

NATIONAL INSTITUTE OF TECHNOLOGY

DURGAPUR

CURRICULUM

OF

BACHELOR OF TECHNOLOGY IN METALLURGICAL AND MATERIALS ENGINEERING

2023 ONWARD UNDERGRADUATE ADMISSION BATCH

Curriculum

V0:

First Year Curriculum Recommended by members of UGAC	19.08.2023
First Year Curriculum Approved by the Chairman, Senate	19.08.2023
First Year Curriculum & Syllabus ratified in the 71st Senate meeting (Item No. 71.5(b))	18.12.2023
Entire Curriculum and Syllabus Recommended by UGAC	09.12.2024
Entire Curriculum and Syllabus Approved by the 73 rd Senate (Item No. 73.8)	23.03.2025

DEPARTMENT OF METALLURGICAL AND MATERIALS ENGINEERING

**Program Name: Bachelor of Technology in Metallurgical and Materials
Engineering**

DETAILED CURRICULUM OF

B. TECH. in METALLURGICAL AND MATERIALS ENGINEERING

**L= Lecture hour/ week; T= Tutorial hour/ week; P= Sessional/ practical hour/ week
C= Subject credit point; H= Subject contact hour/ week.**

Semester - I							
Sl. No	Code	Subject	L	T	P	C	H
1	MAC01	Mathematics - I	3	1	0	4	4
2	CSC01	Computer Programming	2	1	0	3	3
3	XEC01	Engineering Mechanics	2	1	0	3	3
4	XEC02*	Basic Electrical and Electronics Engineering	3	0	0	3	3
5	ESC01	Ecology and Environment	2	0	0	2	2
6	CYC01	Engineering Chemistry	3	0	0	3	3
7	CSS51	Computing Programming Laboratory	0	0	3	2	3
8	XES52	Basic Electrical and Electronics Engineering Laboratory	0	0	3	2	3
9	CYS51	Engineering Chemistry Laboratory	0	0	2	1	2

***From the AY2025-26, L-T-P of XEC02 is 3-1-0, Credit = 4**

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Semester - III							
Sl. No	Code	Subject	L	T	P	C	H
1	MAC331	Mathematics- III	3	1	0	4	4
2	MMC301	Introduction to Metallurgy and Materials	3	1	0	4	4
3	MMC302	Metallurgical Thermodynamics and Kinetics	3	1	0	4	4
4	MMC303	Non - Ferrous Process Metallurgy	3	1	0	4	4
5	MMC304	Computational Materials Science	3	1	0	4	4
6	MMS351	Metallurgical Thermodynamics and Kinetics Laboratory	0	0	3	2	3
7	MMS352	Mineral Beneficiation Laboratory	0	0	3	2	3
8	MMS353	Computational Materials Science Laboratory	0	0	3	2	3
TOTAL			15	5	9	26	29
Semester - IV							
Sl. No	Code	Subject	L	T	P	C	H
1	MMC401	Transport Phenomena in Metallurgical Processes	3	1	0	4	4
2	MMC402	Phase Transformation and Phase Equilibria	3	1	0	4	4
3	MMC403	Materials Characterization	3	1	0	4	4
4	MMC404	Physics of Materials	3	0	0	3	3
5	MMC405	Manufacturing Processes	3	1	0	4	4
6	MMS451	Transport Phenomena Laboratory	0	0	3	2	3
7	MMS452	Phase Transformation and Phase Equilibria Laboratory	0	0	3	2	3
8	MMS453	Materials Characterization Laboratory	0	0	3	2	3
TOTAL			15	4	9	25	28
Semester - V							
Sl. No	Code	Subject	L	T	P	C	H
1	MMC501	Modelling and Simulation of Metallurgical Processes	3	1	0	4	4
2	MMC502	Engineering Materials and Heat Treatment	3	1	0	4	4
3	MMC503	Mechanical Behaviour of Materials	3	1	0	4	4
4	MMC504	Iron Making	3	0	0	3	3
5	MME510---	Depth Elective - 1	3	0	0	3	3
6	MMS551	Manufacturing Processes Laboratory - I	0	0	3	2	3
7	MMS552	Heat Treatment of Materials Laboratory	0	0	3	2	3
8	MMS553	Mechanical Behaviour of Materials Laboratory	0	0	3	2	3
TOTAL			15	3	9	24	27

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Semester - VI							
Sl. No	Code	Subject	L	T	P	C	H
1	HSC631	Economics and Management Accountancy	3	0	0	3	3
2	MMC601	Mechanical Working of Materials	3	1	0	4	4
3	CSC631	Artificial Intelligence (AI) and Machine Learning (ML)	3	0	2	4	5

CREDIT UNIT OF THE PROGRAM:

Semester	I + II	III	IV	V	VI	VII	VIII	TOTAL
Credit Unit	43	26	25	24	21	21	7	167

List of Core Subjects:

Sl No	Core Subjects	
1	MMC301	Introduction to Metallurgy and Materials
2	MMC302	Metallurgical Thermodynamics and Kinetics
3	MMC303	Non - Ferrous Process Metallurgy
4	MMC304	Computational Materials Science
5	MMC401	Transport Phenomena in Metallurgical Processes
6	MMC402	Phase Transformation and Phase Equilibria
7	MMC403	Materials Characterization
8	MMC404	Physics of Materials
9	MMC405	Manufacturing Processes
10	MMC501	Modelling and Simulation of Metallurgical Processes
11	MMC502	Engineering Materials and Heat Treatment
12	MMC503	Mechanical Behaviour of Materials
13	MMC504	Iron Making
14	MMC601	Mechanical Working of Materials
15	MMC701	Steel Making

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

List of Subjects in Depth Elective – 1 to be offered in FIFTH SEMESTER

CODE	DEPARTMENT OF METALLURGICAL AND MATERIALS ENGINEERING
MME510	Functional Materials
MME511	Energy Materials
MME512	Alternative Routes of Iron Making
MME513	Design and Selection of Engineering Materials
MME514	Powder Metallurgy

List of Subjects in Depth Elective – 2 & 3 to be offered in SIXTH SEMESTER

CODE	DEPARTMENT OF METALLURGICAL AND MATERIALS ENGINEERING
MME610	Advanced Engineering Materials
MME611	Energy and Environment in Metallurgical Industries
MME612	Production of Ferrous Alloys
MME613	Nano Science and Technology
MME614	Ceramic Technology
MME615	Solidification Phenomena
MME616	Metal Joining Processes
MME617	Experimental Techniques in Metallurgy
MME618	Secondary Steel Making
MME619	Coatings and Thin Film Technology
MME620	Stainless Steel; Technologies and Applications
MME621	Green Steel Making
MME622	Metallurgical Waste Management

List of Subjects in Depth Elective – 4 & 5 to be offered in SEVENTH SEMESTER

CODE	DEPARTMENT OF METALLURGICAL AND MATERIALS ENGINEERING
MME711	Fatigue, Creep and Fracture
MME712	Raw Materials Preparation for Iron and Steel Making
MME713	Fuel, Furnace and Refractories
MME714	Corrosion Engineering
MME715	Metallurgical Process Design
MME716	Composite Materials
MME717	Advanced Material Processing
MME718	High Temperature Materials

List of Non-Departmental Subjects:

MAC331- Mathematics- III

HSC631- Economics and Management Accountancy

CSC631- Artificial Intelligence (AI) and Machine Learning (ML)

MSC731- Principles of Management

List of Sessional Subjects:

Sl No	Laboratory	
1	MMS351	Metallurgical Thermodynamics and Kinetics Laboratory
2	MMS352	Mineral Beneficiation Laboratory
3	MMS353	Computational Materials Science Laboratory
4	MMS451	Transport Phenomena Laboratory
5	MMS452	Phase Transformation and Phase Equilibria Laboratory
6	MMS453	Material Characterization Laboratory
7	MMS551	Manufacturing Processes Laboratory - I
8	MMS552	Heat Treatment of Materials Laboratory
9	MMS553	Mechanical Behaviour of Materials Laboratory
10	MMS651	Mechanical Working of Materials Laboratory
11	MMS652	Manufacturing Processes Laboratory - II
12	MMS751	Ferrous Process Metallurgy Laboratory
13	MMS752	Materials Testing Laboratory

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

FIRST SEMESTER

Mapping of CO (Course outcome) and PO (Programme Outcome)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC01	MATHEMATICS - I	PCR	3	1	0	4	4
Pre-requisites		Basic concepts of function, limit, differentiation and integration.					
Course Outcomes	• CO1: learn the fundamentals of differential calculus of single and several variables. • CO2: learn the basic concepts of convergence of infinite series. • CO3: understand the basic concepts of integral calculus along with its various applications. • CO4: acquire the theoretical knowledge of vector calculus and its engineering applications.						
Topics Covered	Functions of Single Variable: Review of limit, continuity and differentiability. Mean value theorems: Rolle's Theorem, Lagrange's Mean Value Theorem (MVT), Cauchy's MVT, Taylor's theorem, Taylor's and Maclaurin's series. (8) Functions of several variables: Limit, continuity and differentiability of functions of several variables, partial derivatives and their geometrical interpretation, derivatives of composite and implicit functions, derivatives of higher order and their commutativity, Homogeneous function, Euler's theorem and its converse, Exact differential, Jacobian, Taylor's & Maclaurin's series, Maxima and Minima, Necessary and sufficient condition for maxima and minima (no proof). (11) Sequences and Series: Real sequences and their convergence, Series of positive terms, Necessary and sufficient condition for convergence, p-series, geometric series, Comparison test, D'Alembert's ratio test, Cauchy's root test, Alternating series, Leibnitz's rule, Absolute and conditional convergence. (6) Integral Calculus: Review of the idea of integration as a limit of a sum, Mean value theorems of integral calculus, Area and length in Cartesian and polar co-ordinates, Volume and surface area of solids of revolution in Cartesian and polar forms, Improper integrals and their convergence, Beta and Gamma functions. (12) Multiple Integrals: Evaluation of double and triple integrals, Change of order of integration, Change to better coordinates, Area and volume by double integration, Volume by triple integration. (10) Vector Calculus: Vector valued functions and its differentiability, Line integral, Surface integral, Volume integral, Gradient, Curl, Divergence, Green's theorem in the plane (including vector form), Stokes' theorem, Gauss's divergence theorem and their engineering applications. (9)						
Text Books, and/or reference material	Text Books: 1. Kreyszig, E., Advanced Engineering Mathematics: 10th edition, Wiley India Edition, 2010. 2. Murray, D.A., Differential and Integral Calculus, FB & C Limited, 2018. 3. Marsden, J. E; Tromba, A. J.; Weinstein: Basic Multivariable Calculus, Springer, 2014. 4. Murray Spiegel, Schaum's Outline of Vector Analysis, .Tata McGraw Hill Education, 1980 Reference Books: 1. Tom Apostol, Calculus-Vol-I & II, Wiley Student Edition, 2011. 2. Thomas and Finny: Calculus and Analytic Geometry. 11th Edition, Addison Wesley.						

Course	COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
MAC01	CO1	2	3	2	3	1	1	-	-	1	1	1	2
	CO2	2	3	2	3	-	1	-	-	1	1	2	2
	CO3	2	3	2	3	-	1	1	-	-	2	2	2
	CO4	3	3	2	3	1	1	-	1	-	2	1	2

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSC01	COMPUTER PROGRAMMING	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic knowledge of computer.		CT+MT+EA					
Course Outcomes	• CO1: To understand basics of computer programming, program flow, and programming constructs. • CO2: Develop concepts on basic and complex data types, conditional and iterative statements. • CO3: Exercise the concepts of user defined functions to solve real time problems. • CO4: Inscribe C programs that use Pointers to access arrays, strings and functions. • CO5: Exercise user defined data types including structures and unions to solve problems.						
Topics Covered	Introduction to C: Phases of developing a running computer program in C. (2L) Data types, size and values. Char, Unsigned and Signed data types. Number systems and representations. Constants, Overflow. (3L) Data concepts in C: Constants, Variables, Expressions, Operators, and operator precedence in C. (2L) Statements: Declarations, Input-Output Statements, Compound statements, Selection Statements. (2L) Conditions, Logical operators, Precedences. Repetitive statements, While construct, Do-while Construct, For construct. (3L) Arrays. Strings. Multidimensional arrays and matrices. (3L) Pointers: Pointer variables. Declaring and dereferencing pointer variables. Pointer Arithmetic. Examples. Accessing arrays through pointers. Pointer types, Pointers and strings. String operations in C. (6L) Dynamic memory allocation. (2L) Modular Programming: Functions: The prototype declaration, Function definition. (3L) Function call: Passing arguments to a function, by value, by reference. Scope of variable names. Recursive function calls, Tail recursion. (4L) Sorting problem: Sorting in arrays with an example of Bubble sort. Sorting in strings. (3L) Search problem: Linear search and binary search. (2L) More Data-types in C: Structures in C: Motivation, examples, declaration, and use. Operations on structures. Passing structures as function arguments. type defining structures. (4L) File input-output in C. Streams. Input, output and error streams. Opening, closing and reading from files. Programming for command line arguments. (3L)

	CO4	3	2	2	-	-	1	-	-	-	-	-	-	
	CO5	3	1	2	-	1	2	-	-	-	-	-	-	

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P) [#]	Total Hours	
XEC01	ENGINEERING MECHANICS	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
		CT+MT+EA					
Course Outcomes	- CO1: Acquire knowledge of mechanics and ability to draw free body diagrams. - CO2: Apply knowledge of mechanics for solving special problems like truss and frame analysis. - CO3: Ability to calculate centroid, moments of inertia for various shapes.						
	CO4: Learn momentum and energy principles.						

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

	CO5: Knowledge on virtual Work Principle and its application
Topics Covered	Engineering Mechanics; measurement and SI units. [1] Vectors and force as a vector; Resultant of a system of forces on a particle; free body diagram and conditions of equilibrium of a particle; problems on particles; equilibrium of particles in space. [2] Resultant of a system of forces and couples on a rigid body; conditions of equilibrium of a rigid body; free body diagrams of rigid bodies subjected to different types of constraints; simple space problems of rigid bodies. [4] Coefficients of static and kinetic friction; problems involving friction; theories of friction on square threaded power screw and flat belt. [5] Simple trusses; analysis of trusses by method of joints and method of sections. [5] Centre of gravity and centre of mass; centroids of lines, curves and areas; first moment of area; second moment of area; polar moment of inertia; radius of gyration of an area; parallel axis theorem; mass moment of inertia. [4] Path, velocity, acceleration; rectilinear and curvilinear motion; motion of system of particles; introduction to the concept of plane kinematics of rigid bodies. [6] Newton's second law of motion; dynamic equilibrium and D'Alembert's principle; linear momentum; angular momentum; rectilinear and curvilinear motion; principles of work–energy and impulse–momentum; impact of system of particles; introduction to the concept of plane kinetics of rigid bodies. [12] Principle of Virtual Work, Solution of Problems on Mechanics using Principle of Virtual Work [3]
Text Books, and/or reference material	1) S P Timoshenko and D H Young, Engineering Mechanics, 5th Edition 2) J L Meriam and L G Kraige, Engineering Mechanics, 5th Edition, Wiley India 3) F P Beer and E R Johnston, Vector Mechanics for Engineers 4) I H Shames, Engineering Mechanics

Mapping of CO (Course outcome) and PO (Programme Outcome)

Course	COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
XEC01	CO1	1	-	-	-	-	-	-	-	-	-	-	1
	CO2	1	1	1	1	-	-	-	-	-	-	-	1
	CO3	1	1	-	-	-	-	-	-	-	-	-	1
	CO4	1	2	-	-	-	-	-	-	-	-	-	1
	CO5	-	2	2	2	2	1	-	-	-	1	-	1

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
XEC02	Basic Electrical and Electronics Engineering	PCR	3	0	0	3	3
Pre-requisites			Course Assessment methods				
(10+2) level mathematics and physics			CT+MT+EA				
Course Outcomes	CO1: Learn the fundamentals of electric circuits and analyze the circuits using laws and network theorems. CO2: Gain the knowledge about magnetic circuits, electromagnetism and the basics of generation of alternating voltage. CO3: Understand the behaviour of single phase and poly-phase AC circuits. CO4: Understand the fundamentals of semiconductor devices. CO5: Analyze the design and characteristics of transistor-based electronic circuits. CO6: Evaluate operational amplifier-based circuits and logic gates.						
Topics Covered	1. Introduction to Electrical systems, Fundamentals of Electric Circuits: Ohm's laws, Kirchhoff's laws, Independent and Dependent sources, Analysis of simple circuits. (4) 2. Network theorems (DC): Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem. (5) 3. Magnetic circuits: Review of fundamental laws of electromagnetic induction, Self and mutual inductances, Solution of magnetic circuits. (3) 4. Generation of alternating voltage and current, E.M.F. equation, Average and R.M.S. value, Phase and phase difference, Phasor representation of alternating quantity, Behaviour of AC circuits, Resonance in series and parallel R-L-C circuits. (6) 5. Poly-phase system, Advantages of 3-phase system, Generation of 3-phase voltages, Voltage, current and power in a star and delta connected systems, 3-phase balanced and unbalanced circuits. (3) 6. Semiconductor Devices: Construction, working and V-I characteristics of diode, Zener diode, Zener diode as a voltage regulator, LED. (6)						

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

	7. Transistors:Introduction to BJT, FET, MOSFET; CMOS, working principle, and V-I characteristics of Transistors, biasing of BJT circuits-fixed bias, emitter bias, feedback bias, voltage divider bias, transistor as an amplifier. (8) 8. Operational amplifier:Introduction, applications: inverting, non-inverting amplifier, unity follower, integrator, differentiator, summing circuit .(4) 9. Introduction of logic gates, memory: ROM, RAM. (3)
Text Books, and/or reference material	TEXT BOOKS 1. Electrical & Electronic Technology by Hughes, Pearson Education India. 2. Introduction Electronic Devices & Circuit Theory, 11/e, 2012, Pearson: Boylestad&Nashelsky. 3. Electronics: Fundamentals and Applications By D. Chattopadhyay, P. C. Rakshit; New Age Int. Publication. REFERENCE BOOKS 1. Advanced Electrical Technology by H. Cotton, Reem Publication Pvt. Ltd. 2. Electrical Engineering fundamentals by Vincent Deltoro, Pearson Edu. India. 3. The Art of Electronics 3e, by Paul Horowitz, Winfield Hill. 4. Electronics - Circuits and Systems, Fourth Edition by Owen Bishop. 5. Electronics Fundamentals: Circuits, Devices & Applications (8e) by Thomas L. Floyd & David M. Buchla.

Mapping of CO (Course outcome) and PO (Programme Outcome)

	CO6	3	2	2	2	3	-	-	-	2	-	-	1

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P) [#]	Total Hours	
ESC01	Ecology and Environment	PCR	2	0	0	2	2
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	- CO1: Understand the importance of environment and ecosystem. - CO2: Understand the fundamental aspect of pollutant tracking and its implementation in natural and anthropogenic pollution of air and water system. - CO3: Understand the scientific basis of local and as well as global issues. - CO4: Apply of knowledge to develop sustainable solution.						
Topics Covered	UNIT – I: INTRODUCTION(2) Multidisciplinary nature of Environmental Studies: Definition, Scope, and Importance. UNIT–II: FUNDAMENTALS OF ECOLOGY (9) Definition, Components of Environment; Fundamentals of Ecology and Ecosystem; Components and Classification of Ecosystem; Energy flow in Ecosystem: Tropic level, Food Chain, Food Web, Ecological Pyramid; Biogeochemical cycles: Carbon, Nitrogen, Sulphur, Phosphorus, and Water Cycle; Biosphere and Biodiversity; Conservation. UNIT–III: FUNDAMENTALS OF ENVIRONMENT (10) Environmental Pollution: Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Solid Wastes, and Natural hazards: Floods, earthquakes, cyclones, and landslides. Environmental Issues: Climate change and global warming; acid rain; and ozone layer depletion. Environment Quality: Ambient air quality standards, Water quality parameters and standards: pH, Turbidity, Hardness, Sulphate, Phosphates, Iron, Dissolved Oxygen, BOD, and COD. UNIT– IV: NATURAL RESOURCES (3) Mineral Resources, Energy Resources: Conventional and Non-Conventional. UNIT- V- GREEN TECHNOLOGY & ENVIRONMENTAL ETHICS (4)						

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

	Sustainability: Carbon Sequestration, Green building practices, Green computing; Carrying capacity; and Environment Protection Acts/laws.
Text Books, and/or reference material	1. A Basic Course in Environmental Studies. Deswal & Deswal. Pub. Dhanpat Rai & Sons 2. Ecology. Odum. Pub. Oxford & IBH 3. Environmental Engineering. Peany et.al. Pub. McGraw Hill 4. A Text Book of Environmental Engg. Venugopal Rao. Pub. PHI 5. A Basic Course in Environmental Studies. Deswal & Deswal. Pub. Dhanpat Rai & Sons 6. Environmental Studies. Bharucha. Pub. University of Press 7. Environmental Chemistry and Pollution, S. S. Dara & D. D. Mishra, S. Chand Publishing

Mapping of CO (Course outcome) and PO (Programme Outcome)

ESC01	CO1	3	-	-	-	-	-	2	-	-	-	-	-
	CO2	1	-	-	-	-	-	2	-	-	-	-	-
	CO3	2	-	-	-	-	-	2	-	-	-	-	-
	CO4	1	-	3	-	-	-	2	1	-	-	-	-

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CYC01	Engineering Chemistry	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
None		CT+MT+EA					
Course Outcomes	- CO1: Students will get the knowledge of fundamentals as well industrial applications of polymer, petroleum products, organometallic compounds and others. - CO2: Students will be able to elucidate the structure of different organic compounds and to analyze the structure-property correlation. - CO3: Students will be aware on the role played by different metals in biological systems and also the ecological impact of metals. - CO4: Students will be able to understand and analyze thermodynamical, kinetic as well as electrochemical aspects of chemical systems and apply the understanding in the technical field.						
Topics Covered	ORGANIC CHEMISTRY Polymer chemistry and polymer engineering: Fundamental concept on polymer chemistry; synthesis and application of important polymers, Rubber and plastic materials; vulcanization, structure-property correlation: Concept of Molecular weight of polymer, Glass transition temperature. Engineered polymer: Thermally stable, flame retardant, Conducting polymer. (5L) Petroleum Engineering and oil refinery: Origin of petroleum, separation principle and techniques of distillation of crude oil, thermal and catalytic cracking of petroleum, uses of different fractions, knocking, anti-knock compounds, octane number and cetane number. High octane and Aviation fuel. Bio-diesel. (3L) Structure elucidation of organic compounds by modern spectroscopic methods: Application of UV-Visible (Lambert-Beers law), concept of chromophore, auxochrome, hypso-, hyper-, bathochromic, red shift. FT-IR spectroscopy and Mass spectroscopy (including instrumentation). (4L) INORGANIC CHEMISTRY Coordination Chemistry: Crystal Field Theory of octahedral and tetrahedral complexes, colour and magnetic properties, LMCT, MLCT, IVCT. Isomerism and stereochemistry. (5L) Bioinorganic Chemistry: Metal ions in biological systems: Fe, Cu (2L) Industrial application of Organometallic complexes: π-acid ligands, stabilization of metal low oxidation state and 18 electron rules, metal carbonyls and nitrosyls, metal-alkene complexes, Various catalytic cycles of industrial importance. (4L) Environmental Chemistry: Metal toxicity (As, Hg, Pb and Cd) and its remediation (1L) PHYSICAL CHEMISTRY Chemical Thermodynamics: 2nd law of thermodynamics: Concept of thermodynamic engine (Carnot and reverse Carnot cycle), entropy, free energy. Temperature and pressure dependence of entropy and free energy. Change in phase: phase diagram of single component system. Cryogenics: Joule Thomson experiment. (5L) Chemical Kinetics: Rate expression of Reversible reaction, parallel reaction, and Consecutive reaction with proper examples. Temp effect on reaction rate. (3L)						

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

	iii. Catalysis: Types of catalysis, Rate expression for Catalysed reaction, Acid-base and Enzyme catalysis.(2L) iv. Electrochemistry:EMF, Nernst Equation, Application of electrochemistry in chemical processes. Electrochemical cell, Fuel cell, Li-ion battery (3L).
Text Books, and/or reference material	<u>Suggested Text Books:</u> (i) Physical Chemistry by P. Atkins, Oxford (ii) A guidebook to mechanism in Organic chemistry: Peter Sykes; Pearson Edu. (iii) Inorganic Chemistry Part-I & II, R. L. Dutta, The new book stall <u>Suggested Reference Books:</u> Organic Chemistry: (i) Basic stereochemistry of organic molecules: S. Sengupta; Oxford University press (ii) Engineering Chemistry: Wiley (iii) Elementary Organic Spectroscopy: William Kemp, ELBS with Macmillan Inorganic Chemistry: (i) Inorganic Chemistry: Principle structure and reactivity, J. E. Huheey, E. A. Keiter and R. L. Keiter, Pearson Education (ii) Bioinorganic Chemistry -- Inorganic Elements in the Chemistry of Life: An Introduction and Guide, 2nd Edition, Wolfgang Kaim, Brigitte Schwederski, Axel Klein. (iii) Inorganic Chemistry Fourth Edition, Shriver & Atkins, Oxford Physical Chemistry: (i) Physical Chemistry by G.W Castellan (ii) Physical Chemistry by P. C. Rakshit

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	CO1: Learn to analyse the electric circuits using network theorems. CO2: Understand the characteristics of fluorescent lamp and compact florescent lamp. CO3: Analyze the behaviour of single phase and three phase AC circuits. CO4: Understand the application of electronics components, diode circuits as rectifier circuits and voltage regulators. CO5: Evaluate and study the performance of the transistor as a switch. CO6: Create inverting and non-inverting amplifier circuits using Op-Amp.						
Labs Conducted.	1. Verification of the network theorems (DC). 2. Study of the characteristics of fluorescent and compact fluorescent lamp. 3. Analysis of the three phase system for star and delta connected load. 4. Study of the series and parallel R-L-C circuit. 5. Identify and understand the use of different electronic and electrical instruments, various electronic components. 6. Study of half-wave and full-wave (bridge) rectifier with and without capacitor filter circuit. Zener diode as a voltage regulator. 7. Study the performance of a transistor as a switch through NOT gate. 8. Realization of Inverting and Non-inverting amplifier using Op-Amp.

SECOND SEMESTER

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC02	MATHEMATICS - II	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Basic concepts of set theory, differential equations, and probability.		CT+MT+EA					
Course Outcomes	- CO1: learn the basic concepts of linear algebra and be able to apply the same to solve various engineering problems. - CO2: understand fundamentals of ordinary differential equations and their applications. - CO3: acquire the theoretical knowledge of Fourier Series, Fourier & Laplace transforms, and learn about their applications. - CO4: learn the basic concepts of probability theory.						
Topics Covered	Introduction to Algebraic structures: Group, subgroup, ring, subring, integral domain, and field. (3) Linear Algebra: Vector spaces over field, linear dependence and independence of vectors, linear span of a set of vectors, basis and dimension of finite dimensional vector space, elementary row/column operations, rank of a matrix, solutions of system of linear (homogeneous and non-homogeneous) equations, eigenvalues and eigenvectors, characteristic polynomials, Cayley-Hamilton theorem (without proof), Diagonalization of matrices. (15) Ordinary Differential Equations (ODE): Review of first order ODE, Picard's theorem (Statement Only), ODE of first order and of the first degree (exact ODE, rules for finding integrating factors), ODE of first order and of the higher degree (ODE solvable for x, solvable for y; Clairaut's equation, singular solution), homogeneous and non-homogeneous linear ODE with constant coefficients and variable coefficients (Euler–Cauchy type), linear dependence of solutions, Wronskian determinant, Solution of simultaneous ODEs ($dx/P = dy/Q = dz/R$; $dx/dt = ax + by$, $dy/dt = cx + dy$), properties of nonlinear ODEs, phase plane analysis. (18) Fourier series: Piecewise smooth and periodic functions, Fourier series of a function in an interval, Dirichlet conditions, Convergence of Fourier series, Fourier sine and cosine series, Complex form of Fourier series. (4) Fourier Transforms: Fourier Integral Theorem (statement only), Different forms of Fourier Integrals, Fourier Transform and its inversion formula, Properties of Fourier Transform, Convolution. (7) Laplace Transforms: Laplace transforms and its Properties, Inverse Laplace transforms, Convolution theorem, Applications to ODE. (4) Probability: Random variables and probability distributions (discrete and continuous), Binomial, Poisson, Uniform and Normal distributions. (5)

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
CSC02	Data Structure and Algorithms	PCR	2	1	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CSC01 (Computer Programming)		CA+ MT + ET [CA: 15%, MT: 25%, ET: 60%]					
Course Outcomes	- CO1: Understanding the fundamental concepts of abstract data types, data structures, algorithms and time complexity analysis of algorithms. - CO2: Implementation of different abstract data types (array, linked list, stack, queue, tree, graph). - CO3: Implementation of different sorting and searching techniques along with their performance evaluation. - CO4: Analysis of the suitability/compatibility of different data structures based on the types of applications. - CO5: Design and development of algorithms for real-life applications.						
Topics Covered	Introduction: Abstract Data Type (ADT), Data Structures, Concept of static and dynamic memory allocation, Algorithm, Analysis of time and space complexity of algorithms, Asymptotic notations: Big Oh, Big Omega and Big Theta notations, Impact of data structure on the performance of an algorithm. (6L) Array: Array as an ADT, Single and multi-dimensional array, Memory representation (row major and column major) of array, Address calculation for array elements. (2L) Linked list: Linked list as an ADT, Memory allocation and deallocation for a linked list, Linked list versus array, Types of linked lists: singly linked list, doubly linked list and circular linked list, Operations on linked list: creation, display, insertion and deletion (in different positions), Concatenation, Searching, Sorting, Applications of linked list: Representations and operations on polynomials, sparse matrices, etc., Array vs. Linked List. (6L)						
	Stack: Stack as an ADT, Push and pop operations on stacks, Array implementation of stack, Linked list implementation of stack, Applications of stack: Recursion, Function call, Evaluation of postfix expression using stack, Conversion of infix to postfix using stack. (5L) Queue: Queue as an ADT, Enqueue and dequeue operations, Array implementation of queue, Limitation of array implementation, Circular queue, Linked list implementation of queue, Priority queue. (4L) Binary Tree: Binary Tree, Definition and properties, Representation of binary tree in memory: linked representation, array representation, Binary tree traversal (Preorder, Inorder and Postorder), Binary search tree, Heap (8L) Searching Algorithms: Linear search and binary search. (2L) Sorting Algorithms: Selection sort, Insertion sort, Quick sort, and Merge sort. (5L) Graphs Algorithms: Graph representation using Adjacency matrix and Adjacency list, Breadth First Search and Depth First Search algorithms. (4L)						
Text Books, and/or reference material	Text Books: 1. R. F. Gilberg and B. A. Forouzan, "Data Structures: A pseudocode approach with C", 2nd Edition, CENGAGE Learning. 2. A. V. Aho, J. D. 			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
PHC01	Engineering Physics	PCR	2	1	0	3	3
Pre-requisites:		Course Assessment methods: (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	- CO1: To realize and apply the fundamental concepts of physics such as superposition principle, simple harmonic motion to real world problems. - CO2: Learn about the quantum phenomenon of subatomic particles and its applications to the practical field. - CO3: Gain an integrative overview and applications of fundamental optical phenomena such as interference, diffraction and polarization. - CO4: Acquire basic knowledge related to the working mechanism of lasers and signal propagation through optical fibers.						
Topics Covered	Harmonic Oscillations - Linear superposition principle, Superposition of two perpendicular oscillations having same and different frequencies and phases, Free, Damped and Forced vibrations, Equation of motion, Amplitude resonance, Velocity resonance, Quality factor, sharpness of resonance, [8] Wave Motion: Longitudinal waves, Transverse waves, Wave equation, phase velocity and group velocity, Maxwell's equations, Electro-magnetic waves in free space. [3] Introductory Quantum Mechanics - Inadequacy of classical mechanics, Blackbody radiation, Planck's quantum hypothesis, de Broglie's hypothesis, Heisenberg's uncertainty principle and applications, Schrodinger's wave equation and applications to simple problems: Particle in a one-dimensional box, Simple harmonic oscillator, Tunnelling effect. [8] Interference & Diffraction - Huygens' principle, Young's experiment, Superposition of waves, Conditions of sustained Interference, Concepts of coherent sources, Interference by division of wavefront, Interference by division of amplitude with examples, The Michelson interferometer and some problems; Fraunhofer diffraction, Single slit, Multiple slits, Resolving power of grating. [13] Polarisation - Polarisation, Qualitative discussion on Plane, Circularly and elliptically polarized light, Malus law, Brewster's law, Double refraction (birefringence) - Ordinary and extra-ordinary rays, Optic axis etc.: Polaroid, Nicol prism, Retardation plates and analysis of polarized lights. [5] Laser and Optical Fiber - Spontaneous and stimulated emission of radiation, Population inversion, Einstein's A & B co-efficient, Optical resonator and pumping methods, He-Ne laser. Optical Fibre– Core and cladding, Total internal reflection, Calculation of numerical aperture and acceptance angle, Applications. [5]						
Text Books, and/or reference material	TEXT BOOKS: - The Physics of Vibrations and Waves, H. John Pain, Willy and Sons - A Text Book of Oscillations and Waves, M. Goswami and S. XES51	ENGINEERING GRAPHICS	PCR	1	0	3	4	2.5
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
NIL		CT+EA					
Course Outcomes	• CO1: Ability of mental visualization of different objects • CO2: Theoretical knowledge of orthographic projection to solve problems on one/two/three dimensional objects • CO3: Able to read/interpret industrial drawing and to communicate with relevant people						
Topics Covered	Graphics as language of communication; technical drawing tools and their up-keep; types of lines; construction of geometrical figures; lettering and dimensioning. [6] Construction and use of scales; construction of curves of engineering importance such as curves of conic section; spirals, cycloids, involutes and different loci of points; use of equations for drawing some curves. [9]						

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

	Descriptive geometry: necessity and importance of orthographic projection; horizontal and vertical reference planes; coordinate of points; orthographic projection of points and lines situated in different quadrants, viz. 1st, 2nd, 3rd and 4th quadrants; traces of lines. First angle and third angle projection of lines and planes; views from top, front and left (or right); true length and true inclination of lines with planes of projections; primary auxiliary projection of points, lines and planes; auxiliary plan and auxiliary elevation. [9] Projection of simple regular solids, viz. prisms, cubes, cylinders, pyramids, cones, tetrahedrons, spheres, hemi-spheres etc. [6] Section of solids; section by perpendicular planes; sectional views; true shapes of sections. [6] Dimensional techniques; international and national standards (ISO and BIS). [3] Freehand graphics. [3]
Text and/or reference material	1)... Engineering Drawing and Graphics – K Venugopal 2)... Engineering Drawing – N D Bhat 3)... Practical Geometry and Engineering Graphics – W Abbott

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
PHS51	Physics Laboratory	PCR	0	0	2	2	1
Pre-requisites		Course Assessment methods: (Continuous evaluation (CE) and end assessment (EA))					
NIL		CE+EA					
Course Outcomes		CO1: To realize and apply different techniques for measuring refractive indices of different materials. CO2: To realize different types of waveforms in electrical signals using CRO. CO3: To understand charging and discharging mechanism of a capacitor. CO4: To understand interference, diffraction and polarization related optical phenomena. CO5: To acquire basic knowledge of light propagation through fibers.					
Topics Covered		1. Find the refractive index of a liquid by a travelling microscope. 2. Determine the refractive index of the material of prism using spectrometer. 3. Determination of amplitude and frequency of electrical signals by oscilloscope. 4. To study the characteristics of RC circuits. 5. To study Brewster's law/Malus' law using laser light. 6. To study the diffraction of light by a grating. 7. To study the interference of light by Newton's ring apparatus. 8. To determine numerical aperture of optical fiber. 9. Determination of Planck constant.					
Text and/or reference material		SUGGESTED BOOKS: 1) A Text Book on Practical Physics – K. G. Mazumdar and B. Ghosh 2) Practical Physics – Worsnop and Flint

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

THIRD SEMESTER

Department of Mathematics							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MAC331	MATHEMATICS-III	PCR	3	1	0	4	4
Pre-requisites		Basic knowledge of topics included in MAC01 & MAC02					
Course Outcomes	- CO1: Acquire the idea about mathematical formulations of phenomena in physics and engineering. - CO2: To understand the common numerical methods to obtain the approximate solutions for the intractable mathematical problems. - CO3: To understand the basics of complex analysis and its role in modern mathematics and applied contexts. - CO4: To understand the optimization methods and algorithms developed for solving various types of optimization problems.						
Topics Covered	Partial Differential Equations (PDE): Formation of PDEs; Lagrange method for solution of first order quasilinear PDE; Charpit method for first order nonlinear PDE; Homogenous and Nonhomogeneous linear PDE with constant coefficients: Complimentary Function, Particular integral; Classification of second order linear PDE and canonical forms; Initial & Boundary Value Problems involving one dimensional wave equation, one dimensional heat equation and two dimensional Laplace equation. [14] Numerical Methods: Significant digits, Errors; Difference operators; Newton's Forward, Backward and Lagrange's interpolation formulae; Numerical solutions of nonlinear algebraic/transcendental equations by Bisection and Newton-Raphson methods; Trapezoidal and Simpson's 1/3 rule for numerical integration; Euler's method and modified Euler's methods for solving first order differential equations. [14] Complex Analysis: Functions of complex variable, Limit, Continuity and Derivative; Analytic function; Harmonic function; Conformal transformation and Bilinear transformation; Complex integration; Cauchy's integral theorem; Cauchy's integral formula; Taylor's theorem, Laurent's theorem (Statement only); Singular points and residues; Cauchy's residue theorem. [17] Optimization: Mathematical Preliminaries: Hyperplanes and Linear Varieties; Convex Sets, Polytopes and Polyhedra. [2] Linear Programming Problem (LPP): Introduction; Formulation of linear programming problem (LPP); Graphical method for its solution; Standard form of LPP; Basic feasible solutions; Simplex Method for solving LPP. [9]						
Text Books, and/or reference material	Text Books: 1. An Elementary Course in Partial Differential Equations- T. Amarnath 2. Numerical Methods for scientific & Engineering Computation- M.K.Jain, S.R.K. Iyengar & R.K. Jain. 3. Foundations of Complex Analysis- S. Ponnuswami 4. Operations Research Principles and Practices- Ravindran, Phillips, Solberg 5. Advanced Engineering Mathematics- E. Kreyszig Reference Books: 1. Complex Analysis- L. V. Ahlfors 2. Elements of partial differential equations- I. N. Sneddon 3. Operations Research- H. A. Taha						

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MMC301	Introduction to Metallurgical and Materials	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
PHC01: Engineering Physics		CT+MT+EA					
Course Outcomes	I. To correlate atomic structure, periodic table, elemental properties, chemical bonding and material properties. II. To interpret crystal structure in view of translational periodicity and symmetry and as well as to introspect different kinds of defects in a crystal. III. To study the binary phase diagrams and a brief introduction to different engineering materials.						
Topics Covered	Atomic Structure and chemical Bonding: Quantum mechanical approach, Schrödinger wave equation, wavefunction, Quantum state, Periodic Table, electronic configuration and atomic structure. Bonding in solids, different types of bonds, Bond energy, effect of bonding on material properties. (10) Structure of Solids: The crystalline and the noncrystalline states – Metals and Alloys, Ceramics, semiconductors and polymers; Crystal structure – concept of lattice and crystal, Translational periodicity and symmetry, crystal systems, space lattice, representation of atomic position, lattice directions and lattice planes in cubic and hexagonal systems; atomic packing, voids in FCC, BCC and HCP crystals; crystal imperfections – point defect, line defect, surface defect and volume defect; equilibrium concentration of point defect. (12) Solidification of metals and alloys including Rapid Solidification Technology. (6) Phase diagrams: The phase rule, single component system. Binary phase diagrams with reference to a few important metallic systems. (6) Corrosion and oxidation of materials: The principles of corrosion; Protection against corrosion; Mechanism of oxidation; Oxidation resistant materials. (6) Introduction to Materials (Classification, Selection and Applications): Metals and Alloys, Intermetallics, Polymers, Glasses and Ceramics, Composite Materials, nano-crystalline materials. (10)						
Text Books, and/or reference material	Text Books: 1. Materials Science and Engineering: A first course – V. Raghavan, PHI Learning Pvt.Ltd., 2004. 2. Introduction to Metallurgy-A.H.Cottrell, Arnold, 1968. 3. Structure and Properties of Engineering Materials – R. M. Brick, A. W. Pense and R. B. Gordon. 4. The Structure and properties of Materials (I – IV) – R.M. Rose, L. A. Shepard and J. Wulff. 5. Introduction to solids-L.V.Azaroff, Tata McGraw-Hill, 1990. 6. Crystallography applied to solid state physics-A. R.Verma, O.N. Srivastava, Wiley, 1982.						

Mapping of CO (Course Outcome) and PO (Programme Outcome)

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MMC302	Metallurgical Thermodynamics and Kinetics	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
CYC01: Engineering Chemistry		CT+MT+EA					
Course Outcomes	CO1: Acquire the knowledge of thermodynamic laws to apply in metallurgical processes and materials. CO2: Identify the feasibility of metallurgical processes and reactions. CO3: Learn to analyze the kinetics of metallurgical processes and design the alloy systems by applying the concepts of thermodynamics.						
Topics Covered	Definitions, behaviour of gasses, vapours and gaseous moisture, materials balances in metallurgical processes. (4) First law of thermodynamics, Heat and work changes in reversible processes, Concept of Heat Capacity, Enthalpy energy balance in metallurgical processes, Reversible adiabatic process. (4) The Carnot cycle, concept of entropy, Entropy changes in reversible, irreversible processes and universe, Clausius inequality, Combined statement of first and second law, Entropy change for irreversible chemical reactions. (6) Helmholtz free energy and the Gibbs free energy, Free-energy equations in differential form, Thermodynamic potentials, The Maxwell relations, Criteria of equilibrium and spontaneity (or irreversibility), The Gibbs-Helmholtz equation, Third law of thermodynamics. (6) Concept of chemical potential, Chemical potential of oxygen, partial molar quantities, Integral molar quantities, Raoult's law and Henry's law, Alternative standard states, Sievert's law, Mixing function, Excess function, Regular solution, concept of interaction parameter. (13) Fugacity, Activity, standard state, equilibrium constant, Van't Hoff reaction isotherm, LeChatelier's Principle, Free-energy Charts and Ellingham diagrams, Gas-solid reaction, Van't Hoff equation, Sigma Function (Σ), Clausius-Clapeyron Equation, Trouton's Rule. (8) Types of electrochemical cells, Laws of electrolysis, determination of thermodynamics quantities using reversible electrochemical cells, Electrochemical cell based on solid electrolytes. (3) Types of reaction, Order of reaction, Determination of order and rate constant of a reaction, Reactions involve in solids – nucleation and growth kinetics (J-M equation), Gas-solid reaction kinetics. (6)						
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Introduction to Metallurgical Thermodynamics – David R Gaskell. 2. Metallurgical 2. Textbook of Materials and Metallurgical Thermodynamics –A. Ghosh 3. Thermochemistry – O. Kubaschewski, E LL Evans and C B Alcock <u>Suggested Reference Books:</u> 1. Stoichiometry and thermodynamics of Metallurgical processes - Y K Rao. 2. Problems in Metallurgical Thermodynamics and Kinetics – G S Upadhyay and R K Dube. 3. Chemical Kinetics - Keith Laidler.

Department of Metallurgical & Materials Engineering							
Course code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MMC304	Computational Materials Science	PEL	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Nil		CT+MT+EA					
Course outcomes	CO1: To understand the different methodologies of materials modelling and simulation CO2: To explore materials structure, properties, and behaviour under externally imposed variables CO3: To design materials for different applications						
Topics covered	1. Introduction: Overview of different modeling approaches; aims and scopes; concept of multiscale modeling and simulation; significance of materials modeling and simulation. [4 h] 2. Atomistic Modeling and Simulation: Classical Newtonian mechanics; overview of molecular dynamics (MD) simulation and its field of applicability; statistical mechanics principles; N-body problem; ensembles and ergodicity; interatomic potentials; initialization and thermal equilibration; boundary conditions; force calculation; potential energy cut-off and truncation schemes; integration algorithms with their relative merits and demerits; thermostating; barostating; evaluation of different physical, mechanical, structural, thermodynamic, and transport properties of materials using MD simulation technique; illustration of equilibrium MD and non-equilibrium MD techniques; MD exercises with LAMMPS; overview of probability theory based Monte Carlo (MC) simulation and its field of applicability; Metropolis algorithm; Kawasaki dynamics; kinetic Monte Carlo method; simulation of phase evolution and phase transformation using Monte Carlo method. [16 h] 3. Mesoscale Stochastic Simulation: Overview; Brownian dynamics; modeling diffusion of a particle in a fluid medium. [4 h] 4. Continuum Modeling and Simulation: Overview; Outline of continuum modeling using FEM technique; Discretization; Element types; Interpolation functions; Continuity; Finding the element properties using direct approach and Galerkin method; Assembling the element properties to obtain the system equations; Imposing the boundary conditions; solving the system equations; Convergence analysis; illustration of solving structural mechanics and heat transfer problems using FEM simulation. [20 h] 5. Multiscale Approaches: Overview and examples; bridging the scale gaps between different simulation levels; simultaneous integration of models; sequential integration of models (hierarchical approach); illustration of coupled MD-FEM model and coupled MD-stochastic model. [4 h]

			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MMC401	Transport Phenomena in Metallurgical Processes	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT), and end assessment (EA))					
XEC-01: Engineering Mechanics		CT+MT+EA					
Course Outcomes	CO1: Understand the fundamentals of fluid flow and momentum conservation CO2: Understand different modes of heat transfer and mass transfer. CO3: Ability to solve industry oriented problems involving heat, mass, and momentum transfer.						
Topics Covered	Introduction, Continuum hypothesis, fluid statics. (3) Fluid flow: Newton's law of viscosity, Non-newtonian fluids. (5) Continuity equation, Navier-Stokes equations, Laminar flow. (6) Turbulence and experimental correlations, the concept of friction factor. (3) Flow through porous media, fluidized bed, Concept of Hydraulic Radius, Ergun equation. EX: centrifugal casting, bottom gating system. (6) Modes of heat transfer, Industrial examples, Fundamental law and Subsidiary law (3) Concept of thermal resistance and overall heat transfer coefficient, Differential equation of heat conduction. (3) Conduction-convection system, Moving fins, Application in estimating heat losses from furnaces, Two dimensional steady state heat conduction. (3) Lumped heat capacity analysis, Time constant and response time of temperature measuring instruments, Heisler's charts, application in heat treatment and solidification. (4) Concept of the boundary layer, correlation for external flow and internal flow, continuous casting cooling system, heat losses from hot surfaces. (3) View factor between surfaces, radiation heat transfer in furnace enclosures, reactors in used in materials processing, radiation shields Case studies involving multimode heat transfer in materials processing. (5) Fick's Laws of diffusion, advection due to diffusion, case of evaporation of liquid through a column, Analogy between mass and heat transfer, mass transfer coefficient, application in gas-solid reactions such as oxidation, reduction etc. (7)						
Text Books, and/or reference material	<u>Suggested Text Books:</u> 4. Rate Phenomena In process metallurgy – J. Szekeley and N.J. Themelis 5. Transport Phenomena in Metallurgy – G.H. Geiger and D.R.Poirier <u>Suggested Reference Books:</u> 4. Heat Transfer– J.P. Holman 5. Heat and Mass Transfer – F. P. Incropera and D. P. DeWitt 6. Transport Phenomena – R. B. Bird, W. E. Stewart and E. N. Lightfoot

MMC402	Phase Transformation and Phase Equilibria	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC301: Introduction to Metallurgy and Materials		CT+MT+EA					
Course Outcomes	I. To understand and interpret Free energy-composition diagram and origin of phase diagrams. II. A detailed understanding on diffusion in solid and solid state phase transformations in steel. III. To understand the fundamentals of solidification in order to apply it in Foundry industry.						
Topics Covered	Introduction: Basic concepts about Stability of Phases and equilibrium; Types of Phase Transformations, Order of transformations. (5 hrs) Phase Equilibria: Thermodynamics of phase changes, phase diagrams and equilibria in relation to Free energy-composition diagrams; Interpretation of phase diagrams, determination and calculations; Solid-liquid Miscibility gap; invariant reaction. Principles of ternary phase diagram, Examples of a few metallic and ceramic phase diagrams. (6 hrs) Diffusion: Phenomenological equation of diffusion, Chemical potential gradient, Fick's first law of diffusion, diffusion coefficient (diffusivity), representation of diffusion flux in terms of chemical potential gradient; Nernst-Einstein Equation, Diffusion in ideal solution and in solutions with positive and negative deviation; Uphill diffusion, determination of diffusion coefficient (diffusivity) for ideal binary solid solution in terms of jump frequency and jump distance, atomic mechanism of diffusion, Expression of diffusion coefficient (diffusivity) for self diffusion in pure metal or diffusion in substitutional solid solution through vacancy mechanism and in interstitial solid solution; Steady state diffusion and transient diffusion; Fick's second law of diffusion; determination of self diffusion coefficient by radioactive method; solution of Fick's second law: analysis of carburizing and decarburizing processes; solution of Fick's second law for variable diffusivity; Boltzmann-Matano analysis, Matano interface, determination of diffusivity as a function of concentration; Diffusion in substitutional solid solution: Kirkendall effect, Darken's analysis. (10 hrs) Liquid-Solid Phase Transformation: Principles of Solidification in metals and alloys: thermodynamics involved, eutectic and peritectic Solidification, Homogeneous and heterogeneous nucleation, Mechanisms of growth. Rapid Solidification Processing. (8 hrs) Solid State Phase Transformations: Nucleation and growth Kinetics, homogeneous and heterogeneous transformation, Precipitation: Coherency, age hardening, particle Coarsening; Ostwald ripening, Order-disorder transformation, spinodal decomposition, massive transformations. (8 hrs) Solid State Phase Transformations in steel: Reconstructive and displacive transformations; Pearlitic transformation: mechanism and kinetics: Johnson-Mehl equation, morphology of pearlite; Bainitic transformation: mechanism and kinetics; morphology of upper bainite and lower bainite; Martensitic transformation: Mechanism-diffusionless displacive nature; morphology of high carbon and low carbon martensite. (8 hrs)						
Text Books, and/or reference material	Text Books: 1. Phase transformations in metals and alloys-D.A.Potter and K.E.Easterling, CRC Press, 1992. 2. PHC01: Engineering Physics, CYC01: Engineering Chemistry MMC302: Metallurgical Thermodynamics and Kinetics		CT+MT+EA					
Developer		Dr Barna Roy					
Course Outcomes	CO1: Material properties and free electron theory CO2: Improvement of free electron theory through quantum mechanics CO3: Combining crystal structure with free electron theory and quantum mechanics; Using the model to describe the specific materials properties.						
Topics Covered	1. Introduction- Electron Theory: Free electron theory: Classical electron theory, quantum free electron theory; Properties of materials; Thermal expansion; Thermal conductivity; AC and DC conductivity (Electrical conductivity); Wiedemann-Franz Law; Ideal and free electron gas; Large system; Maxwell-Boltzmann statistics. [12 h] 2. Particles- Classical and Quantum; History of quantum mechanics; Drude Sommerfeld model; Fermi Dirac statistics; Anisotropy, periodic potential and density of states; Fermi energy, surface and temperature; Bose-Einstein statistics. [12 h] 3. Reciprocal space; Diffraction; Wigner Seitz cells; Brillouin zones; Critical wave velocity; Band Theory/Zone theory of solids. [12 h] 4. Semiconductor; Magnetic materials; Optoelectronic materials; Superconductivity; Nano-materials; Summary. [12 h]						
Text Books, and/or reference material	Text Books: 1. Introduction to electronic properties of materials by David Jiles - (Chapman and Hall, 1994) 2. Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MMC-302: Metallurgical Thermodynamics and Kinetics		CT+EA					
Course Outcomes	- To understand different Manufacturing Processes - Ability to design casting techniques and the basics of Welding Metallurgy - To have ability to have a practical concept of manufacturing objects.						
Topics Covered	Introduction to casting as a shaping technique; Characteristic and effects of sand, binders and additives; Different types of Moulding and Machine moulding; Special casting techniques (12) Design of Gating and Riser of casting; Solidification (5) Melting furnace- cupola, rotary furnace, induction furnace; Defects in casting and their remedy; Metallurgy of cast iron, Aluminium and copper based alloy. (12) Joining: Physics of welding, Process of different welding, common welding processes of shielded metal arc welding, gas metal arc welding, gas tungsten arc welding and submerged arc welding; Welding metallurgy, problems associated with welding of steels and aluminium alloys, defects in welded joints. (14) Historical perspective of Powder Metallurgy; Reasons for using Powder Metallurgy; The Future of Powder Metallurgy; Powder Fabrication: Different powder fabrication techniques; Powder Characterization: Experimental methods for measuring particle size, shape, distribution, surface area; Significance of true, apparent and tap densities of powders; Flow rate of powders and its significance; compressibility and green strength; Powder Handling: Powder Packing; Mixing and Blending; Mixing with Binders and Lubricants; Powder Lubrication; Compaction: Phenomenology of Powder Compaction; Conventional Compaction; Fundamentals of Compaction; Influence of Material and Powder Characteristics; Sintering: Sintering fundamentals; Full Density Processing. (14)

MMS452	Phase Transformation and Phase Equilibria Laboratory	PCR	0	0	6	6	1.5
Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
Nil		CT+EA					
Course Outcomes	I. To introspect phase equilibria and phase transformation in steels of varying carbon content through investigation of microstructure in correlation to iron-carbon diagram. II. To investigate microstructures of different cast irons in correlation to associated phase equilibria and phase transformation. III. To understand the application of lever rule and phase rule.						
Topics Covered	(i) Experiment 1: Investigation of the microstructures of pure metals (Fe, Cu, Zn, Al) (ii) Investigation of the microstructures of carbon steels containing ~0.2% C, ~0.4% C, ~0.6% C, ~0.8% C, ~1.0% C, in correlation with phase equilibria in Fe-C system (Iron-Carbon phase diagram). Experiment 2 (Part I): Microstructure of 0.2 wt.% C steel (4 hours) Experiment 3 (Part II): Microstructure of 0.4 wt.% C steel (4 hours) Experiment 4 (Part III): Microstructure of 0.6 wt.% C steel (4 hours) Experiment 5 (Part IV): Microstructure of 0.8 wt.% C steel (4 hours) Experiment 6 (Part V): Microstructure of 1.0 wt.% C steel (4 hours) (iii) With regard to Fe-C-Si phase equilibria, investigation of the microstructure of different types of cast irons, viz. White Cast iron, Grey Cast iron, Spheroidal (Nodular) graphite cast iron and Malleable cast iron. Experiment 8 (Part I): Microstructure of White Cast iron (4 hours) Experiment 9 (Part II): Microstructure of Grey Cast iron (4 hours) Experiment 10 (Part III): Microstructure of Spheroidal (Nodular) graphite cast iron (4 hours) Experiment 11 (Part IV): Microstructure of Malleable cast iron (4 hours) (iv) Experiment 12: Study of the precipitation hardening process in Duralumin (Al-4.5% Cu alloy) (3 hours) (v) Experiment 13: Application of Lever Rule. (3 hours) (vi) Experiment 14: Application of Phase Rule to different types of binary phase diagrams. (3 hours)

Pre-requisites		Course Assessment methods (Continuous (CT) and end assessment (EA))					
MMC-301: Introduction to Metallurgy and Materials		CT+EA					
Course Outcomes	I. Learn fundamentals and operational aspects of X-ray diffraction, electron microscopy and other characterization techniques. II. In-hand identification of the crystal structure and indexing of diffraction patterns of different phases to meet contemporary needs. III. Data analysis and report writing of various experiments.						
Topics Covered	List of Experiments 1. Indexing the X-ray diffraction (XRD) pattern of different phases. (a). Indexing the XRD pattern of BCC structure. (b) Indexing the XRD pattern of FCC structure. (c) Indexing the XRD pattern of HCP structure. (d) Indexing the XRD pattern containing a mixture of BCC and FCC phase. 2. Precise lattice parameter determination. 3. X-ray diffraction of powders to show the effect of powder size on peak broadening. 4. Microstructural and Fractographic study by SEM. 5. Indexing of SADP 6. Precipitation kinetics study of age hardenable Al alloy

FIFTH SEMESTER

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MMC501	Modelling and Simulation of Metallurgical Processes	PEL	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC401: Transport Phenomena in Metallurgical Processes		CT+MT+EA					
Course Outcomes	CO1: To Learn fundamentals of Modelling. CO2: To Identify the nature of engineering problems and solving by numerical methods CO3: To Build physical and mathematical models to describe the complex physical phenomena pertaining to the real world.						
Topics Covered	Review of Fluid Flow, heat transfer and Mass Transfer, Type of Models, Advantages of Mathematical Model, Types of Mathematical model, Method of prediction, Modeling vs. experimentation, nature of coordinates. (4) Classification of partial differential equations, Elliptic, Parabolic, and Hyperbolic Equations, Initial and Boundary Conditions, Initial Value and Boundary Value Problems, Substantial derivative, Concept of grid points, cell and mesh, methods of discretization, Types of cells and mesh, Basic approach in solving a problem. (4) Central, Forward, and Backward difference expressions for a uniform grid, Central difference expression for a nonuniform grid, Numerical errors, Accuracy of solution: optimum step size, grid Independence test. (4) Application heat of conduction and diffusion, one dimensional steady state problem, Method of solution: Gaussian elimination, Tri-diagonal matrix algorithm (TDMA), Gauss-Seidel iterative method, the concept of Relaxation factor, optimization of Relaxation factor, Two-dimensional steady state problem, Block iterative methods, There-dimensional steady state problem, Transient one dimensional problem, Euler method, Crank-Nicolson method, Pure Implicit method, Accuracy of Euler, Crank-Nicolson and Pure Implicit method, stability, Von Neumann stability analysis, Two-dimensional transient, Alternative Direction Implicit method, Problem in cylindrical and spherical geometry, Non-axisymmetric problem, Transient conduction in composite media, Treatment of nonlinearity in conduction and diffusion, irregular geometry, Diffusive- convective system with Flow, Met lab codes. (24) Phase Change Problems: Mathematical Formulation of Phase Change Problems, Variable Time Step Approach for Single-Phase solidification, Variable Time Step Approach for two-Phase solidification, Enthalpy Method. (5) Physical modeling: Introduction, dimensional analysis, similarity criteria, modeling of steel making processes. (7) Case studies. (4)						
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Finite difference Method in heat transfer- M. N. Ozisik 2. Computational Fluid dynamics and heat transfer – P.S. Ghoshdastidar 3. Modeling of Steelmaking Processes – D. Mazumdar and James W. Evans <u>Suggested Reference Books:</u> 1. Getting Started with MATLAB 7: A Quick Introduction for Scientists and Engineers– R. Pratap. 2. Numerical Methods for Engineers - D. Vaughan Griffiths and I.M. Smith.

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MMC 502	Engineering Materials and Heat Treatment	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT), and end assessment (EA))					
PHC 01 Engineering Physics MMC 402 Phase Transformation and Phase Equilibria		CT+MT+EA					
Course Outcomes	• CO1: To understand the basic principle behind the heat treatment of metals and alloys in terms of solid-state phase transformation • CO2: To acquire basic knowledge to change the physical and mechanical properties after different heat treatments of materials • CO3: To learn different heat treatment processes that have some commercial applications						
Topics Covered	Objectives and Principles of Heat Treatment on Engineering Materials. Introduction to Various Classes of Engineering Materials: Factors Affecting Selection of Engineering Materials- Service requirements, fabrication requirements, and economic requirements. Study of the industrially important of steels, their mechanical and thermal treatment and uses: Plain carbon steels. Conventional low carbon steels, Mild steels, dual-phase steels, and alloy steels. [6 hours] Phase Transformation on heating, Forming of austenite, Kinetics of formation of austenite, Nucleation sites in eutectoid steels, Austenitic grain size, Grain growth, Importance of grain size [4 hours] Annealing – Stress relieving, recrystallization annealing, full annealing, partial annealing, diffusion annealing, Spheroidizing, Normalizing, Hardening, and Tempering, [4 hours] Method of plotting, Types of TTT diagram, Critical cooling rate, Effect of alloying elements on TTT diagram, Applications, Continuous cooling transformation diagram, Pearlitic transformation: Mechanism, Kinetics, Effect of alloying elements on transformation, Interlamellar spacing, Bainitic transformation: Mechanism, Characteristics, Bainitic structure. Diffusion less transformation: Mechanism, Kinetics, Ms - Mf temperatures, Athermal& isothermal martensites, Effect of applied stress on transformation, Habit planes, Bain distortion model / crystallographic theory of martensitic transformation, Retained austenite, Martensitic transformation in non-ferrous systems. [8 hours] Hardenability: Significance, Grossman method, Critical and ideal critical diameter, Jominy End Quench method, Effect of grain size and composition, Residual stresses, Quench cracking. Factors affecting hardenability, Quenchants: Characteristics of quenchants, Different quenching media, Mechanism of quenching. [4 hours] Principles involved in surface hardening, Induction and flame hardening methods and application of selective hardening, Laser hardening, Case carburizing (solid, liquid, and gaseous), Cyaniding, Carbonitriding, Nitriding, Plasma nitriding, etc., [6 hours] Special heat treatment processes: Thermomechanical treatment, Austempering, Martempering, Ausforming, Patenting, Sub-zero treatment etc., Thermo-Mechanical treatments. [4 hours] Design for heat treatment of alloy steels, tool steels, dies steels, stainless steels (concerning carbide precipitation and sigma phase formation), cast irons and non-ferrous alloys. – specific examples, Heat treatment of aluminum alloys, titanium alloys, and copper alloys, Concept of age-hardening. Heat treatment furnaces- their temperature and atmosphere control, Defects in heat-treated parts, Causes for the defects in heat-treated parts, and remedies. [8 hours]						
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. An Introduction to Physical Metallurgy – S. N. Avner, McGraw-Hill Book Company. 2. ASM Metals Hand Book – Vol. IX, ASM International Materials Society. 3. Principles of the Heat Treatment of Plain Carbon and Low Alloy Steels, Charlie R. Brooks, ASM international, 1996. 4. Structure and properties of materials – J Wulff and other. Vols. I–IV. Wiley Eastern pub Ltd. New Delhi <u>Suggested Reference Books:</u> 5. Principles of Heat Treatment – R. C. Sharma, New Age International (P) Ltd. 6. Heat Treatment of Metals – V. Singh (Standard Publication Distributors) New Delhi

Developer		Dr. Madan Mohan Ghosh and Dr. Manab Mallik					
Course outcome s	CO1: To understand the fundamental concepts of plastic deformation of materials CO2: To know about various lattice defects and the roles played by these defects in plastic deformation and strengthening of materials CO3: To correlate the fundamentals ideas of deformation and strengthening with the observations in materials testing and mechanical processing						
Topics covered	1) Introduction to plastic deformation and evaluation of the mechanical properties: Concept of stresses and strains, engineering stress and strain, true stress and strain, different types of loading for bulk deformation, slow strain rate deformation, evaluation of mechanical properties of materials by tensile and compression testing, stress-strain response of different materials - elastic region, yield point, plastic deformation, necking and fracture, effects of strain rate and temperature on stress-strain response of materials, superplastic behavior, evaluation of shear stress - shear strain curve from torsion testing, deformation and fracture of materials under impact loading, ductile to brittle transition, elementary concept of fatigue deformation and fracture, elementary concept of creep deformation and fracture, localized deformation at surface and indentation hardness, different methods of hardness measurement. [24 h] 2) Mechanisms of plastic deformation and strengthening: Plastic deformation by slip, slip system, slip line, slip band, critical resolved shear stress (CRSS) of a material, theoretical shear strength, defects/imperfections in crystals, classification of defects, thermodynamics of defects, geometry of dislocations, Burgers vector, Burgers circuit, various types of dislocations, dislocation glide, Peierls stress, partial dislocations and stacking faults, cross slip, dislocation climb, intersection of dislocations, jogs and kinks in dislocation, force on a dislocation, line tension of a dislocation, dislocation generation - Frank-Read and grain boundary sources, stress and strain field around dislocations, strain energy of a dislocation, dislocation interactions, forces between dislocations, polygonization, dislocation movement and strain rate, deformation behavior of single crystals - flow curve and strain hardening/work hardening mechanisms of single crystals, deformation behavior of polycrystalline aggregates, plastic deformation by twinning, interaction between dislocations and interstitial atoms - yield point phenomena and strain ageing, dislocation phenomena involved in fatigue and fracture, Hall-Petch and other hardening mechanisms of polycrystalline aggregates, grain size effect, Hall-Petch breakdown, strengthening due to fine particles, fiber strengthening, solid solution strengthening, strengthening due to point defects, plastic deformation of two-phase aggregates, cold-worked structure of polycrystalline materials, annealing of cold-worked polycrystalline materials, Bauschinger effect, preferred orientation. [24 h]						
Text books, and/or reference materials	- Mechanical Metallurgy, SI Metric Edition, <i>George E. Dieter</i>, McGraw-Hill Book Company (UK) Limited, 1988 - Mechanical Behavior of Materials, <i>William F. Hosford</i>, Cambridge University Press, New York, 2005 - Mechanical Behavior of Materials, Second Edition, <i>Marc A. Meyers and Krishan K. Chawla</i>, Cambridge University Press, New York, 2009 - Mechanical Behavior of Materials, Second Edition, <i>Thomas H. Courtney</i>, Waveland Press, Inc., Illinois, 2005 - The Plastic Deformation of Metals, <i>R.W.K. Honeycombe</i>, Edward Arnold, 1968 - Dislocations and Plastic Flow in Crystals, <i>A.H. Cottrell</i>, Clarendon Press, 1965

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC-301: Metallurgical Thermodynamics and Kinetics		CT+MT+EA					
Course Outcomes	• CO1: Understand fundamentals of physico-chemical principles of blast furnace iron making. • CO2: Understand the design & operational aspects of blast furnace technology. • CO3: Understand the development in alternative iron making processes.						
Topics Covered	History of Iron Making Pig Iron production in India. (2) Raw Materials – Valuation and preparation of raw materials (6) Methods of Agglomeration: sintering, pelletizing. (6) Testing of raw materials. (2) Design and construction of the blast furnace. (2) Theory and practice of pig iron making – charge distribution, burden calculation. mass balance (4) Physico-chemical aspects of blast furnace reactions, Blast furnace slags. Operating line (6) Developments in blast furnace practice. Blast furnace irregularities. (4) Blast furnace accessories: blowers, stoves, gas cleaning plants. (4) Alternative methods of Iron making. (4) Manufacture of ferro alloys. (2) Environmental considerations in iron making. (1)						
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. A Text Book on Modern Iron Making - R. H. Tupkary (new edition) 2. Principles of Iron Making - A. K. Biswas. 3. Ghosh, A. and Chatterjee, A., Principles and Practices in Iron and Steel making, Prentice Hall of India, New Delhi, 2008 <u>Suggested Reference Books:</u> 1. Manufacture of Iron & Steel. Vol. I.- G. B. Bashforth.

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MME511	Energy Materials	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
NIL		CT+MT+EA					
Course Outcomes	- CO1: Basics of different types of alternative energy sources and technologies. - CO2: Fundamentals of different types of materials utilized for different energy technologies. - CO2: To train the students to select and design specific materials for specific energy technology.						
Topics Covered	Introduction: General introduction to current earth climate and it's problems. Need for search of alternative energy sources. [2] Thermoelectric materials: Thermoelectric materials and devices. [4] Photovoltaic materials: Inorganic and organic photovoltaic materials. [8] Materials for hydrogen energy: Hydrogen production, transportation, storage, and use; hydrogen storage – compressed storage, liquid state storage, solid state storage, metal hydrides, complex and chemical hydrides. [10] Materials for electrochemical energy storage: Electrochemical Reactions; Electrochemical Energy Storage Systems, Batteries and Supercapacitors [6] Fuel cells: Introduction, different types, SOFC, Bio fuel cells [5] Other energy technologies and materials: Nuclear, geothermal, hydro and wind [5]						
Text Books, and/or reference material	Text Books: 1. Materials for Sustainable Energy Applications: Conversion, Storage, Transmission, and Consumption, David Munoz-Rojas and Xavier Moya (Editors), CRC Press, 2016. Reference Books: 1. Fundamental studies connected with electrochemical energy storage; by E.Buck; Washington, DC: NASA (1975) 2. Electrochemical Supercapacitors; by B. E. Conway; Kluwer Academic/Plenum; New York (1999) 3. Handbook of Hydrogen Storage - New Materials for Future Energy Storage - by M Hirscher, 2010, Wiley-VCH 4. Fuel cells: from fundamentals to applications; by Supramaniam Srinivasan; Springer Science + Business Media; New York (2006)

Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MME512	Alternative Routes of Iron Making	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC-302:Metallurgical Thermodynamics and Kinetics MMC-404: Iron Making,		CT+MT+EA					
Course Outcomes	- CO1: Apply the thermodynamic knowledge to understand the fundamentals of direct reduction and smelting reduction of iron oxides - CO2: Acquire the knowledge of reaction mechanism and the process technology of alternative routes of iron making - CO3: Learn to analyze raw materials requirements for different processes						
Topics Covered	Ironmaking and environment 4R principles, Steel facts, Blast furnace iron making technology and its limitation, Objectives of alternative routes of ironmaking [6] Classifications of alternative routes, direct reduction and smelting reduction technology, classifications of DR processes, Characterization of DRI - % of Metallization and Degree of Reduction, Fundamentals of reduction of iron oxides, Discussion of Fe-C-O system, Equilibrium gas composition calculation with temperature for different oxides of iron, Raw materials characterization techniques – Chemical, physical and physicochemical characterization [12] Gas based direct reduction processes – Midrex and HyL, principles and operation [4] Coal based direct reduction process, Rotary kiln – principles and operation, process analysis, Accretion formation – mechanism, factors affecting it. Comparative analysis of SL/RN, CODIR, ACCAR, TDR, JSW, DRC. Rotary Hearth Furnace - Principles and features, various RHF based processes – INMETCO, FASTMET, COMET, SIDCOMET. [8]						

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

	Fluidized bed reactor – FINMET and FINNEX process. Application of DRI, DRI statistics [2] Introduction to smelting reduction, Fundamentals of Smelting reduction, Factors affecting smelting – Postcombustion ratio, Prereduction degree, Coal chemistry, Classifications of smelting reduction, Corex process - principles and operation, raw materials requirement, Environmental aspect [4] Modern technologies: Itmk3 process, Hisarna process - Fundamentals and Features of the process and nugget, Environmental aspects. Basic mechanism, Product quality, Advantages [4] Environmentally friendly Breakthrough technologies, Iron production by electrolysis, Hydrogen production technologies, Hydrogen based process technologies - HPR process and its fundamentals, [4] Case studies. [6]
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Alternative routes of iron making, Arabinda Sarangi and Bidyapati Sarangi, PHI learning 2. Beyond the Blast Furnace, Amit Chatterjee, CRC Press 3. Alternative Methods of Ironmaking, S. K. Dutta, S CHAND & Company Limited 4. Sponge Iron Production by Direct Reduction of Iron Oxide, Amit Chatterjee, PHI learning 5. Metallics for Steelmaking Production and Use, Amit Chatterjee and Banshidhar Pandey 6. Hot Metal Production by Smelting Reduction of Iron Oxide, Amit Chatterjee <u>Suggested Reference Books:</u> 1. B. F. Ironmaking Principles -A.K Biswas 2. Direct Reduced Iron – Stephanson&Smailer 3. Modern Iron Making – R. H. Tupkery 4. Physical Chemistry of Iron & Steel manufacture – C. Bodsworth.

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Course Outcomes	CO1: Learn science and technological aspects of the Powder Metallurgy Techniques. CO2: The contemporary need can be met by the ability to analyze the industrial processes. CO3: Solve problems of near net shape fabrication of powder metallurgy parts and explore powder-processing-property relationship
Topics Covered	Introduction: Historical perspective of Powder Metallurgy; The Future of Powder Metallurgy. [4 hours] Fabrication of Powders: Basics methods, Mechanical fabrication techniques; Electrolytic fabrication techniques, Chemical fabrication techniques, Atomization techniques. Production of Ferrous powders [8 hours] Powder Characterization: Experimental methods for measuring particle size, shape, distribution, surface area; Significance of true, apparent and tap densities of powders; Flow rate; compressibility and green strength; Characteristics of common ferrous powders [6 hours] Mixing and Blending: Dry Mixing, wet mixing; Powder Lubrication [4 hours] Compaction: Injection Molding; Fundamentals of Compaction; Influence of Material and Powder Characteristics on compaction. [6 hours] Sintering Behavior: Sintering fundamentals; Sintering Theory; Mixed Powder Sintering; Liquid Phase Sintering; Sintering Atmosphere, Sintering Furnaces; Full Density Processing. [8 hours] Finishing Operations: Machining; Heat Treatments; Surface Treatments [4 hours] Applications: Competitive Processes; Examples of Powder Metallurgy Applications and Properties. [4 hours]
Text Books, and/or reference material	TEXT BOOKS: 1. Powder Metallurgy – A Upadhyaya and G S Upadhyaya. 2. Powder Metallurgy Science – R. M. German, 2nd Edition, MPIF, 1994 REFERENCE BOOKS: 1. Powder metallurgy: principles and applications, Fritz V. Lenel, Metal Powder Industries Federation, 1980 2. Powder Metallurgy Technology, Cambridge International Science Publishing, 2002

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Department of Metallurgical and Materials Engineering							
Course code	Title of the course	Program Core (PCR) / Elective (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MMC601	Mechanical Working of Materials	PCR	3	1	0	4	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC503: Mechanical Behaviour of Materials		CT+MT+EA					
Developer		Dr. Madan Mohan Ghosh and Dr. Manab Mallik					
Course Outcomes	CO1: To understand the mechanics of metal forming processes CO2: To know about tools and techniques of different metal forming processes CO3: To understand the parameters which are needed to be controlled for increasing quality and productivity of different metal forming operations						
Topics covered	1) Introduction: Overview, objectives of mechanical working or plastic deformation of materials, classification of plastic deformation processes, mechanics of mechanical working of materials, influence of friction and lubrication in mechanical working processes, workability. [3 h] 2) Theory of Elasticity: Description of stress and strain at a point within a loaded body, stress tensor, principal stresses under 3D state of stress, concept of Mohr's circle construction and its implications under 3D state of stress, hydrostatic and deviator components of stress, elastic stress - strain relations, strain energy. [8 h] 3) Theory of Plasticity: Yielding criteria for ductile metals, yield locus, yield surface, plastic stress - strain relations, plane strain condition of plastic deformation, stress analysis under plane strain condition of plastic deformation using slip line - field theory. [6 h] 4) Rolling: Classification of rolling processes, forces and geometrical relationships in rolling, angle of bite, neutral point, theories of cold rolling and hot rolling, calculation of rolling load, torque and horse power, maximum allowable back tension in cold rolling, variables controlling rolling process, common defects in rolled products and their remedies. [10 h] 5) Forging: Classification of forging processes, open-die forging, closed-die forging, stress distribution in open-die forging, calculation of forging load, common forging defects. [8 h] 6) Extrusion: Classification of extrusion processes, analysis of extrusion process, hot extrusion, cold extrusion, deformation, lubrication and defects in extrusion processes, hydrostatic extrusion, extrusion for producing tubes. [3 h] 7) Drawing: Different types of drawing processes, analysis of wire drawing and tube drawing, limit of drawability, residual stresses in drawn products. [3 h] 8) Sheet - Metal Forming: Various sheet-metal forming processes, stretch forming, deep drawing, limiting draw ratio, forming limit criteria, defects in sheet-formed products. [7 h]

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MME 610	Advanced Engineering Materials	PCL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC 302 Introduction to Metallurgy and Materials MMC 502: Engineering Materials and Heat Treatment		CT+MT+EA					
Course Outcomes	CO1: To learn the basic fundamentals of different advanced engineering materials CO2: To understand the microstructure - properties correlation for various advanced engineering materials CO3: To learn the latest developments in materials technology and application of new advanced materials						
Topics Covered	Fundamentals of atomic structure- chemical bonding, crystal structure. Introduction to Various Classes of advanced Engineering Materials: Selection of advanced Engineering Materials, Microstructure - Properties correlation in Advanced Engineering Materials, [4 hours] Development Strategy of advanced high strength steels (AHSS): Concept of Multiphase Sstructure, Classification of AHSS, Strengthening mechanism of AHSS steels, Processing, properties and application of DP steels, HSLA steels, TRIP, TWIP and Q&P Steels. [6 hours] Sstrengthening mechanism of Materials, Effect of alloying elements, Aluminium alloys, Al-Li alloy, Pprocessing of Al alloys. Rapid solidification process for alloys, Ti base alloys, Al base composites. [4 hours] High temperature materials: Materials available for high-temperature and low temperature applications, Structure, Processing, mechanical behaviour and oxidation resistance of Stainless Steels, Ni- and Co-Based Super alloys, Processing, Properties and Applications of Super alloys. Intermetallics - Aluminides and Silicides, Carbon-Carbon and Ceramic Composites. [6 hours] Shape memory and Superelastic alloys: shape memory effect, thermodynamic aspects and micromechanism of martensitic transformation, Stress induced martensitic, transformation and super-elasticity, Ni-Ti and Ni-Al based alloys and their applications. [6 hours] Nanomaterials, Smart materials, Metal foams, Nanofluids, Carbon nanotubes, Metal Hydride, Hybrid nanocomposites, Nanoporous materials, Nano coatings. Bulk Metallic Glass: Criteria for glass formation and stability, Examples and mechanical behavior [6 hours]						
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. An Introduction to Physical Metallurgy – S. N. Avner, McGraw-Hill Book Company. 2. Structure and properties of materials – J Wulff and other. Vols. I–IV. Wiley Eastern pub Ltd. New Delhi 3. Materials Science and Engineering An Introduction – William D. Callister, Jr., John Wiley & Sons, Inc., 2007 4. Introduction to Magnetic Materials – B. D. Cullity and C. D. GrahamMetallurgy for Engineers – E C Rollason 5. Physical Metallurgy – Vijendra Singh. <u>Suggested Reference Books:</u> 1. Physical Metallurgy of Engineering Materials by N. R. petty, Allen Unwin (1968) 2. Light Alloys: Metallurgy of the light Metals by I. J. Polmser-Edwaraedannord. 3. The Super alloys by C. T. Sims and W. C. Hegel –Wily-Interscience.

MME-611	Energy and environment in metallurgical industries	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC404: Iron Making MMC504: Steel Making		CT+MT+EA					
Course Outcomes	CO1: Understand the concept of utilization of energy and environmental degradation in metallurgical processes. CO2: Acquire knowledge of minimization of energy requirements and methods of controlling pollution in metallurgical processes. CO3: Application of knowledge to prevent energy loss and to minimize waste generation in metallurgical industries						
Topics Covered	UNIT I: Energy: (14 hrs) Energy resources: non-renewable and renewable, Indian energy resources. Use of energy in metal production, process fuel equivalent. Conservation of energy in metallurgical industries with examples of aluminium, iron & steel making. Hydrogen energy: characteristics, production, storage and utilization in metal industries. Biomass: types of biomass, wood char as reductant in iron making. UNIT II: (25 hrs) Environment: Sources and types of pollutants (wastes) from metal / minerals industries. Gaseous emissions: control of SPM, hazardous gases, viz. sulphur dioxide, fluorides, nitrogen oxides. Greenhouse gases: Greenhouse effect, global warming potential, Kyoto protocol, carbon trading. Emission and control from, iron & steelmaking and aluminium smelting. Liquid effluents: treatment of waste water, with examples from metal industries. Solid wastes: types, disposal and utilization of slime, red mud and spent pot lining, iron and steel slags. Impact of pollutants on human health, management of radioactive wastes,e-waste, noise pollution, thermal pollution.

MME612	Production of Ferroalloys	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC-302: Metallurgical Thermodynamics and Kinetics		CT+MT+EA					
Course Outcomes	- CO1: Apply thermodynamic knowledge to understand the fundamentals of Ferro alloys production and their use - CO2: Acquire the knowledge of reaction mechanism and the process technology of production of different ferroalloys - CO3: Learn to analyze the different design and operation aspects of submerged arc furnace						
Topics Covered	Introduction to ferroalloys, Classification, quality requirement and application of ferroalloys. Thermodynamic principles - Ellingham diagram, direct and indirect reduction, Equilibrium gas composition, smelting temperature, Energy requirement, Thermal decomposition, Alloy grade and impurities, carbide formation etc, Functions of carbonaceous materials, Types of carbonaceous materials and basis of choosing carbonaceous materials [8] Arc Furnace - principles, types – Direct, Indirect and submerged arc furnace, DC arc furnace and AC Arc furnace, Equipment and accessories of SAF – Transformer, Bus Bar, Flexi Cable, Electrode, Cooling water jacket, Furnace control system, tapping electrode; Soderberg electrode – raw materials, working principle, quality requirement, Prebaked graphite electrode – raw materials, calcination, crushing, Kneading, Moulding parameters, Baking, Impregnation, Secondary Baking, Graphitization – types of furnace used, Mechanical processing, Property check; Design of submerged arc furnace – Power, current and voltage calculation, Electrode diameter, Hearth dimension - bath volume, Furnace shape [10] Production of Ferromanganese - Resources and Reserves of Manganese ore, Thermodynamic fundamentals of manganese oxide reductions, High Carbon FeMn production in BF, High Carbon FeMn production in SAF, Discard slag practice, high slag practice, Production of silicomanganese, Medium and low carbon ferromanganese production [8] Production of ferrochrome - Raw materials, Resources and reserves, Thermodynamics of Reduction of chromium oxide, High carbon and low carbon ferrochrome production [6] Ferrosilicon production - Ores, Resources and reserves, Raw materials and its quality, fundamentals of SiO₂ reduction, Operational practice, Reaction mechanism, Origin and Control of impurities [6] Application of Ferroalloys – Deoxidation - Fe-O system, sources of oxygen in liquid steel, Various types of deoxidant used, Thermodynamic fundamentals of deoxidation, Deoxidation constant and its importance, Alloying - Mechanism of dissolution of ferroalloys in liquid steel, Addition methods. [6] Case studies. [6]						
Text Books, and/or reference material	<u>Suggested Text Books:</u> - Handbook of Ferroalloys Theory and Technology, M. Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC405: Manufacturing Processes		CT+MT+EA					
Course Outcomes	• CO1: Understand solidification theories to industrial processes • CO2: Predict microstructures as a function of process parameters. • CO3: Understand solidification of alloys in different industrial conditions						
Topics Covered	Properties of metals and alloys before and during solidification. Surface phenomena. (2) Basic terms: surface energy, surface tension, Wetting angle. Wetting speed. Classification and influence of wetting. (4) Rapid solidification processes (RSP). Classification of high cooling rates. Conventional and unconventional effects. (2) Under cooling and recalescence. Amorphous state. Glaze-ability. (1) Processing of alloys in the semi-solid state. Rheology. Newton's law of viscosity. Newtonian and non-Newtonian materials. (3) Distribution of non-Newtonian materials, physical models of materials and their rheograms. The apparent viscosity. Thixotropy.. Submersible rotational viscometry. (3) High-speed mixing. The intensity of the flow and its significance for the primary crystallization. The materials in the semi-solid state - SSM (Semi-Solid Metals). (2) Theories of solid solution morphology spheroidization. Types of alloys suitable for SSM. Case studies of selected castings. (4) Pressure solidification processes (PSP). Effect of pressure on the primary crystallization, change the thermo-physical properties, cooling rate and the force induced solidification flow. (3) Alloys used in PSP. (3) Practical use of the rheological behavior of the alloys in the solidification processes and its importance. Case studies of selected castings. (4)

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Department of Metallurgical & Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MME 617	Experimental Techniques in Metallurgy	PEL	3	0	0	3	3
PHC 01: Engineering Physics MMC 403: Materials Characterisation		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Engineering Physics		CT+MT+EA					
Course Outcomes	CO1: To understand the principle and theory of different experimental techniques CO2: To understand the mechanisms, science and technological in different techniques CO3: To learn methods of different experimental techniques used for industrial applications						
Topics Covered	Optical Methods: Fundamental of image formation, Different aberrations in optical systems, Optical microscopy, characteristics of the microscope, and different conditions of image formation such as brightfield, darkfield, and oblique illumination. Special Techniques in Metallography: Polarized beam, Phase Contrast, Differential Interference Microscopy, Fluorescent microscopy, Principles of above techniques and their applications. Quantitative Metallurgy and Image analysis, Applications Developments for Quantitative Image analysis in Metallurgy. [10 hrs] Basic principles of Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM), secondary electron, backscattered electron, Diffraction pattern analysis, energy dispersive X-ray spectroscopy (EDS), Wavelength dispersive spectrometer analysis (WDS), electron back-scattered diffraction (EBSD), electron probe microanalysis (EPMA). Fundamental of Atomic Force Microscopy, Basic theory, Image formation and its applications. [8 hrs.] Techniques for chemical analysis: Atomic absorption spectrometer, Emission spectroscopy & direct reading spectrometer, Mass spectrometer. Principle of temperature measurement by using thermocouples and radiation pyrometers. [4 hrs.] Thermal analysis of phase transformations: Thermal Analysis techniques: Principle, Working and application of DTA, TGA, DSC and Thermo-Mechanical Analysis, Principles, and Applications. [2 hrs.] Principle of magnetic characterization, characterization of soft magnet and hard magnets. Application. [4 hrs.] NDT: Basic principle of Dye Penetrant testing, Types of dye methods and application, Developer application and Inspection, Magnetic particle testing, Basic theory of magnetism, Magnetization methods, Field indicators, Particle application, Inspection. Eddy current testing, Basic principle; Faraday's law, Inductance, Ultrasonic testing: Basics of ultrasonic waves, Pulse and beam remarks, Radiographic testing, Basics, different isotopes and different techniques to identify the flaws. [10 hrs.]

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MME618	Secondary Steel Making	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT), and end assessment (EA))					
MMC302: Metallurgical Thermodynamics Kinetics, MMC401: Transport Phenomena in Metallurgical Processes and MMC501: Modelling and Simulation of Metallurgical Processes		CT+MT+EA					
Course Outcomes		CO1: Learn fundamentals of physico-chemical principles of Secondary steel making. CO2: Apply laws of thermodynamics and kinetics for producing clean steel. CO3: Design process route for economical production of steel.					
Topics Covered		A brief review of fluid flow, thermodynamics and primary steel making processes, composition of the crude steel, need for secondary refining, the objective of secondary steel making, physico-chemical principles of Secondary steel making, Slag basicity and capacities, secondary steel making equipment and processes, preheating and recycling of ladles. (8) Furnace tapping operations; Phenomena during furnace tapping; carry over slag and slag detection devices; slag making in ladles and de-oxidation: common de-oxidisers and requirement of de-oxidisers; addition methodology; melting and dissolution of deoxidisers; de-oxidation thermodynamics and kinetics; simple vs. complex de-oxidation; De-oxidation products; Elementary de-oxidation calculations. (5) Inert Gas Stirring in Ladles (objectives, Devices, gas flow regimes, stirring energy and stirring intensity); Temperature and Composition Control in Ladles (arcing, alloying addition, and aluminium wire feeding). (3) Degassing and Decarburization in liquid steel: Introduction, Principles and thermodynamics of reactions in vacuum degassing, equipment's and degassing Methods and their relative merits and demerits; slag eye area and re-oxidation, fluid flow and mixing in vacuum degassing, rates of vacuum degassing and decarburization, decarburization for Ultra-low carbon (ULC), stainless steel making. (8) Desulfurization in secondary steelmaking: Introduction, thermodynamics aspects, desulfurization with only top slag, injection metallurgy for Desulfurization. (3) Clean steel, Types of inclusions, Morphology, Properties of inclusions, Inclusion assessment, sources of inclusions, control of inclusions, Inclusion modification, Calcium Treatment (cored wire injection. objectives and devices reactions, calcium recovery and inclusion morphology and composition). (6) Teeming speed, Gas absorption during tapping and teeming form surrounding, Temperature changes of molten steel during secondary Steel making, phosphorus control in secondary steel making, Nitrogen control in steel making, application of Magnetohydrodynamics, Modeling of secondary steelmaking processes. (6)					
Text Books, and/or reference material		<u>Suggested Text Books:</u> 1. Principles and Practices in Iron and Steelmaking – A. Ghosh, and A. Chatterjee. 2. Secondary Steelmaking – A. Ghosh <u>Suggested Reference Books:</u> 3. Making, Shaping and Treating of Steel (Steelmaking and Refining), 10th Edition, 1985, AISE, Pittsburgh

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
Engineering Physics (PHC01) Introduction to Metallurgy and materials (MMC301)		CT+MT+EA					
Course Outcomes	CO1: Describes generic approaches to thin film depositions and the basic principle associated with appropriate deposition techniques. CO2: Learn structure-property relationships, and its important in thin film engineering. CO3: To learn technology aspect of coatings and thin films on different engineering application						
Topics Covered	Introduction: Definitions; Historical perspective of thin films; Reasons for using thin films. [2] Thin film depositions: Evaporation methods, sputtering and chemical methods. [6] Film structure: Structural morphology of films and coatings; crystallographic structure of films; amorphous thin films [6] Characterization of thin films: Film thickness, Structural characterization; Chemical characterization [6] Mechanical properties of thin films [4] Growth and Synthesis of Nanostructured Thin Films [3] Applications of Functional Thin Films and Nanostructures in Gas Sensing [3] Gas sensing applications of zinc oxide [3] Applications of Functional Thin Films for Mechanical Sensing [3]						
Text Books, and/or reference material	<u>Suggested Text Books:</u> 1. Thin Film Phenomena- K. L. Chopra, Robert E Krieger Publishing Company, Florida, 1985 2. Lecture Notes and Published Papers <u>Suggested Reference Books:</u> 1. Materials Science of Thin Films – Milton Ohring, Academic Press, San Diego; USA, 2002

MME620	Stainless Steel: Technologies & Applications	PEL	3	1	0	52	4
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC 402: Phase Transformation and Phase Equilibria MMC 503: Mechanical Behaviors of Materials MMC: 504: Steelmaking		CT+MT+EA					
Developer		JSL & Arup Kumar Mandal					
Course Outcomes	CO1: Fundamental understanding of phase transformation and manufacturing of stainless steel. CO2: Acquire detailed knowledge of different processes like AOD, LF, VD and continuous casting. CO3: Learn to analyze physical, chemical, and mechanical properties for suitable industrial applications of different stainless grades.						
Topics Covered	1. Introduction: Definition, Alloying elements in Stainless Steels and their functions. Effect of alloying elements on properties of Stainless Steels. Classification of Stainless Steels. Cost implications of alloy additions and substitutes. Stainless steel production in India and in the world. [3L] 2. Making and Processing: Raw materials, Electric Arc Furnace, Induction furnace, plasma furnace, Argon oxygen decarburisation, Ladle Refining, Vacuum Oxygen Decarburisation, Vacuum degassing, Ingot casting vis-à-vis Continuous casting, casting defects, inclusion control. Hot Rolling, Hot Forging, Annealing & Pickling, Cold Rolling, Final Annealing and Pickling, Skin Pass Mill, Strip Grinding Line. Finishing of Stainless Steels. Colour Coating of Stainless Steels [8L] 3. Phase Transformations and Heat treatments: Relevance of Nickel equivalent and Chromium equivalent, Inadequacy Fe-Fe₃C diagram for stainless steels, Role of alloying elements in ferrite and austenite stabilisation, Role of deformation on phase transformation. Heat treatment of stainless steels-ferritic, martensitic, austenitic, duplex, precipitation hardenable grade stainless steels. Precipitation reaction in stainless steels, [4L] 4. Mechanical Behavior and Properties: Deformation behaviour of stainless steel. Role of precipitates on mechanical properties. Mechanical properties of different grades of stainless steels-tensile, hardness, impact, fatigue [4L] 5. Fabrication: Cold roll forming (CRF) processes, Forging, Extrusion, Deep Drawing, Coin blanking, machining, Cutting of Stainless Steels, Welding of Stainless Steels- Welding, Brazing, Soldering and Overlaying, Common welding techniques, welding consumables and precautions required. Fusion Welding processes- Shielded Metal Arc Welding (SMAW), Gas Tungsten AW, Gas Metal AW (Inert/active gas), Flux-cored AW, Plasma AW, Submerged AW, Electro-slag Welding, EBW, LBW. Solid State Welding – All variations of Resistance welding e.g. Spot, Seam, Projection, Flash, Upset, High frequency, Percussion. Friction stir welding. Specific difficulties associated with welding of – Martensitic-, Ferritic-, Austenitic-, Duplex, Precipitation Hardened-, Martensitic, Semiaustenitic-, Austenitic- precipitation hardened stainless steels. Welding of dissimilar metal combinations with stainless steels. Sensitization/Weld decay: Causes, mechanisms, remedies, High temperature sensitization, 475oC embrittlement, α' phase transformation, Distortion-Causes, mechanisms, remedies, Effect of alloying elements on weldability of Stainless Steels, Schaeffler De Long diagram interpretations. Tools and Equipment. Issues faced during fabrication of stainless steels and their solutions. [8L] 6. Testing, Handling and Storage of Stainless steel: PMI technique, XRF, Ultrasonic testing, Magnetic Particle testing, Dye penetrant, Portable hardness, Surface roughness measurement, Surface Reflectivity measurement, Recommended procedures for storage. [3L] 7. Corrosion: Types of corrosion, Galvanic corrosion-Mechanism and prevention, Pitting Corrosion-Mechanism and prevention, Interpretation of PREN, Crack propagation mechanisms-Intergranular, Trans-granular, Crevice Corrosion, Stress Corrosion Cracking (SCC), Microbiologically Induced Corrosion (MIC), Erosion Corrosion. High temperature corrosion, Different corrosion testing procedures. Role of precipitates on corrosion, Corrosion resistance of stainless steels [5L] 8. Applications: Automotive, Railways & Transport, Architecture, Building & Construction, Reinforcement bars, Roofing sheets, utensils, Furnitures, Material Handling applications, Process Industries, Biomedical applications. Life Cycle Cost Analysis. [4L] 9. Plant visit: 2 days plant visit at any one of JSL's manufacturing units at Hisar (Haryana) or Jajpur (Odisha).

Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC-504: Iron Making		CT+MT+EA					
Course Outcomes	CO1: Understand the fundamentals of physicochemical principles of green steel-making process CO2: Acquire knowledge of the different routes of the steel-making process CO3: Analyze the benefits and shortcomings of different Green steel-making routes in industrial applications						
Topics Covered	1. Introduction to Green Steel Making: Definition and importance, Environmental impact of traditional steel-making [2] 2. Fundamentals of Steel Making: Iron ore reduction and smelting, Steel production processes (BOS, EAF, etc.) [2] 3. Decarbonization Strategies: Challenges/Options facing Steel Producers , Energy efficiency and optimization, Fuel switching (e.g., to natural gas, biomass, hydrogen), Carbon capture, utilization, and storage (CCUS), Recycling and circular economy approaches [2] 4. Green Steel Making Technologies: Hydrogen Fundamentals: Production, Combustion & Reduction, Hydrogen usage in Blast Furnace and DRI Processes, Decarbonisation Options Outside Hydrogen Reduction, Carbon capture and utilization, Biomass based Steel making, Hydrogen-based steel						

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

	making; Electric arc furnace (EAF) steel-making, Impact on Steelmaking Operations [12] 5. Sustainable Raw Materials: Recycling and reuse of steel scrap, Alternative iron ore reduction methods [4] 6. Energy Efficiency and Renewable Energy; Energy optimization in steel production, Integration of renewable energy sources (solar, wind, etc.) [4] 7. Environmental Impact Assessment: Life cycle assessment (LCA) of green steel production, Environmental footprint reduction strategies [2] 8. Case Studies and Industry Examples: Successful implementation of green steel making technologies, Challenges and opportunities in the industry [2] 9. Zero-Waste Business Models: Principles of zero-waste manufacturing, Strategies for developing value-added products from steel by-products, Examples of value-added products in the industry, Economic and environmental benefits [2] 10. Policy and Regulatory Framework: International agreements and initiatives (Paris Agreement, etc.), National and local regulations supporting green steel making [2] 11. Future Directions and Research Opportunities: Emerging technologies and innovations (HDRI-BOF/ HDRI-EAF/HDRI-SR/ Hydrogen Plasma Smelting route, Ammonia based steelmaking, Research and development priorities in green steel making [6]

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Behaviour of Materials		
Developer		Dr. Madan Mohan Ghosh and Dr. Manab Mallik
Course Outcomes	CO1: To know about the methods of rolling, forging under different conditions CO2: To learn the parameters needed to be controlled in rolling, forging processes CO3: To assess and understand the factors affecting the quality of the products	
Topics Covered	1. Studying the open-die forging operation by hydraulic press and evaluation of hardness and microstructural changes of the forged product 2. Study of the effect of specimen size (h/D ratio) on load vs deformation curve of a ductile materials 3. Upset Ring Test using hydraulic press forging to determine interface friction factor (m). 4. To study the effect of friction and lubrication on strain energy in open-die forging operation 5. Closed-die forging operation by hydraulic press and evaluation of hardness and microstructural changes of the forged product 6. Studying the effects of cold working and annealing on the hardness and microstructure of ductile materials. 7. Hot forging of a ductile material and evaluation of hardness and microstructural variations 8. To study the effect of hammer (drop) forging on the hardness and microstructure of ductile materials. 9. Cold rolling to produce sheet from plate using plain barreled rolls and evaluating changes in microstructure and hardness, and estimation of angle of contact, no-slip angle, forward slip, interfacial frictional coefficient and rolling load

SEVENTH SEMESTER

Department of Management Studies							
Course Code	Title of the course	Program Core(PCR)/ Electives(PEL)	Total Number of contact hours				Credit
			Lecture(L)	Tutorial(T)	Practical(P)	Total Hours	
MSC731	PRINCIPLES OF MANAGEMENT	PCR	3	0	0	3	3
Pre-requisites		Course Assessment methods(Continuous assessment(CA) and End Assessment(EA))					
		CA+EA					
Course Outcomes	- CO1: To make budding engineers aware of various management functions required for any organization - CO2: To impart knowledge on various tools and techniques applied by the executives of an organization - CO3: To make potential engineers aware of managerial functions so that it would help for their professional career - CO4: To impart knowledge on organizational activities operational and strategic both in nature - CO5: To impart knowledge on each functional area of management like Marketing, Finance, Behavioral Science, Quantitative Techniques and Decision Science						
Topics Covered	UNIT I: Management Functions and Business Environment: Business environment -macro, Business environment -micro; Porter's five forces, Management functions – overview, Different levels and roles of management, Planning- Steps, Planning and environmental analysis with SWOT, Application of BCG matrix in organization (12) UNIT II: Quantitative tools and techniques used in management: Forecasting techniques, Decision analysis (6) UNIT III: Creating and delivering superior customer value: Basic understanding of marketing, Consumer behavior- fundamentals, Segmentation, Targeting & Positioning, Product Life cycle. (8) UNIT IV: Behavioral management of individual: Motivation, Leadership, Perception, Learning. (8) UNIT V: Professional ethics: Introduction to Professional ethics, Morals, values and Ethics, Ethics in Business. (2)						
Text Books, and/or reference material	Text Books: - Marketing Management 15th Edition, Philip Kotler and Kelvin Keller, Pearson India - Management Principles, Processes and practice, first edition, Anil Bhat and Arya Kumar, Oxford Higher education - Organizational Behavior, 13th edition, Stephen P Robbins, Pearson Prentice hall India - Operations Management, 7th edition (Quality control, Forecasting), Buffa & Sarin, Willey - A.C.Fernando: Business Ethics & Corporate Governance, Pearson Education 2nd edition

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Correlation levels 1, 2 or 3 as defined below:

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

Department of Metallurgical and Materials Engineering							
Course Code	Title of the course	Program Core (PCR) / Electives (PEL)	Total Number of contact hours				Credit
			Lecture (L)	Tutorial (T)	Practical (P)	Total Hours	
MME711	Fatigue, Creep and Fracture	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC-301: Introduction to Metallurgy and Materials MMC503: Mechanical Behaviour of Materials		CT+MT+EA					
Course Outcomes	I. Learn fundamentals of fatigue, creep and fracture (including fracture mechanics). II. Understand fatigue, creep and fracture in details including mechanisms and methods of testing. III. Solve problems on fatigue, creep, fracture and different design problems to meet contemporary needs (including tutorials).						
Topics Covered	Fatigue: Types of stress cycles, S-N diagram and endurance limit, Various failure relations, viz., Goodman, Soderberg, Gerber parabola; Fatigue crack nucleation and propagation; application of fracture mechanics for fatigue cracking cyclic stress strain curve; low cycle fatigue; effect of stress concentration on fatigue; size effect; surface effects; effect of metallurgical variables on fatigue; Increased fatigue life due to surface protection cumulative fatigue damage rule; concept reverse plastic zone; corrosion fatigue; fretting; high temperature fatigue. 11h Creep: Materials problem at high temperature; time dependant mechanical behavior; Creep curves, Stress rupture test; Creep mechanisms; Deformation mechanism map; Super plasticity; Creep resistant alloys; Presentation of engineering creep data; Prediction of long time properties; Creep-fatigue interaction. 4h Fracture: Examples of fracture in real components; Different design philosophies; atomic view of fracture; stress concentration effects of flaws; Linear elastic plastic fracture mechanics (LEFM): Griffith's theory of brittle fracture; The energy release rate; R-curve; Different modes of loading; Stress analysis of cracks, crack tip plasticity; concepts of plane stress and plane strain. Elastic plastic fracture mechanics: CTOD, J integral, HRR singularity. Types of fracture in metals; microstructural aspects of fracture; Different toughening mechanisms; Fracture toughness testing of metals: K_{1C}, CTOD and J_{1C}. 22h

MME-712	Raw materials preparation for iron and steel making	PEL	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC-404: Iron making		CT+MT+EA					
Course Outcomes	CO1: Understand the concept of preparing raw materials as a burden for different iron and steel-making methods. CO2: Acquire knowledge about the different processing routes for raw materials preparation CO3: Application of knowledge for different raw materials preparation, their characterization and suitable use of various iron and steel-making industries						
Topics Covered	Introduction: Need of Raw Material Preparation. [1hr] Ore Preparation: Important minerals and their characteristics; Ore reserves in India and World; Techno - economic appraisal of ore- breaking, crushing and grinding techniques considering sizing operations. [8hrs] Agglomeration: Purpose, technological appraisal of various methods with merits and demerits, bonding mechanism. [3hrs] Sintering: Process, mechanism, factors affecting sinter quality, fluxed sinter, sinter mineralogy, sintering machine design, process control. [5hrs] Pelletizing: Process, green ball formation and growth, additives and their effect, pellet drying and hardening (cold and hot), pelletizing machine types, design, pellet firing systems. [6hrs] Briquetting and Nodulizing: Process, additives and hardening methods. Rotary hearth furnace, its operation, future prospective. Techno- economic evaluation of various iron ore feed materials. [4hrs] Coal preparation: Coal washing purpose and methods, use of coal in iron and steel making [6hrs] Coke quality: Stamp charging, coke quality affected by process parameters, coke testing, methods for reactivity, strength etc. [4hrs] Industry status: Agglomeration scenario in India and world, coking coal in India and world, future prospects. [1hr]

MME713	Fuel, Furnace and Refractories	PER	3	0	0	3	3
Pre-requisites		Course Assessment methods (Continuous (CT), mid-term (MT) and end assessment (EA))					
MMC-302: Metallurgical Thermodynamics & Kinetics.		CT+MT+EA					
Course Outcomes	- CO1: Understanding the Conventional and Non- Conventional energy sources - CO2: Understanding the property of Fuel and Refractories. - CO3: Understanding the design of furnace with respect to usage of fuel and Refractories						
Topics Covered	Definition, Comparative study of solid, liquid and gaseous fuels. Constitution, classification and grading of coal. (4) Testing of fuels like: Grindability, Caking properties, calorific value, Proximate and ultimate analysis, Flash and Fire point, viscosity. (6) Non-conventional Energy Resources like Nuclear fuel, Solar, Wind, Geo-thermal, Bio-mass, Hydrogen (2) Carbonization of coal: Coke making and by-products. (2) Producer gas, Water gas, Natural gas, LPG, Industrial Gases, Gobar Gas. Storage of fuels. (2) Combustion of fuels and problems (2) Definition and Classification of Furnaces, Batch furnaces, Continuous furnaces. (2) Construction and working of furnaces Pit furnace, Rotary furnace, Muffle furnace etc. (4) Evolution of heat and flame temperature. Available heat. Natural, forced, induced and balanced draft. Chimney height, (2) Heat losses in furnaces and minimization. Waste heat recovery. (2) Nature and Type and Properties of Refractories, Manufacture of Common Refractories (4) Furnace Design: Lay out of Refractories in a furnace. (2)

CYC-01: Engineering Chemistry		CT+MT+EA					
Course Outcomes	CO1: To learn Fundamentals of Corrosion Engineering CO2: Techniques to acquaint with Actual Corrosion Testing CO3: To understand the Principles, Mechanism and Prevention of High Temperature Corrosion						

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Topics Covered	Introduction: Definition of corrosion, Cost of Corrosion, corrosion damage, environments, and classification of corrosion. (1) Corrosion Principles: Electrochemical reactions, thermodynamics of corrosion, cell potential, emf and galvanic series, representation of cell / cell diagram, electrode kinetics, exchange current density, polarization - activation, concentration and combined, Pourbaix diagram, Evans diagram, Passivation. (11) Forms of Corrosion: Uniform attack; galvanic or two-metal corrosion; crevice corrosion; pitting corrosion; intergranular corrosion – sensitization and weld decay; Selective leaching - dezincification; erosion corrosion; Stress corrosion cracking (SCC) and hydrogen damage. Case studies of corrosion in industry e.g. steel, chemical, fertilizer and food etc. (11) Corrosion Prevention: Materials selection, alteration of environments, design, inhibitors, cathodic and anodic protection, coatings – electroplating. (5) Corrosion Testing: Purpose, standard expression of corrosion rate, polarization technique – Tafel extrapolation, linear polarization method, AC impedance method, evaluation of pitting damage, Huey and stretcher test for stainless steel, slow strain rate test (SSRT). Corrosion failure analysis. (5) High Temperature Corrosion: Introduction, oxidation, Pilling – Bedworth (PB) ratio, electrochemical and morphological aspects, oxidation kinetics, internal oxidation, corrosion in mixed environments, salt deposited hot corrosion, case studies for high temperature corrosion. (2)
Text Books, and/or reference material	Text Books: - Foundations of Corrosion Science and Engineering, K. S. Ghosh, PHI Learning, 2024 - Corrosion Engineering – Mars G. Fontana, McGraw- Hill Publication, 1987. - The Fundamentals of corrosion – J. C. Scully Reference books: - An Introduction of Metallic Corrosion – R. Evans, Edward Arnold (Publishers) Ltd, London. - Introduction of High Temperature Corrosion – N. Birks and G. H. Meier

Course Outcomes	I. Learn the fundamental of composite materials, classification, properties and applications II. Metal matrix composites (MMCs) III. Solid and liquid state synthesis of MMCs, joining of MMCs						

CURRICULUM AND SYLLABUS FOR B.TECH. IN METALLURGICAL AND MATERIALS ENGINEERING

Topics Covered	Course assessment methods: Mid semester examination and End semester examination Introduction: Classification of composites on the basis of matrix, ex-situ or in-situ synthesis, type of reinforcement etc.; Metal matrix composite, polymer matrix composites, ceramic matrix composite and carbon-carbon composite; application of different composite materials. (8 hours) Different routes of composites synthesis: casting route, powder metallurgy route and other routes. (4 hours) Powder metallurgy processed Composite: high energy milling, Mechanical alloying: Fundamentals and parameters; Compaction and Sintering: material dependent routes and process parameters; Recent trends- Spark plasma sintering, Equal channel angular pressing etc.; process parameter-structure-property correlation. (12 hours) Cast metal matrix composites: different synthesis routes: dispersion process (stir casting, compocasting and screw extrusion)-contact angle, wettability and particle-matrix bonding; Liquid metal impregnation/infiltration (pressure infiltration, squeeze casting and Laxide process)- principle of molten metal infiltration-capillary flow of molten metal; Spray process (Osprey process and rapid solidification process); In-situ production of dispersoids-XD process; evolved microstructure: structural defects in cast metal matrix composites-porosity, particle segregation (macro segregation and micro segregation), interfacial reaction and particle degradation; structure-property correlation. (12 hours) Joining of metal matrix composites, limitations of conventional fusion welding, Application of transient liquid phase (TLP) diffusion bonding, basic mechanism and different stages of TLP bonding process for monolithic and composite system, process parameters of TLP bonding, joint efficiency. (4 hours)
Text Books, and/or reference material	Text Books: 1. Metal Matrix Composites-Chawla and Chawla, Springer, 2006. 2.
