

"We are very happy to declare that NIT Durgapur has successfully developed a low cost oxygen concentrator. Today, we have delivered the first one (5 LPM) to Sanjeevan Hospital, Uluberia for clinical testing and application on moderate patients. We will refine the system as required, based on the feedback of the doctors.

The design and development of this product has been led by **Prof. S. S. Roy** of the Mechanical Engineering Department and his team and has been funded by the institute. A company has been incubated at NIT Durgapur, which will take charge henceforth and soon the concentrators will be available on commercial basis, through authorized manufacturing agencies. In the meanwhile, it has come to our information and noticed that some unscrupulous people are going around collecting orders for the NIT product at much higher cost.

WE HAVE NOT YET AUTHORISED ANY AGENCY TO CARRY OUT ANY SORT OF BUSINESS WITH IT.

We will inform the status and relevant information on our web page and the institute Facebook page. In the meanwhile, for any information, you may communicate with the Registrar at registrar@admin.nitdgp.ac.in"
