production, application and development. Alan Scragg, CABI. 2. Research articles

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT9040	**Bioprocess & Plant Design**	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
Bioprocess Engineering, Bioseparation Technology	CT+EA

Course Outcomes	CO1: Learn about mass balance and energy balance in Bioprocess Engineering and Cell growth kinetics CO2: Learn about media sterilization and air sterilization including kinetics, design of batch and continuous media sterilizers and air sterilizers. CO3: Study of bioreactors and their design aspects related to microbial, plant and animal cell culture products CO4: Study of Scale-up, Operation, Instrumentation and control of Bioreactors. CO5: Bioreactor design supporting systems; Pumps, Refrigeration, Boilers and Effluent treatment plants. CO6: plant design aspects

Topics Covered	**Introduction to Bioprocess Engineering and Systems: (10)** Mass balance and energy balance in Bioprocess Engineering, kinetics of microbial growth, batch, continuous and fed batch systems, components of bioreactors, material of construction, vessel size, Aseptic operations in bioreactors, Mass Transfer and Heat transfer Bioreactors. Mechanical fittings in bioreactors ,Project planning in Bioprocess Engineering **Sterilization of Bioreactors: (6)** Media sterilization, kinetics of media sterilization, Arrhenius equation. Design of batch and continuous sterilizers Air sterilization, kinetics of air sterilization, Design of Air Filters **Bioreactors and their Design: (8)** Batch, continuous stirred tank Bioreactors (CSTR), Plug flow Bioreactors (PFR). Enzyme immobilized bioreactors ,Fluidized bed bioreactors, Bubble column bioreactors, Air- lift bioreactors, Hollow- fibre bioreactors, Membrane bioreactors Bioreactors for plant and animal cell culture systems **Scale-up, Operation, Instrumentation and control of Bioreactors: (4)** Scale up criteria, Measurement systems and their control in Bioreactors, Feedback control, Computer control Bioreactors. **Bioreactor design supporting systems: (6)** Reciprocating and Centrifugal Pumps; Boilers for Steam generation-Water Tube and Fire Tube boilers; Refrigeration systems; Effluent treatment systems-Aerobic and Anaerobic. **Plant Design (8)** Plant Location and Site Selection, Site layout, Utilities, Environmental considerations, Equipment cleaning, Culture cell bank, cGMP aspects, Bioprocess validation, Safety Considerations, Process economics.

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT9041	**Advanced rDNA & Cellular Biotechnology**	PCR	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
Cell Biology, Biochemistry, Immunology, Molecular Biology & rDNA Technology, Microbiology	CT+EA

Course Outcomes	CO1 :Learn the concept about working of Host system , vectors.specfic enzymes CO2 : Formulate the strategies for r proteins from specific cells,media selection and their modification. CO3: By applying knowledge of cellular technologies, purification specific bioreactors can be setup for commercial level production of valuable compounds for mankind.
Topics Covered	**Module 1** : **Tools and general Methodology Recombinant DNA Technology**: Vectors types and their importance. Selection of host and its characteristics, Cloning and screening strategies for gene and gene expression with specific examples. (**6)** **Module 2** : **Manipulation in Gene Expression and Protein Production in Prokaryotes and Eukaryotes**;Regulatable promoters role; Vector design for increasing protein, Fusion protein , protein stability ; overcome oxygen limitation ,DNA integration into host chromosome, Metabolic load, Increasing Secretion ;Yeast espression system Cultured insect cell expression systems;Microbial Cell factories for insulin production.Modified microorganisms for waste degradation, Synthesis of commercial from recombinant microorganisms Ascorbic acid , Indigo, amino acids antibiotics, Engineering human interferon , Human growth hormones, DNAse I and Aginate lyase. **(10)** **Module 3 : Animal cells as Bioreactor**: Cultivation systems for cell and tissue culture: Animal cell cultures maintenance and modifications. Vector design for mammalian gene expression ; CHO cells and its modification to enhance its potential in production of

	recombinant proteins; Animal cell culture fermenter. Cell immobilization techniques. Large Scale Production of r Protein, Types of Fermenter ,Two stage fermentation in Tandem air lift reactor for T4 DNA Ligase. Separation of products.**(10)** **Module 4**: **Plants as bioreactors** for bio Pharmaceuticals production:Plant tissue culture techniques Cell suspension cultures and bioreactor technology, secondary metabolites, plant biosynthesis of alkaloids, flavonoids, terepenes, phenols, regulation and commercial importance.Plant and plant cell culture derived r Therapeutics and its purification.**(10) Module 5** : **Recent advanced tools** for Forensic studies,Molecular Diagnostics, Gene therapy. Environment cleaning programme.**(6)**
Text Books, and/or reference material	**Text/ Reference Books :** 1. Principles of Gene Manipulation. Old and Primrose- Blackwell scientific Pub. 2. Recombinant DNA Technology. Watson JD et al., Scientific American Book Series 3. Molecular biotechnology Principles and applications of r DNA technology. Bernard R.Glick.Jack J Pasternak. ASM Press ; Washington DC 4. Culture of Animal Cells: A Manual of Basic Technique. R. Ian Freshney Wiley-Liss. 5.Principles of Gene Manipulation. Sandy B. et al., Blackwell Publishers

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT9042	**Animal Biotechnology**	PEL	3	0	0	0	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Genetics and Molecular Biology		CT+EA					
Course Outcomes	1. Learn about animal cell culture technique in laboratory scale. 2. Learn about technique for animal in large scale. 3. Learn about various techniques in animal biotechnology. 4. Learn about transgenic and knock animal techniques and its application. 5. Learn about techniques and importance of gene therapy 6. Learn about IVF technique and its importance. 7. Learn about stem cells and its applications.						

Topics Covered	1. History scope and prospect of animal cell culture: History of animal cell culture and development, Development of primary culture, Development of cell line by enzymatic disaggregation, Culture media and growth conditions.Cell type and characterization, origin of animal cell line, maintenance and characterization of different cell lines, Marker gene characterization. 2. Growth and scale up: Cell growth characteristics and kinetics, Micro-carrier attached growth, Cell culture in continuous, perfusion and hollow fiber reactor, Mass transfer in mammalian cell culture. 3. Technology – Present and future: Hybridoma technology/Monoclonal antibody technology, Vaccine production, Organ culture, Transfection of animal cells, Future tissue engineering. 4. Transgenic and Konck out Animals: Methodology, Embryonic Stem Cell method,
	Microinjection method, Retroviral vector method, Applications of transgenic animals 5. Gene Therapy: Ex-vivo gene therapy, In vivo gene therapy, Viral gene delivery system,Retrovirus vector system, Adenovirus vector system, Adeno-Associated virus vectorsystem, Herpex simplex virus vector system, Non-viral gene delivery system, Prodrug activation therapy, Nucleic acid therapeutic agents. 6.In Vitro Fertilization and Embryo Transfer:Composition of IVF media, Steps involved in IVF, Fertilization by means of micro insemination, PZD, ICSI, SUZI, MESA. 7.Stem cells: Classification and types, Sources, Markers, Differentiation signals, application, IPSC

<tr><td>Course Outcomes</td><td colspan="7">CO 1. The students will gain insight into the immune response to various infectious and non-infectious and autoimmune diseases.
CO 2. In depth understanding of the impact of different receptors cell signaling pathways in immune response will allow their knowledge to apply for future application.
CO 3. The latest technologies used in disease detection and antibody production
CO 4. To apply the concept and strategies for immunotherapeutics production from cell lines at higher scale.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Fundamental and cell signaling in immune system: Components of innate and acquired immunity; major histocompatibility complex and immune responsiveness, molecular basis of antibody diversity, self–non-self discrimination and immunological memory. Immunoglobulin superfamily; B and T cell activation B-cell receptor; T-cell receptor; cytokines, chemokines and their receptors; signal transduction pathways. (8)
Host-Pathogen interaction; Molecular basis of Immune diversity, Immunity and infection to bacteria, virus, protozoa, fungi. tumor. Cancer, Auto immune disease, Inflammation. Discussion with examples for each category.Research on progress for immunotherapay (8)
Principles and applications of laboratory tests in Immunology: Principles of antigen-antibody interactions;production and purification of polyclonal antibodies; antibody assays - precipitation, agglutination, immunoelectrophoresis advanced immunological techniques - RIA, ELISA, Western blotting, immunofluorescence, immunoelectron microscopy, flow cytometry and ELISPOT assay, surface plasmon resonance; total and differential counts in human peripheral cells, separation of monocytes from peripheral cells; lymphoproliferation assay, mixed lymphocyte reaction, cell cytotoxicity assays, HLA typing (6)</td></tr>
</table>

	Cellular technologies and animal cell bioreactors : Large scale production of interferon, therapeutic agents. Generation of monoclonal antibodies through Hybridoma technology,. Use of specific cells and cell lines for therapeutic purpose. Genetic engineering techniques to make human antibodies- chimeric antibodies & humanized antibodies, clinical use of monoclonal antibodies. **(8)** **Vaccinology:** Active and passive immunization; Live, killed, attenuated, sub unit vaccines; Vaccine technology- Role and properties of adjuvants, recombinant DNA and protein based vaccines; mRNA based vaccine, Peptide vaccines; conjugate vaccines, Dendritic cell vaccine; **(4)** **Clinical Immunology**- Hypersensitivity; Types of autoimmune diseases and their treatment; Transplantation and immunosuppressive therapy; Tumor immunology – Tumor antigens; Therapeutic uses of cytokines. **(8)**

Biochemistry, Proteomics, Protein Engineering		CT+EA					

Course Outcomes	CO1: To understand the physical basis of the structure, the dynamic evolution of the system, and the function of biological macromolecules. CO2: To learn the fundamental concepts of structure-activity relationships CO3: To elucidate the mechanism of action of drugs (drug-receptor interaction) CO4: To learn rational design of novel, biologically active compounds.
Topics Covered	Introduction to molecular Simulation Techniques (5) Quantum chemistry for Modeling of small molecules (5) Molecular Dynamics Methods- Molecular Dynamics of rigid non linear polyatomic molecules in ensembles, Structural information from M.D. (5) Force fields for molecular modeling: Choice of functional form. Parametrization of a force field, Distributed multipole and polarizable force fields, Hydrophobic effect and solvation energy. Potentials of mean force. (10) Conformational analysis: Geometry optimization using steepest descent and conjugate gradients. Restrained and constrained molecular dynamics. Distance geometry. Case studies: Prediction of protein-protein interactions. DNA conformation. (10) Principles of ligand based drug design: SAR, QSAR and 3D-QSAR. Receptor based drug design: Principles of receptor based de novo ligand design. Rigid body molecular Docking. (7)

Cell Biology and Genetics Biochemistry and Enzyme Technology, Microbiology and Fermentation Technology	CT+EA
Course Outcomes	CO1: To acquire knowledge on microbial based products of commercial importance at environmental ,industrial and clinical relevance. CO2:To Apply knowledge based skills in developing strategies to improve yield and reduce cost of the microbial process and or derived products CO3:To generate pilot plant design via understanding in microbial kinetic studies. and scale up approaches. CO4:Able to impart the knowledge in synthesis and separation of microbial products at highest level of purity as per the required demand.
Topics Covered	UNIT 1:An overview of traditional and modern applications of microbial products. Concept of Overproduction of metabolites. Strain improvement strategies for improved production of valuables via Classical (Random Mutagenesis)and advanced approches(Genetic engineering, Site directed mutagenesis, Protoplast fusion). Case studies on strategies for enhanced production of Insulin, Penicillin, and enzymes of microbial origin with emphasis onhost cell engineering ;vector design, optimization of media and process parameters. Concepts on cost analysis for better yield using improved technology (10) UNIT 2: Process technology for the production of microbial biomass. , primary metabolites and secondary metabolites. Growth and product kinetics .Fermentation, raw materials for fermentation, submerged, surface and solid-state systems, whole cell and enzyme immobilized systems.Technological processes for industrial manufacture of Yoghurt, acidophilus milk, Koumis, kefir, cheese, bread, alcoholic beverage, vinegar. Lactic acid and oriental fermented food of commercial importance. Equipment involved in the commercially important food processing methods.(10) UNIT 3: Different regulatory mechanisms involved in controlling the catabolic and anabolic processes of microbes, Induction, nutritional repression, carbon catabolite repression, Crabtree effect, feedback inhibition and feedback repression, with respect to biomass and valuables production.Case studies on Heterologous gene expression and secretion in Gram-positive bacteria with industrial applications. Biotechnology of protein secretion systems in Escherichia coli.(10)

	UNIT4:Environmental factors and stress in Bacterial community and their response.Microbial waste degradation (Heavy metal ,phenolics,and hydrocarbon); Microbes in bioenergy production (bioethanol , biobutanol,algal biofuel); Application based perspectives of Metagenomics. Plant microbe interaction microbe-mediated enhancement of nitrogen and phosphorus content for crop improvement; Genetic control of the cell cycle and microbial pathogenesis.(10) UNIT 5: Primary & secondary separation process for recovery of microbial products - Biomass removal . Biomass disruption , Membrane based techniques. Extraction -solvent, aqueous two phases, super critical, and Adsorption. Chromatography, Precipitation

.

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT9047	**Environmental Biotechnology**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Microbiology, Molecular Biology, Biochemistry		CT+EA					
Course Outcomes	Learn about scope, applications (pollution prevention and abatement) and different parameters in the field of Environmental Biotechnology. Learn about different modes of microbial interaction with inorganic and organic pollutants. Learn about aerobic and anaerobic biotransformation mechanisms and about the scope of genetically engineered organisms in bioremediation. Learn about role and requirements of microorganisms, Microbial community composition and the interactions between community members for enhanced bioremediation. Learn about different strategies of bioremediation – in-situ bioremediation approaches, ex-situ bioremediation approaches, biostimulation, bioaugmentation, monitored natural attenuation, phytoremediation. Learn about different factors regulating bioremediation. Learn about waste water characteristics. Learn about effluent treatment processes. Learn about various suspended growth Aerobic effluent treatment processes. Learn about various attached growth Aerobic effluent treatment processes. Learn about Anaerobic digestion process. Learn about design of reactors for effluent treatment processes.						

Topics Covered	Unit 1-Introduction to Environmental Biotechnology: definition, scope of applications; Biotechnology for pollution prevention and pollution abatement (green technologies – bioleaching of metals, microbially enhanced oil recovery, biodegradable polymers, biobleaching, biodesulphurization, biofuel production, biogas, bioremediation, etc.) (3) Unit 2 -Types of pollutants, sources of pollutants, magnitude of contamination problem, merits and limitations of bioremediation, bioremediation of organic and inorganic pollutants. Microbial interactions with heavy metals/radionuclides – bioaccumulation, biosorption,
	biotransformation, bioprecipitation, applications of metal-microbe interactions, biomining, engineering microorganisms for metal bioremediation (3) Unit 3 - Biodegradation principles – microbial processes, biotransformation, mineralization, detoxification, activation, cometabolism and growth associated degradation. Requirements for biodegradation, cooperation between different microbial species for enhanced biodegradation, Implications of recalcitrance, acclimation, biotransformation mechanisms – genes, enzymes, reactions, Biodegradation pathways and metabolites, effect of contaminant structure on biodegradability. (8) Unit 4 -Bioremediation strategies – microbial community composition and interactions between community members for enhanced bioremediation, natural attenuation and accelerated bioremediation, aerobic, anaerobic, ex-situ bioremediation approaches, in-situ bioremediation approaches, biostimulation, bioaugmentation, Phytoremediation - phytoextraction, rhizofiltration, phytodegradation, phytovolatilization, rhizoremediation, phytostabilization. (8) Unit 5 -Waste Water & Sludge treatment:Characteristics and analysis of waste water, Treatment of waste water of sewage & Industry. Bio-kinetics coefficient and its application in waste water treatment. Basic design concepts and calculations for waste water treatment of:Preliminary treatment units – screening,grit removal , removal of oil and grease; Primary treatment units-settling tank, flotation.Biological treatment:Aerobic: Activated sludge process, secondary settling tank, trickling filter, waste stabilization pond.Anaerobic : Anaerobic reactors for treatment of waste water- Anaerobic Digesters, Upflow Anaerobic Sludge Blanket Reactor(UASB), Fluidized Bed Biofilm Reactor(FBBR), Treatment and disposal of sludge, Solid waste management , Advanced Waste Water Treatment-Limitations of conventional treatment, pathogen removal, toxic substances removal, phosphorous and nitrogen removal (12) Unit 6 -Industrial Waste:Approach to design, process design parameters - Characteristics, analysis and treatment of wastes from different Industry like: dairy industry, fermentation, slaughter house, tanning, dye, pulp and paper, distillery, petroleum, heavy metal pesticides, food and beverage, antibiotics etc. Treatment of biological industry wastes, Treatment & disposal of radioactive waste.(8)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT9048	**Protein structure, folding & misfolding**	PEL	3	0	0	3	3
Biochemistry, Cell Biology, Molecular Biology		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					
Course Outcomes	CO1: To learn about protein structures and its classification into structural groups. CO2: To understand protein-DNA interactions and the origin of selectivity and specificity in this process CO3: To learn how to determine protein structure CO4: Understanding of protein folding mechanism and how protein misfolding is related to several human diseases.						

Topics Covered	Basic structural principles - The building blocks, motifs of protein structure, alpha-domain structures, alpha/beta structures, beta structures, fibrous proteins. (10) DNA structures. DNA recognition in prokaryotes by helix-turn-helix motifs. (6) DNA recognition by eukaryotic transcription factors, specific transcription factors. (6) Structural feature of common proteins involved in enzyme catalysis, signal transduction and immunity. (8) Protein Structure determination (4) Protein folding: thermodynamics, kinetics and chaperones. (4) Protein misfolding and Disease. (4)
Text Books, and/or reference material	Text Book: 1. Introduction to Protein Structure: Second Edition by Carl IV Branden, Routledge Reference book: 1. Structure and Mechanism in Protein Science A Guide to Enzyme Catalysis and Protein Folding: Alan Fersht

Code		(PCR) / Electives (PEL)	Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT9049	**Methods in Computational Biology**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Biochemistry, Bioinformatics, C programming		CT+EA					
Course Outcomes	CO1: Learning computational skills to examine biological information CO2: Learning and developing computational tools for analysis of large biological data CO3: To understand the models of biological systems constructed from experimental measurements CO4: Learn about machine learning and statistical tools to construct models from large existing datasets						

Topics Covered	Algorithms in Computing: Biological and Computer algorithm, Fibonacci problem, Dynamic Programming, Time and space complexity of algorithms (7) Programming languages- Algorithm, Flowchart, Compiling, Testing and Debugging (7) C programming – C language Introduction, Identifier , Variables, Constants, Operators, Input statement, Output statement, Conditional and Unconditional Control Statement, Looping Statement: while, do-while, for loop, Arrays. Read, write files (biological data) (10) Clustering and Trees: Hierarchical Clustering, k-Means Clustering, Evolutionary Trees, Distance-Based Tree Reconstruction, Reconstructing Trees from Additive Matrices, Character-Based Tree Reconstruction, Small and large Parsimony Problem. (10) Hidden Markov Models: Markov processes and Markov Models, Hidden Markov Models (8)

Basic understanding of biology, Chemistry and Physics		CT+EA					
Course Outcomes	CO1: Acquire advanced idea about nanoscale phenomenon CO2: To learn about the different investigation tools for the nanobiotechnology CO3: To learn about synthesis of diverse classes of nanomaterials CO4: To get comprehensive understanding of applications of nanotechnology in biology						

Topics Covered	Nanotechnology; introduction to miniaturization. (4) Investigation tools: experimental methods and probes; basic principles of scanning force microscopy; scanning electron microscopy; transmission electron microscopy. investigation tools: nanoimprint lithography (8) Nanomaterials: organic and inorganic nanoparticles. (6) Molecular self-assembly and bottom up synthesis of nanomaterials. (6) Nanoparticles and cancer therapeutics; nanoparticle-based drug delivery. (6) Nanofiber-based scaffolds and tissue engineering; nanodiagnostics and biosensing. (6) Nanotoxicology. (4) Future Concepts in Nanobiotechnology. (2)

BT9051	**Plant Biotechnology**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Biochemistry, Cell Biology, Genetics, Molecular Biology & rDNA Technology		CT+EA					

Course Outcomes	CO1: To understand the concepts and techniques of plant tissue culture. CO2: To understand the basic methods of mapping and cloning plant genes. CO3: To learn the methodologies of genetic transformation of plants. CO4: To generate the ability to create genetically modified plants by means of plant breeding and genetic engineering with improved quality traits.
Topics Covered	History of Plant Tissue Culture (1) Lab requirements and general techniques (1) Tissue Culture Media (1) Hormones in plant tissue culture (4) Cellular Totipotency (1) Somatic embryogenesis (1) Cell Suspension Culture (1) Haploid Production, (1) Somaclonal variation (1) Protoplast Isolation and Culture (1) Micropropagation in plants(1) Morphological Markers, Biochemical Markers, (1) molecular markers (DNA / protein) – RFLP, RAPD,AFLP, SSLPs, ESTs, SNPs etc., (6) Molecular mapping, Map-based cloning, (2) marker-assisted selection, marker-aided breeding, (1) Cloning of plant genes using activation tagging, transposon tagging etc. (2) Direct and indirect methods of genetic transformation of plants, (2) *Agrobacterium* mediated gene transfer, Ti Plasmid, (3) vectors for plant transformation, selectable and screenable markers, (1) gene constructs, strategies for genetic transformation of plants,(2) gene silencing, RNA interference, (1) genome editing in plants, (1) resistance to biotic stresses, tolerance to abiotic stresses, genetically modified crops (5)

BT9052	**Metabolic Engineering**	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
Basic concepts of chemical reaction kinetics & stoichiometry; matrices, Biochemistry, recombinant DNA Technology	CT+EA

Course Outcomes	**CO1:** To learn about the basic concepts of Metabolic Engineering **CO2:**To learn about the models of cellular reactions and to understand the regulation of metabolic pathways **CO3:** To understand the manipulation of metabolic pathways to enhance the yield and quality of the products **CO4:** To learn and understand the models and the concepts required for the purpose of metabolic flux analysis **CO 5:** To study the methods and application of metabolic flux analysis **CO 6:** To analyze metabolic networks
Topics Covered	Importance of metabolic engineering [1] Review of cellular metabolism, Regulation of metabolic pathways, Examples of pathway manipulations: metabolic engineering in practice – enhancement of product yield and productivity [10] Extension of product spectrum and novel products (antibiotics, biopolymers, polyketides, vitamins etc), Improvement of cellular properties [7] Metabolic modeling: Introduction to models for cellular reactions- stoichiometry, rates, and yield coefficients of cellular reactions, black box stoichiometries [7] Material balance & data consistency: Black box model; elemental balances, degree of reduction balances, Heat balance [7] Biochemical reaction networks: simple metabolic networks, flux analysis in metabolic networks; Metabolic control analysis [7] Xenobiotic degradation [3].

BT9053	**Nutraceuticals & Nutrigenomics**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					
Course Outcomes	CO1: To establish the correlation between nutraceuticals with cell signaling pathway. CO2: To target nutraceuticals from different sources. CO3: To understand the interaction between gut microbiota with functional food components and nutraceuticals. CO4: To formulate the concept of nutrient gene interaction.						
Topics Covered	Nutraceuticals : General concepts of cell apoptosis/proliferation and molecular targets of nutraceuticals. Nutraceutical role in host immune response, in cancer, infection and chronic/acute inflammations. Mechanism of action of Nutraceutical-signaling events, proteomics and transcription factors. Nutraceuticals from food and herbs I: Polyphenols, flavonoids and other phenolic compounds. Nutraceuticals from food and herb -II: Saponins, terpenoids and sulphur compounds, Probiotic food with therapeutic applications, Prebiotics, Genomics of Lactic Acid Bacteria Nutragenomics: An introduction, Nutrient gene interaction- Structure of nuclear receptors with reference to carbohydrate, fat and vitamin A, Type 2 Diabetes Mellitus and nutrigenomics, PPAR-γ and Diabetes Mellitus, Bioactive Peptides and its role in Nutrigenomics						
Text Books, and/or reference material	**Books** Nutritional Genomics: Discovering the Path to Personalized Nutrition by James Kaput, Raymond L. BT9054	**Molecular Plant Pathogen Interactions**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Molecular Biology & rDNA Technology		CT+EA					
Course Outcomes	CO1: Development of basic concept of plant diseases and contribution of environment toward plant disease development. CO2: Understanding the genetics of plant pathogen interactions. CO3: Learning about mechanisms of host defense & pathogenesis. CO4: Development of knowledge toward developing control measures against phytopathogens.						
Topics Covered	Introduction to molecular plant pathology, Plant diseases, (4) Plant disease development and environment, (3) Effects of pathogen on plant physiology, (2) Biochemistry of plant defense reactions, (3) Plant-pathogen interactions, (3) Genetic regulation of resistance in host plants, (4) Genetic regulation of virulence in pathogen, (4) Mechanisms of host defense, (3) Mechanisms of pathogenesis, (3) Hormone signaling pathways, (7) Biotechnological approach for plant protection; (3) Genetically modified plants to protect against pathogens. (3)

BT9055	**Cell Biology of Human Diseases**	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
Cell Biology, Molecular Biology and Biochemistry	CT+EA

Course Outcomes	CO1: To understand the concepts of structure, organization and molecular signaling of cells which govern its function. CO2: To understand cellular defects leading to human diseases and apply such understanding to explain any given phenotype at the cellular or organism level. CO3: To learn the application of experimental methods and designs to solve cell biology questions in human diseases.

Topics Covered	Overview of cell organizations and functions. (3) Experimentations in cell biology: Microscopy, genetic screens, cell fractionations and biochemical assays. (6) Cytoskeleton and extracellular matrix. Hypertrophic and dilated cardiomyopathies, epidermolysis bullosa simplex (EBS), muscular dystrophy, neurodegeneration, progeria, hearing defects. (4) Cell polarity, cell junctions and changes in cell shape. Neural Tube Defects.(2) Cell transport, endocytosis, exocytosis, membrane channels. Cholera and cystic fibrosis. (3) Cell migration during development and chemotaxis. Developmental defects and cancer.(1) Cilia structure and function and specialized sensory cells. Ciliopathies.(1) Protein processing, trafficking and transport. Microbial immune evasion,lysosomal storage disease, and diabetes.(4) Neurons, astrocytes and oligodendrocytes. Demyelinating diseases.(1) Mitochondrial function and mitochondrial genome. Mitochondrial diseases.(2) Cell cycle, cell proliferation, apoptosis. Cancer.(4) Stem cells and cell differentiation. Cancer.Regenerative medicine. (3) Nuclear organization and gene expression.Cancer.(2) Paper presentations (in group).(4)

BT9056	**Infectious Diseases & Infection Control**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Cell Biology, Immunology		CT+EA					

Course Outcomes	CO1: To understand about the spread of infectious diseases, the social impact and means of infection control CO2: To learn about bacterial infections and ways to tackle different bacterial diseases CO3: To learn the viral infections, vaccine development and challenges CO4: To learn about the protozoan and fungal infections and methods to combat them
Topics Covered	Origin of Infection; Evolution of infectious diseases; Concept of Infection: Immunity, Immune surveillance, Virulence, Pathogenesis (4) Introduction to pathogenic and non-pathogenic bacteria; Common bacterial diseases in humans; Basic mechanism of Bacterial pathogenesis; Bacterial survival in host cells- Quorum sensing; Bacterial virulence factors: Microbial structures and Toxins; infection; Bacterial immune evasion: Molecular Mimicry; Strategies for antibacterial therapy: Antibiotics, Other antibacterial compounds, and Antibiotic resistance- MDR and XDR strains. Bacterial vaccines. Case study: *E. coli* infection and diarrhoea (9) History of viral infections; Different viral diseases; Viral pathogenesis; Viral life cycle; Virus genomes and structure; Host –virus interactions; Host Immune reaction against viruses; Viral evasion of host immune surveillance; Antiviral pathways; Mutations in viral genome; Viral diseases and antibody response; Vaccine against viral diseases; Antivirals compounds for viral infections; Challenges in vaccine production against certain virtues; Case study: Influenza (9) Introduction to Protozoan Diseases; Different protozoan diseases, General mode of action of protozoa; Pathogenesis of protozoan diseases; Host response to Protozoans; Molecular signalling against Protozoa; Hypersensitivity and autoimmunity associated with Protozoan infections; Antimalarial drug development ; Case study: Plasmodium (7) General fungal diseases; Mode of action of fungal diseases; Immune response against fungal infection; Case study: Candidiasis; Infection caused by Yeast; Mode of action of Yeast infection; Case study: Ring worm (4) ; Infection and life style-Concepts of Microbiome; Neglected diseases (2) Spread of Infectious diseases; Disease epidemiology, Steps involved in epidemiology and epidemiological case studies; (3) Purpose of infection control, Regulations, policy and practice; Roles and responsibilities in infection control; Risk assessments; Principles of infection control procedures (4).

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Bioprocess Engineering, Bioseparation Technology		CT+EA					
Course Outcomes	CO1: Learning about process flow diagram and basic concepts of plant design CO2: Learning about cleaning of process equipment and design of pipes and valves CO3: Learning about facility design and project planning CO4Learning about Planning, construction and commissioning of a biopharmaceutical manufacturing plant CO5: Learning about process economics CO6: Learning about production concepts						

Topics Covered	Introduction Basic considerations in plant design, project identification, preliminary techno-economic feasibility. Process flow Diagrams and symbols: Symbols of Process Equipments & their concepts, types of flow diagrams, Importance of Laboratory development, pilot plant, scale up methods (6) Piping and valves for biotechnology: design, piping materials, polishing, passivation, sizing of pipes and tubes, connections and clean ability, piping applications, supporting and insulating sanitary tubing, in-line instruments, hoses, valves. (5) Cleaning of process equipment: design and practice, sterilization of process equipment, pharmaceutical water systems: design and validation, utilities for biotechnology production plant, biowaste decontamination systems, Heating, ventilating & air conditioning (HVAC) (4) Programming & facility design, project planning, containment regulations affecting the design and operation of biopharmaceutical facilities. (4) Planning, construction and commissioning of a biopharmaceutical manufacturing plant: planning, construction, commissioning, qualification, validation, project schedules, cost estimates, organization of an engineering project, role & selection of contractors, legal aspects of facility engineering, health, safety and environmental law, building law. (6) Product sales and manufacturing costs: basic principles of cost calculation, fixed cost, variable cost, depreciation, interest, typical costs of biotechnological manufacturing processes, profit and loss calculation. (6) Investments: investment targets, types of investments, investment appraisal, cost comparison, profit comparison, internal rate of return, dynamic payback time. (5) Production concepts: capacity planning, dilemma of in-house manufacturing, aspects of
	manufacturing out-sourcing, contractual agreements, technology transfer, process optimization after market launch, supply chain management. (6)

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT9060	**Medical Biotechnology**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Immunology, Molecular Biology, rDNA technology		CT+EA					
Course Outcomes	CO1: To provide an understanding about Inborn errors of metabolism and genetic disorders and their consequence. CO2: Able to analyze the key features therapeutics and drugs in current scenario. CO3: Able to apply the knowledge for commercial production of pharmaceuticals and place it in market for marketing approvals. CO4: Able to understand the ethical issues and the different competent regulatory authorities globally associated with clinical Biotechnology.						
Topics Covered	Module 1: Biochemical diagnostics in Medical Biotechnology 10 Clinical diagnosis of diseases: Inborn errors of metabolism and genetic disorders. Preimplantation diagnosis, pre-natal diagnosis-chorionic villus sampling, Amniocentesis. Molecular techniques for analysis of diseases: DNA polymorphism; 'disease' gene vs. 'susceptibility' gene; SNP detection: hybridization based assays; Polymerization based assays; Ligation based assays; Polymorphism detection without sequence information: Single nucleotide polymorphism and disease association; High throughput DNA sequencing and diagnosis; and Array based techniques in diagnosis. Module 2: Drug Discovery and targeting: 10 Overview of inherited and acquired diseases for gene therapy; Identification of disease biomarkers and selection of drug targets; Proteomics and High throughput DNA screening for drug discovery; Gene silencing technology: therapeutic applications in treatment of influenza and HIV/AIDS; Tissue and organ transplantation; Transgenics and their uses. Delivery system development: Intracellular barriers to gene delivery; virus, Liposome and nanoparticles mediated gene delivery. Module 3: Production of pharmaceuticals: 12 Production of pharmaceuticals by genetically engineered cells. Microbial transformation for production of important pharmaceuticals. Techniques for development of new generation antibiotics; Pharmacogenomics and pharmacogenetics of pharmaceuticals; Cellular and genotoxicity of pharmaceuticals.						

	Module 4:Clinical research: 10 Introduction and importance of clinical research, Drug development and phases of clinical trials: Designing clinical trials, Protocol designing, Ethical, safety and regulatory issues in clinical research, Drug regulatory concepts and accrediting agencies of the world (USFDA, TGA, ICH, WHO, ISO etc.), ICH-GCP Guidelines, Informed consent process, Role of CRC and CRA in clinical trials, Standard operating procedures, Guidelines to undertake clinical trials in India.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT9061	**Biological Chemistry**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Basic understanding of biology, chemistry and physics		CT+EA					

Course Outcomes	CO1: Understanding of the basic thermodynamic and kinetic aspect of biology. CO2: Getting familiarity with common principle of chemistry and chemical bonds CO3: To have a deeper understanding of energy flow in biology. CO4:To learn about the chemical reactions relevant to biological processes.
Topics Covered	Chemical reactions, reaction stoichiometry, rates of reaction, rate constants, order of reactions, Arrhenious equation, Maxwell Boltzmann distributions, rate determining steps, catalysis, free-energy, entropy and enthalpy changes during reactions; kinetic versus thermodynamic controls of a reaction, reaction equilibrium (equilibrium constant). (8) Chemical and Biological Synthesis-Introduction to synthesis in biology. Chemical synthesis of peptides and proteins. Chemical synthesis of nucleic acids. Chemical synthesis of oligosaccharides. Chemical synthesis of lipids. Biological synthesis of biological macromolecules. Directed biological synthesis of proteins. Biological synthesis of nucleic acids, oligosaccharides and lipids. (6)
	Advance chemical and physical tools for Biology-Electronic and vibrational spectroscopy in biology, Circular dichroism spectroscopy, Vibrational spectroscopy, Fluorescence spectroscopy, X-ray crystallography, Mass spectrometry for proteomics. (8) Chemical thermodynamics - internal energy, heat and temperature, enthalpy (bond enthalpy and reaction enthalpy), entropy, Gibbs free energy of ATP driven reactions, spontaneity versus driven reactions in biology; redox reactions and electrochemistry - oxidation- reduction reactions, standard cell potentials, Nernst equation, resting membrane potentials, electron transport chains (ETC) in biology, coupling of oxidative phosphorylations to ETC; theories of ATP production and dissipation across biological membranes. (8) Bond rotations and molecular conformations - Newman projections, conformational analysis of alkanes, alkenes and alkynes; functional groups, optically asymmetric carbon centers, amino acids, proteins, rotational freedoms in polypeptide backbone (Ramachandran plot). Types of organic reactions in biology; addition reactions- electrophilic, nucleophilic and free radical. Substitution reactions – electrophilic, nucleophilic and free radical. Elimination and Rearrangement reactions; Chemical insight of enzyme catalyzed reactions – proteases, polymerases, ribosomes. (12)

Chemistry: Principles, Patterns, and Applications. San Francisco: Benjamin Cummings. 3. Cantor, C. R., &Schimmel, P. R. (2004). Biophysical Chemistry. San Francisco: W.H. Freeman.

Department of Biotechnology							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
BT9062	**Bioentrepreneurship**	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
Basic understanding of Biosafety guidelines	CT+EA

Course Outcomes	**CO1.** To educate about various societal, governance and regulatory issues in biotechnology. **CO 2**. To educate about entrepreneurial skill attainment in customer development, customer validation, competitive analysis of the real-world problems and projects and market survey. **CO 3**. To build managerial capacity in value creation through company formation, intellectual property licensing of biopharmaceutical products. **CO 4.** To raise awareness about the ethical implications and safety rules in biopharma and GMO production management.
Topics Covered	**Introduction to Bioentrepreneurship**: Fundamentals of Marketing of biotechnological products, patent rules regarding product licensing. (4)
	Entrepreneurship traits & motivation: Growth of entrepreneurship, The marketing and selling of Biotechnology, Creating and marketing the image of the biotechnology company, Effective advertising and marketing.(8) **Entrepreneurial development:** Training, institution in aid of entrepreneur, Power and importance of Positioning of a company name and product. (6) **Capacity building**: **Regulatory systems for health products in India**: Regulatory authority India central (federal) and state (provincial) authorities. Central Licensing Authority. International collaboration of India with South East Asia Regulatory Network (SEARN). Quality management system (QMS). Regulatory functions : Control of clinical trials. Marketing Authorization, Registration Certificate for Import, Manufacturing Licence, Non-Objection Certification (NOC). Licence to manufacture Pre-approval batches, Import Licence, Export NOC for Biological Samples Pharmacovigilance for medicines, vaccines and blood products. (3) Setting of a small industry, location of an enterprise, steps of starting small industry, Incentive & subsidies for industry, Problems of entrepreneurship, The Art of Negotiation, Workable marketing and the strength of distribution. Opportunities in international marketing. (8)

	Risk & benefit assessment: Steps involved in product licensing and technology transfer for commercialization of a biotechnological product. (6) **Ethical issues and Biosafety guidelines:** Food safety and environmental safety evaluation of genetically modified microbes, crops, animals (GMO & LMOs); Roles of Institutional Biosafety Committee, WHO, DBT guideline for institutional biosafety . Primary Containment for Biohazards; Biosafety Levels; Biosafety Levels of Specific Microorganisms. Ethical implications of biotechnological products and techniques over human health. (7)
Text Books, and/or reference material	Text Book: 1. Dynamics of Entrepreneurial development & management; Vasant Desai, Himalay Publications. 2. Entrepreneurship reflection & investigation; M.S. Bisht & R.C. Mishra, Chugh Publication. 3. Entrepreneurship development in India; Samiuddin, Mittal Publication References: • Innovation, Product Development and Commercialization: Case Studies and Key Practices for Market • Science Business: The Promise, the Reality, and the Future of Biotech by Gary P. DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT.

6th Semester

	DEPARTMENT OF CHEMICAL ENGINEERING
CHE610	Chemical Reactor Analysis
CHE611	Industrial Pollution Control and Treatment
CHE612	Non-conventional Energy Engineering
CHE613	Combustion Engineering
CHE614	Artificial Intelligence in Chemical Industries

7th Semester

	DEPARTMENT OF CHEMICAL ENGINEERING
CHE710	Energy Sources & Utilization
CHE711	Bioprocess and Bioreactor Engineering
CHE712	Process Engineering
CHE713	Chemical Plant Design and Economics
CHE714	Process Safety in Chemical Industries

CHE715	Membrane Separation Processes
CHE716	Process Intensification
CHE717	Colloids and Interface Engineering
CHE718	Pinch Technology
CHE719	Energy Management and Process Optimization in Chemical Industry
CHE720	Self-Mastery

8th Semester

	DEPARTMENT OF CHEMICAL ENGINEERING
CHE810	Multiphase Flow
CHE811	Process Analysis and Optimisation
CHE812	Boiling Heat Transfer
CHE813	CFD Applications in Chemical Engineering
CHE814	Nanotechnology

9th Semester

	DEPARTMENT OF CHEMICAL ENGINEERING
CH9011	Biochemical and Bio Engineering
CH9012	Advanced Process Dynamics and Control
CH9013	Environmental Engineering
CH9014	Non-conventional Energy Engineering
CH9015	Chemical Process Optimization
CH9016	Multiphase Flow
CH9018	Petroleum Refining and Petrochemical Engineering
CH9020	Mathematical Heat Transfer and Fluid Flow
CH9021	Ethics in Engineering Profession
CH9023	CFD Applications in Chemical Engineering
CH9026	Nanotechnology
CH9027	Computer Aided Process Engineering
CH9028	Advanced Water and Wastewater Technology
CH9030	Colloids and Interface Engineering
CH 9034	Pinch Technology in Process Industry
CH 9042	Membrane Technology in Environmental Pollution Control
CH 9043	Biofuel Technology

DETAILED SYLLABUS

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 01	MATHEMATICS - I	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic concepts of function, limit, differentiation, and integration.		CT+MT+EA					
Course Outcomes	• CO1: To introduce the fundamentals of differential calculus of single and several variables • CO2: To develop the basic concepts of integral calculus including multiple integrals and its application in finding area, volume, centre of mass, centre of gravity etc. • CO3: To introduce the fundamental concepts of vector calculus • CO4: To develop the concept of convergence						
Topics Covered	**Functions of Single Variable:** Rolle's Theorem and Lagrange's Mean Value Theorem (MVT), Cauchy's MVT, Taylor's and Maclaurin's series, Asymptotes & Curvature (Cartesian, Polar form). (8) **Functions of several variables:** Function of two variables, Limit, Continuity and Differentiability, Partial derivatives, Partial derivatives of implicit function, Homogeneous function, Euler's theorem and its converse, Exact differential, Jacobian, Taylor's & Maclaurin's series, Maxima and Minima, Necessary and sufficient condition for maxima and minima (no proof), Stationary points,						

	Lagrange's method of multipliers. (10) **Sequences and Series:** Sequences, Limit of a Sequence and its properties, Series of positive terms, Necessary condition for convergence, Comparison test, D Alembert's ratio test, Cauchy's root test, Alternating series, Leibnitz's rule, Absolute and conditional convergence. (6) **Integral Calculus:** Mean value theorems of integral calculus, Improper integral and it classifications, Beta and Gamma functions, Area and length in Cartesian and polar co-ordinates, Volume and surface area of solids of revolution in Cartesian and polar forms. (12) **Multiple Integrals:** Double integrals, Evaluation of double integrals, Evaluation of triple integrals, change of order of integration, Change of variables, Area and volume by double integration, Volume as a triple integral. (10) **Vector Calculus:** Vector valued functions and its differentiability, Line integral, Surface integral, Volume integral, Gradient, Curl, Divergence, Green's theorem in the plane (including vector form), Stokes' theorem, Gauss's divergence theorem and their applications. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th ed., Wiley India Ed. (2010). 2. Daniel A. Murray, Differential, and Integral Calculus, Fb & c Limited, 2018. 3. Marsden, J. E; Tromba, A. J.; Weinstein: Basic Multivariable Calculus, Springer, 2014. **Reference Books:** 1. Tom Apostal, Calculus-Vol-I & II, Wiley Student Edition, 2011. 2. Thomas and Finny: Calculus and Analytic Geometry, 11th Ed., Addison Wesley.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
PHC01	**Engineering Physics**	**PCR**	**2**	**1**	**0**	**3**	**3**
Pre-requisites:		Course Assessment methods: (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course	CO1: To realize and apply the fundamental concepts of physics such as superposition						

Outcomes	principle, simple harmonic motion to real world problems. CO2: Learn about the quantum phenomenon of subatomic particles and its applications to the practical field. CO3: Gain an integrative overview and applications of fundamental optical phenomena such as interference, diffraction and polarization. CO4: Acquire basic knowledge related to the working mechanism of lasers and signal propagation through optical fibers.
Topics Covered	**Harmonic Oscillations** - Linear superposition principle, Superposition of two perpendicular oscillations having same and different frequencies and phases, Free, Damped and forced vibrations, Equation of motion, Amplitude resonance, Velocity resonance, Quality factor, sharpness of resonance, etc. [8] **Wave Motion** - Wave equation, Longitudinal waves, Transverse waves, Electro-magnetic waves. [3] **Introductory Quantum Mechanics** - Inadequacy of classical mechanics, Blackbody radiation, Planck's quantum hypothesis, de Broglie's hypothesis, Heisenberg's uncertainty principle and applications, Schrodinger's wave equation and applications to simple problems: Particle in a one-dimensional box, Simple harmonic oscillator, Tunnelling effect. [8] **Interference & Diffraction** - Huygens' principle, Young's experiment, Superposition of waves, Conditions of sustained Interference, Concepts of coherent sources, Interference by division of wavefront, Interference by division of amplitude with examples, The Michelson interferometer and some problems; Fraunhofer diffraction, Single slit, Multiple slits, Resolving power of grating. [13] **Polarisation** - Polarisation, Qualitative discussion on Plane, Circularly and elliptically polarized light, Malus law, Brewster's law, Double refraction (birefringence) - Ordinary and extra-ordinary rays, Optic axis etc.; Polaroid, Nicol prism, Retardation plates and analysis of polarized lights. [5] **Laser and Optical Fiber** - Spontaneous and stimulated emission of radiation, Population inversion, Einstein's A & B co-efficient, Optical resonator and pumping methods, He-Ne laser. Optical Fibre– Core and cladding, Total internal reflection, Calculation of numerical aperture and acceptance angle, Applications. [5]
Text Books, and/or reference material	**TEXT BOOKS**: 1. The Physics of Vibrations and Waves, H. John Pain, Willy and Sons 2. A Text Book of Oscillations and Waves, M. Goswami and S. Sahoo, Scitech Publications 3. Engineering Physics, H. K. Malik and A. K. Singh, McGraw-Hill. **REFERENCE BOOKS**: 1. Vibrations and Waves in Physics, Iain G. Main, Cambridge University Press 2. Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					

Course Outcomes

- CO1: Introduced to chemical thermodynamics, kinetics, electrochemistry, absorption, and catalytic processes for engineering applications
- CO2: To learn fundamentals of polymer chemistry and petroleum engineering.
- CO3: Introduced to basic spectroscopic techniques for structure determination and characterization.
- CO4: To study few inorganic and bioinorganic compounds of industrial importance.

Topics Covered

ORGANIC CHEMISTRY

i. Fundamentals of organic reaction mechanisms; Few important reactions and their mechanism along with their applications; Robinson annulation, Hydroboration reaction, Organometallic reagents (Gilman reagents), Metathesis using Grubb's catalyst and Wittig reaction. (3)

ii. Fundamental concept on stereochemistry and application: Conformation and configuration of organic compounds, Diastereo-selective, enantio-selective, regio-selective, stereo-specific, and stereo-selective reactions. (3)

iii. Polymer chemistry and polymer engineering: Fundamental concept on polymer chemistry; synthesis and application of important polymers, Rubber, and plastic materials. Conducting polymer. (2)

iv. Petroleum Engineering and oil refinery: origin of mineral oils, separation principle and techniques of distillation of crude oil, Uses of different fractions, octane number, cetane number, Knocking, anti-knock compounds, and Bio-Fuel. (2)

v. Structure elucidation of organic compounds by modern spectroscopic methods; Application of UV-Visible and FT-IR spectroscopy. (3)

INORGANIC CHEMISTRY

i. **Coordination Chemistry:** Crystal Field Theory of octahedral and tetrahedral complexes, colour and magnetic properties, Jahn-Teller distortion, pseudo Jahn-Teller distortion, Isomerism, and stereochemistry. (5)

	ii. **Bioinorganic Chemistry:** Heme and non-heme O_2 transport protein (Haemoglobin, Myoglobin), Chlorophyll and photosynthesis. (3) iii. **Inorganic Materials:** Introduction towards industrially important inorganic materials like cementing material, refractory material, fertiliser, inorganic polymer. (2) iv. **Organometallic Chemistry:** π-acid ligands, stabilization of metal low oxidation state and 18 electron rules, metal carbonyls and nitrosyls, metal-alkene complexes. (4) **PHYSICAL CHEMISTRY** i. **Thermodynamics:** 2nd law of thermodynamics, entropy, free energy, Gibbs Helmholtz equation, change of phase. Cryogenics: joule Thomson experiment. (4) ii. **Chemical Kinetics:** 2nd and 3rd order rate expression, Reversible reaction, Chain reaction, Consecutive reaction, Temp effect on reaction rate. (4) iii. **Electrochemistry:** Electrochemical cell, Effect of pH, precipitation, and complex formation on EMF of oxidation/reduction processes. (2) iv. **Absorption:** Physical and Chemical absorption, Absorption isotherms. (1) v. **Catalysis:** Types of catalysis, Rate expression for Catalysed reaction, Acid-base and Enzyme catalysis. (2)
Text Books, and/or reference material	Suggested Text Books: (i) Physical Chemistry by P. Atkins, Oxford (ii) A guidebook to mechanism in Organic chemistry: Peter Sykes; Pearson Edu. (iii) Inorganic Chemistry Part-I & II, R. L. Dutta, The new book stall Suggested Reference Books: **Organic Chemistry**: (i) Basic stereochemistry of organic molecules: S. Sengupta; Oxford University press (ii) Engineering Chemistry: Wiley (iii) Elementary Organic Spectroscopy: William Kemp, ELBS with Macmillan **Inorganic Chemistry:** (i) Inorganic Chemistry: Principle structure and reactivity, J. E. Huheey, E. A. Keiter and R. L. Keiter, Pearson Education (ii) Bioinorganic Chemistry -- Inorganic Elements in the Chemistry of Life: An Introductionand Guide, 2nd Edition, Wolfgang Kaim, Brigitte Schwederski, Axel Klein. (iii) Inorganic Chemistry Fourth Edition, Shriver & Atkins, Oxford **Physical Chemistry:** (i) Physical Chemistry by G.W Castellan (ii) Physical Chemistry by P. C. Rakshit

	CO4	-	1	-	-	2	-	1	-	-	-	-	-

Correlation levels 1, 2 or 3 as defined below:
1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)[#]	Total Hours	
XEC01	**ENGINEERING MECHANICS**	PCR	2	1	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA

Course Outcomes	• CO1: Acquire knowledge of mechanics and ability to draw free body diagrams. • CO2: Apply knowledge of mechanics for solving special problems like truss and frame analysis. • CO3: Ability to calculate centroid, moments of inertia for various shapes. • CO4: Learn momentum and energy principles. • CO5: Knowledge on virtual Work Principle and its application
Topics Covered	Engineering Mechanics; measurement and SI units. [1] Vectors and force as a vector; Resultant of a system of forces on a particle; free body diagram and conditions of equilibrium of a particle; problems on particles; equilibrium of particles in space. [2] Resultant of a system of forces and couples on a rigid body; conditions of equilibrium of a rigid body; free body diagrams of rigid bodies subjected to different types of constraints; simple space problems of rigid bodies. [4] Coefficients of static and kinetic friction; problems involving friction; theories of friction on square threaded power screw and flat belt. [5] Simple trusses; analysis of trusses by method of joints and method of sections. [5] Centre of gravity and centre of mass; centroids of lines, curves and areas; first moment of area; second moment of area; polar moment of inertia; radius of gyration of an area; parallel axis theorem; mass moment of inertia. [4] Path, velocity, acceleration; rectilinear and curvilinear motion; motion of system of particles; introduction to the concept of plane kinematics of rigid bodies. [6] Newton's second law of motion; dynamic equilibrium and D'Alembert's principle; linear momentum; angular momentum; rectilinear and curvilinear motion; principles of work–energy and impulse–momentum; impact of system of particles; introduction to the concept of plane kinetics of rigid bodies. [12] Principle of Virtual Work, Solution of Problems on Mechanics using Principle of Virtual Work [3]
Text Books, and/or reference material	1) S P Timoshenko and D H Young, Engineering Mechanics, 5^{th} Edition 2) J L Meriam and L G Kraige, Engineering Mechanics, 5^{th} Edition, Wiley India 3) F P Beer and E R Johnston, Vector Mechanics for Engineers 4) I H Shames, Engineering Mechanics

ESC01	**Environmental Science**	PCR	2	0	0	2	2
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	• CO1: Understand the importance of environment and ecosystem. • CO2: Understand the fundamental aspect of pollutant tracking and its implementation in natural and anthropogenic pollution of air and water system. • CO3: Understand the scientific basis of local and as well as global issues. • CO4: Apply of knowledge to develop sustainable solution.
Topics Covered	**Introduction:** Multidisciplinary nature of Environmental Studies; Basic issues in Environmental Studies. [2] Human population and the Environment. [1] Social issues and the Environment. [1] **Constituents of our Environment & the Natural Resources:** Atmosphere– its layers, their characters; Global warming, Ozone depletion, Acid rain, etc. [5] Hydrosphere - Its constituents, Oceans, Groundwater, Surface waters; Hydrological cycle. [4] Lithosphere - constituents of lithosphere; Rock and Mineral resources; Plate Tectonic Concept and its importance. [5] Biosphere– its components; Ecosystems and Ecology; Biodiversity; Biomes. [5] Natural disaster and their management – Earthquakes, Floods, Landslides, Cyclones. [3] **Pollution:** Pollutants and their role in air and water pollution. [2]

XES51	**ENGINEERING GRAPHICS**	PCR	1	0	3	4	2.5

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
NIL	CT+EA

Course Outcomes	• CO1: Ability of mental visualization of different objects • CO2: Theoretical knowledge of orthographic projection to solve problems on one/two/three dimensional objects • CO3: Able to read/interpret industrial drawing and to communicate with relevant people
Topics Covered	Graphics as language of communication; technical drawing tools and their up-keep; types of lines; construction of geometrical figures; lettering and dimensioning. [6] Construction and use of scales; construction of curves of engineering importance such as curves of conic section; spirals, cycloids, involutes and different loci of points; use of equations for drawing some curves. [9] Descriptive geometry: necessity and importance of orthographic projection; horizontal and vertical reference planes; coordinate of points; orthographic projection of points and lines situated in different quadrants, viz. 1^{st}, 2^{nd}, 3^{rd} and 4^{th} quadrants; traces of lines. First angle and third angle projection of lines and planes; views from top, front and left (or right); true length and true inclination of lines with planes of projections; primary auxiliary projection of points, lines and planes; auxiliary plan and auxiliary elevation. [9] Projection of simple regular solids, viz. prisms, cubes, cylinders, pyramids, cones, tetrahedrons, spheres, hemi-spheres etc. [6] Section of solids; section by perpendicular planes; sectional views; true shapes of sections. [6] Dimensional techniques; international and national standards (ISO and BIS). [3] Freehand graphics. [3]
Text and/or reference material	1)… Engineering Drawing and Graphics – K Venugopal 2)… Engineering Drawing – N D Bhat 3)… Practical Geometry and Engineering Graphics – W Abbott

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
None	CT+EA

Course Outcomes

- CO1: Improvement in linguistic proficiency of the learners
- CO2: Improvement in communicative ability of the learners
- CO3: Improvement in social connectivity skill

Topics Covered

1. Professional Communication: Introduction (1)
2. Technical Writing: Basic Concepts (2)
3. Style in Technical Writing (3)
4. Technical Report (2)
5. Recommendation Report (2)
6. Progress Report (1)
7. Technical Proposal (3)
8. Business Letters (3)
9. Letters of Job Application (2)
10. Writing Scientific and Engineering Papers (3)
11. Effective Use of Graphic Aids (2)
12. Presentation Techniques (6)
13. Group Discussion (6)
14. Interview Techniques (6)

Text Books, and/or reference material

Text Book:
1. English for Engineers –Sudharshana& Savitha (Cambridge UP)

Reference Books:
1. English for Engineers -Sudharshana & Savitha (Cambridge UP)
2. Effective Technical Communication-M A Rizvi (McGraw Hill Education)
3. References to relevant NPTEL, MOOC, SWAYAM courses be given by the Instructor

PHS51	Physics Laboratory	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods: (Continuous evaluation (CE) and end assessment (EA))					
NIL		CE+EA					

Course Outcomes	CO1: To realize and apply different techniques for measuring refractive indices of different materials. CO2: To realize different types of waveforms in electrical signals using CRO. CO3: To understand charging and discharging mechanism of a capacitor. CO4: To understand interference, diffraction and polarization related optical phenomena. CO5: To acquire basic knowledge of light propagation through fibers.
Topics Covered	1. Find the refractive index of a liquid by a travelling microscope. 2. Determine the refractive index of the material of prism using spectrometer. 3. Determination of amplitude and frequency of electrical signals by oscilloscope. 4. To study the characteristics of RC circuits. 5. To study Brewster's law/Malus' law using laser light. 6. To study the diffraction of light by a grating. 7. To study the interference of light by Newton's ring apparatus. 8. To determine numerical aperture of optical fiber. 9. Determination of Planck constant.
Text and/or reference material	**SUGGESTED BOOKS**: 1) A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

CYS51	**CHEMISTRY LABORATORY**	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
None		CT+EA					

Course Outcomes

- CO1: To learn basic analytical techniques useful for engg applications.
- CO2: Synthesis and characterization methods of few organic, inorganic and polymer compounds of industrial importance.
- CO3: Learn chromatographic separation methods.
- CO4: Applications of spectroscopic measurements.

Topics Covered

i. Experiments based on pH metry: Determination of dissociation constant of we acids by pH meter.
ii. Experiments based on conductivity measurement: Determination of amou of HCl by conductometric titration with NaOH.
iii. Estimation of metal ion: Estimation of Fe^{2+} by permangnomentry
iv. Estimation of metal ion: Determ. of total hardness of water by EDTA titration.
v. Synthesis and characterization of inorganic complexes: e. g. $Mn(acac)_3$, Fe(acac cis-bis(glycinato)copper (II) monohydrate and their characterization by m. p FTIR etc.
vi. Synthesis and charact. of organic compounds: e.g.Dibenzylideneacetone.
vii. Synthesis of polymer: polymethylmethacrylate
viii. Verification of Beer-Lamberts law and determination of amount of iron prese in a supplied solution.
ix. Chromatography: Separation of two amino acids by paper chromatography
x. Determination of saponification value of fat/ vegetable oil

Suggested Text Books:
1. Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall
2. Advanced Physical Chemistry Experiments: By Gurtu&Gurtu
3. Comprehensive Practical Organic Chemistry: Qualitative Analysis By V. K. Ahluwalia and S. Dhingra

Suggested Reference Books:
1. Practical Chemistry By R.C. Bhattacharya
2. Selected experiments in Physical Chemistry By N. G. Mukherjee

WSS51	WORKSHOP PRACTICE	PCR	0	0	3	3	1.5

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
NIL	CT+EA

Course Outcomes	• CO1: Study and practice on machine tools and their operations • CO2: Practice on manufacturing of components using workshop trades including fitting, carpentry, foundry and welding • CO3: Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping • CO4: Develop basic electrical engineering knowledge for house wiring practice
Topics Covered	**M/c shop & Carpentry shop -- 3X3= 9hrs.** • Introduction on machining process. • Introduction to machine tools- Lathe, Shaper, Milling and Drill machine. • Introduction to woods- Types, structure, disease and defect of wood. • Introduction to wood working machines and tools. • Making of dovetail joint and bridle joint. **Welding Shop & Sheet metal -- 3X3= 9hrs.** • Introduction to welding.Safety and precautions in welding. • Formation of weld bead by SMAW on mild steel flat. • Formation of weld bead by oxy-fuel welding on mild steel flat. • Introduction to sheet Metal works. • Tools and Machines used in sheet metal works. • Concept of development, marking out of metal sheets. • Cutting and joining of metal sheets. • Safety precautions, General warning needed in the shop floor. **Black smithy & Foundry -- 3X3= 9hrs.** • Introduction Smithing and Forging- Tools, Machines, Furnaces and its accessories, fuels. • Safety and precautions in blacksmithy. • Making of bars of different cross-sections. • Making of hexagonal headed bolts. • Forge welding. • Introduction to Foundry Technology. • Preparation of sand mould using Solid/Split Pattern. **Fitting & Electrical shop -- 3X3= 9hrs.** • Introduction to hand metal cutting tools with specifications, nomenclature and their use. • Marking tools, measuring tools and their use. • Fitting of joints of mild steel flats. • Introduction to electrical hazards and safety precaution.

	• Wire jointing and soldering. • PVC Conduit Wiring controlled by separate single way switches. • PVC Cashing Capping Wiring for two-way switches. • Conduit wiring for the connection of a Calling Bell with In& Out Indicators. • Batten Wiring and Cleat Wiring. • Tube Light Connection. • Insulation Resistance Testing of 1ph / 3ph Motor and House Wiring. • Earth Resistance Testing. • DOL Starter Connection. **Viva voce -- 1X3= 3hrs.**
Text Books, and/or reference material	1. Workshop Technology Part I and Part II by W. A. J. Chapman 2. Elements of Workshop Technology S. K. Hazra Chowdhury, A. K. Hazra Chowdhury and Nirjhar Roy 3. Mechanical Workshop Practice by K. C. John

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Introduction of Yoga. • Sitting Posture/Asanas- Padmasana, Vajrasana, Ardhakurmasana, Ustrasana, Bakrasana, Sasankasana, Janusirshasana, Suryanamaskar. • Mudra- Gyana mudra, Chin mudra, Shuni mudra, Prana mudra, Adi mudra,						

	Anjali mudra. • Laying Posture/Asanas- PavanaMuktasana, UttanaPadasana, Sarpasana, Bhujangasana (Cobra Pose), Eka Pada Śalabhāsana, Dhanurasana, Chakrasana, Viparitkarani. • Meditation- Yognidra, Om chant, Pray chant. • Standing Posture/Asanas- Tadasana (Mountain Pose), Vrikshasana (Tree Pose), Ardhachandrasana, Trikonasana, Utkatasana, Padahastasana. • Pranayama- Deep breathing, AnulomVilom, Suryabhedi, Chandrabhedi. • Kriya- Kapalbhati, Trataka. **ATHLETICS** • Introduction of Athletic. • Starting Technique for Track events- Standing start, Crouch & Block start. • Finishing Techniques. • Relay Race- 4×100m, 4×400m & Baton Exchange Technique & Rules. • Track Marking with Fundamentals- 200m, 400m and Diagonal Distance Radius, Straight Distance, Staggers of Different Lanes & Curve Distance. **BASKETBALL** • Introduction and Players stance and ball handling. • Passing- Two hand chest pass, two hand bounce pass, One hand baseball pass, Side arm pass, Overhead pass, Hook pass. • Receiving- Two hand receiving, one hand receiving, receiving in stationary position, Receiving while jumping and Receiving while running. • Dribbling- Dribble, High dribble, Low dribble, Reverse dribble, Rolling dribble. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Introduction of Volleyball • Service- Underarm service, Sidearm service, Tennis service, Floating service, Jump service. • Pass: Underarm pass- Ready position, Teaching stage of underarm pass and Upper hand pass- Volley pass, Back pass, Short set, Jump set & Underarm set. • Rules and their interpretation. **FOOTBALL** • Introduction of Football • Push pass- Instep inside, Instep outer side. • Kicking- Spot kick, Instep kick, Lofted kick. • Dribbling- One leg, Both legs, Instep. • Trapping- Rolling ball sole trapping, High ball sole trapping, High ball chest trapping, High ball thigh trapping. • Throwing- Standing throw, Running throw, Seating throw. • Goal Keeping- Griping the ball, Full volley, Half volley, Drop Kick. • Rules and their interpretation. **CRICKET** • Introduction of Cricket

	• Batting gripping & Stance, Bowling gripping technique. • Batting front foot defense& Drive. • Batting Back foot defense& Drive. • Batting Square cut. • Bowling medium pace, Bowling off break. • Fielding drill, Catching (Short & High). • Rules & Regulation. **BADMINTON** • Basic introduction about Badminton and Badminton court. • Racket parts, Racket Grip, Shuttle Grip. • Basic stance, Basic Footwork, Shadow practice (Full court movement). • Strokes services: Forehand- Overhead & Underarm, Backhand- Overhead & Underarm. • Match practice (Single & Double). • Rules & Regulation. **TABLE TENNIS** • Introduction of Table Tennis. • Basic Stance and Grip (Shake hand & Pen hold). • Service Basic. • Stroke: Backhand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Stroke: Forehand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-1 General Introduction and words of command. • FD-2 Attention, Stand at ease and Stand easy, Turning and inclining at the halt. • FD-3 Sizing, Forming up in three Ranks Numbering, Open and Close order March and Dressing. • FD-4 Saluting at the halt, Getting on parade, Dismissing and falling out. • FD-5 Marching, Length of pace and Time of Marching in quick time and Halt, Slow March and Halt. • FD-7 Turning on the March and Wheeling. • FD-12 Parade practice. **TAEKWONDO** • Introduction about Taekwondo- Meaning of Taekwondo, Korean language of dress, Fighting area, Punch, Block, Kicks etc. • Stance- Ready stance, Walking stance, Fighting stance, Front stance, Back stance, Cat stance etc. • Punch Technique- Front fist punch, Rear fist punch, Double fist punch, With stance etc. Blocks- Upper blocks, Middle block, Side block, Suto etc. • Foot Technique (Balgisul)- Standing kick (Saseochagi), Front kick (Abchagi), Doliyo (Chagi), Abdalchagi (Butterfly kick), Back kick etc. **NSS**

	• Swachha Bharat Mission • Free Medical Camp • Sanitation drive in and around the campus. • Unnat Bharat Abhiyaan • MatribhashaSaptah celebration

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 02	MATHEMATICS - II	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic concepts of set theory, differential equations, and probability.		CT+MT+EA					
Course Outcomes	• CO1: Develop the concept of basic linear algebra and matrix equations so as to apply mathematical methods involving arithmetic, algebra, geometry to solve problems. • CO2: To acquire the basic concepts required to understand, construct, solve and interpret differential equations. • CO3: Develop the concepts of Laplace transformation & Fourier transformation with its property to solve ordinary differential equations with given boundary conditions which are helpful in all engineering & research work. • CO4: To grasp the basic concepts of probability theory.						
Topics Covered	**Elementary algebraic structures:** Group, subgroup, ring, subring, integral domain, and field. (5) **Linear Algebra:** Vector space, Subspaces, Linear dependence and independence of vectors, Linear span, Basis and dimension of a vector space. Rank of a matrix, Elementary transformations, Matrix inversion, Solution of system of Linear equations, Eigen values and Eigen vectors, Cayley-Hamilton Theorem, Diagonalization of matrices. (15)						

	Ordinary Differential Equations: Existence and uniqueness of solutions of ODE (Statement Only), Equations of first order but higher degree, Clairaut's equation, Second order differential equations, Linear dependence of solutions, Wronskian
	determinant, Method of variation of parameters, Solution of simultaneous equations. (12) **Fourier series:** Basic properties, Dirichlet conditions, Sine series, Cosine series, Convergence. (4) **Laplace and Fourier Transforms:** Laplace transforms, Inverse Laplace transforms, Convolution theorem, Applications to Ordinary differential equations. Fourier transforms, Inverse Fourier transform, Fourier sine and cosine transforms and their inversion, Properties of Fourier transforms, Convolution. (10) **Probability:** Historical development of the subject and basic concepts, Axiomatic definition of probability, Examples to calculate probability, Random numbers. Random variables and probability distributions, Binomial distribution, Normal distribution. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10^{th}ed, Wiley India Ed. (2010). 2. Gilbert Strang, Linear algebra and its applications (4th Ed), Thomson (2006). 3. Shepley L. Ross, Differential Equations, 3^{rd} Edition, Wiley Student Ed (2017). **Reference Books:** 1. S. Kumaresan, Linear algebra - A Geometric approach, PHI (2000). 2. C. Grinstead, J. L. Snell, Introduction to Probability, American Math. Society.

CSC01	**INTRODUCTION TO COMPUTING**	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic knowledge of computer.		CT+MT+EA					
Course Outcomes	CO1: Recognize the changes in hardware and software technologies with respect to the evolution of computers and describe the function of system software's						

	(operating Systems) and application software's, languages, number system, logic gates. CO2: Illustrate the flowchart and inscribe an algorithm for a given problem Inscribe C programs using operators. CO3: Develop conditional and iterative statements to write C programs. CO4: Exercise user defined functions to solve real time problems CO5: Inscribe C programs that use Pointers to access arrays, strings and functions. CO6: Exercise user defined data types including structures and unions to solve problems.
Topics Covered	Fundamentals of Computer: History of Computer, Generation of Computer, Classification of Computers 2L Basic Anatomy of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices. [2] Languages: Assembly language, high level language, compiler, and assembler (basic concepts) [1] Binary & Allied number systems representation of signed and unsigned numbers. BCD, ASII. Binary Arithmetic & logic gates. [2] Basic concepts of operating systems like MS DOS, MS WINDOW, UNIX, Algorithm & flow chart. [1] C Fundamentals: The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements. [2] Operators & Expressions: Arithmetic operators, relational and logical operators, type, conversion, increment and decrement operators, bit wise operators, assignment operators and expressions, precedence, and order of evaluation. Input and Output: Standard input and output, formatted output -- printf, formatted input scanf. [8] Flow of Control: Statement and blocks, if - else, switch, loops - while, for do while, break and continue, go to and labels. [5] Fundamentals and Program Structures: Basic of functions, function types, functions returning values, functions not returning values, auto, external, static and register Variables, scope rules, recursion, function prototypes, C pre-processor, command line arguments. [5] Arrays and Pointers: One-dimensional, two-dimensional arrays, pointers and functions, multi-dimensional arrays. [10] Structures Union and File: Structure, union, structures and functions, arrays of structures, file read, file write.[5]

ECC01	**Basic Electronics**	PCR	2	1	0	3	3
Pre-requisites			Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))				
(10+2) level mathematics and physics			CT+MT+EA				
Course Outcomes	• CO1: Knowledge of Semiconductor physics and devices. • CO2: Have an in depth understanding of basic electronic circuit, construction, operation. • CO3: Ability to make proper designs using these circuit elements for different applications. • CO4: Learn to analyze the circuits and to find out relation between input and output.						
Topics Covered	1. **Semiconductors** 1.1. Concept of band formation in solids; Fermi-Dirac distribution function, concept of Fermi level, invariance of Fermi level in a system under thermal equilibrium 1.2. Definitions of insulator, conductor and semiconductor using band diagram 1.3. Crystalline structure of semiconductor 1.3.1. Covalent bond 1.3.2. Generation of holes and electrons 1.3.3. Effect of temperature on semiconductor 1.4 Intrinsic semiconductor 1.5 Doping and Extrinsic semiconductor 1.5.1 n-Type semiconductor and band diagram 1.5.2 p-Type semiconductor and band diagram 1.5.3 Mass-action law of semiconductor 1.6. Conductivity of semiconductor (including mathematical expression) 1.7 Carrier transport phenomenon. (03 hrs.) 2. **Diodes** 2.1. Construction						

	2.2. Unbiased diode; Depletion layer and Barrier potential; junction capacitance (expression only) 2.3. Principle of operation with forward biasing and reverse biasing 2.4. Characteristics 2.5 Diode's three models/equivalent circuits.(02 hrs.) 3.**Diode Circuits** 3.1 Diode rectifier 3.1.1 Half wave rectifier 3.1.2 Full wave rectifier:centre tap and bridge rectifier 3.1.3 Capacitive filter and DC power supply (Numerical problems) 3.2 Special Diodes 3.2.1 Zenerdiode: Avalanche breakdown and Zener breakdown and characteristics. 3.2.2 Zener diode as a voltage regulator 3.2.3 Displaydevices: LED and LCD. (03 hrs.) 4.**Bipolar Junction Transistor (BJT)** 4.1 n-p-n and p-n-p transistor and their constructions 4.2 Principle of operation 4.3 Transistor configuration: common base, common emitter, and common collector 4.4 Transistor characteristics: input and output characteristics of CB and CE configurations 4.5 DC load line: quiescent (Q) point; cut-off, active, and saturation region 4.6 Amplifier: Principle of operation 4.7 Transistor as a switch. (04 hrs.) 5.**Transistor Biasing** 5.1 Need of biasing 5.2 Methods of biasing: base resistor or fixed bias, emitter feedback, voltage divider biasing 5.3 Stability of Q-point (qualitative discussions) 5.4 (Numerical problems). (02 hrs.) 6.**Single Stage Amplifier:** classification of amplifiers (voltage amplifier, current amplifier, power amplifier etc.) Class-A CE Amplifier with coupling and bypass capacitors, Qualitative discussions of magnitude characteristics of frequency response (graph only) (02 hrs.) 7.**Feedback Amplifier** 7.1 Positive and negative feedback 7.2 Deduction of gain with negative feedback, explanation of stability of gain with negative feedback, other effects of negative feedback (no deduction), numerical problems. (03 hrs.) 8.**Other Semiconductor Devices** 8.1 JFET: Construction, principle of operation, characteristics 8.2 MOSFET: Construction, principle of operation, characteristics 8.3 Power Electronic Device-SCR: Brief discussions. (02 hrs.) 9.**Operational Amplifier** 9.1 Characteristics of ideal operational amplifier 9.2 Pin Configuration of IC 741,

	9.3 Analysis of simple operational amplifier circuits: concept of virtual ground; noninverting amplifier and inverting amplifier. 9.4 Applications: voltage follower, summer, differentiator, integrator, and comparator (04 hrs) 10.**Oscillator** 10.1 Positive feedback and condition of oscillation 10.2 R-C phase-shift oscillator, Wien bridge oscillator.(02 hrs.) 11.**Boolean Algebra** 11.1 Boolean algebra, De Morgan's theorem, simplification of Boolean expressions 11.2 Number system, range extension of numbers, overflow 11.3 Different codes: gray code, ASCII code and BCD codes and them Applications. (01 hrs.) 12. **Logic Gates** 12.1 NOT, OR, AND, NOR, NAND, EX-OR, EX-NOR gates 12.2 Simplification of logic functions 12.3 Realizations of logic expressions using logic gates. (01 hrs.) 13. CRO and its applications and other test and measurement instruments. (01 hrs.)

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
EEC01	ELECTRICAL TECHNOLOGY	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), Mid Term (MT), and end assessment (EA))					
NIL		CT+MT+ EA					
Course Outcomes	Upon successful completion of this course, the student should be able to • CO1: learn the fundamentals of Electric Circuits and Network theorems and analysis of electrical network based on these concepts. • CO2: develop an idea on Magnetic circuits, Electromagnetism and learning the working principles of some fundamental electrical equipment's • CO3: learn about single phase and poly-phase AC circuits and analysis of such circuits based on these concepts. • CO4: introduce the basic concept of single-phase transformer. • CO5: analyze the transient phenomena in electrical circuits with DC excitation.						
Topics Covered	Introduction: Overview of Electrical power generation systems (2) Fundamentals of Electric Circuits: Ohm's laws, Kirchhoff's laws, Independent and Dependent sources, Analysis of simple circuits. (4) Network theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem (4) Magnetic circuits: Review of fundamental laws of electromagnetic induction, transformer and rotational emfs, Solution of magnetic circuits. Analysis of coupled circuits (self-inductance, mutual inductance, and dot convention)(8) Transients with D.C. excitation for R-L and R-C circuits. (3) Generation of alternating voltage and current, E.M.F. equation, Average and R.M.S. value, Phase and phase difference, Phasor representation of alternating quantity, Behavior of A.C. circuits, Resonance in series and parallel R-L-C circuits. AC Network: Superposition theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem, solution of networks with AC sources. (10) Single-Phase Transformer, equivalent circuits, open circuit and short circuit tests (6) Poly-phase system, Advantages of 3-phase system, Generation of 3-phase voltages, Voltage, current and power in a star and delta connected systems, 3-phase balanced and unbalanced circuits, Power measurement in 3-phase circuits. (5)						

Textbooks/Reference material	Textbooks: 1. Electrical & Electronic Technology by Hughes, Pearson Education India Reference Books: 1. Advanced Electrical Technology by H. Cotton, Reem Publication Pvt. Ltd 2. Electrical Engineering fundamentals by Vincent Deltoro, Pearson Edu India

BTC01	LIFE SCIENCE	PCR	2	0	0	2	2
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	CO1: Basic understanding of basic cellular organization of organisms and cellular communications, structure and functions of the macromolecules and their biosynthesis and cata--bolism. CO2: To give an understanding of the key features of the structure, growth, physiology and behavior of bacteria, viruses, fungi and protozoa CO3: To introduce molecular biology to understand biological processes in various applications. CO4: To provide a foundation in immunological processes and an overview of the interaction between the immune system and pathogens. CO5: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them CO6: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them
Topics Covered	**1. Cell Biology (4)** a) Introduction to life science: prokaryotes & eukaryotes Definition; Difference b) Introduction to cells - Define cell, different types of cell c) Cellular organelles - All organelles and functions in brief d) Cellular communications

	Introduction to basic signaling; endocrine, paracrine signaling; concepts of receptor, ligand, on-off switch by phosphorylation/dephosphorylation **2. Biochemistry (4)** a) Biological function of carbohydrate and lipid - Introduction, structure and function b) Biological function of nucleic acids and protein - structure and function c) Catabolic pathways of Macromolecules - Introduction to catabolism, hydrolysis and condensation reactions; Catabolism of glucose- Glycolysis, TCA; overall degradation of proteins and lipids d) Biosynthesis of Macromolecules Generation of ATP (ETS), Generation of Glucose (Photosynthesis) **3. Microbiology (5)** a) Types of microorganisms and their general features - Bacteria, Yeast, Fungi, Virus, Protozoa- general introduction with practical significance and diseases b) Microbial cell organization - Internal and External features of cell- bacterial cell wall, viral capsule, pilus etc, c) Microbial nutritional requirements and growth - Different Sources of energy; growth curve d) Basic microbial metabolism - Fermentation, Respiration, Sulfur, N_2 cycle **4. Immunology (5)** a) Basic concept of innate and adaptive immunity - Immunity-innate and adaptive, differences, components of the immune system b) Antigen and antibody interaction - Antigen and antibody, immunogen, factors affecting immunogenicity, basic antigen-antibody mediated assays, introduction to monoclonal antibody c) Functions of B cell - B cell, antibody production, memory generation and principle of vaccination d) Role of T cell in cell-mediated immunity - Th and Tc, functions of the T cell with respect to different pathogen and cancer cell **5. Molecular Biology (5)** a) Prokaryotic Genomes (Genome organization & structure) - Nucleoid, circular or linear b) Eukaryotic Genomes (Genome organization & structure) - Intron, exon, packaging, chromatin c) Central Dogma (Replication, Transcription and Translation) d) Applications of Molecular Biology (Diagnostics, DNA-fingerprinting, Recombinant products etc.) - Introduction to Recombinant DNA, fingerprinting, cloning **6. Bioprocess Development (5)** a) Microbial growth kinetics - Batch, fed-batch and continuous systems, Monod Equation b) Enzyme kinetics, kinetics of enzyme inhibition and deactivation Definition of enzymes, activation energy, Concepts of Km, Vmax, Ki c) Microbial sterilization techniques and kinetics Introduction to sterilization, dry and moist sterilization d) Thermodynamics of biological system - Concepts of Enthalpy, Entropy,

	favorable reactions, exergonic and endergonic reactions e) Material and energy balance for biological reactions - Stoichiometry

			Lecture (L)	Tutorial (T)	Practical (P)#	Total Hours	
XXS-52	**Co-curricular Activities**	PCR	**0**	**0**	**2**	**2**	**1**
Pre-requisites	Course assessment methods: (Continuous evaluation((CE) and end assessment (EA)						
NIL	CE + EA						
Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Sitting Posture/Asanas- Gomukhasana, Swastikasana, Siddhasana, Ustrasana, Janusirsasana, ArdhaMatsyendrasana (Half-Spinal Twist Pose), Paschimottanasana, Shashankasana, Bhadrasana. • Mudra- Vayu, Shunya, Prithvi, Varuna, Apana, Hridaya, Bhairav mudra. • Laying Posture/Asanas- Shalabhasana (Locust Posture), Dhanurasana (Bow Posture), ArdhaHalasana (Half Plough Pose), Sarvangasana (Shoulder Stand), Halasana (Plough Pose), Matsyasana, SuptaVajrasana, Chakrasana (Wheel Posture), Naukasana (Boat Posture), Shavasana (Relaxing Pose), Makaraasana. • Meditation- 'Om'meditation, Kundalini or Chakra Meditation, Mantrameditation. • Standing Posture/Asanas- ArdhaChakrsana (Half Wheel Posture), Trikonasana (Triangle Posture), ParshwaKonasana (Side Angle Posture), Padahastasana, Vrikshasana (Tree Pose), Garudasana (Eagle Pose). • Pranayama- Nadisodha, Shitali, Ujjayi, Bhastrika, Bhramari. • Bandha- Uddiyana Bandha, Mula Bandha, Jalandhara Bandha, Maha Bandha. • Kriya- Kapalabhati, Trataka, Nauli. **ATHLETICS** • Long Jump- Hitch kick, Paddling, Approach run, Take off, Velocity, Techniques, Flight & Landing • Discus throw, Javelin throw and Shot-put- Basic skill & Technique, Grip, Stance, Release & Follow through. • Field events marking. • General Rules of Track & Field Events. **BASKETBALL**						

	• Shooting- Layup shot, Set shot, Hook shot, Jump shot. Free throw. • Rebounding- Defensive rebound, Offensive rebound. • Individual Defensive- Guarding the man without ball and with ball. • Pivoting. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Spike- Straight spike, Body turn spike, Tip spike, Back attack, Slide spike, Wipe out spike. • Block- Single block, Double block, Triple block, Group block. • Field Defense- Dig pass, Double pass, Roll pass. • Rules and their interpretation. **FOOTBALL** • Dribbling- Square pass, Parallel pass, Forward pass. • Heading (Standing & Running)- Fore head, Side fore head, Drop heading, Body covering during heading. • Kicking- Full volley, Half volley, Drop kick, Back volley, Side volley, Chiping (lobe). • Tackling: Covering the angle, Chessing time sliding chese, Heading time shoulder tackle etc. • Feinting- Body movement to misbalance the opponent and find space to go with ball. • Rules of Football. **CRICKET** • Batting straight drive. • Batting pull shot. • Batting hook shot. • Bowling good length, In swing. • Bowling out swing, Leg break, Goggle. • Fielding drill. • Catching (Long & Slip). • Wicket keeping technique. • Rules & Regulation. **BADMINTON** • Net play- Tumbling net shot, Net Kill, and Net Lift. • Smashing. • Defensive high clear/Lob. • Half court toss practice, Cross court toss drop practice, Full court Game practice. • Player Positioning, Placements. • Rules & Regulation. • Doubles & Mixed doubles match practice. **TABLE TENNIS** • Stroke: Backhand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke: Forehand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin.

- Stroke- Backhand lob with rally, Backhand lob with sidespin, Forehand lob with rally, Forehand lob with sidespin.
- Service: Backhand/Forehand- Push service, Deep push service, Rally service.
- Service: Backhand sidespin (Left to right & Right to left).
- Service: Forehand- High toss backspin service, High toss sidespin service, High toss reverse spin service.
- Rules and their interpretations.
- Table Tennis Match (Singles & Doubles).

NCC

- FD-6 Side pace, Pace Forward and to the Rear.
- FD-7 Turning on the March and Wheeling.
- FD-8 Saluting on the March.
- FD-9 Marking time, Forward March and Halt in Quick Time.
- FD-10 Changing step.
- FD-11 Formation of Squad and Squad Drill.
- FD-12 Parade practice.

TAEKWONDO

- Poomsae (Forms)- Jang, Yi Jang.
- Self Defense Technique- Self defense from arms, Fist and Punch.
- Sparring (Kyorugi)- One step sparring, Two step sparring, Fight (Free sparring).
- Combination Technique- Combined kick and punch.
- Board Breaking (Kyokpa)- Sheet breaking.
- Interpretation Rules above Technique of Taekwondo.

NSS

- No Smoking Campaign
- Anti- Terrorism Day Celebration
- Any other observation/celebration proposed by Ministry/institute
- Public Speaking
- Discussion on Current Affairs
- Viva voce

Mapping of CO (Course outcome) and PO (Programme Outcome)

THIRD SEMESTER

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC331	**MATHEMATICS-III**	PCR	3	1	0	4	4
Pre-requisites		Basic knowledge of topics included in MAC01 & MAC02					

Course Outcomes	• CO1: Acquire the idea about mathematical formulations of phenomena in physics and engineering. • CO2: To understand the common numerical methods to obtain the approximate solutions for the intractable mathematical problems. • CO3: To understand the basics of complex analysis and its role in modern mathematics and applied contexts. • CO4: To understand the optimization methods and algorithms developed for solving various types of optimization problems.
Topics Covered	**Module - I** **Partial Differential Equations (PDE):** Formation of PDEs; Lagrange method for solution of first order quasilinear PDE; Charpit method for first order nonlinear PDE; Homogenous and Nonhomogeneous linear PDE with constant coefficients: Complimentary Function, Particular integral; Classification of second order linear PDE and canonical forms; Initial & Boundary Value Problems involving one dimensional wave equation, one dimensional heat equation and two dimensional Laplace equation. [14 hrs] **Module - II** **Numerical Methods:** Significant digits, Errors; Difference operators; Newton's Forward, Backward and Lagrange's interpolation formulae; Numerical solutions of nonlinear algebraic/transcendental equations by Bisection and Newton-Raphson methods; Trapezoidal and Simpson's 1/3 rule for numerical integration; Euler's method and modified Eular's methods for solving first order differential equations.[14 hrs] **Module - III** **Complex Analysis:** Functions of complex variable, Limit, Continuity and Derivative; Analytic function; Harmonic function; Conformal transformation and Bilinear transformation; Complex integration; Cauchy's integral theorem; Cauchy's integral formula; Taylor's theorem, Laurent's theorem (Statement only); Singular points and residues; Cauchy's residue theorem. [17 hrs.] **Module - VI** **Optimization:** **Mathematical Preliminaries:** Hyperplanes and Linear Varieties; Convex Sets, Polytopes and Polyhedra. **Linear Programming Problem (LPP):** Introduction; Formulation of linear programming problem (LPP); Graphical method for its solution; Standard form of LPP; Basic feasible solutions; Simplex Method for solving LPP. [11 hrs.]

Text Books, and/or reference material	Suggested Text Books: 1. An Elementary Course in Partial Differential Equations-T. Amarnath 2. Numerical Methods for scientific & Engineering Computation- M.K.Jain, S.R.K. Iyengar& R.K. Jain. 3. Foundations of Complex Analysis- S. Ponnuswami 4. Operations Research Principles and Practices- Ravindran, Phillips, Solberg 5. Advanced Engineering Mathematics- E. Kreyszig Suggested Reference Books: 1. Complex Analysis-L. V. Ahfors 2. Elements of partial differential equations- I. N. Sneddon 3. Operations Research- H. A. Taha

Mapping of CO (Course outcome) and PO (Programme Outcome)

Course	COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO 10	PO 11	PO 12

CHC301	**PROCESS CALCULATIONS**	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (CT) and End Sem Assessment (EA)					
Nil		CT+EA					
Course Outcomes	• CO1: Learn fundamentals of units and dimension, dimensionless groups and their implications. • CO2:Graphical interpretation of experimental data, use of log-log and semi log plots for non-linear equations • CO3:Understanding of mass and energy balance for various chemical processes • CO4:Understanding the Ideal gas equation, Raoult's law, Henry's law, and psychrometric property						
Topics Covered	**Module - I** Units and dimension, Dimensionless groups and their significance, Dimensional homogeneity and analysis: Buckingham's pi theorem and its application, repeating variables, Rayleigh methods, Stepwise methodology Adiabatic Flame Temperature and its importance, Energy balance in thermal reactor, Computation of AFT, effect of temperature and pressure Basic understanding of application of semi-log and log-log graph, Unit operation						

	and experimental data fittings in log-log and semi-log graph paper, Problem-solving techniques [9 hrs.] **Module - II** Ideal gas laws and its significance, Molar concept, Concept of partial pressure & partial volume, Dalton's law and Amagat's law and Numerical problems on their applications Fundamental concept of vapor pressure & boiling point, Clausius-Clapeyron equation, Antoine equation and numerical problems on their applications, Numerical problems on Duhring& Cox plots. Ideal& non-ideal solutions, Raoult's law, Henry's law and their applications in numerical problems. [8 hrs.] **Module - III** Concept of Material balance, basis of calculation, bypass and recycling operation, various problems on material balance- drying, evaporation, crystallization, leaching. Material balance with chemical reaction. Atmospheric air and its composition, the property of moist air and ideal gas law, Humidity and its significance, various humidity/saturation terms like molar, absolute, relative & percentage saturation Fundamental concept of dry-bulb, wet-bulb, adiabatic saturation temperatures, and dew point. Psychometric/humidity chart and its application Humid volume, enthalpy and specific heat of moist air, humidification and de-humidification operation and material balance. Theoretical analysis and Energy balance during adiabatic saturation and wet bulb temperature [13 hrs.] **Module - IV** Energy conservation laws, Energy balance, Laws of thermodynamics with examples, Enthalpy calculation for systems without Chemical Reaction, Estimation of Heat Capacities of solids, Estimation of Heat Capacities: liquids and gases. Heat of fusion and vaporization. Enthalpy calculation for systems with Chemical Reaction, Calculations of heat of reaction, heat of combustions, heat of formation and heat of neutralization, Kopps rule Effect of Temperature and Pressure on Heat of Reaction, Hess's Law, Application of Energy balance to problems of various chemical processes [12 hrs.] ● **Tutorial on above topics and class tests (14)**
Text Books, and/or reference material	Suggested Text Books: 1. Basic Principles and Calculations in Chemical Engineering – David Himmelblau, PHI Suggested Reference Books: 1. Chemical Process Principles – Hougen and Watson, Part-I, CRC Press, CBS. 2. Stoichiometry-4thedn, Bhatt and Vora, Tata Mc-Graw Hill

●CO4: Solve problems of single and multi-phase chemically reactive systems using the concept of chemical reaction equilibrium.</td></tr>
<tr><td colspan="2">Topics Covered</td><td colspan="7">Module – I
Scope of thermodynamics and fundamental concepts. Microscopic and microscopic view. First law of thermodynamics: Applications to batch and flow systems.
Second and third law of thermodynamics: Reversibility and irreversibility, Carnot cycle, entropy, free energies, exergy [5 hrs.]

Module – II
Real gases: Equations of state, compressibility charts, departure functions
Thermodynamics of flow processes: Single and multi-stage compression, expansion through nozzles.
Refrigeration and liquefaction of gases: Vapour compression, cascade, absorption and gas refrigeration cycles, Choice of refrigerants, Linde and Claude processes of liquefaction of gases. [9 hrs.]

Module – III
Thermodynamic property relations: Maxwell's relations and thermodynamic functions of pure substances. Residual properties, fugacity. [5 hrs.]</td></tr>
</table>

	Module – IV Solution thermodynamics and phase equilibrium: Multi-component gaseous systems and solution. Partial molal properties and thermodynamic potential, criteria for equilibrium, thermodynamic properties of solutions, Gibbs-Duhem equation and consistency of thermodynamic data. Activity and activity coefficient, estimation of activity coefficient- Margules and Van laar equations, ASOG and UNIFAC methods. Generation of VLE data. Calculation of bubble and dew points of ideal and non-ideal solutions. Azeotropes. Systems. Phase equilibrium at elevated pressure. [12hrs.] **Module – V** Chemical reaction equilibrium: Estimation of equilibrium constant. Homogeneous reactions. Heterogeneous reactions. [9hrs.] Tutorial on above topics and class tests. [14 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Chemical Engineering Thermodynamics – J. M. Smith & H. C. Van Ness and M. M. Abbott (Tata McGraw Hill) 2. Chemical Engineering Thermodynamics – G. N. Halder (Prentice Hall of India) SuggestedReference Book: 1. Chemical & Engineering Thermodynamics – S. I. Sandler (Wiley) 3. Applications of Thermodynamics, V. Kadambi , T. R. Seetharam, K. B. Subramanya Kumar, Wiley (2019)

Course Outcomes	• CO1: Createafundamental understanding of fluidstatistics kinematicsandkinetics • CO2: Apply mass,momentumandenergy balance to hydrostatic and fluid flow problems • CO3: Acquire knowledge of Fluid machineries and flow measuring devices	
Topics Covered	**Module - I** Fluids and fluid properties, continuum concept, Fluid statics: Pressure and pressure measuring devices, Fluid kinematics, different flow regimes, equation of continuity. Boundary layer, Skin and form friction. [6 hrs.] **Module - II** Bernoulli's equation, Hagen-Poiseuille equation, Fanning's equation and their applications Pipes, fittings and valves. Pressure losses due to sudden expansion, contraction and fittings Navier-Stoke's equation and total energy balance equation Turbulent flow, Reynold's stress, universal velocity profile [16 hrs.] **Module - III** Flow past solid surface, drag, flow through packed bed, fluidization, pneumatic conveying Flow of compressible fluids, flow through convergent-divergent nozzles Non-Newtonian fluids: Their characteristics and calculation of pressure drop due to their flow through pipes Flow measuring devices: Orificemeter, venturimeter, rotameter, weirs, anemometer, pitot tubes, etc. [11hrs.] **Module - IV** Fluid machineries: Pumps, blowers and compressors [10hrs.] Tutorial on above topics and class tests [14 hrs.]	
Text Books, and/or reference material	Suggested Text Books: 1. Unit Operations – McCabe W L and Smith J L (McGraw Hill) 2. Transport Processes and Unit Operations – GeankoplisJ G, Allen A H, Lepek D H (Prentice Hall) Suggested Reference Books: 1. Principle of Unit Operations – Foust A S, Wenzel L A, Curtis W, Maus L, Anderson L B (Wiley)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Engineering Chemistry CYC 01		CT+MT+EA					
Course Outcomes	• CO1: To learn advanced analytical techniques useful for chemical engineering. • CO2: To learn the few catalytic process commonly used in industrial applications. • CO3: To learn thermodynamics of solutions and understanding of phase diagrams of single and multicomponent systems. • CO4: To learn fundamentals of fats, oils and carbohydrate chemistry together with basics of large scale organic synthesis.						
Topics Covered	**Module - I** Organic Chemistry Organic C-C bond formation: application of Grignard reagents, ethyl acetoacetate and malonic esters. Principles of large scale organic synthesis having industrial importance. Carbohydrate chemistry: Classification, structure elucidation. Reactions of glucose and fructose; mutarotation, inversion of cane sugar. Fats and oils, soaps and detergents.[11 hrs.] **Module - II** Inorganic Chemistry Application of coordination compound in analytical chemistry: complexometric titration, biological application. Analytical methods used to metal ions estimation: Gravimetric, UV-Vis spectrophotometric, atomic absorption spectrometric, solvent extraction etc. Catalyst: General principles, homogeneous catalysts: hydrogenation of alkenes, hydroformylation, methanol carbonylation, Wacker oxidation of alkenes etc. Heterogeneous catalyst: hydrogenation catalysts, ammonia synthesis, alkene polymerisation (Zigler Natta catalyst). [11 hrs.] **Module - III** Physical Chemistry Thermodynamic condition of chemical equilibrium, Chemical potential, Activity, Fugacity, Gibbs-Duhem equation, Duhem-Margulesequatuion. 1st and 2nd order transition. Transition state theory towards rate of elementary chemical reaction, salt effect							

	on rate of a chemical reaction. photochemical and photophysical processes, Jablonsky diagram. Phase rule and its derivation, phase diagram of CO_2, H_2O and Sulphur system, two component system, solid-liquid and binary liquid mixture, fractional distillation, steam distillation, azotrope, ideal and nonideal solution, Routs law and Henrys law, Colligative properties. Conductance and tansport number, Buffer solution, Debye-Huckel limiting law, Salt effect and common ion effect on solubility of weak electrolytes. Ion-solvent and ion-ion interaction. Electrochemical cell with transference: liquid junction potential. [15 hrs.]
Text Books, and/or reference material	Suggested Text Books: (i) Organic Chemistry: R.T. Morrison and R.N Boyd, Prentice Hall of India Pvt.Ltd. (ii) Inorganic Chemistry Part-I & II, R. L. Dutta (iii) Inorganic Chemistry Fourth Edition, Shriver & Atkins, Oxford (iv) Physical Chemistry by P. Atkins, Oxford (v) Physical Chemistry by G.W Castellan Suggested Reference Books: (i) Organic Chemistry by Volhardt (ii) Fundamentals of Analytical Chemistry By Skoog, West, Holler and Crouch (iii) Physical Chemistry by P. C. Rakshit

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CYS 51		CT+ EA					
Course Outcomes	• CO1: To learn advanced chemical analysis useful for chemical engineering. • CO2: Estimation of metal ion concentration using advanced spectroscopic						

	techniques. • CO3: Advanced synthesis and characterization methods for few compounds of industrial importance.
Topics Covered	1. Determination of CMC of a surfactant: conductometrically and surface tension measurement. 2. Potentiometric titration: estimation of Fe^{2+} in Mohr's salt. 3. Determination of solubility product of lead iodide. 4. Kinetics of ester hydrolysis. 5. Spectroscopic Estimation of metal ion: Estimation of Cu^{2+}/ Cr^{3} 6. Estimation of metal ion: Estimation of Na^{+}, K^{+}, Ca^{2+} by Flame photometry 7. Estimation of base content of commercially available antacid and acid content of vitamin C. 8. Synthesis of Mohr's salt. 9. Synthesis of paracetamol. Analysis of pyrolusite ore.
Text Books, and/or reference material	Suggested Text Books: 1.Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall 2. Practical Chemistry by R.C. Bhattacharya Suggested Reference Books: 1. Selected experiments in Physical Chemistry by N. G. Mukherjee 2. Advanced Physical Chemistry Experiments: by Gurtu&Gurtu 3. Comprehensive Practical Organic Chemistry: Qualitative Analysis by V. K. Ahluwalia and S. Dhingra

FOURTH SEMESTER

Department of Chemical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)#	Total Hours	
CHC401	**HEAT TRANSFER**	**PCR**	**3**	**1**	**0**	**4**	**4**

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
CHC301, CHC303	CT+EA

Course Outcomes	• CO1:Illustrate principles and laws of heat transfer of different heat exchanging phenomena • CO2**:** Solve heat transfer problems of different difficulty levels • CO3**:**Design and analyze heat transfer equipment
Topics Covered	**Module - I** Mechanism of heat transmission: Conduction, Convection and Radiation. Conduction: Fourier's law; Steady-state heat transfer through plane wall and composite slabs, cylinders and spheres; Thermal contact resistance, Critical thickness of insulation, Optimum thickness of insulation; Unsteady-state heat transfer - use of Gurnie-Lurie chart, one and two-dimensional conduction in different geometry. [10 hrs.] **Module - II** Convection: Forced convection; Heat transfer coefficients; Overall Heat Transfer Coefficients; Log-mean temperature difference; Dimensional analysis of heat transfer; Equivalent diameter; General equation for forced convection; Thermal boundary layer; Analogy between heat and momentum transfer. [10 hrs.] **Module - III** Natural convection: Empirical equations; Condensation: Film Condensation, Derivation of heat transfer coefficient, Empirical equations; Boiling of liquids: Concept of excess temperature, Pool boiling, Forced convection boiling; Radiation: Black body and Gray body; Laws of radiation; View factor; Radiant heat exchange between surfaces [12hrs.] **Module - IV** Heat exchangers: Type of different heat exchangers and their design - Double pipe, Shell and tube, Finned tube and Compact heat exchangers; Condensers and reboilers. Evaporation: Type of evaporators with accessories; Capacity and Steam economy;

	Boiling point rise/elevation; Multiple effect evaporators; Design of single and multiple effect evaporators. [10 hrs.] Tutorial on above topics and class Tests [14 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Process Heat Transfer: D. Q. Kern, MGH 2. Heat Transfer Principles and Application, B. K. Dutta, PHI. SuggestedReference Books: 1. Heat Transfer: An Engineering Approach: Cengel and Boles, Tata Mc-Graw Hill

CHC 403	**MASS TRANSFER- I**	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	• CO1 Principles of mass transfer for chemical processes • CO2 Various laws of mass transfer and mass balance of chemical processes • CO3 Design and analyze mass transfer equipment through problem solution						
Topics Covered	**Module - I** Mass transfer operation and principles. General principles of diffusion process, Molecular and eddy diffusion in fluids, Diffusion in solids and measurement of diffusivity, Multi-component diffusion, Diffusion through a variable area, Knudsen diffusion, surface diffusion and self-diffusion [10 hrs.] **Module - II** Convective mass transfer and mass transfer coefficients: Introduction. Dimensionless groups in mass transfer and correlations for the convective mass transfer coefficient. Theories of mass transfer, Analogy between Momentum, Heat and Mass Transfer, Inter-phase mass transfer and Basic laws, Two-film theory, overall mass transfer coefficient, Material balance in contacting equipment – the operating line and Mass transfer in stage-wise contact of two phases. [10 hrs.] **Module III** Gas absorption and stripping: Introduction. Design of a packed tower: Design method based on individual mass transfer coefficients. Design method based on the overall mass transfer coefficient. Determination of the number of stages in a tray tower, HETP, Tray efficiency, Gas-liquid contacting equipment, tray or plate column, operational features of tray column: Hydraulic gradient and multi-pass trays, weeping and dumping, entrainment, flooding, turndown ratio and estimation of diameter of tray. [12 hrs] **Module IV** Elementary idea about multi-component absorption and adsorption with chemical reactions. Extraction: Liquid-liquid extraction, Equilibrium data, Use of triangular diagrams, selectivity and choice of solvent, Single and multi-stage calculation in liquid-liquid extraction. Extraction efficiency, Principles of leaching and stage calculation methods. [10 hrs.] Tutorial on above topics and class Tests [14 hrs]							
Text Books,	<u>Suggested Text Books:</u> 1. Mass Transfer Operations: R.E. Treybal						

and/or reference material	2. Principles of Mass Transfer & Separation Processes: B. K. Dutta Suggested Reference Books: 1. P. Sinha and P. De, Mass Transfer Principles and Operations, PHI 2. Chemical Engineering: 5th Ed., Coulson & Richardson

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	• CO1: To develop a workable idea of the thermo-mechanical behaviour of industrial equipment used in various chemical industries. • CO2: To study the application of different thermodynamic principles for thermal system design • CO3: To learn the concepts of stress and strain, the properties of engineering materials, and the methods of machine design pertaining to chemical engineering						

Topics Covered	**Module – I** Relation between system and control volume approaches, Equation of states. Zeroth, first and second law of thermodynamics. Gouy-Stodola theorem; Applications of SFEE. Carnot cycle, reversed Carnot cycle, Heat engine, heat pump and refrigerators. First and second law-based performances.Properties of pure substances, Vapour power cycle—Rankine cycle. Air standard cycles—Otto, Diesel, dual and Joule-Brayton cycles. [20 hrs.] **Module – II** Review of stress, strain and deformation. Engineering materials and their properties. General principle of machine design. Factor of safety,Use of data book in mechanical design. Design of shaft and key, Mechanical drives: Introduction to simple gear drive and belt drive. Types of pressure vessels: Thin cylinder and thick cylinder. [20 hrs.]
Text Books, and/or reference material	Suggested Text Books 1. Y. A. Cengel and M. A. Boles, Thermodynamics: An Engineering Approach, McGraw-Hill. 2. M. Zemansky and R. Dittman, Heat and Thermodynamics, McGraw-Hill. 3. V B Vhandari, Design of Machine elements [3rd edition] Suggested Reference Books: 1. M. Planck. Treatise on thermodynamics. Dover. 2. E. P. Gyftopoulos, G. P. Beretta, Thermodynamics: Foundations and applications, Dover.

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)#	Total Hours	
CHC 502	**MASS TRANSFER-II**	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CHC 403, CHC301		CT+MT+EA					
Course Outcomes	• CO1: Understanding fundamentals of some major Mass transfer operations • CO2: Application of design principles for mass transfer devices • CO3: Learning operations of various mass transfer systems • CO4: Building foundation for process intensification • CO5:Motivation towards innovations for novel systems of mass transfer						
Topics Covered	**Module-I** Humidification & Dehumidification Operations: Principles of Humidification & Dehumidification Wet & dry bulb thermometry, Construction and use of humidity charts, characteristics of saturated and unsaturated vapor- gas mixtures, design & operation of cooling tower, Design problems [10 hrs.] **Module-II** Drying: Theory and mechanism of drying, steady and unsteady state drying, classification and selection of industrial dryers, estimation of drying rates, drying characteristics of materials, performance and design of batch and continuous dryers						

	[10 hrs.] **Module-III** Distillation processes: Vapor- liquid equilibrium, relative volatility, azeotropism, Equilibrium and flash distillation, types of distillation columns and construction, Rectification of binary systems, enthalpy-composition diagram and construction. [6 hrs.] **Module-IV** Rectification column design methods: Lewis-Sorel &Ponchon–Savarit, McCabe-Thiele method, Design problems [6 hrs.] **Module-V** Special distillation processes: Membrane, molecular, extractive, catalytic Distillation, multi-component Distillation & introduction to ASPEN PLUS [9 hrs.] **Module-VI** Theory of crystallization, Nucleation and crystal growth, Batch and continuous crystallizers, Design calculations for crystallizers [3 hrs.] **Module- VII** Membrane separation basics, classification, transport & exclusion mechanisms, Membrane modules and design problems on micro, ultra, nano& reverse osmosis [3hrs.] Tutorial on above topics and class Tests [14 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Unit Operations of Chemical Engineering: W.L. McCabe & J.C. Smith 2. Principles of Mass Transfer & Separation Processes: B. K. Dutta 3. Mass Transfer Operations: R.E. Treybal Suggested Reference Books: 1. Introduction to chemical engineering: W.L.Badger&J.T.Banchero 2. Membrane Science & Technology, Osada& Nakagawa 3. Industrial Water Treatment Process Technology, P. Pal, Elsevier Science 4. Chemical Engineering: Coulson & Richardson 5. Principles of Unit Operation: C. J. Geankoplis

● CO2: Ability to understand the process flow diagram and various process parameters.
● CO3: Ability to identify and solve engineering problems during production.
● CO4: Knows current scenario of chemical & allied process industries.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module I:
Basic philosophy of a process flow diagram (PFD). Elements of a PFD. General discussion on Influence of various parameters on deciding process for a product and method of drawing PFD.
Water-sources and it’s economic use. Water conditioning processes, Industrial waste water treatment - different processes
Industrial production of oxygen and nitrogen, cryogenic and non-cryogenic processes. Hydrogen manufacture from different source-steam reforming and partial oxidation processes.
Cement, glass, ceramic industries: Raw materials, principles of manufacture, flow-sheet [20 hrs.]

Module II:
Chlor-alkali industries: Production and consumption pattern, manufacture of Chlorine-caustic soda: Raw materials, principles of manufacture, Mercury-cathode & Membrane process: flow-sheet and sequence of operation, other processes, advancement of process technology and major engineering problems, uses.
Soda-ash: Production and consumption pattern, Raw materials, Solvey process Physico-chemical principles of manufacture, carbonation and ammonia recovery step, flow-sheet and sequence of operation, other processes, advancement of process technology and modified Solvey process, major engineering problems, uses. [12 hrs.]

Module III:
Industrial Acids:
Hydrochloric Acid: Raw materials, principles of manufacture, flow-sheet and</td></tr>
</table>

	sequence of operation, Sulfuric acid: sulfuric acid production process, Contact process, Physico-chemical principles and general theory of contact reaction with thermodynamic and reaction engineering aspects, different types of catalyst, DCDA process, uses. Nitric Acid: Raw materials, Ostwald Process –physico-chemical principles, catalyst, process flow sheet, Phosphoric Acid: Raw materials, manufacturing process with process flow sheet [5 hrs.] **Module IV:** Fertilizer Industries: Nitrogenous fertilizers: Synthesis of ammonia- physico chemical principles, catalyst for synthesis of ammonia, process flow sheet, Urea - Raw materials, manufacturing process with flow sheet, sequence of operation, Ammonium sulphate: Raw materials, manufacturing process with flow sheet, Phosphatic fertilizers: Manufacturing process of super phosphate of lime ,triple super phosphate and ammonium phosphate, Mixed fertilizers: NPK –manufacturing process, details of major equipment.[7 hrs.] **Module V:** Organic chemical industries Oils & Fats: Methods of extracting vegetable oils, Hydrogenation of oils, major engineering problems and improved technology Soaps, Detergents &Glycerin: Classification of cleaning compounds, uses, Methods of soap production, Methods of detergent manufacture, Methods of production of Glycerin. Process description& flow sheet of each process. Sugar and starch industries: Manufacturing process with flow diagram, Sugar refining, manufacturing process of starch and their different by-products; Glucose, Sorbitol & PolyolsPulp and paper Industries, technology and manufacturing methods, world market [12hrs.]

CO2: Process modeling fundamentals: Differential equation models, Laplace transforms, linearization, idealized dynamic behavior, transfer functions, block diagram, and process optimization.
CO3: Evaluate stability, frequency response, and other characteristics relevant to process control.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Module I:
Introduction to Instrumentation
Measurement of High temperature, Measurement of Moderate to Low Temperature, Measurement of High Pressure, Measurement of Moderate to Low Pressure, Measurement of gas and liquid flow, Measurement of multiphase flow, Measurement of liquid level & Composition [15hrs.]

Module II:
Process Dynamics & Transfer function
Process Dynamics & Model: I/O model-first-order and second-order process, Linearization and concept of deviation variable, Laplace Transform, Block Diagram, Different forcing function: step, pulse, impulse, ramp, and sinusoid. Lumped and distributed parameter system
Transfer function: SISO & MIMO systems, Transient response of first, second and higher order systems, Transportation lag; Pade approximation, Control valve: Characteristics curves and transfer function. Open loop transfer [10 hrs.]

Module III:
Closed loop systems and Stability
Closed loop systems and its components: Measuring device, Controller, Final Control</td></tr>
</table>

	Element (FCE), transmission line; Block diagram, Servo and Regulator control, closed loop response, Different type of analog controller: P, PI, PD, PID, On-Off. Concept of Stability: BIBO, characteristics equation, Routh– Hurwitz method, root locus method. Frequency Response Analysis and Controller Tuning: Amplitude Ratio and Phase Lag calculation for: General, first, second and higher order systems, Dead time, P, PI, PD, PID controllers and their respective Bode plot &Nyquist plot; Bode &Nyquist stability criteria; [10 hrs.] **Module IV:** Controller design Empirical tuning criteria: one quarter decay ratio, ISE, IAE, ITAE. Controller tuning: Cohen-Coon, Zeigler-Nicholas method; Elementary idea of feed forward, cascade, ratio, adaptive and digital computer control. Model-based control –Internal model controller [7hrs.]

CHS552	**MECHANICAL OPERATION LABORATORY**	PCR	0	0	3	3	1.5
Pre-requisites							
	Viva-Voce						

Course Outcomes	• CO1: Understand of the fundamental principles underlying mechanical operation through practical experimentation. • CO2: Know the principles of different mechanical operation equipment. • CO3: Design and analyse mechanical operation equipment. • CO4: Compare performances and select type of mechanical operation equipment. • CO4: Learn industrial applications of size reduction equipment (k)
Topics Covered	1. To verify Rittinger's Law in a Jaw Crusher 2. To Study comminution through a Ball Mill and calculate its theoretical Efficiency 3. Studies on the performance of the Cyclone Separator-(I. To study the characteristics of a cyclone separator. II. To measure the fractional collection efficiency of different particle size ratio) 4. To determine overall effectiveness of a vibrating screen for a given solid sample of unknown size 5. To determine the mixing index of flour and pulses in kneader mixer 6. To determine the power consumption in a propeller mixer and compare it with the actual power requirements in agitated vessel 7. To run the operation of Plate and Frame Filter Press For filtration of calcium carbonate slurry. (I. To determine the lost quantity of calcium carbonate after filtration process.) 8. To study the influence of different flow rates of water on separation efficiency of an Elutriator 9. To determine average size of a group of particles in a mixture based on volume and surface and graphical representation of screen analysis data for size distribution of the mixture. 10. To study the working of continuous type thickener [36 hrs]
Text Books, and/or reference material	Suggested Text Books: Lab Manual 1. Unit Operations- G. G Brown (CBS Publishers & Distribution) 2. Pre-requisites: Process calculation, Engg. Math I-III			Course Assessment methods (Continuous (CT), Midterm (MT) and end assessment (EA))				
			CT+MT+EA				

Course Outcome	• CO1: Understanding the principle ofmass, energy and momentum conservation equations. • CO2: Concept of steady state and unsteady state model equations • CO3: Numerical techniques to solve Algebraic, ODE and PDE • CO4: Solution of various model equationsand graphical presentation
Topics Covered	**Module I:** Introduction to Mathematical Model and its Necessity: Empirical relationship, experimentation, data interpretation, correlation and mathematical modelling using example Model Development Principles and Classification of Models: Dimensional Analysis, Synthesis of sub-models, Experimental facts, Hypothesis, Scale up concept, Steady state, unsteady state model, dynamic response, Constitutive relationships, Deterministic and Stochastic – Macroscopic diffusion equation, Lumped and Distributed Parameter - Stirred tank and plug flow models, Linear and non-linear models Conservation principles of mass and energy and momentum balance equations and Modelling of few simple systems**,** Gravity flow tank, Flash drum, Distillation column, Double pipe heat exchanger, Gas-liquid absorption column, CSTR, Batch reactor, Plug flow reactor. **[**18 hrs.] **Module II:** Development of dynamic model, Input output model vs. state model, system parameters, numerical integration,Linear models and deviation variables, linearization of non-linear models, System with one state variables, one input. State space model,Heated mixing tank, Isothermal CSTR, Non-isothermal CSTR with 2nd order chemical reaction, linearized model for the system and state space representation, Stability analysis and Eigen values. Model development ofPyrolysis, Combustion, Gasification process of coal and biomass and comprehensive modellingin TGDA, Isothermal mass loss Apparatus. [12 hrs.] **Module III:** Specialized Modeling for distributed parameter system: Distributed parameter system and model equations,the general conservation equation and interpretation of individual terms, Detail derivation of Finite Volume Method (FVM) and its application to steady state diffusive, convective and convective-diffusive problem. Extensions of the same for unsteady state operation, Presence of non-linear reaction terms, radiation term and linearization technique. Solution ofmodel equations. [14hrs.] Tutorial and class test [14 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1.*Lyuben*, W.L, *Process Modelling*, Simulation and Control, McGraw-Hill, N.Y. 1990. Suggested Reference books: 1. Patankar, S. V., 'Numerical fluid flow and heat transfer', 1980, Hemisphere

CHS 651	**FUEL LABORATORY**	PCR	0	0	3	3	1.5
Pre-requisites							
		Viva-Voce					
Course Outcomes	● CO1: Demonstrate and understand the principles of fuel properties testing instrument. ● CO2:Conduct the experiments for determination of properties of different fuels. ● CO3:Analyze the performance of equipment through group tasks.						
Topics Covered	1. Proximate Analysis of Coal determines the moisture ash, volatile matter and fixed carbon of coal in terms of weight percentage. 2. Shattering Index of Coke 3. Caking Index 4. Swelling Index 5. Viscosity of Fuel Oils 6. Determination of Flash point and Fire point of an oil by closed cup Pensky Martin Apparatus 7. Determination of moisture content of fuel oil by Dean and Stark Apparatus 8. Aniline point determination by thin film 9. Determination of vapour pressure of petroleum products using Reid Apparatus. 10. To perform atmospheric distillation of petroleum product and to find out percent recovery, percent total recovery, percent loss, percent residue. 11. Determination of calorific value of solid fuel by Bomb Calorimeter 12. Determination of carbon residue of fuel by Conradson Method [36 hrs.]

Sixth Semester Departmental Depth Elective Subjects

Department of Chemical Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHE610	**CHEMICAL REACTOR ANALYSIS**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), Mid Term and end assessment (EA))					
CHC501		CT+MT+EA					
Course Outcomes	• CO1: Design & analyze fluid-solidnon-catalytic, catalytic and fluid-fluid reactors • CO2: Design &analyse multiphase reactors • CO3: Design and analyze bioreactors and non-ideal reactors • CO4: Analyse the thermal instability of CSTRs						
Topics Covered	**Module I:** Design and analysis of non-catalytic solid-fluid reactors [3 hrs.] **Module II:** Analysis of catalytic reactors: Packed, Moving-bed and Fluidized-bed reactors [10hrs.] **Module III:** Multiphase reactors: slurry and trickle bed reactors [9hrs.] **Module IV:** Multiple steady states and thermal instability of reactors; Dynamic analysis of CSTR; Sustained oscillation and limit cycle [5hrs.] **Module V:** Modelling of non-ideal reactors [4hrs.] **Module VI:** Biochemical reactor design [2hrs.]						

	Module VII: Fluid-fluid reactor design [5 hrs.] Tutorial on above topics and class tests [4hrs.]
Text Books, and/or reference material	Suggested Text books: 1. H. S. Fogler, Elements of Chemical Reaction Engineering, Prentice Hall India. 2. O. Levenspiel, Chemical Reaction Engineering, Wiley. Suggested Reference book: 1. Chemical Reactor Analysis and Design - G F Froment& K B Bischoff (Wiley).

CHE611	**INDUSTRIAL POLLUTION CONTROL AND TREATMENT**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Knowledge of all Unit Operations and Unit processes		CT+MT+EA					
Course Outcomes	• CO1: The fundamental concepts in environmental engineering dealing with water, air, and land pollution. • CO2: Graduates will learn a solid foundation in mathematics, sciences, and technical skills needed to analyze and design environmental engineering systems. • CO3: Graduates will be familiar with current and emerging environmental engineering and global issues, and have an understanding of ethical and societal responsibilities. • CO4: The necessary qualifications for employment in environmental engineering						

	and related professions, for entry into advanced studies, and for assuming eventual leadership roles in their profession.
Topics Covered	**Module I:** Introduction to Water Treatment: National & International Scenario; World-wide Water resources Management; Water quality standards – Drinking water standards; Industrial effluent standards [3 hrs] **Module II:** Physico-Chemical Treatment Technology: Aeration, Ion exchange, Ozone treatment, adsorption. Chemical coagulation-precipitation, settling, flocculation theorems, Chlorination, advanced scheme for municipal water treatment.[6hrs.] **Module III:** Biological Treatment: Basics of biological water treatment, relevant kinetics, biological reactor configurations, Activated sludge process, trickling filtration, lagoon treatment, submerged aerators, upward flow sludge blanket reactor, rotating disc biological contactors, advances in biological treatment. [7hrs.] **Module IV:** Membrane Treatment: Different membranes and modules in water treatment; Transport mechanisms in membrane separation; Principles of Forward and Reverse osmosis; Membrane distillation, Micro and ultrafiltration; Nanofiltration and hybrid processes in water treatment processes.[7 hrs.] **Module V:** Industry-specific advanced water treatment schemes: Petroleum refinery waste treatment, coke-oven waste treatment, pharmaceutical waste treatment, tannery wastewater treatment.[5 hrs.] **Module VI** Air Pollution Environmental threats Role of Atmosphere in dispersion , Plume behavior Dispersion problems and Stack Design(Tutorial): Control devices –Cyclone Separators, ESP, Venturi scrubber, gravity separator, filters Design Problems (Tutorial) Abatement of gaseous pollutants & VOCs [10 hrs.] **ModuleVII:** Solid and hazardous Waste management [4 hrs.]
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Industrial water treatment Process Technology, P. Pal, Elsevier Science 2. Membrane Technology in Environmental Pollution Control, P.Pal 3. Environmental Pollution Control Engineering – C.S. Rao <u>Suggested Reference Books</u>: 1. Groundwater Arsenic remediation: Treatment Technology and Scale up, P. Pal, Elsevier Science

CHE612	**NON-CONVENTIONAL ENERGY ENGINEERING**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
CHC401		CT+EA					
Course Outcomes	● CO1: Learn about energy technology of different conventional and non-conventional energy resource and Recent worldwide energy market scenario ● CO2: Design & analyze of different renewable energy collectors and renewable energy thermal power plants ● CO3: Learn industrial and domestic applications of different renewable energy sources ● CO4: Solve energy technology problems of different difficulty levels through tutorials						
Topics Covered	**Module I:** Wind Energy: Sources and potentials, Wind energy conversion, General formula -Lift and Drag- Basis of wind energy conversion – Effect of density, frequency variances, angle of attack, and wind speed. Windmill rotors Horizontal axis and vertical axis rotors. Determination of torque coefficient, horizontal and vertical axis windmills, performance characteristics, Betz criteria, Design and analysis of wind turbines.						

	geographical aspects. [10 hrs.] **Module II:** Solar Energy: Energy available form Sun, Solar radiation data, Solar energy conversion into heat, Flat plate and Concentrating collectors, Construction and performance analysis of solar flat plate collectors, Mathematical analysis of Flat plate collectors and collector efficiency, collector efficiency factor, tilt factors, collector heat removal factor, Hottel-Willier-Bliss equation. Principle of Natural and Forced convection, Salt gradient solar ponds: construction, operation, technical problems, Solar drying and dehumidification: Solar cabinet dryers, convective dryers Solar engines-Stirling, Brayton engines, Photovoltaic, p-n junction, solar cells, PV systems, Stand-alone, Grid connected solar power satellite. [10 hrs.] **Module III:** Nuclear Energy: Nuclear fission principles, types of nuclear reactors (BWR, PWR, PHWR, LMCR, GCR, FFR). Nuclear reactor analysis: four factor formula, resonance absorption, reactor buckling, multiplication factor, thermal utilisation coefficient, reflector saving, fast fission factor, optimum moderator to fuel ratio. Radioactive waste disposal Energy from Ocean: Wave, Tidal and OTEC energy- Difference between tidal and wave power generation, Principles of tidal and wave power generation, OTEC power plants (closed cycle, open cycle, hybrid cycle), operation and technical problems, environmental impact, Tidal power, salinity power plants, Geothermal systems: Resources, types of wells, methods of harnessing the energy, Hot water and dry steam systems, energy extraction principles. [10 hrs.] **Module IV:** Energy from biomass: Biomass utilization: pyrolysis, gasification, anaerobic digestion (biogas production). Principles of Bio-Conversion, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion characteristics of bio-gas, Biodiesels: Manufacture and characteristics. Gasohol: Characteristics and manufacture, use of pervaporation technology. Synthetic liquid fuels from coal: F – T Process, Coal hydrogenation, MTOG process. [10 hrs.]

CHE 613	**COMBUSTION ENGINEERING**	PEL	3	0	0	3	3	
Pre-requisites: Process calculation, Material and energy balance, Engg. Mathematics, ODE, PDE, Numerical techniques, modelling simulation with computing skill using c and Matlab program			Course Assessment methods (Continuous (CT), Midterm (MT) and end assessment (EA))					
			CT+MT+EA					
Course Outcomes	• CO1: Clean coal technologies, coal bed methane blending of biomass with coal. • CO2: Mass and energy balance during combustion of solid, liquid and gaseous fuel. • CO3: Reaction kinetics and mechanism of Pyrolysis, Combustion and gasification. • CO4: Burner design for different industrial application.							
Topics Covered	**Module I:** Properties of solid liquid and gaseous fuels Classification, Composition, Calorific Values, Lower and higher heating values, ASTM test techniques of solid, liquid and gaseous fuels. Gasification of coal –Coal gasification technologies, chemical reactions, process conditions, design of gasification equipment. Underground coal gasification technology, process route. Clean coal Technologies: What is clean coal technology? Principle and objectives.Oxyfuel combustion, Biochar, Carbon capture and storage, Carbon sequestration, Kyoto Protocol, Mitigation of global warming, Refined coal, Coal bed methane deposits, CBM recovery through microporous network, Primary method-Dewatering process, Secondary method (Carbon dioxide injection technique). [24 hrs.] Module II: Stoichiometry of combustion -							

	Chemical equations, Mass and energy balance of solid liquid and gaseous fuel combustion, concept of mixture fraction and equivalence ratio, problems on Fuel efficiency, excess air ratio and draft.Gas analyzers- Orsat and modern gas analyzers [7 hrs.] **Module III:** Combustion of liquid and gaseous fuels, Theory of diffusion flame, development diffusion flame equations and its solution technique, length of diffusion flame, chemical properties of diffusion flame & Premixed flame and its nature. Burner design for liquid and gaseous fuel, Types of Burners, design parameters and problems.[7 hrs.] **Module IV: 12h** Combustion of solid fuels, Stages of combustion- drying, devolatilization, volatile combustion, combustion of residual char, Pulverized coal combustion, Combustion in fluidized bed system, burning rate in fluidized bed, factors affecting combustion efficiency. Combustion in bubbling fluidized bed boilers Combustion mechanism dense phase and lean phase concept and mass and energy balance, Recirculation of fly ash, effect of design parameters on combustion efficiency. Single particle combustion modelling- Single particle combustion modelling using volume reaction model, reaction mechanism and role of pore surface area. Heat and species transport equation in porous medium.Excremental technique in TG/DTA and drop tube furnace. [24 hrs.] Tutorial and class test [5 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Combustion and Fuel Technology, A.K.Saha 2. Combustion and gasification in Fluidized bed, PrabirBasu, Taylor & Francis Suggested Reference Books: 1. Fundamentals of Combustion Engineering by Achintya Mukhopadhyay and Swarnendu Sen

	PROCESS INDUSTRY						
Pre-requisites		Course Assessment methods (Continuous (CT), Midterm (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	● CO1 : Acquire an idea about the application of artificial intelligence in chemical process industry ● CO2 : To learn the fundamental knowledge of Neural network base modeling and their application in chemical process industries ● CO3: To learn the fundamental knowledge of different stochastic optimization techniques and their application in industry
Topics Covered	**Module I:** Basic concept and introduction, Challenges faces by process industries, Paradigm shift of chemical business, What is artificial intelligence (AI)?, What is advance data analytics (ADA)?, Use of artificial intelligence (AI) and advance data analytics in different fields, Use of AI in chemical process industry and changing business scenario of chemical process industry , Areas where AI have impact on process industry, Different real life case studies of application of AI in process industry , How AI based techniques can be used to increase profit in chemical industry. [08 hrs.] **Module II:** Application of artificial neural network (ANN) for modeling industrial processes What is process modeling? ,Difference between process design and process simulation , Different process modeling strategy , Comparative advantage and disadvantage of different modeling strategy , Limitations of first principle base modeling , Limitations of commercial simulators to model complex industrial reactors ,Data driven black box or grey box modeling technique and its advantage ,Necessity to build a platform to utilize large number of process data , Artificial neural network (ANN) as effective tool of black box modeling, What is artificial neural network (ANN)?, Network architecture, Back propagation algorithm, How ANN can be used to develop complex industrial processes, Steps in ANN modeling technique ,Modeling of process performance parameters like selectivity, yield, efficiency etc. , Different examples of ANN modeling applied in diverse field of process industries, A step by step matlab based ANN case study for modeling of industrial reactor ,Different aspects of ANN modeling. [12 hrs.] **Module III:** Artificial intelligence based process optimization What is process optimization? , How parameter optimization can increase profit? , Limitations of conventional methods to apply complex industrial context, Use of metaheuristic method for optimization, Different Meta heuristics strategies like genetic programming, differential evolution and particle swarm optimization, Genetic algorithm (GA), what is GA? Basic algorithm and matlabcode ,Explanation of different parameters in GA algorithm ,Different uses of GA in various fields of process optimization , Differential evolution (DE), what is DE? Basic algorithm and matlabcode ,Explanation of different parameters in DE algorithm,Different uses of DE in various fields of process optimization

	Particle swarm optimization (PSO), What is PSO?, Basic algorithm and matlab code, Explanation of different parameters in PSO algorithm, Different uses of PSO in various fields of process optimization ,How metaheuristics algorithm can be used for parameter optimization,3 case study in reactor optimization, Advantage of metaheuristics methods over conventional methods. [10 hrs.] **Module IV:** Artificial intelligence based fault diagnosis in process industry Development of system to use and generate knowledge from process data ,Online advance process monitoring ,Generation of dashboard of different KPI ,Use of different advance computational technique to visualize data ,Artificial neural network based monitoring system ,How ANN can be used to develop advance process monitoring system ,Steps to develop ANN based process monitoring system Principal component based monitoring system, What is Principal component analysis (PCA)?, PCA algorithm, How PCA can be used to develop advance process monitoring system ,Advantage of PCA based monitoring system ,Steps to develop PCA based process monitoring system Development of Fault diagnosis system What is fault diagnosis system?, Features of fault diagnosis system ,How a robust fault diagnosis system can be made by PCA and ANN , Steps to build efficient fault diagnosis system ,Matlab code ,Case study. [10 hrs.]

SEVENTH SEMESTER

Department of Chemical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	

MSC731	PRINCIPLES OF MANAGEMENT	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous assessment (CA) and end assessment (EA))					
		CA+EA					

Course Outcomes	• CO1:To make budding engineers aware of various management functions required for any organization • CO2:To impart knowledge on various tools and techniques applied by the executives of an organization • CO3:To make potential engineers aware of managerial function so that it would help for their professional career • CO4:To impart knowledge on organizational activities operational and strategic both in nature • CO5: To impart knowledge on each functional area of management like Marketing, Finance, Behavioral Science, Quantitative Techniques and Decision Science
Topics Covered	**Module I:** Management Functions and Business Environment: Business environment- macro, Business environment -micro; Porter's five forces, Management functions –overview, Different levels and roles of management, Planning- Steps, Planning andenvironmental analysis with SWOT, Application of BCG matrix in organization [8 hrs.] **Module II:** Quantitative tools and techniques used in management: Forecasting techniques, Decision analysis, PERT & CPM as controlling technique [7 hrs.] **Module III:** Creating and delivering superior customer value: Basic understanding of marketing, Consumer behavior-fundamentals, Segmentation, Targeting & Positioning, Product Life cycle. [8 hrs.] **Module IV:** Behavioral management of individual: Motivation, Leadership, Perception, Learning. [8 hrs.] **Module V:** Finance and Accounting: Basics of Financial management of an organization, Preparation of Final Accounts, Analysis of Financial statements, Cost Volume Profit (CVP) Analysis, An overview of financial market with special reference to India. [12 hrs.]
Text Books, and/or reference material	<u>Suggested Text Books</u>: 1. Financial Management, 11th Edition, I M Pandey, Vikas Publishing House. 2. Marketing Management 15th Edition, Philip Kotler and Kelvin Keller, Pearson India 3. Management Principles, Processes and practice, first edition, Anil Bhat and Arya Kumar, Oxford Higher education <u>Suggested Reference Books:</u>

	1. Organizational Behavior,13 th edition, Stephen P Robbins, Pearson Prentice hall India 2. Operations Management, 7th edition (Quality control, Forecasting), Buffa & Sarin, Willey

CH1003	**ADVANCED MATHEMATICAL METHODS FOR CHEMICAL ENGINEERING**	PEL	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
--		CT+EA					
Course Outcomes	• CO1: Conceptualization ofa chemical process and its calculation needs • CO2: Understanding the various equations for Estimation of Physical Properties and thermodynamic parameters • CO3: Understandingthe mathematical equations and their solution procedure related to fluid dynamics and Chemical reaction engineering • CO4: Calculations and their solution methodology related to mass transfer						
Topics Covered	**Module I:** Solutions of Algebraic Equations Truncation error, round-off, Chopping-off error, loss of significance and propagation of error. Jacobi and Gauss-Seidel iterations, Eigen value problem, Gauss elimination, Tri-Diagonal matrix, algorithm (TDMA), Applications-heat transfer, chemical reactions, fitting straight line and polynomial etc.						

	Newton-Rapson method, Newton's method, application in thermodynamic property calculation, bubble point calculations equations, stability analysis of a non-isothermal CSTR. [7 hrs] **Module II:** Solutions of Differential Equations ODEs-Euler's Method, Runge-Kutta Method, predictor-corrector method, Crank-Nicholson method Applications in chemical reaction Engineering and heat transfer [6 hrs] **Module III:** Solutions of Partial Differential Equations (PDE) Finite volume technique for PDE. Steady state convection diffusion equation, unsteady Steady state convection diffusion equation. PDE with linear and non-linear source terms [8 hrs] **Module IV:** Numerical methods with Matlab and Excel Introduction to MATLAB, Numerical Methods with MATLAB, Linear Systems, Nonlinear Equations, Regression Analysis, Interpolation., Optimization, Differentiation and Integration, Ordinary Differential Equations, Partial Differential Equations [5 hrs] **Module V:** Fluid Mechanics Friction Factor, Flow of Fluids in Pipes, Friction Loss, Overall Pressure Drop, Flow through Tank, Compressible Fluid Flow in Pipes, Two-Phase Flow in Pipes, [5 hrs] **Module VI:** Chemical Reaction Engineering Calculations and estimations of different parameters related to the following: Reaction Rates, Continuous-Stirred Tank Reactor (CSTR), Batch Reactor, Catalytic Reactors [5 hrs] **Module VII** Mass Transfer Multiple-Effect Evaporators, Shortcut Calculation Method for Multicomponent Distillation, Rigorous Steady-State Distillation Calculations [5 hrs] Tutorial on above topics, remedial classes and class tests. [14 hrs]
Text Books, and/or reference material	Suggested Text Books: 1.Chemical Engineering Computation with MATLAB., Yeong Koo Yeo, CRC Press 2. T.F.EdgarandD.M.Himmelblau,"OptimizationTechniquesforChemicalEngineers",McGraw-Hill,NewYork, 1985. 3.S. S. Rao,

	"EngineeringOptimizationTheoryandPractice",Thirdedition,NewAgeInternationalPublishers,India. 4. S. K. Gupta, "Numerical Techniques for Engineers",New AgeInternational Publishers, 3rd edition, 2015 5. Mathematical Methods in Chemical &Environmental Engineering: AjayK. Ray, ThomsonLearning,2000. Suggested Reference Books: 1. K. Deo,"OptimizationTechniques", WileyEastern, 1995. 2. R. Panneerselvam, "Operation Research", 2nd Ed., PHI Learning privateLtd, NewDelhi,India. 3.PremKumarGuptaandD.S.Hira "ProblemsinOperationsResearch(PrinciplesandSolutions)",S. Chand and company Ltd. NewDelhi,India.

Mapping of CO (Course Outcome) and PO (Programme Outcome)

CHS 752	**CHEMICAL ENGINEERING COMPUTING LABORATORY- 2**	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CHEMICAL ENGINEERING COMPUTING LABORATORY- 1 (CHS 351)		EA and Viva-Voce					
Course Outcomes	• CO1: To improve the skill of programming with numerical methods • CO2: To solve Chemical Engg problems using computers (using Matlab/Aspen/Ansys)						
Topics Covered	**Module I** 1. Arrays Operations, Loops in Matlab 2. Script and Functions in Matlab 3. Plotting in Matlab 4. Truncation Error and Numerical error in Matlab 5. Numerical Differentiation and Integration using Matlab						

	Module II Solving Linera/non-linear equations using Matlab Solving set of linear equation Solving ODEs in Matlab (RK/ODE45) **Module III** Intruduction to Matlab-Simulink Tuning of PID controller using Simulink Example cases using Simulink **Module IV** Introduction to Aspen-Plus Property analysis using Aspen-Plus Process Modelling and simulation using Aspen-Plus [36 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Computational Techniques for Process Simulation and Analysis Using MATLAB, Niket S. Kaisare, CRC Press 2. Teach Yourself the Basics of Aspen Plus, Ralph Schefflan, 2nd Edition, AIChE, Willey Suggested Reference Books: 1. Introduction to Simulink: With Engineering Applications,by Steven T. Karris, Orchard Pubns; 3rd edition

	PROCESS EQUIPMENT DESIGN						
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Process Equipment Design I & II		Report submission and Viva-Voce					
Course Outcomes	• CO1: Students are groomed to become confident design engineers / process simulators. They are also made conversant with all aspects of chemical engineering science, since development of CAD packages demands proficiency in all unit operations and unit processes.						
Topics Covered	1. Introduction to the basic principles of pressure vessel, Heat Exchanger, Evaporator and distillation process and its applications 2. Computer Aided process design of Pressure Vessel by Auto-CAD 3. Computer Aided process design of Heat Exchanger column by Auto-CAD 4. Computer Aided process design of Evaporator by Auto-CAD 5. Computer Aided process design of distillation column by Auto-CAD						
Text Books, and/or reference material	Suggested Text Books: 1. L. E. Brownell, E. H. Youg, "Process Equipment Design" John Wiley & Sons Publications, 2004. 2. J.M. Coulson and J. Richardson, "Chemical Engineering", Vol. 6, Asian Books Printers Ltd. 3. Indian Standard Specifications IS-803, 1962; IS-4072, 1967; IS-2825, 1969. Indian Standards Institution, New Delhi. Suggested Reference Books: 1. R.H. Perry, "Chemical Engineers' Handbook", McGraw-Hill. 2. W.L. McCabe, J.C. Smith and P. Harriot, "Unit Operation of Chemical Engineering", McGraw-Hill, 2001.

CHS754	**VOCATIONAL TRAINING / SUMMER**		0	0	2	2	1

	INTERNSHIP & SEMINAR						
Course Outcomes		● CO1: Ability to understand all the Unit Operations and Unit Processes in real-life problem. ● CO2: Knowledge sharing					
Topics Covered		Industrial Training, Internship etc. 4 -8 weeks					
Text Books, and/or reference material		NA					

Seventh Semester Departmental Electives (CHE710-720)

Department of Chemical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHE 710	**ENERGY SOURCES AND UTILISATION**	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	● CO1: Learn different sources of energy and basic terminology ● CO2: Identify characteristic properties of fuels and analyze fuel processing equipment ● CO3: Compare performances and select type of fuel processing equipment						
Topics Covered	**Module I:** Introduction: Survey of different sources of energy and their utilization. Fossil fuels: Coal, Petroleum and gaseous fuels. Coal: Origin and formation of coal . Petrographic constituents of coal, Properties and testing. Classifition of coal, Coal preparation- washing and blending, Metallurgical and other uses. Carbonisation of coal, coke ovens and recovery of by- products. [5 hrs.] **Module II:** Petroleum : Constitution of petroleum, Origin and Occurrence of crude, Evaluation of crude, Properties, testing and specifications of petroleum products- Octane no.; Reid vapor pressure; Flash point; Fire point; Smoke point; Pour point; Cloud point; Aniline point and Diesel index; Cetane no. , Processing of Crude Petroleum.[12hrs.] **Module III:** Gaseous fuels: Classification. Manufacture of producer and water gas. Combustion and furnace: Combustion characteristics, Combustion appliances--						

	furnaces, waste heat recovery system, burners. [11 hrs.] **Module IV:** Non-conventional energy sources: Solar energy, Wind, Tidal Energy, Wave Energy, Energy from biomass, [4 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Modern Petroleum Refining: B. K. B. Rao 2. Fuels & Combustion: Samir Sarkar Suggested Reference Books: 1. Petroleum Refining Engineering: W. L. Nelson 2. Petroleum Refining Technology & Economics: J.H. Gary & G.E. Handwerk 3. The elements of fuel technology: G. W. Himus

Department of Chemical Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHE 711	**BIOPROCESS & BIOREACTOR ENGINEERING**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CHC 301, CHC 403, CHC501		CT+MT+EA					
Course Outcomes	• CO1: Apply kinetics of biochemical reactions for design of bioreactor. • CO2: Analyze performance of ideal and non-ideal bioreactors. • CO3: Integrate different type of reactor and reactor assembly.						
Topics Covered	**Module I:** Introduction to the kinetics of Bioprocess; Free enzyme kinetics; Inhibition in enzymatic reactions. Kinetics of immobilized enzymes. Bioreactors for enzymatic reactions. [15 hrs.] **Module II:**						

	Cell growth kinetics; Growth models, Inhibition in cell growth kinetics, Immobilized cell growth system. Reactors for cell growth system. Combination of bioreactors for cell growth. [15 hrs.] **Module III:** Multiplicity in Biosystems, Global and local stability analyses of Bioreactors. Bioreactor controlling probes, Characteristics of bioreactor sensors, Temperature measurement and control, DO measurement and control, pH/redox measurement and control, Detection and prevention of the foam. [10 hrs.] **Module IV:** Downstream processing in bioprocesses; Intra and extracellular product extraction and separation. Industrial application of bioprocesses. [10 hrs.]
Text Books, and/or reference material	SuggestedText Books: 1. J. E. Bailey, D. F. Ollis, Biochemical Engineering Fundamentals, Second Edition, Mc. Graw Hill Inc., Singapore, 1986. 2. H. W. Blanch, D. S. Clark, Biochemical Engineering, Special Indian Edition, Marcel Dekker Inc. New York, 2007. 3. M. L. Shuler, F. Kargi, Bioprocess Engineering - Basic Concepts, Second Edition, Prentice Hall of India Private Ltd., New Delhi, 2002. SuggestedReference Books: 1. P. M. Doran, Bioprocess Engineering Principles, Academic Press, California, 2009. 2. J. Nielsen, J. Villadsen, G. Liden, Bioreaction Engineering, Second Edition, Springer, 2007. 3. D. G. Rao, Introduction to Biochemical Engineering, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2008.

CHE 712	PROCESS ENGINEERING	PEL	3	0	0	3	3
Pre-requisites Unit operations and Chemical reactor, Chemical Process Technology, Optimal design methods			Course Assessment methods (Continuous (CT) and end assessment (EA))				
		CT+EA					
Course Outcomes	● CO1: Understanding process design concepts ● CO2: To troubleshoot real-time chemical processes ● CO3: To do optimal plant operation						
Topics Covered	**Module I:** Introduction, Course objectives and course outcomes- Definition of process engineering–responsibilities of Process Engineers. Structure of Processes and Process Engineering [5hrs.] **Module II:** Process Design and Flow sheeting, Process design principles; process selection; Degree of freedom; selection of design variable; mass balance and energy balance; process flow sheeting; sizing of equipment. [12hrs.] **Module III:** Process dynamics and dynamic optimization: Process response and retrofitting; Dynamic models; Optimization models for process synthesis and design; dynamic optimization; real-time optimization;[12hrs.] **Module IV:** Process Synthesis :Basic concepts in process synthesis; flowsheet optimization and economic analysis; process trouble shooting; case studies, [12hrs.]						
Text Books, and/or reference material	Suggested Text Books: 1. Rudd DF, Watson, CC. Strategies of process engineering, John Wiley, 1968 2. Seader WD, Seader, JD, Lewin, DR. Product & process design principles, John Wiley, 2004 Suggested Reference Books: 1. Arthur W. Westerberg, I.E. Grossmann, and Lorenz T. Biegler, Systematic Methods of Chemical Process Design. Prentice Hall

CHE713	CHEMICAL PLANT DESIGN AND ECONOMICS	PEL	3	0	0	3	3
Pre-requisites: Unit operations and Chemical reactor, Chemical Process Technology, Optimal design methods		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					

Course Outcomes	• CO1:Managing various process design projects • CO2: Understanding process design concept based on mass-energy balance and optimization • CO3: Determining design-project feasibility and implementation time
Topics Covered	**Module I:** Plant Design life cycle: Various stages of a plant design project – managing the various stages of plant design project – various approaches. Various scheduling methods for plant design[10hrs.] **Module II:** Plant Design Projects: Process design principles; process selection-DOF-design variable; -mass balance and energy balance; flow sheeting; sizing of equipment; P&ID-basic engineering package (BEP); Principles of equipment layout in and site selection for chemical plants; Types and selection of materials of construction for process equipment. [12 hrs.] **Module III:** Feasibility of Plant Design**:**Estimation of cost and profit - taxes & depreciation-rate of return (ROI)-case studies; Screening of Process Alternatives; Concepts of investment, interest and time value of money; Profitability analysis. Analysis of alternative investments and replacements.[10hrs.] **Module IV:** Case studies :Design of Reactors; Design of Separation Processes; Energy Integration and Design of Heat Exchanger Network (Pinch Technology);[13 hrs.]
Text Books, and/or reference material	<u>SuggestedText Books</u>: 1. Peters, M S, Timmerhaus, KD, Plant Design and Economics, McGraw Hill, 1991 2. Towler G, Sinnott, Ray, Chemical Engineering Design, Elsevier, 2008 <u>SuggestedReference Books:</u> 1. Rudd DF, Watson, CC. Strategies of process engineering, John Wiley, 1968 2. Seader WD, Seader, JD, Lewin, DR. Product & process design principles, John Wiley, 2004.

CHE 714	**PROCESS SAFETY IN CHEMICAL INDUSTRIES**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	•CO1: Understand the key principles of process safety and its management and consequences of poor process safety (human, environmental and business consequences) •CO2: Understand the hazards associated with process plant and how the risks can be controlled •CO3: Understand the key process safety requirements at each stage in the life cycle of process plant from conceptual design through to operation, maintenance and modification •CO4: Understand the interdependence and the need for overall organization process safety management capability						
Topics Covered	**Module I:** Introduction and Review of Industry Accidents, Basic Laboratory Safety and Bio-safety levels, Importance of personal protective equipment,[8 hrs.] **Module II:** Basics of process safety management,Toxicology and Industrial Hygiene, [7 hrs.] **Module III:** Source Models and Dispersion Models, Fire and Explosion, Designs to prevent fire Fire extinguishers and Sprinklers, Introduction to reliefs. [20 hrs.]						
Text Books, and/or reference material	Suggested Text Books: 1. Chemical Process Safety: Fundamentals with Applications: Daniel Crowl and Joseph F. Louvar, 3rd ed., Pearson New International Edition. Suggested Reference Books: 1. Safety in Chemical Plants/Industry & its Management, B. K. Bhaskara Rao, R. K Jain, Vineet Kumar, Khanna Publishers

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHC 715	**MEMBRANE SEPARATION PROCESS**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CHC 502		CT+MT+EA					
Course Outcomes	• CO1: Learn fundamentals of membrane separation processes and current market scenario • CO2: Classify and characterize membrane separation processes • CO3: Principles and methodologies of separation and transport of molecules through membrane and latest development • CO4: Complete process design of separation and exercise problems through tutorials/ assignment / group task						
Topics Covered	**Module I:** Membrane Separation Processes: Types of membranes and membrane characterization, Membrane modules and motion of molecules through membrane, Classification & characterization of Membrane Separation Processes. Reserve Osmosis (RO): Fundamentals, Osmotic Pressure, Models of Solvent and solute Transport through membrane – Fluxes, Rejection and Separation factor, Mechanism of salt rejection by CA membrane, Concentration Polarization, applications [12 hrs.] **Module II:** Nano-filtration (NF): Fundamentals of NF, Models and Types of transport mechanism in NF membranes, Applications of NF Ultra-filtration (UF): Models and Types of transport in UF membranes, Membranes for UF – Fouling and concentration Polarization in UF, Separation schemes using UF, Dia-filtration – process design – batch, continuous, multistage						

	Micro-filtration (MF): Membranes for MF – transport mechanism [12 hrs.] **Module III:** Dialysis: Solute transport in dialyzer – analysis of dialysis operation, Mode of dialysis, Hemo-dialysis – dialysis equipment – applications Electro –dialysis (ED): Types of ED – ion transport fundamentals, Resistances and voltages in ED cells – power requirement, ED membranes and cells, Problems of ED operation, Plant design and process cost. [8 hrs.] **Module IV:** Pervaporation (PV): Theory of PV – parameter study, Classification of PV – air heated PV, Osmotic distillation, thermo-pervaporation, Advantages and disadvantages of PV, Application of PV, Gas Separation: Membrane gas separation, Industrial applications. [8 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Separation Processes – C. J. King 2. Synthetic membranes – P. M. Bungay, H. K. Lonsdale, M. N. de Pinho Suggested Reference Books: 1. Membrane Separation Processes – KaushikNath 2. Membrane Hand Book – W. Ho and K. K. Sirkar 3. Industrial Processing with membranes – R. E. Lacey & S Loeb 4. Reverse Osmosis – S. Sourirajan 5. Ultrafiltration Handbook – M. Cheryan 6. Principles of Mass Transfer and Separation Processes – B. K. Dutta 7. Membrane Technology in Environmental Pollution Control, P.Pal 8. Industrial Water Treatment Process Technology, P.Pal, Elsevier Science 9. Membrane Technology in Environmental Pollution Control. P.Pal

	INTENSIFICATION						
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					
Course Outcomes	• CO1: Understanding the concept, need and benefits of process intensification amidst • stringent environmental regulations, concerns for energy security and sustainable • development • CO2: Learn different approaches of achieving process intensification • CO3: Learning design, operation, analysis and application of selected process intensification technologies						
Topics Covered	**Module I:** Basics of Process Intensification, definitions, routes, benefits, need for process intensification, sustainable development issues [4 hrs.] **Module II:** Twelve principles of green chemistry. Matrices for chemistry: Effective mass yield, carbon efficiency, atom economy, reaction mass efficiency, Environmental factor (E) [4 hrs.] **Module III:** Process Intensification by Multifunctional equipment, Principles, design, operation and case studies [4 hrs.] **Module IV:** Process Intensification by reactive distillation: Principles, design, control, feasibility, technical evaluation, case studies [4 hrs.] **Module V:** Process Intensification by catalytic distillation: Principles, design, operation, application, economics [4 hrs.] **Module VI:** Process Intensification by Membrane application: principles, modular design issues, energy saving prospects, space-saving prospects, green processing prospects, case studies [4 hrs.] **Module VII**: Case studies of process intensification in lactic acid manufacture, glutamic acid manufacture, industrial wastewater treatment and reuse, recovery of valuables. [6hrs.] **Module VIII:** Process Intensification through cavitation reactors, oscillatory baffled reactors, sono-chemical, hydrodynamic cavitation reactors, case studies [4 hrs.] **Module IX:**						

	Process Intensification through monolith reactors: Hydrodynamics, design, advantages, applications [4 hrs.]
Text Books, and/or reference material	Suggested Text Book: 1. Intensification of bio-based processes, A. Gorak, Andrzej Stankiewicz edited. RSC publication 2. A.Stankiewicz, J.A. Moulijin, Re-engineering the Chemical Processing Plant, Process intensification, Marcel Dekker, New York (2004) Suggested References Book: 1. Membrane based technologies for environmental pollution control, P.Pal, Elsevier Sci.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHE 717	**COLLOIDS AND INTERFACE ENGINEERING**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	• CO1: Acquire an idea about the application of colloidal chemistry, fluid-fluid and solid-fluid interface engineering in different industrial fields. • CO2: To learn the fundamental knowledge of intermolecular forces involved in colloids and interfaces • CO3: Introduction to surface active agent and learn about the application of surface active agents to enhance the efficiency in the process.						
Topics Covered	**Module I:** Importance and scope of the subject. Overview of colloidal systems, interfaces and surface. Properties and application of the colloids. Colloidal stability factor. Kinetic theory of						

	colloidal systems: sedimentation, centrifugation, diffusion, Domestic and industrial application of colloidal solution. Adsorption at fluid-fluid and fluid-solid interface, Thermodynamics of interfaces, Interfacial rheology and transport process.[10hrs.] **Module II:** Surface active agent: Surfactant, Surface and interfacial tension, surface free energy. Surface tension for curved interfaces, Surface excess and Gibbs equation. Theory of surface tension, contact angle, and wetting. Thermodynamics of micelle and mixed micellar formation. Adsorption of single and mixed surfactants at interfaces, Mixed micellar properties, Rheology of surfactant systems. Preparation, mechanistic details of stabilization and relationship between HLB and solubility parameter, characterization and Application. [10hrs.] **Module III:** Intermolecular forces relevant to colloidal systems: Electrostatic and van der Waals forces. DLVO theory.Measurement techniques of surface tension, contact angle, zeta potential, particle size.[4 hrs.] **Module IV:** Overview of industrial applications of various interfacial phenomena in the industries [Mattress industry (Foam: preparation, characterization, stability), petroleum industry, Mineral processing industry Pesticides, firefighting, personal care formulations], Super hydrophobic surface and self-cleaning surfaces. Case studies related interfacial science. Application of interfacial engineering concept through the surface modification for the synthesis of nanostructured material by using surface active agent.[12hrs.]

Introduction to process Intensification and Process Integration (PI). Areas of application and techniques available for PI, onion diagram. Introduction to Pinch Technology, Conceptof ΔT_{min}, Data Extraction, Composite curve, Grand Composite Curve Targeting, Grid Diagram, Problem Table Algorithm. [4 hrs.]
Module II:
Energy Targeting, Area Targeting, Number of units targeting, Shell Targeting and Cost targeting.[8hrs.]
Module III:
Pinch Design Methods of HEN, Heuristic rules, stream splitting, and design of maximum energy recovery (MER). Use of multiple utilities and concept of utility pinches, Design for multiple utilities pinches, Concept of threshold problems and design strategy. Network evolution and evaluation-identification of loops and paths, loop breaking and path relaxation.[10hrs.]
Module IV:
Design tools to achieve targets, driving force plot, remaining problem analysis, diverse pinch concepts, MCp ratio heuristics. Targeting and designing of HENs.[4 hrs.]

CHE 719	**ENERGY MANAGEMENT AND PROCESS OPTIMIZATION IN CHEMICAL INDUSTRIES**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO1: Acquire an idea about the energy intensity in industry context and benchmarking energy intensity • CO2: To learn the step by step methodology for energy assessment in industry, finding optimization opportunities and how to exploit them in industry. • CO3: To learn the fundamental knowledge of different Process optimization techniques to increase profit						
Topics Covered	**Module I:** Basic concept and introduction Challenges faces by process industries ,Paradigm shift of chemical business ,Background of energy and process optimization in industry ,Five ways to improve energy efficiency , Four key element for continuous improvement , Theory of energy intensity ,Definition of process energy intensity ,Concept of fuel equivalent ,Energy intensity for a total site, Benchmarking energy intensity, Data extraction from historian ,Convert all energy usage to fuel equivalent ,Energy balance, Energy performance index method ,Key indicators and targets ,Define key indicators, Set up targets for key indicators, Economic evaluation of key indicators ,Implementing key indicators into energy dashboard.						

	[10hrs.] **Module II:** Pinch Technology for heat exchanger network, Basic concept of pinch, Hot and cold composite curve, Pinch temperature, Golden rules of pinch, cross pinch heat transfer, Minimum hot and cold utility target, Optimum delta T min. [12hrs.] **Module III:** Heat exchanger Distillation system performance assessment, Basic concept and calculations, understanding performance criteria –U values, understanding pressure drop,Improving heat exchanger performance, Heat exchanger fouling assessment,Fouling mechanism, Fouling mitigation,Fouling resistance calculations,A cost based model for clean cycle optimization,Energy loss assessment, Energy loss audit, Energy loss evaluations,Brainstorming, Energy audit report, Distillation system assessment Distillation operating window,Distillation efficiency,Understanding operating window,Typical capacity limit, Distillation system optimization, Define a base case,Building process simulation, Tower efficiency assessment,Tower optimization basis,Energy optimization for distillation system,Overall process optimization. [10hrs.] **Module IV**: Process optimization in industryCollect online data for the whole operation cycle, Determine the true benefit from process variation, Map the whole process in cost term,How to detect opportunities for optimization,Common tools available to exploit those opportunities. [12hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Energy and process optimization for the process industries By Frank (Xin X) Zhu (Wiley, ISBN 978-1-118-10116-2) 2. Profit Maximization Techniques for operating Chemical Plants, Sandip Kumar Lahiri, Wiley, ISBN 978-1-119-53215-6 Suggested Reference books: 1.Process Heat Transfer – D.Q.Kern (McGraw-Hill)

CH 720	**SELF-MASTERY**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), Midterm (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	• CO1:To expose to a wide variety of techniques and exercises that have been found to be helpful in sparking the creative process; to help you select those that best fit your personality and apply them to many different business and personal situations. • CO2:To help you discover your "purpose in life", the grand design that gives meaning to all of your activities; to help you find that to which you can enthusiastically devote the rest of your life. When you are moved by deep inner conviction is when you have the greatest opportunity to sway others, in short to become a "leader". • CO3:To show you how you can mobilize resources to reach your goals most efficiently. There is a non-linear relationship between "work" and "results". Immense exertion can produce little outcome and, at other times, a little effort can yield a huge payoff. If you have an open mind you can learn to create serendipitous opportunities.
Topics Covered	**Module I:** Mental Models and How You Became What You Are Your Starting Point,What Is A Mental Model?, It's Not Real! It's Only a Model, Why And How You Became Who You Are, Good Thing, Bad Thing - Who Knows?, When Does Suffering Begin?, Taming The Horse – It Isn't Easy, But It Can Be Done, Dropping the Baggage, Be A Daruma Doll. [8 hrs.] **Module II:** How to Win the Inner Game Of Happiness Shape Your World By Being Observant, Turn Difficult Situations Into a Game, How Attitude Molds Your Blessings, Quick Trick That Beats Positive Thinking, How To Use Affirmations Effectively, Build a Daily Gratitude Practice, How to Get Off the Hedonic Treadmill, Overcome the Life of Quiet Desperation, Discover the Secret to Happiness, Achieve Great Success Beyond Your Dreams, Unravel Your Mental Chatter, Learn to Tame Your Mental Chatter, Successfully Implement Positive Chatter, Master the Skill of Managing Yourself, Become the Best Actor in Your Life Play, Simple Trick to Eliminate Stress, Identify Your True Self Through Consciousness, How Did The One Become Many?, How to Be of Greater Service to Others. [12 hrs.] **Module III:** Your Future Depends On Thinking Big and Why Mindfulness Matters Overcome the Need to Compare, Learn to Let Go of Possessions, What Does Your Ideal Day Look Like?, Move From Burden to Freedom, How to Read Another Person Through Conversation, Turn Your Question Into an Answer, Switch Sense of Injustice Into Awakening, What Is the Root of All Your Problems?, Shift from Me-Centered to the Other-Centered Universe, Change the Stories That Don't Serve You, Learn to Respond with Care, What to Do When Fear Strikes,Where Does Your Journey Take You?, Create Paradigm Shift in Your Consciousness, Who Are You Being?, Master Life

	on Two Simultaneous Levels, How to Set Goals. [10 hrs.] **Module IV:** 10 habits to make you highly effective in your life How habits define your success, Paradigm shift, Habit 1: Be Proactive Focus and act on what you can control and influence instead of what you can't. Habit 2: Begin With the End in Mind® Define clear measures of success and a plan to achieve them. Habit 3: Put First Things First® Prioritize and achieve your most important goals instead of constantly reacting to urgencies. Habit 4: Think Win-Win® Collaborate more effectively by building high-trust relationships. Habit 5: Seek First to Understand, Then to Be Understood® Influence others by developing a deep understanding of their needs and perspectives. Habit 6: Synergize® Develop innovative solutions that leverage differences and satisfy all key stakeholders. Habit 7: Sharpen the Saw® Increase motivation, energy, and work/life balance by making time for renewing activities. Habit 8 : Help others to win their battle Habit 9 : Choose happiness over success Habit 10 : Build your own definition of success and happiness, [12 hrs.]

EIGHTH SEMESTER

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CH 2001	**ADVANCED CHEMICAL ENGINEERING THERMODYNAMICS**	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
Basic and Undergraduate level Engineering Thermodynamics course	CT+EA

Course Outcomes	• CO1: To learn the application of equation of state for ideal and non-ideal gases, and exergy analysis of chemical processes • CO2: To learn various fundamental property relations and their application to estimate thermodynamic parameters • CO3: To learn the thermodynamics of fluid phase equilibria • CO4: To learn the statistical interpretation of distribution function for measurement of interactions and surface forces.
Topics Covered	**Module I:** Review of laws of thermodynamics, Equations of state for ideal and non-ideal gases, Kammerlingh-Onnes equation, Van der Waals equation, Redlich-Kwong equation, Peng-Robinson equation, Bennedict-Webb-Rubin equation, Law of corresponding states, Acentric factor, Virial and cubic equation of state for binary mixtures, Exergy of heat, Exergy analysis of Chemical Engg Processes. Entropy and estimation of entropy changes. [7 hrs] **Module II:** Maxwell's relations, Clausius Clapeyron equation, Gibbs-Helmhotz equation, TDS equations, Heat capacity relations, Isothermal compressibility, Volume expansivity, Joule-Thomson coefficient. Residual properties: Estimation of residual parameters from virial and cubic equation of state, Fugacity and fugacity coefficient: Fugacity coefficient from compressibility factor, cubic and virial equation of state, Effect of temperature and pressure on fugacity. [6 hrs] **Module III:** Thermodynamics of fluid phase equilibrium: Partial molar properties, Chemical potential, Activity and activity coefficients, their evaluation, Gibbs–Duhem equation, Fugacity in mixture, Excess functions, Ideal solution, Lewis-Randall rule, Phase equilibrium for Multi-component system, Vapour-liquid equilibrium, Excess Gibb's free energy model: Wilson equation, NRTL equation, UNIFAC (Universal Functional Activity Coefficient) method, van Laar theory, Scatchard-Hildebrand theory, Flory-Huggins theory, Liquid-Liquid equilibrium, Solid-Liquid equilibrium. [10 hrs] **Module IV:** Multi-reaction stoichiometry, Equilibrium criterion of Chemical Reaction, Equilibrium

	constant, Van't Hoff's equation, Homogeneous gas-phase and liquid-phase reaction, Heterogeneous reaction equilibria, Fuel cell. [7 hrs] **Module V:** Statistical Thermodynamics: Thermodynamic ensemble; Most probable thermodynamic distribution function; Canonical, grand canonical and micro-canonical ensemble partition functions; Derivation of thermodynamic variables from partition functions; Statistical explanation of second and third laws of thermodynamics; Quantum statistics; Maxwell Boltzmann statistics, Fermi-Dirac statistics, and Bose-Einstein Statistics; their distributions; [12 hrs] Tutorial on above topics, remedial classes and class tests. [12 hrs]
Text Books, and/or reference material	Suggested Text Books: 1. Smith, J.M., Van Ness, H.C., and Abbott, M.M. "Introduction to Chemical Engineering Thermodynamics", 7th Edition., McGraw-Hill 2. Halder, G., Introduction to Chemical Engineering Thermodynamics, 2nd edition, 2013, PHI Learning Pvt. Ltd, New Delhi Suggested Reference Books: 1.Thipse, S.S. "Advanced Thermodynamics", Narosa Publishing House, New Delhi. 2.Thermodynamics and Introduction to Statistical Mechanics, B. Lindner, Wiley Interscience, 2004

Mapping of CO (Course Outcome) and PO (Programme Outcome)

CH 2002	**ADVANCED TRANSPORT PHENOMENA**	BC	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					

Basics of Fluid Mechanics, Heat Transfer and Mass Transfer	CT+EA
Course Outcomes	• CO1: To create an understanding on universal approach of transportphenomena andfundamental transport processes like mass, momentum andenergy. • CO2:To give an understanding on shell balance technique, setting ofboundaryconditions etc.fordifferentgeometryofasystem. • CO3: To apply NSE, equation of continuity, equation of energy etc. to different types of geometrical systems. • CO4:Tosolveproblemsonmass,momentumandenergytransportusing transport phenomena approach.
Topics Covered	**Module I:** Transport Phenomena-an universal approach, Reynold transport theorem, Fundamental transport Processes and their relation. [3 hrs] **Module II:** Momentum transport phenomena: Idea about Shell balance technique and its application in rectangular, cylindrical and spherical coordinate systems. Navier-stokes equation (NSE), Euler equation, application of NSE in rectangular, cylindrical and spherical coordinate systems. Flow through parallel plates, flow over flat plates, Steady and unsteady systems, turbulent flow [12 hrs] **Module III:** Energy transport: Basic energy transport equations, application of equation of energy for analyzing different heat conduction, convection and reactor systems, steady state and unsteady state systems, simultaneous energy and mass transport system [12 hrs] **Module IV:** Mass transport: Types of fluxes and their relation, continuity equation for a binary mixture, application of equation of continuity for different coordinate systems, steady and unsteady state systems, diffusion in porous catalyst with and without chemical reaction, diffusion in falling liquid film, turbulent mass flux, interphase mass transport. [12 hrs] **Module V:** Transport phenomena in small and large scale systemsand their application. [3 hrs] Tutorial on above topics, remedial classes and class tests. [14 hrs]
Text Books, and/or reference material	Suggested TextBooks: 1. Analysis of Transport Phenomena by William M. Deen, Oxford Univ Pr; 2nd Edition, 2011. 2. TransportPhenomenabyBird,Stewart&Lightfoot,Wiley,2nd Edition,2010. Suggested ReferenceBooks: 1.Transport Phenomena: A Unified Approach by Brodkey& Hershey, McGraw-HillChemical EngineeringSeries,BrodkeyPublishing,2003 2. Transport Phenomena: An Introduction to Advanced Topics, Larry A. Glasgow, Wiley, July 2010.

8th Semester Departmental Elective

Department of Mechanical Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHE810	**MULTIPHASE FLOW**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
CHC-303 (Fluid Mechanics)		CT+EA					
Course Outcomes	• CO1: To learn fundamental and modeling methods of multiphase flow • CO2: To learn transport mechanism of multiphase flow and industrial application of multiphase flow • CO3**:** To learn differentflow patterns and flow pattern maps and measurement methods in multiphase flow.						
Topics Covered	**Module I:** Introduction to multiphase flow: Two phase flow: Gas/Liquid and Liquid/liquid systems: Flow patterns in pipes, analysis of two phase flow situations, Prediction of holdup and pressure drop or volume fraction, Bubble size in pipe flow, Lockchart-Martinelli parameters, Bubble column and its design aspects, Minimum carryover velocity. holdup ratios, pressure drop and transport velocities and their prediction. [7hrs.] **Module II:** Flow Models:Flow patterns - identification and classification - flow pattern maps and transition - momentum and energy balance - homogeneous and separated flow models -correlations for use with homogeneous and separated flow models - void fraction and slip ratio correlations - influence of pressure gradient - empirical treatment of two phase flow - drift flux model - correlations for bubble, slug and annular flows Introduction to three phase flow. [10hrs.] **Module III:** Design and Stability of multiphase system:Dynamics of gas-solid liquid contactors (agitated vessels, packed bed, fluidized bed, pneumatic conveying, bubble column, trickle beds), Flow regimes, pressure drop, holdup, distributions, mass and heat transfer, reactions, Applications of these contactors. [10hrs.] **Module IV:** Measurement techniques for multiphase flow:Measurement techniques in multiphase flow: Conventional and novel measurement techniques for multiphase systems (Laser Doppler anemometry, Particle Image Velocimetry). [10hrs.]							

	Module V: Hydrodynamics of three phase systems:An introduction of three phase flow; liquid – solid flow, gas-solid flow; liquid-liquid-gas flow; gas-liquid-solid flow; principle of hydraulic and pneumatic transportation; flow regime identification; related measurement techniques. [5hrs.]
Text Books, and/or reference material	Suggested Text Books 1. Clift, R., Weber, M.E. and Grace, J.R., Bubbles, Drops, and Particles, Academic Press, New York, 1978. 2. Y. T. Shah, Gas-Liquid-Solid reactors design, McGraw Hill Inc, 1979 3. Fan, L. S. and Zhu, C., Principles of Gas-solid Flows, Cambridge University Press, 1998 4. Govier, G. W. and Aziz. K., "The Flow of Complex Mixture in Pipes", Van Nostrand Reinhold, New York, 1972. Suggested Reference Books 1. Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MAC01, MAC02, CHS351		CT+MT+EA					
Course Outcomes	• CO1: Conceptualization of a chemical process and its needs • CO2: Solving material and heat balance for a large-scale process • CO3: Understanding process synthesis • CO4: Solving optimal design and control problems simultaneously						

	• CO5: Real time optimization techniques and their implementations
Topics Covered	**Module I:** Cramer's rule, Inverse of matrix, Gauss elimination, Gauss Jordan method, LU decomposition, Gauss Seidel method, error analysis, Linear regression. [9hrs.] **Module II:** Bisection method, successive substitution method, Newton-Raphson method, Secant method, Eigen values, Eigen vectors and its application in solving differential equations. [10hrs.] **Module III:** Multi-variable optimization algorithms: Unidirectional search, Direct search methods, Gradient based methods, Constrained optimization algorithms: Kuhn-Tucker conditions, Transformation methods. [8 hrs.] **Module IV:** Sensitivity analysis, Direct search for constrained minimization, Linearized search techniques, Feasible direction method, Generalized reduced gradient method, Gradient projection method. [6hrs.] **Module V:** ODE- Initial Value Problem, Boundary Value Problem, Specialized algorithms: Integer programming, Geometric programming, Nontraditional optimization algorithms: Genetic algorithms, Simulated annealing, Global optimization. [5hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Steven C. Chapra& Raymond P. Canale, "Numerical methods for engineers" McGraw-Hill, Sixth Edition 2. S. K. CHE 812	**BOILING HEAT TRANSFER**	PEL	3	0	0	3	3
Pre-requisites: Mathematical methods, Transport Phenomena, Heat transfer		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					

Course Outcomes	• CO1: Concept of a vapor bubbles • CO2: Understanding micro-convection of heat • CO3**:** Computing boiling regimes and heat transfer coefficients
Topics Covered	**Module I:** Concept of a vapor bubbles :Boiling; Bubbles; growth mechanisms; modeling issues for pool boiling and flow boiling. [10hrs.] **Module II:** Boiling regimes and heat transfer coefficients Various boiling regimes; determination of heat transfer coefficients; subcooled boiling; saturated/bulk boiling; [10hrs.] **Module III:** Interfacial Instabilities and Flow Instabilities in Boiling Types of interfacial instabilities and flow instabilities; their mechanisms; consequences. [10hrs.] **Module IV:** Condensation: Collapse of vapor bubbles; their mechanism; condensation heat transfer coefficients.[10hrs.] **Course Assessment Method:** The theory performance of students are evaluated
Text Books, and/or reference material	Suggested Text Book: 1. John G. Collier, John R. Thome, Convective Boiling and Condensation, Clarendon Press, 1994 2. Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MAC 331, CHC 303		CT+MT+EA					

Course Outcomes	• CO1: To learn basics of continuum-based modelling and simulation; Its area of applications and limitations • CO2: To learn different discretization methods of continuum based governing equations • CO3: To learn different steps of CFD simulations • CO4: To learn the use of CFD techniques in realistic problems
Topics Covered	**Module I:** Introduction to Computational Fluid Dynamics Conservation Equations, Discretization. Different Numerical methods and their comparison; Finite Difference Method, Finite Volume Method, Finite Element Method, etc. Source terms and their linearization, Solution of discretized equations. [12hrs.] **Module II:** Solution of mass and energy equations:Solution of diffusive problems: Steady 1D, Steady 2D and Steady 3D problems. Unsteady 1D, 2D unsteady and 3D unsteady problems, Solution of convective-diffusion problems: Steady and unsteady problems; Different schemes, [18hrs.] **Module III:** Solution of momentum equations:SIMPLE, SIMPLER, SIMPLEC algorithms [10hrs.]
Text Books, and/or reference material	Suggested Text Books: 1.Numerical heat transfer and fluid flow by S.V. Patankar, Hemisphere Publishing Corporation, 1980. 2.Introduction to Computational Fluid Dynamics by Anil W. Date, Cambridge University Press, 1st Edition, 2005. Suggested Reference Books: 1. Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CHE 814	**NANOTECHNOLOGY**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	● CO1: Acquire the concept of nanotechnology at the basic level to apply for different application. ● CO2: Acquire the concept of synthesis and characterization of nanomaterials. ● CO3: Acquire the idea how to apply nanotechnology in different fields (catalysis, energy and environment) for better efficiency.						
Topics Covered	**Module I:** Introduction to the physics of solid state. Structure and bonding elements of nanoscience & nanotechnology.[8hrs.] **Module II:** Synthesis of nanomaterials: General Top Down and Bottom up approaches. Physical Methods, Chemical Methods & Biological Methods. Mechanical, Structural, Thermal, Electrical & Optical properties.[10hrs.] **Module III:** Characterization techniques of nanomaterials: Spectroscopy, XRD, BET, TGA, SEM and TEM. Some special nanomaterials: Carbon nanotubes, Porous silicon, Zeolites, Aerogels, Core-shell, Hollow and Yolk-shell nanoparticle.[12hrs.] **Module IV:** Application of the nanomaterials in different fields.Nanolithography, Nanocomposites, Nanoparticles as catalyst, Nanoparticles in energy and environment application, Nanoparticles in biomedical application.[12hrs.]						
Text Books, and/or reference material	Suggested Text Books: 1. T. Pradeep, Nano: The Essentials, Understanding Nanoscience and Nano Technology, Tata McGraw-Hill Publishing Company Limited, New Delhi, 2007. 2. Nanotechnology: Principles & Practices; S. K. Kulkarni, Capital Publishing Company, Kolkata Suggested Reference Books**:** 1. Principles of nanotechnology: N. Phanikumar; Scitech, Kolkata 2. Introduction to nanotechnology: Charles P. Poole & Frank Li Owens, Wiley

NINETH SEMESTER

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours (H)	
CH 1002	**CHEMICAL REACTOR ANALYSIS AND DESIGN**	PCR	3	1	0	4	4
Pre-requisites: Reaction Engineering		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					

Course Outcomes	• CO1: To design & analyse ideal and non-ideal homogeneous reactors. • CO2: To design & analyse fluid-solid catalytic, non-catalytic and multiphase reactors. • CO3: To analyse thermal instability of reactors. • CO4: To design and analyse bioreactors.
Topics Covered	**Module I:** Ideal Reactors: Design and analysis of isothermal and non-isothermal batch, plug flow and backmix reactors. [8 hrs] **Module II:** Non-catalytic Fluid-solid Reactors: Shrinking core model. Design and analysis of non-catalytic fluid-solid reactors. [4 hrs] **Module III:** Fluid-solid Catalyzed Reactors: Catalysis, interaction of physical and chemical rate processes in a porous catalyst particle, effectiveness factor, selectivity. Design and analysis of Packed-bed, Moving-bed and Fluidized-bed reactors. [9 hrs] **Module IV:** Multiphase Reactors: Design and analysis of slurry and trickle bed reactors. [7 hrs] **Module V:** Multiple Steady States and Thermal Instability of Reactors; Dynamic analysis of CSTR; Sustained oscillation and limit cycle. [4 hrs] **Module VI:** Non-ideal Reactors: Residence time distribution of fluid in vessels, RTD in ideal and non-ideal reactors, Modelling of non-ideal reactors – Segregation model, Tanks-in-series model and Dispersion model. [5 hrs] **Module VII:** Biochemical Reactors: Enzyme-catalyzed and biomass growth reaction kinetics. Design of bioreactors. [5 hrs]

	Tutorial on above topics, remedial classes and class tests. [14 hrs]
Text Books, and/or reference material	Suggested Text books: 1. H. S. Fogler, Elements of Chemical Reaction Engineering, Prentice Hall. 2. O. Levenspiel, Chemical Reaction Engineering, John Wiley. Suggested Reference book: 1. Chemical Reactor Analysis and Design - G F Froment & K B Bischoff, John (Wiley).

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours (H)	
CH 9011	**BIOCHEMICAL AND BIO-ENGINEERING**	PEL	3	0	0	3	3
Pre-requisites: Basics of Reaction Engineering			Course Assessment methods (Continuous (CT) and end assessment (EA))				
--			CT+EA				
Course Outcomes	• **CO1:** To understand the basic kinetics of enzymatic and cell growth bioprocesses. • **CO2:** To apply the knowledge to design the bioreactor and analyze the reactor operations • **CO3:** To Evaluate industrial application and Economics of the process.						
Topics Covered	**Module I:** Introduction to Microbiology, Biochemistry and Bioproducts. Stoichiometry and Thermodynamics of biochemical reactions. [7 hrs] **Module II:**						

	Kinetics of homogeneous chemical reactions. Different types of bioreactors and reactor analysis. [7 hrs] **Module III:** Kinetics of enzyme catalyzed reactions using free enzymes. Kinetics of enzyme catalyzed reactions using immobilized enzymes. [7 hrs] **Module IV:** Kinetics of substrate utilization, product formation and biomass production of microbial cells. Kinetics of substrate utilization, product formation and biomass production of microbial cells [7 hrs] **Module V:** Transport phenomenon in bioprocess. Air and medium sterilization. [7 hrs] **Module VI:** Operation and Process control, Downstream processing, Economic analysis of biochemical processes. [7 hrs]
Text Books, and /or reference material	Suggested Text Books: 1. Dutta, R. Fundamentals of Biochemical Engineering. Springer Publications, 2008. Suggested Reference Books: 1. Bailey, J. E., and D. F. Ollis. Biochemical Engineering Fundamentals. 2nd ed. New York, NY: McGraw-Hill, 1986.

	PROCESS DYNAMICS AND CONTROL						
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					

Course Outcomes	• CO1: Determiningthe controlstructures in chemical processes • CO2: Understandingmultiple MIMO systems and their dynamical interactions • CO3: Understanding the working of Model Predictive Control (MPC) • CO4: Awareness of different implementations steps of MPC in industry • CO5: Determiningthe controller settingsforMIMO systems.
Topics Covered	**Module I:** SISO control system Purpose of Process Control in Chemical Process Industries (CPI), Basic Feedback control loop, Control hardware; Process dynamics, Regulatory PID Control Layer, Advance Regulatory Control (ARC) Layer, Basis of cascade control, Ratio control, Feedforward control, split range control, Shortcomings of Simple Regulatory PID Control [10 hrs] **Module I:** Model Predictive Control (MPC) and MIMO control system MIMO control systems, Basic concept of Multivariable Model Predictive Control, Function of Multivariable Model Predictive Optimizing Controller, Relevance of Multivariable Predictive Control (MPC) in Chemical Process Industry in Today's Business Environment, Position of MPC in Control Hierarchy, Advantage of Implementing MPC, How Does MPC Extract Benefit? Application of MPC in Oil Refinery, Petrochemical, Fertilizer, and Chemical Plants, and Related Benefits [10 hrs] **Module III:** Theoretical base of Model Predictive Control (MPC) Concept of Controlled variables, manipulated variables and Disturbance variable, Features of MPC, Brief Introduction to Model Predictive Control Techniques, Simplified Dynamic Control Strategy of MPC, Historical Development of Different MPC Technology [10 hrs] **Module IV:** MPC Implementation Steps Preliminary Cost–Benefit Analysis, Assessment of Base Control Loops, Functional Design of Controller, Conduct the Preliminary Plant Test (Pre-Stepping), Conduct the Plant Step Test, identify a Process Model, Perform Offline Controller Simulation/Tuning, Commission the Online Controller, Online MPC Controller Tuning, Hold Formal Operator Training, Performance Monitoring of MPC Controller, Maintain the MPC Controller, Summary of Steps Involved in MPC Projects with Vendor [10 hrs]

Text Books, and/or reference material	Suggested Text Books: 1. SK Lahiri, Multivariable predictive Control-Applications in industry, Wiley. 2. P. K. Sarkar, AdvancedProcess Dynamics andControl, Prentice-HallofIndia Pvt. Ltd. 3. D.E.Seborg, T.F. Edgar,E.A.Mellichamp, F. J. Doyle, Process Dynamicsand Control, 3rd edition, John Wiley &Sons, NY. Suggested Reference Books: 1. B.A. Ogunnaike and W.H. Ray, 1994, Process Dynamics, Modeling,andControl, Oxford University Press.

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours (H)	
CH9013	**ENVIRONMENTAL ENGINEERING**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Basic subjects of Chemical Engineering and Mathematics		CT+EA					
Course Outcomes	● CO1: To illustrate the fundamental concepts in environmental engineering dealing with water, air, and land pollution ● CO2: To illustrate different techniques as used for treatment of wastewater with special emphasis on design, operational features, etc ● CO3: To design and analyse the equipment as used for removal of particulate and gaseous pollutant from waste gas ● CO4: To analyse the techniques used for treatment of industrial wastes and case studies						
Topics Covered	**Module I:** Introduction and Physico-chemical Treatment Introduction to environment, Constituents of environment, Sources of water and its						

	uses: domestic and industrial. Domains of environmental degradation and its root causes, Characteristics of drinking and wastewaters, WHO standards, Physical, chemical and biological treatment techniques, Treatment options and selection of appropriate treatment scheme. Physico-chemical treatment units, Screening, Grit Chamber, Mixing, Principles of settling, Coagulation, Flocculation, Design and operation of settling tanks, Chemical treaments, Advanced oxidation, WET oxidation, Catalytic degradation, Membrane based separation, Ion exchange and disinfection of water, Adsorption, etc. [10 hrs] **Module II:** Biological Treatment Process design and operation of attached growth, suspended growth, hybrid/integrated process, Design and operation of biological treatment units like ACS, Biofilter, Trickling Filter, RDC, Design and operations of lagoons, and troubleshooting of ACS units, Phycoremediation; Toxicity analysis of untreated and treated wastewater for its further use. [10 hrs] **Module III:** Air Pollution Air pollution- sources, classification, health hazards, Dispersion of air pollutants, plume behaviour, Stack design, abatement techniques of air pollutants, Design and operation of control devices, Design and operational problems of gravity separators, cyclone separators, ESP, Filtration, Bag Filter – Operation and Principle, Water scrubbing, venture scrubber Abatement of gaseous pollutants like SO_x, NO_x, CO_2 etc., Powers and functions of state and central PCBs, GHG emission, global warming, climate change. [10 hrs] **Module IV:** Industrial wastes and Case Studies Industrial wastes and their sources: Various industrial processes, Sources and types of solid, liquid, gaseous wastes, Solid waste management, Noise & radiation emissions. Processes responsible for deterioration of environment, Various waste water streams, Control and removal of specific pollutants in industrial wastewaters, e.g., oil and grease, bio-degradable organics, chemicals such as cyanide, fluoride, toxic organics, heavy metals, radioactivity etc. Wastewater reuse & recycling, Modern trend in load reduction. Effluent treatment plant design, Concept of zero discharge effluent. Recent trends in industrial waste management, Cradle to grave concept, Life cycle analysis, Clean technologies, Case studies of various industries, e.g., dairy, fertilizer, distillery, sugar, pulp and paper, iron and steel, metal plating, thermal power plants, etc. Concept of waste utilization and value added product recovery and its impact in society. [12 hrs]
Text Books, and/or reference material	Suggested Text Books: 1. Wastewater Engineering-Treatment and Reuse. Metcalf & Eddy, 4th Edition, McGraw-Hill, 2003; Publisher: McGraw-Hill Science/Engineering/MathISBN-13: 978-0070418783, ISBN-10: 0070418780.

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours (H)	
CH9014	**NON-CONVENTIONAL ENERGY ENGINEERING**	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
Fundamental of fuels, Mathematics	CT+EA

Course Outcomes	• CO1: Learn about energy technology of different conventional and nonconventional energy resource and Recent worldwide energy market scenario. • CO2: Design & analyze of different renewable energy collectors and renewable energy thermal power plants. • CO3: Learn industrial and domestic applications of different renewable energy sources. • CO4: Solve energy technology problems of different difficulty levels through tutorials
Topics Covered	**Module I:** Energy Scenario: Classification of Energy Sources, Energy resources (Conventional and nonconventional), Energy needs of India, and energy consumption patterns. Worldwide Potentials of these sources. Energy efficiency and energy security. Energy and its environmental impacts, Distributed generation. [4 hrs] **Module II** Solar Energy: Solar radiation and its measurement, limitations in the applications of Solar Energy, Solar collectors – types, and constructional details. Solar water heating, applications of Solar Energy for heating, drying, space cooling, water desalination, solar concentrators, photovoltaic power generation using silicon cells. solar water heating, solar cooling, solar distillation, solar refrigeration, solar dryers, solar pond, solar thermal power generation, solar energy application in India, energy plantations, Photo voltaic (PV) technology: Present status, solar cells, cell technologies, characteristics of PV systems, equivalent circuit, array design, building integrated PV system, its components, sizing and economics. Peak power operation. Standalone and grid interactive systems. [10 hrs] **Module III** Wind Energy: Wind speed and power relation, power extracted from wind, wind distribution and wind speed predictions. Wind power systems: system components, Types of Turbine, Turbine rating. Choice of generators, turbine rating, electrical load matching, Variable speed operation, maximum power operation, control systems, system design features, stand alone and grid connected operation. Small Hydro Systems. [10 hrs] **Module IV** Nuclear Energy: Nuclear fission principles, types of nuclear reactors (BWR, PWR, PHWR, LMCR, GCR, FFR). Nuclear reactor analysis: four factor formula, resonance absorption, reactor buckling, multiplication factor, thermal utilisation coefficient, reflector saving, fast fission factor, optimum moderator to fuel ratio. Radioactive waste disposal. [10 hrs] **Module V** Geothermal Energy: Geo technical wells and other resources dry rock and hot aquifer analysis, harnessing geothermal energy resources. Ocean wave energy conversion, ocean thermal energy conversion, tidal energy conversion. Biomass and Biofuels: Recycling of agricultural waste, anaerobic/aerobic digestion, and types of biogas digesters, gas yield, and combustion characteristics of bio gas,

	design of biogas system for heating. Biofuels such as biodiesel, ethanol, bio-butanol etc. and their production and present status. [10 hrs] **Module VI** Energy Storage and Distribution: Importance, biochemical, chemical, thermal, electric storage. Fuel cells, distribution of energy. Energy Storage -Sensible, latent heat and thermo-chemical storage-pebble bed etc. materials for phase change-Glauber's salt-organic compounds. [10 hrs]
Text Books, and/or reference material	Suggested Text Books: 1. Goldmberg J., Johansson, Reddy A.K.N. & Williams R.H., Energy for a Sustainable,World, John Wiley. 2. POs COs	PO1	PO2	PO3
CO1	1	2	1
CO2	2	2	2
CO3	3	2	3
CO4	3	2	3

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours (H)	
CH9015	**CHEMICAL PROCESS OPTIMIZATION**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Mathematics, Chemical Engineering Computing Laboratory		CT+EA					

Course Outcomes	• CO1: Able to apply the knowledge of optimization and optimum design and an overview of optimization methods. • CO2: Ability to solve various multivariable optimization problems and solve chemical process optimization issues using MATLAB. • CO3: Develop skills to implement the theory and applications of optimization techniques in a comprehensive manner for solving linear and non-linear, geometric, dynamic, integer and stochastic programming techniques. • CO4: Identify, formulate and solve a practical engineering problem of their interest by applying or modifying an optimization technique.
Topics Covered	**Module I:** The nature and organization of optimization problems, scope and hierarchy of optimization, examples of applications of optimization in chemical industry, essential features of optimization, general procedures for solving optimization problems, basic concepts of optimization, continuity of functions, unimodal vs multimodal functions, convex and concave functions, convex region, necessary and sufficient conditions for an extremum of an unconstrained function, interpretation of the objective function in terms of its quadratic approximation. [5 hrs] **Module II:** Optimization of unconstrained function, one dimensional search, numerical methods for optimizing a function of one variable, scanning and bracketing procedures, Newton, Quasi, Newton and Secant methods of uni, dimensional search, region elimination methods, polynomial approximation methods, one dimensional search applied in a multidimensional problem, evaluation of uni-dimensional search methods, unconstrained multivariable optimization , direct methods, indirect methods–1 st order, 2 nd order; secant methods. [10 hrs] **Module III:** Linear programming and applications, basic concepts in linear programming, degenerate LPs–graphical solution, natural occurrence of linear constraints, simplex method of solving linear programming problems, standard LP form, obtaining a first feasible solution, revised simplex method, LP applications in chemical industry. [7 hrs] **Module IV:** Linear Regression, Multiple, polynomial and general least square regression, Nonlinear regression; Regression: MATLAB implementation. [5 hrs] **Module V:** Teaching-Learning based optimization(TLBO), Implementation of TLBO in MATLAB, Particle Swam Optimization (PSO), Implementation of PSO in MATLAB, Differential Evolution(DE), Implementation of DE in MATLAB, Genetic Algorithm(GA), Implementation of GA in MATLAB, Other MATLAB optimization tools and in-built functions. [15 hrs]
Text Books, and/or reference	Suggested Text Books: 1. Edgar, T.F. and Himmelblau, D.M., Optimization of Chemical Processes, McGraw Hill, 1989. 2. Deb K., Optimization for engineeringdesign, Algorithms and examples,

material	PrenticeHallofIndia, New Delhi, 2005. 3. Urbanier, K. and McDermott, C., Optimal Design of Process Equipment John Wiley, 1986. Suggested Reference Books: 4. CH9016	**MULTIPHASE FLOW**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Fluid mechanics, heat transfer, transport phenomena, mathematical methods		CT+EA					
Course Outcomes	● CO1: To learn the fundamental concepts and applications of multiphase flow ● CO2: To learn the numerical models and methods for transport mechanisms and design strategy for multiphase flow ● CO3: To learn the dynamics of bubble, drop and solid particle ● CO4: To learn the measurement methods for multiphase flow						
Topics Covered	**Module I:** Fundamental concepts and applications of multiphase flow Two-phase flow; three-phase flow; components; fields; space and time-averaging; volume/void fraction; flow quality; superficial velocities; phase velocities; volumetric flux; velocity ratio; slip; volume and mass-centered velocity; homogeneous flow; drift flux;						

	separated flow; Martinelli parameters; two-phase multiplier and correlations; two-phase pressure drop; isothermal and non-isothermal flows; applications of nuclear, thermal, petroleum, chemical industries and in nature. [6 hrs] **Module II:** Flow patterns and transitions Flow patterns; identification and classification; flow pattern maps and transition in gas-liquid, solid-gas, solid-liquid, gas-solid-liquid flows; boiling channel; bubble column, fluid bed; trickle beds; prediction of holdup and pressure drop in different flow regimes.[6 hrs] **Module III:** Numerical models and methods Conservation equations for mass, momentum and energy for heat transfer and flow field in multiphase flow; homogeneous and separated flow model; drift flux model; two-fluid models; Eulerian and Lagrangian methods; numerical methods for solutions; closure equations for fluid-wall and interfacial transports of heat and momentum; drift flux and slip correlations for bubbly, slug, annular and stratified flows. [12 hrs] **Module IV:** Dynamics of bubble, drop and solid particle Growth of bubble and drop; terminal velocity of bubble, drop and particle; pinch-off; contact line and triple contact lines; coalescence; breakup and collapse; deformation of bubbles and particles; flow around a spherical particle; flow through porous medium. [8 hrs] **Module V:** Measurement methods in multiphase flow: Two-phase pressure drop, void fraction, phase indication; phase distributions; phase velocities; anemometry; velocimetry; densitometry; optical methods; electrical methods. [10 hrs]

CH9018	**PETROLEUM REFINING AND PETROCHEMICAL ENGINEERING**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Fuel and combustion		CT+EA					
Course Outcomes	• CO1: Understanding the role of petroleum as energy source amidst world energy scenario • CO2: Learning design and operation of petro refineries and petrochemical complexes • CO3: Learning safe practices in operations of refineries and petrochemical complexes • CO4: Identifying challenges, energy security issues and environmental issues						
Topics Covered	**Module I:** Petroleum - Origin and Occurrence, Exploration, Estimation and recovery, Evaluation of crude, Properties, testing and specifications of petroleum products, Problems & Prospectus of petroleum refining in India. [10 hrs] **Module II:** Processing of Crude Petroleum - Atmospheric and Vacuum distillation, column control schemes, Conventional thermal cracking – vis-breaking and design variables of vis-breaking – coking: Fluid coking, flexi coking, delayed coking and hardware considerations – catalytic conversion processes -fluid catalytic cracking with special reference to catalyst and reactor design configurations – hydro-treating, hydrodesulphurization and hydro-cracking – Reforming: process, catalyst, reactor design configuration – alkylation – isomerization – lube oil manufacturing process, solvent – de-asphalting, solvent de-waxing. [12 hrs] **Module III:** Production of finished petroleum goods like, LPG, Kerosene, Petrol, Diesel, Lubricating Oil, Bitumen, environmental norms of products. [4 hrs] **Module IV:** Petrochemical technology: Petrochemical industry overview, primary raw materials for petrochemicals, first generation petrochemicals – hydrocarbon intermediates and their production, non-hydrocarbon intermediates, olefin production, processing of olefins from steam cracking and fluid cracking.						

	[6 hrs] **Module V:** Aromatics production– benzene, toluene and xylene derivatives – Properties, applications and production technologies, third generation petrochemicals – polymers, elastomers, polyurethanes and synthetic fiber. [10 hrs]
Text Books, and/or reference material	Suggested Text Books: 1. Ram Prasad, "Petroleum Refining Technology", Khanna Publishers, Delhi, 2000 2. J. H. Gary, G. H. Handwerk and M. J. Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Heat transfer, fluid mechanics, transport phenomena, mathematical methods		CT+EA					
Course Outcomes	● CO1: To learn the mathematical models and methods for the design strategy for heat transfer equipment applications of nuclear, aerospace, thermal, metal, petroleum, chemical industries. ● CO2: To learn how to derive analytically the variation of local Nusselt number, temperature and velocity fields to validate the numerical solutions.						
Topics Covered	**Module I:** Introduction to mathematical methods Method of separation variables; method of combination variables; solutions of ODEs and PDEs (1-D and 2-D) using gamma functions, beta functions, error functions, Bessel's functions, green functions, power series, Fourier series, Fourier-Legendre series, integral transform, Fourier transform, Laplace transform Finite difference method, adaptive finite difference method; volume of fluid; finite element method [10 hrs] **Module II:** Heat transfer in laminar flow Equations of energy, motion and continuity; differential and integral equation of momentum and thermal boundary layers; boundary layer approximation, initial and boundary conditions; exact solution of boundary layer equations; Steady-state laminar flow over a semi-infinite flat plate – analytical solution of Navier-Stokes equation and Blasius equation, Laminar boundary heat transfer from a semi-infinite plate at a constant temperature; Heat transfer in high velocity thermal boundary layer Heat transfer in laminar flow through pipe; constant heat flux and constant wall temperature; fully developed flow and entrance length; Exact solution of Sturm-Liouville systems, computation of Eigen functions and Eigen values; Bessel's functions and zeros; orthogonal Eigen functions. Natural convection on a vertical flat plate [10 hrs] **Module III:** Heat transfer in spherical geometry Stokes flow past sphere; potential flow; stream functions; steam lines; velocity vector fields; dynamics of vortex motion Heat transfer to heat transfer from a solid sphere in stagnant liquid; steady-state Solution of heat transfer to a moving sphere a constant diameter in stagnant liquid; Similarity solutions for a transient heat conduction problem; similarity solutions of the boundary layer equations for natural convection over spherical surface. Exact solution of heat transfer and flow field during the growth and departure of a vapor-bubble; evaporation from drops [8 hrs]						

	Module IV: Heat transfer in turbulent flow Reynolds averaged Navier-Stokes equation (RANS); Prandtl's mixing-length hypothesis; universal velocity profile; Reynolds averaged form of energy equation; turbulent heat transfer in pipe; k-ε model of turbulence; conjugate heat transfer problems. [6 hrs] **Module V:** Numerical solutions Navier-Stokes equation; Blasius equation; Sturm-Liouville systems; heat transfer and flow field in single-phase and two-phase flow with phase change. [8 hrs]
Text Books, and/or reference material	Suggested Text Books: 1. W.M. Kays, Convective heat and mass transfer, First, McGraw Hill Book Company, New York, 1966. 2. W. J. Minkowycz, E. M. Sparrow, G. E. Schneider, R. H. Pletcher, Handbook of Numerical Heat Transfer, Wiley Interscience, New York, 1988 3. H. Schlichting, Boundary layer theory,; McGraw Hill Education; 7th edition, New York, 2014 4. G. Biswas, A. Dalal, V. K. Dhir, Fundamentals of Convective Heat Transfer, CRC Press-Taylor and Francis, India, 2019. 5. B. Weigand, Analytical Methods for Heat Transfer and Fluid Flow Problems, Springer, 2015. Suggested Reference Books: 1. L. Prandtl, O.G. Tietjens, L. 	ENGINEERING PROFESSION						
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
--		CT+EA					
Course Outcomes	• CO1: To help the students appreciate the essential complementarily between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity, which are the core aspirations of all human beings • CO2: To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the Human reality and the rest of Existence. Such a holistic perspective forms the basis of Universal Human Values and movement towards value-based living in a natural way. • CO3: To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behavior and mutually enriching interaction with Nature						
Topics Covered	**Module I:** Course Introduction - Need, Basic Guidelines, Content and Process for Value Education Understanding the need, basic guidelines, content and process for Value Education. Self-Exploration–what is it? - its content and process; 'Natural Acceptance' and Experiential Validation- as the mechanism for self-exploration Continuous Happiness and Prosperity- A look at basic Human Aspirations Right understanding, Relationship and Physical Facilities- the basic requirements for fulfilment of aspirations of every human being with their correct priority Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario Method to fulfil the above human aspirations: understanding and living in harmonyat various levels. [10 hrs] **Module II:** Understanding Harmony in the Human Being - Harmony in Myself! Understanding human being as a co-existence of the sentient 'I' and the material 'Body' Understanding the needs of Self ('I') and 'Body' - *Sukh* and *Suvidha* Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer) Understanding the characteristics and activities of 'I' and harmony in 'I' Understanding the harmony of I with the Body: *Sanyam* and *Swasthya*; correct appraisal of Physical needs, meaning of Prosperity in detail Programs to ensure *Sanyam* and *Swasthya* - Practice Exercises and Case Studies will be taken up in Practice Sessions. [10 hrs] **Module III:** Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship *Understanding Harmony in the family – the basic unit of human interaction* Understanding values in human-human relationship; meaning of *Nyaya* and program for its fulfillment to ensure *Ubhay-tripti*; Trust (*Vishwas)* and Respect (*Samman)* as the foundational values of relationship						

	Understanding the competence meaning of *Vishwas*; Difference between intention and competence Understanding the meaning of *Samman*, Difference between respect and differentiation; the other salient values in relationship Understanding the harmony in the society (society being an extension of family): *Samadhan, Samridhi, Abhay, Sah-astitva* as comprehensive Human Goals Visualizing a universal harmonious order in society- Undivided Society (*Akhand Samaj),* Universal Order (*Sarvabhaum Vyawastha)*- from family to world family! - Practice Exercises and Case Studies will be taken up in Practice Sessions. [11 hrs] **Module IV:** Implications of the above Holistic Understanding of Harmony on Professional Ethics Natural acceptance of human values, Definitiveness of Ethical Human Conduct, Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order Competence in professional ethics: a) Ability to utilize the professional competence for augmenting universal human order b) Ability to identify the scope and characteristics of people-friendly and ecofriendly production systems, c) Ability to identify and develop appropriate technologies and management patterns for above production systems. Case studies of typical holistic technologies, management models and production systems Strategy for transition from the present state to Universal Human Order: a) At the level of individual: as socially and ecologically responsible engineers, technologists and managers b) b) At the level of society: as mutually enriching institutions and organizations [11 hrs]
Text Books, and/or reference material	<u>Suggested Text Books:</u> **1.** R.R Gaur, R Sangal, G P Bagaria, A foundation course in Human Values and professional Ethics, Excel books, New Delhi, 2010, ISBN 978-8-174-46781-2. <u>Suggested Reference Books:</u> 1. CH9023	**CFD APPLICATIONS IN CHEMICAL ENGINEERING**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Basics of Fluid Mechanics, Transport Phenomena, Numerical Methods		CT+EA					

Course Outcomes	● CO1: To learn basics of continuum based modelling and simulations; its area of applications and limitations. ● CO2: To learn different discretization methods of continuum based governing equations. ● CO3: To learn different steps of CFD simulations. ● CO4: To learn the use of CFD techniques in realistic problems.
Topics Covered	**Module I:** Introduction: Illustration of the CFD approach, CFD as an engineering analysis tool, Review of governing equations, Modelling in engineering, Partial differential equations- Parabolic, Hyperbolic and Elliptic equation, CFD application in Chemical Engineering, CFD software packages and tools. [5 hrs] **Module II:** Principles of Solution of the Governing Equations: Finite difference, Finite volume and Finite Element Methods, Convergence, Consistency, Error and Stability, Accuracy, Boundary conditions, CFD model formulation. [8 hrs] **Module III:** Mesh generation: Overview of mesh generation, Structured and Unstructured mesh, Guideline on mesh quality and design, Mesh refinement and adaptation. [4 hrs] **Module IV:** Solution Algorithms: Discretization schemes for pressure, momentum and energy equations - Explicit and implicit Schemes, First order upwind scheme, second order upwind scheme, QUICK scheme, SIMPLE, SIMPLER and MAC algorithm, pressure-velocity coupling algorithms, velocity-stream function approach, solution of Navier-Stokes equations.

	[15 hrs] **Module V:** CFD Solution Procedure: Problem setup – creation of geometry, mesh generation, selection of physics and fluid properties, initialization, solution control and convergence monitoring, results reports and visualization. [5 hrs] **Module VI:** Case Studies: Benchmarking, validation, Simulation of CFD problems by use of general CFD software, Simulation of coupled heat, mass and momentum transfer problem. [5 hrs]
Text Books, and/or reference material	Suggested Text Books: 1. Numerical heat transfer and fluid flow by S.V. Patankar, Hemisphere Publishing Corporation, 1980. 2.Introduction to Computational Fluid Dynamics by Anil W. Date, Cambridge University Press, 1st Edition, 2005. 3. P.S. Ghosdastidar, Computer Simulation of Flow and Heat Transfer, Tata McGraw-Hill (1998). Suggested Reference Books: **1.** Muralidhar, K.,and Sundararajan, T. Computational Fluid Flow and Heat Transfer, Narosa Publishing. House (1995). **2.** Computational Fluid Dynamics and Heat Transfer by P S Ghosdastidar (Publisher: Cengage Learning India) **3.** Ranade, V.V., Computational flow modeling for chemical reactor engineering, Academic Press (2002).

CH9026	**NANOTECHNOLOGY**	PEL	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					

Basic knowledge of Chemistry, Physics and Mathematics		CE+EA
Course Outcomes	• CO1: Acquire the concept of nanoscience and nanotechnology at the basic level to apply for different application. • CO2: Acquire the concept of synthesis and characterization of nanomaterials. • CO3: Acquire the idea how to apply nanotechnology in different fields (catalysis, energy and environment) for better efficiency.	
Topics Covered	**Module I:** Introduction, History of Nanomaterials synthesis approach of nanomaterials, various kind of nanostructures. [10 hrs] **Module II:** Synthesis of nanomaterials: Physical Methods, Chemical Methods and Biological Methods. Properties of Nanomaterials: Mechanical, Structural, Thermal, Electrical and Optical properties. [11 hrs] **Module III:** Characterization techniques of nanomaterials: Spectroscopy, XRD, BET, TGA, SEM, TEM and XPS. [11 hrs] **Module IV:** Application of the nanomaterials in different fields. Nanolithography, Nanocomposites. Nanoparticles as catalyst Nanoparticles in energy and environment application. Nanoparticles in biomedical application. [10 hrs]	
Text Books, and/or reference material	Suggested Text Books: **1.** Dieter Vollath, Nanomaterials: An introduction to synthesis, properties and application, Wiley-VCH Verlag GmbH & Co. Weinheim, Germany, 2008. **2.** CNR Rao, PJ Thomas, GU Kulkarni, Nanocrystals: Synthesis, Properties and Applications, Springer-Verlag Berlin Heidelberg 2007. **3.** T. CH 9027	**COMPUTER AIDED PROCESS ENGINEERING**	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
--		CT+EA					
Course Outcomes	● CO1: Learnaboutfundamentals of Mathematical modelling, simulations, process design and learn to develop modellingof different unit operations ● CO2: Design&analyzeofdifferentof processes equipment ● CO3: Learn theanalysisand solvingmethods of mathematical modelled equation and completeprocess model of chemical unit operations throughassignment /grouptask						
Topics Covered	**Module I:** Overview of Process engineering, modelling, Simulation and Design Fundamental of process engineering, Concept of Mathematical model, simulation and process analysis. Scopes and uses of simulation in process engineering. Fundamentals of model building. Classification uses of mathematical models. Formulation of mathematical models. Reviews of continuity equation - energy equation-momentum equation-equation of state- equilibrium-kinetics, Difference between Process modelling, simulation and Process design, Phenomenological modelling, data driven black box modelling, Grey box modelling [8 hrs] **Module II:** Introduction to process simulators Use of simulation, basis of Flow sheet simulation, Advantage of simulation, Understanding the simulation problem, Approaches to flowsheet simulation, Sequential modular and equation oriented, Structure of a process simulator, features of commercial simulators, Flow sheet tropology level, Unit operation models and physical property models, Steps in Aspen simulation. Run the first Aspen Simulation., Physical property environment, Use of method assistant to know the physical property method, Workshop on property analysis in Aspen.[8 hrs] **Module III:** Process engineering calculations related toFluid Mechanics Process engineering calculations related to Friction Factor, Flow of Fluids in Pipes, Friction Loss, Overall Pressure Drop, Flow through Tank, Compressible Fluid Flow in						

	Pipes, Two-Phase Flow in Pipes, Flow through Packed Beds, use of Aspen simulators to design and simulations of Pumps and compressors, pressure drop in pipeline [8 hrs] **Module IV:** Design and simulations of Distillation columns Process engineering calculations related to Diffusion, Unsteady-State Mass Transfer, Multiple-Effect Evaporators, Design and simulations of distillation columns in commercial simulators: Short cut Distillation design, Short cut Distillation rating, Rigorous Binary and multicomponent Distillation design and rating, Hydraulic calculations of distillation towers, Complete Plant/manufacturing set up design, Solvent recovery plants. [8 hrs] **Module V:** Design and simulations of Heat exchanger Overview of Heat exchanger modules available in Aspen, Heat exchanger simulations by simplified model in commercial simulators, Rigorous heat exchanger design by EDR module. [8 hrs]
Text Books, and/or reference material	Suggested Text Books: 1. Applied Mathematics inChemical Engineering:MickleyTMH 2. Mathematical Methods in Chemical Engineering:S. Pushpavanam, PHI 3. Numerical methods forMathematics, Science and Engineering: John H. Mathews, PHI Suggested Reference Books: 1. Applied Numerical Methods: Alkis Constantinides, McGrawHill 2. CH9028	**ADVANCED WATER AND WASTEWATER TECHNOLOGY**	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
	CT+EA
Course Outcomes	• CO1: To learn the objective, operational principles and different treatment technologies' barriers and to empower personnel with skills required to handle effluent treatment design, analysis and selection. • CO2: To master key unit processes for assessment and the use of relevant methods for advanced water treatment, and to apply these to specific needs. • CO3: To enhance ability to diagnose and improve existing wastewater technologies and familiarize with the advanced developments in effluent treatment technology.
Topics Covered	**Module I:** Introduction, Introduction to the Issues of Access to Safe Drinking Water, Worldwide Temporal and Spatial Variation of Water Resources, Water-Quality Standards and Sources and Classification of Pollutants, Introduction to Water Resource Management Approaches [5 hrs] **Module II:** Physicochemical and Chemical Treatment Technology Introduction, Coagulation–Flocculation–Precipitation–Filtration, Physicochemical Treatment Technology Based on Coagulation–Flocculation–Settling, Adsorption Principles, Adsorption-Based Technology Aeration, Chemical Neutralization, Chemical Oxidation, Chemical Precipitation, Ion Exchange, Disinfection of Water, Advanced Oxidation Technology [8 hrs] **Module III:** Water Treatment by Membrane-Separation Technology Introduction, Classification of Membrane-Based Processes, Membrane-Separation Terminology, Flow Modes, Membrane Materials, Membrane Modules, Transport Mechanisms in the Membrane-Separation Process, Transport Modeling in Nanofiltration, Selection of Membrane Technology in Water Treatment, Microfiltration Technology in Water Treatment, Ultrafiltration Technology in Water Treatment, Nanofiltration Technology in Water Treatment, Pervaporation Technology in Water Treatment, Reverse Osmosis Technology in Water Treatment, Forward Osmosis Technology in Water Treatment, Integrated Membrane Technology in Groundwater and Wastewater Treatment, Forward Osmosis Technology In Power Generation, Membrane Distillation Technology in Water Treatment [10 hrs] **Module IV:** Biological Treatment Technology Introduction to Biological Treatment Technologies, Wastewater Biodegradability: Selection of Treatment Technology, Microbial Growth Kinetics: Unstructured model, Bioreactor Configurations of Biological Treatment Technologies, Biological Treatment Using Fluidized-Bed Reactor Technology, Conventional Biological Treatment Technologies, Advances in Biological Treatment Technologies, Case Studies. [7 hrs] **Module V:**

	Industry-Specific Water Treatment: Case Studies [5 hrs] **Module VI:** Nanotechnology in Water Treatment Introduction, Nanomaterials as Adsorbent in Water Treatment, Nanomaterials in Water Purification as Membrane, Nanomaterials in Photocatalytic Degradation of Water Pollutants, Nanomaterials in Disinfection of Contaminated Water. [7 hrs]
Text Books, and/or reference material	Suggested Text Books: 1. Wastewater Treatment, Disposal, Reuse, Eddy and Metcalf 2. Parimal Pal, "Industrial Water Treatment Process Technology" 1st Edition, 2017, Elsevier. Reference Book: 1. Handbook of Water and Wastewater Treatment Technologies, AuthorsNicholas P. Cheremisinoff, ISBN 978-0-7506-7498-0, Copyright © 2002 Elsevier Inc. All rights reserved 2. All latest Journals (National & International)

CH9030	**COLLOIDS AND INTERFACE ENGINEERING**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Basic Chemistry, Physics and Mathematics		CT+EA					
Course Outcomes	• CO1: Acquire an idea about the application of colloidal chemistry, fluid-fluid and solid-fluid interface engineering in different industrial fields. • CO2: To learn the fundamental knowledge of intermolecular forces involved in colloids and interfaces						

	• CO3: Introduction to surface active agent and learn about the application of surface active agents to enhance the efficiency in the process.
Topics Covered	**Module I:** Importance and scope of the subject. Overview of colloidal systems, interfaces and surface. Properties and application of the colloids. Colloidal stability factor. Kinetic theory of colloidal systems: sedimentation, centrifugation, diffusion, Domestic and industrial application of colloidal solution. Adsorption at fluid-fluid and fluid-solid interface, Thermodynamics of interfaces, Interfacial rheology and transport process. [10 hrs] **Module II:** Surface active agent: Surfactant, Surface and interfacial tension, surface free energy. Surface tension for curved interfaces, Surface excess and Gibbs equation. Theory of surface tension, contact angle, and wetting. Thermodynamics of micelle and mixed micellar formation. Adsorption of single and mixed surfactants at interfaces, Mixed micellar properties, Rheology of surfactant systems. Preparation, mechanistic details of stabilization and relationship between HLB and solubility parameter, characterization and Application [10 hrs] **Module III:** Intermolecular forces relevant to colloidal systems: Electrostatic and van der Waals forces. DLVO theory. Measurement techniques of surface tension, contact angle, zeta potential, particle size. [10 hrs] **Module IV:** Overview of industrial applications of various interfacial phenomena in the industries [Mattress industry (Foam: preparation, characterization, stability), petroleum industry, Mineral processing industry Pesticides, firefighting, personal care formulations] Super hydrophobic surface and self-cleaning surfaces. Case studies related interfacial science. Introduction to Nanotechnology. Application of interfacial engineering concept through the surface modification for the synthesis of nanostructured material by using surface active agent. [12 hrs]
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. P. C. Hiemenz, and R. Rajagopalan, Principle of colloid and surface chemistry, 3rd edition, Mercel Dekher, N. Y. 1997. 2. Pallab Ghosh, Colloid and Interface Science, 1st Edition, PHI Learning, 2009. 3. M. J. CH9034	**PINCH TECHNOLOGY IN PROCESS INDUSTRY**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Heat Transfer		CT+EA					

Course Outcomes	• CO1: Acquire an idea to optimize the process heat recovery and reducing the external utility loads. • CO2: To achieve financial saving by constructing the best process heat integration.
Topics Covered	**Module I:** Introduction to process Intensification and Process Integration (PI). Areas of application and techniques available for PI, onion diagram. Overview of Pinch Technology: Introduction, Basic concepts, How it is different from energy auditing, Roles of thermodynamic laws, problems addressed by Pinch Technology. Key steps of Pinch Technology: Concept of ΔT_{min}, Data Extraction, Targeting, Designing, Optimization-Supertargeting Basic Elements of Pinch Technology: Grid Diagram, Composite curve, Problem Table Algorithm, Grand Composite Curve. Targeting of Heat Exchanger Network: Energy Targeting, Area Targeting, Number of units targeting, Shell Targeting and Cost targeting. [12 hrs] **Module II:** Designing of HEN: Pinch Design Methods, Heuristic rules, stream splitting, and design of maximum energy recovery (MER). Use of multiple utilities and concept of utility pinches, Design for multiple utilities pinches, Concept of threshold problems

	and design strategy.Network evolution and evaluation-identification of loops and paths, loop breaking and path relaxation. [12 hrs] **Module III:** Design tools to achieve targets, Driving force plot, remaining problem analysis, diverse pinch concepts, MCp ratio heuristics. Targeting and designing of HENs with different ΔT_{min} values, Variation of cost of utility, fixed cost, TAC, number of shells and total area with ΔT_{min} Capital-Energy trade-offs. Process modifications-Plus/Minus principles, Heat Engines and appropriate placement of heat engines relative to pinch. Heat pumps, Appropriate placement of heat pumps relative to pinch. Steam Rankin Cycle design, Gas turbine cycle design, Integration of Steam and Gas turbine with process. Refrigeration systems, Stand alone and integrated evaporators. Heat integrations and proper placement of Reactors for batch Processes as well as continuous processes. [12 hrs] **Module IV:** Case studies on heat integration by pinch technology [6 hrs]

	TECHNOLOGY IN ENVIRONMENTAL POLLUTION CONTROL						
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
--		CT+EA					
Course Outcomes	• CO1: Understanding fundamentals of membrane separation and membrane-based technologies • CO2: Understanding synthesis of membranes and operations of membrane modules for membrane-based technology development • CO3: Understanding application of Membrane Technology in separation-purification and green production in innovative way • CO4: Ignited Minds with passion for developing novel technologies in solving environmental problems						
Topics Covered	**Module I:** Membrane materials, membrane-based processes and membrane modules. [6 hrs] **Module II:** Introduction to membrane-based technology, application potentials of micro, ultra, nano, reverse osmosis, forward osmosis and other integrated membrane processes in water treatment, bio separation, biofuel production, air pollution control, green chemical production. [5 hrs] **Module III:** Introduction to modelling membrane separation, modelling microfiltration, ultrafiltration, nanofiltration, reverse osmosis, forward osmosis, membrane distillation and integrated processes. [6 hrs] **Module IV:** Introduction to Membrane-based technologies in air pollution control. Membrane technology in controlling particulates, and gaseous pollutants (SO_x, NO_x, CO_2, CO). [5 hrs] **Module V:** Membrane-based technologies in groundwater treatment, surface water treatment, industrial wastewater treatment, turning waste to wealth through membrane technology, closed loop wastewater treatment using multistage membrane separation. [10 hrs] **Module VI:** Introduction to development of green technology using membranes, green chlor-alkali production, green biofuel production, green biochemical production. Process intensification through membrane technology, analysis of space intensification, energy reduction, eco-friendly production through adoption of membrane technology. [10 hrs]						

Text Books, and/or reference material	Suggested Text Books: 1. Membrane-based Technologies for Environmental Pollution control, Parimal Pal, Elsevier Sci. Suggested Reference Books: 1. Industrial Water Treatment Process Technology, Parimal Pal, Elsevier 2. Groundwater Arsenic Remediation: Treatment Technology & Scale Up, Parimal Pal, Elsevier Sci.

CH 9043	**BIOFUEL TECHNOLOGY**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					
Course Outcomes	• CO1: Students know details biofuel production, they can calculate energy balance of biofuel production students know principles and thermodynamics of gasification processes • CO2: students know advanced power plants concepts (IGCC, chemical looping) • CO3: students know details of gas-to-liquid processes, Fischer Tropsch process • CO4: students know details of carbon dioxide capture and storage, they can calculate energy requirement students know details of desulfurization process						
Topics Covered	**Module I:** Fundamental concepts in understanding biofuel/bioenergy production; Climate Change & the Impact of Carbon Dioxide; History of Biofuels; Renewable Biomass feedstocks and its production; Feedstocks availability, characterization and attributes for biofuel/bioenergy production; Biomass pre-processing: drying, size reduction, and densification. [10 hrs]						

	Module II: Bio-ethanol, Bio-butanol: 1st Generation Biofuels – Corn Ethanol & Sugarcane Ethanol; 2nd Generation Biofuels – Cellulosic Ethanol; Different enzymes, enzyme hydrolysis, and their applications in ethanol production; 3rd Generation Aquatic Biomass – Cyanobacteria, Diatoms & Algae; Production Processes for Biofuels from Algae. [9 hrs] **Module III:** Biodiesel production from oil seeds, waste oils and microalgae, Transesterification process, feedstock processing, Reaction kinetics, Thermodynamics, Parametric optimization of transesterification, Catalyst and catalyst support development, reusability, characterization of catalyst and biofuel, safe disposal, cost estimation of biofuel and catalyst synthesis. [9 hrs] **Module IV:** Biogas & Biohydrogen; Microbial fuel cells; Gasification processes Advanced power plant concepts (IGCC); Fischer-Tropsch synthesis, gas to liquid processes. [8 hrs] **Module V:** Environmental impacts of biofuel production: Carbon dioxide capture and storage; Chemical Looping, Desulfurization; Value-added processing of biofuel residues and co-products. [6 hrs]
Text Books, and/or reference material	Suggested Text Books: 1. Biofuel Technology Handbook, Dominik Rutz, Rainer Janssen, WIP Renewable Energy, Germany, 2003 Suggested Reference Books: 1. Biofuel Technology: Recent Development, Reza Faryar, Springer Publishers, 2001 2. Biofuel and Bioenergy Technology, Wei-Hsin Chen, Keat Teong Lee, Hwai Chyuan Ong, MDPI, Switzerland, ISBN 978-3-03897-596-0 (Pbk)

DEPTH ELECTIVE COURSE BASKETS

THE STUDENTS PRIMARILY WILL OPT FROM THE DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED IN A PARTICULAR SEMESTER BY HIS/ HER OWN DEPARTMENT. HOWEVER, A STUDENT CAN OPT FOR DEPTH ELECTIVE SUBJECT(S) THAT ARE OFFERED BY OTHER DEPARTMENT IN A PARTICULAR SEMESTER, WITH THE PERMISSION/ CONSENT FROM HIS/ HER HEAD OF THE DEPARTMENT AND THE CONCERNED TEACHER OF THAT SUBJECT.

SIXTH SEMESTER	
CYE611	Analytical and Environmental Chemistry
CYE612	Chromatographic Separation and Instrumental Methods of Analysis

EIGHT SEMESTER	
CYE811	Advanced Natural Products and Medicinal Chemistry
CYE812	Spectroscopic Methods of Chemical Analysis

NINTH SEMESTER	
CYE911	Advanced Quantum Chemistry and Application of Group Theory
CYE912	Non-Equilibrium Thermodynamics and Biophysical Chemistry
CYE913	Material chemistry and advanced spectroscopy
CYE914	Electrode kinetics and corrosion science
CYS951	Advanced Physical Chemistry-II Laboratory
CYE921	Advanced Green Chemistry and Analytical Chemistry
CYE922	Synthetic Methodology for Metal Complexes and Coordination Aggregates
CYE923	Small Molecule Activation, Nuclear Chemistry and Related Spectroscopy
CYE924	Group theory, applied electrochemistry and X-ray structure analysis
CYS952	Environmental Sample Analysis
CYE931	Application of some important reactions in synthetic organic chemistry
CYE932	Natural Products and Drug Design
CYE933	Bioorganic Chemistry
CYE934	Advanced Stereochemistry and structure activity Correlation
CYS953	Multi Step Synthesis and characterization of Organic Compounds

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 01	MATHEMATICS - I	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic concepts of function, limit, differentiation, and integration.		CT+MT+EA					
Course Outcomes	• CO1: To introduce the fundamentals of differential calculus of single and several variables • CO2: To develop the basic concepts of integral calculus including multiple integrals and its application in finding area, volume, centre of mass, centre of gravity etc. • CO3: To introduce the fundamental concepts of vector calculus • CO4: To develop the concept of convergence						
Topics Covered	**Functions of Single Variable:** Rolle's Theorem and Lagrange's Mean Value Theorem (MVT), Cauchy's MVT, Taylor's and Maclaurin's series, Asymptotes & Curvature (Cartesian, Polar form). (8) **Functions of several variables:** Function of two variables, Limit, Continuity and Differentiability, Partial derivatives, Partial derivatives of implicit function, Homogeneous function, Euler's theorem and its converse, Exact differential, Jacobian, Taylor's & Maclaurin's series, Maxima and Minima, Necessary and sufficient condition for maxima and minima (no proof), Stationary points,						

	Lagrange's method of multipliers. (10) **Sequences and Series:** Sequences, Limit of a Sequence and its properties, Series of positive terms, Necessary condition for convergence, Comparison test, D Alembert's ratio test, Cauchy's root test, Alternating series, Leibnitz's rule, Absolute and conditional convergence. (6) **Integral Calculus:** Mean value theorems of integral calculus, Improper integral and it classifications, Beta and Gamma functions, Area and length in Cartesian and polar co-ordinates, Volume and surface area of solids of revolution in Cartesian and polar forms. (12) **Multiple Integrals:** Double integrals, Evaluation of double integrals, Evaluation of triple integrals, change of order of integration, Change of variables, Area and volume by double integration, Volume as a triple integral. (10) **Vector Calculus:** Vector valued functions and its differentiability, Line integral, Surface integral, Volume integral, Gradient, Curl, Divergence, Green's theorem in the plane (including vector form), Stokes' theorem, Gauss's divergence theorem and their applications. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10th ed., Wiley India Ed. (2010). 2. Daniel A. Murray, Differential, and Integral Calculus, Fb & c Limited, 2018. 3. Marsden, J. E; Tromba, A. J.; Weinstein: Basic Multivariable Calculus, Springer, 2014. **Reference Books:** 1. Tom Apostal, Calculus-Vol-I & II, Wiley Student Edition, 2011. 2. Thomas and Finny: Calculus and Analytic Geometry, 11th Ed., Addison Wesley.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
PHC01	**Engineering Physics**	**PCR**	**2**	**1**	**0**	**3**	**3**
Pre-requisites:		Course Assessment methods: (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					

Course Outcomes	CO1: To realize and apply the fundamental concepts of physics such as superposition principle, simple harmonic motion to real world problems. CO2: Learn about the quantum phenomenon of subatomic particles and its applications to the practical field. CO3: Gain an integrative overview and applications of fundamental optical phenomena such as interference, diffraction and polarization. CO4: Acquire basic knowledge related to the working mechanism of lasers and signal propagation through optical fibers.
Topics Covered	**Harmonic Oscillations** - Linear superposition principle, Superposition of two perpendicular oscillations having same and different frequencies and phases, Free, Damped and forced vibrations, Equation of motion, Amplitude resonance, Velocity resonance, Quality factor, sharpness of resonance, etc. [8] **Wave Motion** - Wave equation, Longitudinal waves, Transverse waves, Electro-magnetic waves. [3] **Introductory Quantum Mechanics** - Inadequacy of classical mechanics, Blackbody radiation, Planck's quantum hypothesis, de Broglie's hypothesis, Heisenberg's uncertainty principle and applications, Schrodinger's wave equation and applications to simple problems: Particle in a one-dimensional box, Simple harmonic oscillator, Tunnelling effect. [8] **Interference & Diffraction** - Huygens' principle, Young's experiment, Superposition of waves, Conditions of sustained Interference, Concepts of coherent sources, Interference by division of wavefront, Interference by division of amplitude with examples, The Michelson interferometer and some problems; Fraunhofer diffraction, Single slit, Multiple slits, Resolving power of grating. [13] **Polarisation** - Polarisation, Qualitative discussion on Plane, Circularly and elliptically polarized light, Malus law, Brewster's law, Double refraction (birefringence) - Ordinary and extra-ordinary rays, Optic axis etc.; Polaroid, Nicol prism, Retardation plates and analysis of polarized lights. [5] **Laser and Optical Fiber** - Spontaneous and stimulated emission of radiation, Population inversion, Einstein's A & B co-efficient, Optical resonator and pumping methods, He-Ne laser. Optical Fibre– Core and cladding, Total internal reflection, Calculation of numerical aperture and acceptance angle, Applications. [5]
Text Books, and/or reference material	**TEXT BOOKS**: 1. The Physics of Vibrations and Waves, H. John Pain, Willy and Sons 2. A Text Book of Oscillations and Waves, M. Goswami and S. Sahoo, Scitech Publications 3. Engineering Physics, H. K. Malik and A. K. Singh, McGraw-Hill. **REFERENCE BOOKS**: 1. Vibrations and Waves in Physics, Iain G. Main, Cambridge University Press 2. • CO2: To learn fundamentals of polymer chemistry and petroleum engineering.
• CO3: Introduced to basic spectroscopic techniques for structure determination and characterization.
• CO4: To study few inorganic and bioinorganic compounds of industrial importance.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">ORGANIC CHEMISTRY
i. Fundamentals of organic reaction mechanisms; Few important reactions and their mechanism along with their applications; Robinson annulation, Hydroboration reaction, Organometallic reagents (Gilman reagents), Metathesis using Grubb’s catalyst and Wittig reaction. (3)
ii. Fundamental concept on stereochemistry and application: Conformation and configuration of organic compounds, Diastereo-selective, enantio-selective, regio-selective, stereo-specific, and stereo-selective reactions. (3)
iii. Polymer chemistry and polymer engineering: Fundamental concept on polymer chemistry; synthesis and application of important polymers, Rubber, and plastic materials. Conducting polymer. (2)
iv. Petroleum Engineering and oil refinery: origin of mineral oils, separation principle and techniques of distillation of crude oil, Uses of different fractions, octane number, cetane number, Knocking, anti-knock compounds, and Bio-Fuel. (2)
v. Structure elucidation of organic compounds by modern spectroscopic methods; Application of UV-Visible and FT-IR spectroscopy. (3)
INORGANIC CHEMISTRY
i. Coordination Chemistry: Crystal Field Theory of octahedral and tetrahedral complexes, colour and magnetic properties, Jahn-Teller distortion, pseudo Jahn-Teller distortion, Isomerism, and stereochemistry. (5)</td></tr>
</table>

	ii. **Bioinorganic Chemistry:** Heme and non-heme O_2 transport protein (Haemoglobin, Myoglobin), Chlorophyll and photosynthesis. (3) iii. **Inorganic Materials:** Introduction towards industrially important inorganic materials like cementing material, refractory material, fertiliser, inorganic polymer. (2) iv. **Organometallic Chemistry:** π-acid ligands, stabilization of metal low oxidation state and 18 electron rules, metal carbonyls and nitrosyls, metal-alkene complexes. (4) **PHYSICAL CHEMISTRY** i. **Thermodynamics:** 2nd law of thermodynamics, entropy, free energy, Gibbs Helmholtz equation, change of phase. Cryogenics: joule Thomson experiment. (4) ii. **Chemical Kinetics:** 2nd and 3rd order rate expression, Reversible reaction, Chain reaction, Consecutive reaction, Temp effect on reaction rate. (4) iii. **Electrochemistry:** Electrochemical cell, Effect of pH, precipitation, and complex formation on EMF of oxidation/reduction processes. (2) iv. **Absorption:** Physical and Chemical absorption, Absorption isotherms. (1) v. **Catalysis:** Types of catalysis, Rate expression for Catalysed reaction, Acid-base and Enzyme catalysis. (2)
Text Books, and/or reference material	Suggested Text Books: (i) Physical Chemistry by P. Atkins, Oxford (ii) A guidebook to mechanism in Organic chemistry: Peter Sykes; Pearson Edu. (iii) Inorganic Chemistry Part-I & II, R. L. Dutta, The new book stall Suggested Reference Books: **Organic Chemistry**: (i) Basic stereochemistry of organic molecules: S. Sengupta; Oxford University press (ii) Engineering Chemistry: Wiley (iii) Elementary Organic Spectroscopy: William Kemp, ELBS with Macmillan **Inorganic Chemistry:** (i) Inorganic Chemistry: Principle structure and reactivity, J. E. Huheey, E. A. Keiter and R. L. Keiter, Pearson Education (ii) Bioinorganic Chemistry -- Inorganic Elements in the Chemistry of Life: An Introductionand Guide, 2nd Edition, Wolfgang Kaim, Brigitte Schwederski, Axel Klein. (iii) Inorganic Chemistry Fourth Edition, Shriver & Atkins, Oxford **Physical Chemistry:** (i) Physical Chemistry by G.W Castellan (ii) Physical Chemistry by P. C. Rakshit

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	• CO1: Acquire knowledge of mechanics and ability to draw free body diagrams. • CO2: Apply knowledge of mechanics for solving special problems like truss and frame analysis. • CO3: Ability to calculate centroid, moments of inertia for various shapes. • CO4: Learn momentum and energy principles. • CO5: Knowledge on virtual Work Principle and its application
Topics Covered	Engineering Mechanics; measurement and SI units. [1] Vectors and force as a vector; Resultant of a system of forces on a particle; free body diagram and conditions of equilibrium of a particle; problems on particles; equilibrium of particles in space. [2] Resultant of a system of forces and couples on a rigid body; conditions of equilibrium of a rigid body; free body diagrams of rigid bodies subjected to different types of constraints; simple space problems of rigid bodies. [4] Coefficients of static and kinetic friction; problems involving friction; theories of friction on square threaded power screw and flat belt. [5] Simple trusses; analysis of trusses by method of joints and method of sections. [5] Centre of gravity and centre of mass; centroids of lines, curves and areas; first moment of area; second moment of area; polar moment of inertia; radius of gyration of an area; parallel axis theorem; mass moment of inertia. [4] Path, velocity, acceleration; rectilinear and curvilinear motion; motion of system of particles; introduction to the concept of plane kinematics of rigid bodies. [6] Newton's second law of motion; dynamic equilibrium and D'Alembert's principle; linear momentum; angular momentum; rectilinear and curvilinear motion; principles of work–energy and impulse–momentum; impact of system of particles; introduction to the concept of plane kinetics of rigid bodies. [12] Principle of Virtual Work, Solution of Problems on Mechanics using Principle of Virtual Work [3]
Text Books, and/or reference material	1) S P Timoshenko and D H Young, Engineering Mechanics, 5th Edition 2) J L Meriam and L G Kraige, Engineering Mechanics, 5th Edition, Wiley India 3) F P Beer and E R Johnston, Vector Mechanics for Engineers 4) I H Shames, Engineering Mechanics

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
	CT+MT+EA
Course Outcomes	• CO1: Understand the importance of environment and ecosystem. • CO2: Understand the fundamental aspect of pollutant tracking and its implementation in natural and anthropogenic pollution of air and water system. • CO3: Understand the scientific basis of local and as well as global issues. • CO4: Apply of knowledge to develop sustainable solution.
Topics Covered	**Introduction:** Multidisciplinary nature of Environmental Studies; Basic issues in Environmental Studies. [2] Human population and the Environment. [1] Social issues and the Environment. [1] **Constituents of our Environment & the Natural Resources:** Atmosphere– its layers, their characters; Global warming, Ozone depletion, Acid rain, etc. [5] Hydrosphere - Its constituents, Oceans, Groundwater, Surface waters; Hydrological cycle. [4] Lithosphere - constituents of lithosphere; Rock and Mineral resources; Plate Tectonic Concept and its importance. [5] Biosphere– its components; Ecosystems and Ecology; Biodiversity; Biomes. [5] Natural disaster and their management – Earthquakes, Floods, Landslides, Cyclones. [3] **Pollution:** Pollutants and their role in air and water pollution. [2]

Course Outcomes	• CO1: Ability of mental visualization of different objects • CO2: Theoretical knowledge of orthographic projection to solve problems on one/two/three dimensional objects • CO3: Able to read/interpret industrial drawing and to communicate with relevant people
Topics Covered	Graphics as language of communication; technical drawing tools and their up-keep; types of lines; construction of geometrical figures; lettering and dimensioning. [6] Construction and use of scales; construction of curves of engineering importance such as curves of conic section; spirals, cycloids, involutes and different loci of points; use of equations for drawing some curves. [9] Descriptive geometry: necessity and importance of orthographic projection; horizontal and vertical reference planes; coordinate of points; orthographic projection of points and lines situated in different quadrants, viz. 1st, 2nd, 3rd and 4th quadrants; traces of lines. First angle and third angle projection of lines and planes; views from top, front and left (or right); true length and true inclination of lines with planes of projections; primary auxiliary projection of points, lines and planes; auxiliary plan and auxiliary elevation. [9] Projection of simple regular solids, viz. prisms, cubes, cylinders, pyramids, cones, tetrahedrons, spheres, hemi-spheres etc. [6] Section of solids; section by perpendicular planes; sectional views; true shapes of sections. [6] Dimensional techniques; international and national standards (ISO and BIS). [3] Freehand graphics. [3]
Text and/or reference material	1)… Engineering Drawing and Graphics – K Venugopal 2)… Engineering Drawing – N D Bhat 3)… Practical Geometry and Engineering Graphics – W Abbott

Pre-requisites		Course Assessment methods: (Continuous evaluation (CE) and end assessment (EA))					
NIL		CE+EA					

Course Outcomes	CO1: To realize and apply different techniques for measuring refractive indices of different materials. CO2: To realize different types of waveforms in electrical signals using CRO. CO3: To understand charging and discharging mechanism of a capacitor. CO4: To understand interference, diffraction and polarization related optical phenomena. CO5: To acquire basic knowledge of light propagation through fibers.
Topics Covered	1. Find the refractive index of a liquid by a travelling microscope. 2. Determine the refractive index of the material of prism using spectrometer. 3. Determination of amplitude and frequency of electrical signals by oscilloscope. 4. To study the characteristics of RC circuits. 5. To study Brewster's law/Malus' law using laser light. 6. To study the diffraction of light by a grating. 7. To study the interference of light by Newton's ring apparatus. 8. To determine numerical aperture of optical fiber. 9. Determination of Planck constant.
Text and/or reference material	**SUGGESTED BOOKS**: 1) A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
None		CT+EA					
Course Outcomes	• CO1: To learn basic analytical techniques useful for engg applications. • CO2: Synthesis and characterization methods of few organic, inorganic and polymer compounds of industrial importance. • CO3: Learn chromatographic separation methods. • CO4: Applications of spectroscopic measurements.						
Topics Covered	i. Experiments based on pH metry: Determination of dissociation constant of we acids by pH meter. ii. Experiments based on conductivity measurement: Determination of amou of HCl by conductometric titration with NaOH. iii. Estimation of metal ion: Estimation of Fe^{2+} by permangnomentry iv. Estimation of metal ion: Determ. of total hardness of water by EDTA titration. v. Synthesis and characterization of inorganic complexes: e. g. $Mn(acac)_3$, Fe(acac cis-bis(glycinato)copper (II) monohydrate and their characterization by m. p FTIR etc. vi. Synthesis and charact. of organic compounds: e.g.Dibenzylideneacetone. vii. Synthesis of polymer: polymethylmethacrylate viii. Verification of Beer-Lamberts law and determination of amount of iron prese in a supplied solution. ix. Chromatography: Separation of two amino acids by paper chromatography x. Determination of saponification value of fat/ vegetable oil						
	<u>Suggested Text Books:</u> 1. Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall 2. Advanced Physical Chemistry Experiments: By Gurtu&Gurtu 3. Comprehensive Practical Organic Chemistry: Qualitative Analysis By V. K. Ahluwalia and S. Dhingra <u>Suggested Reference Books:</u> 1. Practical Chemistry By R.C. Bhattacharya 2. Selected experiments in Physical Chemistry By N. G. Mukherjee

• CO1: Study and practice on machine tools and their operations
• CO2: Practice on manufacturing of components using workshop trades including fitting, carpentry, foundry and welding
• CO3: Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping
• CO4: Develop basic electrical engineering knowledge for house wiring practice
</td></tr>
<tr><td>Topics Covered</td><td colspan="7">
M/c shop & Carpentry shop -- 3X3= 9hrs.
• Introduction on machining process.
• Introduction to machine tools- Lathe, Shaper, Milling and Drill machine.
• Introduction to woods- Types, structure, disease and defect of wood.
• Introduction to wood working machines and tools.
• Making of dovetail joint and bridle joint.
Welding Shop & Sheet metal -- 3X3= 9hrs.
• Introduction to welding.Safety and precautions in welding.
• Formation of weld bead by SMAW on mild steel flat.
• Formation of weld bead by oxy-fuel welding on mild steel flat.
• Introduction to sheet Metal works.
• Tools and Machines used in sheet metal works.
• Concept of development, marking out of metal sheets.
• Cutting and joining of metal sheets.
• Safety precautions, General warning needed in the shop floor.
Black smithy & Foundry -- 3X3= 9hrs.
• Introduction Smithing and Forging- Tools, Machines, Furnaces and its accessories, fuels.
• Safety and precautions in blacksmithy.
• Making of bars of different cross-sections.
• Making of hexagonal headed bolts.
• Forge welding.
• Introduction to Foundry Technology.
• Preparation of sand mould using Solid/Split Pattern.
Fitting & Electrical shop -- 3X3= 9hrs.
• Introduction to hand metal cutting tools with specifications, nomenclature and their use.
• Marking tools, measuring tools and their use.
</td></tr>
</table>

	• Fitting of joints of mild steel flats. • Introduction to electrical hazards and safety precaution. • Wire jointing and soldering. • PVC Conduit Wiring controlled by separate single way switches. • PVC Cashing Capping Wiring for two-way switches. • Conduit wiring for the connection of a Calling Bell with In& Out Indicators. • Batten Wiring and Cleat Wiring. • Tube Light Connection. • Insulation Resistance Testing of 1ph / 3ph Motor and House Wiring. • Earth Resistance Testing. • DOL Starter Connection. **Viva voce -- 1X3= 3hrs.**
Text Books, and/or reference material	1. Workshop Technology Part I and Part II by W. A. J. Chapman 2. Elements of Workshop Technology S. K. Hazra Chowdhury, A. K. Hazra Chowdhury and Nirjhar Roy 3. Mechanical Workshop Practice by K. C. John

NIL		CT+EA					
Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service						
Topics Covered	**YOGA** • Introduction of Yoga. • Sitting Posture/Asanas- Padmasana, Vajrasana, Ardhakurmasana, Ustrasana,						

	Bakrasana, Sasankasana, Janusirshasana, Suryanamaskar. • Mudra- Gyana mudra, Chin mudra, Shuni mudra, Prana mudra, Adi mudra, Anjali mudra. • Laying Posture/Asanas- PavanaMuktasana, UttanaPadasana, Sarpasana, Bhujangasana (Cobra Pose), Eka Pada Śalabhāsana, Dhanurasana, Chakrasana, Viparitkarani. • Meditation- Yognidra, Om chant, Pray chant. • Standing Posture/Asanas- Tadasana (Mountain Pose), Vrikshasana (Tree Pose), Ardhachandrasana, Trikonasana, Utkatasana, Padahastasana. • Pranayama- Deep breathing, AnulomVilom, Suryabhedi, Chandrabhedi. • Kriya- Kapalbhati, Trataka. **ATHLETICS** • Introduction of Athletic. • Starting Technique for Track events- Standing start, Crouch & Block start. • Finishing Techniques. • Relay Race- 4×100m, 4×400m & Baton Exchange Technique & Rules. • Track Marking with Fundamentals- 200m, 400m and Diagonal Distance Radius, Straight Distance, Staggers of Different Lanes & Curve Distance. **BASKETBALL** • Introduction and Players stance and ball handling. • Passing- Two hand chest pass, two hand bounce pass, One hand baseball pass, Side arm pass, Overhead pass, Hook pass. • Receiving- Two hand receiving, one hand receiving, receiving in stationary position, Receiving while jumping and Receiving while running. • Dribbling- Dribble, High dribble, Low dribble, Reverse dribble, Rolling dribble. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Introduction of Volleyball • Service- Underarm service, Sidearm service, Tennis service, Floating service, Jump service. • Pass: Underarm pass- Ready position, Teaching stage of underarm pass and Upper hand pass- Volley pass, Back pass, Short set, Jump set & Underarm set. • Rules and their interpretation. **FOOTBALL** • Introduction of Football • Push pass- Instep inside, Instep outer side. • Kicking- Spot kick, Instep kick, Lofted kick. • Dribbling- One leg, Both legs, Instep. • Trapping- Rolling ball sole trapping, High ball sole trapping, High ball chest trapping, High ball thigh trapping. • Throwing- Standing throw, Running throw, Seating throw. • Goal Keeping- Griping the ball, Full volley, Half volley, Drop Kick.

	• Rules and their interpretation. **CRICKET** • Introduction of Cricket • Batting gripping & Stance, Bowling gripping technique. • Batting front foot defense& Drive. • Batting Back foot defense& Drive. • Batting Square cut. • Bowling medium pace, Bowling off break. • Fielding drill, Catching (Short & High). • Rules & Regulation. **BADMINTON** • Basic introduction about Badminton and Badminton court. • Racket parts, Racket Grip, Shuttle Grip. • Basic stance, Basic Footwork, Shadow practice (Full court movement). • Strokes services: Forehand- Overhead & Underarm, Backhand- Overhead & Underarm. • Match practice (Single & Double). • Rules & Regulation. **TABLE TENNIS** • Introduction of Table Tennis. • Basic Stance and Grip (Shake hand & Pen hold). • Service Basic. • Stroke: Backhand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Stroke: Forehand- Push, Deep Push, Chop, Rally, Drive, Drop Shot, Flick, Block, Smash. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles). **NCC** • FD-1 General Introduction and words of command. • FD-2 Attention, Stand at ease and Stand easy, Turning and inclining at the halt. • FD-3 Sizing, Forming up in three Ranks Numbering, Open and Close order March and Dressing. • FD-4 Saluting at the halt, Getting on parade, Dismissing and falling out. • FD-5 Marching, Length of pace and Time of Marching in quick time and Halt, Slow March and Halt. • FD-7 Turning on the March and Wheeling. • FD-12 Parade practice. **TAEKWONDO** • Introduction about Taekwondo- Meaning of Taekwondo, Korean language of dress, Fighting area, Punch, Block, Kicks etc. • Stance- Ready stance, Walking stance, Fighting stance, Front stance, Back stance, Cat stance etc. • Punch Technique- Front fist punch, Rear fist punch, Double fist punch, With

	stance etc. Blocks- Upper blocks, Middle block, Side block, Suto etc. • Foot Technique (Balgisul)- Standing kick (Saseochagi), Front kick (Abchagi), Doliyo (Chagi), Abdalchagi (Butterfly kick), Back kick etc. **NSS** • Swachha Bharat Mission • Free Medical Camp • Sanitation drive in and around the campus. • Unnat Bharat Abhiyaan • MatribhashaSaptah celebration

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC 02	MATHEMATICS - II	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Basic concepts of set theory, differential equations, and probability.	CT+MT+EA

Course Outcomes	
	• CO1: Develop the concept of basic linear algebra and matrix equations so as to apply mathematical methods involving arithmetic, algebra, geometry to solve problems. • CO2: To acquire the basic concepts required to understand, construct, solve and interpret differential equations. • CO3: Develop the concepts of Laplace transformation & Fourier transformation with its property to solve ordinary differential equations with given boundary conditions which are helpful in all engineering & research work. • CO4: To grasp the basic concepts of probability theory.

Topics Covered	**Elementary algebraic structures:** Group, subgroup, ring, subring, integral domain, and field. (5) **Linear Algebra:** Vector space, Subspaces, Linear dependence and independence of vectors, Linear span, Basis and dimension of a vector space. Rank of a matrix, Elementary transformations, Matrix inversion, Solution of system of Linear equations, Eigen values and Eigen vectors, Cayley-Hamilton Theorem, Diagonalization of matrices. (15) **Ordinary Differential Equations:** Existence and uniqueness of solutions of ODE (Statement Only), Equations of first order but higher degree, Clairaut's equation, Second order differential equations, Linear dependence of solutions, Wronskian determinant, Method of variation of parameters, Solution of simultaneous equations. (12) **Fourier series:** Basic properties, Dirichlet conditions, Sine series, Cosine series, Convergence. (4)
	Laplace and Fourier Transforms: Laplace transforms, Inverse Laplace transforms, Convolution theorem, Applications to Ordinary differential equations. Fourier transforms, Inverse Fourier transform, Fourier sine and cosine transforms and their inversion, Properties of Fourier transforms, Convolution. (10) **Probability:** Historical development of the subject and basic concepts, Axiomatic definition of probability, Examples to calculate probability, Random numbers. Random variables and probability distributions, Binomial distribution, Normal distribution. (10)
Text Books, and/or reference material	**Text Books:** 1. E. Kreyszig, Advanced Engineering Mathematics: 10thed, Wiley India Ed. (2010). 2. Gilbert Strang, Linear algebra and its applications (4th Ed), Thomson (2006). 3. Shepley L. Ross, Differential Equations, 3rd Edition, Wiley Student Ed (2017). **Reference Books:** 1. S. Kumaresan, Linear algebra - A Geometric approach, PHI (2000). 2. C. Grinstead, J. L. Snell, Introduction to Probability, American Math. Society.

<tr><td colspan="2">Basic knowledge of computer.</td><td colspan="6">CT+MT+EA</td></tr>
<tr><td colspan="2">Course Outcomes</td><td colspan="6">CO1: Recognize the changes in hardware and software technologies with respect to the evolution of computers and describe the function of system software’s (operating Systems) and application software’s, languages, number system, logic gates.
CO2: Illustrate the flowchart and inscribe an algorithm for a given problem Inscribe C programs using operators.
CO3: Develop conditional and iterative statements to write C programs.
CO4: Exercise user defined functions to solve real time problems
CO5: Inscribe C programs that use Pointers to access arrays, strings and functions.
CO6: Exercise user defined data types including structures and unions to solve problems.</td></tr>
<tr><td colspan="2">Topics Covered</td><td colspan="6">Fundamentals of Computer: History of Computer, Generation of Computer, Classification of Computers 2L Basic Anatomy of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices. [2]
Languages: Assembly language, high level language, compiler, and assembler (basic concepts) [1]
Binary & Allied number systems representation of signed and unsigned numbers. BCD, ASII. Binary Arithmetic & logic gates. [2]
Basic concepts of operating systems like MS DOS, MS WINDOW, UNIX, Algorithm & flow chart. [1]
C Fundamentals: The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements. [2]
Operators & Expressions: Arithmetic operators, relational and logical operators, type, conversion, increment and decrement operators, bit wise operators, assignment operators and expressions, precedence, and order of evaluation. Input and Output: Standard input and output, formatted output -- printf, formatted input scanf. [8]
Flow of Control: Statement and blocks, if - else, switch, loops - while, for do while, break and continue, go to and labels. [5]
Fundamentals and Program Structures: Basic of functions, function types, functions returning values, functions not returning values, auto, external, static and register Variables, scope rules, recursion, function prototypes, C pre-processor, command line arguments. [5]
Arrays and Pointers: One-dimensional, two-dimensional arrays, pointers and functions, multi-dimensional arrays. [10]
Structures Union and File: Structure, union, structures and functions, arrays of structures, file read, file write.[5]</td></tr>

• CO1: learn the fundamentals of Electric Circuits and Network theorems and analysis of electrical network based on these concepts.
• CO2: develop an idea on Magnetic circuits, Electromagnetism and learning the working principles of some fundamental electrical equipment's
• CO3: learn about single phase and poly-phase AC circuits and analysis of such circuits based on these concepts.
• CO4: introduce the basic concept of single-phase transformer.
• CO5: analyze the transient phenomena in electrical circuits with DC excitation.</td></tr>
</table>

Topics Covered	Introduction: Overview of Electrical power generation systems (2) Fundamentals of Electric Circuits: Ohm's laws, Kirchhoff's laws, Independent and Dependent sources, Analysis of simple circuits. (4) Network theorems: Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem (4) Magnetic circuits: Review of fundamental laws of electromagnetic induction, transformer and rotational emfs, Solution of magnetic circuits. Analysis of coupled circuits (self-inductance, mutual inductance, and dot convention)(8) Transients with D.C. excitation for R-L and R-C circuits. (3) Generation of alternating voltage and current, E.M.F. equation, Average and R.M.S. value, Phase and phase difference, Phasor representation of alternating quantity, Behavior of A.C. circuits, Resonance in series and parallel R-L-C circuits. AC Network: Superposition theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem, solution of networks with AC sources. (10) Single-Phase Transformer, equivalent circuits, open circuit and short circuit tests (6) Poly-phase system, Advantages of 3-phase system, Generation of 3-phase voltages, Voltage, current and power in a star and delta connected systems, 3-phase balanced and unbalanced circuits, Power measurement in 3-phase circuits. (5)

<tr><td>Course Outcomes</td><td colspan="7">CO1: Basic understanding of basic cellular organization of organisms and cellular communications, structure and functions of the macromolecules and their biosynthesis and cata--bolism.
CO2: To give an understanding of the key features of the structure, growth, physiology and behavior of bacteria, viruses, fungi and protozoa
CO3: To introduce molecular biology to understand biological processes in various applications.
CO4: To provide a foundation in immunological processes and an overview of the interaction between the immune system and pathogens.
CO5: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them
CO6: To provide knowledge about biological and biochemical processes that require engineering expertise to solve them</td></tr>
<tr><td>Topics Covered</td><td colspan="7">1. Cell Biology (4)
a) Introduction to life science: prokaryotes & eukaryotes
Definition; Difference
b) Introduction to cells - Define cell, different types of cell
c) Cellular organelles - All organelles and functions in brief
d) Cellular communications
Introduction to basic signaling; endocrine, paracrine signaling; concepts of receptor, ligand, on-off switch by phosphorylation/dephosphorylation
2. Biochemistry (4)
a) Biological function of carbohydrate and lipid - Introduction, structure and function
b) Biological function of nucleic acids and protein - structure and function
c) Catabolic pathways of Macromolecules - Introduction to catabolism, hydrolysis and condensation reactions; Catabolism of glucose- Glycolysis, TCA; overall degradation of proteins and lipids
d) Biosynthesis of Macromolecules
Generation of ATP (ETS), Generation of Glucose (Photosynthesis)
3. Microbiology (5)
a) Types of microorganisms and their general features - Bacteria, Yeast, Fungi, Virus, Protozoa- general introduction with practical significance and diseases
b) Microbial cell organization - Internal and External features of cell- bacterial cell wall, viral capsule, pilus etc,
c) Microbial nutritional requirements and growth - Different Sources of energy; growth curve
d) Basic microbial metabolism - Fermentation, Respiration, Sulfur, N_2 cycle</td></tr>
</table>

	4. Immunology (5) a) Basic concept of innate and adaptive immunity - Immunity-innate and adaptive, differences, components of the immune system b) Antigen and antibody interaction - Antigen and antibody, immunogen, factors affecting immunogenicity, basic antigen-antibody mediated assays, introduction to monoclonal antibody c) Functions of B cell - B cell, antibody production, memory generation and principle of vaccination d) Role of T cell in cell-mediated immunity - Th and Tc, functions of the T cell with respect to different pathogen and cancer cell **5. Molecular Biology (5)** a) Prokaryotic Genomes (Genome organization & structure) - Nucleoid, circular or linear b) Eukaryotic Genomes (Genome organization & structure) - Intron, exon, packaging, chromatin c) Central Dogma (Replication, Transcription and Translation) d) Applications of Molecular Biology (Diagnostics, DNA-fingerprinting, Recombinant products etc.) - Introduction to Recombinant DNA, fingerprinting, cloning **6. Bioprocess Development (5)** a) Microbial growth kinetics - Batch, fed-batch and continuous systems, Monod Equation b) Enzyme kinetics, kinetics of enzyme inhibition and deactivation Definition of enzymes, activation energy, Concepts of Km, Vmax, Ki c) Microbial sterilization techniques and kinetics Introduction to sterilization, dry and moist sterilization d) Thermodynamics of biological system - Concepts of Enthalpy, Entropy, favorable reactions, exergonic and endergonic reactions e) Material and energy balance for biological reactions - Stoichiometry

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	• CO1: Acquire idea about basic electronic components, identification, and behavior. • CO2: To determine IV characteristics of these Circuit elements for different applications. • CO3: Learn to analyze the circuits and observe and relate input and output signals.						

Labs Conducted.	1. To know your laboratory: To identify and understand the use of different electronic and electrical instruments. 2. To identify and understand name and related terms of various electronics components used in electronic circuits.: Identify different terminals of components, fid their values and observe numbering associate with it. 3. Use of oscilloscope and function generator: Use of oscilloscope to measure voltage, frequency/time and Lissajous figures of displayed waveforms. 4. Study of half wave and Full-wave (Bridge) rectifier with and without capacitor filter circuit. 5. Realization of basic logic gates: Truth table verification of OR, AND, NOT, NOT and NAND logic gates from TTL ICs 6. Regulated power supply: study LM78XX and LM79XX voltage regulator ICs 7. Transistor as a Switch: study and perform transistor as a switch through NOT gate 8. Zenner diode as voltage regulator 9. To study clipping and Clamping circuits 10. To study different biasing cirtis. 11. Study of CE amplifier and observe its frequency response.

XXS-52	Co-curricular Activities	PCR	0	0	2	2	1

Pre-requisites	Course assessment methods: (Continuous evaluation((CE) and end assessment (EA)
NIL	CE + EA
Course Outcomes	• CO1: Social Interaction: Through the medium of sports • CO2: Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them • CO3: Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes. • CO4: Personality development through community engagement • CO5: Exposure to social service
Topics Covered	**YOGA** • Sitting Posture/Asanas- Gomukhasana, Swastikasana, Siddhasana, Ustrasana, Janusirsasana, ArdhaMatsyendrasana (Half-Spinal Twist Pose), Paschimottanasana, Shashankasana, Bhadrasana. • Mudra- Vayu, Shunya, Prithvi, Varuna, Apana, Hridaya, Bhairav mudra. • Laying Posture/Asanas- Shalabhasana (Locust Posture), Dhanurasana (Bow Posture), ArdhaHalasana (Half Plough Pose), Sarvangasana (Shoulder Stand), Halasana (Plough Pose), Matsyasana, SuptaVajrasana, Chakrasana (Wheel Posture), Naukasana (Boat Posture), Shavasana (Relaxing Pose), Makaraasana. • Meditation- 'Om'meditation, Kundalini or Chakra Meditation, Mantrameditation. • Standing Posture/Asanas- ArdhaChakrsana (Half Wheel Posture), Trikonasana (Triangle Posture), ParshwaKonasana (Side Angle Posture), Padahastasana, Vrikshasana (Tree Pose), Garudasana (Eagle Pose). • Pranayama- Nadisodha, Shitali, Ujjayi, Bhastrika, Bhramari. • Bandha- Uddiyana Bandha, Mula Bandha, Jalandhara Bandha, Maha Bandha. • Kriya- Kapalabhati, Trataka, Nauli. **ATHLETICS** • Long Jump- Hitch kick, Paddling, Approach run, Take off, Velocity, Techniques, Flight & Landing • Discus throw, Javelin throw and Shot-put- Basic skill & Technique, Grip, Stance, Release & Follow through. • Field events marking. • General Rules of Track & Field Events. **BASKETBALL** • Shooting- Layup shot, Set shot, Hook shot, Jump shot. Free throw. • Rebounding- Defensive rebound, Offensive rebound. • Individual Defensive- Guarding the man without ball and with ball. • Pivoting. • Rules of Basketball. • Basketball game. **VOLLEYBALL** • Spike- Straight spike, Body turn spike, Tip spike, Back attack, Slide spike, Wipe out spike. • Block- Single block, Double block, Triple block, Group block.

	• Field Defense- Dig pass, Double pass, Roll pass. • Rules and their interpretation. **FOOTBALL** • Dribbling- Square pass, Parallel pass, Forward pass. • Heading (Standing & Running)- Fore head, Side fore head, Drop heading, Body covering during heading. • Kicking- Full volley, Half volley, Drop kick, Back volley, Side volley, Chiping (lobe). • Tackling: Covering the angle, Chessing time sliding chese, Heading time shoulder tackle etc. • Feinting- Body movement to misbalance the opponent and find space to go with ball. • Rules of Football. **CRICKET** • Batting straight drive. • Batting pull shot. • Batting hook shot. • Bowling good length, In swing. • Bowling out swing, Leg break, Goggle. • Fielding drill. • Catching (Long & Slip). • Wicket keeping technique. • Rules & Regulation. **BADMINTON** • Net play- Tumbling net shot, Net Kill, and Net Lift. • Smashing. • Defensive high clear/Lob. • Half court toss practice, Cross court toss drop practice, Full court Game practice. • Player Positioning, Placements. • Rules & Regulation. • Doubles & Mixed doubles match practice. **TABLE TENNIS** • Stroke: Backhand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke: Forehand- Topspin against push ball, Topspin against deep ball, Topspin against rally ball, Topspin against topspin. • Stroke- Backhand lob with rally, Backhand lob with sidespin, Forehand lob with rally, Forehand lob with sidespin. • Service: Backhand/Forehand- Push service, Deep push service, Rally service. • Service: Backhand sidespin (Left to right & Right to left). • Service: Forehand- High toss backspin service, High toss sidespin service, High toss reverse spin service. • Rules and their interpretations. • Table Tennis Match (Singles & Doubles).

	NCC • FD-6 Side pace, Pace Forward and to the Rear. • FD-7 Turning on the March and Wheeling. • FD-8 Saluting on the March. • FD-9 Marking time, Forward March and Halt in Quick Time. • FD-10 Changing step. • FD-11 Formation of Squad and Squad Drill. • FD-12 Parade practice. **TAEKWONDO** • Poomsae (Forms)- Jang, Yi Jang. • Self Defense Technique- Self defense from arms, Fist and Punch. • Sparring (Kyorugi)- One step sparring, Two step sparring, Fight (Free sparring). • Combination Technique- Combined kick and punch. • Board Breaking (Kyokpa)- Sheet breaking. • Interpretation Rules above Technique of Taekwondo. **NSS** • No Smoking Campaign • Anti- Terrorism Day Celebration • Any other observation/celebration proposed by Ministry/institute • Public Speaking • Discussion on Current Affairs • Viva voce

<tr><td>Course Outcomes</td><td colspan="7">CO1: Acquire the idea about mathematical formulations of phenomena in physics and engineering.
CO2: To understand the common numerical methods to obtain the approximate solutions for the intractable mathematical problems.
CO3: To understand the basics of complex analysis and its role in modern mathematics and applied contexts.
CO4: To understand the optimization methods and algorithms developed for solving various types of optimization problems.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Partial Differential Equations (PDE): Formation of PDEs; Lagrange method for solution of first order quasilinear PDE; Charpit method for first order nonlinear PDE; Homogenous and Nonhomogeneous linear PDE with constant coefficients: Complimentary Function, Particular integral; Classification of second order linear PDE and canonical forms; Initial & Boundary Value Problems involving one dimensional wave equation, one dimensional heat equation and two dimensional Laplace equation. [14]
Numerical Methods: Significant digits, Errors; Difference operators; Newton's Forward, Backward and Lagrange's interpolation formulae; Numerical solutions of nonlinear algebraic/transcendental equations by Bisection and Newton-Raphson methods; Trapezoidal and Simpson's 1/3 rule for numerical integration; Euler's method and modified Eular's methods for solving first order differential equations. [14]
Complex Analysis: Functions of complex variable, Limit, Continuity and Derivative; Analytic function; Harmonic function; Conformal transformation and Bilinear transformation; Complex integration; Cauchy's integral theorem; Cauchy's integral formula; Taylor's theorem, Laurent's theorem (Statement</td></tr>
</table>

	only); Singular points and residues; Cauchy's residue theorem. [17] **Optimization:** **Mathematical Preliminaries:** Hyperplanes and Linear Varieties; Convex Sets, Polytopes and Polyhedra. [2] **Linear Programming Problem (LPP):** Introduction; Formulation of linear programming problem (LPP); Graphical method for its solution; Standard form of LPP; Basic feasible solutions; Simplex Method for solving LPP. [9]
Text Books, and/or reference material	Suggested Text Books: 1. An Elementary Course in Partial Differential Equations-T. Amarnath 2. Numerical Methods for scientific & Engineering Computation- M.K.Jain, S.R.K. Iyengar&R.K.Jain. 3. Foundations of Complex Analysis- S. Ponnuswami 4. Operations Research Principles and Practices- Ravindran, Phillips, Solberg 5. Advanced Engineering Mathematics- E. Kreyszig Suggested Reference Books: 1. Complex Analysis-L. V. Ahfors 2. Elements of partial differential equations- I. N. Sneddon 3. Operations Research- H. A. Taha

CURRICULUM AND SYLLABUS FOR INTEGRATED MSC IN CHEMISTRY

Course Outcomes	• CO1: know the history of development of the subject with the contribution of the scientist. • CO2: to be exposed with quantization of energy, momentum and space. • CO3: understand the behavior of electron in an atom in term of energy, momentum, position etc. • CO4: knowledge about the hydrogen spectrum in absence and presence of magnetic field. • CO5: know about Schrodinger equation and different quantum number. • CO6: spin of electrons and spin quantum number • CO7: orientation and shape of the atomic orbitals • CO8: quantum mechanical treatment of VB and MOT • CO9: understand the concept of hybridization of atomic orbital, the shape of the molecules, VB and MOT	
Topics Covered	Genesis: Planks quantisation of energy, photoelectric effect, Compton effect, De Broglie wave particle duality, Heisenberg uncertainty principle, wave function, Born interpretation	04
	Schrödinger wave equation of hydrogen atom, separation of variables, quantum numbers, Principal quantum number, orbital quantum numbers, magnetic quantum numbers, shape and size of orbital, uncertainty principal and quantisation of space	04 04
	Electron probability density, radial part, radial distribution curve and its interpretation, node and angular part of wave s (imaginary and real form) and orbitals shape, electron cloud density representation of hydrogen orbitals	02
	Electron in magnetic field, Zeeman effect, spectrum of hydrogen atom and electron spin	02
	Many electron atoms and ions: Antisymmetric principle, Pauli's exclusion principle, Hund's rule, exchange energy, Aufbau principle	04
	Electronic energy level diagrams and electronic configurations of hydrogen-like and poly electronic atoms and ions, screening effect, Slater rule, approximate method, variation principle, spin orbit coupling, term symbol	01 02 05
	Covalent bond: Covalence bond: Lewis structure and octet rule, violation of octet rule Variation principle, one electron wave function, valence bond theory with H_2 Hybridisation, sigma bond, pi bond, delta bond, bond distance, bond energies, bond angle Directional property, shape, VSEPR	02

	Bond moment and dipole moments, hydrogen bond, inter molecular forces Molecular orbital theory, H_2^+, binuclear(AB) , tri nuclearAB$_2$ (linear and angular), Cyclic planar, Penta nuclearAB$_4$ (tetrahedral, square planer) , hepta nuclear AB$_6$ (octahedral) etc.	02 05
Text Books, and/or reference material	1. Inorganic Chemistry, Part I , R. L. Dutta New Book Stall 2. Fundamental concept of Inorganic Chemistry, vol I and II, Asim K. Das, CBS publishers & distributors 3. Inorganic Chemistry, Huheey, Keiter, Keiter, Medhi, Pearson education 4. Inorganic chemistry, Shriver & Atkins, Oxford 5. Concept and models of inorganic Chemistry, Douglas, Mcdeniel, Alexander, Wiley india Pvt. Ltd.

CURRICULUM AND SYLLABUS FOR INTEGRATED MSC IN CHEMISTRY

Course Outcomes	• CO1: To Learn Basic Concept of stereochemistry • CO2: To Learn Molecular symmetry, Designation of chiral centre, axis and helices • CO3: To Learn Selectivity issues in organic reactions • CO4: To Learn Nomenclature of bicyclic and Spiro compounds and reactivity based on stereochemistry • CO5: To Learn Conformational analysis • CO6: To Learn Chemistry of Functional Groups	
Topics Covered	1. Basic concept of stereochemistry : Isomerism; asymmetric and dissymmetric centres /molecules, Conformation and configurational nomenclature 2. Molecular symmetry: chirality, chiral axis, helicity, 3. Regio-, chemo- and stereoselective reactions 4. Nomenclature of spiro and bicyclic compounds, reactivit6y based on stereochemistry	25 lecs
	5. conformational analysis of acyclic and cyclic compounds 6. Chemistry of functional groups: Preparation, properties, reactions, separation and identification of compounds containing various functional groups	15Lecs
Text Books, and/or reference material	1. Basic stereochemistry of organic molecules: S. Sengupta 2. Stereochemistry: Conformation and Mechanism; P.S. Kalsi 3. Organic Chemistry : Morrison and Boyd 4. Organic stereochemistry: D. Nasipuri **5. Stereochemistry of Carbon Compounds: Ernest L. Eliel.** 6. Organic Chemistry : S. H. Pine

CYS351	**Qualitative analysis of organic samples**	PCR	0	0	3	3	1.5
Pre-requisites		Course Assessment methods: Continuous assessment and Viva-Voce at the end of the semester.					
None							
Course Outcomes	• CO1: A basic idea about the physical methods like; M.P., B.P., distillation and crystallization for analysis of organic compounds. • CO2: An idea about the uses of reagents and solvents for analysis of organic compounds • CO3: Detection and identification of special elements and functional groups of organic samples.						
Topics Covered	1. **Mixed Melting Point Determination:** Urea – Cinnamic acid mixture of various compositions (1:4, 1:1, 4:1) 2. **Distillation**: Simple distillation of ethanol-water mixture using water condenser Distillation of nitrobenzene and aniline using air condenser Purification of common organic solvents by distillation; methanol, petroleum ether, THF, chloroform etc. 3. **Crystallization**: Concept of induced crystallization, Phthalic acid from hot water (using fluted filter paper and stem less funnel), Acetanilide from boiling water, Naphthalene from ethanol, Benzoic acid from water. 4. **Decolourization and Crystallization:** Decolourization of brown sugar (sucrose) with animal charcoal using gravity filtration. Crystallization and decolourization of impure naphthalene (100 g of naphthalene mixed with 0.3 g of congo red using 1 g decolourizing carbon) from ethanol. 5. **Sublimation (Simple and vacuum)**: Camphor, Naphthalene, phthalic acid and Succinic acid. 6. **Identification of some common organic molecules:** methanol, ethanol, acetone, glycerol, aniline, nitrobenzene, benzyl alcohol, formic acid, acetic acid, succinic acid, tartaric acid, salicylic acid, glucose, sucrose, resorcinol. 7. **Identification of unknown organic compound:** Identification of an organic compound through the functional group analysis, determination of melting point and preparation of suitable derivatives.						

Text Books, and/or reference material	Suggested Text Books: (i) Textbook of Practical Organic Chemistry by Vogel (ii) A text-book of practical organic chemistry by Subhas C Das (iii) A text book on chemistry practical: Nad, Mahapatra and Ghosal

Mapping of CO (Course Outcome) and PO (Programme Outcome)

			Lecture (L)	**Tutorial (T)**	**Practical (P)**	**Total Hours**	
PHC334	**Physics II**	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods: (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	CO1: Able to understand the principles of classical mechanics apply to solve classical problems related to solving Lagrange's and Hamilton's equations of motion. CO2: Able to apply fundamental knowledge of different co-ordinate systems to describe the spatial variations of the physical quantities dealt in electromagnetic field theory. CO3: Able to explain fundamental laws governing electromagnetic fields and evaluate the physical quantities of electromagnetic fields (Field intensity, Flux density etc.). CO4: Gain an integrative overview of electromagnetic waves, its propagation in different media and different phenomena related to electromagnetic wave propagation..						

Topics Covered	**Classical Mechanics**: D'Alembert's principle, Lagrange's equation of motion, Some applications of Lagrange's equation of motion, Hamilton's equation of motion, Some applications of Hamilton's equation of motion and its physical significance [6L] **Vector Analysis**: Vector field, Divergence and curl of a vector field and their physical significance, Gauss's divergence theorem, Stoke's theorem, Green's theorem, Different coordinate systems (Cartesian, spherical and cylindrical) [8L] **Electrostatics**: Divergence of electrostatic field, Gauss's Law of electrostatics and its applications, Laplace's equation, Poisson's equation, Continuity equation, Capacitor. [6L] **Magnetostatics**: Curl of magnetic field, Ampere's Circuital law and its applications, Curl of electric field and divergence of magnetic field, Concepts of scalar and vector potentials. [7L] Electromagnetic Induction and Maxwell's Equation: Faraday's law of electromagnetic induction, Concept of displacement current, Maxwell's equation in free space, Poynting Theorem. Some examples. [7L] **Alternating Current**: L-R, C-R, L-C-R series and parallel circuits, Q- factor, Resonance, Maximum power transfer theorem, Voltage magnification factor, Band width of circuit. [8L]
Text Books, and/or reference material	**TEXT BOOK**: 1. Vector Analysis: Murray Spiegel (Author),Seymour Lipschutz, Dennis Spellman 2. Introduction to Electrodynamics: David J. Griffith 3. Introduction to Classical Mechanics: R. G. Takwale & P. S. Puranik **REFERENCE BOOKS**: 1.Classical Mechanics: N. C. Rana & P. S. Joag 2.Classical Mechanics: H. Goldstein 3. Electricity and Magnetism: D. Chattopadhyay & P. C. Rakshit

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
PHS384	**Physics II Laboratory**	PCR	**0**	**0**	**3**	**3**	**1.5**
Pre-requisites		Course Assessment methods: (Continuous evaluation (CE) and end assessment (EA))					
PHS51		CE+EA					

Course Outcomes	CO1: To realize and apply different techniques for measuring resonance, Q-factor of series L-C-R circuit. CO2: To determine the Self-Inductance, Mutual Inductance and verification of Faraday's law. CO3: To determine the thermoelectric power of a given thermocouple. CO4: To apply the concepts to measure the horizontal component of the earth's magnetic field using a vibrational and deflection magnetometer CO5: To calculate the loss of a magnetic specimen by B-H loop measurement.
Topics Covered	1. Study of series L-C-R Resonant Circuit: (i) To draw the resonance curve (ii) To determine the Q- Factor of the circuit (iii) To study the variation of impedance with frequency (iv) verification of maximum power transfer theorem. 2. Verification of Faraday's law. 3. To determine the Mutual-Inductance (M-I) of two coils. 4. Determination of Self-Inductance of a coil. 5. To verify Fresnel's equation for reflection of electromagnetic waves. 6. Draw the (Thermo EMF) – Temperature curve of given thermocouple and hence find thermoelectric power at a given temperature. 7. Determination of horizontal component of the earth's magnetic field using a vibrational and deflection magnetometer. 8. To draw the B-H loop of a given specimen.
Text Books, and/or reference material	**SUGGESTED BOOKS:** 1) A Text Book on Practical Physics – K. G. Majumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

FOURTH SEMESTER

Department of Chemistry								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CYC401	**Biochemistry: Structure and Function**	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					

Course Outcomes	• CO1: Understanding the Chemistry behind biological processes • CO2: Development of basic knowledge of cell structure and function • CO3: Learning of different chemical aspects of biomolecules such as Carbohydrates, Lipids, Proteins, Nucleic acids • CO4: Generation of concepts on molecular mechanics amongst biomolecules as a stepping-stone towards Biophysical Chemistry.	
Topics Covered	1. Amino Acids and Protein Chemistry: Introduction, classification according to their composition. Different methods of peptide synthesis. Different methods to determine the composition of peptides and proteins (amino acid analysis). Primary and secondary structure of proteins. Denaturation of proteins. Different methods of molecular weight determination	10
	2. Chemistry of mono, di, oligo and poly-saccharides Introduction, Conformation of monosaccharides, structure and functions of important monosaccharides like glycosides, deoxy sugars, myoinositol amino sugars. N-acetylmuramic acid, sialic acid, disaccharides and polysaccharides. Structural polysaccharides – cellulose and chitin. Storage polysaccharides - starch and glycogen.	6
	3. Lipid chemistry Introduction, , Fatty acids, essential fatty acids, structure and function of triacylglycerols, glycerophospholipids, sphingolipids, cholesterol, Properties of lipid aggregates – micelles, bilayers, liposomes and their possible biological functions. Biological membrane. Fluid mosaic model of membrane structure, Iodine number	5
	4. Structure and function of DNA and RNA, nucleosides, nucleotides, Introduction, Purine and pyrimidine bases of nucleic acids, base pairing via H-bonding. Structure of RNA and DNA, double helix model of DNA and forces responsible for holding it. Chemical and enzymatic hydrolysis of nucleic acids. The chemical basis of heredity, an overview of replication of DNA, transcription, translation and genetic code.	12

Text Books, and/or reference material	1. Principles of Biochemistry by Lehninger 2. Biochemistry byVoet&Voet. 3. Principles of Physical Biochemistry by K. E. van Holde, C. Johnson and P. S. Ho (Pearson).

<tr><td>Course Outcome</td><td colspan="7">• CO1: Concept of phase rule and phase diagram of multi-component system.
• CO2: Understand the fundamentals of chemical kinetics and corresponding theoretical treatment.
• CO3: Concept of catalysts towards reaction rate and its applications.
• CO4: Numerical analysis of the effect of various parameters on reaction kinetics.</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Phase rule and phase diagram:
Phase rule equation (derivation excluded); phase diagram of water and sulphur system, Two component system, Miscibility (phenol-water) and distillation of completely miscible binary liquid mixtures; azeotropes, Steam distillation. 10L
Colligative properties:
Raoult’s law of vapour pressure and colligative properties: osmosis, lowering of freezing point, elevation of boiling point, experimental methods of determination of molecular weights of substances in dilute solutions, van’t Hoff ‘i’ factor and abnormal behaviour of electrolytic solutions. 10L</td></tr>
</table>

	Chemical Kinetics: Rate process approach towards complex reactions including Opposing reaction, parallel reaction, consecutive reactions chain reactions; Pseudo first order reactions; Determination of order of a reaction by half-life and differential method. 8 L Temperature dependence of rate constant; Arrhenius equation, energy of activation Lindemann theory of unimolecular reaction. Collision theory; Transition State theory. Effect of ionic strength (primary and secondary salt effect), dielectric constant and pressure on rate. Kinetics of different composite reactions, including Auto-catalytic and Oscillating reactions. 10L **Catalysis:** Rate expressions for Homogeneous and heterogeneous catalytic reactions including acid-base catalyzed reaction, bimolecular surface catalyzed reaction, and enzyme catalyzed reactions. Determination of turnover number of an enzyme. 6 L

Department of Chemistry							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CYC 404	**Organic Reaction Mechanism and Reactive Intermediates**	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	• CO1: To Learn methods for investigating of organic reaction mechansims • CO2: To Learn various aspect of Elimination treactions • CO3: To Learn various aspects of addition reactions to C-C multiple bonds • CO4: To Learn synthetically useful addition reactions to C-hetero multiple bonds • CO5: To Learn the fundamentals of nucleophilic and electrophilic substitution reactions • CO6: To learn basics of some molecular rearrangements and their application in synthesis • CO7: To learn structure and reactivity of organic reactive intermediates						
Topics Covered	1. Methods for investigation of mechanism: Factors affecting the rate of reactions, activation energy, transition state, reactive intermediates, rate determining step, Hammond's postulate, product analysis, detection, isolation and trapping of intermediates, application of isotope—isotope labelling, primary kinetic isotope effect, secondary kinetic isotope effect, cross over experiment 2 Lecs.						

	2. Elimination reactions: E1 , E2, and $E1_{CB}$ mechanism, effect of stereochemistry, regioselectivity, isotope and stereo electronic effects effect 4 Lecs 3. Addition to C-C multiple bonds : Mechanistic and stereochemical aspects of addition reactions involving electrophiles, nucleophiles and free radicals, regio- and chemoselectivity, Hydrogenation of double, triple bonds and aromatic rings. Hydroboration reaction, Sharpless asymmetric epoxidation. 3 Lecs. 4. Addition to Carbon- Hetero Multiple Bonds: Mechanism of metal hydride reaction of substituted and unsubstituted carbonyl compounds, acids, esters and nitriles. Addition of Grignard reagents, organo-Zn and organo-Li and organo Si reagents to saturated and unsaturated carbonyl compounds. Wittig reaction. Mechanism of condensation involving enolates5 Lecs. 5. Reaction mechanism of electrophilic and nucleophilic substitution: Substitution on sp^3 system, Electrophilic attack on benzene, π- and σ-complexes, electronic effect of substituents, ortho/para ratio, partial rate factors and selectivity, kinetic and thermodynamic control, nitration, halogenations, sulphonation, alkylation and acylation, diazo coupling, ipso substitution, nucleophilic attack on benzene system: substitution of hydrogen and atoms other than hydrogen, reactions via aryne intermediate, reactions and reactivity pattern in condensed aromatic sysyems 10 Lecs 6. Reaction mechanism of some rearrangement reactions: Allylic rearrangement, neopentyl rearrangement, pinacol-pinacolone, Beckmann, Wolff, Hofmann, Curtius, lossen and Schmidt rearrangement, benzyl-benzilic acid rearrangement, Bayer-Villiger oxidation 6 Lecs. 7. Chemistry of reactive intermediates: Formation, structure, stability , detection and reactions of carbocations, radicals, carbenes, nitrenes, carbions, arynes10 Lecs
Text Books, and/or reference material	1. A Guidebook to Mechanism in Organic Chemistry: Peter Sykes 2. Organic Chemistry: Subrata Sengupta 3. AdVanced General Organic Chemistry: A Molecular Approach: Sachin Kumar Ghosh 4. Organic Chemistry: G. Marc Loudon 5. March's Advanced Organic Chemistry: Reactions, Mechanisms, and Structure: Michael B. smith

CURRICULUM AND SYLLABUS FOR INTEGRATED MSC IN CHEMISTRY

Course Outcomes	• CO1: understand different concepts of acids and bases • CO2: know about the thermodynamic aspects of Lewis acid and base interaction • CO3: understand the concept of redox reaction, standard redox potential • CO4: have concept of effect of concentration and pH on redox reaction • CO5: know basic idea of Inorganic solid and crystal • CO6: know the thermodynamics and energetics of stability of solid • CO7: Born Lande equation and Kapustinskii equation, • CO8: crystal system and different types of unit cells and crystals in inorganic solid • CO9: defect of crystal and the associated property	
Topics Covered	**Concept of acids and bases:** The Arrhenius concept, Concept of K_w, , concept of pH, Strength of aicds and bases(hydracids and oxyacids), levelling effect of water , solvent concepts, Bronsted Lowry concept, Lewis concepts	05
	Hard-Soft acid base concept, relation of hardness to ionisation potential and electronegativity and frontier orbital	02
	Thermodynamic of Lewis acid and base interaction, the Drago-Wayland equation	01
	Monoatomic ions and their acid –base properties, polyatomic ions and their acid-base properties	01
	Redox Chemistry:	
	Redox reaction, ion electron balancing, standard reduction potential and their diagrammatic representation	03
	Redox predominance diagrams of elements, disproportionation and metastable state	02
	Redox chemistry and extraction of elements from ores. Ellingham diagrams	02
	Effect of concentration and pH on redox reaction, uses of redox series in chemical reaction, Pourbaix diagrams	03
	Ionic equilibrium and precipitation reactions:	01
	Ionic compounds: Factors effecting ionic radii, Fajans rule, lattice energy, Born Haber cycle and its application	04
	Born Lande equation, modification of Born-Lande equation, Kapustinskii equation, radius ratio rule	04
	Solid State Chemistry:	
	Crystal system and lattices, unit cell, Miller planes, crystal packing, metallic bond	04
	ionic crystals, structures of AX, AX_2, AX_3, A_2X_3, type Structures of mixed metal oxides: spinel and inverse spinel, perovskite	04
	Crystal structure related to super conductivity, ferroelectric and piezo electric property, crystal defects, stoichiometric and nonstoichiometric defect, Schottkey and Frenkel defect, etc.	04
	Inorganic nanomaterial and polymers.	

Text Books, and/or reference material	Suggested Text Books: 1) Inorganic Chemistry, Part I ,R.L. Dutta New Book Stall 2) Fundamental concept of Inorganic Chemistry, vol 3, Asim K. Das, CBS publishers & distributors 3) Inorganic Chemistry, Huheey, Keiter, Keiter, Medhi, Pearson education 4) Inorganic chemistry, Shriver & Atkins, Oxford 5) Concept and models of inorganic Chemistry, Douglas, Mcdeniel, Alexander, Wiley indiaPvt. Ltd. 6) Concise inorganic chemistry, Lee, Wiley india Pvt. Ltd.

CYC 503	**Chemistry of Heterocyclic Compounds and Natural Products**	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					

Course Outcomes	• CO1: Nomenclature, aromaticity acidity-basicity of heterocyclic compounds • CO2: Synthesis and reactions of heterocyclic compounds • CO3: Study of heterocycles with two or more hetero atoms including purine & pyrimidine • CO4: Classification, general reactions of alkaloids aiding their isolation, purification and structure determination • CO5: Structure determination, synthesis and reactions of simple alkaloids
Topics Covered	Nomenclature of heterocycles, common nomenclature, replacement method, Hantzsch-Widman (IUPAC or Systematic) method (3 Lec) Aromatic and nonaromatic heterocycles, molecular orbital picture and aromatic characteristics of pyrrole, furan, thiophene and pyridine and other small ring heterocycles. Comparison of basicity of pyridine, piperidine and pyrrole (3 Lec) Generalized approach to the synthesis of heterocycles possessing 5, 6 and 7 membered rings with one or two heteroatoms (3 Lec) Reactions of heterocycles: with particular emphasis on the mechanism of electrophilic substitution. Mechanism of nucleophilic substitution reactions in pyridine derivatives. Oxidation and reduction. (8 Lec) Fused five and six – membered heterocycles. Preparation and reactions of indole, quinoline and isoquinoline with special reference to Fisher indole synthesis, Skraup synthesis and Bischler- Napieralski synthesis. Mechanism of electrophilic substitution reactions of indole, quinoline and isoquinoline (4 Lec) Five and six membered heterocycles with two or more hetero atoms (4 Lec) Purine & pyrimidines: Structure, synthesis, reactions (4 Lec) Alkaloids: Classification; general reactions of alkaloids; chemistry of simple alkaloids like chavicine, piperine, nicotine, quinzoline ring. (14 Lec)
Text Books, and/or reference material	Suggested Text Books: 1. Organic Chemistry, Volume 2: Stereochemistry and the Chemistry Natural Products, I. L. Finar, Pearson Education India, 2002. 2. Heterocyclic Chemistry, T. R. Gilchrist, Longman, 1989. 3. Topics in Heterocycles Chemistry. G. W. Gribble. Spinger-Verlag Berlin Heidelberg, 2010. Suggested Reference Books: 4. Modern Heterocyclic Chemistry. 4 Volume Set. Julio Alvarez-Builla, Juan Jose Vaquero, José Barluenga. Wiley. 2011. 5. Principles of Modern Heterocyclic Chemistry, L.A. Paquette, W.B. SIXTH SEMESTER

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CYC601	**Basics of photochemistry, Spectroscopy, group theory and data analysis**	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment) (EA))
NIL	CT+EA

Course Outcome	• CO1: Physical understanding of photochemistry and photo-physical processes. • CO2: Fundamentals of different molecular spectroscopy. • CO3: Introduction to symmetry and concept of point group. • CO4: Application of spectroscopy and symmetry to unravel the molecular structure. • CO5: Concept of data analysis and its applications.
Topics Covered	**Photochemistry:** Lambert-Beer's law and its application, Basics of photochemical reactions, primary processes, reactions of electronically excited species; law of photochemical equivalence, Franck-Condon principle, fluorescence and phosphorescence, Jablonsky diagram, Non-radiative processes,Concept of excited state life-time. Laws of photochemistry, quantum yield, kinetics of HI decomposition, H_2-Br_2 reactions, quenching, basic techniques of absorption and emission spectroscopy. 10L **Basics of spectroscopy:** Elementary idea of rotational, vibrational and electronic spectroscopy. 10L **Symmetry:** Introduction of symmetry and point groups, symmetry operations. Reducible and Irreducible representation and character table.10L **Data Analysis:** Statistical data analysis, mean, median, mode, frequency, standard deviations, mean deviation, etc. Frequency analysis, Normal distribution, Poisson distribution and others. Regression analysis, correlation. 12L
TextBooks,	1. Modern molecular photochemistry by N. J. Turro 2. Fundamentals of molecular spectroscopy by Banwell 3. Fundamentals of photochemistry by Rohatgi-Mukherjee 4. Statistical methods, vol 1 and 2 by N. G. Das 5. Group theory and chemistry by Bishop

CYC602	**Coordination Chemistry**	PCR	3	1	0	4	4

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
NIL	CT+MT+EA

Course Outcome (Students will be enriched by)	• CO1: Concepts of coordination complexes, ligand types and isomerism • CO2: Theories of bonding (e.g. VBT, CFT, MOT) • CO3: Application of CFT and MOT to explain the spectroscopic and magnetic properties of metal-ligand complexes. • CO4 : Spectroscopic Term symbols, Orgel diagram and Tanabe Sugano diagram • CO5 : Circular dichroism, optical rotatory dispersion, cotton effect • CO6 : Electronic spectral properties of Lanthanides and actinides
Topics Covered	Bloomstantrand-Jorgensen's chain theory, Warner's theory of coordination compounds , double salts and complex salts, perfect and imperfect complexes, detection and evidence of complex formation in solution. 4L Classification of Ligands, Inner-metallic complex, Poly nuclear or bridged complexes, Nomenclature of coordination compounds 4L Structure, isomerism and stereochemistry, structural isomerism, conformational isomerism, stereoisomerism, geometric isomerism, optical isomerism 4L Theories of bonding : Valence bond theory, crystal field theory, Factor effecting the crystal field splitting parameter, Pairing energy and controlling the pairing energy, CFT and octahedral complexes, CFT and tetrahedral complexes, CFT and TPB and square pyramidal complexes, Tetragonal distortion, in octahedral symmetry , Jahn Teller distortion, CFT and square planer complex, Application of CFT. 8L

	Molecular orbital Theory of Octahedral, tetrahedral and square planer complexes, spectrochemical series and nephelauxeic series 4L Electronic spectra of transition metal complexes: Type of electronic spectra, selection rules, Relaxation of selection rule, band intensity , band width, symmetric and asymmetric bands. 3L Spectroscopic term symbols , Orgel diagram, examples, limitation of orgel diagram. 5L Tanabe Sagano diagram, Charge Transfer spectra, Intervalence electron transfer bands. 3L Circular dichroism, optical rotatory dispersion, cotton effect. 3L Electronic spectra of lanthanide and actinide complexes. 2L
Text Books, and/or reference material	1) Inorganic Chemistry, Part I ,R.L. Dutta, New Book Stall 2) Fundamental concept of Inorganic Chemistry, vol 4 & 5, Asim K. Das, CBS publishers & distributors 3) Inorganic Chemistry, Huheey, Kieter, kieter, Medhi, Pearson education 4) Inorganic chemistry, Shriver & Atkins, Oxford 5) Concept and models of inorganic Chemistry, Douglas, Mcdeniel, Alexander, Wiley indiaPvt. Ltd. 6) Concise inorganic chemistry, Lee, Wiley indiaPvt. Ltd. 7) Inorganic Chemistry by Housecroft and Sharp. 8) Principles of Inorganic Chemistry by B. W. Pfennig

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CYC603	**Reagents in Organic synthesis**	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					

Course Outcomes	• CO1: A basic idea on synthesis of organic compounds has been incorporated using some specific reagents for particular compound synthesis. • CO2: How the better yield could be obtained, their strategy has been highlighted. • CO3: Role of specific reagents and catalysts including mechanism in their transformation from substrate to products is included for their step by step synthesis.
Topics Covered	1. Some important reactions with reagents: Aromatic electrophylic (Friedel craft reaction) and nucleophilic substitution reactions, Cine substitution reactions, Aldol and Michael condensation reactions, Robinson annulation reaction; Synthesis of bio-molecules like steriod Oestrone-1, ± Zearalenone and Isonotkatone via Retro synthesis. 9L 2. Protection and deprotection of functional groups; Merrifield reagents (protection and deprotection of amino group in solid state peptide synthesis; Ring expansion and ring contraction reactions; Regio-selective and enantio-selective reactions controlled by special reagents, Assymmetric synthesis by Oxazoline derivatives, bis-lactone ether based chiral auxiliary. 9L 3. Special reagents and reactions: Barton reaction, Wittig reaction; Peterson's synthesis (olifination); 2,3-dichloro-5,6-dicyano-1,4 benzoquinone (DDQ); Umpolung reactivity (1,3-Dithianes); Dicyclohexyl-carbodiimide (DCC); OsO_4; Woodward and Prevost hydroxylation; SeO_2; Phase transfer catalyst, purple benzene, cryptates and clathro chelates; Wilkinson catalyst; hydroformylation reactions or Oxo reactions; Sapiro reaction; Favoriski reactions; Hoffmann-Löffler reaction; Baker's yeast (enzymatic reduction) and Gilman reagents. 9L 4. Special reagents used in oxidation and reduction organic transformation reactions: Oxidation reaction: CrO_3, pyridine complex, Mn(IV) oxide (used in retinal synthesis), RuO_4, Sharpless epoxidation, Moffat oxidation, Swern oxidation, Dess-Martin periodinane oxidation. Reduction reaction: hydride transfer reagents: DIBAL; Na(CN)BH; Trialkylborohydrides; trialkyltin hydride; Low valent titanium(II) oxide, diimide. 9L

NIL		CT+EA					
Course Outcome (Students will be enriched by)	• CO1: Knowledge on chemical processes that regulate the environment as well as attention will be paid to understanding chemical equilibrium and kinetics of natural systems. • CO2: The course is designed to give the students a broad understanding of the issues related to the basic concepts and principle of different analytical techniques.						

	• CO3: This course imparting the knowledge about the theory and techniques of analysis including introductory instrumental methods and its fundamental principle. • CO4: Knowledge on quantification of various environmental parameters. • CO5: Knowledge on Ecologically safe alternatives and basic principle of green chemistry.
Topics Covered	**Analytical chemistry**: Quantitative and qualitative analysis: Detection of element, detection of cations and anions, Volumetric analysis (acid-base, redox, complexometric), Colorimetric analysis, Titrimetric analysis, gravimetric analysis, conductometric, poteiometric titration , ion selective electrodes etc. 18 **Environmental chemistry:** Chemical aspects of air, water and soil pollution, chemistry of photochemical and sulphurous smog, stratosphere-chemistry and pollution, chemical specification, priority and water pollutants-their effects, chemical analysis and control. Radioactive and Biomedical waste disposal. Ecological balance and planning of Industrial complexes. Application of Bioreactors in industries for pollution control. Ecologically safe alternatives and basic principle of. Green chemistry. 18 lec

CYS653	**Single Step Synthesis of Organic Compounds**	PCR	0	0	4	4	2
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA) and Viva-Voce)					
None		CT AND Viva-Voce					
Course Outcomes	• CO1: To reach a targeted product through singlestep reaction process using suitable reagents and optimum reaction conditions. • CO2: To learn Separation and Purification of products • CO3: To learn Purification techniques, like phase transfer, crystallization, GC-Mass and other spectroscopic method will be adopted • CO4: To Learn Understand the basic concept behind separation process for most common spectroscopic method like; UV-Vis, FT-IR, NMR, ESI-Mass and GC-Mass. • CO5: To learn how to reach a maximum yield with minimum uses of solvent, reagents and energy like; heat and electricity (Green chemistry).						
Topics Covered	1. Synthesis of Osazone 2. Preparation of triphenyl methanol 3. Synthesis of *tans*-p-anisalacetophenane (aldol) 4. Oxidation of 4-chlorobenzyl alcohol to 4-chlorobenzoic acid 5. Nitration of bromobenzene (aromatic substitution) 6. Preparation of 2-chloro-2-methyl butane from 2-methyl-2-butanol (substitution) 7. Reaction of 1,3-cyclopentadiene with maleic anhydride (Diels-Alder reaction)						

Text Books, and/or reference material	1. Vogel's Textbook of practical organic chemistry 2. Advanced practical chemistry : Subas C. Das 3. An Advanced Curse in Practical Chemistry: Nad, Mahapatra and Ghoshal

<tr><td colspan="3">NIL</td><td colspan="5">CT+MT+EA</td></tr>
<tr><td>Course Outcome (The students will master the following)</td><td colspan="7">
CO1: Basic concept of inorganic reaction mechanism associated with octahedral and square planar complexes.
CO2: Types of electron transfer reactions of the complexes including the detail mechanism
CO3: Solving the problems related to Marcus theory.
CO4: Types of magnetic substances and their magnetic properties.
CO5: Quantum numbers and origin of magnetic moments; microstates and derivation of Russel-Saunders Terms for various electronic configuration, Lande Interval Rule, Hole formalism and equivalency.
CO6: Determination methods of magnetic susceptibility of various metal complexes, multiplet widths and derivation of various equations to determine magnetic moments, orbital magnetic moment quenching, concept of high-, low-, intermediate- and admixed-spin state and their interactions.
</td></tr>
<tr><td>Topics Covered</td><td colspan="7">(i) Stoichiometric mechanism, second order limiting rate constant, base hydrolysis, Effects of non-leaving ligands, proton exchange, activation parameters 5Lec
(ii) Stereochemistry of octahedral substitution reactions, racemisation reaction (Bailar twist and Ray –Dutt twist) 4Lec
(iii) Square planar complexes: Ligands substitution reactions, General features, significance of rate law, effect of entering and leaving ligands, The trans effect, theories of trans effect, grounds state effects, transition effect, steric effects of non-leaving ligands, catalysis of substitution by redox process. 4Lec
(iv) Electron transfer reaction: Types of electron transfer reaction, outer sphere electron transfer process: electron transfer and reorganisation and chemical activation, potential energy diagram, Marcus theory for outer sphere cross reaction. 5Lec
(v) Inner sphere electron transfer process: steps, rate law, types of inner sphere electron transfer process, bridging ligand, remote attack, the chemical mechanism. 4Lec
vi) Definition of magnetic properties, types of magnetic bodies, sources of paramagnetism: orbital and spin effects, Diamagnetism and Pascal’s constant, diamagnetic correction of ligands and metal complexes 3Lec
(vii) Quantum numbers and vectors, Mutual inclination of electron orbits and resultant vectors, Russel-Saunders coupling and j-j coupling, Ground State Term Symbol and Hund’s rules 2Lec</td></tr>
</table>

	(viii) Microstates and derivation of Russel-Saunders Terms for p^2, d^2 and pd configuration, Spin-orbit interaction 2Lec (ix) Lande Interval Rule, Hole formalism and equivalency, Hund's third rule and energies of J levels, Russel-Saunders coupling of d2 system and j-j coupling 3Lec (x) Thermal energy and magnetic property, Magnetic moments for different multiplet widths i.e for multiplet width large compared to KT, small compared to KT and comparable to KT 3Lec (xi) Magnetic properties of Lanthanides, first transition series metal ions and actinides 2Lec (xii) Determination of magnetic susceptibility: Gouy's method, Faraday's method, NMR method and their advantage and disadvantages, magnetic anisotropy. 3Lec (xiii) Magnetic properties of complexes with different geometries based on crystal field model, spin-state equilibrium in octahedral stereochemistry, magnetic properties of high-spin, low-spin, intermediate-spin and admixed-spin state concept. 2Lec (xiv) Quenching of Orbital magnetic moment by crystal field, loss of orbital degeneracy and quenching of orbital magnetic moment, valence bond and crystal field interpretation of magnetic moment, shortcomings of crystal field theory. 2Lec
Text Books, and/or reference material	1. Inorganic chemistry, Shriver & Atkins, Oxford. 2. Concept and models of inorganic Chemistry, Douglas, Mcdeniel, Alexander, Wiley. 3. Inorganic Chemistry, Huheey, Kieter, kieter, Medhi, Pearson education 4. Concise Inorganic chemistry, Lee, Wiley indiaPvt. Ltd 5. Elements of magnetochemistry by Dutta & Shyamal 6. Mechanisms of Inorganic Reactions by Fred Basolo and Ralph Pearson

<tr><td colspan="2">None</td><td>CT+MT+EA</td></tr>
<tr><td>Course Outcomes</td><td colspan="2">CO1: A complete knowledge on tactics, strategy and control for the synthesis of organic compounds has been elaborately discussed using some specific reagents for particular compound synthesis.
CO2: How the better yield of product could be obtained, their tactics, strategy and control has been highlighted.
CO3: Role of specific reagents with related mechanism in their transformation and mechanistic path from substrate to products is included for their step by step reactions.</td></tr>
<tr><td>Topics Covered</td><td colspan="2">Planning Organic Syntheses:
Tactics, Strategy and Control; Slectivity: chemoselectivity, regioselectivity, streoselectivity: 2L
Making Carbon-carbon single and double bonds: Enolates, homoenolates, extenddenolates, nitrogen analogues of enols and enolates, acyl anion equivalents, allyl anions, specific enol equivalents, Michael reaction, σ-complexes of metals, orgnometallic reagents, aldol addition and condensation reactions, Mukaiyama aldol condnsation, control of facial reactivity, Claisen and Dieckmann condensation, conjugate addition, orthostrategy for aromatic compounds, reactions involving carbocation, carbenes and radicals, vinyl anion equivalent, allyl cation equivalent, Palladium catalysed coupling reactions.
Olefination reactions – wittig and related reactions, Julia olefination. Sulfenylation and selenenylation, hydroalumination, carboalumination, ROMP and RCMP. 8 L
Functional group interconversions and Retrosynthetic analysis: Synthones and synthetic equivalents, functional group interconversions and order of events in organic synthesis. One group - C-X and two groups C-X disconnections, chemoselectivity, reversal of polarity, cyclisation reactions, amine synthesis. One group C–C and two group C–C disconnections (typical examples), use of acetylenes and aliphatic nitro compounds in organic synthesis. Diels-Alder reactions, 1,3- and 1,5-difunctionalised compounds, α, β-unsaturated carbonyl compounds, control in carbonyl condensation, Michael addition and Robinson annealation. Ring synthesis: saturated heterocycles synthesis of 3-, 4-, 5-, and 6-membered rings, aromatic heterocycles in organic synthesis. 8L
Classic total synthesis of some natural products: Strategies and synthesis of some classic examples of total synthesis; Periplanone B, penicillin V, reserpine, erythronolide B, thienamycin, biotin, menthol, strychnine by Woodwards method. 10L
Asymmetric synthesis: Control of stereochemistry, chiral pool, asymmetric induction via reagents, asymmetric induction via substrate, asymmetric induction via catalysis, kinetic resolution, enantiomerically pure compounds and sophiscticated synthesis. 8L</td></tr>

CYS753	Separation and Identification of Organic Compounds from Binary Mixture	PCR (Practical)	L 0	T 0	P 4	H 4	C 2
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment) (EA)and Viva-Voce)					
CYS351		CT + Viva-voce					
Course Outcome (The students will well-acquainted with)	CO1: Scientific knowledge on principle of separation techniques to reach a targeted pure separate component from a binary mixture, CO2: Become skilled to optimise the uses of solvent obeying the principle of green chemistry. CO3: Separation and purification techniques, like phase transfer, crystallization, GC-Mass and other spectroscopic method will be adopted CO4: Understand the basic concept behind separation process for most common different methodology and their principles like; distillation, sublimation, crystallization and solvent extraction will be adopted. CO5: To reach a maximum yield with minimum uses of solvent, reagents and energylike; heat and electricity (Green chemistry).						
Topics Covered	1. Aniline and benzil (Liquid and solid) 2. Ethyl acetoacetate and Benzoic acid (Liquid and solid) 3. Benzil and Benzoic acid (solid and solid) 4. p-chlorobenzoic acid and aniline (solid-liquid) 5. Cyclohexanone/ cyclohexanol and N,N dimethyl aniline (liquid and liquid) In each case, separation and identification of individual components, preparation of derivatives of each component, their purification and characterization.						
Referenc e material	1. *Vogel's* Textbook of practical *organic* chemistry, 5th Edition 2. Advanced *practical* chemistry, 3rd ed.: Subas C. Das 3. An Advanced Curse in Practical Chemistry, New Central Book Agency; 3rd ed.: Nad, Mahapatra and Ghoshal

● CO2: Understand the classification of different types of pericyclic and organic photochemical reactions
● CO3: Solving mechanism of pericyclic and organic photochemical reactions
● CO4: Understand the application of pericyclic and organic photochemical reactions</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Pericyclic Reactions(18L):
Molecular orbital symmetry, Frontier orbitals of ethylene, 1,3-butadiene, 1,3,5-hexatriene and allyl system. 3L
Classification of pericyclic reactions. Woodward-Hoffmann correlation diagrams. FMO & PMO approach. 3L
Electrocyclic reactions-conrotatory and disrotatory motions. 4n, 4n+2 system 4L
Cycloaddition – antarafacial and suprafcial additions, 4n and 4n+2 systems, 2+2 addition of ketenes, 1,3 dipolar cycloadditions and cheletropic reactions. 4L
Sigmatropic rearrangements-suprafacial and antarafacial shifts of H, Sigmatropic shifts involving carbon moieties, 3,3- and 5,5 sigmatropic rearrangements. Claisen, cope and aza-cope carbon rearrangements. Fluxional tautomerism, Ene reactions. Recent advances from current literature. 4L
Organic Photochemistry (20L):
General information, Photo-chemical energy, effect of light intensity on the rate of photochemical reactions. Jablonski-diagram, photo-sensitisation and quenching.
Norrish tyoe-I, type-II processes, Paterno-Buchi reaction, photochemistry of unsaturated compounds. 4L
Types of photochemical reactions: Photo-dissociation, gas phase photolysis. Photochemistry of alkenes: Intramolecular reactions of the olefinic bond-geometrical isomerism, cyclisation reactions, rearrangement of 1,4- and 1,5-dienes. 3L
Photochemistry of Carbonyl compounds: Intramolecular reactions of carbonyl compounds saturated, cyclic and acyclic,β,γ-unsaturated and α,β-unsaturated compounds. Cyclohexadienones,Intermolecular cycloaddition reactions, dimerisation and oxetane formation. 4L</td></tr>
</table>

	Aromatic compounds: Isomerisations, additions and substitutions. Miscellaneous photochemical reactions: Photo-Fries reactions of anilides, photo-fries rearrangement, Barton reaction, Singlet molecular oxygen reactions. 3L Photochemical formation of smog. 1L Photodegradation of polymers, photosubstitution, photoreduction of ketones, photooxidation, di-π methane rearrangement, photochemistry of arenes. 3L Organo-metalic photochemistry, photochemistry of vision. 2L
Text Books, and/or reference material	1. Molecular Orbitals and Organic Chemical Reactions by I. Fleming, Wiley. 2. Pericyclic reaction By S. Sankararaman Wiley VCH, 2005. 3. NIL		CT+EA					

Course Outcome (The students will master the following)	• CO1:Understanding the importance of natural products • CO2: Learning of the structure, synthesis and uses of different Terpenes • CO3: Know the chemistry of Steroids in hormones • CO4: Develop knowledge of the chemical structure, synthesis of different natural pigments • CO5:Concept generation on rational medicinal chemistry and classification • CO6: Introduction to drug manufacturing done in pharmaceutical industries • CO7:Fundamental use of computer in drug design and discovery	
Topics Covered	Terpenes: Structural studies on sesqui terpenes, diterpenes, triterpenes and carotenoids; chemistry of carryophyllene, abietic acid, beta-amyrin, alpha and beta-carotenoids	9Lec

	Steroids and Prostanoids: Reaction and synthesis of steroids, sources of steroid hormones; diosgenin, hecogenin, etc., structure and synthesis of prostanoids	9Lec
	Natural Pigments: General methods of isolation, structure elucidationandsynthesisofanthocyanins,flavones,flavones,isoflavones, aurone, chalcone, xanthone and their chemical interconversions	9Lec
	Medicinal Chemistry: Definition, Concepts of LD50 and ED50, introduction to rational approach to drug design, physical and chemical factors associated with biological activities, structure-activity relationship, and mechanism of drug action. Classification of Medicine: Based on structure or pharmacological basis with examples. Antineoplastic agents, cardiovascular, local anti-infective, psychoactive, antibiotics (including vancomycin). Industrial synthesis of important medicines. Modelling: Molecular modeling, conformational analysis, qualitative and quantitative structure-activity relationship.	9Lec
TextBooks, and/or reference material	4. Asymmetric Synthesis of Natural products By Ari M PKoskinen (Wiley) 5. Chemistry of Natural products By S BBhat,B A Nagasampagi, M Sivakumar (Narosa) 6. Medicinal Chemistry: An introduction By Gareth Thomas (Wiley) 7. An Introduction to Medicinal Chemistry by GL Patrick (Oxford)' 8. Bioinformatics and Computational Biology in Drug Discovery and Development by William T. Loging (Cambridge)

Course Outcomes	· CO1: Understanding the principle and applications of UV-VIS, IR and Raman spectroscopy to elucidate the structure of different organic and inorganic molecules. · CO2: Understanding the principles of ESR spectroscopy and its application in the structure determination of inorganic complexes and reactive intermediates involved in organic and inorganic reactions. · CO3: Understanding the basic concept of Mössbauer Spectroscopy and usefulness of this technique to the studies of bonding and structures of inorganic compounds. · CO4: Understand the core concept of Mass Spectroscopic techniques and their contribution to the methods of structure elucidation of organic and inorganic species. ● CO5:Understand the different aspect of Nuclear Magnetic Resonance spectroscopy and its application in the field of structure determination of organic and inorganic species
Topics Covered	1. Applications of UV-VIS, IR and Raman spectroscopy to elucidate the structure of different organic and inorganic molecules. 4 Lecs 2. ESR spectroscopy: Hyperfine coupling, Spin polarization for atoms and transition metal ions, Spin-orbit coupling and significance of g-tensors, application to transition metal complexes including free radicals. 4 Lecs 3. Mössbauer Spectroscopy Basic principles, spectral parameters and spectrum display. Application of the technique to the studies of i) bonding and structures of FeII, FeIII compounds including those of intermediate- spin, ii) SnII and SnIV compounds, nature of M-L bond, coordination number and structure and iii) detection of oxidation states. 4 Lecs 4. Mass Spectroscopy Generation of ions and detection; EI, CI, FD, FAB, plasma desorption etc; fragmentation pattern in EI, GC-MS, MS-MS, LC-MS. Application of UV, IR, NMR and MS in structure elucidation. 8 Lecs 5. NMR Spectroscopy Long-range spin-spin interaction. Interpretation of non-first order NMR; double resonance, Lanthanide shift reagent, spin-tickling, INDOR, NOE, effect of solvents (aliphatic and aromatic), preliminary idea on 19F, 31P, 14N, 15N, 17O. NMR of solids, NMR imaging. 13C NMR Spectroscopy: Introduction, theory, instrumentation, chemical shift, coupling constants, application in organic molecules. 15 Lecs
Text Books, and/or reference material	1. Elements of magnetochemistry: Dutta and Shyamal 2. 2. Fundamental concept of Inorganic Chemistry (Vol-7): A. K. Das 3. Structural methods in molecular inorganic chemistry: Rankin, Mitzel, Mosrision 4. NMR spectroscopy (Basic Principles, concepts and application in chemistry): H. Gunther 5. Spectrometric identification of organic compounds: Robert Silverstein 6. Organic spectroscopy: William Kemp 7. Structural methods in Inorganic Chemistry : Ebsworth, Rankin and Cradock

CO1: Students will be given an introduction to green chemistry and learn about its basic concepts.
CO2: Students will learn the application of green chemistry
CO3: Demonstrate the design for safer, energy efficient technology and process optimization for cleaner industrial processes.
CO4: Understand the fundamentals of pollution prevention technique with respect to health significance.
CO5: Fundamental Understanding of monitoring and analysis of air and water
</td></tr>
<tr><td rowspan="3">Topics Covered</td><td colspan="7">Introduction to Green Chemistry: 15 Lecture
Definition and strategic of green chemistry. Why Green Chemistry? Prevention, Atom Economy, Less Hazardous Chemical Syntheses, Designing Safer Chemicals, Safer Solvents and Auxiliaries, Design for Energy Efficiency, Use of Renewable, Feedstocks, Reduce Derivatives, Catalysis, Design for Degradation, Real-time analysis for Pollution Prevention, Inherently Safer Chemistry for Accident Prevention, Laboratory pollution prevention.</td></tr>
<tr><td colspan="7">Application of Green Chemistry: : 10 Lecture
Applications and benefits of green chemistry: Production of new chemicals, materials, and products. Examples of successful green technologies; Alternative synthetic routes, new separation processes, new methods for delivery or product application (Alternative solvents, Energy vs. material activity). Importance of pollution and wastefulness in modern cultures by reflecting on the green chemistry.</td></tr>
<tr><td colspan="7">Principle of Analysis for Air and Water samples: 10 Lecture
Objectives of chemical analysis of air and water. Analysis of water: colour, turbidity, total solid, conductivity, acidity, alkalinity, hardness, chloride, sulfate, fluoride, phosphates, and different forms of nitrogen. Heavy metal analysis with respect to health significance. Measurement of DO, BOD and COD. Pesticides as water pollutants analysis.
Monitoring and analysis of air: Monitoring technique through high volume sampler, SPM and RPM sampler. Measurement and analysis of SPM, RPM, SOX and NOX.
Air and water pollution laws and standards.</td></tr>

CYC602 & CYC702		CT+EA					
Course Outcome (The students will master the following)		• CO1: Understand the importance of transition metal complexes • CO2: Basic knowledge of different types of ligands and their applications • CO3: Primary Concept of designing and synthesis of a ligand • CO4: Learn about the different aspects of supramolecular chemistry • CO5: Clear idea about the synthesis of diversified macrocycles • CO6: Fundamentals of thermodynamic effects upon changing the cavity size of a macrocycle					

Topics Covered	Introduction, Importance of ligand design and their applications in metal-complex formation	6 Lec
	Nitrogen Based Ligand: N_2 as Ligand, Reactivity of Bound N_2, Macrocyclic Amines, Polyimines, Porphyrin, Polypyrazolylborate Ligand, Hydroxylamido Ligand, Schiff Base Ligand, Azide and Other Anionic Ligand	5 Lec
	Phosphorus Based Ligands: Phosphine as Ligand, Monophosphines, Diphosphines, PolydentatePhosphines, Phosphate Ligands, Heterocyclic Phosphorus Ligands, Dialkyl- and Diarylphosphido Ligands	4 Lec
	Oxygen Based Ligand: Dioxygen, Sueroxo and Peroxo Ligand, Alkoxides and Aryloxides, Ketone and Ester, Crown Ethers, β-Ketoenolato and Related Ligands, Carbamates, Oxo Anions as Ligands	5 Lec
	Sulphur Based Ligand: Thiolates, Disulphides, Thioethers, Sulphur Oxide, Dithiocarbamates, 1,2-Dithiolenes	3 Lec
	Metal-Organic Frameworks	2 Lec
	Supramolecular Chemistry:	
	Introduction, Host-Guest Chemistry, SelfAssembly, Supramolecular Building Blocks and Spacer, Driving Forces for the Formation of Supramolecular Structure	2 Lec
	Spatial Relationships between Host and Guest, Classification Of Host-Guest Compounds, General Introduction To Podand, Coronand, Spherand, Coronand-Podand Hybrid, Cryptands	2 Lec
	The Chelate And Macrocyclic Effect On Host-Guest Binding, Synthesis of Crown Ethers, The Template Effect, Synthesis of Cryptands, Recent Developments in the Synthesis of Cryptands, Synthesis of Aza Crown Ethers and Related Compounds	3 Lec
	Chiral Crown Ethers, Proton Ionisable Crown Ethers, Diester Crown Ethers, Synthesis of Lariat Ethers	2 Lec
	Synthesis of Calix[n] Arenes, Chiral Calix[n] Arenes, Introduction of Functional Groups in Calix[n] Arenes, Reactions at Upper Rim of Calixarene	3 Lec
	Selectivity of Cation Complexation, Cation Binding by Crown Ethers, Cation Binding by Lariat Ethers, Cation Binding by Cryptands, Thermodynamic Effect of Binding	4 Lec
Text Books, and/or reference material	1. An Introduction to Supramolecular Chemistry by Asim K Das and Mahua Das. 2. Analytical Chemistry of Macrocyclic and Supramolecular Compounds by S. M. Khopkar. 3. Advanced Inorganic Chemistry by F. A. Cotton, G. Wilkinson, C. A. Murillo and M. Bochmann. 4. Synergy in Supramolecular Chemistry edited by Tatsuya Nabeshima. 5. Concepts and Models of inorganic chemistry by B. E. Douglas, D. H. McDaniel and J. J. Alexander.

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
CY1102, 2014	CT+EA

Course Outcome (The students will master the following)	Course outcome accounts of
	• CO1: Diversified biological roles of Nitric Oxide (NO) and the NO donor drugs. • CO2: Enemark-Feltham $\{MNO\}^n$ notation of metal nitrosyls and their spectroscopic and structural properties to elucidate structure-function relationship. • CO3: Active site structure and role of denitrifying bacteria responsible for nitrite (NO_2^-), nitric oxide (NO) and nitrous oxide (N_2O) reduction to N_2 sustaining global N_2 cycle. • CO4: Details of structure function of Metalloenzymes responsible for N_2 fixation, reverse process of denitrification. • CO5: Basics of nuclear chemistry, the nuclear spin (I), quadrupole moment (Q) and ellipticity of the nuclides and numerical problems. • CO6: The concepts and working principle of three spectroscopy such as Nuclear Magnetic Resonance (NMR), Electron Paramagnetic Resonance (EPR) or Electron Spin Resonance (ESR) and Mössbauer spectroscopy (specifically the last two) those are related to nuclear spin and the s-electron density of the nuclides.

Topics Covered	Importance of NO as ligand and its diverse roles in biology, NO Synthase enzyme and NO donors including metal nitrosyls, MO diagram of NO, Bonding nature of NO, Enemark-Feltham $\{MNO\}^n$ notation, Spectroscopic and structural properties of various $\{MNO\}^n$ species, NO detection methods, Electrophilic and nucleophilic reactivity on metal activated NO moiety 8 Lec Nitrite and Nitrous Oxide Reductase, their active site structures and catalytic activity and impact on Atmospheric Nitrogen Cycle 5Lec The N_2 fixation, Biological N_2 reduction using FeMo cofactor and Models, Chatt Cycle, Electrocatalytic reduction using low-valent tungsten (W), Mo(III) mediated N_2 reduction system, cleavage of N_2, Mo-N_2 complexes, N_2Redcution Mechanisms, Nitrogenase-related transformations 5Lec Concept of Quarks; Size, shape, stability and classification of nuclides, Nuclear potential diagram, Packing fraction, Mass defect, Binding energy and related numerical problems, Quantum numbers of nucleon and magnetic properties, Nordheim's rules, Nuclear magnetic resonance (NMR) and its application to medical diagnosis such as MRI, Electric quadrupole moment of the nuclides and concept of electric multipoles; Nuclear spin (I), quadrupole moment (Q) and Ellipticity of the nucleus and numerical problems 5 Lec Nuclear resonance or recoilless absorption and Mössbauer Spectroscopy; Recoiling Frequency shift, Frequency broadening and Doppler effect, Characteristics of Mössbauer nuclides and related Decay scheme, Quadrupole splitting, Isomer shift and its application to assign the spin states. 5Lec Electron spin resonance (ESR) spectroscopy: Interaction between electron spin and magnetic field, Techniques of ESR spectroscopy, Relaxation process and line widths in ESR transition, ESR relaxation and chemical bonding, Interaction between electron spin with nuclear spin: hyperfine/super hyperfine splitting, g values and factors affecting it, determination of g values, Zero field splitting, Kramer's degeneracy, applications of ESR measurement. 6 Lec Nuclear shell model, magic number and periodicity of nuclear properties, liquid drop model. 1 Lec Detection and measurement of radioactivity, Preparation of radio-isotopes, Cow and milk systems, Applications of radio-isotopes as tracers such as for chemical investigation, physico-chemical applications, age determination, medical applications, agricultural and industrial applications etc. 2Lec

Course Outcome	Course outcome accounts of · CO1: matrix representation of operator, formation of character tables of different point group and its application in analyzing vibration and electronic spectroscopy of complex molecules. · CO2: Use of character table, symmetry and projection operator to learn hybridization and formation of SALC and LCAO which enable to understand bonding in molecules. ·CO3: foundation in different electrochemical methods like cyclic voltammetry, coulommetry and associated techniques to analysis inorganic complexes and evaluating kinetic processes occurring at the electrodes-solution interface. · CO4: knowledge of unit cell, symmetry and space group of different crystal. · CO5: idea of reciprocal lattice and its importance in structure elucidation of inorganic complexes using X-ray diffraction technique. · CO6: understanding of the working principle of various electrochemical instruments as well as X-ray diffractometer.

Topics Covered	**Group theory**: representation of groups, techniques and relationships for chemical applications, symmetry and chemical bonding, equation of wave functions, vibrational spectroscopy, transition metal complexes 12 lec **Electrochemistry**: fundamental of electrode reaction, basic equipment for electrochemical measurements, voltammetric techniques, coulometric techniques, electrochemical behaviour of transition metal complexes, metal complexes containing redox active ligands 12 lec **X-ray structure determination**: Diffraction of X-rays, Lattices, Plane and indices, X-ray diffraction. The reciprocal lattice, Brag's law in reciprocal lattice, crystal symmetry and space group, data collection, Intensity of data collection, theory of structure factors, and Fourier syntheses. 12 lec.
Text Books, and/or reference material	1. Electrochemical Methods: Fundamentals and Applications By Bard and Faulkner 2. Chemical applications of Group theory by F. A. Cotton 3. Molecular theory and group theory by R. L. Carter 4. Inorganic Electrochemistry: Theory, practice and application By P Zanello (RSC) 5. X-ray Crystallography By William Clegg (Oxford)

Course Outcome (The students will master the following)	• CO1:. The course is designed to give the students a broad understanding of the issues related to the basic concepts and principles of analysis of soil and water quality parameters. • CO2: Students will also accumulate idea about the permissible limit, present concentration etc. of different environmental impurities. • CO3:. Demonstrate an idea about the soil, water and wastewater quality standards and its regulations. • CO4: Students will also accumulate idea about the soil quality status with respect to nutrients like N, P and K present.
Topics Covered	1. *p*H measurement of soil; 2. Estimation of organic carbon content in soil; 3. Chlorine content in drinking water; 4. Estimation of phenol in industrial waste-water sample 5. N, P and K of soil 6. Cyanide in industrial waste-water sample

CYE931	**Application of some important reactions in synthetic organic chemistry**	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					

Course Outcomes	• CO1: Understanding of mechanism of few important reactions, their application in different field of synthetic organic chemistry. • CO2: Uses of strategy of Hydroboration and wittig reaction for carbon-carbon bond formation, reduction of methodology for specific transformation by Birch reduction, how the better yield of product could be obtained, their tactics, strategy and control has been highlighted. • CO3: Role of specific reagents with related mechanism in their transformation and their mechanism from substrate to products is included for their step by step synthesis.
Topics Covered	1. Hydroboration reaction of alkenes, mechanism and hydrolysis process, Regioselectivity, stereoselectivity and Enantioselective hydroboration reaction, Uses of 9-BBN (in Suzuki Cross coupling reaction and others) and Monoisocamphenylborane ($IpcBH_2$), isomerisation of alkenes via hydroboration reactions, Carbon-Nitrogen, Carbon-halogen bond formation, synthesis of cyclopropyl, cyclobutyl derivatives and bicyclo compounds. 10 L 2. Birch Reduction: Mechanism, dependent factors, Application of birch reduction in aminolysis, hydrogenolysis, Wilds & Nelsen modification for pure products in Birch reduction, Regio-selectivity of Birch reduction. Hine postulates; Reduction of substitute benzenoid systems with EWG and EDG; biphenyl systems, regio-selective reduction of naphthalene and substituted naphthalene; Stereo selective of Birch reduction in naphthalene. Reduction of Anthracene and Phenanthrene systems; single electron transfer system (SET), application in natural product synthesis with special emphasis on Gibberalic acid. 10L 3. Wittig reactions or chemistry of Ylide: synthesis of phosphoylide; Stereo-chemical outcome of wittig reactions and their dependent factors. Stereo-selectivity in case of stabilised and non stabilizedylides. Scholar modifications. Effect of ligands in phosphorous ylide. Advantages of Wittig-Horner reaction over Wittig reaction; Difference in reactivity of phosphorous and sulphur ylide; Regio selective and stereoselective reaction with stabilized and non-stabalizes sulphur ylides. 10L
Text Books, and/or reference material	<u>Suggested Text and reference Books:</u> 1. F.A. Carey & R.J. Sundberg, Advanced Organic Chemistry, Springer, 2007 2. K.C. Nicolaou& E.J. CYC401	CT+EA

Course Outcome (The students will master the following)	● CO1: Understanding the importance of natural products ● CO2: Learning of the structure, synthesis and uses of different Terpenes ● CO3: Know the chemistry of Steroids in hormones ● CO4: Develop knowledge on the chemical structure, synthesis of different natural pigments ● CO5: Concept generation on rational drug design and drug classification ● CO6: Introduction to drug manufacturing done in pharmaceutical industries ● CO7: Fundamental use of computer in drug design and discovery	
Topics Covered	Terpenes: Structural studies on sesquiterpenes, diterpenes, triterpenes and carotenoids; chemistry of carryophyllene, abietic acid, beta-amyrin, alpha and beta-carotenoids	9 Lec
	Steroids and Prostanoids: Reaction and synthesis of steroids, sources of steroid hormones; diosgenin, hecogenin, etc., structure and synthesis of prostanoids	9 Lec
	Natural Pigments: General methods of isolation, structure elucidation and synthesis of anthocyanins, flavones, flavones, isoflavones, aurone, chalcone, xanthone and their chemical interconversions	9 Lec
	Drug Design: Drug definition, Concepts of LD50 and ED50, introduction to rational approach to drug design, physical and chemical factors associated with biological activities, structure-activity relationship, and mechanism of drug action. Classification of drugs: Based on structure or pharmacological basis with examples. Antineoplastic agents, cardiovascular drugs, local anti-infective drugs, psychoactive drugs, antibiotics (including vancomycin). Industrial synthesis of important drugs. Modelling: Molecular modeling, conformational analysis, qualitative and quantitative structure-activity relationship.	9 Lec

Text Books, and/or reference material	1. Medicinal Chemistry: An introduction By Gareth Thomas (Wiley) 2. Asymmetric Synthesis of Natural products By Ari M P Koskinen (Wiley) 3. Chemistry of Natural products By S B Bhat, B A Nagasampagi, M Sivakumar (Narosa) 4. An Introduction to Medicinal Chemistry by G L Patrick (Oxford)' 5. Bioinformatics and Computational Biology in Drug Discovery and Development by William T. Loging (Cambridge)

CYC401, CYC503	CT+EA
Course Outcome (The students will master the following)	• CO1: Generation of concept on the interdisciplinary interface lies within Chemistry and Biology • CO2: Learn the Chemistry of Nucleic acids (DNA, RNA) • CO3: Develop knowledge on the enzyme chemistry • CO4: Introduction of enzyme inhibitors and inhibition kinetics

Topics Covered	Nucleoside, nucleotides and Nucleic acids: Basic concept and importance; Bio-synthesis of purine and pyrimidine nucleotides, synthesis of adenosine, Guanosine; Nucleotides: synthesis of adenyltlic acid(AMP), Guanylic acid(GMP), uridylic(UMP) acid and cytidilic acid; Cell structure, DNA structure and genetic material, replication and transcription of DNA, RNA and protein synthesis, genetic material and genetic code Enzyme Chemistry: Enzymes: Chemical and biological catalysts. Nomenclature and classification, concept and identification of active sites by use of inhibitors, catalytic power, specificity and regulation. Examples of some typical enzyme mechanisms for chymotripsin, and carboxypeptidase-A. Different types of enzyme catalyzed reactions, Co-enzyme chemistry. Enzyme models: Host-guest chemistry, chiral recognition, molecular asymmetry and prochirality, biomimetic chemistry, crown ether, cryptates, cyclodextrins, calixarin Bioorganic Chemistry: Enzyme kinetics: MichaelisMenten and Lineweaver-Burk plots, reversible and irreversible inhibition. Mechanism of enzyme action: Typical enzyme mechanism for ribonuclease, lysozyme. Chemical models and mimics for enzymes, receptors, peptides, carbohydrates and other bioactive molecules, catalytic antibodies- Design, synthesis and evaluation of enzyme inhibitors. Enzyme catalyzed reactions: Carboxylation and decarboxylation. Isomerization and rearrangement.	8 Lec 12 Lec 12 Lec
Text Books, and/or reference material	1. Principles of Biochemistry by Lehninger 2. Biochemistry by Voet&Voet 3. An Introduction to Medicinal Chemistry by G L Patrick (Oxford)

<tr><td>Course Outcomes</td><td colspan="7">

CO1: Learn about the three dimensional structure of organic molecules, which govern their reactivity in different reactions.
CO2: Advance stereochemistry helps to synthesize biological active compounds with better yield and minimum by-products.
CO3: In the field of drug design & drug delivery, insecticides and pesticides, new bio-active molecules could be synthesized for better utility in field of pharmaceutical science, agriculture and material science.
CO4: It helps to understand the basic knowledge in synthesis of organic molecules and to obey the guide lines of green chemistry principle.
CO5: With help of knowledge in stereochemistry and structural correlation, the hurdle in stereochemical problem in industries in large scale production of polymer, drug etc. could be solved.
</td></tr>
<tr><td>Topics Covered</td><td colspan="7">
1. Advanced stereochemistry: Configarational analysis: Relative and absolute configuration. 2 Lec.
2. Determination of relative configuration:
(i) Chemical correlation not affecting the chiral atom,
(ii) Chemical correlation affecting bonds to the chiral atom in a ‘known way’
(iii) Correlation by asymmetric synthesis: Horeaus rule, Prelog’s rule, Cram’s rule (Felkin modification), and Sharpless rule
(iv) Physical methods: NMR, MS, IR, dipole moment, ORD, CD. 8Lec.
3. Optical rotation and optical rotatory dispersion: Preliminary concept about linearly polarised light (LP), RCP and LCP; circular birefringence; and circular dichroism and optical rotatory dispersion; Cotton effect; ORD of ketones and Octant rule. 8 Lec.
</td></tr>
</table>

	4. Conformation of acyclic and cyclic system (3-8 membered rings), decalin, octalene, and bridged bicyclo systems; stability, reactivity and mechanism, Cortin Hammett principle and Winstein-Eliel equation (special emphasis on 5 and 6 membered rings with and without heteroatoms like O, S and N). 8Lec. 5. Quantitative relationship between structure and reactivity: (i) Liner free energy relation: Hammett equation; Equilibrium and rate in organic reactions; (ii) Separation of polar, steric and resonance: (iii) Taft equation; (iv) Grunwald-Winstein equation. (iv) Some application of structure-reactivity correlation study. 8 Lec.
Text Books, and/or reference material	1. Stereochemistry of Carbon Compounds. Ernest L. Eliel. McGraw-Hill 2. Basic Stereochemistry of Organic Molecules, Oxford University Press: Subrata Sen Gupta 3. Stereochemistry Of Organic Compound; Principle and Applications by D. Nasipuri 4. Stereochemistry. Conformation and Mechanism. P. S. Kalsi

No pre-requisites		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes	· CO1: Gain knowledge about elementary level civil engineering · CO2: To learn the use of survey instruments · CO3: To learn about construction materials and technology						
Topics Covered	**Measurement:** Measurement of lengths, heights, and angles using surveying equipments, chain, tape, Dumpy level, staffs, Theodolites. **(10)** **Survey:** Different mapping methods, elements of chain surveying, compass surveying, plane table surveying, theodolite surveying, leveling and contouring. **(10)** **Building Materials:** Common building materials, stone, brick, timbers, cement, concrete, lime concrete, their strength, characteristics and different types of each material. **(10)** **Construction:** Elements of residential buildings, method of construction, miscellaneous temporary constructions, form work, timbering etc. **(12)**						

Text Books, and/or reference material	***Text Books:*** 1. Surveying and Levelling Part I by T. P. Kanetkar, and S. V. Kulkarni, Pune Vidyarthi Griha Prakashan Pune – 30, 1979 2. Engineering Materials by S. C. Rangwala, Charotar Pub. House, Anand 3. Building Construction by S. C. Rangwala, Charotar Pub. House, Anand ***Reference Books:*** 4. Building Construction by B. C. Punmia, A. K. Jain and A. K. Jain, Laxmi Publications (P) Ltd.

Basic Engineering, statistics & probability		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs):	· CO1: Development of skills for predicting engineering system behaviour · CO2: Knowledge of basics of data analysis for further applications. · CO3: Developing the requisite skill that helps in the advanced courses related to experimental study						
Topics Covered (Hrs)	**Types of measurements and errors**: Internal & external estimates of errors, Relative frequency distribution, Histogram, True value, Precision of measurement, Best estimate of true value & precision, Methods of calculating best estimate of true value & standard deviation **(7)** **Combination of measurements**: Accuracy of mean, Significant digits. Method of least squares & its application for calculation of best estimate of true value, curve fitting, **(8)** **General linear regression**: Comparison & combination of measurements. Extensions of least square method. Theory of errors, Binomial & Gaussian distribution, Confidence limits, Significance test, principle of maximum likelihood & goodness of fit, Chi-square test. **(9)** **Displacement measurement**: Dial Gauge, Microcator, Optical Method, Pneumatic Transducer, Strain Gauges, Variable Inductance & Capacitance Transducer, Piezo-Electric, Electro-Kinetic, Photo-Electric, Ionization, Vibrating Wire & Vacuum Tube Transducer. **Force & Torque:** Elastic Type, Fluid Load Cell, Dynamometers. **Temperature:** Bi-Materials, Pressure & Resistance Thermometers,						

	Thermocouples & Pyrometers. **Pressure:** McLeod Gauge, Pirani Gauge, Ionization Gauge, Manometers, Bourdon Tube, Resistance Gauges. **Fluid Velocity:** Pitot tube & Hot Wire Anemometer, LDA. Flow Measurement in Confined Passages & Open Channels. Miscellaneous measurements **(10)** **Dynamic Response** of a Measuring Instrument, Response to Transient & Periodic Signals, First & Second order systems as well as their Dynamic Response Characteristics. (**8)**

CHO441	**PROCESS HEAT TRANSFER**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Nil		CT+MT+EA					
Course Outcomes	• CO1: Illustrate principles and laws of heat transfer of different heat exchanging phenomena • CO2**:** Solve heat transfer problems of different difficulty levels • CO3**:** Design and analyze heat transfer equipment						
Topics Covered	**Module I:** Mechanism of heat transmission: Conduction, Convection and Radiation. Conduction: Fourier's law; Steady-state heat transfer through composite slabs, cylinders and spheres; Optimum thickness of insulation; Unsteady-state heat transfer - use of Gurnie-Lurie chart, one and two-dimensional conduction in different geometry. [14 hrs.] **Module II:** Convection: Forced convection; Thermal boundary layer; Analogy between heat						

	and momentum transfer; Dimensional analysis of heat transfer; Heat transfer coefficients; Log-mean temperature difference; General equation for forced convection; Equivalent diameter; Natural convection; Condensation; Boiling of liquids. [10 hrs.] **Module III:** Radiation: Black body and Gray body; Laws of radiation; View factor; Radiant heat exchange between surfaces; Radiation from flame, gases and vapors. [7 hrs.] **Module IV:** Heat exchangers: Type of different heat exchangers and their design - Double pipe, Shell and tube, finned tube and Compact heat exchangers; Condensers and reboilers. **Evaporation:** Type of evaporators with accessories; Capacity and Steam economy; Boiling point rise/elevation; multiple effect evaporators; Design of single and multiple effect evaporators. [17 hrs.]
Text Books, and/or reference material	Suggested Text Books: 1. Heat Transfer : Principles and Applications – Binay K. Dutta (Prentice-Hall India) 2. Process Heat Transfer – D. Q. Kern (McGraw-Hill) 3. A Text Book on Heat Transfer – S P Sukhatme (Universities Press) Suggested Reference Books: **1.** Heat Transmission – Mc Adams (McGraw-Hill)

CSO 441	Data Structures and Algorithms	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
CSC-01 (Introduction to Computing)		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Understanding the fundamental concepts of data, data types and abstract data types. • CO2: Implementation of different abstract data types using different data structures. • CO3: Design and development of algorithms for real-life applications. • CO4: Apply different types of data structures to implement different						

	algorithms.
Topics Covered	Introduction to problem solving through computer, Design of algorithm to solve a problem, Concept of static and dynamic memory allocation, Algorithms and data structures, Concept of Abstract Data Type (ADT) with examples. (4L) Efficiency of an algorithm, Time and space complexities, Impact of data structure on the performance of an algorithm. (3L) Array, Single and multi-dimensional array, Memory representation (row major and column major) of array, Insertion, and deletions in array, Advantages and disadvantages of array. (3L) Linked list as an ADT, Memory allocation and deallocation for a linked list, Linked list versus arrays, Types of linked lists: singly linked list, doubly linked list, circular linked list, Operations on linked list: creation, display, insertion and deletion (in different positions). (5L) Stack as an ADT, Main operations (push and pop), auxiliary operations and axioms, Array implementation of stack, Limitation of array implementation, Linked list implementation of stack, Applications of stack: Recursion, Function call, Evaluation of postfix expression using stack. Conversion from infix expression to its postfix version. (5L) Queue as an ADT, Main operations (enqueue and dequeue), Auxiliary operations and axioms, Array implementation of queue, Limitation of array implementation and Circular queue, Linked list implementation of queue, Priority queue and its applications. (4L) Trees, Definition and mathematical properties, Binary trees, Representation of binary trees in memory: linked representation, array representation, Binary tree traversal, Pre-order, Inorder, Post order, Expression trees, Heap and its applications, Search trees: Binary search trees, Balanced binary search trees. (8L) Searching and sorting: Linear search and binary search, Bubble, selection, insertion, Quick sort, Merge sort, Heap sort, Radix sort. (8L) Graphs: Mathematical Properties, Degree, Connectedness, Memory representation of graph: adjacency matrix, Adjacency list, Directed Graphs, Directed Acyclic Graph. (2L)

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSO 442	Object Oriented Technology	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
CSO442 (Object Oriented Technology)		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Understanding of Object Oriented Design Approach and its real world applications • CO2: Analyzing problems in terms of object oriented methodologies. • CO3: Implement programs using concepts of classes and objects. • CO4: Specify the forms of inheritance and use them in problem solving. • CO5: Learn and implement different forms of polymorphism. • CO6: Developing skills to write generic codes						
Topics Covered	Introduction to problem solving through computer, Design of algorithm to solve a problem, Concepts of functions, loops, strings, arrays, pointers, structures etc. Procedure Oriented Programming, Object Oriented Programming, Objects and Classes, 3 basic features of OOP, Comparison of procedural programming and object oriented programming, C++ language, cout, cin operator, return type of main, structure of a C++ program, example with description, Tokens, keywords, identifiers, declaration of variables, dynamic initialization of variables, reference variables, scope resolution operator, difference between C and C++. Examples and Practice Sessions. (7L) Declaration of classes and objects, member functions, accessing class members, inline function, Nesting of member function, Private member function, Static data members, static member function, Objects as function argument, Friend functions, structure and class, returning objects, Examples and Exercises. (5L) Overview of constructors, default constructors, parameterized constructors, constructors with default arguments, dynamic initialization of objects, copy constructors, dynamic constructors & destructors, constraints on constructors & destructors. Examples and Exercises. (4L) Operator overloading overview, defining operator overloading function, Overloading unary operator, binary operators and arithmetic operators, Overloading using friend function, multiple overloading, Overloading comparison operators, conversion between objects and basic types, conversion between objects of different classes, overloading various operators, such as +, -, *, /, =, ==, (), [], {}, &&, ||, ++ (preincrement and post increment) etc. Examples and Exercises. (6L) Overview, defining derived classes, types of inheritance, single inheritance, making private member inheritable, multilevel inheritance, Multiple inheritance, ambiguity in multiple inheritance Hierarchical inheritance,hybrid inheritance, Virtual base classes, abstract classes, Constructors in derived classes, initialisation list, nesting of classes, Examples and Exercises. (7L) Overview, late binding, early binding, Pointers to objects, accessing class members using pointers, creating objects at runtime, This pointer, pointers to derived classes, virtual functions, pure virtual functions, Examples and Exercises. (5L) Overview of Templates, generic class, function template, function template with multiple argument, Class template, Class template with multiple						

	argument, overloading template function, templates as member function of a class, Examples and Exercises. (3L) Exception handling overview, exception handling mechanism, throwing and catching mechanism, Multiple catch, catch All exceptions, rethrowing an exception, Examples and Exercises. (3L) Mini Project Implementation using the concepts. (2L)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Nil		CT+MT+EA					
Course Outcomes	• CO1: Given Specification leads to design of network, choice of optimal Voltage, Transmission line and its material. • CO2: Given Specification leads to study of suitable system parameters and in corporation laws of Power systems to choose the most applicable. • CO3: Given Specification emphasizes on the different Tariff structures, by which one can able to judge, compare and select a suitable Tariff plan. • CO4: Given Specification facilitates the design of equipment's on the basis of power factor. • CO5: Given specification will give knowledge about the different types of faults and its severity, which can help to design the protection schemes for those faults.						
Topics Covered	Power System Network: Single phase transmission, three phase transmission, complex power, Basic Structure of power system, overhead and underground systems, overhead line conductors, Transmission, and distribution systems in India. (2) Generating Stations: Steam Power station, Hydro-electric power station, Gas turbine power station, nuclear power station, classification, Comparison of various power stations. (5) Supply Systems: AC power supply scheme, Comparison of DC and AC transmission, Advantages of High transmission voltage, various systems of						

	power transmission, comparison of conductor material in overhead system, comparison of conductor material in underground system, Choice of transmission voltage. (5) Line Parameters and Performance of Transmission Lines: Line resistance, Inductance, Capacitance, Representation of Lines, per unit method, advantages of per unit systems, short transmission line, medium length transmission line, long transmission line, Evaluation of ABCD parameter, equivalent pi and T circuit. (8) Conductors: Introduction, Type of Conductor, Skin effect, Kelvin's economy law, modified Kelvin's law, Limitations of Kelvin's law (4) Overhead Line Insulators: Type of insulator, voltage distribution over insulator string. (3) Tariffs: Introduction, Types of Tariff-Flat demand tariff, straight line meter rate tariff, Block meter type tariff, Two-part tariff, Power factor tariff, Peak load tariff, three-part tariff (3) Power Factor Improvement: Introduction, Disadvantages of low power factor, causes of low power factor, power factor improvement, power factor correction by static capacitor. Economics of power factor improvement. (5) Power Systems Fault and Protection: Symmetrical components, Symmetrical faults and unsymmetrical faults, Switches, fuses, circuit breakers, protective systems, protective relays, (5) Power System Earthing: Type and methods of earthing, earth resistance, Design of Earthing grid, Tower footing resistance, measurement of earth resistance, neutral grounding. (2)

• CO5 :To understand the energy monitoring through ICT & IoT</td></tr>
<tr><td>Topics Covered</td><td colspan="7">Overall understanding Energy Scenario National and International perspective, Energy system as electrical system, Energy chain, National and International Energy scenario, various non-conventional energy resources-importance, classification, relative merits and demerits, Carbon emission, carbon credit, International environmental meet for awareness of Green House emission (GHG). (10)
Definition and Objective of Energy Management, General Principles of Energy Management, Energy Management Skills, Energy Management Strategy. (6)
Energy Audit: Need, Types, Methodology and Approach. Energy Management Approach, Understanding Energy Costs, Energy performance, Matching energy usage to requirements, maximizing system efficiency, Optimizing the input energy requirements, Fuel and Energy substitution. (6)
Procedures and Techniques for Energy Audit, Data gathering: Level of responsibilities, energy sources, control of energy and uses of energy get Facts, figures and impression about energy /fuel and system operations, Past and Present operating data, Special tests, Questionnaire for data gathering. Analytical Techniques: Incremental cost concept, mass and energy balancing techniques, inventory of Energy inputs and rejections, Heat transfer calculations, Evaluation of Electric load characteristics, process and energy system simulation. (8)
Evaluation of saving opportunities: Determining the savings in Rs, Noneconomic factors, Conservation opportunities, estimating cost of implementation. Energy Audit Reporting: The plant energy study report-Importance, contents, effective organization, report writing and presentation. (6)
Basics of Information Communication Technology (ICT), Internet of Things (IoT). Basic sensors for Energy Monitoring and Evaluation, Application of ICT and IoT for energy monitoring. Remote supervision of Energy use. (6)</td></tr>

Department of Electrical Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
EEO443	NETWORK THEORY	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MAC02(MATHEMATICS -II), EEC01 (ELECTRICAL TECHNOLOGY)		CT+MT+EA					
Course Outcomes	• CO1: Apply the knowledge of basic circuital law, like nodal analysis and mesh analysis, to write the equations for large linear and coupled circuits. • CO2: Apply Thevenin's and Norton's theorems to 12nalyse and design for maximum power transfer. • CO3: Apply the Laplace transform to linear circuits and systems and 12nalyse the signal synthesis. • CO4: Evaluate the performance of RL, RC, and RLC circuits by the application of Laplace transform. • CO5: Analyze the given network using graph theory technique. • CO6: Analyze the given network using different two port network parameters. • CO7: Determine the response of a network using the network function and draw pole-zero plots, Bode plot etc. • CO8: They will also be able to synthesize the network functions. • CO9: Students should be able to design the passive filters.							
Topics Covered	Introduction to circuit variables and circuit elements, Review of Kirchhoff s Laws, Independent and dependent Sources, Source Transformations. Solution methods applied to dc and phasor circuits: Mesh and node analysis of network containing independent and dependent sources Network topology, Network graphs, Trees, Incidence matrix, Tie-set matrix and Cut-set matrix. (8) Network theorems applied to dc and phasor circuits: Thevenin's theorem, Norton's theorem, Superposition theorem, Reciprocity theorem, Millman's theorem, Maximum power transfer theorem. (6) Laplace transform, properties Laplace Transforms and inverse Laplace transform of common functions, Important theorems: Time shifting theorem, Frequency shifting theorem, Time differentiation theorem, Time integration theorem, s domain differentiation theorem, s domain integration theorem, Initial value theorem, Final value theorem Partial Fraction expansions for inverse Laplace transforms, Solution of differential equations using Laplace transforms							

	Transformation of basic signals and circuit into s- domain Transient analysis of RL, RC, and RLC networks with impulse, step, pulse, exponential and sinusoidal inputs. (8) Two-Port parameters: Open circuit, short circuit, transmission and hybrid parameters, relationship between parameter sets, reciprocity and symmetry conditions, parallel connections, parallel connection of two port networks. Network equivalents - Analysis of T, n, ladder, and lattice networks. (8) Network functions for the single port and two ports, properties of driving point and transfer functions, Poles and Zeros of network functions, Significance of Poles and Zeros. Time domain response from pole zero plot, Impulse Response Network functions in the sinusoidal steady state, Magnitude and Phase response. (5) Resonance: Series resonance, bandwidth, Q factor and Selectivity, Parallel resonance. Coupled circuits: single tuned and double tuned circuits, dot convention, coefficient of coupling, Analysis of coupled circuits. (7)

<tr><td colspan="2">Course Outcomes</td><td colspan="6">• CO1: Students will be able to understand and solve the difference equations that are used to model various engineering problems.
• CO2: To enable the students to apply integral transforms to problems formulated on finite or infinite domains and also to solve engineering and physical problems involving PDEs in a simpler way using integral transforms.
• CO3: To enable the students to solve a discrete systems using Z-Transform.</td></tr>
</table>

	• CO4: Students will have an in-depth knowledge of power series solution of differential equations and also will learn about special functions which arise in many engineering and physical problems.
Topics Covered	**Difference Equations:** Formation of difference equation, First and higher order difference equations, Reduction of non-linear difference equation into linear form, Solution of difference equations. (6) **Z-transform:** Some standard Z- transforms, Properties of Z-transform, Damping rule, Shifting rule, Initial and final value theorem, Convolution theorem, Inverse Z-transform, Solution of difference equations using Z-transform. (6) **Series Solution of Ordinary Differential Equations:** Validity of series solution, Series solution about an ordinary point and about a regular singular point, Bessel's equation and Bessel functions, Recurrence relations of Bessel functions, Generating function for $J_n(x)$, Orthogonality of Bessel functions, Legendre's equation and Legendre functions, Legendre polynomial, Rodrigue's formula, Generating function for $P_n(x)$, Recurrence relations for $P_n(x)$, Orthogonality of Legendre polynomial. (15) **Application of Fourier Transforms:** recapitulation of Fourier transform & its properties, solution of partial differential equations using Fourier transform (6) **Application of Fourier Transforms in mathematical statistics (2)** **Finite Fourier Transforms:** Finite Fourier Sine & Cosine transform, basic properties, applications of finite Fourier Sine & Cosine transform in the solution of boundary value problems (7)
Text Books, and/or reference material	**Text Books:** 1. S. L. Ross: Differential Equations: John Willey and Sons. 2. I. N. Sneddon: The use of Integral Transforms, McGraw-Hill, 1974. 3. E. Linear Algebra	PEL	3	0	0	3	3
Pre-requisites	MAC02					
Course Assessment methods (Continuous (CT) and end assessment (EA))	CT+EA					
Course Outcomes	• CO1: Solve systems of linear equations using several methods, including Gaussian elimination and matrix inversion					

	• CO2: Demonstrate understanding of the concepts of vector space and subspace, linear independence, span, and basis and use these for analysis of matrices and systems of linear equations. • CO3: Determine eigenvalues and eigenvectors and solve eigenvalue problems; apply principles of matrix algebra to linear transformations; discriminate between diagonalizable and non-diagonalizable matrices; demonstrate understanding of inner products and associated norms.
Topics Covered	• Systems of linear equations, Matrices, Elementary row and column operations, Row-reduced echelon matrices. Gaussian elimination, LU-Decomposition. (6) • Vector spaces, Subspaces, Linear span, Linear dependence and independence, Basis and dimension, ordered basis and coordinates, Row space and column space, Direct-sum decompositions. (12) • Linear transformations, Rank-Nullity theorem, Matrix representation of linear transformations. (7) • Eigenvalues and eigenvectors, Cayley-Hamilton theorem, Diagonalization of Matrices, Minimal polynomial, rational canonical form, Jordan canonical form. (13) • Inner Product Spaces, Orthonormal Basis, Gram-Schmidt Theorem. (4)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Environmental Science		CT+MT+EA					
Course Outcomes	• CO1: Become aware of environment and health impacts of solid & hazardous waste & knowledge of legal aspects of management of solid & hazardous wastes.						

<table>
<tr><td></td><td>

CO2: Identify improper practices of solid & hazardous waste disposal and their environmental implications. Know the basic engineering principles of solid & hazardous waste management
CO3: Conceive the design aspects of engineered disposal options and apply the gained knowledge to solve numerical examples.

</td></tr>
<tr><td>Topics Covered</td><td>
Module I:
Air Pollution: Sources, Health Hazards, global warming & climate change.
Introduction to water pollution
Introduction on sustainable development goal (SDG).
Nature as a collection of Units, Classification of Units into four orders, Interconnectedness and mutual fulfilment among the four orders, Dependence of the human being on the other three orders, my participation in nature, vision for holistic technologies, production system and management models.
Relevant Regulations of waste management
Municipal solid waste (management and handling) rules;
hazardous waste (management and handling) rules;
biomedical waste handling rules;
flyash rules; recycled plastics usage rules; batteries (management and handling) rules. [14 hrs.]
Module II:
Municipal Solid Waste Management – Fundamentals
Sources; composition; generation rates; collection of waste; separation, transfer and transport of waste; treatment and disposal options
Hazardous Waste Management – Fundamentals
Characterization of waste; compatibility and flammability of chemicals; fate and transport of chemicals; health effects
Physicochemical Treatment of Solid and Hazardous Waste
Chemical treatment processes for MSW (combustion, stabilization and solidification of hazardous wastes);
physicochemical processes for hazardous wastes (soil vapor extraction, air stripping, chemical oxidation); ground water contamination and remediation. [14 hrs.]
Module III:
Biological Treatment of Solid and Hazardous Waste
Composting; bioreactors; anaerobic decomposition of solid waste;
Principles of biodegradation of toxic waste; inhibition; co-metabolism; oxidative and reductive processes; slurry phase bioreactor; in-situ remediation.
Landfill design for solid and hazardous wastes; leachate collection and removal; landfill covers;
Thermal Treatment (Incineration)
Introduction on greywater management, Faecal sludge management, Bio-degradable waste management. [14 hrs.]
</td></tr>

Correlation levels 1, 2 or 3 as defined below:
1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Department of Computer Science and Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSO543	Computer Organization	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
CSC01 (Introduction to Computing)		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Analyze the various parts of a modern computer functional units, bus structure, addressing modes and Computer arithmetic. • CO2: Identify the process involved in executing an instruction and fetching the word from memory. • CO3: Design the hardwired and micro-programmed control units and implementation of interrupts. • CO4: Understand the memory hierarchy and design a memory system.						
Topics Covered	**UNIT-I**: Introduction: Evolution of computers, Basic Structure of Computers: Basic Operational Concepts, GPR based and stack based organisation. Bus Structures, Performance Measurement: Processor Clock, Basic Performance Equation, Clock Rate, Machine Instructions and Programs: Memory Location and Addresses, Memory Operations, Instructions and Instruction Sequencing, Addressing Modes. (10L) **UNIT-II**: Fundamental concepts of the processing Unit: Fetching and Storing words, Register Transfer, Execution of instruction, Arithmetic Operations: Addition and Subtraction of Signed Numbers, Design of Fast Adders, Combinational and Sequential ALU, ALU expansion strategies, Floating Point Numbers (IEEE754), Floating Point Operations. (10L) **UNIT-III**: Computer Organization and Design (Datapath and control path): Instruction codes, computer registers, computer instructions, timing & control, instruction cycle, memory reference instructions, Hard-wired Control, Micro programmed Control: Micro instruction, Microprogram sequencing, Input/output Organization: Accessing I/O Devices, Interrupt, Bus Arbitration schemes. (Brief overview of 8085/8086 microprocessor). (12L) **UNIT-IV**: Memory System: Basic Concepts, Semiconductor RAM Memories, Read Only Memories, Speed, Size, and Cost, Cache Memories – Mapping						

	Functions, Replacement Algorithms, page mode access, interleaved access. Performance Considerations, Virtual Memories, Secondary Storage. (10L)
Text Books, and/or reference material	**Text Books:** 1. David A Patterson, John L Hennessy, "Computer Organization and Design", (The Hardware/Software Interface) Morgan Kaufmann. 2. Carl Hamacher, Zvonko Vranesic, Safwat Zaky: Computer Organization, 5th Edition, Tata McGraw Hill. **Reference Books:** **1. William Stallings, "Computer Organization and Architecture".** 2. Nicholas P Carter, "Computer Architecture & Organisation".

CSO544	Operating Systems	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Introduction to Computing (CSC01), Data Structures and Algorithms (CSC303)		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Explain the functional architecture of an operating system. • CO2: Design the process control algorithms, solution to deadlocks and multi-threading applications • CO3: Implement application programs using UNIX system calls. • CO4: Design and solve control & data access synchronization problems. • CO5: Explain virtual memory organization and management in OS. • CO6: Implementation of standard FAT & UNIX file system.						
Topics Covered	**Introductory Concepts:** Introduction to Operating System as a whole, memory, CPU (registers and ALU), Evolution of Operating System-types of OS(advantages and drawbacks), Performance measurement metrics. (4L) **Process Data Structures and State transitions:** Process management, Basic Definitions, Process table, PCB (process control block), PTE(process table entry), Process states, Transition diagram, context of process-user level, kernel-level and process Level. (3L) **Process Control:** Process creation, Parent and Child processes, System calls--fork(), exit(), wait(), kill(), Signal handling, Process scheduling strategies-FCFS, SPN, SRT, Round Robin, HRRN, Fair share scheduling. (5L) **Multi-threading:** Threads in OS, thread vs process, Applications of threads, Use of POSIX threads library. (3L) **Process synchronization -** Race condition, Critical section, Process Sync Solution using Algorithmic approach (Lamport bakery Algorithm), Creating shared memory using POSIX library. (2L) **Semaphore-** Binary and Counting semaphore, P() and V() operations, Solving Classical problem using semaphores- Sleeping barber, Producer-						

	consumer, Reader-writer, Dining philosophers's problem, Posix library for semaphores. (6L) **Deadlocks** - Necessary and sufficient conditions for deadlocks, approaches to deal with deadlocks, Deadlock Prevention, Avoidance (Banker's algorithm) and Detection. (3L) **Memory organization & management** - Virtual memory organization, Pure Paging, Pure Segmentation, Combined Paging-Segmentation, Inverted PMT, Page fault handling algorithms, Working set theory. (10L) **File management**- Directory structure, Storage of files on disks, contiguous and non-contiguous file allocation strategies, Internal and external fragmentation, FAT & Inode Structure, Free Space management, Disk scheduling strategies. (4L) **I/O management concepts** (2L)
Text Books, and/or reference material	**Text Books:** 1. "Operating System Concepts", Silberschatz and Galvin. 2. "Operating Systems: Internals and Design Principles" by William Stalling. 3. ECO541	Probability Theory for Engineering Application	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), Mid-Term (MT), End Assessment (EA))					
NIL		CT+MT+EA					

Course Outcomes	CO1: Characterize probability models and random variables. CO2: Evaluate moments, correlation, and understand the concept of point estimation, hypothesis testing, inequalities and probabilistic limits. CO3: Recognize, interpret and apply a variety of statistical methods that occur

	in engineering.
Topics Covered	1. Introduction: Basics of probability theory and statistics for engineers, total probability theorem, Bayes' theorem, Bernoulli's Trials. (3L) 2. Continuous type random variables: CDF, PDF; Types – uniform, exponential, Gaussian, Rayleigh, Weibull etc. Markov inequality, Chebyshev's inequality, Function of random variables, moments and characteristics function. (7L) 3. Discrete type random variables: conditional PMF, Types – Binomial, Geormetric, etc.; mean, variance of discrete random variables. (3L) 4. Two random variables: Joint density and distribution function, independence, two functions of two random variables, and central limit theorem. (3L) 5. Frequency distribution, histogram, random sampling, sampling distributions, t- distribution, chi-square distribution, CLT, point estimation, ML estimation, MAP, method of moments, interval estimation, confidence intervals. (8L) 6. Hypothesis testing, type I and type II errors, p values; t – test, goodness of fit. (5L) 7. Nonparametric test: the sign test, Wilcoxon rank sum test, F distribution, F – test, Chi-square test. (5L) 8. Regression analysis, correlation, analysis of variance (ANOVA), MTBF, reliability. (8L)

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
EEO540	MEASUREMENTS AND INSTRUMENTATION	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEC01 (ELECTRICAL TECHNOLOGY)		CT+MT+EA					
Course Outcomes	• CO1: Given specifications of different measuring instruments for measurement of particular parameter of some known electrical system, compare and judge to find the most suitable one. • CO2: Given application of electrical engineering for measurement of particular parameter along with specified range and accuracy, choose most suitable measuring instrument with the understanding of individual working principles, also judge to fit the given application. • CO3: For some specific parameter to be measured, along with the given range, resolution, accuracy and output format, choose suitable sensor, design associated signal conditioning and analog/digital processing circuit to meet the desired specification. • CO4: Given parameters to identify the location of fault.						
Topics Covered	Method of measurement, Measurement system, Classification of instruments, Definition of accuracy, Precision, Resolution, Speed of response, Error in measurement, Classification of errors. (3) Measurement of Voltage and Current: Principle of operation and torque equation of Moving coil, Moving iron instruments. (5) Extension of instrument ranges. (2) Measurement of Power & Energy: Principle of operation of Electrodynamic & Induction type wattmeter, Power measurement by two wattmeter, Construction, theory and application of AC energy meter. (6) Measurement of resistance: Measurement of medium, low and high resistances, Megger (6) AC Bridges: Measurement of Inductance, Capacitance, Frequency, mutual inductance (8) Localization of Cable fault: Methods used for localization of ground and short circuit fault. (4)						

	Sensors & Transducers: Introduction to sensors & Transducers, Strain gauge, LVDT, Temperature transducers, Piezo-electric transducer, pressure transducer, Flow measurement using magnetic flow measurement. (8)
Text Books, and/or reference material	Text Books: 1. K. Sawhney, A course in Electrical & Electronic Measurements & Instrumentation, Dhanpat Rai& sons. 2. E. W. Golding & F. C. Widdis, Electrical Measurement & Measuring Instruments, Wheeler Publishing Reference Books: 1. H. S. Kalsi, Electronics Instrumentation, Mc-Graw Hill Education. 2. A. J. EEO541	FUNDAMENTALS OF CONTROL SYSTEMS	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MAC01 (MATHEMATICS-I) MAC02 (MATHEMATICS-II)		CT+MT+EA					
Course Outcomes	• CO1: To get the knowledge of basic objectives of control system design • CO2: To derive input-output relationship of systems based on their mathematical modeling governed by basic laws of physics • CO3: To justify stability of systems based on their transfer functions, time domain and frequency domain specifications • CO4: To develop concepts on root pattern with variable gains and comment on the stability • CO5: To determine the stability of closed-loop system based on open loop frequency response • CO6: To be able to design controllers so as to meet design specifications both in time as well as frequency domain • CO7: To be able to realize the controller both in software simulation through MATLAB coding as well as in real-time environment.						
Topics Covered	**Introduction to control systems:** Historical development, Open and Closed loop systems, Applications, Effects of feedback, Types of feedback control systems, Servomechanism. (4) **Mathematical Models of Physical Systems:** Modeling of electrical networks, Modeling of mechanical system elements, Transfer functions, Block diagram Algebra, Signal flow graph and Mason's Gain formula. (6) **Introduction to State Variable Approach:** Concepts of state, state variables and state model state models for linear Continuous-time systems,						

	state transition matrix. (4) Representation of Control Components: Electrical components, Mechanical components, Electromechanical Components. (2) **Time domain analysis and design specification of linear systems:** Standard signals, Transient response and s-plane root locations of Second and higher order systems, Design specifications, steady state errors and error constants, effects of adding poles and zeros to transfer functions, P, PI, PD and PID controllers. (6) **Concepts of Stability and Algebraic Criterion:** Concept of stability, Characteristic equation & necessary conditions for stability, Routh-Hurwitz stability criteria. (4) **Root Locus Technique:** The concept of root locus, Analytical construction of Root Loci, Root-locus Plots with MATLAB. (4) **Frequency Response Analysis and Stability Studies in Frequency Domain:** Frequency domain specifications, correlation between time and frequency response, Polar plots, Bode plots, Nyquist stability criterion, Relative stability, conditionally stable system, M and N loci on complex and gain phase plane, MATLAB tools and case studies. (8) **Design and Compensation Techniques:** Preliminary considerations of classical Design, Realization of Basic compensators, Frequency domain and s-plane design techniques, Example of control systems. Design with MATLAB.(4)

EEO542	POWER SYSTEM ANALYSIS AND DESIGN	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					

Course Outcomes	• CO1: Given Specification leads to design of network, choice of optimal Voltage, Transmission line and its material, considering the factors like sag, tension and corona. • CO2: Given Specification leads to study of suitable system parameters and incorporating laws of Power systems to choose the most applicable. • CO3: Given Specification emphasizes on the different Tariff structures, by which one can able to judge, compare and select a suitable Tariff plan. • CO4: Given Specification emphasize on the design of equipment's, on the basis of power factor. • CO5: Given specification will give knowledge about the different types of faults and its severity, which can help to design the protection schemes for those faults
Topics Covered	Fundamentals of Power systems: Transmission line (single phase and three phase), per unit systems, Line constants. (1) Load characteristics: Introduction, connected load, variable Load on Power Station, Load Curves, Important terms and factors, Load duration curve-Load curves and selection of generating units, base load and peak load of power station. (6) Mechanical Design of Overhead Lines, Sag and Tension: General consideration, Line supports, type of steel towers, Sag and tension, Sag and tension calculation, Parabolic method, Catenary method, Sag and tension charts. (7) Corona: Phenomenon of corona, disruptive critical voltage, visual critical voltage, corona loss, factors and conditions affecting corona loss. (3) Balanced and unbalanced fault: Introduction, effects of faults, symmetrical fault, symmetrical components, unsymmetrical faults. (5) Load flow studies: Network model formulation, formation of Ybus, load flow problem, Gauss-Siedel method, Newton-Raphson method, Decoupled load flow studies, comparison of load flow methods. Advantages and disadvantages. (7) Power system stability: Steady state stability, transient stability, equal area criteria, swing equation, multi machine stability concept and methods for improving stability. (8) Economic operation of power system: Incremental fuel cost, economic dispatch neglecting transmission losses, transmission loss as a function of plant generation, General loss formula, Optimum load dispatch considering transmission losses. (5)

Nil		CT+EA					
Course Outcomes	CO1: Acquire an idea about basic concepts of engineering measurements CO2: To learn the basics of data analysis CO3: To learn the fundamentals of data acquisition. CO4: To learn the measurement techniques for electrical signals, pressure, temperature, flow, force, motion, vibration etc.						
Topics Covered	• Basic concepts: Calibration, Standards, Dynamic Measurement, System response and Fourier Analysis 4 • Data analysis: Error analysis, Uncertainty analysis, Statistical analysis, Curve fitting, Goodness of fit. 6 • Measurement of electrical signals: Waveform measurements, Analog/digital meters, Amplifiers, Signal Conditioner, Oscilloscope, transducers 5 • Measurements of physical variables: Pressure measurement 4 • Flow measurement 6 • Temperature measurement 4 • Force/ torque/ strain measurement, motion and vibration measurement. 9 • Data acquisition and processing: Signal conditioning, Data transmission, ADC and DAC 4						
Text Books, and/or reference material	**Text Books:** 1. Experimental Methods for Engineers – J. P. Holman **Reference Books:** 1. Instrumentation, measurements and experiments in Fluids by E. Rathakrishnan 2. Handbook of experimental fluid mechanics by Foss et al. 3. Measurement systems—application and design, Doebelin, E. O.

Nil		CT+EA					
Course Outcomes	• CO1: Understanding the basic principles of fluid flow. • CO2: Relate the fluid-dynamic involved in single phase flow. • CO3: Plan elementary analysis of most liquid Flow. • CO4: Analyze the model to a wide variety of complex engineering problems. • CO5: Plan elementary analysis of fluid flow systems. • CO6: Conclude the Hydrodynamics flow situations.						

Topics Covered	• **Introduction:** Definition of fluid, Continuum hypothesis, Scope of fluid mechanics, Flow pattern: Streamlines, Streak line and Path line. Differential versus Integral Approach. **(3L)** • **Kinematics of flow:** Lagrangian and Eulerian Approach, Reynolds transport Theorem for integral analysis, Acceleration of Flow, Material derivatives, Angular deformation of a fluid element, Stream-function, Problems. **(4L)** • **Fluid property and governing equation of static and inviscid fluid:** Newtonian Fluid and Non-Newtonian fluids, Surface tension, Euler Equation, Governing equation of statics, Bernoulli's Equation., Problems **(4L)** • **Flow measurement:** Flow measurement by Venturimeter, Orifice meter and Pitot tube, problems. **(3L)** • **Dynamics of viscous flows:** Continuity equation in different coordinates, Navier-Stokes equation and Energy equation. General structure of conservation equations. **(4L)** • **Flow through pipes:** Loss of energy in pipe, loss of energy due to friction (Moody's diagram)), minor losses in pipe, hydraulic and energy gradient line, piping system, flow through branched pipe, power transmission through pipes, problems, problems. **(4L)** • **Boundary layer theory:** Derivation of boundary layer equation, Order-of-magnitude analysis, Flow over flat plate, Separation of boundary layer over a circular shape. Different examples **(7L)** • **Turbulence:** Eddies and vortex shredding, statistical description of turbulent flow, Reynolds stresses, Reynolds averaged Navier stokes equation, Prandlt's mixing length, Wall effect in turbulent flow. **(7L)**
Text Books, and/or reference material	**Text Books:** 1. R. W. Fox,P. J.Pritchard,A. T Mcdonald, Introduction to Fluid Mechanics, John Wiley 2. F. Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	• CO1: To understand the physics of dynamic complexity of a nonlinear process • CO2: To identify strange attractors and to estimate their degree of complexity • CO3: To learn relevant mathematical methods for solving nonlinear problems						
Topics Covered	**Module I:** Theories of ODEs: First-order ordinary differential equations, basic ideas. Definitions of stability and elements of linear algebra. Stability of homogeneous linear systems, fundamental stability theorem for nonlinear systems. Uniqueness Conditions for Linear and Nonlinear Systems [10 hrs.] **Module II:** Periodic solutions and Bifurcations: Phase portraits; Hopf bifurcations; period doubling; Poncare maps; RuelleTakens scenario; Floquet matrices and stability. Maps; Reduction of flows to maps; Reconstruction of phase space from one-dimensional signals. [11 hrs.] **Module III:** Quantitative analysis of strange attractors: Liouville's theorem and conservation of areas in phase space; Sensitivity to initial conditions; Stretching and folding;.Lyaponov exponents; Fractal dimension; power spectrum, Lyapunov exponents and Lyapunov functions [11 hrs.] **Module IV:** Case studies: Logistic equation, Lotka-Volterra predator-prey mechanism, Oscillating Chemical Reactions: Brusselator and Oregonator, Lorenz and Rössler attractors, adiabatic and nonadiabatic CSTRs, fermenters, boiling flows, etc. [11 hrs.]

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Department of Computer Science and Engineering								
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSO 743	Computer Networks	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Fundamental knowledge in Data Structures		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Understand the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model. • CO2: Comprehend the fundamentals of Physical layer, and will apply them in real time applications. • CO3: Identify data link layer concepts, design issues, and protocols. • CO4: Classify the routing protocols and analyze how to assign the IP addresses for the given network. • CO5: Acquire knowledge of Application layer and Presentation layer paradigms and protocols.						
Topics Covered	**Introduction:** Data communications: components, data representation, direction of data flow; physical structure (type of connection, topology), categories of network (LAN, MAN, WAN); Protocols and standards; Reference models: OSI reference model, TCP/IP reference model. [3L] **Physical Layer:** Overview of data (analog & digital), signal (analog & digital), transmission (analog & digital) & transmission media (guided & unguided); Circuit switching: time division & space division switch, TDM bus. [5L] **Data link Layer:** Types of errors, error detection & correction methods; framing, Flow control Protocols: Stop & wait ARQ, Go-Back- N ARQ, Selective repeat ARQ, Medium Access sublayer: Token Ring; Reservation, Polling, Multiple access protocols: Pure ALOHA, Slotted ALOHA, CSMA, CSMA/CD, CSMA/CA. [10L] **Network layer:** Internetworking & devices, Addressing: IP addressing, subnetting; Routing : techniques, static vs. dynamic routing , Unicast Routing Protocols, Congestion Control and Quality of service (QoS). [12L] **Transport layer:** Process to Process delivery; Socket address,UDP; TCP. [5L] **Application Layer:** Introduction to DNS, SMTP, SNMP, FTP, HTTP & WWW. [5L] **Network Security :** Encryption/and decryption algorithms, authentication, access control, Security standards - IS/ISO 27000, 18000 introduction. [2L]						
Text Books, and/or reference material	**Text Books:** 1. B. A. Forouzan – "Data Communications and Networking (3rd Ed.) " – TMH. 2. A. S. Tanenbaum – "Computer Networks (4th Ed.)" – Pearson Education/PHI. 3. W. Stallings – "Data and Computer Communications (5th Ed.)" – PHI/ Pearson Education. **Reference Books:** 1. Comer – "Internetworking with TCP/IP, vol. 1, 2, 3(4th Ed.)" – Pearson Education/PHI.

CSO744	Computational Biology and its Applications	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and End assessment (EA))					
Introduction to Computing, Linear Algebra, Fundamentals of Probability and Statistics							
Course Outcomes	• CO1: To develop the problem solving skill using the concept of algorithms • CO2: To understand different computational algorithms including few clustering and classification techniques and genetic algorithm. • CO3: To aware the basic principles and concept of Biology and identify the potential application areas. • CO4: To correlate the computational algorithms and the applicable biological domain. • CO5: To develop new computer modelling for different types of biological data						
Topics Covered	1) Algorithms in Computing: Algorithms, Pseudocode, Time & Space Complexity, Dynamic Programming. (4) 2) Pattern Matching and Optimisation: Hashing, Pattern Finding using Clustering, Genetic Algorithms, Evolutionary Computation Techniques, Case Study on GA based feature selection on microarray gene expression (8) 3) Hidden Markov Model: Markov process and Models, HMM applications (6) 4) Support Vector Machine: Introduction, Margin, Hyperplane, Classification. Bayes Theorem, Bayes Classifier. Case Study on Disease Classification(6) 5. Artificial Neural Network: Perceptron, Hidden Layers, Activation Functions, Feed Forward Neural Network and Back Propagation, Case Study on Biological						

	Image Classification (6) 6) Basics of Biology: Central Dogma of Molecular Biology, Molecular Visualisation Softwares, Protein Sequence and Structure Analysis, Protein Structure Modelling, Protein-protein Docking, Genomics. (12)
Text Books, and/or reference material	**References:** 1. An Introduction to Bioinformatics Algorithms, Neil C. Jones, Pavel Pevzner, MIT Press. 2. Bioinformatics: the Machine Learning Approach, Pierre Baldi, Soren Brunak MIT Press. 3. Genetic Algorithms in Search, Optimization and Machine Learning, David E. Goldberg.

ECO740	Biomedical Instrumentation	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods: (Continuous Assessment (CA), Mid-semester assessment (MA) and End Assessment (EA))					
Basic Electronics (ECC01), Engineering Mechanics (XEC01)		Assignments, Quiz/class test, Mid-semester Examination and End Semester Examination					
Course Outcomes	After the completion of the course the student will be able to • **CO 1**: Understand concept of Biomedical Instrumentation • **CO 2**: Understand basic building blocks of Biomedical Instruments • **CO 3**: Apply quantitative analysis techniques to Biomedical Instruments • **CO 4**: Learn design techniques of Biomedical Instruments • **CO 5**: Investigate application specific Biomedical Instruments						
Topics Covered	**Module I: Introduction to Biomedical Measurements and Instrumentation [L-1]** **Module II: Static and dynamic characteristics of Biomedical Instruments [L-7]** Static characteristics of elements, Dynamic characteristics of elements, Quasi-static characteristics of elements, Static characteristics of systems, Dynamic characteristics of systems, linearity, non-linearity, Sensitivity, Resolution, Repeatability, Reproducibility, Response time, Settling time, Gain, bandwidth						

	Module III: Error and Noise in Biomedical Measurements [L-4] Sources of noise in measurement systems, mathematical modelling of noise, environmental effects, Effects of Interfering and Modifying inputs, Error analysis, Systematic error, Random error. Statistical methods for noise and error analysis and Modelling. **Module IV: Reliability analysis of Biomedical Instruments [L-4]** Concept of Reliability, Reliability of measurement systems, Reliability enhancement strategies **Module V: Operation of Physiological organs, Bioelectric Potentials and Electrodes [L-7]** Operation of Physiological organs, Operation of Nerves system, Operation of heart, Operation of lungs, Operation of Muscular system, Sources of bioelectric potentials, Bioelectric electrodes **Module VI: Building blocks of Biomedical Instruments [L-9]** Bioelectric sensors, Sensors, Signal conditioning circuits, Bridge circuits, Amplifiers, Filters, Oscillators, ADC, Signal Processing Units, Microcontrollers, Data Presentation elements **Module VII: Application Specific Biomedical Instruments [L-10]** Clinical thermometer, Sphygmomanometer, Digital Statoscope, ECG signal measuring instrument, EEG signal measuring instrument, Medical Imaging techniques, Assistive Respiratory system
Text Books, and/or reference material	**Text Books:** 1. John G. Webster, *Medical Instrumentation Application and Design*, 4ed, Wiley, 2015 2. J. Bentley, *Principles of measurement systems*. Prerequisites		Course Assessment methods: (Continuous Assessment (CA), Mid-semester assessment (MA) and end assessment (EA)):					
NIL		Assignments, Quiz/class test, Mid-semester Examination and End Semester Examination					

Course Outcomes	**CO1:** Apply Cellular concepts to evaluate the signal reception performance in a cellular network and traffic analysis to design cellular network with given quality of service constraints. **CO2:** Determine the type and appropriate model of wireless fading channel based on the system parameters and the property of the wireless medium. **CO3:** Analyze and design receiver and transmitter diversity techniques. Evaluate the data rate performance. **CO4:** Application of Fundamental Digital Communication Concepts in Fading Channel. Understanding suitable Modulation Schemes for Wireless Channel **CO5:** Describe and differentiate five generations of wireless standard for cellular networks. Understand wireless communication systems with key 3G (e.g., CDMA); 4G (OFDM) and 5G technologies
Topics Covered/ Syllabus	**Module I. (L - 5)** Introduction to Wireless Personal Communication, Mobile radio systems. **Module II. (L - 10)** Cellular systems concepts, principles, system design fundamentals, spectrum efficiency, frequency management, channel assignment, handoff, power control, Call blocking, Cell splitting and Directional antenna etc. **Module III. (L - 8)** Characterization of wireless radio channel, propagation path models. Fading and Shadowing. **Module IV. (L -12)** Receiver Techniques for fading Channel. Detection of Signal in Fading Channel, Receive Diversity, Transmit Diversity, Equalization, Fading mitigation. Modulation schemes for wireless Communication (MSK, GMSK), OFDM, Multiple access techniques: Spread spectrum techniques, Cellular CDMA, NOMA **Module V. (L - 7)** Wireless Networks and Standards: GSM, CDMA Cellular standard, 3G, 4G
Text Books, and/or Reference material	**Text Books:** [1] Andrea Goldsmith, "*Wireless Communication*", Cambridge University Press [2] Aditya K Jagannathan, "*Principles of Modern Wireless Communication Systems Theory and Practice*", McGraw-Hill India. ECO743	Internet of Things	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods: Continuous (CT), Mid-Term (MT), End Assessment (EA)					
NIL		CT+MT+EA					
Course Outcomes	**CO1**: Explain the term IoT and understand the main components of IoT systems. **CO2**: Recognize, interpret and apply a variety of enabling technologies, connectivity technologies and communication protocols that occur in IoT systems. **CO3**: Design and analysis of a complete working IoT system involving prototyping, programming and data analytics						
Topics Covered	**1. Introduction to IoT**: Introduction and definition of IoT; -Basics of networking: Network types; Network topologies; OSI model; Adressing TCP/IP; -Predecessors of IoT: WSN; M2M; Cyber Physical Systems **(5L)** **2. IoT enabling technologies**: **(8L)** - Cloud computing; Big data analytics; Embedded systems; -IoT levels: level 1 to level 6 -Introduction to sensors; actuators; microcontrollers, and their interfacing: Sensors-characteristics, types; Sensor interfacing-interfacing gas sensors with nodeMCU/ Arduino, interfacing pH sensor, interfacing pulse sensor. -Actuators: types, functions -Microcontrollers and overview **3. IoT communication technologies:** -Constrained nodes and networks: types; lossy and low power networks -Protocols for messaging and transport: Messaging protocols- MQTT; CoAp; XMPP; DDS -Protocols for addressing and identification: IPV4; IPV6; Uniform Resource Identifier (URI); 6LoWPAN; Discovery protocols like universal plug and play; multicast DNS. **(6L)** **4. IoT connectivity technologies:** IEEE 802.15.4; Zigbee; RFID; NFC; Sigfox; LoRa; NB-IoT; WiFi; Bluetooth **(2L)** **5. Cloud for IoT**: challenges; selection of cloud service provider; introduction to Fog computing- working principle; edge and Fog computing; security aspects. **(2L)** **6. Data analytics**: Data analysis; Machine learning: supervised and unsupervised; Types of ML models: classification; regression; clustering; Model building process; modeling algorithm; model performance; Big data platform. **(5L)** **7. IoT case studies and future trends**: Agricultural IoT; Vehicular IoT; Healthcare IoT; Evolution of new IoT paradigms- IoBT; IoV; IoNT; IoD; IoSpace; NFV; SDN; 5G as IoT enabler. **(6L)** **8. IoT hands on:**-Home automation: smart lighting;Air pollution monitoring;Health care: elderly fall detection; Prevention of drowsiness of drivers by IoT based smart drivers assistance systems. **(9L)**

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
EEO740	CONCEPT OF ELECTRICAL MACHINES & DRIVES	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO 1: Get an introductory draft of electrical drive system and discuss different drive systems stability based on fundamental torque equations. • CO2: Explore the motoring principle and design of different parameters of DC and AC motors. • CO3: Calculate different parameters of starters and breakers for DC and AC drive system and know about different starting and braking techniques. • CO4: Understand multi-quadrant operation of DC and AC drive systems and the speed torque characteristics. • CO5: Recognize different speed control techniques of DC and AC drives and compute different speed control system parameters.						
Topics Covered	Concept of electrical drives; Classification, group, individual, multi-motor electric drives; Classification of control schemes and components of electric drives, closed loop control of industrial drives. (6) Speed-Torque characteristics of dc drives; Basic parameter, types of loads, quadrant diagram. Speed-Torque characteristics of dc shunt and series motor. Types of starters and braking (dynamic, regenerative braking) of dc drive. (8) Speed control of dc motor: Basic parameters, method of speed control of dc shunt and series motor. Speed control of dc series motor in a crane using dynamic braking. Introduction to soft control of dc drive. (8) Induction Motor Drives: Three phase I.M., analysis and performance. Operation with unbalanced source voltages and single phasing, analysis						

	of I.M. fed from non-sinusoidal voltage supply. Starting, Braking. Speed control methods of IM, v/f-controlled induction motors, controlled current and controlled slip operation and its application. (12) Stepper, universal, servo and switch reluctance motor drives, solar and battery powered drives, Energy conservation in Electrical Drives. (5) Industrial application of electrical drives: Electric traction, paper mill, textile mill, and coal mines. (3)
Text Books, and/or reference material	Text Books: 1. G. K. Dubey, Fundamentals of Electrical Drives, Narosha Publishing House, 2001. Reference Books: 1. N. K. De and P. K. Sen, Electric Drives, PHI, 2001.

Course Outcomes	• CO 1: Familiarization with biomedical equipment's and transducers • CO2: Introduction to biomedical signal conditioners • CO3: Acquiring knowledge about development of bio potentials and their measurements. • CO4: Introduction patient health care monitoring • CO5: Introduction to computerized imaging techniques
Topics Covered	Introduction to biomedical Instrumentation, biomedical electronics, Components of Analog and digital circuits. (8) Various types of signal conditioners, signal conditioning processes. (8) Generation of Nernst Potential, Establishment of diffusion potential, Goldman Equation, Measurement of membrane potential, resting potential, action potential. (6) Use of electrodes for measurement of bio potentials, polarization in electrodes, principle of operation of Ag/AgCl electrode, Equivalent circuit of electrode. (6) Measurement of ECG, Einthoven triangle method, unipolar and bipolar limb leads, ECG amplifiers, Problems encountered in ECG recording. (6) Introduction to medical imaging, Radiography, Computerized tomography, X Ray, -CT, MRI. (8)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEC01 (ELECTRICAL TECHNOLOGY)		CT+MT+EA					
Course Outcomes	• CO1: To understand the basics of Energy System and overall energy resources • CO2: To design the solar and wind power plant • CO3: To understand the tidal, geothermal energy, biomass and other resources and principles • CO4: To understand the energy conservation opportunities and energy saving						
Topics Covered	Introduction: Energy system as electrical system, Energy chain, National and International Energy scenario, various non-conventional energy resources-importance, classification relative merits and demerits, Carbon emission, carbon credit, Paris environmental meet for awareness of emission. (9) Solar photovoltaic: Introduction, solar radiation & its relationship with photovoltaic effect. Photovoltaic concentration, photovoltaic systems-standalone, Solar Constants, Definition of solar thermal: Thermal characteristics of solar radiation, solar collectors: -materials, types, focusing. Solar thermal power plant: layout and arrangement, solar cooling, recent developments. (8) Wind power and its sources, site selection criterion, wind characteristics, momentum theory, Classification of wind machines. Wind mills-different design & their control, wind generators- different types, wind farms & grid. Wind						

	generation in India. Wind Power and maximum power equation. Wind penetration & its effects, economic issues, recent developments, international scenario. (6) Principles of tidal power generation, components of power plant, Single and two basin systems, Estimation of energy, Maximum and minimum power ranges. Ocean and geothermal Energy, geothermal power plant. OTEC Principle, Open cycle and closed cycle. (4) Bio fuel, Conversion of biomass, Biofuel classification, Biomass production for Energy farming, direct combustion for heat-pyrolysis-thermochemical process, Anaerobic digestion- Digester sizing- waste and residues, vegetable oils and biodiesels, Applications of Biogas, Social and environmental aspects. (5) Fuel Cell: Basic construction & principle of operation of fuel cell, Fuel cell power plants & its integration with wind and solar photovoltaic systems. Geothermal Energy, Dry Steam power plant, Single and Double Flash power plant and integration in electrical system/Grid. (5) Energy conservation opportunities, Type of energy audit, energy audit report. Saving of energy with energy economics. (5)
Text Books, and/or reference material	Text Books: 1. G.D. Rai, Non-conventional energy resources, Khanna Publishers, New Delhi, 2003. 2. N. G. Clavert, Wind Power Principle, their application on small scale, Calvert Technical Press. 3. Fuel Cell Handbook, Parsons Inc. 4. Earnest and T. Wizelius, Wind Power Plants and Projects development, PHI

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
EEO743	FLIGHT CONTROL SYSTEMS	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CONTROL SYSTEMS (EEC431) FUNDAMENTALS OF CONTROL SYSTEMS (EEO541)		CT+MT+EA					
Course Outcomes	• **CO1:** To develop the concept of the aerodynamics, 6 degrees of freedom motion of aircraft and understanding the role of control surface. • **CO2:** To understand the longitudinal and lateral dynamics of aircrafts and						

	to identify different modes along with the scope of their improvements by designing control law. • **CO3:** To develop the concept of Static and Dynamic Stability of Aircrafts. • **CO4:** To develop insight on margin criterion, the closed loop response specifications and their relationship with the stability and flying qualities of the aircrafts. • **CO5:** To design control law based on Classical Control Theory for Longitudinal and Lateral/directional dynamics to meet the desired margin and flying qualities criteria • **CO6:** To design control law based on Classical Control Theory for Longitudinal and Lateral/directional dynamics to meet the desired margin and flying qualities criteria
Topics Covered	**Motions of Aircraft:** Primary Definitions, 6 DOF Motion, Aerodynamic Angles, Forces and Torques, Aircraft Position and Orientation, Stability-Frame and Body-Frame, Euler's Equations (3) **Linearization of Equations of Motion:** Small Disturbance Theory and Linearization of Equations of Motion, Stability and Control Derivatives (2) **Longitudinal Dynamics:** Aircraft Longitudinal Dynamics, Longitudinal Motion Approximations, Short period mode, Phugoid mode, Influence of Stability Derivatives, Transfer Functions, Flying Qualities (5) **Lateral Dynamics:** Aircraft Lateral Dynamics, Lateral-Directional Equations, Dutch Roll, Roll and Spiral Modes, Approximate Models, Transfer Functions, Flying Qualities (5) **Stability and Control:** Static Stability Basics, Longitudinal static stability, Lateral/directional static stability, Dynamic Stability (3) **Classical Design Techniques for Flight Control:** Review of Control System Analysis/Synthesis Techniques, Closed loop performance specifications, Longitudinal Stability Augmentation System and Control Augmentation System Designs, Lateral Stability Augmentation System and Control Augmentation System Designs, Design for Aileron to Rudder interconnect gain, Concept of Autopilot design, Design of 2 Loop, 3 Loop Roll Autopilot (12) **Advanced Design Techniques for Flight Control:** Design of longitudinal and lateral Stability Augmentation System using Pole Placement, Linear Quadratic Regulator with Output feedback, Linear Quadratic Regulator with full state feedback, Designing Performance Index, Tracking a command (12)
Text Books, and/or reference material	Suggested Text Books: 1. Stevens and Lewis, Aircraft Control and Simulations, Wiley & Sons, 3rd Edn 2. Dynamics of Flight Stability and Control by Etkin and Reid, John Wiley & Sons, 3rd Edn Suggested Reference Books: 1. Flight Stability and Automatic Control by Nelson, WCB/McGraw-Hill, 2nd Edn 2. Introduction to Flight by Anderson, McGraw-Hill, 2nd Edn 3. Guided Weapon Control Systems by Garnell and East, 1st Edn Pergamon Press, 1980

MEO 741	**Non-conventional Energy Systems**	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT) and end assessment (EA))
NA	CT+EA

Course Outcomes	CO1: Identify and explain the use of non-conventional energy systems. CO2: Develop an understanding that solutions to energy-related problems are complex involving sociological, economic, political and technological considerations, decisions and development. CO3: Gain insight into the issues surrounding non-conventional energy sources development and use. CO4: Become knowledgeable about applications of non-conventional energy systems as they apply to commercial, residential and industrial markets.
Topics Covered	Traditional energy systems, Sources, Features and characteristics, applications 2 Component of solar energy systems, Collector types and performances, Radiation and meteorological data processing, Long term conversion factors, System conversion and system design procedures, Solar power generation, Solar heating and cooling, Solar passive systems: Solar still, Pond, Greenhouse, Dryer, Trombe wall, Overhangs and Wing walls. 13 Wind energy conversion systems, Estimate of wind energy potential, Aerodynamic and mechanical aspects of wind machine design. 4 Principles and applications of wave energy, Shoreline systems, Near shore systems, Off shore systems 3 Tidal energy, Biomass energy, Operating principle, Wood gassifier, Pyrolysis, Applications, 4 Geothermal energy and OTEC. 4 Fuel cell: Types and technology status. 3 Hydel Power Plant: Introduction to hydro-electric power generation, Types of Hydel turbines, Layout and selection of turbines and installation, Geographic limitations, Turbine performance, Comparative analysis between thermal and hydel plants. 9
Text Books, and/or reference material	**Suggested Text Books:** 1) Solar Energy Fundamentals and Applications-- Garg and Prakash 2) Solar Energy-- S. P. Sukhatme **Suggested reference books:** 1) Fundamentals of Renewable Energy Systems-- D. Mukherjee and S. Chakrabarti 2) Non-conventional Energy Sources-- D. S. Chauhan and S. K. Srivastava

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MMO 541	Basic Manufacturing Processes	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))
Engineering Physics (PH-01)	CT+MT+EA

Course Outcomes	CO1: To understand the basic fundamental of structure and properties of metal CO2: To learn fundamentals of different manufacturing process. CO3: To learn science and technological aspects of the different manufacturing techniques
Topics Covered	Introduction: Importance of manufacturing process. Economic & technological consideration in manufacturing. Classification of manufacturing processes. Materials & Manufacturing processes for common items. [4 hours] Crystallography and Equilibrium Phase Diagram: Concept of unit cell space lattice, Bravais lattices, common crystal structure, Defects and dislocation in solids. Uniary and Binary diagram, phase rules, Types of equilibrium diagrams, Solid solution type and combination type. Iron-carbon equilibrium phase diagram. [6 hours] Mechanical Properties: Materials Structure and properties of engineering materials, stress-strain diagrams for engineering materials. Stress vs Strain, toughness, Hardness, Fracture, Fatigue and Creep. Ductile & brittle materials. Heat treatment of steels Annealing, Normalising and hardening. [5 hours] Metal Forming Processes: Forming: Plastic deformation and yield criteria; fundamentals of hot and cold working processes; Load estimation for bulk (forging, rolling, extrusion, drawing) and sheet (shearing, deep drawing, bending) metal forming processes; Work required for forging operation, Different forging operation, different forging tools. Condition for rolling force and power in rolling. Rolling mills & rolled section. Hot and cold working Rolling, forging, wire & tube drawing, deep drawing extrusion [8 hours] Manufacturing Processes: Metal casting: patterns and moulds making, gating and risering, melting, casting practices in sand casting, permanent mould casting, investment casting and shell moulding, casting defects and repair. [5 hours] Joining: Physics of welding, Process of different welding, common welding processes of shielded metal arc welding, gas metal arc welding, gas tungsten arc welding and submerged arc welding; welding metallurgy, problems associated with welding of steels and aluminium alloys, defects in welded joints. [5 hours] Heat treatment: hardening, annealing, tempering, normalizing, surface hardening, case hardening. [2 hours] Powder Metallurgy: Powder Metallurgy Manufacturing Process. Principles of powder metallurgy. The need, Process, advantage and applications. [3 hours]

MSO-841	MARKETING RESEARCH AND ANALYTICS	PEL	3	0	0	3	3
Pre-requisites- NIL		Course Assessment methods (Continuous (CT) and end assessment (EA))					
		CT+EA					

Course Outcomes	CO1. Students will be aware of technique of customer segmentation and new product designing CO2. Students will be informed about understanding customer perception on competitive brands CO3. Students will be educated on technique of comparative analysis on various marketing matrix
Topics Covered	**UNIT I:** Conceptualization and process for conducting research on marketing problems **(5)** **UNIT II:** Application of univariate and multivariate techniques in solving marketing problem. Application of independent sample, before –after T, chi- square statistics to solve marketing problem; Guidelines for application of statistical software.(9) **UNIT III:** Experimental design and its application. Guidelines for application of statistical software.(4) **UNIT IV:** Application of cluster analysis for solving market – segmentation problem. Making of similarity index from categorical data .Distance and correlation based approach for building similarity index. Software based application.(9) **UNIT V:** Application of conjoint analysis in designing consumer preference. Discussion of case studies in relation to design new product /service.(7) **UNIT VI:** Application of other Multivariate techniques for solving relevant marketing problems(10)
Text Books, and/or reference material	Text Books: 1. Applied Multivariate Statistical Analysis, Richard A. Johnson, Dean W. Wichern, Person Prentice Hall **2.** Multivariate Data Analysis, Joseph F. Hair, William C. Black, Barry J. Babin, Rolph E. Aderson, Person Prentice Hall. 3. Marketing Research: An Applied orientation, Naresh K. Malhotra, Person Prentice Hall 4. Business Research Methods, Prahlad Mishra, Oxford University Press India

BTO840	Industrial Biotechnology	PEL	3	0	0	3	3
Pre-requisites			Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))				
Life science			CT+MT+EA				
Course Outcomes	CO1- To understand the methods of cell 's bio processing under various conditions, strain improvement methods for better results CO-2 Demonstrate the experimental techniques associated with aseptic processes, media preparation and related upstream processes CO-3 .Design and develop medium for cell cultivation for fermentation process Apply the knowledge of sterilization techniques CO-4 Understand needs of various parts of fermenter and their operation and Design bioreactor based on thumb rules for fermentation operation CO-5 Apply the knowledge of Purification Separation and kinetics theory of Enzyme production for industrial fermentation						
Topics Covered	**UNIT 1 CELL CULTIVATION ,GROWTH KINETICS** -- 10 Hrs Media development for Cell growth and culture for microbes , plant, animal -derived cells and its application. Microbial growth kinetics, logistic growth model, growth of filamentous organism Strain improvement of industrial micro organism. Measurement of cell mass. Cell immobilization. Numericals.. **UNIT 2-MEDIA PREPARATIONand STERILIZATION** 10 Hrs Sterilization: basic concepts in sterilization in situ and ex-situ sterilization, Sterilization of medium, air, filters, fermenter. Types of media, Strain preservation , inoculum preparation, Development of inocula for industrial fermentation/ seed fermenter **UNIT 3- BIOREACTOR DESIGN AND ITS OPERATION- 12 Hrs** Purpose and importance of bioreactor, Parts of fermenter and types ;Oxygen requirement, Oxygen transfer in fermenter, , KLa measurement, Measurement of dissolved oxygen concentrations, Estimating Oxygen Solubility Operational modes of bioreactor: batch, semi-batch/fed batch,						

	continuous. Major components of bioreactor and its purpose, classification of Bioreactor – SLF, SSF, animal and plant cell culture. Classification of bioreactors for environmental control and management. Fixed bed bioreactor, airlift reactor, hollow fibre reactor, seed reactor. **UNIT 4 INDUSTRIAL ENZYMES ,PURIFICATION and A PPLICATIONS** -10Hour Enzyme engineered for new reactions-novel catalyst for organic synthesis. Case studies: thermozymes cold adopted enzymes. Ribozymes, therapeutic enzymes of industrial importance (amylase, glucose isomerase, cellulose, lipase, protease, xylanase, invertase, peroxidases). Separation of insolubles: filtration, centrifugation. Extraction and purification of solubles: Ultra filtration, high performance tangential flow filtration, Recovery and purification of intracellular products: cell disruption, chromatographic techniques. Analytical assays of purity level of enzymes.

Pre-requisite(s)	Course Assessment methods
Basic Engineering, statistics & probability	Continuous (CT) and end assessment (EA). CT+EA

Course Outcomes (COs):	· CO1: Development of skills for predicting engineering system behaviour · CO2: Knowledge of basics of data analysis for further applications. · CO3: Developing the requisite skill that helps in the advanced courses related to experimental study
Topics Covered (Hrs)	**Types of measurements and errors**: Internal & external estimates of errors, Relative frequency distribution, Histogram, True value, Precision of measurement, Best estimate of true value & precision, Methods of calculating best estimate of true value & standard deviation **(7)** **Combination of measurements**: Accuracy of mean, Significant digits. Method of least squares & its application for calculation of best estimate of true value, curve fitting, **(8)** **General linear regression**: Comparison & combination of measurements. Extensions of least square method. Theory of errors, Binomial & Gaussian distribution, Confidence limits, Significance test, principle of maximum likelihood & goodness of fit, Chi-square test. **(9)**

	Displacement measurement: Dial Gauge, Microcator, Optical Method, Pneumatic Transducer, Strain Gauges, Variable Inductance & Capacitance Transducer, Piezo-Electric, Electro-Kinetic, Photo-Electric, Ionization, Vibrating Wire & Vacuum Tube Transducer. **Force & Torque:** Elastic Type, Fluid Load Cell, Dynamometers. **Temperature:** Bi-Materials, Pressure & Resistance Thermometers, Thermocouples & Pyrometers. **Pressure:** McLeod Gauge, Pirani Gauge, Ionization Gauge, Manometers, Bourdon Tube, Resistance Gauges. **Fluid Velocity:** Pitot tube & Hot Wire Anemometer, LDA. Flow Measurement in Confined Passages & Open Channels. Miscellaneous measurements **(10)** **Dynamic Response** of a Measuring Instrument, Response to Transient & Periodic Signals, First & Second-order systems as well as their Dynamic Response Characteristics. (**8)**

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MAC01, CYC01		CT+MT+EA					
Course Outcomes	• CO1: Understand the kinetics of different bioprocess for the design of bioreactor. • CO2: Analyze the performance of bioreactors. • CO3: Apply the knowledge of bioprocess for industrial production.						
Topics Covered	**Module I:** [15 hrs.] Introduction of Bioprocesses and their important in process industry; Free enzyme kinetics; Inhibition in enzymatic reactions. Bioreactors for enzymatic reactions.						

	Module II: [15 hrs.] Cell growth kinetics; Growth models, Inhibition in cell growth kinetics, Reactors for cell growth system. Combination of bioreactors for cell growth. **Module III:** [10 hrs.] Downstream processing in bioprocesses; Intra and extracellular product extraction and separation. Industrial application of bioprocesses. **Module IV:** [10 hrs.] Application of enzymatic reactions in industrial production. Production of HFCS. Application of cell growth reactions in industrial production. Biofuel production, waste water treatment.

CHO842	**ENERGY INTEGRATION AND ECONOMICS IN PROCESS INDUSTRY**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Heat Transfer		CT+MT+EA					
Course Outcomes	• CO1: To identify and understand the method of data extraction for energy integration in the process industry • CO2: To analyse the process heat data to minimize energy cost. • CO3: To create the low cost heat integrated process.						
Topics Covered	**Module I:** [8 hrs.] Introduction to process Integration (PI) and Pinch Technology. **Concept** of ΔT_{min}, Data Extraction, Composite curve, Grand Composite Curve, Targeting, Graphical representations. Rules of data extraction. Problem Table Algorithm.						

	Module II: [8 hrs.] Introduction to Energy Targeting, principle of pinch, problem table algorithm, Grand composite curve analysis, Threshold problems, Multiple utility targeting with grand composite curve. Number of units targeting. **Module III:** [8 hrs.] Introduction to area targeting, balanced composite curves, area targeting for unequal heat transfer coefficient, area targeting for equal heat transfer coefficient, shell targeting. **Module IV:** [8 hrs.] Introduction to cost targeting, capital cost targeting, operating cost targeting, total cost targeting, cost targeting for optimum ΔT_{min}. **Module V:** [10 hrs.] Pinch design method for heat exchanger network (HEN) synthesis, rules of pinch design method, remaining problem analysis, design for multiple pinch problem. HEN optimization with case studies.

Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Digital Electronics, Computer Organisation, Algorithm Analysis and Design.		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: To visit the various stages of the VLSI design cycle and appreciate the role of automation therein. • CO2: To appreciate how High Level Synthesis converts an HDL code into an architecture level design. • CO3: To discuss the algorithmic approach to physical design. • CO4: To emphasize the importance to testability measures in the design.						

Topics Covered	VLSI Design cycle. Design styles. System packaging styles. Fabrication of VLSI devices. Design rules-overview. (3L) HLS: Scheduling in High Level Synthesis. ASAP and ALAP schedules. Time constrained and Resource constrained scheduling. (4L) HLS: Allocation and Binding. Datapath Architectures and Allocation tasks. (4L) Partitioning. Clustering techniques. Group Migration algorithms. (4L) Floorplanning. Constraint based Floorplanning. Rectangular Dualization. Hierarchical Tree based methods. Simulated Evolution approaches. Timing Driven floorplanning. (5L) Placement.Simulation based placement algorithms. Partitioning based placement algorithms.ClusterGrowth.(5L) Global Routing. Maze Routing algorithms. Line probe algorithms. Shortest Path based algorithms. Steiner's Tree based algorithms. (5L) Detailed Routing. Channel Routing Algorithms. Switchbox Routing. Over-the-cell routing. Clock and Power Routing. (4L) Design for testability. Fault testing. Ad-hoc and structured DFT techniques.(8L)

Programming Fundamentals, Data Structure and Algorithms, Operating Systems, Data networks (may be carried out		CT+EA [CA: 15%, MT: 25%, ET: 60%]					

simultaneously)	
Course Outcomes	• CO1: Understanding the fundamental concepts of Internet Structure and Protocols. • CO2: Using TCP/IP protocols, SOCKET API and HTTP. • CO4: Designing and developing Web applications with security enhancement. • CO5: Understanding Semantic Web and Applying Web Analytics over Semantic Web.
Topics Covered	INTERNET TECHNOLOGY: Brief review of Data Networking; Introduction to Data Communication, OSI Layered Architecture, Introduction to Networking Devices, Network Performance Metrics. (4L) data transmission over point to point links, link sharing and MACs, Forwarding and Routing, TCP-IP layered network concepts. (3L) Internet specific issues like scalability, inter operability. (1L) Internet Structures – logical and physical grouping with sub netting and super netting. (3L) Review of TCP-IP protocols – processing, performance and variations. (3L) Security Implementations - secured IP, Transport Layer security. (3L) Quality of Service Issues and their Application in Internet. (2L) HTTP: Requests and Responses - Message Formats, Headers and Fields; TCP Keep-alive and pipe-lining concepts; Server Architecture, Performance and Deployment. (3L) WEB PROGRAMMING: Document Object Model; Client side scripting fundamentals: Server Side Scripting and Programming – Data base connectivity, session management and security enhancement; Introduction to Web Application Development Platforms – JavaEE, Dzango. (7L) XML: DTD and Schema; Visualisation using XSLT; Web Application using XML; Service Oriented Architecture and Web services based application development and deployment; Xquery and SOA based application development platforms. (6L) SEMANTIC WEB: General Concept of Semantic Web and linked Data; RDF based relation description; Web Ontology concepts and use; Putting XML, RDF and Ontology together to develop semantic web applications; Capturing Information from semantic web pages; Data analytics over semantic and linked Web. (7L)

ECO841	Signal Processing	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods: (Continuous (CT), Mid-Term (MT), End Assessment (EA))					
Signals and Systems (ECC303), Mathematics-II & III (MAC02 & MAC331)		Class Assignments, Mid and End term examinations					
Course Outcomes	**CO#1**. Represent signals in time and frequency domain. **CO#2**. Implement DFT, FFT and z-transform. **CO#3**. Analyse a given signal or system using tools such as Fourier						

	transform and z-transform to know the property of a signal or system. **CO#4**. Design of prototype of Linear Phase Filters, FIR and IIR Filter Structure. **CO#5**. Process signals to make them more useful and to design a signal processor (Digital filter structures) for a given problem.
Topics Covered/ Syllabus	Introduction: reasons behind digital processing of signals, brief historical development, organization of the course. (L=2) Theory of discrete time linear system sequences, linear time invariant systems, causality, stability, difference equations, frequency response, discrete Fourier series, relation between continuous and discrete systems, Inverse Systems, Stability. (L=2) Z –transform: definition, properties of Z transform, system function, digital filter implementation from the system function, region of convergence in the Z plane, determining filter coefficients from the singularity locations, geometric evolution of Z transform in the Z plane, relationship between Fourier transform and Z transform, inverse Z transform. (L=4) Transform technique: Fourier transform, its properties, inverse Fourier transform, discrete Fourier transform, properties of DFT, circular convolution, computations for evaluating the DFT, decimation in time and decimation in frequency FFT algorithms, discrete Hilbert transform. (L=5) Digital filter structures: system describing equations, filter categories, All Pass Filters, Comb Filters, direct form I and II structures, cascade and parallel communication of second order systems, Polyphase representation of filters, linear phase FIR filter structures, Compensatory Transfer Functions, frequency sampling structure for the FIR filter. Test for Stability using All Pass Functions. (L=6) IIR filter design techniques: Analog Filter Design, Analog Butterworth lowpass filter design techniques, Analog Chebyshev LPF, Design methods to convert analog filters into digital filters, frequency transformation for converting lowpass filters into other types, all-pass filters for phase response compensation. (L=6) Digital Filter Structures: IIR Realizations, All Pass Realizations, FIR and IIR Lattice Synthesis, IIR Design by Bilinear Transformation, Digital to Digital Frequency Transformation. (L=6) FIR filter design techniques: Windowing method for designing FIR filters, DFT method for approximating the desired unit sample response, combining DFT and window method for designing FIR filter, frequency sampling method for designing FIR filter (L=6) Non-Linear System Identification Schemes, Fractional-order digital differentiators (DDs) and digital integrators (DIs), Fractional-order low-pass Butterworth and Chebyshev filter. (L=5)

Basic Electronics (ECC01), Physics of Semiconductor Devices (PHC331)		CT+MT+EA					
Course Outcomes	• CO1: Outline basic knowledge of semiconductor materials, devices and growth process of Si devices • CO2: Identify the process flow of device fabrication. • CO3: Illustrate each process method of VLSI technology • CO4: Build the knowledge of integrated process technology						
Topics Covered	**Module 1: Introduction** [3L] Materials, Definitions, Scaling laws, Idea of Clean room, Si Substrate Growth and Cleaning of Si **Module 2: Oxidation** [5L] Oxidation: Process of Oxidation, Types of Oxidation, Deal-Grove Model, Dependence of oxidation on different parameters, Applications in IC technology, LOCOS. **Module 3: Lithography** [6L] Process flow of lithography, Components of Lithography, Aligner; Contact, Proximity, Projection, Metrics of Lithography, Photo resist-Positive and Negative, Mask, Next generation lithography. **Module 4: Diffusion and Ion Implantation** [7L] Basic Concepts, Diffusion in Si, Poly Si, Basic Process: Pre-deposition and Drive-in Diffusion, Problems in Thermal Diffusion, Advantages of Ion Implantation, Ion Implantation system, Mechanism, Implantation Profile, Junction Depth, Dose and Concentration relationship, Ion Implantation damage and annealing, Ion Channeling, Multi Implantation.						

	Module 5: Thin Film Deposition [6L] Requirements of deposition, Methods: Physical Vapor Deposition and Chemical Vapor deposition, Step Coverage and Filling Issues. **Module 6 Etching:** [3L] Etch process, Requirements, Figure of merits, Types of Etch, Dry and Plasma Etch, Ion enhanced Etch. **Module 7: Metallization and Interconnect** [6L] Interconnect, Interconnect requirements, Possible Interconnect materials, Al metallization, Al spike problem, Hillocks and Voids, Electromigration Problems, Methods to reduce the problems, Metal silicides, Multilevel Metallization, W plugs for contact and vias, Intermetal Dilectrics. **Module 8: IC process Integration** [6L] Simple Resistor, Capacitor, NMOS.
Text Books, and/or reference material	1. VLSI Technology: S M Sze 2. Silicon Process Technology: S K Gandhi 3. Silicon VLSI Technology: Plummer, Deal and Griffin 4. Fundamental of Semiconductor Fabrication: Sze and May

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
ECO843	EMI/EMC	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods: (Continuous Assessment (CA), Mid-semester assessment (MA) and end assessment (EA)):					
Signals and Systems (ECC303) Analog Communication (ECC401) Digital Communication (ECC501) Electromagnetic Theory and Transmission Lines (ECC403) Microwave Engineering (ECC502)		Assignments, Quiz/class test, Mid-semester Examination and End Semester Examination					
Course Outcomes	**CO#1** Ability to understand the basic knowledge of the sources of electromagnetic interference and electronic equipment classes based on						

	standards **CO#2** Ability to analyze, explain and resolve technical problems related to electromagnetic interference **CO#3** Develop an ability to devise methodologies to mitigate electromagnetic interference and make the electronic system compatible
Topics Covered/ Syllabus	**Introduction to EMI** : Definitions, Different Sources of EMI (Electro-magnetic Interference), Electro-static discharge (ESD), Electro-magnetic pulse (EMP), Lightning, and Mechanism of transferring Electro-magnetic Energy: Radiated emission, radiated susceptibility, conducted emission, and conducted susceptibility, Differential & common mode currents. Concepts of EMC, EMC units. **[L-8]** **Transmission Line Theory** : transmission by guided media, idea of propagation characteristics and computation of VSR, reflection coefficient, scattering parameters. Transients of transmission line, Time-domain Reflectrometry (TDR) basics for determining the properties of a transmission line. Planar Transmission lines Pattern of EM field distribution in a Micro-strip Line, Derivation of Effective Dielectric Constant, Characteristic impedance & Attenuation, Different Micro-strip line design examples, coupled transmission lines, concept of signal integrity **[L-8]** **Impedance Matching & Tuning** : Purpose of Impedance matching, Factors important in the selection of a particular matching network, Different types of Impedance matching, Single stub matching, double stub matching, The quarter-wave transformer, Quarter-wave transformer bandwidth calculation, theory of small reflection, Single-section Transformer, Multi-section Transformer **[L-8]** **Electromagnetic Sensors and Measurement** : Antenna types and their use as sensors, effective height, antenna factor, broadband and multiband electromagnetic sensors, sub wavelength electromagnetic sensors, Power losses in cable, calculation of signal source output for a mismatched load, Measuring & Test systems, Test facilities, measurements of radiated emission in open test range & in Anechoic chamber, Conducted emission testing by Line Impedance Stabilization network (LISN). **[L-8]** **EMC requirements for electronic systems** : World regulatory bodies- FCC, CISPR etc. Class-A devices, class-B devices, Regulations of the bodies on EMC issues. **[L-6]** **Mitigation Techniques Grounding** : Fundamental grounding concepts, Floating ground, Single-point & Multi-point ground, advantages & disadvantages of different grounding processes. Shielding, Cross-talks & Coupling, Measurement set for measuring Cross-talk. Filtering & decoupling. **[L-6]** Electromagnetic pulse and application in warfare, electromagnetic discharge **[L-2]**

EEO840	Microgrid systems	PEL	3	0	0	3	3
Pre-requisites:		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• **CO1:** Acquire an idea about microgrid and its operations. • **CO2:** To learn the different components of the microgrid systems. • **CO2:** To study different types of microgrid and different control strategies. • **CO3:** To model and calculate different parameters of the renewable sources and the energy storage system of microgrid. • **CO4:** To learn different active and reactive power control strategies of microgrid. • **CO5:** To understand the future applications of microgrid and its role in the electrical ecosystem.						
Topics Covered	1. **Introduction:** What is microgrid, advantage of microgrid over traditional systems, architecture of microgrid, operating modes of microgrid. **(2L).** 2. **Components of microgrid:** Local generation, different loads, storage system, converters, filters, monitoring and control system **(4L).** 3. **Classification of microgrid:** AC, DC, and hybrid microgrid, architecture and components of different microgrids, classification based on control strategies, centralized and decentralized control **(5L).** **4. Renewable sources:** PV source, modelling of PV source, MPPT of PV source, different components of wind turbine, MPPT control of wind turbine, effect of uncertainty on PV and wind power **(6L).** 5. **Energy storage system:** Advantage of ESS, different type, integration of ESS, importance of storage system in microgrid **(4L).** 6. **Microgrid power control:** ABC/DQ, DQ/ABC transformation, centralized P-Q control, droop control, master-slave control, peer to peer control **(6L).** 7. **Role of microgrid in future electricity ecosystem:** Decarbonisation, digitalization, decentralization, load forecasting, load shedding, energy management. **(7L).**						
Text Books, and/or Reference Material	**Text Book:** HANDBOOK ON MICROGRIDS FOR POWER QUALITY AND CONNECTIVITY– Asian Development Bank **Reference Book:** Microgrid Technologies– C.Sharmeela, P.Shivaraman, P.Sanjeevikumar (Wiley)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	• CO 1: Familiarization with biomedical equipment's and transducers • CO2: Introduction to biomedical signal conditioners • CO3: Acquiring knowledge about development of bio potentials and their measurements. • CO4: Introduction patient health care monitoring • CO5: Introduction to computerized imaging techniques						
Topics Covered	Introduction to biomedical Instrumentation, biomedical electronics, Components of Analog and digital circuits. (8) Various types of signal conditioners, signal conditioning processes. (8) Generation of Nernst Potential, Establishment of diffusion potential, Goldmann Equation, Measurement of membrane potential, resting potential, action potential. (6) Use of electrodes for measurement of bio potentials, polarization in electrodes, principle of operation of Ag/AgCl electrode, Equivalent circuit of electrode. (6) Measurement of ECG, Einthoven triangle method, unipolar and bipolar limb leads, ECG amplifiers, Problems encountered in ECG recording. (6) Introduction to medical imaging, Radiography, Computerized tomography, X Ray, -CT, MRI. (8)

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
PHC01: Engineering Physics, CYC01: Engg Chemistry		CT+EA					
Course Outcomes	CO1: Learn science and technological aspects to a design problem involving materials. CO2: Emphasis is put on such engineering materials which are traditionally and commercially important. CO3: The existing industrial materials problem can be analysed and various techno-economic aspects of materials science.						
Topics Covered	Introduction: Solid Engineering Materials- their classification and characteristic properties.(1) Solidification of pure metals: Homogeneous and Heterogeneous nucleation process, cooling curve, concept of supercooling, microstructures of pure metals. (1) Binary phase diagrams: Isomorphous, eutectic, eutectoid, peritectic, and peritectoid systems, effect of non-equilibrium cooling, coring and homogenization. (2) Iron cementite diagram: Construction and interpretation of Fe-Fe_3C and Fe Graphite diagrams. Microstructure and properties of different alloys in steel and cast iron, their microstructures and typical uses. (2) Physical metallurgy of common non-ferrous alloys: Cu, Al and Ni based alloys. Microstructures and heat treatment of common alloys of these systems. (2) Study of the industrially important steels, their mechanical and thermal treatment and uses: Plain carbon steels, Dual Phase Steels and High Strength Low alloys (HSLA) Steels. (8) Effect of Alloying Elements in Steel. Alloy Steels: Manganese Steels, Hadfield manganese Steel. Heat Resistant and Stainless Steels, Tool and Die Steels, High speed tool steel (HSTS), Maraging Steels. (7) Study of Nonferrous Alloys, their mechanical and thermal treatment: Brasses, Bronzes, Bearing Metals, Light alloys based on Aluminium and Magneium, Titanium Base alloys, Ni base alloys, Lead and tin base babbits. (8) Cryogenic and High temperature Materials, Alloy cast irons, Special purpose materials, such as, Materials for Aerospace, Nuclear Reactors etc. Electrical and Magnetic Materials. (4)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	• CO1: Learners will be acquainted with the variegated aspects of life represented through literature • CO2: Learners will be able to critically appreciate a piece of literary work acknowledged to be a classic • CO3: Learners will be introduced to the sublime beauty of literary language						
Topics Covered	. **Poetry (any five to be selected by the Instructor):** William Shakespeare: Sonnet No. 73/ Sonnet No. 116 / Sonnet No. 118 John Donne: The Canonization / The Extasie Andrew Marvell: To His Coy Mistress / The Garden William Wordsworth: Upon Westminster Bridge / Tintern Abbey P. B. Shelley: The Cloud / Ode to the West Wind John Keats: Ode on a Grecian Urn/ Ode to a Nightingale / Bright Star Lord Alfred Tennyson: Break, Break, Break / Ulysses / Tithonus Robert Browning: My Last Duchess / Two in the Campagna Matthew Arnold: Shakespeare / Dover Beach W. B. Yeats: The Second Coming /Sailing to Byzantium T. S. Eliot: The Love Song of J. Alfred Prufrock /Preludes **B. Play (one to be selected by the Instructor):** Christopher Marlowe: Doctor Faustus / William Shakespeare: Julius Caesar / William Shakespeare: Macbeth / William Shakespeare: Hamlet / William Shakespeare: Othello / William Shakespeare: King Lear /William Shakespeare: As You Like It / William Shakespeare: Twelfth Knight /Bernard Shaw: Arms and the Man / Girish Karnad: Hayavadana /John Galsworthy: Justice / St. John Ervine: Progress / T.S. Eliot: Murder in the Cathedral / Samuel Beckett: Waiting for Godot / John Osborne: Look Back in Anger / Harold Pinter: The Birthday Party **C. Novel (one to be selected by the Instructor):** Charles Dickens: Hard Times / Thomas Hardy: The Mayor of Casterbridge / E M Forster: A Passage to India / Joseph Conrad: Heart of Darkness / William Golding: Lord of the Flies / Graham Greene: The Power and the Glory / James Joyce: A Portrait of the Artist as a Young Man/ George Orwell: Animal Farm						
Text and/or Books	Text Book: As recommended by the Instructor from time to time

MSO 852	INDUSTRIAL MARKETING	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA)					
NIL		CT+EA					
Course Outcomes	• CO1: Understand the importance of industrial marketing • CO2: Analyse industrial consumer behaviour						

	• CO3: Formulate effective industrial marketing strategies
Topics Covered	1. Understanding industrial marketing Company's vision and industrial marketing, market paradigms, business assumptions, understanding industrial customer orientation, the customer-product relationship, customer orientation through the product, competitive behaviour in industrial markets (10). 2. Understanding industrial products What is an industrial product? Types of industrial product, nature of industrial product, commodity marketing, industrial product functionality, industrial product life cycle (5). 3. Exploring industrial markets Identifying industrial consumer need, purchase behaviour of an industrial customer, industrial purchasing process, factors influencing industrial purchase decisions, industrial marketing research process (5). 4. Industrial market segmentation Need for segmentation, different bases of segmenting industrial markets, process of segmentation of industrial markets (3). 5. Industrial product design and development Turning customer needs into product/service, process of product development, adoption process of industrial products (3). 6. Organizing marketing and sales department of an industrial company Organizational structure of an industrial sales force, organizational structure of an industrial marketing department, cross-selling industrial products (3). 7. Industrial sales force Purpose of an industrial sales force, industrial selling process, role of a sales engineer, consultative sales management for complex industrial products, industrial sales force compensation (3). 8. Distribution of industrial products Characteristics of industrial distribution, types of industrial distribution, key issues in designing industrial distribution (3). 9. Industrial branding Different types of industrial brands, factors affecting industrial branding, principles of industrial branding (2) 10. Pricing industrial products Challenges in industrial price management, a general model for price determination of industrial products, key issues in value based pricing (3). 11. Promotion strategies for industrial products Advertising, the COMPACT model, other forms of promotion strategies for industrial products (2).
	Text Book: The Marketing Challenge for Industrial Companies: Advance Concepts and Practices, Claudio A Saavedra, Springer, 2016. Reference Books: 1. Industrial Marketing, P. K. Ghosh, Oxford University Press, 2005. 2. Industrial Marketing, Ronald McTavish and Angus Maitland, The Macmillan Press, 1980

MAO851	Operations Research	PEL	3	0	0	3	3

Pre-requisites	Basic concepts of Set Theory, Linear Programming Problem, Network and Game Theory
Course Outcomes	• CO1: To understand the origin of Operations Research and &to familiarise with formulation of different Problems. • CO2: To acquire knowledge on fundamentals of Linear Programming and also to learn its applications. • CO3: To get basic knowledge on fundamentals of Netwok Analysis so as to get acquainted with designing & planning of various project related problems. • CO4: To get the basic Concepts of decision making under competitive situations.
Topics Covered	**Overview of Operations Research:** Origin of OR and its definitions, Formulation of the OR problems, Developing OR models, Testing the adequacy of the model, Model solution, Evaluation of the solution and implementation. (4) **Linear Programming and its Applications:** Vector spaces, Basis, Linear transformations, Convex sets, Extreme points and convex polyhedral sets Theory of Simplex method, Simplex Algorithm, Degeneracy, Duality theory, primal dual algorithms, Transportation problems, Assignment problems, Sensitivity analysis. (14) **Network Analysis:** Introduction to network analysis, Shortest path problem, Construction of minimal spanning tree, Flows in networks, Maximal flow problems. Definition of a project, Job and events, Construction of arrow diagrams, Determination of critical paths and calculation of floats. Resource allocation and least cost planning, Use of network flows for least cost planning. Uncertain duration and PERT, PERT COST system. Crashing. (12) **Game Theory:** Maxmin and Minmax principle, Two-person Zero-sum games with saddle point, Game problems without saddle point, Pure strategy and mixed strategy, Solution of a 2×2 game problem without saddle point, Graphical method of solution for n×2 and 2×n game problem, Reduction rule of a game problem (Dominance rule), Algebraic method of solution of game problem without saddle point, Reduction of a game problem to linear programming problem. (12)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total contact hours (Per week)				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAO852	Advanced Numerical Analysis	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Basics of Linear Algebra & Numerical Methods		CT+EA					
Course Outcomes	• CO1: Develop problem solving skills by different numerical methods and also skill in numerically verifying theoretical convergence speed. • CO2: Help to work with key concepts of stability and assessing the accuracy of numerical results. • CO3: Help to write algorithm, computational steps & flow chart which help in developing computer program. • CO4: Help to solve various scientific and engineering problems by different numerical methods.						
Topics Covered (with lecture hours)	Numerical solution of Algebraic and transcendental equations (Method of Iteration, Newton-Raphson method), convergence and errors. (3) Solution of system of equations by Direct method (Gauss-elimination, Gauss Jordon, L-U decomposition) and Iteration method (Jacobi, Gauss-Seidel), Convergence analysis and errors. (7) Eigen values and Eigen vectors by power method. (3) Interpolation- Newton's divided difference, cubic spline, Hermite poly, error in interpolation, Least square approximation. (6) Numerical differentiation and integration (Trapezoidal rule, Simpson's 1/3rd rule, Simpson's 3/8th rule), Error analysis. (5) Numerical solution of ordinary differential equations (Taylor series method, Euler's & Modified Euler's method, Runge-Kutta method), Finite difference solution of boundary value problem. (9) Numerical solution of partial differential equations of hyperbolic (wave equation), parabolic (heat equation), elliptic (Laplace and Poisson equation)(9)						
Text Books, and/or reference books	**Text Books:** 1. Introductory Methods of Numerical Analysis- S.S.Sastry (PHI). 2. Numerical Methods for scientific & Engineering Computation- M.K. Jain, S.R.K. Iyengar & R.K. Jain (New Age International (P) Ltd.). **Reference Books:** 1. Numerical Mathematical Analysis- J.B. Scarborough (Oxford & IBH). **2.** A friendly introduction to Numerical Analysis, Braine Bradie, Pearson Edu.

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAO853	Optimization Techniques	PEL	3	0	0	3	3
Pre-requisites		Vector Spaces and Matrices, Linear Transformations, Eigenvalues and Eigenvectors					
Course Outcomes	• CO1: Ability to develop a knowledge in the field of optimization techniques and their basic concepts, principles and algorithms. • CO2: Ability to understand fundamentals of linear programming, Integer programming and Dynamic programming. • CO3: Ability to apply the theory of optimization methods for modelling various types of decision making problems. • CO4: Ability to solve the mathematical results and numerical algorithms of optimization theory to concrete Engineering and Management problems.						
Topics Covered	**Basic Concepts:** Formulation of mathematical programming problems; Classification of optimization problems; Optimization techniques – classical and advanced techniques (5) **Optimization using Calculus:** Convexity and concavity of functions of one and two variables; Optimization of function of multiple variables subject to equality constraints; Lagrangian function; Optimization of function of multiple variables subject to equality constraints; Hessian matrix formulation (7) **Linear Programming:** Standard form of linear programming (LP) problem; Canonical form of LP problem; Assumptions in LP Models; Graphical method for two variable optimization problem; Motivation of simplex method, Simplex algorithm and construction of simplex tableau; Revised simplex method; Duality in LP; Primal dual relations; Dual Simplex Method; Sensitivity or post optimality analysis; bounded variables; Examples for transportation, assignment, TSP problems. (18) **Dynamic Programming:** Representation of multistage decision process; Types of multistage decision problems; Concept of sub optimization and the principle of optimality (8) **Integer Programming:** Integer linear programming; Branch and Bound algorithm; Concept of cutting plane method; Mixed integer programming; Solution algorithms. (8) **Advanced Topics in Optimization:** Direct and indirect search methods; Heuristic and Meta-Heuristic Search methods; Multi objective optimization. (10)

PHO 851	**Fiber-Optics Communication**	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods: (Continuous (CT), mid-term (MT) and end assessment (EA))
NIL	CT+MT+EA

Course Outcomes	After completion of the course, the student is able to **CO1:** Distinguish and identify different types of fibers and there potential application in different fields of optical communication and sensing. **CO2:** Explain different characteristics of optical fiber along with dispersion and attenuation. **CO3:** Understand and classify the working principle of different optical sources and detectors. **CO4:** Acquire basic knowledge of short haul, long haul and advanced optical transmission systems.
Topics Covered	**Introduction to Optical Fiber Communications:** Transmission speed, Evolution of Fiber Optic Systems, Elements of an Optical Fiber Transmission Link. [3] **Optical Fibers: Structures, Waveguide and Fabrication:** Ray propagation through SI and GI fiber, Pulse broadening- multipath dispersion and material dispersion, Maxwell's Equations, TE and TM mode wave equations. Wave propagation in rectangular slab and circular waveguides, Propagation modes, Power Flow in rectangular slab waveguide, Single-mode fibers; Mode-field diameter. Fiber fabrication; overview of different methods of fabrication. [14]

	Signal Degradation in Optical Fibers: Signal attenuation, Absorption, Scattering Losses, Bending Losses, Core and cladding losses, coupling loss. Group Velocity Dispersion, Material Dispersion, Waveguide Dispersion, Polarization-Mode dispersion, Intermodal Distortion. **[7]** **Optical Sources and Detectors:** Review of semiconductor Physics. Light Emitting Diodes (LEDs); Structure, Materials, Quantum Efficiency and LED Power, Modulation of an LED. Laser Diodes; Threshold conditions, Rate equations, Quantum efficiency, Resonant frequencies, Structure and radiation patterns, Single-mode lasers, Modulation, Effects of temperature. Optical detectors- p-n junction, P-I-N, APD, Phototransistor, PMT detectors. [12] **Power launching and coupling:** Source-to-Fiber power launching lensing schemes for coupling improvement, Fiber splicing, Optical fiber connectors and optical devices, etc. [6]
Text Books, and/or reference material	**TEXT BOOKS:** **1.** Fiber Optics and Optoelectronics, R. P. Khare, Oxford University Press 2. Optical Fiber Communications (3rd Ed.), Gerd Keiser- McGraw-Hill 3. Optoelectronics Photonics , S.O. Kasap **REFERENCE BOOKS:** 1. Introduction to Fiber Optics, Ajoy Ghatak & K. Thyagarajan, Cambridge University Press 2. Fiber-Optic Communications Technology, D. K. Mynbaev & L. L. Scheiner, Pearson Education 3. Optical Communication Components & Systems, J. H. Franz & V. K. Jain.

Pre-requisites		Course Assessment methods: (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	CO1: To realize fundamental concepts of optics such as reflection, refraction and diffraction in designing optical elements. CO2: To learn basics and working principle of some optoelectronic devices. CO3: To gain an integrative overview and applications of different optical microscopes, telescopes and spectroscopes.						

	CO4: To acquire fundamental knowledge of interferometry and apply it in optical metrology.
Topics Covered	**Optical elements**: Reflective and Refractive optical elements, Diffractive optical element, Holographic Optical Element, Grating, Prism. [6] **Microscopy**: Bright field microscopy, Dark field microscopy, Phase-Contrast microscopy, Polarized light microscopy, Differential Interference contrast microscopy, Fluorescence microscopy, Confocal microscopy, Digital Holographic microscopy. [8] **Spectroscopy:** Atomic Absorption Spectroscopy, UV-Vis-NIR Spectroscopy. [4] **Optical Interferometer:** Common path interferometer, Multiple-Beam interferometer, Multiple wavelength interferometer, Shearing interferometer, Speckle interferometer. [6] **Optoelectronic devices**: Photomultiplier Tubes, Photodiodes, CCD, acousto-optic modulator, electro optic modulator [6] **Optical Instruments**: Optical Coherence Tomography, Particle Image Velocimetry. 		CT+MT+EA					

Course Outcomes	· CO1: To provide an understanding about Inborn errors of metabolism and genetic disorders and their consequence. · CO2: Able to analyze the key features therapeutics and drugs in current scenario. · CO3: Able to apply the knowledge for commercial production of pharmaceuticals and place it in market for marketing approvals. · CO4: Able to understand the ethical issues and the different competent regulatory authorities globally associated with clinical Biotechnology.
Topics Covered	**Microbial pathogenesis:** Definitions - Infection, Invasion, Pathogen,Pathogenicity, Virulence, Carriers and their types, Opportunistic infections, NosocomialInfections, epidemics. **Diagnosis of Infectious diseases**–Biology of Nitric oxide implications in diagnosis and therapeutics, Ethical problems around prenatal diagnosis, *in vitro* fertilization, cloning, gene therapy. **DrugDesign and Drug delivery system :** Synthesis of compounds in accordance with the molecular structure and biological activity concept. Various principles/ mode of drug action/ screening of drugs/ drug analysis using various techniques . New generation viral vectors for Gene Therapy and advancement in Drug Delivery system, antibody mediated drug delivery of vaccines, Antibiotics **Molecular Medicine:** Antibodies and vaccines-Therapeutic production of antibodies, different kind of vaccines and applications of recombinant vaccines.Ribozymes for therapeutic use in viral infection . **Cell and tissue therapy** – Gene therapy, tissue engineering, stem cell and cloning. In vivo targeted gene delivery **Clinical Toxicology**,**Clinical Research Governance and Ethics:** Basic concept in toxicology. Types and mechanism of toxin action-Epoxidation & drug toxicity, Overview on regulatory affairs for pharmaceuticals, neutraceuticals and medical devices. . International quality standard and related guidelines (ICH-E6). Risk assessment and trial monitoring. Legal and ethical issues on biotechnology, medical research and related clinical practice.

Pre-requisite(s)		Course Assessment methods					
Engineering /Solid Mechanics		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs) :	· CO1: Apply knowledge of solid mechanics for design solutions. · CO2: Understand basic design philosophy applicable to steel structures. · CO3: Formulate, analyze, and design basic components of Civil Engineering Steel structures.						
Topics Covered (Hrs)	**Properties** of Reinforced Concrete and Structural Steel, Loads & load combinations, Design Philosophies-Working Stress Method, Limit State Method **(4)** **Limit State Method (LSM) of design for RC Structures:** Limit State of Flexure: Stress-strain characteristics of concrete & reinforcing steel, Moment of Resistance for singly reinforced, doubly reinforced sections. Limit State of Shear, Bond & Anchorage, Development length, Design of Beams, slab, Short Columns under axial load, Design of isolated Footing. **(19)**						

	Limit State Method (LSM) of design for Steel Structures: Limit state of collapse & serviceability, partial safety factor for material and loading, Connections: truss joint connections, Design of Tension member, Compression member, Design for Beams, Gusseted Column base foundation **(19)**
Text Books, and/or reference material (s)	***Text Books:*** 1. Reinforced Concrete Design by S. U Pillai and Devdas Menon, Tata McGraw-Hill. 2. IS 456: 2000, Indian Standard Plain and Reinforced Concrete – Code of Practice (4th Revision), BIS, New Delhi. 3. Design of steel Structures by N. Subrhamanium (Oxford publications) 4. IS 800-2007: General Construction in Steel-Code of Practice 5. IS 808-1989: Dim of Hot Rolled Steel beam, column, channel and angle sections 6. www.nptel.iitm.ac.in/courses/ ***Reference Books:*** *7.* Reinforced Concrete Design by S.N. Sinha, Tata McGraw-Hill Publishing*:* 8. Limit State Design of Steel Structures by S.K. Duggal, McGraw Hill publications

Pre-requisite(s)		Course Assessment methods					
Engineering Mathematics		Continuous (CT) and end assessment (EA). CT+EA					
Course Outcomes (COs) :	· CO1: Apply the concepts of probability and statistics in reliability analysis. · CO2: Aanalyze data for finding failure probability. · CO3: Apply Monte carlo simulation technique in reliability analysis to solve different engineering problems. · CO4: Develop the concepts of statistical quality control and reliability tests.						
Topics Covered (Hrs)	**Elements of probability and statistics**: Basictheory of probability, random variable, functions of random variables, multiple random variables, Joint PMF, PDF, CDF, Conditional probability, Probability distributions (discrete and continuous), basic statistics, covariance and correlation. (8) **Failures of Engineering systems**: Data analysis, Hazard models. (4) **Basic reliability analysis**: Introduction, Definition of reliability, Different						

	classical reliability analysis methods: First Order Reliability Method, Second Order Reliability Method, Engineering applications. (10) **Simulation Techniques**: Monte Carlo simulation technique, theory and applications. (4) **Statistical Quality Control and Reliability Tests:** Statistical Quality Control, Statistical Reliability Tests, Accelerated Testing, Goodness of fit tests. (8) **System reliability**: Modeling, parallel and series system, Reliability improvement and allocation. (6)
Text Books, and/or reference material(s)	**Text Book(s)** 1. Probability concepts in engineering and design by Ang and Tang, John Wiley. 2. CHO851	**ENERGY, ENVIRONMENT & SUSTAINABILITY**	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
CHC401		CT+EA					
Course Outcomes	• CO1: Learn about energy technology of different conventional and non-conventional energy resource and Recent worldwide energy market scenario • CO2: Design & analyze of different renewable energy collectors and renewable energy thermal power plants • CO3: Learn industrial and domestic applications of different renewable energy sources • CO4: Solve energy technology problems of different difficulty levels through tutorials						
Topics Covered	**Module I:** Wind Energy: Sources and potentials, Wind energy conversion, General formula - Lift and Drag- Basis of wind energy conversion – Effect of density, frequency						

	variances, angle of attack, and wind speed. Windmill rotors Horizontal axis and vertical axis rotors. Determination of torque coefficient, horizontal and vertical axis windmills, performance characteristics, Betz criteria, Design and analysis of wind turbines. geographical aspects. [10 hrs.] **Module II:** Solar Energy: Energy available form Sun, Solar radiation data, Solar energy conversion into heat, Flat plate and Concentrating collectors, Construction and performance analysis of solar flat plate collectors, Mathematical analysis of Flat plate collectors and collector efficiency, collector efficiency factor, tilt factors, collector heat removal factor, Hottel-Willier-Bliss equation. Principle of Natural and Forced convection, Salt gradient solar ponds: construction, operation, technical problems, Solar drying and dehumidification: Solar cabinet dryers, convective dryers Solar engines-Stirling, Brayton engines, Photovoltaic, p-n junction, solar cells, PV systems, Stand-alone, Grid connected solar power satellite. [10 hrs.] **Module III:** Nuclear Energy: Nuclear fission principles, types of nuclear reactors (BWR, PWR, PHWR, LMCR, GCR, FFR). Nuclear reactor analysis: four factor formula, resonance absorption, reactor buckling, multiplication factor, thermal utilisation coefficient, reflector saving, fast fission factor, optimum moderator to fuel ratio. Radioactive waste disposal **Energy from Ocean:** Wave, Tidal and OTEC energy- Difference between tidal and wave power generation, Principles of tidal and wave power generation, OTEC power plants (closed cycle, open cycle, hybrid cycle), operation and technical problems, environmental impact, Tidal power, salinity power plants, **Geothermal systems:** Resources, types of wells, methods of harnessing the energy, Hot water and dry steam systems, energy extraction principles. [10 hrs.] **Module IV:** **Energy from biomass:** Biomass utilization: pyrolysis, gasification, anaerobic digestion (biogas production). Principles of Bio-Conversion, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion characteristics of bio-gas, Biodiesels: Manufacture and characteristics. **Gasohol:** Characteristics and manufacture, use of pervaporation technology. Synthetic liquid fuels from coal: F – T Process, Coal hydrogenation, MTOG process. [10 hrs.]

CSO 851	Machine Learning	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
Basic concept of Probability and Statistics.		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					
Course Outcomes	• CO1: Understanding of the basic concepts, fundamental issues and challenges of machine learning. • CO2: Comprehend the principle and techniques of supervised learning. • CO3: Explain the basic concepts and techniques of unsupervised learning. • CO4: Understanding of the basic concepts and challenges of reinforced learning. • CO5: Ability to apply the concepts of machine learning in different domains.						
Topics Covered	1. Introduction: what is Machine Learning; Human learning and Machine learning; Well-posed learning problem; Types of Machine Learning: Supervised, Unsupervised, and Reinforcement learning; Applications, Issues, and tools of Machine Learning. (03 L) 2. Concept Learning: Inductive learning hypothesis, general to specific ordering of hypothesis; FIND-S algorithm; Version space, candidate elimination algorithm; Inductive bias. (04 L) 3. Bayesian Learning, Naïve Bayes Classifier, Optimal Classifier. (03 L) 4. Supervised learning: Classification- k-Nearest Neighbour, Decision Tree, Support vector machine. Regression- Simple and Multiple linear regression. (12L) 5. Artificial Neural Networks: Biological neuron and artificial neuron, How ANN works, Parallel distributed model of ANN; Activation functions; Perceptron, McCulloch-Pits model, ADALINE network model; Architecture of ANN- single-layer feed forward, multi-layer feed forward, competitive network, recurrent network; Backpropagation algorithm; Basic concept of deep learning. (05L) 6. Unsupervised learning: Different clustering techniques- Partitioning methods (k-means, k-medoid, etc. clustering techniques), Hierarchical methods (Agglomerative and Divisive techniques: MIN, MAX, Group average, Ward's etc. methods), and Density-based method (DBSCAN). (05 L) 7. Unsupervised learning: Rule mining and Association analysis- different terminology (itemset, support count, support, association rule, confidence, etc.); Association rule mining techniques; Market-Basket analysis; Apriori principle, Apriori algorithm for frequent itemset generation, Rule generation for apriori algorithm. (05 L) 8. Genetic Algorithm based Learning. (02 L) 9. Reinforcement Learning: Basic concept, Model based learning, Temporal difference based learning. (03 L)							

	10. Standards: Introduction to standardization efforts IS/ISO/IEC/22417 and 20546 (2L)
Text Books, and/or reference material	Text Books: 1. Machine Learning by Tom Mitchell [Mc. Graw-Hill]. 2. Machine Learning by S. Dutt, S. Chandramouli, and /A. K. Das [Pearson, 2019]. 3. Applied machine Learning by M. Gopal [Mc. Graw-Hill, 2018]. 4. NPTEL Course materials. **Reference Books:** Introduction to Machine Learning by Ethem Alpaydin [MIT Press].

Pre-requisites		Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))					
		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					

Course Outcomes	• CO1: Classify the labelled dataset into different classes and group the unlabelled dataset into different clusters by uncovering hidden patterns and correlations among them.. • CO2: Model a problem into a graph database after absorbing and connecting a large volume of data and performing the analytical task over the graph. • CO3: Develop a recommendation system by predicting users' preferences based on similarity measures and evaluating its performance using the metrics such as Precision, recall, and F1-score. • CO4: Understand and set up the Hadoop framework, which will allow them to efficiently manage and process big data in a distributed computing environment.
Topics Covered	Introduction to Data Analytics, Types of Data Analytics: Descriptive Analytics, Diagnostic Analytics, Predictive Analytics, and Prescriptive Analytics. Use Cases, Issues and Challenges in Big Data Analytics. (4L) Fundamentals of Statistics: Population, Sample, Parameter, Statistic, Variable. Descriptive Statistics, Inferential Statistics. Basic Probability Theory: Random Experiment, Sample Space, Random Variables, Probability, Conditional Probability, Independence, Conditional Independence, Expectation, Variance, Probability Distribution, Joint Probability Distribution, Conditional Probability Distribution. (8L) Similarity Measures: Jaccard Similarity, Cosine Similarity, Adjusted Cosine Similarity. Missing Value Prediction Techniques: Mean Centering, Weighted

	Average, Z-Score. (6L) Basics of Complex Network: Scale-Free Networks, Small-World Phenomenon, Degree Distributions, Transitivity or Clustering. Centrality Measures: Degree Centrality, Betweenness Centrality, Closeness Centrality, Eigenvector Centrality, PageRank Centrality. Community Structure, Community Detection Algorithms: Girvan-Newman, Fast Greedy, Label Propagation, Clique Percolation Method. Community Quality Metrics: Modularity, NMI, Conductance. (10L) Introduction to Data Mining, Machine Learning Techniques: Least Square Regression, Decision-trees, SVM. Clustering Techniques: K-Means. (8L) Introduction to Hadoop Ecosystem – HDFS, Map-Reduce, PIG, HIVE, HBase, Mahout, Zookeeper, Flume, Sqoop, etc. (6L)
Text Books, and/or reference material	**Text Books:** 1. Data Science and Big Data Analytics: Discovering, Analyzing, Visualizing and Presenting Data – EMC Education Services – Wiley. 2. Machine Learning: Hands-On for Developers and Technical Professionals – Jason Bell – Wiley. **Reference Books:** 1. Networks: An Introduction – M. E. J. Newman – Oxford University Press. 2. 		CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**					

Course Outcomes	• CO1: Can have the efficiency to act in a strategic situation. • CO2: Can analyse the strategic interactions among agents. • CO3: Can understand modern state of the art in Game Theory. • CO4: Will have the knowledge of related area where Game Theory can be applied.
Topics Covered	**Introduction:** Motivation to the course. (2L) **Non-Coperative Game Theory:** Introduction to Game Theory, Extensive Form Games, Strategic Form Games, Dominat Strategy Equilibria, Pure Strategy Nash Equlibrium, Mixed Strategy Nash Equilibrium with examples. (8L) **Mechanism Design without Money**: One sided and two sided matching with strict preferences, Voting theory, and Participatory democracy. (5L) **Mechanism Design with Money:** Auction basics, sponsored search auctions, Revenue optimal auctions, VCG Mechanisms. Online auctions. (6L) **Cooperative Game Theory**: Coalitional Games, The Core, and The Shapley Value. (4L) **Repeated Games:** Introduction to repeated games and its Applications. (4L) **Applications:** Incentive Study in - P2P Networks, Crowdsourcing. (5L) **Some Special Topics**: Fair Division, Price of Anarchy, Scoring rules, Learning in Auction, Synergies between Machine Learning & Game Theory. (8L)

CSO 855	Information Security	PEL	3	0	0	3	3

Pre-requisites	Course Assessment methods (Continuous Assessment (CA), Mid-Term (MT), End Term (ET))
Programming Languages, Computer Networks and Operating Systems	CA+ MT + ET **[**CA: 15%, MT: 25%, ET: 60%**]**

Course Outcomes	• CO1: Learn fundamental concepts of Information Security viz. Security Models (like the CIA triad), Access Control Mechanisms, Security policies and Security Mechanisms like authentication, identification, authorization, non-repudiation, etc. • CO2: Understand program security issues, attack vectors, and malicious code including worms, viruses, and Trojan horse and logic bombs. • CO3: Understand common vulnerabilities like Buffer Overflow, TOC-TOU flaws. Learn secure programming requirements; write robust security code and exploit/recreate-and-fix common vulnerabilities in software. • CO4: Define trusted computing base and Operating System hardening as defence mechanisms, Intrusion detection and prevention. • CO5: Get introduced to trusted computing and multilevel security. • CO6: Explain concepts related to applied cryptography, including plain-text, cipher-text, four techniques for crypto-analysis, symmetric cryptography, asymmetric cryptography, digital signature, message authentication code, hash functions, and modes of encryption operations. • CO7: Explain and compare security mechanisms for conventional operating systems, OS hardening. Case Study on Linux. • CO8: Exposed to network and distributed systems security issues and solutions including authentication, key distribution and management and network security protocols like SSL/TLS. • CO9: Introduced to Laws and regulatory requirements, security standards and controls, risk management, security metrics and performance indicators, security auditing, education, training and awareness and digital forensics.
Topics Covered	▪ Information Security Introduction -- Defining and Understanding security through security models, Confidentiality, Integrity and Availability, formal description of security, Attacks and Defences, Threats, Vulnerabilities and Risk, Assurance, Prevention, Detection, Security Controls. [2L] ▪ Identification and Authentication. [2L] ▪ Authorization and Access Control, Access Control Models & Mechanisms and Multilevel Security. [2L] ▪ Auditing and Accountability. [2L] ▪ Computational Number Theory & Cryptography -- Fermat's theorem, Euler's theorem, Euclid's algorithm, manually and computationally encrypt/decrypt, sign/verify signatures for small messages using RSA, Deffie-Hellman and DSA algorithms. Applied cryptography viz. Symmetric key Cryptography, asymmetric Cryptography and Digital Signatures, message authentication codes, hash functions and modes of cryptographic operations.[6L] ▪ Physical Security. [1L]

	▪ Network Security – Network threats: eavesdropping, spoofing, modification, denial of service attacks o Introduction to network security techniques: firewalls, virtual private networks, intrusion detection. Different Network Security Protocols.[6L] ▪ Operating System Security & Trusted OS-- Memory, time, file, object protection requirements and techniques, Protection in contemporary operating systems, ACLs, DAC, MAC, RBAC, Identification and authentication, Identification goals, Authentication requirements, Human authentication, Machine authentication, OS Forensics. Assurance & Trust, Design principles, Evaluation criteria, Evaluation process.[8L] ▪ Application & Program Security– Flaws, Malicious code: viruses, Trojan horses, worms, Program flaws: buffer overflows, time-of-check to time-of-use flaws, incomplete mediation o Defenses, Software development controls, Testing techniques.[5L] ▪ Secure Coding. [2L] ▪ Distributed Systems Security. [2L] ▪ Digital Forensics. [2L] ▪ Cyber Laws. [2L]
Text Books, and/or reference material	**Text Books:** 1. The Basics of Information Security by Jason Andress, Syngress Publication. 2. Security in Computing (3rd Edition) 3rd Edition by Charles P. <tr><td></td><td>(RWA), virtual topology design, wavelength rerouting, and traffic grooming in optical network design.
• CO3: Acquire knowledge of the wavelength convertible network.
• CO4: Comprehend the basic concepts of multicast routing in optical networks.</td></tr>
<tr><td>Topics Covered</td><td>1. Fundamentals and Optical Components: Optical fiber principles, Optical transmission system, Wavelength Division Multiplexing(WDM), optical networking evolution, Optical Network Architectures; Optical Components- Couplers, Multiplexers and Filters, Optical Amplifiers, Transmitter, Detectors, switches and wavelength converters; Different issues in wavelength routed networks. (12L)
2. Routing and Wavelength Assignment (RWA) algorithms: ILP formulation of the RWA problem, Route Selection algorithms – Fixed Routing, Fixed Alternate Routing, Exhaust Routing, Least Congested Path Routing, Limited alternate Routing. Wavelength Selection algorithms. Joint wavelength-Route selection algorithm. (08L)
3. Wavelength Convertible Networks: Need for Wavelength Converters, Wavelength convertible Switch Architecture, Routing in Convertible Networks, Performance Evaluation of Convertible networks, Network with Sparse Wavelength Conversion, Converter Placement problem. (04L)
4. Wavelength Rerouting Algorithm: Benefits of wavelength rerouting, Issues in wavelength rerouting, Different rerouting algorithms. (05L)
5. Virtual Topology Design: Concept of virtual topology, Limitations on virtual topology, Virtual topology problem formulation, Virtual topology design algorithms. (06L)
6. Traffic Grooming: Basic concepts, Grooming node architecture, ILP formulation of the traffic grooming problem, Different heuristics (MST, MRU, TGCP, etc) for the traffic grooming problem. (05L)
7. Basic concepts of Multicast routing and wavelength assignment. (02L)</td></tr>

<tr><td>Course Outcomes</td><td colspan="7">
• CO1: Identify communication networks suitable for different operational scenarios.
• CO2: Install and troubleshoot typical communication networks.
• CO3: Explain the information flow through various subsystems of a network.
• CO4: Realize the integration between various subsystems of a network.
• CO5: Interpret the current communication technology trends.
• CO6: Evaluate the business potential of future communication networking paradigms.
</td></tr>
<tr><td>Topics Covered</td><td colspan="7">
Module 1: Elements of communication network [2 hrs.]
Network – nodes, links, advantages, evolution path.
Switching – circuit switching, packet switching, store and forward mechanism.
Module 2: Computer networks [8 hrs.]
Computer networks – Ethernet, topology, Ethernet address and IP address.
Interconnecting Ethernets – Hub, Switch, Router.
Layered architectures – Netwrok protocols, TCP/IP, OSI.
Module 3: Landline telephone networks [8 hrs.]
Fundamentals – elements (end nodes, transmission media, switching, signaling), design parameters (GoS, blocking probability, time and call congestion), centralized and distributed switching.
Telephone system – handset, CBS, base unit, transmission impairments, subscriber loop design.
Module 4: Cellular mobile networks [8 hrs.]
Cellular networks – cellular concept, PCS standards (GSM, CDMA), PCS architecture, How a call comes to your mobile phone?
WiFi and Bluetooth.
Module 5: Optical networks [8 hrs.]
FDDI – topology and architecture, access and priority mechanisms, applications.
SONET – topology and architecture, frame format, equipments, deployment and applications.
Under Sea networks – global architecture, how India is served by them?
Module 6: Satellite networks [8 hrs.]
Fundamentals – types of satellites, frequency bands, basic satellite components.
VSAT networks – architecture and applications.
Mobile satellite networks – Iridium, Globalstar.

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEE 610(NUMERICAL ANALYSIS)		CT+MT+EA					
Course Outcomes	• CO1: For a given non-linear or non-derivative problem, tune the control parameters of adaptive particle swarm optimization (APSO) for efficiently controlling the global exploration and local exploitation. • CO2. Analyze the genetic algorithms, PSO, DE and their applications • CO3: For a given single objective problem (SOP), apply binary coded genetic algorithm (BCGA) and real coded genetic algorithm (RCGA) with different types of crossovers, mutation and also understand the impact of different parent selection strategies. • CO4: For a given multi-objective problem, explain the significance of Difference vector in Differential Evolutionary (DE) technique and also illustrate self-adaptive differential evolutionary (SADE) technique. • CO5: For a given problem, describe fuzzy knowledge base controller (FKBC) showing information and computational flow with membership function, rule base and defuzzification. • CO6: For a given problem, logically clarify the impact of hidden layers in artificial neuron network (ANN) and also stepwise explicate the back propagation algorithm of ANN.						
Topics Covered	Hard Computing and Soft-Computing techniques, Conventional & non-conventional approaches, limitations of hard computing techniques, merits & demerits of soft-computing techniques, practical examples associated with soft-computing techniques. (3) Fundamental concept of optimization techniques and necessity of optimization techniques, types of optimization techniques, coding, fitness/objective function, algorithms. (2) Introduction of Particle Swarm Optimization (PSO) algorithm, Bird flocking & fish schooling, velocity, inertia weight factor, pbest solution, gbest solution, local optima, global optima, Flowchart/algorithm, examples, new modifications of PSO, Parameter Selection in PSO. (6) Introduction of genetic algorithm, Binary coding & decoding, Genetic modelling, Reproduction, Crossover, Mutation, importance of crossover and mutation						

	operators, parent selection strategy, parent selection methods, Flowchart/algorithm, drawback of binary coded genetic algorithm (BCGA), real coded genetic algorithm (RCGA), examples. (6) Fundamentals of Differential Evolution algorithm, difference vector and its significance, Mutation and crossover, comparisons among DE, PSO and GA, Examples, new modifications of DE, Improved DE schemes for noisy optimization problems. (6) Biological neural networks, Model of an artificial neuron, neural network architecture, Characteristics of neural network, learning methods, Taxonomy of neural network architecture, Back propagation networks, architecture of a back propagation network, back propagation learning, Examples, RBF network, Associative memory, Adaptive resonance theory. (7) Fuzzy set theory, Fuzzy systems, crisp sets and fuzzy sets, fuzzy set operations and approximate reasoning, Fuzzification, inferencing and defuzzification, Fuzzy knowledge and rule bases, examples. (6) Applications of Soft Computing to various fields of engineering. (6)

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
EEC403 (DIGITAL ELECTRONICS)		CT+MT+EA					

Course Outcomes	• CO1: Demonstrate programming proficiency using the various addressing modes and data transfer instructions of the target microprocessor microcontroller. • CO2: Identify—and exercise—opportunities for hardware and software trade-offs. • CO3: Design of interfacing circuits such as memory, keyboard, display, ADC, DAC, DMA etc. and programming in assembly language for typical microprocessor-based system. • CO4: Given peripheral devices such as memory, ADC, DIOs, etc., design of interfacing circuit, and writing algorithms to fulfil a given specific application. • CO5: Programming processor specific and processor independent software for different complex embedded system applications.
Topics Covered	Introduction to Embedded systems: Introduction – Features – Microprocessors – ALU - Von Neumann and Harvard Architecture, Classification, SPP, ASIC, ASIP, CISC and RISC - Instruction pipelining. General characteristics of embedded system, introduction to different components etc. (3) Basic Microprocessor architectures, organizations and Instruction sets. (4) Memory Classification: ROM, EPROM, EEPROM, RAM. (4) Various types of Interrupts. (2) Programmable Peripheral Devices and Interfacing 8255, 8259, 8257, 8251, 8253, ADC, DAC and Practical Applications. (4) Microcontroller 89CX51/52 Series: Characteristics and Features, Overview of Architectures, and Peripherals, Timers, Counters, Serial communication, Digital I/O Ports. (3) Microcontroller PIC Series: Characteristics and Features, Overview of architectures, and Peripherals, Interrupts, Timers, watch-dog timer, I/O port Expansion, analog-to-digital converter, UART, I2C and SPI Bus for Peripheral Chips, Accessories and special features. (4) ARM Architecture: Evolution, Characteristics and Features, Overview of architectures, Modes, Registers etc. (6) Software architecture and RTOS: Software Architecture: Round Robin- Round Robin with interrupts -Function Queue. Scheduling Architecture RTOS: Architecture -Tasks and Task States -Tasks and Data -Semaphores and Shared Data Message Queues -Mail Boxes and pipes -Timer Functions -Events -Memory Management, Interrupt Routines. (6) Applications of Embedded systems in different field of engineering. (6)

MEO 851	**Tribology**	PEL	**3**	**0**	**0**	**3**	**3**
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NA		CT+EA					
Course Outcomes	CO1: To learn the basic knowledge of surface topography and contact between engineering surfaces. CO2: To learn the basic theory and application of friction and wear for different materials CO3: To learn about lubricants and lubrication for different bearings CO4: Introduced to Bio-tribology of human joints CO5: Introduced to Micro-tribology for MEMS applications						
Topics Covered	**Part I - Basic Tribology** **Surface topography:** Measurement of surface topography; Quantifying surface roughness; The topography of engineering surfaces. 2 **Contact between surfaces:** Hertzian contact – sphere on sphere contact and cylinder on cylinder contact; Contact between rough surfaces.						

	4 **Friction and Wear of contact surfaces:** Laws and Theories of friction and wear; Friction and Wear of different materials; Application to friction materials. 8 **Lubricants and lubrication:** Viscosity of lubricants; Composition and properties of oils and greases; Reynolds equation; Type of lubrications - Hydrostatic lubrication, Hydrodynamic lubrication; Elastohydrodynamic lubrication; Boundary lubrication, and application to bearings. 14 **Part II - Advanced Tribology** **Microtribology:** Surface forces and adhesion; Atomic force microscopy (AFM); Friction, wear and lubrication on atomic level; Applications to MEMS. 6 **Biotribology:** Natural human joints; Structure and properties of articular cartilage; Mechanism of synovial lubrication: Mechanism of articular cartilage damage; Artificial joint replacements; Skin Tribology 8)
Text Books, and/or reference material	**Text Books:** 1. Engineering Tribology - Dr. Prasanta Sahoo 2. Introduction to Tribology of Bearings-- B.C.Majumder 3. Principles of Tribology-- J.Halling 4. Basic Lubrication Theory - Alastair Cameron

Associate Professor

CSE Department, NIT Durgapur

Subject: Request for re-evaluation of marks in Internet of Things (CSE 814)

Dear Sir,

With due respect, I beg to state that I expect a better grade in the subject, Internet of Things (CSE 814), in the 8th semester, of the B.Tech. CSE course. Along with the marks in the continuous assessments which were declared (which I have gone through) previously and my performance in the end semester examination are not matching with my expectation and thereby I want to reassure. 'X'

I, therefore, request you to kindly review and re-evaluate my answer script and take necessary actions at your end, to correct the marks recorded on my 8th semester grade card.

Thanking You,

Yours sincerely,

Soumik Samanta

Soumik Samanta

Roll No: 18CS8127

Ph No: 8013918694

Email: soumiksamantaa@gmail.com

Considering the appeal made in 'X' above I went through the declared marks in CA's and Online part (30 marks) of the end semester. I also checked the end sem script. I agree that there were mistakes' in mark entries in the Chanakya portal from my end. I request the concerned authority to consider it as human error and make following changes. I apologyse for the delay in my response but request the concerned authorities to make necessary changes in the final marksheet. The request for the correction are sent and attached herewith in proper format. However, I mention them below again for more clarity.

Subject Code	Roll no.	OLD Marks			New Marks			Justification	Name of Examiner
		CA	MT	ET	CA	MT	ET		
		15	17	40	15	20	55	Mistake in Data Entry	Subhrabrata Chowdhury

SChowdhury
24/08/22

Dear (ACAD) I request the to consider the case and correct the mistake.

(HOD, CSE) 24/08/22

ANNEXURE 67.5.1

Date: 08.06.2022

Minutes of the meeting of Research Academic Committee (RAC) held on 08.06.2022 (Wednesday) at 03.00 pm.

The Chairman welcomed the members to the meeting and the agenda was placed for discussion.

Item # 1 **Confirmation of the minutes of the meeting of RAC held on 12.04.2022.**

The minutes of the RAC meeting held on 12.04.2022 were confirmed.

Item # 2 **To consider the result of the examinations for course work subjects in even semester 2021-2022.**

The provisional results of 113 students are recommended for approval and subsequent publication on public domain.

Item # 3 **To consider the academic calendar 2022-2023.**

The academic calendar 2022-2023 of the PG program will be followed with the following modifications.

- Results will be declared after 10 working days of the publication of results of PG program.
- Research Methodology classes will be taken up separately and not with the PG program.

Item # 4 **To consider the matter for uploading PhD theses to on INFLIBNET platform in light of the decision taken by the Senate.**

The matter is discussed in detail and the following resolutions are taken for approval.

- Meta Data of the theses from 2018 onwards will be uploaded in PDF format.
- From April 2018 (13th Convocation) to June 2022 full theses will be uploaded.
- From July 2022 onwards theses arranged chapter wise will be uploaded.
- The theses will be uploaded by the INFLIBNET Coordinator of the Institute. The Supervisor concerned will send the theses to the INFLIBNET Coordinator.
- A declaration / consent will be obtained from the individual scholar as -

  ".... I am the sole owner of copyright on this thesis. The National Institute of Technology, Durgapur is hereby granted, non - exclusive, royalty- free and non - transferable rights to make available, in full or in part without any modifications, this thesis in electronic/ printed form for public use at no charge. Any use of material from this thesis/ dissertation must be accompanied with appropriate citation.

  I wish to allow open access to my thesis."
- The department of CSE will extend its manpower support to the INFLIBNET Coordinator.

Item # 5 **To consider the matter of advertisement for admission in odd semester to PhD progamme 2022-2023.**

The format of the advertisement was circulated / published.

It is also resolved that

- Advertisement of category J will not be published.
- Attendance of all the PhD scholars (regular and professional) will be registered at the department level.

Item # 6 **To consider the summarized list of documents to be submitted during different phases after admission to award of PhD degree.**

The format of the advertisement was circulated / published.

Item # 7 **To consider registration for Ph.D. Programme**

The award of the PhD degree to the above mentioned scholars are noted on the dates as mentioned against the respective scholar, to be reported to the Senate for recommendation.

Item # 9 To consider the appeal for an extension of period of registration of the following scholars

- Padma Seragadam (Roll No. 16/CHE/1505, Reg. No. NITD/PhD/CHE/2017/00907 dt. 11.05.2017)-Extension for 1 year from 11.05.2022 (1^{st}).
- Saurabh Pal (Roll No. 15/CA/1501, Reg. No. NITD/PhD/CS/2017/00891 dt. 02.05.2017-Extension for 1 year from 02.05.2022 (1^{st}).
- Himangshu Pal (Roll No. 14/ECE/1514, Reg. No. NITD/PhD/EC/2016/00745 dt. 19.04.2016)-extension for 1 year from 19.04.2022 (2^{nd}).
- Avick Kumar Dey (Roll No. 14/CA/1503, Reg. No. NITD/PhD/CA/2016/00749 dt. 02/05/2016)-extension for 1 year from 02.05.2022 (2^{nd})

- RangaballavPradhan (Roll No. 15/CSE/1105, Reg. No. NITD/PhD/CS/2017/00882 dt.27.04.2017)- extension for 1 year from 27.04.2022 (1st).
- Pradipta Banerjee (Roll No. 15/IT/1109, Reg. No. NITD/PhD/CS/2017/00888 dt. 28.04.2017)- extension for 1 year from 28.04.2022 (1st)
- Pratik Kumar Sinha (Roll No. 15/IT/1108, Reg. No. NITD/PhD/CS/2017/00889 dt. 28.04.2017)- extension for 1 year from 28.04.2022 (1st)
- Sanjeet Kumar (Roll No. 15/CA/1502, Reg. No. NITD/PhD/CS/2017/00913 dt. 16.05.2017)- extension for 1 year from 16.05.2022 (1st)
- Kingsuk Majumdar (Roll No. 15/EE/1502, Reg. No. NITD/PhD/EE/2016/00781 dt. 19.09.2016)- extension for 1 year from 19.09.2022 (2nd)
- Sanjib Biswas (Roll No. 16/MS/1302, Reg. No. NITD/PhD/MS/2017/00914 dt. 17.05.2017) extension for 1 year from 17.05.2022 (1st)
- Payel Mondal (Roll No. 16CH1102, NITD/PhD/CH/2017/00924 dt. 24.07.2017) extension for 1 year from 24.07.2022 (1st)
- Vinay Ravindra Varude (Roll No. 16ME1303, NITD/PhD/ME/2017/00866 dt. 07.02.2017) extension for 1 year from 07.02.2022 (1st)
- Subhajit Roy (Roll No. 16CS1303, Reg. No. NITD/PhD/CS/2017/00904 dt. 05.05.2017)- extension for 09 (nine) months from 05.05.2022 (1st)
- Prakash Mondal (Roll No. 15/CE/1502, NITD/PhD/CE/2017/00886dt. 28.04.2017) extension for 1 year from 28.04.2017 (1st)
- Deepa Naik (Roll No. 12/CSE/1103, Reg. No. NITD/PhD/CS/2015/00672 dt. 20.11.2015) extension for 6 months from 20.05.2022 (2nd)
- Biswaranjan Mishra (Roll No. 14/EE/1103, Reg. No. NITD/PhD/EE/2015/00661 dt. 17.11.2015) extension for 2 years from 17.11.2020 (1st) – special consideration of two (02) years.

The matter is recommended for approval as the formalities in this regard are fulfilled. Further it is recommended for approval by the Senate for relaxation of one year extension for period of registration also for academic year 2022-2023 on specific recommendation of the respective DSC due to COVID19 situation.

The matter of Biswaranjan Mishra (Roll No. 14/EE/1103, Reg. No. NITD/PhD/EE/2015/00661 dt.17.11.2015) is referred to the Senate.

Item # 10 **To consider the appeal for discontinuation from PhD Program**

- **Jyotirmoy Halder (Roll No. 20CY1103) – Family issue.**
- **Syed Wasim Parvez (Roll No. 14/BT/ 1108)- Health issue**

The above matter has been discussed and as recommended by DSC of the student it may be forwarded to the Chairman, Senate for his approval.
The matter of release of regular Institute fellows will be guided by the regulations of the programme while the release of other regular fellows will be guided by the regulations of the respective funding agencies.

Item # 11 **To consider the matter regarding the approval for extension of period for delivering preregistration seminar:**

- **Santanu Dutta (18MS1505)- (Date of Admission: 31.07.2018)**
- **Somashish Saha (19CH1502)(Date of Admission: 27.07.2019)**

The matter related to Santanu Dutta (18MS1505) (extension up to Dec. 2022) and Somashish Saha (19CH1502)(extension up to Dec. 2022) are recommended for approval.

Rk

Item # 12 **To consider the matter regarding the approval for Campus release of –**

- **Shubhrajyoti Kundu (Reg. No.- 20REE011) - Appointed in K. K. Group of Institutions, Dhanbad on 25.05.2022.**
- **Ashis Bera(Reg. No.- 19RMA031)- Appointed in VIT, Chennai on 02.05.2022**

The matter is approved subject to submission of the NOC from the employer.

The scholarship will be stopped from the date of intimation regarding employment,

Item # 13 **To consider the matter regarding the approval of reconstitution of DSC:**

- Saurabh Pal (15/CA/1501)- Inclusion of Dr.Gautam Bandyopadhyay (MS) in place of Dr.Sajal Mukhopadhyay (CS) – revised DSC
- Amit Kumar Banerjee (19HS1503)- Inclusion of Co-Supervisor Dr.Partha PratimSengupta (HS).
- Saroj Khutia (17PH1105)- Inclusion of Dr. R. N. Saha (CY) in place of Dr. S. Ghosh (EE, Retired.).
- Madhab Dhali (17EC1101)- Inclusion of Co-Supervisor Dr.Rajib Kar (EC)
- Sanjeet Kumar (15/CA/1502)- Inclusion of Dr. Sanjay Dhar Roy (EC) in place of Dr.Tanmay De (CS) – revised DSC

The matter is recommended for approval.

Item # 14 **To consider the matter regarding the appeal on pre-submission seminar of Partha Parichha (Roll. No. 16/MA/1504, Reg. No. NITD/PhD/MA/2016/00827).**

The matter is discussed and Partha Parichha (Roll. No. 16/MA/1504, Reg. No. NITD/PhD/MA/2016/00827) may be allowed to appear for a pre submission seminar on fulfilment of the formalities for the same.

The meeting ended with vote of thanks to the Chairman.

Regulations for PhD Program

(Revised and Effective from 9th June, 2022)

Amended as per (i) 54th Senate, Item No. 54.18.3, (ii) 56th Senate, Item No. 56.6 (point 1, 2 and 3), (iii) 57th Senate, Item No. 57.12 and Item No. 57.17.3, (iv) 58th Senate, Item No. 58.8, (v) 60th Senate, Item No. 60.5 (point 10.6.21:Item 11(b)) & Item No. 60.9 and (vi) 61st Senate, Item No. 61.12 & Item No. 61.13, (vii) 62nd Senate, Item No. 62.7, (viii) Item No. 62.8 & (ix) Item No. 62.10

&

Office Order No: NITD/60, dt. March 24 & 25, 2021

National Institute of Technology Durgapur

The Institute/ NITD means 'National Institute of Technology Durgapur'

The Student/ Scholar means 'Research Scholar'

1.0. Introduction

1.1. The Institute offers doctoral research program leading to the degree of Doctor of Philosophy (PhD).

1.2. Deleted.

1.3 Notwithstanding any of the clauses provided in the Regulations, the Senate can exercise its powers to amend/interpret/implement decisions and actions concerned with academic matters.

1.4 A joint or collaborative PhD degree may be awarded by NIT Durgapur and another premier academic institution in India or abroad with which NIT Durgapur shall sign a MoU to this effect. However, each such case shall have to be approved by the respective Senate and the Board of Governors.

1.5. All the provisions of the UGC will be covered in the PhD program at NIT Durgapur as far as possible. (UGC Regulations, 2016; The Gazette of India, July 5, 2016, Part III, Section 4)

1.6. The Board of Governors of the Institute may, on the recommendation of the Senate, change any or all parts of the Regulations at any time.

1.7. The medium of communication, instruction, examination, seminars and the defense of PhD thesis will be English.

2.0. Admission

2.1. Status of Research Scholar:

The status of the candidates admitted to the PhD program shall be classified under any one of the following categories:

Category-A. Regular Research Scholar with Institute Fellowship:

Category-B. Regular Research Scholar with financial support from Government Programs (Sponsored by DST, CSIR, UGC, DST-INSPIRE, **etc.)**.
Candidates seeking admission to PhD program having their fellowship from various Government organizations such as CSIR, UGC, DBT, DST-INSPIRE etc. must be supported by a No Objection Certificate from the **Proposed** Supervisor of the Institute.

Category-C. Regular Research Scholar Selected in Externally Funded Sponsored Projects in the Institute (Must be supported by a No Objection Certificate from the Principal Investigator, indicating the duration for which the fellowship is available).

Category-D. Regular Research Scholar under QIP/ EFIP scheme.

Category-E. Regular Foreign Research Scholar Admitted Through Government of India.

Category-F. Professional Research Scholar from the Institute (NIT Durgapur Faculty / Staff): (Must be supported by a No Objection Certificate from the Head of the Institute).

Category-G. Regular Sponsored Research Scholar from Government/ Semi- Government/ other Highly Reputed Organizations/Academic or Research Institutions (Submission of No Objection Certificate / Sponsorship Certificate in the given format is mandatory).

Category-H. Professional Research Scholars from Industries: (Submission of either No-objection certificate or Sponsorship certificate from the employer during the admission process in the given format is mandatory).

Category-I. Professional Sponsored Research Scholars from Academic/ Research Institutions (Must be supported by a No Objection Certificate from the Head of the Institute)

Category-J. Professional Sponsored Research Scholars under Government of India Schemes like TEQIP etc. (will be guided by the norms of the scheme).

Category-K. Regular Research Scholar without Institute Fellowship (Self-sponsored)
(Such scholars will pursue PhD programme at the Institute on full time basis without getting financial assistance from NIT Durgapur or any other funding agency.)

Category L. Regular Research Scholar under Collaborative/Joint PhD Programs.
(Admission of such research scholars under this Category can be taken in both Odd and Even Semesters. Admission of such research scholars shall be made as per laid down terms and conditions in the MoU with respective institute/organization.)

The interested applicants can apply under various centres of the institute as listed below under categories B, C and K.
The interested applicants can apply under various centres of the institute under categories B and C, if they have their own fellowships and / or applying from a project, which was funded under the centres of the institute (relevant documents are to be provided by the respective Centre Coordinator).

List of Centres of the Institute:

(i) Centre for Research on Environment and Water (CREW)
(ii) Centre for Biomedical Engineering & Assistive Technology (BEAT)
(iii) Centre for Advanced Research on Energy (CARE)
(iv) Centre of Excellence on IoT and Intelligent Systems (IoTIS)

The interested applicants can also apply in the professional category for PhD studies in the above four Centres of Advanced Research.

Beside above categories, admission of research scholar from foreign institution/organization shall be made as per laid down terms and conditions in MoU with respective institute / organization.

The PhD degree awarded to all categories of students shall be treated as the same and equivalent.

2.2. Eligibility for Admission

2.2.1 The minimum qualification required for admission to Ph.D. program is one of the following:

<table>
<tr><th>Qualifying Degree*
(for relevant discipline)</th><th>General/ OBC</th><th>SC / ST</th><th>Academic and other Qualifications</th></tr>
<tr><td>M. Tech./ M.E./ M. Arch/ M. Pharm / M. S. / MBA/ PGDBM/ PGDM</td><td>6.5 CGPA or 60% marks</td><td>6.0 CGPA or 55% marks</td><td rowspan="6"><u>Category A:</u>
B. Tech/ B.E./ B. Arch/ B. Pharm / Equivalent with valid GATE.
M. Tech./ M.E./ M. Arch/ M. Pharm degrees with or without GATE qualification.
Other Post Graduate or Graduate degrees (as listed) with any relevant NET qualification.
List of NETs:
CSIR, UGC, GATE, GPAT, DBT-JRF, JEST, ICMR, ICAR, NBHM, Bioinformatics National Certification Examination etc. However, these NET qualifications will have to be relevant to the qualifying degree of the candidate concerned.
(OM No. SB/S9/2-01/2015 dated 07.01.2015)

<u>Categories B, C, D and E:</u>
As per the terms and conditions of the funding or sponsoring agency.

<u>Categories F, G, H, I, J, and K</u>:
Same as category A, but GATE/NET qualification is not mandatory.

<u>Category L</u>: As per MoU</td></tr>
<tr><td>M. Sc./ M. Com./ MBBS/ BDS</td><td>6.5 CGPA or 60% marks</td><td>6.0 CGPA or 55% marks</td></tr>
<tr><td>MA</td><td>6.0 CGPA or 55% marks</td><td>5.5 CGPA or 50% marks</td></tr>
<tr><td>MCA</td><td>7.5 CGPA or 70% marks</td><td>7.0 CGPA or 65% marks</td></tr>
<tr><td>B. Tech/ B.E./ B. Arch/ B. Pharm / Equivalent</td><td>7.5 CGPA or 70% marks</td><td>7.0 CGPA or 65% marks</td></tr>
<tr><td>CA/ ICWAI/ CS with a graduation degree</td><td>6.0 CGPA or 55% marks</td><td>5.5 CGPA or 50% marks</td></tr>
</table>

*All the degrees will be from an institute / university recognized by UGC/AICTE/MoE.
The preceding qualifying degrees of the candidates required for admission shall be decided by the respective DRPC. The minimum eligibility criteria for admission to professional PhD program 2019-20 onwards will be same as full-time PhD program under Category A. However, qualification in National Eligibility Tests etc., is not mandatory for professional PhD program.

2.2.2. Scholars under categories C and F must submit a no-objection certificate from the PI of the project/Institute during admission. They shall work for the Ph.D. program without affecting their normal duties.

2.2.3. Research scholars of categories G, H, I and J shall submit a Sponsorship and/or No-objection certificate, as applicable, from the employer during admission. In case the candidate joins a new organization, submission of a fresh NOC obtained from them is mandatory.

2.2.4. Deleted.

2.2.5. Mere possession of required degree and a good academic record does not guarantee admission to a candidate for the Ph.D. program. Apart from academic record, the DRPC will take into consideration the research aptitude, ability to work in a team, subject interest, availability of supervisors, facilities in the department and the research focus of the department while selecting candidates to the Ph.D. program through a pre-defined process.

2.3. Residential Requirement

2.3.1. Normally all full-time candidates admitted to the Ph.D. program will be required to stay in the Institute till they complete all assigned work and submit thesis.

However, for full-time candidates sponsored from Government / Semi-government / major industry with established R&D facilities, the DRPC may recommend to reduce the minimum residential requirement to one year or higher (for completing the course work and formulating the research problem).

2.3.2. If a full-time sponsored candidate intends to carry out a major part of his research work in his place of employment, she/he must convince the DRPC at the time of selection that adequate research facilities and research tradition exist in her/his organisation. While taking the decision DRPC will examine all the documents presented to it regarding adequacy of the R&D facilities available in the sponsoring organisation. These documents have to be furnished by the candidate during the time of interview.

In general major Central Govt. (CSIR, DRDO, DAE, ISRO, CDRC etc.) labs, research organisations, industries (public or private) with established R&D facilities are taken as organisations with adequate facilities.

Regarding recognition of other organisations the DRPC has to make a recommendation on the basis of the material available to it to the Director through Dean (Academic Research) for approval. In every case, the Senate will decide the residential requirement.

2.3.3. All Ph.D. (Professional) students including categories H, I and J students are mandated to have contact with the supervisor(s) for discussion and research in the Institute for at least 90 days a year in a single/multiple visit/s.

2.4. Admission procedure

2.4.1. Admission of scholars under categories A and B shall be made once in each semester as per a pre-decided schedule indicating the total number of seats available. Dean (Academic Research) will publish the admission notice on the Institute website. The departments will screen the applications based on pre-defined criteria sent by the Academic Section and prepare the shortlist. They will conduct admission tests (for category A), followed by shortlisting based on pre-defined criteria, if needed, and viva voce, and select the candidates on the basis of overall academic performance, written test and viva voce. The department will send the list of selected candidates to the office of the Dean (Academic Research). One expert from other department, selected from a panel of experts nominated by Director, will act as an observer in the viva voce.

2.4.2. Admission of scholars under categories C shall be made once in each semester along with the scholars under categories A and B. The candidate shall submit the application through the Dean (R&C) in the prescribed format of Sponsored Research and Consultancy Cell (SRCC) on recommendation of concerned PI and Head of the Department/Centre. The selection procedure will be the same as category A.

2.4.3. (i) Admission under categories F, G, H, I and J shall be made once in every academic year, during Odd Semester only.
(ii) F**oreign/NRI candidates from foreign institution/organization not having MoU with NIT Durgapur** shall be treated at par with the candidates from foreign institutions/organizations having MoU with NIT Durgapur.

2.4.3.1. The admission under categories F, H and J shall be made directly subject to fulfillment of eligibility criteria fixed by the respective departments, and submission of requisite documents and no-objection/ sponsorship certificate. The admission shall be subject to the availability of suitable supervisor(s) and the endorsement by the department.

2.4.3.2. Admission of candidates under categories G and I shall be made against the admission notice on the Institute website. The departments will conduct admission tests and viva voce, select the candidates on the basis of overall academic performance, written test and viva voce and send the list of selected candidates to the office of the Dean (Academic Research). Dean (Academic Research) shall publish the selection list on the Institute website. The candidates need to produce a sponsorship / No objection certificate in the prescribed format of the Institute during the admission test. For the category I, a Board of external examiners shall be constituted by the Chairman, Senate for the selection process.

2.4.3.3 Admission of candidates under category K shall be made once in each semester against the admission notice on the Institute website.
(i) **Minimum required qualification**: The minimum qualification required for admission to PhD program for Category K is the same as that of Category A but GATE/NET qualification is not mandatory.
(ii) **Admission Process**: The admission process will be the same as that of Category A, as per PhD regulations.
(iii) For the matters other than those mentioned in the above points Nos. 2.4.3.3. (i) & (ii), all other existing rules applicable to Category A scholars will be applicable to the Category K scholars as per PhD regulations or as prescribed by the Institute time to time.
(iv) The direct conversion of Scholar from the Category K to Category A and vice versa will not be permitted.
(v) A “Self-declaration” for unemployed/self-employed or “No Objection Certificate” from the employer for employed candidate is to be submitted during the admission process.

2.4.3.4 Admission of candidates under category L shall be made as per MoU.

2.4.4. Admission of research scholar from foreign institution/organization shall be made as per laid down terms and conditions in MoU with respective institute / organization during the Odd Semester only.

2.4.5. Applications of candidates shall be received by the office of Dean (Academic Research) and forwarded to the departments for screening. Dean (Academic Research) shall publish the short-list of the candidates screened by the departments on the Institute website along with the date, time and venue of the admission test and viva-voce.

2.4.6. Dean (Academic Research) shall publish the selection list on the Institute website. All communication related to the admission procedure shall be made through the Institute website **www.nitdgp.ac.in** only. Regular reservation policy of the Government of India shall apply.

2.4.7. All selected candidates will fill in the admission form (vide **INFORMATION SHEET** (**PAIS**), FORM-1) and submit an undertaking that she/he would abide by all rules and regulations and codes of conduct of the Institute.

2.4.8. Respective departments shall be responsible for the selection of research scholars.

2.5. Withdrawal from Residency

2.5.1. A sponsored student, pursuing PhD by staying on campus, can become non-resident by taking withdrawal from the residency. She/he may return to his place of work on completion of residential requirement, provided that such a scenario was mentioned in his application for admission and the student has a co-supervisor from his place of employment. The minimum period of work will be extended by one year, except when the student is employed in a superior R&D organization and is engaged in full time research on the same topic as his PhD works. The Joint/ Deputy Registrar (Academic & Examination) will issue a withdrawal order.

2.5.2. When a regular PhD student received the registration number fulfilling all the registration requirements and she/he gets a new job, she/he should apply through DSC for withdrawal of residency. However, the No Objection Certificate must be submitted from the employer.

2.5.3. In case of students, who secure a new job or otherwise wish to move outside the institute and end their doctoral program prematurely, need to refund any scholarship received.

3.0. Supervisors (to be read with clause 17.4)

3.1. The assignment of Ph.D. students to supervisor(s) by DRPC and constitution of Doctoral Scrutiny Committee (DSC) following enrolment/admission of the Ph.D. students will be made within a period of fifteen days from the date of enrolment. Chairperson (DRPC), in consultation with the supervisor/co-supervisor(s), shall constitute the DSC (vide DOCTORAL SCRUTINY COMMITTEE (DSC), FORM-3). The supervisor/co-supervisor(s) shall finalize the broad (tentative) title of the research topic of a selected candidate after mutual discussion.

3.2. All supervisors/co-supervisors of Ph.D. program shall be at least in the rank of Assistant Professor or equivalent having a Ph.D. degree. If a person from outside the Institute, not satisfying these criteria, is proposed to be a co-supervisor, the matter shall be referred to the Senate for decision.

3.3. The weightage of a joint PhD supervision by more than one supervisors shall be considered to be 0.5 while counting the number of total PhD supervision by a faculty member. The maximum permissible total number thus computed shall, however, not exceed six.

3.4. There can be one supervisor and maximum one co-supervisor for a research scholar from the Institute, with maximum one additional co-supervisor from outside.

3.5 The supervisor/co-supervisor must be a regular faculty member of the Institute belonging to the department in which the research scholar will be registered for doctoral studies.

3.6. The co-supervisor(s) may be from the same department of the Institute or other departments / outside.

3.6.1. A person from abroad satisfying the qualification criteria may become a co-supervisor. NIT Durgapur will have, however, no financial responsibility, whatsoever, in the research visits, if any, required for the collaborative research.

3.6.2. Deleted.

3.6.3. Co-supervisors from other institutions/ organizations shall submit curriculum vitae, a consent letter and a no-objection certificate from the employer during formation of DSC, if they do not have MoU with NIT Durgapur.

3.7. Any change in supervisor/co-supervisor shall have to be recommended by the DSC and forwarded to the office of Dean (Academic Research) for approval of Senate.

3.7.1. Change of supervisor/co-supervisor under exceptional circumstances shall be permitted on the recommendation of the DSC, subject to the consent of the research scholar, the present supervisor/co-supervisor and the proposed supervisor/co-supervisor. However, the candidate shall not be permitted to present pre-submission seminar within one year from the date of change of supervisor/co-supervisor.

3.7.2. Addition of co-supervisor shall be permitted on the recommendation of the DSC, subject to the consent of the research scholar. However, the candidate shall not be permitted to present pre-submission seminar within one year from the date of addition of supervisor/co-supervisor.

3.8. When a supervisor leaves the Institute permanently or temporarily for a period exceeding 6 months, the DSC shall appoint a new supervisor for the research scholar before her/his departure.

3.9. Deleted.

3.10. The DSC may consider continuation of the original supervisor on her/his return to the Institute as one of the supervisors.

3.11. A supervisor/co-supervisor after superannuation shall continue to act as the co-supervisor. However, if the research scholar has no supervisor from the department in which she/he is registered, one faculty member of the same department shall be made the supervisor after consultation with the superannuating supervisor and the research scholar. In case of the candidate already presented pre-submission seminar successfully, no additional supervisor shall be necessary.

4.0. Semester Registration

4.1. A student enrolled in the Ph.D. program will be required to register every semester along with endorsement of satisfactory progress by the DSC (vide Ph.D. SEMESTER REGISTRATION FORM (PSRF), FORM-2) and by paying tuition fees and other Institute dues. The Semester registration is different from PhD registration. A research scholar shall appear before the DSC at the end of each semester to make a presentation of the progress of his/her work for evaluation and further guidance. The DSC shall submit the approved progress report along with the registration form to the Academic Section.

4.2. Sponsored students who have been sanctioned withdrawal also need to do semester registration. They may, however, be permitted to send registration form by post to their supervisor, who will present them to the Academic Section through the HOD.

4.3. Failure to do semester registration within the stipulated dates as per Academic Calendar will result in termination of studentship, which in a very special case can be restored by the Senate on consideration of all circumstances, payment of additional fines and extension of thesis submission date.

4.4. It shall be the responsibility of the student to bring any deviation in his status in matters of course work, registration, withdrawal etc. to the attention of Dean (Academic Research) at the time of semester registration, if she/he has not done so earlier.

4.5. A student may be exempted from semester registration by Dean (Academic Research) / Director if she/he submits thesis within 30 days of scheduled semester registration. However, the student will lose his fellowship (if any) during the said period. If she/he fails to submit the thesis within 30 days, she/he must do the semester registration before the thesis is accepted for evaluation.

4.6. When the examined PhD thesis require revision and sent back to the examiner or the PhD thesis is not recommended / rejected by the examiner, the scholars have to pay semester registration fees to keep his / her studentship valid for the period till his / her thesis is recommended by the examiners. However, the scholarship will not be revived for such cases.

5.0. Ph.D. Registration

5.1. Every student enrolled in the Ph.D. program is given provisional admission soon after his/ her enrolment. The provisional admission defines:
(a) The broad area of research and

(b) The course work to be carried out by the student.
The student continues to work for close to a year before his research plan is properly formulated.

5.2 An enrolled Ph.D. student will be formally registered (vide Registration Form for Ph.D. Programme, FORM-5) for the degree of Ph.D. on completion of following steps:
(a) The candidate has successfully completed all assigned course work,
(b) Worked out a road map of the program and submitted a formal work plan to the DSC and
(c) Delivered an open seminar (Pre-registration seminar) to the satisfaction of the DSC. A tentative research title should be indicated in this seminar.

5.3. Subsequent to obtaining a favourable recommendation from the DSC, the Ph.D. registration fee (as applicable at the time) shall be paid by the candidate. The date when the candidate deposits the PhD registration fee shall be treated as the date of registration.

5.4. The registration of Ph.D. candidates may be approved by Chairperson, Senate and be ratified by the Senate in its subsequent meeting.

5.5. Candidates should normally present the registration seminar not later than five semesters from the date of enrolment, failing which the registration shall be cancelled.

5.6. The final title of Ph.D. thesis shall have to be indicated in the synopsis of the Ph.D. thesis at the pre-submission seminar and shall have to be approved by the DSC, along with the final synopsis of the Ph.D. thesis (clause 7.3).

6.0. Course Work

6.1. Course work is compulsory for all students enrolled for Ph.D. program including those with Master Degree in the same discipline. PhD scholars will have to qualify all the course work as assigned by the DSC.

6.2.1 (i) All Ph.D. scholars are required to qualify the course "Research Methodology".
(ii) PhD Students those are admitted under the MoU as well as other Professional PhD Students shall take Research Methodology course offered by NIT Durgapur or by an IIT/NIT/IISER/IISc/CFTI for which request letter shall be sent by NIT Durgapur to the concerned institute on behalf of the candidate. Other courses may be taken at NIT Durgapur or online (NPTEL, MOOCS, etc.).
6.2.2 The DSC will prescribe additional courses as follows (applicable for candidates admitted in the Academic Session 2021-22 onwards):
i) Scholars with M. Tech./ equivalent degree - Minimum 9 credits plus Research Methodology.
ii) Scholars with B. Tech./ MSc/ MA/ MCA degree - Minimum 16 credits plus Research Methodology.
iii) While this is a general guideline, the DSC may decide on higher credits requirement.
iv) Online courses offered by MOOCS/ NPTEL etc. and conduct online examination may also be utilized for the purpose of credit requirement, as assigned by the DSC.

6.3. Deleted
6.4. The scholars admitted to the Ph.D. programs shall be required to complete the coursework prescribed by the DSC within the first four semesters. Any extension will require the approval of the Senate.

6.5. The scholars will take courses based on the recommendation of the supervisor/co-supervisor(s) and approved by the DSC. The list of courses to be taken by a research scholar during a particular semester shall be endorsed by the DSC and informed to the Dean (Academic Research) within seven days from the start of the semester or within seven days from the date of enrolment. In case a course is taken from another department, it is to be endorsed by the Head of the concerned Department.

6.6. The scholars enrolled in courses are subject to the same regulations as applicable to other students in the courses with regard to attendance, grading, discipline and assessment.

6.7. The concerned teachers shall forward the grades of the research scholar at the end of a semester to the Associate Dean (Academic Research) for publication of results.

6.8. The scholar must pass each of these courses with at least C grade in a 7-point scale / equivalent. The result will be published as "QUALIFIED" for grades obtained 'C' and above and as "NOT QUALIFIED" for grades obtained below 'C'. A student shall get maximum three chances to pass a course assigned by the DSC, through grade improvement examinations which will be held concurrently with supplementary examinations of other academic programmes.

7.0. Submission of Thesis

7.1. The research scholars of all categories shall normally submit their Ph.D. thesis within a period of six years from the date of enrolment in the Ph.D. program. However, for satisfactory reasons, the period may be extended by one more year. The female scholars and Persons with Disability (more than 40% disability) shall be allowed a relaxation of two years in the maximum duration. However, the fellowship tenure shall be applicable as per the guidelines of the MoE / sponsoring agency.
The extension shall have to be recommended by the DSC. In case, no extension for registration is applied for the registration shall automatically stand terminated at the end of the above-stipulated period.

7.2. A research scholar shall submit his/her Ph.D. thesis not earlier than two years from the date of registration in the PhD program.

7.3. Prior to submission, when the thesis is nearly ready and can comfortably be submitted within three months the scholar will submit the synopsis of the thesis [typically 10 pages including tables, graphs and references] and present a seminar to an open audience (pre-submission seminar), which will include members of DSC. Soft and hard copies of the thesis should be submitted to the members of the DSC at least one week before the date of the seminar.

7.4. The DSC shall assess the work through a pre-submission seminar in presence of all supervisor/co-supervisor(s). It is mandatory that all the supervisor/co-supervisor(s) are present during the seminar. The DSC should confirm that the scholar has completed the required number of courses. The scholar shall respond to the suggestions of every DSC member. If and when the DSC is satisfied with the extent of work done and the quality of the thesis the scholar will be allowed to submit the thesis. The DSC shall forward one hard copy, signed by the scholar and the supervisor/co- supervisor, and a soft copy of the synopsis of the PhD thesis along with recommendations (vide EVALUATION REPORT ON PRE-SUBMISSION SEMINAR FOR Ph.D. THESIS, FORM-7) to the office of Dean (Academic Research).

7.5. (i) The scholar must have at least two papers published / accepted for publication based on his/her doctoral research in a SCI/ SSCI/ AHCI/ Non-paid Scopus/ Web of Science journal and

preferably two paper presentations in conferences/ seminars before the submission of the dissertation/ thesis for adjudication, and produce evidence for the same in the form of presentation certificates and/or reprints.
(ii) A journal publication by a PhD student without any of her/his supervisor(s) as one of the author(s) can be included in her/his PhD thesis with the approval of the supervisor(s).

7.6. A general format and guidelines (Clause 19.0) shall be used for writing Ph.D. thesis.

7.7. Plagiarism check shall be made for Ph.D. thesis to satisfy maximum permissible match of 20% excluding publications of the research scholar and corresponding supervisor/co-supervisor(s). The plagiarism check certificate should be included in the thesis.

7.8. The thesis examination fee, as applicable at the time, shall be deposited, subject to completion of all formalities.

7.9. The research scholar shall submit two copies of the Ph.D. thesis (hard-bound cover) for the external examiners to the office of the Dean (Academic Research) within three months from the date of successful pre-submission seminar. The soft copy of the thesis shall be emailed to Dean (Academic Research). After successful defense of the thesis and incorporation of revision as per the comments of the examiners, the candidate shall submit one hardbound copy of the final version and a soft copy of the Ph.D. thesis to the office of Dean (Academic Research).

7.10. Electronic copies of the theses should be posted on Institute web site for wide distribution.

8.0. Examination of PhD Thesis *[applicable to all scholars]*

8.1. The DSC shall prepare and submit two panels of five external examiners each in the area of the submitted research work each from India and abroad, to Dean (Academic Research) in hard and soft copies, for the appointment as external examiners of the thesis. The list must include the name, designation, affiliation, full postal address, telephone number, email IDs and webpage address of the examiners. The examiners should be selected by the DSC from amongst the eminent faculty members or experts, Professors / Associate Professors/ Retired Professors / Emeritus Professors, and researchers with Ph.D. in Institutes / Universities / Research laboratories / Industries of repute. The area of his/ her specialization is to be mentioned explicitly along with a hyperlink to his/ her web page. In the list of examiners from abroad, there shall be at least three experts not of Indian origin. The name of a person who is a co-author with the research scholar in any of her/his publications (Journal/Conference/Patent) at any time should not be recommended by the DSC as External Examiner for evaluation of the Ph.D. thesis of the scholar. **There should not be any conflict of interest in the selection of the panel of examiners**.
It shall also include the name and registration number of the research scholar, thesis title, the department registered and the name of the supervisor/co-supervisor(s) etc. (vide Ph.D. THESIS SUBMISISON FORM, FORM-8). Director as the Chairperson of the Senate shall select one external examiner each from India and abroad from the recommended panel.

8.2. It is expected that the DSC submits the panels of examiners immediately after the pre-submission seminar to the Dean (Academic Research), so that the consent of examiners is obtained before submission of the thesis.

8.3. Dean (Academic Research) will arrange to dispatch the synopsis to the external examiners by email. On receipt of their acceptance to become the external examiner of the Ph.D. thesis, the Academic Section will arrange to dispatch the thesis to them by e-mail/post. The soft copy of the

Ph.D. thesis shall also be sent through email. Normally, the examiner will be required to submit the evaluation report within six weeks.

8.4. Deleted.

8.5. When a thesis is unanimously accepted by the board of examiners for the award of the Ph.D. degree (Annexure-IX), the scholar shall be required to defend the work in an open seminar followed by a viva-voce conducted in presence of the external examiner from India. DSC members and other interested persons. It is not mandatory for the co-supervisors from abroad to be present during the viva voce. In case the Indian external examiner is not able to attend the seminar and viva-voce, Director shall appoint an alternate examiner for the purpose from the existing panel of external examiners from India. The defense of the thesis shall be held after at least three weeks from the date of dispatch of the thesis.

8.6. If an external examiner does not respond within three weeks from the date of dispatch of the synopsis or within three months from the date of dispatch of the thesis, Director may select an alternate name from the recommended panel of Experts as the external examiner. The examiners may be reminded of sending the report of the thesis after two months of dispatch of the thesis. The examiners may send the report on the thesis by email and / or post with a “confidential” label on the mail.

8.7. (i) In case where an examiner criticizes a Ph.D. thesis strongly but still recommend it as “To be revised but need not be sent back to the examiner”, the DSC shall take utmost care to ensure that all suggested revisions and concerns of the examiner have been addressed in the revised thesis.
(ii) If a thesis in the present form is not found to be acceptable by any one of the external examiners for award of the Ph.D. degree and is likely to be accepted after revision in line with the modifications suggested by the external examiners in their report, the research scholar must re-submit the thesis, after making payment of necessary re-submission fees, incorporating the suggested amendments within three months from the date of the earlier decision of the DSC.

8.8. If a thesis is recommended by one external examiner for the award of the Ph.D. degree but is rejected by the other external examiner, the thesis may be sent to another examiner. The DAC, if needed, may submit a fresh panel of external examiners. The research scholar may submit another copy of the thesis after depositing an additional thesis examination fee, as applicable at the time.

8.9. If a thesis is rejected by both the external examiners, or if it recommended by one examiner but is rejected by two examiners consecutively, the student shall submit a fresh thesis after a period of one year from the date of the decision. The thesis examination fee of as applicable at the time shall be deposited again before the submission of the thesis. The DAC will recommend a fresh panel of external examiners in the area of the submitted research work each from India and abroad for appointment as external examiners of the thesis.

8.10. The thesis resubmission fees will have to be paid as applicable from time to time as stated in the clauses 8.7, 8.8 and 8.9.

9.0. Defense of Ph.D. work

9.1. The Dean (Academic Research) shall invite the examiners, on approval of Chairman, Senate.

9.2. Open Ph.D. seminars and viva will be conducted at respective departments in presence of DSC members.

9.3. Recommendations of the external examiner and DSC will be forwarded to the Dean (Academic Research) for its onward submission to the Chairman, Senate (vide REPORT ON VIVA-VOCE & DEFENSE FOR Ph.D. DEGREE, FORM-14).

10.0. Award of Degree

10.1. On the recommendation of the Doctoral Scrutiny Committee, the Senate or the Chairperson, Senate (when the Senate is not sitting early) shall decide whether the candidate should be awarded the degree of Doctor of Philosophy. If the Chairperson, Senate has approved the award of degree, the award needs to be confirmed by the Senate.

10.2. Deleted

10.3. A provisional degree certificate will be issued by Dean (Academic Research) to the scholar on successful defense of the thesis stating that the candidate has successfully defended her/his Ph.D. thesis fulfilling all the conditions stipulated by the Senate of the Institute. The final degree certificate will be issued in the convocation or by any other mode approved by the Senate. The date of the defense examination shall be the effective date of award of degree and will be mentioned in the provisional certificate and degree certificate.

10.4. Any deliberate false statement or plagiarized text will lead to summary disqualification, in addition to other punitive measures commensurate with the offence. Degrees, even after being awarded, may be revoked if gross violation of academic ethics is established.

10.5. Posthumous Ph.D. degree will be awarded to a deceased student only if the formalities up to the receipt of the 'RECOMMENDED' reports from both examiners (from India and abroad) are completed and the compliance report is submitted. Each such case will, however, need the recommendation of the Senate.

11.0. Fellowship *[applicable to Institute scholars, Category A]*

10.1. Institute doctoral fellowships shall be governed by the rules of MoE. When the number of Institute fellowships is limited; they will be distributed among different departments by the Director on recommendation of Dean (Academic Research). Generally, the number of fellowships will be proportional to the faculty strength, but changes can be made to ensure that the positions are filled to the extent possible.

11.2. In case of students awarded a scholarship by an external agency or from a research project operating in the Institute; the provisions specified by the sponsor shall govern the rules.

11.3. Deleted

11.4. Deleted
11.5. Deleted.

11.6. The scholarship for the category A students shall normally be given initially for a period of three years, which can be renewed on year-to-year basis on satisfactory performance up to a maximum period of 5 years (including project fellowship, if any) / tenure of the research scheme. The scholarship shall, however, automatically be terminated after the date of Ph.D. thesis defense or 5 years from the date of enrolment whichever is earlier.

11.7. Enhancement in rate of fellowship, after two years of enrolment, may be considered on successful assessment by the DSC and submission of report (vide EVALUATION REPORT FOR ENHANCEMENT OF FELLOWSHIP FOR Ph.D. DEGREE, FORM-6) to the Dean (Academic Research) towards satisfactory progress in the research activity. The student will submit a summary of the progress of the work to the Chairperson, DSC through the supervisor/co-supervisor(s) and deliver an open seminar. In case the recommendation of the DSC is not favourable, the candidate may deliver a fresh seminar after six months from the previous one for consideration of enhancement in scholarship. Enhancement of scholarship shall be effective from the date of successful enhancement seminar.

11.8. Deleted.

11.9. If a student with Institute fellowship fails to complete registration formalities within 24 months of enrolment, payment of fellowship will be suspended (with permanent loss) till registration formalities are over.

11.10. All research scholars with fellowship (Institute sponsored/ Externally funded, including UGC/ CSIR/ DST etc.) will be required to assist the Department in teaching activity (sessional, laboratory etc.) and other academic activity for up to 8 hours per week; the quantum of such contribution being decided by the administration from time to time.

11.11. Change of fellowship, other than project fellowship (due to completion of project duration), shall not be permitted.

12.0. Leave rules [*applicable to Institute scholars, Category A*]

12.1. A research student, except when granted withdrawal by the Institute must attend to his work on a whole time basis. The departments will maintain attendance record of the student. The DSC will examine the attendance record of students, and if it is found unsatisfactory, will recommend extension of minimum duration for submission of thesis, deregistration or termination of studentship, as it thinks fit.

12.2. Research scholars other than Institute employee are eligible to enjoy 30 days leave as and when necessary in a calendar year.

12.2.1. Request for the sanction of any type of leave, formal application should be addressed to the HOD which should usually be recommended and forwarded by the supervisor before availing any leave excepting exigencies.

12.2.2. The HOD and his/her office would take care of the leave applications and approvals. The same office would also keep the records of the leave as usual and submits the attendance report to the appropriate authority for scholarships or other grants. The HOD may refer appropriate cases to the Dean (Academic Research) to issue leave certificate, as and when required, and to settle and dispute or cases of exigency.

12.2.3. Leaves of research scholars under CSIR/UGC/DST sponsored research schemes and other categories will be governed by the rules of the bodies, which provide financial support.

12.2.4. In case of medical leave, the Institute Medical Officer must endorse the medical certificate.

12.2.5. Maternity and child care leave are applicable to female student only. A female student is entitled to avail maternity leave for a maximum of 180 days and childcare leave for a maximum of 60 days once during the tenure of their studentship. Similarly, a male student is entitled to avail paternity leave for a maximum of 15 days. If availed, the loss of days due to these leaves may be augmented by extending their registration period, by the same number of days, on the basis of written prayer from the scholars to the Dean (Academic Research) with due recommendation of DSC.

12.2.6. There will be no loss of scholarship/fellowship for the female students availing the maternity and childcare leave but the total time period of scholarship will remain same and will not be extended.

12.2.7. In all cases, an application for medical/maternity leave must be accompanied by all relevant medical papers - prescriptions, admission and discharge reports, diagnostic reports, medicine purchase slips etc.

12.2.8. All leave application must be filed within 3(three) working days after joining.

12.2.9. Absence without sanctioned leave will entail loss of financial assistantship for the period of absence and may result in the termination of the students' program.

12.3. There shall be no summer or winter vacation for research students.

12.4. For part of a year, the entitlement will be on pro-rata basis.

12.5. In matter of course work, leave rules applicable to other program will also be applicable to Ph.D. students.

12.6. Leave on duty - If a scholar require to visit any laboratory/ institute in connection to his/ her research work, such absence from NIT Durgapur will be treated as leave on duty. However, the scholar will require to have prior approval for the same, on recommendation of the concerned supervisor, from the Chairman of DSC (up to 7 days) or Dean (Academic Research) (more than 7 days up to 30 days) or the Chairman, Senate (more than 30 days).

13.0. Miscellaneous

13.1. All seminars and viva voce for the Ph.D. program shall be open house, with a notice normally circulated to all departments of the Institute at least seven days in advance.

13.2. All seminars; pre-registration, enhancement and pre-submission seminars must be conducted within a maximum period of one month from the date of application by the candidate, subject to concurrence of the DSC.

13.3. If the DSC finds the performance of the research scholar unsatisfactory, it will give at least two warnings (in writing) to the candidate. If there is no improvement in her/his performance even after the warnings, the DSC may recommend termination of the Ph.D. program for the scholar through DRPC for approval of the Senate.

13.4. The Institute may revise the fee structure from time to time.

13.5. The list of documents, which need to be submitted at various stages of Ph.D. program starting from the time of admission are listed in Annexure- forms.

13.6. External co-supervisors will submit a willingness certificate (FORM 16/ as per Format) and no objection certificate (FORM 17 / as per Format) from their organization and from their end during formation of DSC or at a time when appropriate.

13.7. The Institute shall submit the soft copy of the thesis to the INFLIBNET after the approval of the award of the PhD degree.

13.8. The Institute will issue a declaration to the effect that the degree has been awarded in accordance with the provisions of UGC regulations, 2016, if sought by a degree awardee.

14.0. Termination of Studentship *[applicable to all students]*

The studentship of a Ph.D. scholar may be terminated by the Senate on exceptional grounds. They are:

- Recommendation of Institute‘s Disciplinary Committee.
- Failure to do semester registration.
- Failure to complete registration within two years from the date of enrolment.
- Poor progress as noted by DSC. Such a decision may be implemented only after approval of the Senate.
- Prolonged absence (exceeding two months) from the Institute without prior intimation.

15.0. Transition issues

The revised/amended regulation shall come into effect from Aug. 21, 2021. Students enrolled prior to this date shall be generally covered by the regulation in vogue at the time of their enrolment. However, some of the clauses in the present regulation shall be applicable to them where these are specifically mentioned. The final decision on each specific issue will be taken by the Senate (or Chairman Senate on its behalf), on case-to-case basis.

16.0. Exceptions

Notwithstanding anything stated in the rules, the Senate can make special provisions and exceptions depending on the merit of a case. Such cases shall not be cited as precedence in future occasions of similar nature, because two situations appearing similar may not be identical.
In emergency situations, the Director in capacity of the Chairman Senate, can exercise powers of the Senate and discharge the functions of the Senate. Such decisions must be reported to the Senate at its next meeting.

17.0. Committees / Functionaries

The following committees shall be constituted for the research program.

17.1. Research Academic Committee (RAC)

17.1.1. Constitution:
i) Dean (Academic Research) - Chairperson
ii) Dean (R&C) - Members

iii) Chairman of all DRPCs OR any one faculty (with Ph.D.) nominated by Chairman of respective DRPCs- Members
iv) One representative with Ph.D. degree from industry / R&D organization - Member
v) Associate Dean (AR)- Member
vi) Joint/Deputy Registrar (A&E) - Convener

17.1.2: Functions:
i) To consider the recommendations of the DRPC on matters relating to research program and to make suitable recommendations to the Senate.
ii) To ensure that all norms and regulations pertaining to research programme are strictly followed
iii) To make periodic review of ordinances, regulations and instructions pertaining to research program and to recommend to the Senate any modification thereof.
iv) To review the academic performance and make suitable recommendations to the Senate regarding the award of degrees.
v) To conduct at least one meeting each semester and send the proceedings to Secretary, Senate.
vi) The quorum for each meeting will be ten.

17.2. Departmental Research Program Committee (DRPC)

17.2.1. Constitution
i) Head of the Department- Chairperson
(In case, Head of the department does not possess Ph.D. degree, the Director shall nominate Chairperson)
ii) All faculty members of the department having Ph.D. degree- Members
iii) One Professor from a premier national academic institution /
one expert from industry / R&D organization with Ph.D. degree- Member

17.2.2. Functions
i) To ensure academic standard and excellence of the Ph.D. program offered by the department.
ii) To assign the supervisor/co-supervisor(s) to the research scholar in consultation with the Scholar and the supervisor/co-supervisor(s)
iii) To conduct admission test/ interview
iv) To consider any general matter related to the research program of the department and propose change in policy pertaining to the Ph.D. program.
v) The external expert to be present in the non-routine DRPC meetings where policy decisions are recommended.

17.3. Doctoral Scrutiny Committee (DSC)

There shall be a Doctoral Scrutiny Committee for each Ph.D. scholar. The Supervisor shall be the Convener of this Committee. The DSC shall vigilantly monitor the quality of the research work and the Ph.D. thesis.

17.3.1. Constitution
i) Chairperson (DRPC)/ A senior Faculty member of the Department
(if Chairperson is a supervisor/co-supervisor) – Chairperson
ii) Two faculty members of the department having PhD degree- Members
iii) One faculty member in the rank of Professor/ Assoc. Professor having Ph.D. from other department of the institute, preferably having interest in related area of research- Member
iv) Concerned supervisor/co-supervisor(s) for the research scholar- Member(s)

17.3.2. Functions

i) To review the research proposal and finalize the topic of research;

ii) To guide the research scholar to develop the study design and methodology of research and identify the course(s) that he/she may have to do.

iii) To periodically review and assist in the progress of the research work of the research scholar.

iv) A research scholar shall appear before the DSC once in six months to make a presentation of

the progress of his/her work for evaluation and further guidance. The six monthly progress reports shall be submitted by the DSC to the Academic Section before each Semester registration.

v) In case the progress of the research scholar is unsatisfactory, the DSC shall record the reasons for the same and suggest corrective measures. If the research scholar fails to implement these corrective measures, the DSC may recommend with specific reasons for cancellation of the registration of the research scholar.

vi) To conduct registration, enhancement and pre-submission seminars, viva voce.

vii) To act as the examiners in the above seminars and viva voce.

viii) To oversee and advise on all matters related to the Ph.D. work of the scholar.

17.4. Supervisor/co-supervisor

The functions and responsibility of the supervisor/ co-supervisor are:

i) To assign a topic for research to the research scholar in consultation with the scholar.

ii) To recommend the courses to be taken up by the research scholar.

iii) To provide or arrange for facilities to carry out research and supervise the research scholar for the entire research studies.

iv) To monitor the progress of the research scholar.

v) To report to the DSC the performance of the student at the end of each semester.

vi) To recommend a panel of Ph.D. thesis external examiners to DSC.

vii) To forward all applications of the research scholar working under him to the DRPC

Utmost care must be taken by the supervisor(s) with respect to the content, organization and language of the Ph.D. thesis before endorsing it for submission.

17.5. Central Admission Committee (CAC)

17.5.1. Constitution

i) Dean (Academic Research)- Chairman

ii) Chairman of all DRPCs- Members

iii) Associate Dean (Academic Research) - Member

iv) Joint/Deputy Registrar (A&E)- Convener

17.5.2. Functions

To prepare the final list of the selected candidates based on the selection lists prepared by the departments and communicate it to the office of Dean (Academic Research).

17.6. Departmental PhD Programme Coordinator

The Ph.D. Coordinator will be appointed by the HOD on rotation basis, who will be in charge of Ph.D. program in the Department with the following function and responsibilities.

i) To help the department with allotment of Ph.D. students to faculty members.
ii) To maintain a detailed record of departmental Ph.D. students.
iii) To organize Ph.D. admission test and viva voce in each semester as required.
iv) To keep a record of various course works being taken by the Ph.D. students.
v) To monitor that DSC assigned course works are being taken by the Ph.D. students.
vi) To compile the marks of all the course works and submits the same to the Academic Section.
vii) To work in conjunction with the academic section for any relevant issue.
viii) To circulate any departmental Ph.D. related seminar notices as soft copies.
ix) To report to the Academic section, as required, through HOD.
x) Any other function as assigned by the HOD.

18.0 Guidelines for Utilization of Contingency Grant (for attending National/International Conference/Lab visit etc.) [Applicable to Institute Scholars, Category A]

18.1 The financial assistance shall be provided to a research scholar in different heads as follows for attending National/International Conferences within India:

Head	Eligibility	Remarks
Registration Fee	Maximum up to Rs. 5000	On production of fee receipt
Travel	Train(AC III Tier)/AC Bus (by the shortest route)	As per actuals on production of ticket. In case the scholar travels by flight or any other mode, the reimbursement should be actual subjected to an
Local Travel	Auto/Bus	As per actuals subjected to an upper limit of Rs 100 per day on production of bills/self-certification
Lodging	Hostel/Guest House/Hotel for the conference days plus one day each prior to and after the conference days	Actuals subjected to a ceiling of Rs 1000 per day
Per diem	The conference days plus one day each prior to and after the conference days	Rs. 250 per day (No bills required)

18.2 Maximum two conferences can be attended in a calendar year subjected to availability of contingency grant.

18.3 A research scholar will be given the support provided he/she continues to be a student for at least three months after attending the conference.

18.4 The scholar has to obtain an approval from competent authority before attending the conference and should submit settlement of financial assistance granted by the Institute (by listing all the expenses incurred in an orderly manner and duly enclosing all supporting documents) within ten days to the Academic Section.

18.5 In case the purpose of the travel is for data collection/lab visit for conducting experiments, the scholar will be permitted to travel within India, subjected to availability of contingency grant, and the entitlements will be the same as that of conference travel within India.

18.6. List of items, which can be purchased under contingency grant

i) Acquisition of books and documents of relevance to the research topic provided these are not available in the library of the University/Institute.
ii) Chemical/consumable items required for the research work.
iii) Equipment required exclusively for research.
iv) Photographic materials for research or thesis work.
v) Computation charges.
vi) Reprints/ Off- print of research papers.
vii) Stationery and postal charges.
viii) Registration fee for attending conference in India and abroad.
ix) For registration of Ph.D. and submission of thesis.
x) Any other purpose, specially authorized by NIT Durgapur administration.

<u>Contingency grant cannot be used for:</u>

i) Foreign travel or other expenses for visit abroad.
ii) Stationery items such as pen, pencils, folders, file covers, carbon papers etc. and furniture items.
iii) Tuition fees

19.0. Guideline for Composing Ph.D. Thesis

19.0. INTRODUCTION

Purpose

This document, herein after referred to as the Thesis Guide, lists the general and specific requirements governing thesis preparation including guidelines for structuring the contents. For style, structure and presentation of the thesis, students may refer to additional style manuals or reference guides (some of which are listed below) and to the published literature in their respective field of study.

Style Manuals or Reference Guides

i) Michaelson, H.B. *How to Write & Publish Engineering Papers and Reports*. 3rd ed. Phoenix: Oryx Press, 1990.

ii) Turner, R.P. *Technical Report Writing*. 2nd ed. San Francisco: Rinehart Press, 1971.

iii) Turk, C. and Krikman, J. *Effective writing: Improving Scientific, Technical and Business Communication*. 2nd ed. London: E & FN Spon, 1989.

iv) Campbell, W.G., Ballou, S.V. and Slade, C. *Form and Style: Theses, Reports, Term Papers*. 4th ed. Boston: Houghton Mifflin Co., 1974.

v) *MLA Style Manual and Guide to Scholarly Publishing*. 3rd ed. New York: Modern Language Association, 2008.

vi) Sternberg, D. *How to Complete and Survive a Doctoral Dissertation*. New York: St. Martin's Press, 1981.

vii) Day, R.A. and Gastel, B. *How to Write and Publish a Scientific Paper*. Westport: Greenwood Press, 2006.

viii) Booth, W.C., Colomb, G.G. and Williams, J.M. *The Craft of Research*. Chicago: The University of Chicago Press, 2003.

ix) *Publication Manual of the American Psychological Association*. 6th ed. Washington, DC: APA, 2009.

Thesis Submission

To have the thesis examined, two copies of thesis (excluding the copy for the supervisor(s)) are to be submitted to the office of Dean (Academic Research). Besides fulfilling various existing requirements for thesis submission, such as submission of a list of examiners, additional copies of synopsis/abstract, and payment of thesis examination fees (for Ph.D. only), it is to be ensured by the scholar and the respective thesis supervisor (s) that the thesis preparation guidelines have been adhered to.

While submitting the thesis, every student is required to provide a Signed Checklist/ Declaration in the following format to the Dean (Academic Research).

Declaration/ Statement of Thesis Preparation

Thesis title: ……………………………………………………………..

Degree for which the thesis is submitted: ……………………………………

1. Thesis preparation guideline has been followed while preparing the thesis.
2. All specifications regarding thesis format etc. have been followed.
3. The contents of the thesis have been organized based on the guidelines.
4. The thesis has been prepared without resorting to plagiarism.
5. All sources used have been cited appropriately.
6. The thesis has not been submitted elsewhere for a degree.

(**Signature of the student with date**)

Name: __________________________

Registration No.:__________________

Department: _____________________

19.1. THESIS FORMATTING SPECIFICATIONS

19.1.1. Preparation of Manuscript and Copies

19.1.1.1. The thesis needs to be prepared using a standard text processing software and must be printed in black text (color for images, if necessary) using a laser printer or letter quality printer in standard typeface (Times New Roman or Sans Serif font). The font size should also be fixed at 12 in general; exceptions may be there only when it is really required. The medium of writing will be British English.

19.1.1.2. The thesis must be printed or photocopied on both sides of white paper. All copies of thesis pages must be clear, sharp and even, with uniform size and uniformly spaced characters, lines and margins on every page on good quality white paper of 75 gsm or more.

19.1.1.3. Thesis should be free from typographical and grammatical errors.

19.1.2. Size and Margins

19.1.2.1. A4 is the recommended thesis size. The total number of pages should preferably be limited to ~ two hundred (considering both sides of the paper).

19.1.2.2. The top, bottom and right side margins should be 25 mm, whereas the left side margin should be 35 mm for both textual and non-textual (e.g., figures, tables) pages. If one takes print on either side of a page, margin on either right or left side will be different for odd and even pages.

19.1.2.3. Content should not extend beyond the bottom margin except for completing a footnote, last line of chapter/subdivision, or figure/table caption.

19.1.2.4. A sub-head at the bottom of the page should have at least two full lines of content below it. If the texts of the sub-head are too short to allow this, it should begin on the next page.

19.1.2.5. All tables and figures should conform to the same requirements as text. Colour may be used for figures. If tables and figures are large, they may be reduced to the standard size (provided the reduced area is not less than 50% of the original) and/or folded just once to flush with the thesis margin (if the page size does not exceed 250x360 mm).

19.1.2.6. Scholars may choose to submit printed thesis copies either in the standard size (as in 2.2.1) or in a book format that is roughly half of A4. If the book format is adopted for submission, it should be ensured that all textual and illustrative material is distinct and legible. Students should also submit the thesis in soft form (PDF) for storage and archival.

19.1.3. Page Numbering

19.1.3.1. Beginning with the first page of the text in the thesis (Chapter 1), all pages should be numbered consecutively and consistently in Arabic numerals through the appendices.

19.1.3.2. Page numbers prior to Chapter 1 should be in lower case Roman numerals. The title page is considered to be page (i) but the number is not printed.

19.1.3.3. All page numbers should be placed without punctuation in the upper right hand corner, 12 mm from the top edge and with the last digit even with the right hand margin.

19.1.4. Multi-Volume Thesis

A thesis may be in two or more volumes, if required. The volume separation should come at the end(s) of major division(s). The preliminary pages prior to Chapter 1 are contained only in Volume I, except the title page.

19.1.5. Line Spacing

The general text of the manuscript should be in one-and-half spacing. Long tables, quotations, footnotes, multi-line captions and bibliographic entries (references) should be in single spacing, with text size in 11 points.

19.1.6. Tables, Figures and Equations

19.1.6.1. All tables (tabulated data) and figures (charts, graphs, maps, images, diagrams, etc.) should be prepared, wherever possible, on the same paper used to type the text and conform to the specifications outlined earlier. They should be inserted as close to the textual reference as possible.

19.1.6.2. Tables, figures and equations should be numbered sequentially either throughout the thesis or chapter-wise using Arabic numerals. They are referred to in the body of the text capitalizing the first letter of the word and number, as for instance, Table 17, Figure 24, Equation (33), or Table 5.3, Figure 3.11, Equation (4.16), etc.

19.1.6.3. If tables and figures are of only half a page or less, they may appear on the same page as text but separated above and below by double line spacing. Font size for text should be the same as for the general text.
19.1.6.4. Good quality Line Drawings/figures must be drawn using standard software that provides vector rather than bit-map graphics. Figures must be scalable.

19.1.6.5. Images, Photographs, etc. must be scanned in resolution exceeding 200dpi with 256 gray scales for the monochrome images and 24 bit per pixel for the color images.

19.1.7. Binding

The student should submit the copies of the thesis in fully bound form (hard cover). Once the thesis is accepted, it is the student's responsibility to get it properly hard bound before submitting the required number of copies with the Academic Research Section / Central Library and the Department and Supervisors concerned. The front cover of the bound copy should be the same as the title page of the thesis. The front cover should have printing on the side to include the author's name, abbreviated thesis title (optional), degree, department, and the year. The color of the binding cover should be maroon for Ph.D. with golden color writings on it).

19.2. GUIDELINES FOR STRUCTURING THE CONTENTS

19.2.1. Sequence of Contents

The following sequence for the thesis organization should be followed:

(i) Preliminaries	Title Page	As per the format given at the end of the guidelines.
	Certificate	
	Abstract/Synopsis	
	Acknowledgement and/ or Dedication (if included)	
	Table of Contents	
	List of Figures, Tables, Illustrations,	
	Symbols, etc. (wherever applicable)	
(ii) Text of Thesis	Introduction	
	The body of the thesis	
	Summary and conclusions	
(iii) Reference Material: List of References, Bibliography (where included)		
(iv) Appendices, if included		
(v) Index, if included		

All the Chapter headings are centered (without punctuation) 25mm down the top edge of the page. The subsequent type-setting begins three spaces below the heading.

19.2.2. Preliminaries

19.3.2.1. A Ph.D. thesis should contain an abstract/synopsis typically not exceeding 1000 words (about four pages) in one-and-half spacing.

19.2.2.2. Ph.D. students shall also separately submit three copies of the synopsis/abstract.

19.2.2.3. Every student should submit two copies of abstract/synopsis not exceeding 250 words (one page) for record keeping in the Central Library.

19.2.2.4. A synopsis/ abstract shall be printed in one-and-half space with the heading “SYNOPSIS/ ABSTRACT” in uppercase followed by certain preliminary information and the text. For textual matter, refer to the suggested format which is placed at the end of the Thesis Guide.

19.2.2.5. Synopsis/Abstract should be self-complete and contain no citations for which the thesis has to be referred.

19.2.3. Table of contents

19.2.3.1. The table of contents lists all material that follows it. No preceding material is listed. Chapter titles, sections, first and second order sub-divisions, etc. must be listed in it.

19.2.3.2. Tables, figures, nomenclature, if used in the thesis, are listed under separate headings.

19.2.4. The Text of the Thesis

19.2.4.1. Introduction

Introduction may be the first chapter. It should contain a brief statement of the problem investigated. It should outline the scope, aim, general character of the research and the reasons for the student's interest in the problem.

19.2.4.2. The body of Thesis

This is the substance of the dissertation inclusive of all divisions, subdivisions, tables, figures, etc.

19.2.4.3. Summary and conclusions

If required, these are given as the last major division (chapter) of the text. A further and final subdivision titled "Scope for Further Work" may follow.

19.2.4.4. Reference material

The list of references should appear as a consolidated list with references listed either alphabetically or sequentially as they appear in the text of the thesis. If pertinent works have been consulted but not specifically cited, they should be listed as Bibliography or General References. Spacing and font size should be consistent inside a single reference, and there should be a single spacing between two different references (see Section 2.5).

Reference Format

- For referencing an article in a scientific journal the suggested format should contain the following information: authors, title, name of journal, volume number, page numbers and year.
- For referencing an article published in a book, the suggested format should contain, authors, the title of the book, editors, publisher, year, page number of the article in the book being referred to.
- For referencing a thesis the suggested format should contain, author, the title of thesis, name of the institute where thesis was submitted or awarded, and year.

- A few examples of formats of references are given below and the student should be consistent in following the style.

Journals

H.E. Exner, “Physical and Chemical Nature of Cemented Carbides,” *International Metals Review*, 1979, v. 24, pp. 149-173.

G.E. Spriggs, “The Importance of Atmosphere Control in Hard Metal Production,” *Powder Metallurgy*, 1970, v. 13, n. 26, pp. 369-393.

Conference Proceedings

H.F. Fischmeister, “Development and Present Status of the Science and Technology of Hard Materials,” Science of Hard Materials, R.K. Viswanadham, D.J. Rowcliffe, and J. Gurland (eds.), Plenum Press, New York, NY, USA, 1982, pp. 1-45.

W.H. Baek, M.H. Hong, S. Lee, and D.T. Chung, “A Study on the Shear Localization Behavior of Tungsten Heavy Alloy,” Tungsten and Refractory Metals 2, A. Bose and R.J. Dowding (eds.), Metal Powder Industries Federation, Princeton, NJ, USA, 1995, pp. 463-471.

Books

R.M. German, Powder Injection Molding, Metal Powder Industries Federation, Princeton, NJ, USA, 1990.

Thesis

Technical Reports

E.G. Zukas, P.S.Z. Rogers, and R.S. Rogers, “Experimental Evidence for Spheroid Growth Mechanisms in the Liquid Phase Sintered Tungsten Based Composites,” Informal Report: Los Alamos Scientific laboratory, USA, 1976, pp. 1-35.

Patents

V. Oenning and I. S. R. Clark, U. S. Patent No. 4988386, 1991.

Journals in Non-English Language

L. Weihong and T. Xiuren, “Tungsten Matrix in Cu-W Contact Materials by Impregnation Process,” *Powder Metallurgy Technology*, 1988, v. 6, n. 8, pp. 1-4. (in Chinese)

19.2.4.5. **Appendix or Appendices**

Supplementary illustrative material, original data, and quotations too lengthy for inclusion in the text or which is not immediately essential to an understanding of the subject can be presented in Appendix or Appendices (as Appendix A , Appendix B, etc.).

Each appendix with its title should be listed separately in the table of contents. Likewise, tables and figures contained in the Appendices are to be included in the lists of tables and figures, respectively.

19.3. CONCLUDING REMARKS

This Thesis Guide lists only the basic requirements for preparing the thesis. Over and above the aforementioned points, a thesis should be reader-friendly in both its appearance and presentation. Several aspects of thesis preparation, particularly style of writing and presentation, have not been discussed in great detail. The student should follow appropriate ideas from standard literature of his/her area of research, and adopt a uniform style and format throughout the thesis, such as in the structural divisions/subdivisions of the thesis, in the mode of citing references and footnotes in the text, in using dimensions, units and notations, and in preparing tables and figures, etc.

SALIENT DOCUMENTS TO BE SUBMITTED DURING Ph.D. PROGRAMME
(Please follow the current checklist/circular as notified time to time)

A. Documents required at the time of Ph.D. admission:

1. Marks sheets/Grade cards of the secondary, higher secondary board and other university examinations.
2. Certificate/provisional certificate of all the examinations.
3. Proof of date of birth.
4. Migration Certificate (Original).
5. Community certificates (SC/ST) from a competent authority, if applicable.
6. Valid community certificate in case of OBC/EWS candidates from a competent authority, if applicable.
7. Valid PwD certificate from competent authority, if applicable.
8. NET/GATE/CSIR-UGC/any other qualifying examination certificates as applicable.
9. No Objection Certificate from the employer of the student, if applicable.
10. Sponsorship certificate from the employer of the student, if applicable.
11. Two recent passport size color photograph.

B. Documents required within ONE/TWO MONTH of admission:

1. Doctoral Scrutiny Committee (DSC) signed by all members.
2. Courses to be taken by a Ph.D. student.
3. Willingness certificate of co-supervisor, if applicable.
4. No Objection Certificate from the employer of the co-supervisor, if applicable.
5. Curriculum vitae of the co-supervisor, if applicable.

C. Documents required at the time of every semester registration till submission of thesis:

1. Semester registration fee payment proof.
2. Duly filled in Semester registration form.

D. Documents required at the time of Ph.D. registration (within FIFTH semester of admission):

1. Duly filled in Application form.
2. A write-up/report of work done and detailed plan of work (within 10 pages).
3. Registration fees payment proof.

Office of the Dean (Academic Research)

List of Documents to be Submitted for PhD Activities

1. LIST OF DOCUMENTS TO BE SUBMITTED AFTER PhD PRE- REGISTRATION SEMINAR (ALL DOCUMENTS TO BE SUBMITTED TOGETHER)

Sl. No.	List of the Documents (to be Submitted to the Office of the Dean (AR)- in Printed Format)	Remarks
1.	Registration Seminar Notice	In original
2.	Registration Seminar Report **(FORM-5)**	In original
3.	Migration Certificate in original	If, not submitted during the Admission
4.	Synopsis (within 10-15 pages)	One copy (first and last page duly signed by the supervisor and all the pages by the scholar)
5.	Grade Cards of the PhD Course Works Done	Xerox copies (Duly signed by the scholar)
6.	Last Semester Registration Fee Payment Receipt	Xerox copy (Duly signed by the scholar)
7.	DSC Formation Document **(FORM-3)**	Xerox copy (Duly signed by the-supervisor)
8.	**Rs. 2000/- Registration Fee Payment Receipt ****for those who got admitted before 2019** **(Canara Bank, NIT Durgapur. A/C No. 8569101000352, IFSC: CNRB0008569)**	In original or **online payment receipt should be verified by the Bank**
DEADLINE OF SUBMISSION OF DOCUMENTS: Within 5 Working Days from the Date of Seminar.		

2. LIST OF DOCUMENTS TO BE SUBMITTED AFTER PhD ENHANCEMENT SEMINAR (ALL DOCUMENTS TO BE SUBMITTED TOGETHER)

Sl. No.	List of the Documents (to be Submitted to the Office of the Dean (AR)- in Printed Format)	Remarks
1.	Fellowship Enhancement Seminar Notice	In original
2.	Fellowship Enhancement Seminar Evaluation Report **(FORM-6)**	In original
3.	Progress Report (within 10-15 pages)	One copy (first and last page duly signed by the supervisor and all the pages by the scholar)
4.	Grade Cards of the PhD Course Works Done	Xerox copies (Duly signed by the scholar)
5.	Last Semester Registration Fee Payment Receipt	Xerox copy (Duly signed by the scholar)
6.	DSC Formation Document **(FORM-3)**	Xerox copy (Duly signed by the-supervisor)
7.	Registration Certificate	Xerox copy (Duly signed by the-supervisor)
DEADLINE OF SUBMISSION OF DOCUMENTS: Within 5 Working Days from the Date of Seminar.		

RK

3. LIST OF DOCUMENTS TO BE SUBMITTED AFTER PhD PRE-SYNOPSIS SUBMISSION SEMINAR (ALL DOCUMENTS TO BE SUBMITTED TOGETHER)

Sl. No.	List of the Documents (to be Submitted to the Office of the Dean (AR)- in Printed Format)	Remarks
1.	Pre-Synopsis Submission Seminar Notice	In original
2.	Pre-Synopsis Submission Seminar Report **(FORM-7)**	In original
3.	Synopsis (within 15-20 pages)	One copy (first and last page duly signed by the supervisor and all the pages by the scholar)
4.	Last Semester Registration Fee Payment Receipt	Xerox copy (Duly signed by the scholar)
5.	DSC Formation Document **(FORM-3)**	Xerox copy (Duly signed by the-supervisor)
6.	Registration Certificate	Xerox copy (Duly signed by the-supervisor)
7.	List of Publications and Conference(s)	Xerox copy (Duly signed by the scholar and supervisor) of 1st page of each Publications
8.	Conference Presentation Certificates	Xerox copy (Duly signed by the scholar and supervisor)
DEADLINE OF SUBMISSION OF DOCUMENTS: Within 5 Working Days from the Date of Seminar		

4. LIST OF DOCUMENTS TO BE SUBMITTED DURING THESIS SUBMISSION FOR EVALUATION: (ALL DOCUMENTS TO BE SUBMITTED TOGETHER)

Sl. No.	List of the Documents	List of the Documents (to be Submitted to the Office of the Dean (AR)- in Printed Format)	List of the Documents (To be Sent to the Dean (AR) & Asso. Dean (AR) from the Chairperson, DSC through Mail in ZIP File)
1.	DSC Formation Document **(FORM-3)**	**FORM-3** (Duly signed by the supervisor(s))	Scan copy of **FORM-3** in Pdf format
2.	Thesis Submission Form **(FORM-8)**	**FORM-8** (In original)	Scan copy of **FORM-8** in Pdf format
3.	Plagiarism Report	Plagiarism Report in original & each page duly signed by the supervisor (s) and the scholar	Scan copy of original documents in Pdf format
4.	List of Examiners (summary) for Evaluation of PhD Thesis **(FORM-10)**	**FORM-10** in original	Scan copy of **FORM-10** in Pdf format Only Doc (Word) file without signature
5.	Lists of Indian & Foreign Examiners (in sealed envelope) **(FORM-11 and 12)**	In original	Scan Copy of **FORM-11 and 12** in Pdf format Doc (Word) file of FORM-11 and 12 without signature
6.	Thesis (Hard Bound)print in both sides within 200 pages)-One copy	Format of the thesis should be **as per the Latest PhD Regulations**	Pdf copy of the Thesis for evaluation **(Pdf file size should not be more than 10 MB)**
7.	Thesis submission fee Payment Receipt **(Rs. 6500/-) (Canara Bank, NIT Durgapur A/C No. 8569101000352, IFSC: CNRB0008569) ***Thesis submission Fee is 15,000/- for Scholars who got admitted in 2019 onwards**	In original (for bank payment in person) or **payment receipt verified by the Bank for online payment**	Pdf copy of the Synopsis (**Pdf file size should not be more than 1 MB**) Scan Copy of Original documents in Pdf format
FORM 8, 10,11,12 ARE TO BE SUBMITTED SEPARATELY IN A CONFIDENTIAL SEALED ENVELOPE THROUGH THE OFFICE OF RESPECTIVE DEPARTMENT/SECTION			

RK

5. LIST OF DOCUMENTS TO BE SUBMITTED TO CONDUCT PhD DEFENSE SEMINAR (ALL DOCUMENTS TO BE SUBMITTED TO THE DEAN (AR)

Sl. No.	List of the Documents	To be mailed all documents in Zip file to The Dean (AR)	List of the Documents (To be Submitted to the Office of The Dean (AR)- In Printed Format)	
1.	Intimation to Dean (AR) to conduct Defense Seminar	To be mailed to the Dean (AR)	**Not applicable**	**To be communicated for Official formalities at least 12-15 days before the date of Defense seminar**
2.	Formation of Committee for PhD Defense **(FORM-15)**	Doc (Word) file	Printed copies with signature of the supervisor (s)	
3.	Thesis Evaluation Reports (Duly signed by DSC Members) Indian and Foreign Examiner	PDf file	Printed copies with signature of the supervisor (s)	
4.	Compliance Reports (Duly signed by DSC Members) Indian and Foreign Examiner	PDf file	Printed copies with signature of the Scholar and supervisor (s)	
5.	PhD Thesis (**as per Latest PhD Regulations)**	PDf file	Not Applicable	

6. LIST OF DOCUMENTS TO BE SUBMITTED AFTER PhD DEFENSE SEMINAR (ALL DOCUMENTS TO BE SUBMITTED AT A TIME)

Sl. No.	List of the Documents	List of the Documents (to be Submitted to the Office of The Dean (AR))	
		In Printed Format	**Soft Copy in Pen Drive/ CD**
1.	Defense Seminar Notice	Original/ Xerox copy	Not Applicable
2.	Report on Viva-Voce & Defense **(FORM-14)**	In original	Not Applicable
3.	PhD Thesis (Hard Bound))	One copy (Format of the thesis should be **as per Latest PhD Regulations)**	Not Applicable
4.	Soft-copy of the thesis • Front matter with Abstract • Chapter Wise (Separately) • Full Thesis in one file	NA	✓ Pdf file
5.	Compliance Report	Printed copies Duly signed by the Scholar ,supervisor (s) and DSC Members	✓ Pdf file
6.	Thesis Evaluation Report (Indian & Foreign Examiner) **(FORM-13)**	Printed copies Duly signed by the Scholar ,supervisor (s)	✓ Pdf file
7.	No Dues from Hostel, Library & Department	In original	Not Applicable

<u>Guidelines for submitting the soft copy of the thesis for INFLIBNET Shodhganga – (after successful completion of PhD defense.)</u>

Sir/Madam,

The National Institute of Technology, Durgapur has signed a MoU with the INFLIBNET to participate in the Shodhganga platform which is maintained by University Grants Commission of India.

Shodhganga: A reservoir of Indian theses is a digital repository, submitted by Indian Universities.
To make the process effective, following standards may be maintained henceforth during submission of thesis from the respective Departments/Centers of the National Institute of Technology Durgapur.

1. An electronic copy of the thesis is to be submitted through designated Institute email account (meant for shodhganga purpose – to be intimated shortly) by the respective scholar through the Supervisor to the Coordinator INFLIBNET at the office of Dean – Academic Research of the National Institute of Technology, Durgapur for uploading to the Sodhganga Repository.

2. The files submitted electronically should not be password protected as the same needs to be processed before uploading to the Shodhganga Repository.

Please ensure to send the following information in the format below, while sending a submitted thesis and its electronic copy to the National Institute of Technology, Durgapur for archiving.

....

INFORMATION FOR SUBMISSION OF PhD THESIS SOFT COPY FOR INFLIBNET – Shodhganga.

Name of the Scholar :

Name of the Department / Centre :

Title of the Thesis :

Name of the Supervisor(s) :

Registration no. / Date of Registration :

Date of PhD Thesis defense :

Senate resolution no with date
(to be filled by the office of the Dean – AR). :

Guidelines for Submission of e-Thesis for Shodhganga: INFLIBNET A Reservoir of Indian theses and Digital Archiving at Central Library of the National Institute of Technology Durgapur.

1. The Research Scholar needs to submit the thesis, along with the following documents in 02 (two) folders:

   - Folder-1 contains :

     a) The complete thesis after the defense (exactly same as the print version), as a single PDF file.
     b) The complete thesis split into multiple PDF files of different thesis sections and chapters. (Please see and follow Annexure III for splitting the thesis.)

   - Folder-2 contains :

     - An abstract (not exceeding 2500 characters) and thesis metadata in PDF format (Please see Annexure I and II).
     - Scanned copy of 'Consent Form for Digital Archiving'(Annexure – II) duly signed by the research scholar is also to be submitted.

2. In addition to the PDF document, scholars are also advised to submit supporting materials such as Audio files, Video files, Statistical results etc.(if any).

3. However, while submitting such contents it is advised to use proper open format. (For e.g. MP3 for audio files and MPEG4 for Video files etc).

4. The 'Thesis Metadata Form' (Annexure – I) to be duly filled and submitted by the research scholar in a PDF file (In Folder-2).

5. The files submitted electronically as mentioned above should not be password protected as the same needs to be processed before uploading to the Shodhganga Repository.

CATEGORY-B : Regular Research Scholar with Financial Support from the Government Programs (sponsored by DST, CSIR, UGC etc.)
Candidates seeking admission to PhD program having their fellowship from various government organisations such as CSIR, UGC, DBT, DST-INSPIRE, etc. (No Objection Certificate from the proposed Supervisor in the given format is to be submitted mandatorily during the application and admission process)**.**

CATEGORY-C : Regular Research Scholar Selected in Externally Funded Sponsored Projects in the Institute (No Objection Certificate from the Principal Investigator/Proposed Supervisor, indicating the duration for which the fellowship is available in the given format is to be submitted mandatorily during the application and admission process).

CATEGORY-D : Regular Research Scholar under QIP/EFIP Scheme (Not Applicable).
CATEGORY-E. Regular Foreign Research Scholar Admitted through Government of India (Not Applicable).

CATEGORY-F : Professional Research Scholar from the Institute (NIT Durgapur Faculty / Staff): (No Objection Certificate must be submitted from the Head of the Institute during the application and admission process).

CATEGORY-G : Regular Sponsored Research Scholar from Government/ Semi-Government/ other Highly Reputed Organizations/Academic or Research Institutions (No Objection Certificate /Sponsorship Certificate in the given format is to be submitted mandatorily during the application and admission process).

CATEGORY-H: Professional Sponsored Research Scholar from Reputed Industries (Industry Research Program): (No-objection certificate or Sponsorship certificate from the employer in the given format is to be submitted mandatorily during the application and admission process).

CATEGORY-I : Professional Research Scholar from Academic/ Research Institutions (No Objection Certificate from the Head of the Institute in the given format is to be submitted mandatorily during the application and admission process).

CATEGORY-J : Professional Sponsored Research Scholar under Government of India Schemes like TEQIP etc. (Will be guided by TEQIP norms).
NOT APPLICABLE

Category-K. : Regular Research Scholar without Institute Fellowship (Self-sponsored)
(Research Scholars under category K will pursue PhD programme at the Institute on full time basis without getting financial assistance from NIT Durgapur or any other funding agency.)

Availability of Seats under Various Categories of Regular and Professional Research Scholars (Category- B, C, F, G, H, I, J, and K) other than 'A' in Different Departments & Centres are given below:

Minimum Eligibility Criteria for Admission to PhD Program (Odd Sem./ 2022-23)

<table>
<tr><th>Qualifying Degree*
(for relevant discipline)</th><th>General/ OBC</th><th>SC / ST</th><th>Academic and other Qualifications</th></tr>
<tr><td>M. Tech./ M.E./ M. Arch/ M. Pharm / M. S. / MBA/ PGDBM/ PGDM</td><td>6.5 CGPA or 60% marks</td><td>6.0 CGPA or 55% marks</td><td rowspan="6"><u>Category A:</u>
B. Tech/ B.E./ B. Arch/ B. Pharm / Equivalent with valid GATE.
M. Tech./ M.E./ M. Arch/ M. Pharm degrees with or without GATE qualification.
Other Post Graduate or Graduate degrees (as listed) with any relevant NET qualification.
List of NETs:
CSIR, UGC, GATE, GPAT, DBT-JRF, JEST, ICMR, ICAR, NBHM, Bioinformatics National Certification Examination etc.
However, these NET qualifications will have to be relevant to the qualifying degree of the candidate concerned.
(OM No. SB/S9/2-01/2015 dated 07.01.2015)

<u>Categories B, C, D and E:</u>
As per the terms and conditions of the funding or sponsoring agency.

<u>Categories F, G, H, I, J, and K</u>:
Same as category A, but GATE/NET qualification is not mandatory.</td></tr>
<tr><td>M. Sc./ M. Com./ MBBS/ BDS</td><td>6.5 CGPA or 60% marks</td><td>6.0 CGPA or 55% marks</td></tr>
<tr><td>MA</td><td>6.0 CGPA or 55% marks</td><td>5.5 CGPA or 50% marks</td></tr>
<tr><td>MCA</td><td>7.5 CGPA or 70% marks</td><td>7.0 CGPA or 65% marks</td></tr>
<tr><td>B. Tech/ B.E./ B. Arch/ B. Pharm / Equivalent</td><td>7.5 CGPA or 70% marks</td><td>7.0 CGPA or 65% marks</td></tr>
<tr><td>CA/ ICWAI/ CS with a graduation degree</td><td>6.0 CGPA or 55% marks</td><td>5.5 CGPA or 50% marks</td></tr>
</table>

*All the degrees must be from an Institute/University recognized by UGC/AICTE/MoE, Govt. of India.
The eligibility criteria as given above is the minimum requirement only. Good academic career and higher qualification will be preferred. However, satisfying the mere eligibility shall not ensure a call for admission test and/or viva voce.

Candidates need to mention CGPA alongwith the Percentage of marks as awarded by their University/Institute only. In case of unavailability of Percentage of marks, NIT Durgapur norms for conversion of CGPA to the Percentage of marks will be applicable.

Relevant Academic Qualification Details of Various Departments are Listed Below:

Department	Details of Relevant Disciplines (ODD SEM / 2022-23)
Biotechnology (BT)	B. Tech. /M. Tech/ MS/ M. Sc/B. Pharm./ M. Pharm./MBBS/BDS or equivalent degree in relevant discipline.
Civil Engineering (CE)	(i) B. Tech./B.E. or equivalent in Civil Engineering /Construction Engineering /Earthquake Engineering /Structural Engineering /Aerospace Engineering OR in any branch of Engineering that may be considered for research areas consistent with Civil /allied Engineering, WITH OR WITHOUT M.E./M. Tech./ M.S. in the relevant discipline. (ii) 5 year Integrated/ dual degree M. Tech. in Civil Engineering /Construction Engineering /Earthquake Engineering / Structural Engineering /Aerospace Engineering.

Chemical Engineering (CH)	**Category A** (i) B. E. /B. Tech. in Chemical Engineering/ Chemical Technology/ Mechanical Engineering/ Metallurgical/ Metallurgical and Materials Engineering/ Civil Engineering/ Bio technology/Polymer Technology (ii) B.E. / B. Tech. in Chemical Engineering/ Chemical Technology/ Mechanical Engineering/ Metallurgical/ Metallurgical and Materials Engineering/ Civil Engineering/ Bio technology/Polymer Technology with M.E./M. Tech./M.S. in any relevant discipline. (iii) 5 year Integrated/ dual degree M. Tech. in Chemical Engineering. (iv) M. Sc. in Chemistry/Physics/Mathematics /Environmental Sc. or Engg. (with Maths in HS or 10+2 level) The candidate must have completed the academic program(s) in normal duration with no repeat of years. **Categories B to J: (Any of the following)** (i) B. E./ B. Tech. or equivalent in Chemical Engineering or in any relevant discipline. (ii) M.E./ M. Tech. or equivalent in Chemical Engineering or in any relevant discipline. (iii) 5 year Integrated /dual degree M. Tech. in Chemical Engineering or any relevant discipline. (iv) M. Sc. in any relevant discipline.
Computer Science & Engineering (CS)	(i) UG Programme in Engg. /Tech. in CSE/IT/ECE/EE GATE (Qualified/valid Score) in CS only **Or** (ii) Two Year PG programme in Engg. /Tech in CSE/IT/ECE/EE, **Or** MCA/MSc.(Comp.Sc.) with relevant NET qualification (in JRF) /GATE (Qualified/valid Score) in CS only.
Chemistry (CY)	M.Sc. or M. Tech. in Chemistry/Applied Chemistry/ Engineering Chemistry/Chemical Science or Technology / Engineering/ Biochemistry/ Biological science/ Environmental Science or Technology / Engineering/ Material Science or Technology / Engineering (plastics, polymer, corrosion, nanotechnology, Biotechnology and related areas). In addition, chemistry should be one of the subjects at UG levels.
Electronics & Communication Engineering (EC)	Four year undergraduate programme in Engg. or Tech. in ECE/ EE/ CSE/ IT/ EI or an allied area **Or** M. Sc. (Physics) with specialization in Electronics/ Radio Physics and Electronics/ Material Science. **Or** M. Sc. (Electronics Science)/ M.Sc. (Electronics) **Or** Two year post graduate programme in Engineering/ Technology in ECE/ EE/ CSE/I T/ EI or an allied area. **Or** Integrated post graduate programme in Engg. or Technology in ECE/ EE / CSE /IT/EI.
Electrical Engineering (EE)	(i). B.E. / B. Tech. or Equivalent Degree in- (a) Electrical Engineering (EE), (b) Electrical & Electronics Engineering (EEE), (c) Electronics Engineering, /Electronics and Communication/Telecommunication Engineering (ECE), (d) Computer Science Engineering (CSE),(e) Electrical, Electronics & Computer Science Engineering (EECS), (f) Applied Electronics and Instrumentation Engineering (AEIE/EIE), (g) Instrumentation Engineering (IE), (h) Instrumentation and Control Engineering (ICE). **And** (ii). M. E. / M. Tech./ M. S. or any equivalent post graduate degree in the relevant disciplines with indicative broad area of research available: (a) Power System, (b)Electrical Machines, (c) Power Electronics, (d) Power Electronics & Machine Drives, (e) High Voltage Engg., (f) Control System, (g) Instrumentation/ Measurement, (h) Instrumentation & Control, (i) Bio-Medical Instrumentation, (j) Energy Systems/ Renewal Energy Systems, (k) Power Plant Engineering, (i) Internet of Things (IoT),(m) Embedded System, (n)Artificial Intelligence (AI), (o) Machine Learning (ML), (p) Image Processing, (q) Mechatronics,(r) Microwave Engineering, RF Microwave Engineering, (s) Computer networks, (t)

	Micro Electronics and VLSI, (u) Communication Engineering. **Or** B.E. / B. Tech. or equivalent with valid GATE score in EE.
Earth and Environmental Studies (ES)	M.Sc. /M.S. /M. Sc.(Tech.) in Geology/ Earth Science/Applied Geology and Geo informatics/ Applied Geology/ Geochemistry / Hydrogeology (or Ground water)/Agriculture. B. Tech./B.E. in Environmental Engineering/ Civil Engineering / Water Resources Engineering or Management; M. Tech./M.E. in Environmental Engineering/ Environmental Science and Technology/Water Resource Engineering/ Agricultural Engineering.
Humanities & Social Sciences (HS)	Economics: M.A. or M.Sc. in Economics/ Statistics/ Commerce. Interested candidates from other disciplines with PG degree may also apply, subject to the assessment of suitability by the department. English: M.A. in English/ Linguistics/ Cultural Studies. Interested candidates from other disciplines with PG degree may also apply, subject to the assessment of suitability by the department.
Mathematics (MA)	P.G. degree in Mathematics/ Statistics/ Computer Science/ Physics, **Or** MCA **Or** M. Tech. with the following specilizations: Operations Research, Operations Management, Optimization
Mechanical Engineering (ME)	Eligible degrees (i) B.E./ B. Tech. in Mechanical Engg./Production Engg. Or (ii) M. E./M. Tech. with the following specializations (a) Thermal Engg./Heat Power Engg, (b) Production Engg / Manufacturing Engg., (c) Machine Design, (d) Fluid Mechanics/Hydraulic Machines, (e) Power Engg., (f) Automobile Engg., (g) Applied Mechanics, (h) Mechatronics, (i) Robotics.
Metallurgical & Materials Engineering (MM)	B.Tech in Metallurgical and Materials Engineering/Mechanical Engg. /Production Engg./Ceramic Engg./Manufacture Engg./ Materials Science/Aeronautical Engg./Aerospace Engg./Nanoscience and Nanotechnology. **Or** M. Tech. in Metallurgical and Materials Engineering/Mechanical Engg./ Production Engg./Ceramic Engg./Manufacture Engg/Materials Science/Aeronautical Engg/Aerospace Engg./ Nanoscience and Nanotechnology. **Or** M. Sc. in Physics or Chemistry.
Management Studies (MS)	MBA with Specialization in Marketing or Finance or HR or HR & OB or Systems & Operations, OR Post Graduate Degree either in Economics or Statistics or Commerce or Psychology or Applied Psychology. **Or** B.Tech./M.Tech. with interest in doing research in Management and related disciplines. However, suitability of related disciplines will be judged by the Department.
Physics (PH)	M.Sc. in Physics/Applied Physics/Materials Science/Nanotechnology/Biophysics/ Electronics Science. **Or** M. Tech. in (Materials Science/Nanotechnology or equivalent).
Centres	
Centre for Research on Environment and Water (CREW)	B.Tech. /B. E. in Environmental Engineering/ Civil Engineering / Chemical Engineering / Water Resources Engineering or Management /Biotechnology/Metallurgy & Materials Sc./Computer Sc. **Or** M. Tech. /M. E./ M. Tech . Dual Degreein Environmental Engineering/ Environmental Science and Technology/ Agricultural Engineering / Nano Science and Technology/Civil Engineering / Chemical Engineering / Water Resources Engineering or Management /Biotechnology/Metallurgy & Materials Sc./ Computer Sc. **Or** M. Sc./MS/M.Sc. (Tech) in Geology/ Earth Science/ Applied Geology/ Geochemistry /

	Hydrogeology (or Groundwater) /Agriculture/Chemistry/Applied Chemistry/Physics/Mathematics/Biotechnology/M. Sc or M. Sc. (Tech) in Applied Physics, Geophysics, Biophysics, Engineering Physics, Environmental Science, Microbiology, Zoology, Botany, Applied Chemistry, Radiochemistry, Radiophysics, Geochemistry, Engineering Chemistry, Atmospheric Science, Ocenography, Computation Bioscience, Computational Geoscience, Seismology.
Centre for Biomedical Engineering & Assistive Technology (BEAT)	i) M. Tech./M.E. or equiv. in Biomedical Engineering, Chemical Engineering, Computer Science & Engineering, Electrical Engineering, Electrical & Electronics Engg., Electronics & Telecommunications Engineering, Instrumentation Engineering, Mechanical Engineering, Metallurgical and or Material Science Engineering. **Or** ii) M. Pharm. OR MBBS with or without MD/MS. **Or** iii) B. Tech./B.E. or equivalent degree in Biomedical Engineering, Chemical Engineering, Computer Science & Engineering, Electrical Engineering, Electrical & Electronics Engg., Electronics & Telecommunications Engineering, Instrumentation Engineering, Mechanical Engineering, Metallurgical and or Material Science Engineering with a GATE qualified score or a CSIR/UGC/DBT/ICMRJRF (qualified score). **Or** iv) M.Sc. or equiv. in Biochemistry, Biophysics, Biotechnology, Ceramics, Chemistry, Electronics, Ergonomics, Material Science, Mathematics, Molecular Biology, Physics and Physiology with a GATE qualified score or a CSIR/UGC/DBT/ICMRJRF (qualified score). **Or** v) Health Sciences such as MBBS / BDS. Must qualify All India level post graduate entrance examination for relevant disciples. **Or** vi) B. Pharm. (with GPAT entrance examination) **Broad Research Area available:** (i) Biomaterials & Biofabrication, (ii)Biomechanics & Biomechanical Engineering, (iii) Biomedical Devices, Bio-Instrumentation & Bio-sensors, (iv) Assistive Technology & Rehabilitation Engineering.
Centre for Advanced Research on Energy (CARE)	M. E. / M. Tech./ M. Pharm. /M. Sc / M. S. or any Equivalent Post Graduate Degree in the Relevant Disciplines. **Or** B.E./B. Tech. or equivalent with GATE.
Centre of Excellence on IoT and Intelligent Systems (IoTIS)	i). B.E. / B. Tech. in Branch of Engineering /Technology **Or** ii). M.E. / M. Tech./MCA or equivalent **Or** iii). M. Sc. with requisite CGPA/percentage and NET qualification. Note: Proficiency in programming and mathematics/statistics is highly desirable and such skills will be tested during admission process.

SCHOLARSHIP/FELLOWHIP/FINANCIAL SUPPORT

Scholarship/Fellowhip/Financial Support as per the norms of Ministry of Education (MoE), Government of India shall be available to all selected **Regular Research Scholars (Category- A). The matter of** Scholarship/Fellowhip/Financial Support **will be looked after by the office of Dean (SW).**

NATIONAL INSTITUTE OF TECHNOLOGY DURGAPUR

Mahatma Gandhi Avenue, Durgapur-713209, West Bengal, INDIA.
Website: www.nitdgp.ac.in

APPLICATION PROCEDURE:

Mode of Application: Online (visit the Institute website www.nitdgp.ac.in).

Application Fee: The application fee of Rs 2,000/- (Rs 1,500/- for SC/ST/PwD and Women candidates), which is **non-refundable**, has to be paid to the following account through NEFT or IMPS only.
However, a valid document as proof of payment of successful transaction has to be produced by the candidate.

Account Details for Payment of Application Fee:

- Name of the Account: National Institute of Technology Durgapur
- Account Number: 8569101000352
- Name of the Bank: Canara Bank
- Name of the Branch: NIT Durgapur
- IFSC Code:CNRB0008569

Events	Dates
Opening Date for submission of Online Application	24/06/2022 (5:00 PM)
Closing Date for submission of Online Application	12/07/2022 (5:00PM)
Publication of Applicant's List	18/07/2022
Verification of Submitted documents by the Respective Departments / Centres	18/07/2022-21/07/2022 (3:00PM)
Publication of Shortlisted Candidates on the Institute website as prepared by the respective Departments / Centres	26/07/2022
Admission test and Viva-voce by the Respective Departments / Centres	01/08/2022-05/08/2022
Publication of Results on the Institute website	10/08/2022
Admission and Enrollment of Selected candidates/ Physical Reporting to the Institute	16/08/2022-22/08/2022 (on working days only)
Publication of WAITLIST Candidates if any	26/08/2022
Admission of Candidates from Waitlist, if required	29/08/2022-31/08/2022

****The above dates may be changed depending on the condition of the pandemic situation. The applicants are advised to follow the institute website time to time for the updates, if any.***

SELECTION PROCEDURE FOR PhD PROGRAMMES

(i) Selection of PhD candidates under categories A, B, C, G, I & K:

The shortlisting of applications will be made by the respective departments based on the documents submitted (online) and only the shortlisted candidates will be intimated for online admission test and viva voce (online) on the notified date. ***All shortlisted candidates shall appear for the admission test offline/online***. There may be a further screening after the conduction of the admission test and before viva-voce, depending upon the number of candidates.

(ii) Selection of PhD candidates under categories F, H, & J:

Selection under these categories will be made directly subject to fulfillment of eligibility criteria fixed by the respective departments. **A shortlisting of applications will be made and the shortlisted candidates only will be called for viva-voce offline/online.**

(iii) The outline of the syllabus of the admission test: Candidates are referred to check the webpage of the respective Departments/Centres in the Institute website.

The admission committees of the respective departments are fully empowered and responsible for selection and their decision is final in the admission process.

The List of Selected Candidates will be published on the Institute website(www.nitdgp.ac.in).

HOSTEL ACCOMMODATION:

NIT Durgapur is a residential institute. Each and every regular scholar will be required to reside in hostels as per Institute rules, subject to the availability of vacant seats and regarding the matter of accommodation the office of Dean (SW) may be contacted.

FEES STRUCTURE OF PhD PROGRAMS OF ALL CATEGORIES:

The Fee structure for the Academic Session 2022-23 will be available in the Institute website(www.nitdgp.ac.in).

PhD REGULATIONS:

The admitted scholars will be subjected to PhD Regulations, 2022 (Amended) and further Amendments on Ph.D Regulations, 2022, if any, will be published in the Institute website. Applicants are advised to go through the details of rules & regulations available on the institute website (www.nitdgp.ac.in).

APPLICATION CHECKLIST FOR VARIOUS CATEGORIES *(DOCUMENTS TO BE UPLOADED ONLINE)*:

A. Regular Research Scholar with Institute Scholarship:

1. Self-attested copy of marks sheet / Grade card of 10th Standard Examination.
2. Self-attested copy of marks sheet / Grade card of 12th Standard Examination.
3. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Bachelor/UG program).
4. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Masters/PG program).
5. Self-attested copy of Certificate of 10th Standard Examination.
6. Self-attested copy of Certificate of 12th Standard Examination.
7. Self-attested copy of Certificate of the University/Institute Examinations (Bachelor/UG program).
8. Self-attested copy of Certificate of the University/Institute Examinations (Masters/PG program).
9. Self-attested copy of relevant document showing CGPA-Percentage of marks conversion as followed in the qualifying degree awarding University / Institute.
10. Self-attested copy of proof of date of birth (Valid Birth certificate/ Admit card (10th Standard Examination).
11. Self-attested copy of document as proof of payment of application fees.
12. Self-attested copy of valid photo identity proof (Passport /Aaddhar card / Voter ID card).
13. Recent colour Photograph of Size: 3.5 cm x 3.5 cm in JPEG Format Only.

&

14. Self-attested copy of valid certificate (SC/ST) from a competent authority as per the format given in the website, if applicable.
15. Self-attested copy of valid certificate in case of OBC candidates from a competent authority as per the format given in the website indicating the status regarding creamy layer, issued on or after 01/04/2022, if applicable.
16. Self-attested of valid certificate in case of EWS candidates from a competent authority as per the format given in the website indicating the status regarding creamy layer, issued on or after 01/04/2022, if applicable.
17. Self-attested copy of valid Person with Disability (PwD) certificate from a competent authority as per the format given in the website, if applicable.

&

18. **Self-attested copy of NET / GATE qualification certificate (as described in the eligibility criteria), as applicable.**
19. **Self-attested copy of course completion certificate / Transcript for Result Awaited candidates.**
20. Self-attested copy of any other relevant documents.

B. Regular Research Scholar with Financial Support from Government Programs (sponsored by DST, CSIR, UGC etc.)

1. Self-attested copy of marks sheet / Grade card of 10th Standard Examination.
2. Self-attested copy of marks sheet / Grade card of 12th Standard Examination.
3. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Bachelor/UG program).

4. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Masters/PG program).
5. Self-attested copy of Certificate of 10th Standard Examination.
6. Self-attested copy of Certificate of 12th Standard Examination.
7. Self-attested copy of Certificate of the University/Institute Examinations (Bachelor/UG program).
8. Self-attested copy of Certificate of the University/Institute Examinations (Masters/PG program).
9. Self-attested copy of relevant document showing CGPA-Percentage of marks conversion as followed in the qualifying degree awarding University / Institute.
10. Self-attested copy of proof of date of birth (Valid Birth certificate/ Admit card (10th Standard Examination).
11. Self-attested copy of document as proof of payment of application fees.
12. Self-attested copy of valid photo identity proof (Passport /Aaddhar card / Voter ID card).
13. Recent colour Photograph of Size: 3.5 cm x 3.5 cm in JPEG Format Only.

&

14. **Self-attested copy of a NET/ GATE qualification certificate, as per the requirement of the corresponding funding agency (in case of non-requirement, a valid supporting document for non-requirement of NET/GATE qualification has to be produced), as applicable.**
15. **Self-attested copy of No Objection Certificate from the Project Supervisor as per the format given in the website.**
16. Self-attested copy of any other relevant documents.

C. Regular Research Scholar Selected in Externally Funded Sponsored Projects in the Institute

1. Self-attested copy of marks sheet / Grade card of 10th Standard Examination.
2. Self-attested copy of marks sheet / Grade card of 12th Standard Examination.
3. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Bachelor/UG program).
4. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Masters/PG program).
5. Self-attested copy of Certificate of 10th Standard Examination.
6. Self-attested copy of Certificate of 12th Standard Examination.
7. Self-attested copy of Certificate of the University/Institute Examinations (Bachelor/UG program).
8. Self-attested copy of Certificate of the University/Institute Examinations (Masters/PG program).
9. Self-attested copy of relevant document showing CGPA-Percentage of marks conversion as followed in the qualifying degree awarding University / Institute.
10. Self-attested copy of proof of date of birth (Valid Birth certificate/ Admit card (10th Standard Examination).
11. Self-attested copy of payment for proof of application fees.
12. Self-attested copy of valid photo identity proof (Passport /Aaddhar card / Voter ID card).
13. Recent colour Photograph of Size: 3.5 cm x 3.5 cm in JPEG Format Only.

&

14. **Self-attested copy of a NET/ GATE qualification certificate, as per the requirement of the corresponding funding agency (in case of non-requirement, a valid supporting document for non-requirement of NET/GATE qualification has to be produced), as applicable.**
15. **Self-attested copy of No Objection Certificate from the Principal Investigator as per the format given in the website, indicating the duration for which the fellowship is available.**
16. Self-attested copy of any other relevant documents.

F. Professional Research Scholar from the Institute (NIT Durgapur Faculty / Staff)

1. Self-attested copy of marks sheet / Grade card of 10th Standard Examination.
2. Self-attested copy of marks sheet / Grade card of 12th Standard Examination.
3. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Bachelor/UG program).
4. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Masters/PG program).

5. Self-attested copy of Certificate of 10th Standard Examination.
6. Self-attested copy of Certificate of 12th Standard Examination.
7. Self-attested copy of Certificate of the University/Institute Examinations (Bachelor/UG program).
8. Self-attested copy of Certificate of the University/Institute Examinations (Masters/PG program).
9. Self-attested copy of relevant document showing CGPA-Percentage of marks conversion as followed in the qualifying degree awarding University / Institute.
10. Self-attested copy of proof of date of birth (Valid Birth certificate/ Admit card (10th Standard Examination).
11. Self-attested copy of payment for proof of application fees.
12. Self-attested copy of valid photo identity proof (Passport /Aaddhar card / Voter ID card).
13. Recent colour Photograph of Size: 3.5 cm x 3.5 cm in JPEG Format Only.

&

14. **Self-attested copy of No Objection Certificate from the employer as per the format given in the website.**
15. Self-attested copy of any other relevant documents.

G. Regular Sponsored Research Scholar from Government/ Semi-Government/ other Highly Reputed Organizations/Academic or Research Institutions

1. Self-attested copy of marks sheet / Grade card of 10th Standard Examination.
2. Self-attested copy of marks sheet / Grade card of 12th Standard Examination.
3. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Bachelor/UG program).
4. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Masters/PG program).
5. Self-attested copy of Certificate of 10th Standard Examination.
6. Self-attested copy of Certificate of 12th Standard Examination.
7. Self-attested copy of Certificate of the University/Institute Examinations (Bachelor/UG program).
8. Self-attested copy of Certificate of the University/Institute Examinations (Masters/PG program).
9. Self-attested copy of relevant document showing CGPA-Percentage of marks conversion as followed in the qualifying degree awarding University / Institute.
10. Self-attested copy of proof of date of birth (Valid Birth certificate/ Admit card (10th Standard Examination).
11. Self-attested copy of payment for proof of application fees.
12. Self-attested copy of valid photo identity proof (Passport /Aaddhar card / Voter ID card).
13. Recent colour Photograph of Size: 3.5 cm x 3.5 cm in JPEG Format Only.

&

14. **Self-attested copy of No Objection Certificate from the present employer as per the format given in the website.**
15. **Self-attested copy of Sponsorship Certificate from the present employer as per the format given in the website.**
16. Self-attested copy of any other relevant documents.

H. Professional Sponsored Research Scholar from Reputed Industries (Industry Research Program)

1. Self-attested copy of marks sheet / Grade card of 10th Standard Examination.
2. Self-attested copy of marks sheet / Grade card of 12th Standard Examination.
3. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Bachelor/UG program).
4. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Masters/PG program).
5. Self-attested copy of Certificate of 10th Standard Examination.
6. Self-attested copy of Certificate of 12th Standard Examination.
7. Self-attested copy of Certificate of the University/Institute Examinations (Bachelor/UG program).
8. Self-attested copy of Certificate of the University/Institute Examinations (Masters/PG program).
9. Self-attested copy of relevant document showing CGPA-Percentage of marks conversion as followed in the qualifying degree awarding University / Institute.
10. Self-attested copy of proof of date of birth (Valid Birth certificate/ Admit card (10th Standard Examination).
11. Self-attested copy of payment for proof of application fees.

12. Self-attested copy of valid photo identity proof (Passport /Aaddhar card / Voter ID card).
13. Recent colour Photograph of Size: 3.5 cm x 3.5 cm in JPEG Format Only.

&

14. Self-attested copy of No Objection Certificate from the present employer as per the format given in the website.
15. Self-attested copy of Sponsorship Certificate from the present employer as per the format given (for sponsored candidates).
16. Self-attested copy of any other relevant documents.

I. Professional Research Scholar from Academic/ Research Institutions

1. Self-attested copy of marks sheet / Grade card of 10th Standard Examination.
2. Self-attested copy of marks sheet / Grade card of 12th Standard Examination.
3. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Bachelor/UG program).
4. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Masters/PG program).
5. Self-attested copy of Certificate of 10th Standard Examination.
6. Self-attested copy of Certificate of 12th Standard Examination.
7. Self-attested copy of Certificate of the University/Institute Examinations (Bachelor/UG program).
8. Self-attested copy of Certificate of the University/Institute Examinations (Masters/PG program).
9. Self-attested copy of relevant document showing CGPA-Percentage of marks conversion as followed in the qualifying degree awarding University / Institute.
10. Self-attested copy of proof of date of birth (Valid Birth certificate/ Admit card (10th Standard Examination).
11. Self-attested copy of payment for proof of application fees.
12. Self-attested copy of valid photo identity proof (Passport /Aaddhar card / Voter ID card).
13. Recent colour Photograph of Size: 3.5 cm x 3.5 cm in JPEG Format Only.

&

14. Self-attested Pdf copy of No Objection Certificate from the present employer as per the format given in the website.
15. Self-attested copy of any other relevant documents.

J. Professional Sponsored Research Scholar under Government of India Schemes like TEQIP etc. (will be guided by TEQIP norms). **NOT APPLICABLE**

1. Self-attested copy of marks sheet / Grade card of 10th Standard Examination.
2. Self-attested copy of marks sheet / Grade card of 12th Standard Examination.
3. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Bachelor/UG program).
4. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Masters/PG program).
5. Self-attested copy of Certificate of 10th Standard Examination.
6. Self-attested copy of Certificate of 12th Standard Examination.
7. Self-attested copy of Certificate of the University/Institute Examinations (Bachelor/UG program).
8. Self-attested copy of Certificate of the University/Institute Examinations (Masters/PG program).
9. Self-attested copy of relevant document showing CGPA-Percentage of marks conversion as followed in the qualifying degree awarding University / Institute.
10. Self-attested copy of proof of date of birth (Valid Birth certificate/ Admit card (10th Standard Examination).
11. Self-attested copy of payment for proof of application fees.
12. Self-attested copy of valid photo identity proof (Passport /Aaddhar card / Voter ID card).
13. Recent colour Photograph of Size: 3.5 cm x 3.5 cm in JPEG Format Only.

&

14. Self-attested copy of No Objection Certificate from the present employer as per the format given in the website.
15. Self-attested copy of Sponsorship Certificate from the sponsorer as per the format given in the website.
16. Self-attested copy of any other relevant documents.

Category-K. Regular Research Scholar without Institute Fellowship (Self-sponsored)

1. Self-attested copy of marks sheet / Grade card of 10th Standard Examination.
2. Self-attested copy of marks sheet / Grade card of 12th Standard Examination.
3. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Bachelor/UG program).
4. Self-attested copy of marks sheet / Grade card of the University/Institute Examinations (Masters/PG program).
5. Self-attested copy of Certificate of 10th Standard Examination.
6. Self-attested copy of Certificate of 12th Standard Examination.
7. Self-attested copy of Certificate of the University/Institute Examinations (Bachelor/UG program).
8. Self-attested copy of Certificate of the University/Institute Examinations (Masters/PG program).
9. Self-attested copy of relevant document showing CGPA-Percentage of marks conversion as followed in the qualifying degree awarding University / Institute.
10. Self-attested copy of proof of date of birth (Valid Birth certificate/ Admit card (10th Standard Examination).
11. Self-attested copy of payment for proof of application fees.
12. Self-attested copy of valid photo identity proof (Passport /Aaddhar card / Voter ID card).
13. Recent colour Photograph of Size: 3.5 cm x 3.5 cm in JPEG Format Only.

&

14. **(a) For employed candidate**:-Self-attested copy of No Objection Certificate from the present employer as per the format given in the website.
    (b) For unemployed/self-employed candidate:- Self-declaration as per the format given in the website.
15. Self-attested copy of any other relevant documents.

NOTE: In addition to the above documents, all aspiring candidates are required to upload/submit her/his full Signature (Size: 200px X 80px in JPEG/ JPG/ PNG Format Only) during the submission of online application form.

All announcements related to PhD admission will be made through the Institute website (www.nitdgp.ac.in). No communication will be made to any individual separately. Candidates are requested to visit the Institute website from time to time as required. The Institute will not be responsible in any manner if a candidate fails to visit /access the website in time.

The selected candidates will be required to produce all the original documents (as mentioned above for different categories, as applicable) for verification during their Admission Test/Physical Reporting/Admission (dates to be announced later) to the institute. Selected candidates are also advised to bring the printed application form, three copies of colour passport size photograph and a set of self-attested photocopies of all the required documents during Admission/Physical Reporting.

Additionally, all the selected candidates who will eventually turn out to be suitable for admission, will be required to submit **the migration certificate (in orginal)** at the time of physical reporting to the institute during the admission.

Misinformation/wrong information, submission of incomplete application, partly submitted application and submission of incorrect or false documents (during the process of application/admission) will lead to rejection of the application/ candidature at any time and the submitted fees, if any, will not be refunded.

Respective Department / Centre reserves the right to cancel incomplete applications (including applications submitted without relevant documents), if any. No correspondence/interim inquiries will be entertained from the candidates in connection with the process of selection including reasons for not being called for admission test / viva voce. Canvassing in any manner would also entail disqualification of the candidature.

Mahatma Gandhi Avenue, Durgapur-713209, West Bengal, INDIA

FORMATS OF CERTIFICATES/DECLARATIONS & UNDERTAKINGS FOR PhD ADMISSION 2022-2023

1. Format for OBC- NCL Certificate
2. Format for EWS Certificate
3. Format for SC/ST Certificate
4. Disability Certificate Formats
5. Format for Dyslexia Certificates
6. Format of Course Completion Certificate
7. Format of Self Declaration about Course Completion
8. Format of Self Declaration about Non Availability of Prefinal Year / Semester Marksheet
9. Format of Self Declaration about Non Availability of Provisional / Degree Certificate
10. Undertaking for Caste Validity Certificate for Maharashtra State Candidates
11. Undertaking to be submitted by GEN-EWS Candidates, not having the GEN-EWS Certificate Issued on or after 1st April 2022
12. Undertaking to be submitted by OBC-NCL Candidates, not having the OBC-NCL Certificate issued on or after 1st April, 2022
13. No Objection Certificate for Professional Ph.D
14. No Objection Certificate from NIT Durgapur
15. No Objection Certificate from Principal Investigator for Projects
16. No Objection Certificate from Supervisors for DST-Inspire, CSIR, UGC fellowship
17. Sponsorship Certificate for Ph.D. Programme
18. Declaration for Category K (Regular Research Scholar Without Institute Fellowship (Self-Sponsored)) for Unemployed/Self-Employed Candidates
19. No Objection Certificate for Category K (Regular Research Scholar Without Institute Fellowship (Self-Sponsored)) for Employed Candidates

FORMAT FOR OBC [NCL] CERTIFICATE

TO BE PRODUCED BY OTHER BACKWARD CLASSES APPLYING FOR ADMISSION

[This certificate must be issued on or after 1st April, 2022]

This is to certify that Shri/Smt./Kum.______________________________Son/Daughter of Shri/Smt.

___________________________________ of Village/Town __________________________________

District/Division___________________________in the_________________________State/UT

belongs to the__________________Community which is recognized as a backward class under:

*** The property held by a "Family' in different locations or different places/cities have been clubbed while applying the land or property holding test to determine EWS status.

FORMAT FOR SC/ST CERTIFICATE

A candidate who claims to belong to one of the Scheduled Castes or the Scheduled Tribes should submit in support of his claim an attested / self-certified copy of a certificate in the form given below, from the District Officer or the Sub-Divisional Officer or any other officer as indicated below of the District in which his parents (or surviving parent) ordinarily reside who has been designated by the State Government concerned as competent to issue such a certificate. If both his parents are dead, the officer signing the certificate should be of the district in which the candidate himself ordinarily resides otherwise than for the purpose of his own education. Wherever photograph his integral part of the certificate, the NIT Durgapur would accept only attested/self-certified photocopies of such certificates and not any other copy.

- **Dipak Kumar (Roll No. 16/CS/1101)- change of non-departmental faculty member of the Institute having PhD degreeDr. Rajib Kar (EC) in place of Dr. Sujit Kumar Mandal (EC).**
- **Amrita Mukherjee (Roll No. 20EC1102)- change in affiliation of Dr. Pratik Chakraborty (Co-supervisor) from DST-INSPIRE faculty at NIT Durgapur to Asst. Professor in the Department of ECE at IIIT Kalyani**

The matter is recommended for approval.

Item # 9 **To consider the matter regarding submission of synopsis and pre-registration seminar of Parbati Golui (Roll No. 18CH1502, Supervisor: Dr. S. Dutta).**

The matter is discussed and reffered back to the Department.

Item # 10 **To consider the appeal for Inclusion of NPTEL Certificate Score in Result of Ph.D Coursework Even Sem. 2021-2022 of Sandip Chakrabarty (Roll No. 20CS1503).**

The matter is recommended for approval.

Item # 11 **To consider the matter regarding the communication from the NITs division of MoE dated 28.06.2022 regarding visit of students in batches to Atal Tunnel Rohtang to understand the best practices in Engineering, Design, Planning, Construction and Project Management.**

The matter is recommended for approval in line with the resolutions adopted by the UGAC and PGAC in this regard. RK

Item # 12 **To consider the matter regarding an application from Mr. Sandipan Dhar (Roll No. 19CS1101, Reg. No. 21RCS057) on his requirement of PhD course work CGPA.**

The matter may be considered on case to case basis. However, the formula for calculation of CGPA is to be prepared and to be placed in the next meeting of the RAC.

Item # 13 **To consider the matter regarding allocation of institute scholars in each of the centres from academic year 2022-2023.**

The matter is discussed and referred to the Senate for further discussions.

Item # 14 **To consider an appeal from the department of Mathematics for late PhD Admission (Odd Semester 2022-2023) in September 2022 for a candidate of category B.**

The matter regarding completion of the process of the admission on 31.08.2022 in odd semester 2022 – 2023 is noted and the matter related to the appeal is referred to the Senate.

Item # 15 **To consider the matter regarding change of PhD programme category from 'Category C' to 'Category B' of Nandita Ghosh, Roll No. 20BT1113.**

The matter is recommended for approval.

Item # 16 **To consider the matter regarding request for submission of PhD thesis after 10 months of delivery of pre-synopsis submission seminar of Sabyasachi Pramanik (Roll No. 13/CHE/1501, Reg. No. NITD/PhD/ChE/2015/00591).**

The matter is discussed and Sabyasachi Pramanik (Roll No. 13/CHE/1501, Reg. No. NITD/PhD/ChE/2015/00591) may be allowed to appear for a pre-synopsis submission seminar on fulfilment of the formalities for the same and recommended for approval of one year extension of registration period from 06.08.2022.

Item # 17 **To consider the appeal of Geeta Verma (Roll No. 21ME1104) and Avishek Mukherjee (Roll No. 21ME1107) regarding extra 1 credit to acquire as per amended PhD Regulations (June, 2022).**

The matter is discussed and the provisions of the resolutions of the Senate vide item no. 62.8 of the meeting held on 08.11.2021 is to be followed.

Item # 18 **To consider the request of Dipanita Deb (Roll No. 16/MS/1304) for delivering pre-submission seminar by online mode.**

The matter is discussed and recommended for approval due to medical reason / special case and this case can not be shown as precedence .

Item # 19 **To consider the last date of defence for award of PhD degree in 18th Convocation to be held on 22/10/2022.**

The matter is discussed and resolved that the last date of defence for the award of PhD degree in the 18th Convocation will be 30/09/2022 on submission of all necessary documents and completion of formalities by 30/09/2022.

The meeting ended with vote of thanks to the Chairman.

Dean (Academic Research)
Date: 07.09.2022.

ANNEXURE 67.6

NATIONAL INSTITUTE OF TECHNOLOGY DURGAPUR

MAHATMA GANDHI AVENUE, DURGAPUR – 713209 (WEST BENGAL)

NOTE SHEET

Date: 12/09/22

In reference to the action taken report of item no. 66.2 (66th Senate); for consideration of equivalence of patent filing with one publication in an SCI/ SSCI/ AHCI/ Non-paid Scopus/ Web of Science journal, the deliberation of the senate constituted committee is given below.

The point no 7.5 (i) of PhD Regulations - 2021 can be amended in the following manner;
7.5. (i) The scholar must have at least two papers published / accepted for publication based on his/her doctoral research in a SCI/ SSCI/ AHCI/ Non-paid Scopus/ Web of Science journal and preferably two paper presentations in conferences/ seminars before the submission of the dissertation/thesis for adjudication, and produce evidence for the same in the form of presentation certificates and/or reprints.

OR

The scholar must have at least one paper published / accepted for publication based on his/her doctoral research in a SCI/ SSCI/ AHCI/ Non-paid Scopus/ Web of Science journal and at least one patent publication along with preferably two paper presentations in conferences/ seminars before the submission of the dissertation/thesis for adjudication, and produce evidence for the same in the form of presentation certificates and/or reprints.

Convener,
Prof. Chiranjib Koley

Pathik Kumbhakar 13/09/2022

Chairman
Prof. Pathik Kumbhakar

REGISTRAR, NIT Durgapur

NATIONAL INSTITUTE OF TECHNOLOGY DURGAPUR
MAHATMA GANDHI AVENUE, DURGAPUR – 713209 (WEST BENGAL)

Minutes of the senate constituted committee meeting on Patent in Ph.D. Regulation held on 05.08.2022

Members present in the meeting

Prof. Chiranjib Koley (EE), — Chiranjib Koley

Prof. Pathik Kumbhakar, Dean (AR), PKumbhakar 05/08/2022

Prof. Tandra Pal (CSE), Tandra Pal 05/08/2022

Prof. Sudip Chattopadhyay (BT), Sudip Chattopadhyay 05/08/22.

Prof. Parimal Pal (CHE) Parimal Pal 5/8/22

The meeting was held in the meeting room of the Electrical Engineering department on 5th August 2022 at 5.30 PM, and the following points were discussed:

Agenda 1: Consideration of equivalence of patent filing with one publication in an SCI/ SSCI/ AHCI/ Non-paid Scopus/ Web of Science journal.

One paper published in SCI/SSCI/AHCI/Non-paid Scopus/Web of Science journal &
one patent ~~[illegible]~~ publication. ~~in patent journal~~
OR
As per existing norms given in PhD Regulations (Clause 7.5).

Agenda 2: Report that is to be submitted to the Chairman of the Senate.

The meeting ended with a vote of thanks to all the members.

18TH CONVOCATION
TENTATIVE DATE OF CONVOCATION : Second Week of September 2022
LIST OF B.TECH /DUAL DEGREE / INTEGRATED M.Sc DEGREE RECIPIENTS

Sl No	Roll No	Reg. No.	Programme	Department		Name	Date of the Ceremony	Photograph	Remarks
507	18ME8008	18U10037	Bachelor of Technology in	Mechanical Engineering	on	Suman Guin			
508	18ME8009	18U10041	Bachelor of Technology in	Mechanical Engineering	on	Mriganka Bagchi			
509	18ME8010	18U10044	Bachelor of Technology in	Mechanical Engineering	on	Anuragh Tamang			
510	18ME8011	18U10057	Bachelor of Technology in	Mechanical Engineering	on	Ananya Nath			
511	18ME8012	18U10068	Bachelor of Technology in	Mechanical Engineering	on	Argha Gayen			
512	18ME8013	18U10075	Bachelor of Technology in	Mechanical Engineering	on	Sourasish Kundu			
513	18ME8015	18U10081	Bachelor of Technology in	Mechanical Engineering	on	Allada Navdeep			
514	18ME8016	18U10088	Bachelor of Technology in	Mechanical Engineering	on	Rudraneel Sarkar			
515	18ME8017	18U10090	Bachelor of Technology in	Mechanical Engineering	on	Sheetal Tamang			
516	18ME8018	18U10094	Bachelor of Technology in	Mechanical Engineering	on	Jayanta Roy			
517	18ME8019	18U10096	Bachelor of Technology in	Mechanical Engineering	on	Anuvab Das			
518	18ME8020	18U10106	Bachelor of Technology in	Mechanical Engineering	on	Ankita Singha			
519	18ME8021	18U10107	Bachelor of Technology in	Mechanical Engineering	on	Harshit			
520	18ME8022	18U10108	Bachelor of Technology in	Mechanical Engineering	on	Debargha Ghosh			
521	18ME8023	18U10111	Bachelor of Technology in	Mechanical Engineering	on	Koushik Dutta			
522	18ME8024	18U10120	Bachelor of Technology in	Mechanical Engineering	on	Naveen Sah			
523	18ME8025	18U10121	Bachelor of Technology in	Mechanical Engineering	on	Tamoghna Basak			
524	18ME8026	18U10126	Bachelor of Technology in	Mechanical Engineering	on	Soumyadeep Saha			
525	18ME8027	18U10131	Bachelor of Technology in	Mechanical Engineering	on	Sumit Mishra			
526	18ME8028	18U10132	Bachelor of Technology in	Mechanical Engineering	on	Sanjana Roy			
527	18ME8029	18U10138	Bachelor of Technology in	Mechanical Engineering	on	Vanumu Khyatirmaye			
528	18ME8030	18U10140	Bachelor of Technology in	Mechanical Engineering	on	Subhrasnata Chakraborty

A Satyam Roychowdhury initiative

SNU SISTER NIVEDITA UNIVERSITY

MEMORANDUM OF UNDERSTANDING

This Memorandum of Understanding (MoU) is made between

National Institute of Technology Durgapur, West Bengal, INDIA, established under Ministry of Education, Government of INDIA by "The Institutes of Technology Act, 2007" having its office at Durgapur- 713 209, West Bengal, INDIA duly represented by Professor Anupam Basu, Director, hereinafter referred to as NITD, which expression shall, unless excluded by or repugnant to the context, be deemed to include its successors in interest and assigns, being the First Party.

And

Sister Nivedita University, Kolkata, established under Sister Nivedita University Act, 2017, having its office at DG-1/2, New Town, Kolkata-700156, duly represented by Prof. Dhrubajyoti Chattopadhyay, Vice Chancellor, Sister Nivedita University, hereinafter referred to as SNU, which expression shall, unless excluded by or repugnant to the context, be deemed to include its successors in interest and assigns, being the Second Party

NIT and SNU will hereinafter jointly be referred to as Parties and individually as Party.

National Institute of Technology Durgapur and Sister Nivedita University, Kolkata are two leading institutions of higher and technical education and research in the country. To promote academic and research cooperation and the development of NIT and SNU as Centres of excellence of higher and technical education and scientific research, NIT and SNU agree to the following broad terms of cooperation.

1. Both the Parties will support each other's endeavours in delivery of academic programmes and research activities through the following though not limited to:

   (i) Collaboration in Research Activities
   (ii) Exchange of faculty in areas of mutual interest
   (iii) Jointly organize events such as seminars, workshops, conferences and training programmes

   (iv) Any other matter/s as agreed which are not covered above

2. Both Parties acknowledge and understand that all financial arrangements, if any, will be subjected to prior written agreement and availability of funds for each activity/project undertaken.
3. The MoU remains in place for a period of Three (03) years from the date of signing of the agreement and may be renewed for a further period of Three (03) years or such time period as agreed by both the Parties in writing.
4. No Party shall have the right to use the name or logo of the other party without the prior approval of that party in writing.

5. The terms of this MoU may be modified/ amended at any time subject to mutual written agreement. Such modifications/changes shall be effective from the date on which both the parties execute them in writing.
6. The MoU may be terminated by either Party by giving 3 months written notice. In the event of termination, both Parties shall ensure that the interest of students working/projects under this MoU is safe-guarded to the extent possible.

Responsibilities of the Parties

Both Parties mutually agree to identify various areas of interest, and depute faculty/officials as per the requirements with mutual consent. The inviting institution shall extend local hospitality to the deputed person.

Both the Parties shall identify faculty for accomplishing the above laid down objectives. Each Party shall attempt to make such faculty available as and when required.
Both the Parties shall organize regular faculty interactions/meets to promote research interaction and collaboration among their faculty members. These meets may be organized for entire institute or specific to any department or school as per mutual convenience.

Each individual research collaboration shall have separate agreement/terms of contract that addresses issues such as Intellectual Property Right (IPR), funding pattern, disclosure of confidential information etc.

In the event of any dispute or difference arising in the implementation of the MoU, such disputes shall be resolved amicably by mutual discussions by the Director of NITD and Vice Chancellor of SNU. All such decisions shall take into account the status of students working/projects under this arrangement and the interest of such students/ projects shall be guarded as much as possible.

Now, based on the aforementioned promise(s), the Parties put their signatures on this MoU on - -

Memorandum of Understanding (MoU)
between
Vilnius Gediminas Technical University, LITHUANIA
AND
National Institute of Technology Durgapur, INDIA

A. Title & Parties

The purpose of this Memorandum of Understanding (MoU) is to establish an affiliation by and between:

National institute of Technology Durgapur (here referred as NITD) is an autonomous institution of the Government of India under Ministry of Human Resource Development, with legal address registered at Durgapur 713 209, West Bengal, India, of the FIRST PART

and

Vilnius Gediminas Technical University (VILNIUS TECH) is a state higher education institution, acting according to the Statute approved by Decree No. XI-2150 of the Seimas of the Republic of Lithuania as of 28 June 2012, located at Sauletekio al. 11, LT-10223 Vilnius, Lithuania (hereafter referred to as VILNIUS TECH), of the OTHER PART,

have agreed to foster a cooperative relationship, for the purpose of establishing a formal connection to support and promote the exchange of faculty and students along with other activities and programs.

B. Preamble

I. Definitions. In accordance with the mutual desire to foster cooperation between NITD and VILNIUS TECH, and in order to explore the potential for collaboration in the areas set out below, the two institutions agree to enter the following MoU.

II. Objectives. Both institutes agree to develop the collaborative activities listed in Article III., Areas of Cooperation, in the academic areas of mutual interest, on the basis of equality and reciprocity.

III. Areas of cooperation. Based on the principles of mutual benefit and agreement, both institutions intend to explore opportunities for collaboration in the priority area of environmental engineering as follows:

(a) Exchange of students between the two institutions at both the undergraduate and post-graduate level for short-term academic visit.

(b) Exchange of faculty and research scholars between the two institutions for the purposes of teaching courses, research collaboration, and other discussions.

(c) Development of joint educational and research activities mutually agreed upon by both institutions.

(d) Benchmarking of processes and academics through meaningful mutual inputs.

(e) Research collaboration in the fields with mutual interest between the faculty and staff members of departments and schools of both institutions, including but not limited to the formation of joint research centers, joint application for research funds, joint implementation of research projects, joint publication of academic papers, and jointly organizing international conferences and seminars on mutually agreed research topics.

(f) Joint supervision for Postgraduate students/ Research Scholars of NITD for internships/ projects/ thesis and vice versa.

IV. Forms of cooperation. NITD and VILNIUS TECH agree that detailed terms and conditions that guide each activity identified above will be separately negotiated and agreed upon by the two institutions by each authorized representative signing the implementing agreement for each activity. These terms shall include a description of proposed activity and financial arrangements.

V. Central Authorities. Each institution shall appoint one member of its teaching/research faculty to coordinate the program on its behalf.

The VILNIUS TECH contact person will be Prof. Dr Edita Baltrenaite-Gediene, Research Institute of Environmental Protection, of Vilnius Gediminas Technical University, Sauletekio al. 11, LT-10223, Lithuania Tel: +37052512131/ +370 687 52299, Email: edita.baltrenaite-gediene@vilniustech.lt

and

The NITD contact person will be Prof. Dr. Susmita Dutta, Professor, Department of Chemical Engg., NIT Durgapur-713209, West Bengal, India. Tel.: +91-9434788120; e-mail: susmita.dutta@che.nitdgp.ac.in

VI. Implementation of Memorandum

(a) Both institutions agree that specific projects and activities shall be developed for the implementation of this Memorandum based on discussions and negotiations between the two institutions. Agreements or contracts shall be signed separately to carry out these projects and activities. However, during the tenure of the MoU or thereafter, both VILNIUS TECH and NITD will be free to take up the similar or same type of work independently and will be free to enter into similar MoU with third parties without disclosing the confidential information of the other party, if any.

(b) *Use of Names.* Beyond promoting the activities supported by the terms and conditions of this MOU among its faculty, staff, and students, neither Party shall use the name of the other in any other form of advertising or publicity without express written permission from the other Party. For instances of name use that exceed the terms of this MOU, each Party must seek permission from the other by submitting a draft of the proposed use at least 60 days in advance of the proposed use to the other Party's representative, designated in "Notices" below.

(c) *Academic Freedom.* VILNIUS TECH is committed to preserving and defending the principles and values of academic freedom for their faculty, staff, and students. If collaborative activities implemented under the auspices of this MOU are deemed by either Party to infringe upon that Party's standards of academic freedom, academic rigor, or academic integrity, that Party may withdraw from this MOU immediately without penalty.

(d) *Non-discrimination.* Eligibility for participation in the collaborative activities developed under the auspices of this MOU will be determined without regard to race, sex, color, religion, sexual orientation, marital status, national origin, age, or beliefs. 'VILNIUS TECH' does not discriminate on the basis of race, color, national origin, ethnic origin, religion, creed, age, physical or mental disability, veteran status, uniformed service, political belief, sex, sexual orientation, gender identity, gender expression, pregnancy, marital status, genetic information, social or economic status, or whether a person is a smoker or nonsmoker, provided that the person complies with 'VILNIUS TECH' policy concerning smoking.

VII. Financial Arrangement

Both institutions agree that all financial arrangements shall be determined on the basis of specific projects and activities and will depend on the availability of funds.

VIII. Protection of Intellectual Property Rights

(a) *Research Ethics and Respect of Pre-existing Intellectual Property Rights.* The Parties to this MOU are committed to ensuring that faculty, staff and students participating in collaborative activities under the auspices of this MOU adhere to all relevant governing regulations and standards of ethics in the conduct of research, use of data, dissemination of results, and disclosures of conflicts of interest. Unless otherwise agreed to in writing by the Parties, each Party will retain ownership of its Intellectual Property that pre-exists the effective date of this MOU or is developed outside the auspices of this MOU. If collaborative activities implemented under the auspices of this activity are deemed by either Party to compromise that Party's standards of ethics in research or infringe on its pre-existing or independently developed intellectual Property, that Party may withdraw from the MOU immediately without penalty.

(b) Ownership of any intellectual property (including but not limited to confidential information, know-how, patents, copyrights, design rights, rights relating to computer software, and any other industrial or intellectual property rights) developed jointly during the course of this Agreement shall be vested in both parties to this MoU, as agreed upon in writing in specific project agreements or implementation plans supporting the activities that result in such jointly developed intellectual property.

IX. Revision & Amendment

This Agreement may be amended or modified by a written agreement signed by the representatives of both institutes.

X. Settlement of Disputes

In the event of a dispute relating to any aspect of academic cooperation, parties named in article V., above, in cooperation with the senior leadership of both institutions as needed, will jointly coordinate a resolution to the dispute, in the spirit of independence, mutual respect, and shared responsibility.

XI. Entry Into Force, Duration and Termination, Renewal Clause

(a) **Entry into force.** This agreement shall come into force after the date of last signature, below.

(b) **Duration and termination.** The Memorandum will remain in effect for five years, or until one party gives the other a written notice of termination one month in advance. Once terminated, neither NITD nor VILNIUS TEC' will be responsible for any losses, financial or otherwise, which the other institutions may suffer. However, NITD and VILNIUS TECH will ensure that the provisions of this Agreement shall continue to apply to all activities in progress until their completion.

(c) **Renewal Clause.** The Agreement shall remain in force for a period of 5 years commencing from date of last signature. Both institutions will review the terms of the Memorandum ninety (90) days before the expiry of the five-year term with a view to negotiating a further agreement on terms acceptable to both. Institutions may extend the term by written agreement signed by both after review.

XII. Concluding Paragraph and signature clause

The individuals signing this MOU on a Party's behalf represent that they have the requisite authority and intent to bind that Party to this MOU. This agreement has been made in the English language in two identical copies, one for each institution.

ANNEXURE 67.9

National Institute of Technology Durgapur

Rules and Regulations

for

Sponsored Research & Consultancy Cell (SRCC)

1.0 PREAMBLE:

A cell is created by the Board of Governors, NIT Durgapur for the purpose of Promotion of sponsored research & consultancy to meet future needs of India through meaningful education, original research of the highest standard and leadership in technological innovation for the industrial growth of the Country. In addition to offering formal Undergraduate and Post-graduate Programs, the Institute actively encourages its faculty to undertake sponsored research and consultancy projects in order to strengthen the research profile of the Institute.

Sponsored research activity of the institute is administered through Sponsored Research and Consultancy Cell (SRCC). The cell looks after the administrative and financial aspects of sponsored research, industrial consultancy, testing and certification. SRCC acts as a facilitating Centre in providing assistance for the faculty members of the institute in communicating with the external sponsors, both national and international, and maintaining the accounts from pre-award to post award stage of the project.

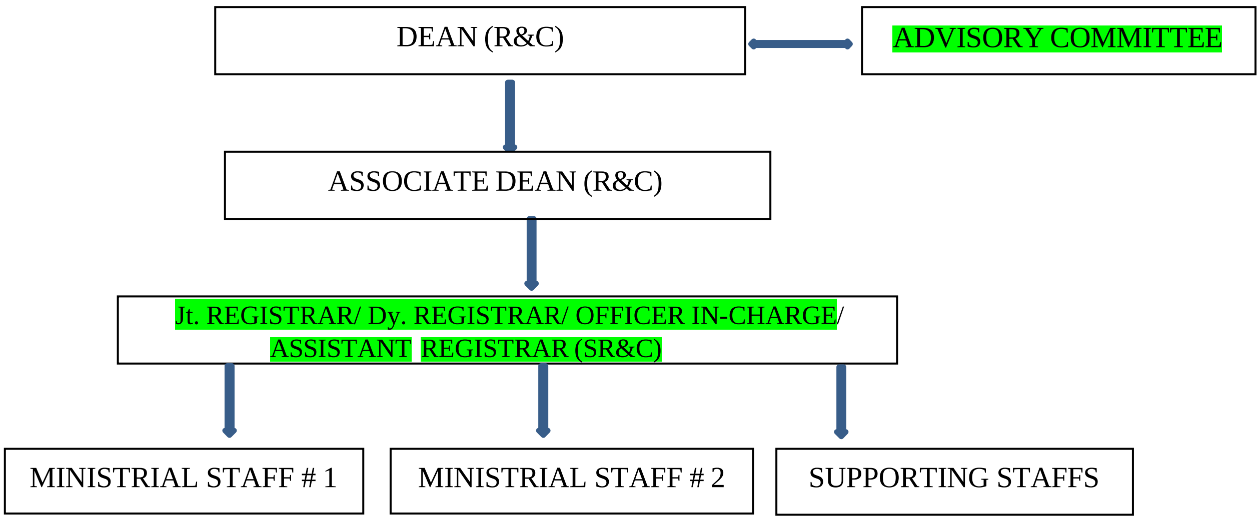
It also promotes and manages Institute-Industry interactions and all externally funded research and development projects as well as patents. All the Industrial Consultancy Projects are to be registered with the SRCC Cell. The Cell acts as a liaison between the Institute and funding agency to undertake sponsored projects.

SRCC shall have total autonomy with respect to the administration of all the sponsored research, industrial consultancy and related matters covered under the SRCC Rules.

SRCC shall be headed by Dean (R&C) and shall consist of Associate Dean (R & C), Assistant Registrar (SR&C) and Ministerial & Supporting staff members and also one advisory committee for guidance. The Dean (R&C) will directly report to Director in all SRCC related issues.

2.0 ORGANIZATIONAL STRUCTURE:

The organizational structure shall be as follows:



ADVISORY COMMITTEE:

The Advisory Committee for SRCC shall consist of following:

(1) Immediate former Dean (R& C)
(2) Dean (Academic Research)
(3) Dean (FW)
(4) Two members nominated by Senate
(5) Two members nominated by Director

3.0 PRINCIPAL INVESTIGATOR (PI):

The term Principal Investigator (PI) refers to a faculty member of the Institute who prepares and submits the project proposal through proper channel and takes full responsibility of carrying out the project to completion along with the achievement of project goals. As a Principal Investigator, one should take into account his professional interest in identifying new and important research questions. One could establish an internal review panel as a team to discuss the efficacy of the proposed study. The team will concentrate on the improvement of scientific content of the proposal. The PI may be assisted by one or more Co-investigators (CI) for achieving the technical goals. The CI(s) will ordinarily be permanent faculty members of the Institute. In case of Inter-institutional projects, the PI of the second institution will be called Co- PI.

PI of a sanctioned project is considered to be the prime interface between the funding agency and SRCC and is operational head of the project. The PI is advised to keep the whole project team aware about the progress of the project and involve the CI(s) in all related project activities. In his/her absence, the PI may request any of the CI to take-over the responsibility of running the project (with or without financial responsibility) and inform the same to SRCC. When the period of leave is likely to exceed one year, the sponsors must be informed by the PI.

PI /Co-PI/CI(s) can claim honorarium in a project only if it is explicitly provided by the Funding Agency.

PI/Co-PI/CI(s) is permitted to go outside the Institute on Special Casual Leave with prior approval of competent authority, for work related to Projects, but without affecting academic activities in the Institute.

The PI shall be responsible for submission of periodical and /or final technical report(s) of the project work as may be required by the sponsoring agency. He / She shall also send a copy of the final technical report to Dean (R&C).

In the consultancy projects, the principal consultant and other consultants will have the same responsibility and authority as of PI and CI of sponsored research projects.

4.0 SPONSORED RESEARCH

4.1 Project Proposal:

All the project proposals to different sponsoring agencies have to be prepared as per the following format or as per the format prescribed by the Sponsoring agency:

Title: The project title shall be a good match to the proposed themes of the funding agency. Moreover, the reviewer should easily remember it.

Summary of the Proposal: One needs to highlight the aims and overview of the research plan. It should demonstrate the importance of the study and generate interest to the reviewer.

Research Statement: PI should incorporate the relevance of the proposed study, the focus of the study and a rational plan to achieve the study goal(s).

Objectives: The proposal should establish the overall direction of the proposed study. In the case of several objectives PI should state the action, the behavior and the standard against which it will be measured.

Literature Review: PI needs to incorporate important work in a concise manner in the proposed study. In addition, PI should try to advance the knowledge.

Study Design: It shall be simple and clear. Moreover, the design should be based on the study objectives. You may need to discuss with the expert in research methods, if necessary, to obtain suggestions on sample design, data measurement, collection and analysis.

IPR issues: The information generated under the projects is usually the joint property of the Funding Agency and the Institute unless otherwise stated in the Contract/Agreement with a funding agency or a collaborative partner with whom the ownership issue is mutually decided beforehand. The same may be protected by means of filing of copyrights/patents etc.

Funding agencies are concerned with ethical issues of the scientific experimentation. PI is responsible for upholding academic integrity and having the requisite clearance from the ethical committee as required.

Budget Estimate:
While making a budget for a project, the following heads should be taken into account:

- Salary of Project Staff (JRF/SRF/Project staff)
- Equipment
- Consumables
- Travel (domestic, international)
- Contingency
- Overheads

In general, for sponsored research projects 20% on the total project cost shall be charged towards service charges (overheads) for utilizing the infrastructural and other facilities of the Institute. The Institute shall support funding for filling patent and fees related to their maintenance.

All research proposals shall be routed through and endorsed by Dean (R&C) on behalf of the Director, with relevant information required by Sponsors. In case of projects requiring significant infrastructure facilities and additional support by the Institute, Dean (R&C) will obtain the prior approval of the Director. The entire outgoing project proposals will be recorded in the proposal register and be filed for documentation of proposals sent to sponsoring agencies for approval.

All sanctioned and approved project proposals have to be registered with the SRCC by filiing up of „Project Registration Form", duly forwarded by HOD/HOC along with a copy of the proposal (both original and recast, if any) and approval by the sponsors for project registration.

It shall be the responsibility of the PI to get the project work completed satisfactorily within the sanctioned grant and duration.

4.2 Project Staff Recruitment:

All the project employees (JRF/SRF/RA/Project staff) will be appointed through open advertisement followed by the interviews. SRCC provides following options of recruiting project staff to kick-start the project activities:

Casual Appointments:
The PI may apply to the Dean (R & C) to engage the manpower as required on casual basis with suitable qualifications starting from the date of their choice. However, such awards are restricted to 89 days only for each individual. These may be given against sanctioned positions. In the meantime, the process for project appointments against the sanctioned posts in the project can be initiated

Project Appointments:
These appointments are purely contractual and renewed every year maximum up to the duration of the project. On receipt of the project, the PI shall forward the request for such engagements to SRCC. SRCC will post the advertisement on Institute website and SRCC notice board. Usually there should be a time gap of about 3 weeks between the advertisement and the last date for receiving the completed application. After the due date the PI will scrutinize the applications received, short list the candidates and get it approved by Dean (R&C). The usual

time gap between the dispatch of call letter and the date of interview should be about 3 weeks but can be reduced if all short listed candidates can be contacted effectively. The project appointees will have to sign an undertaking.

The PI has two options for holding these selections:

Option I - Walk in test/ Interview; and

Option II - Short listing followed by test and / or Interview.

Selection of JRF/ SRF/ RA shall normally be made as per the guidelines provided by the sponsoring agency and with the approval of the Dean (R&C).

Automatic transfer from one project to another either on completion or midway shall not be permitted, except with specific permission from Dean (R&C)/Director.

The PIs shall consider prevailing compensation package, general qualifications and experience for staff while preparing project proposal.

Selection Committee:

The Selection Committee for the recruitment of project staff for each project shall consist of following:

i)	HOD/HOC of the concerned Dept./ Centre to which the PI belongs	- Chairperson
ii)	One faculty member of the PI‟s Dept.	- Member
iii)	One subject expert from outside the Institute as recommended by PI	- Member
iv)	Principal Investigator/Co-Investigator	- Convener

Scheduled selection committees cannot be cancelled at short notice in order to avoid inconvenience to appearing candidates especially coming from outside. The selection process may be conducted offline/online. All appointment letters shall be issued by Dean (R&C) on recommendation of selection committee.

Assistantships/Fellowship:

As per the project guidelines.

Appointing Visiting Scientists:

As per project approval/guidelines the PIs can appoint visiting scientists by invitation against a sanctioned post in a project or from specific project head with the prior approval of Director followed by the recommendation of the Dean (R & C).

Conduct Rules:

A project employee shall execute a Contract Agreement with SRCC at the time of joining with the explicit provision that contract may be terminated by either side (Staff or SRCC Office) by giving one month's notice or one month's consolidated compensation in lieu of the notice.

PIs shall be the sanctioning and controlling authority for all types of leaves with respect to contractual project staff. Project employees shall

a) Follow general code of conduct as approved by SRCC.

Maintain secrecy of the research findings/technical information and shall not get involved in unauthorized communication of any official document or information.

Dean (R&C) may, at his discretion, constitute committee(s) to conduct disciplinary proceedings, if necessary against project employees. On the basis of the report suitable disciplinary action may be initiated and punishment will be imposed by the Dean (R&C).

A Project employee working in a sponsored project of the Institute is eligible to register for the M. Tech. / Ph.D. programme of the Institute subject to his / her satisfying the admission qualifications requirements as per institute rules and regulations. However, the remaining tenure of the project at the time of admission should be at least two years accompanied by the declaration of PI that said scholar will be funded by PI/self financed, if additional time required for the completion of the PhD.

The admitted candidate should give an undertaking that he / she will not be automatically eligible for Institute Fellowship.

4.3 Purchase of Equipment / Consumables:

Purchase of equipment/consumables is to be made by the approved Institute purchase procedure/GFR 2017. PI will take care the procurement process while necessary guidance will be provided by SRCC. However, the bill will be processed by SRCC. For all purchases above Rs. 2,50,000 should be made through SRCC purchase committee:

The SRCC purchase committee shall consist of the following:

i)	Dean (R & C)	Chairperson
ii)	Associate Deans (R & C)	Member
iii)	Jt./Dy./Asst. Registrar (F & A)	Member
iv)	Jt./Dy./Asst. Registrar (P & S)	Member
v)	Jt./Dy./Asst. Registrar (SRCC)	Convenor

Additionally, PI shall be a Member to the Purchase Committee for purchases related to his/her projects.

2. After the due date all the quotations will be opened, examined and signed by the SRCC Purchase Committee. Usually, response from at least three parties is needed for a particular purchase. The committee will sign and recommend the comparative statement. Usually, the purchase recommendation should be on the basis of lowest quotation for the given specifications. However, if the purchase committee feels the necessity to recommend a higher bidder on technical grounds, they can do so by documenting a technical justification for rejecting the lowest quotation with the approval of the competent authority.

3. For specialized items or custom made items procured from a reputed manufacturer or its authorized dealer only, a proprietary nature certificate [SF-6] from PI has to be enclosed for purchase with single quotation.

4. The SRCC shall book the fund and arrange for pre-auditing. Only after the purchase requisition has been pre-audited, it will be forwarded to competent authorities for purchase approval.

5. For purchases upto Rs. 5, 00, 00/-, Dean (R&C) will be the approving authority and for purchases above Rs. 5, 00, 000/-, Director will approve the purchase on the recommendation of Dean (R&C).

6. Finally, SRCC will send the approved purchase file and the draft purchase orders to Registrar for signature. SRCC will particularly ensure that items under taxes, freight, insurance, packing and forwarding, bank charges, payment terms and other terms and conditions are entered correctly in the draft purchase order before sending to Registrar for signature.

Purchase of goods directly under rate contract:

Procurement of the goods under rate contract is to be followed as per the guidelines of the Institute

Imported Items:

The overall purchase procedure for all imported items (equipment, spare parts or consumables) regardless of their value will follow almost the same guidelines with the following additional points which should be taken into account:

1. The quotation should clearly mention if the quoted price is inclusive or exclusive of Indian agent's commission.

2. The commission amount (if any) should be deducted while opening LC.

3. The purchase proposal should contain a Not Manufactured in India (NMI), certificate from PI, if applicable.

4. All purchase orders should mention our cargo releasing agent's name and full address. A copy of the purchase order should be sent to cargo releasing agent at the time of placing the order with the firm for necessary action at their end.

In case of urgency, prior approval of the competent authority is required to make any purchase foreign currency through internet/credit card etc. The need of advance, if any, may also be granted as very special case subject to the approval of the Director.

Procedure for obtaining Engineering Services:

Engineering services such as repair and maintenance work on civil and electrical facilities or alteration / refurbishment will ordinarily be carried out by the Institute Maintenance unit following normal tendering process. However, small works (costing less than Rs. 25000/-) may be arranged by PI at the department level with due approval of HOD/HOC. All formalities of the purchase process, however, should be observed.

4.4 Advance payment:

Advance payment to vendor can be done by taking prior approval of competent authority. The PI may draw advance for such payment and adjustment may be made along with the final bill submitted by the vendor/supplier.

PIs shall normally be allowed to draw another advance only after adjusting the previous one taken by them.

4.5 Payment of Bills:

For all purchases kindly make sure that the bills (except petty cash purchase from imprest account) have S. No., Date and TIN/PAN No. of the vendor/supplier.

While making a purchase, make sure not to pay any Excise Duty as the Institute is exempted from paying it.

Do not incur expenses after the sanctioned duration of the project. Request for extension of projects should be made to funding agencies well in advance.

PIs shall arrange to maintain Procurement-cum-purchase Registers and Stock / Asset Register. These shall be verified by Auditors and SRCC office as and when required. It may be noted that all permanent assets which are of non-consumable nature (equipment/accessories, computers, computer peripherals, furniture etc.) acquired from the project have to be entered in the register of the SRCC and the copy of the same should be sent to central stock entry subsequently.

All the materials / equipment received should be inspected, entered in the stock register and the invoices / bills be certified by PI for payment. In case of purchase of equipment which require installation and demonstration, installation certificate should also be enclosed along with the invoices.
Payment will be made by SRCC through wire transfer/ cheque. .

The usual payment terms for imported items are through LC, which can be opened only after receiving the order confirmation and proforma invoice from the firm.

4.6 Travel & Travel Allowance:

The PI, CI(s) and Project staff can visit places for project work outside the Institute as per entitlement, subject to availability of funds under budget head "Travel or TA/DA" of the project. However, sanction of concerned HOD / HOC is required for being away from the Institute.

All travel bookings are required to be made as per Institute norms. PIs can sanction expenses related to booking of travel tickets (including Tatkal) and cancellation of travel tickets. Prior approval of Competent Authority is required only in case of any relaxation including non-Air India travel.

PI and CI(s) may travel abroad from a project only if a specific provision is available for international travel in the project sanction. Prior approval of competent authority should be obtained before visits as per the govt rules and sanction of leave needs to be obtained from respective sanctioning authority. PI can sanction Registration fees for international conferences from research projects.

On recommendations of PIs, contractual project staff and students working in projects may be permitted with approval of the Dean (R&C) to present papers in National / International Conferences within the country with TA, DA and Registration Fee support provided the funds are available under Travel head of the project.

To meet upcoming expenses during travel, an advance may be drawn. However, it may be noted that such advances need to be adjusted within 15 (fifteen) days from the date of completion of journey. Second advance cannot be sanctioned when the previous advance still remains unadjusted.

Research Fellows (JRFs / SRFs/ RAs) and contract project staff are not entitled for advance. However, they may submit claim for reimbursement of contingency expenditure through proper channel.

The Government of India TA & DA rules will be applicable to the PIs and project employees for all sponsored research/ consultancy projects.

4.7 Organising Seminars/Workshops and Inviting Visitors:

The project may require to arrange/organize Seminars/Workshops/Meetings etc. PIs are empowered for staging such events where such provision exists and the expenses are within the approved budget from Funding Agency. In case no specific provision exists in the project, PI may still sanction expenses within a limit of Rs. 15,000/- from the appropriate head.

Visitors from within country:

PIs can invite outside scientist/expert to the Institute under a project for short duration (up to one week) for project related work with expenses limited to their entitlement. Non-Air India travel requires the approval of competent authority.

Visitors from abroad:

PIs like to invite Students/Researchers/Visitors for project activities from abroad will require the approval of competent authority. In some cases, prior approval of MHRD is also required.

4.8 Finance & Accounts:

A separate book of accounts shall be maintained by SRCC for each project. SRCC should provide the UC & SE as and when required by the sponsors. Govt. Audited statement of accounts at the end of each financial year shall be provided, if required by the sponsor.

In the event, any project utilizes Institute's manpower and other supporting facilities beyond office hours, the expenses towards the same shall be charged to the respective project. For this purpose, on the recommendations of the PI and HOD / HOC concerned, the Dean (R&C) may approve suitable honorarium for the supporting staff of the Institute as per norms approved by the Institute from time to time.

Accounts for sponsored projects shall be maintained under five broad budget heads. These are: Salary, Equipment, Consumables, Travel, Contingency and Overheads.

Cash advance shall be drawn in the name of permanent employees only working in the projects. He / she shall normally be allowed to draw another advance only after adjusting the previous one.

All expenditure shall normally be made within the proposed date of completion of the project. Exception may be permitted with the consent of the sanctioning authority.

SRCC shall ensure that the head-wise expenditure does not exceed the budgetary allocation. For effective control, (or as and when required) expenditure details shall be made available to PIs by SRCC.

The PI shall write to the sponsor for timely release of fund with a copy to the Dean (R&C) for follow up. SRCC will provide the un-audited/audited statement of accounts to PIs for forwarding the same to the sanctioning authority.

Day to day Expenses:

PI may draw a permanent imprest advance of Rs. 10,000/- for meeting day-to-day expenses/petty purchase. PI can draw the next advance only after adjustment of the previous one. The adjustment bills have to submit to SRCC by the PI.

5.0 INDUSTRIAL CONSULTANCY

The Institute has expertise in various research areas to provide knowledge and intellectual inputs which are of interest to the industry. It encourages its faculty to undertake consultancy work, which is an important tool in industrial growth of the Country.

In case of a consultancy project, proposal is prepared by the PI based on the requirement of the industry. It should specifically mention primary component. It may also have the funds, normally consultancy fee as the budget for supporting manpower, equipment, travel, contingency and other such costs to execute the consultancy project.

For projects involving only site visits for consultation work and/or personal discussion, charges will be decided at mutually acceptable rate which shall be based on extent and nature of work. Travelling & Daily allowance will be extra as per the Institute norms.

No consultancy, whatsoever, shall be less than Rs.30,000 and no charges for exclusive material testing shall be less than Rs.5,000.

Industrial Consultancy activities in the Institute and corresponding overhead are of following types:

Sl. No.	Type of Consultancy	Rate of overhead (after deduction of Service Tax)
1	Use of no Institute Facilities	25%
2	Use of institute Laboratory facilities	30%

CALCULATION OF CONSULTANCY FEE:

If project cost (prior to overheads) is P; then overheads of N% will be charged on P as per the table, Service Tax will be 14.5% (presently) or whatever is applicable, on (P + N% overheads).

For example, for a project cost of P =100 and 25% overheads, the calculation is as follows:

Project cost = Rs. 100.00

Overhead = Rs. 25.00

Service Tax = (Rs.100.00 + Rs.25.00) x 14.5% = Rs.18.125

Total fees received from client = Rs.100.00 + Rs.25.00 + Rs.18.125

DISTRIBUTION OF CONSULTANCY FUNDS:

The fund for Consultancy work will be operated by SRCC. The expenditure towards contingencies shall not be more than 25% of the consultancy amount. The consultancy projects where outside agencies will be involved through MOU approved by SRCC shall follow the norms of the MOU. The norms for calculation of various percentages for distribution of the total money received from client (excluding service tax in every case) will be as follows:

General Disbursement Rules:

- Consultancy fees = **C**
- Total expenditure on the project = **E**
- Project cost **P = C + E**
- Overhead Charge **O = P X N%**
- Service Tax **S = (P + O) X 14.5%**
- Total fees received from client **T = P + O + S**

*TDS will be deducted as applicable

Amount **C** (after deducting TDS as applicable) will be distributed among the Investigators, technical & supporting staff and office staff (if required). Fees can be distributed only after successful completion of the project certified by the client.

All sanctioned and approved consultancy project proposals have to be registered with the SRCC by filling up of the ”Project Registration Form”, duly forwarded by HOD/HOC (For category 10.2 in SRCC Form 2) along with a copy of the proposal (both original and recast, if any) and approval by the sponsors for project registration.

It shall be the responsibility of the PI to get the consultancy work completed satisfactorily within the sanctioned amount and duration.

All other norms for consultancy projects presently in vogue shall continue to be applicable with Dean (R&C) having total financial and administrative power. Besides, the rules of sponsored research projects mentioned aforesaid are also applicable.

6.1 **Project Initiation:**

Sl. No.	Activity	Responsibility	Estimated time (Max no. of working days)
1	Submission of proposal to SRCC	PI through HOD or HOC	2
2	Scrutiny of overhead as per norm	SRCC Staff / Asst Registrar (SR&C)	1
3	Endorsement of the proposal	Dean (R&C)/Registrar	1
4	Archive soft / hard copy of the proposal	SRCC Staff	1
5	Dispatch of the proposal (hard copy) to the Sponsor	SRCC Staff / PI	1
6	Registration of the project at SRCC after receipt of sanction letter from the sponsor	PI	-
7	Assign the project number	SRCC Staff	2
8	Intimation of bank account number of SRCC to Sponsor	SRCC Staff / PI	1
9	Budget heads created, received funds in various heads noted. Project operational.	SRCC Staff	2
10	Overhead / service tax deducted from project fund	SRCC Staff	2

6.2 Purchase:

Sl. No.	Activity	Responsibility	Estimated time (Max no. of working days)
1	Preparation of bid document & Tendering	PI	-
2	Preparation of comparative statement & purchase order	PI + SRCC Purchase Committee	3
3	Scrutiny of fund availability and purchase procedure & Approval	SRCC Staff / Internal Audit/ Dean (R & C)	3
4	Signing PO	Registrar	-
5	Dispatch of PO to vendor, PI	SRCC Staff	1
6	Receipt of goods	PI	-
7	Inspection / testing / commissioning etc.	PI	7
8	Entry into measurement book	PI	1
9	Submission of bills, Installation & warranty certificates to SRCC	PI	15
10	Scrutiny of bills & Release of payment to vendor	SRCC	1

6.3 Accounts / Reports:

Sl. No.	Activity	Responsibility	Estimated time (Max no. of working days)
1	Submission of progress reports & other deliverables to the sponsor	PI (with a copy to SRCC)	-
2	Audit of funds each FY	SRCC through Auditor	15
3	Submission of UC & Audit report to sponsor	PI	-
4	Payment of service tax to appropriate authority	SRCC Staff	3
5	Submission of Completion Report to sponsor	PI	-
6	Payment of honorarium to investigators (Consultancy projects)	SRCC Staff / Asst. Registrar (SR&C) / Dean (R&C)	3

6.4 Travel:

Sl. No.	Activity	Responsibility	Estimated time (Max no. of working days)
1	Submission of travel application through HOD/PI	Project staff / PI	-
2	Scrutiny for fund availability	SRCC Staff	1
3	Application for advance	PI	-
4	Approval and release of advance	SRCC Staff /Asst. Registrar (SR&C) / Dean (R&C)	3
5	Submission of TA bill	PI	-
6	Processing of TA bill and adjustment	SRCC Staff / Asst. Registrar (SR&C) / Dean (R&C)	3

6.5 Project Staff:

Sl. No.	Activity	Responsibility	Estimated time (Max no. of working days)
1	Request for recruitment as per provision in sanctioned project along with details	PI	-
2	Scrutiny / Approval	SRCC Staff / Asst. Registrar (SR&C) / Dean (R&C)	2
3	Advertisement on website	-	1
4	Submission of Recommendation of the selection committee along with evaluation sheet and application of the selected candidates, issue of Appointment letter	PI	30
5	Agreement of appointment	-	~~2~~
6	Submission of joining report to SRCC	PI through HOD	2
8	Release of assitanceship/fellowship	SRCC Staff / Asst. Registrar (SR&C) / Dean (R&C)	By 2nd of next month

Availability of concerned officials in SRCC office has been presumed in estimating the maximum number of working days required to complete an activity.

All documents will be finally checked and countersigned by PI.

7.0 Disbursement of Overhead Charges for sponsored Research Project etc.:

Normally overhead charges shall be applicable @20% of the total project cost. Sometime, the overhead charge sanctioned by the sponsoring agency is less than 20%. In that case overhead charges will be acceptable as per sponsoring agency norm.

Distribution of the total ~~Institutional~~ Overheads

Sl.No	Distribution Head	Percentage of Total Amount proposed for '~~Institute~~ Overheads' of SRP
1	Institute Research Development Fund	25
2	Departmental (in which PI belongs) Development Fund	20
3	Professional Development Fund (To be made available to Principal Investigator (PI)	30
4	Research Management Fund	25

Definitions:

1. **Institute Research & Development Fund (IRDF)**
   25% (Twenty Five) of the overheads from Sponsored Research Project will be credited to a fund called Institute Research and Development Fund. 10% of the Institute Research and Development Fund will be transferred every year to a Core Fund, which will form the Corpus of the Institute. The usage of IRDF will be coordinated by Dean (R & C) of the Institute with the approval of the Director. It shall be utilized primarily for the Research & overall developmental activities of the institute, as may be decided by a committee of Deans

2. **Departmental Development fund (DDF)**
   20% (Twenty) of the overheads from Sponsored Research Project shall be transferred to the DDF of the concerned academic department(s). The objective of this fund is to provide additional grant to the department for its developmental activities as well as for funding its other activities for which adequate funds are not available from other sources. This fund can also be used for activities like providing seed money for holding conferences / workshops and seminars etc. The budget proposal for utilizing DDF shall be prepared and submitted by the Department to the Director and utilized after obtaining his approval. The account of DDF shall be maintained by accounts section and statement shall be sent to the department(s) at the end of financial year. The department(s) concerned shall submit expenditure bills to the accounts section for processing payment.

3. **Professional Development Fund (PDF)**

   Professional Development Fund (30% of the overheads from Sponsored Research Project) shall be created for individual faculty. The objective of this will be to help individual faculty member in his / her professional development. The account of PDF shall be maintained by SRCC and statement shall be sent to the departments at the end of financial year. The departments concerned may submit expenditure bills to the SRCC for processing payment. PDF shall be utilized by the concerned individual faculty for expenditure under approved heads (research related items). All expenditures are reimbursable only. The PDF amount can be utilized by the individual even when there are no on-going projects in his / her name. Accumulation of PDF is permitted without any upper limit.

4. **Research Management Fund (RMF)**

   There shall be a research management fund (25% of the overheads from Sponsored Research Project) created in the name of PI to upkeep and maintain the lab/instruments/workspace/furniture/AMC/Air conditioning of the lab. The RMF shall be maintained by the account section and statement will be sent to the respective department at the end of the financial year. The PI concerned may submit the expenditure bill to the Accounts Section for processing and payment. The RMF can be availed even after the completion of the project.

7. Department Promotional Account (DPA):

The DPA can be utilized for the Procurement of equipment, consumables etc. for the department. When the PI is associated with more than one department/ centre, the grant for the DPA will be credited to the account of department / centre recommended by PI.

The advisory and monitoring committee as approved by the BOG shall remain in vogue.

Articles of Agreement made this___________day of__________Two thousand ________ by and between the Sponsored Research and Consultancy Cell (hereinafter called the SRCC) of ONE PART and Mr./Ms. ____________________ son/daughter of Mr. _________________ residing at __________ hereinafter referred to as the 'Party of the Second Part' of the OTHER PART.

WHEREAS the 'Party of the Second Part' has been appointed by the SRCC on contract basis to serve as__________________________in sponsored research project entitled " __________________" sponsored by ___________________

AND WHEREAS the 'Party of the Second Part' has agreed to serve the said project as ______________________on the specific terms and conditions hereinafter contained as well as general terms and conditions regulated by the SRCC.

NOW THESE PRESENTS WITNESSTH and the Parties hereto agree subject to the general terms and conditions regulated by the SRCC.

1) The 'Party of the Second Part' shall serve the said project as __________________ on a consolidated compensation of Rs. ____________ (Rupees __________ only) per month. No DA and other allowances are admissible.

2) That the 'Party of the Second Part' is joining the said project with full knowledge and understanding that the project is a contract job. The tenure of this assignment is up to one year and this contract will automatically terminate on the afternoon of the same day.

3) The 'Party of the Second Part' shall devote his whole time and attention to the service of the project undertaken by the Principal Investigator (PI) and shall be subject to the Rules and other provisions of the SRCC relating to assignment under contract.

4) The 'Party of the Second Part' may be provided with hostel accommodation, if available, and shall be liable to pay license fee and charges for water, electricity and any other services rendered thereunder.

5) If so required, the ‘Party of the Second Part’ shall have to perform on a staggered or shift duty including six days a week.

6) The Contract Service of the ‘Party of the Second Part’ may during the period of contract, be terminated by the SRCC at any time by one month’s notice given during the period of contract. The contract may be terminated at any time due to non-availability of funds or unforeseen termination of the project by the sponsor. In such eventuality, the SRCC shall pay one month’s compensation to the ‘Party of the Second Part’. The ‘Party of the Second Part’ may terminate his contract service by giving one month’s notice.

7) The ‘Party of the Second Part’ shall be eligible to avail 8 days Casual Leave and 10 days (20 days with one half of full compensation) with full compensation. The ‘Party of the Second Part’ shall be provided with outdoor treatment facilities and medicines normally available at Institute Medical Unit only for self and dependents (spouse & children).

8) The ‘Party of Second Part’ thus appointed with consolidated compensation shall not be eligible for Gratuity and other benefits. No LTC / HTC shall be admissible.

9) In respect of any other matter for which no provision has been made in this agreement the ‘Party of the Second Part’ be governed by the SRCC rules and the administrative orders issued by the Dean (R&C) or by his nominee from time to time.

10) The ‘Party of the Second Part’ further understand that this contractual assignment under SRCC will not give him any right whatsoever for automatic absorption into the Institute’s Cadre.

In witness whereof the ‘Party of the Second Part’ and the Dean (R&C) or his nominees for and on behalf of the sponsoring agency have hereunto set their hands the day and year first above written.
